Dear Governor Schwarzenegger,

3.18.9

As a California resident, with an underactive thyroid, I feel it is important that the water I drink does not exacerbate my health problem.

'Scientific evidence supports a perchlorate drinking water standard of 1 part per billion will adequately protect public health. Please ensure that the Office of Environmental Health Hazards considers this most recent ~~the~~ research from the CDC as they revaluate Californias public health goal this year.'

Please ensure that this beautiful state, is also a healthy one.

With sincere thanks,

Elisabeth Jurson
