Subject: April 4, 2022 TUCO - Condition 1.d.iii

EXTERNAL:

In accordance with Condition 1.d.iii of the April 4, 2022 Order Conditionally Approving a Petition for Temporary Urgency Changes, on behalf of the Department of Water Resources and the U.S. Bureau of Reclamation, the following is a projection of State Water Project (SWP) and Central Valley Project (CVP) exports, the purposes and considerations for those exports, and an explanation of why it is in the public interest to export that water when D-1641 requirements are not being met.

Beginning April 7, 2022	SWP	CVP
Planned exports	600 cfs	900 cfs
Purpose, Considerations, and Public Interest	This rate allows the SWP to supply water to Byron Bethany Irrigation District, who diverts from Clifton Court Forebay, supply water to the SWP South Bay Public Water Agencies who are not directly connected to San Luis Reservoir and who rely on direct diversions from the Delta to meet their municipal and industrial demands due to limited or exhausted local storage and a lack of sufficient alternative supplies, and move to San Luis Reservoir to meet minimum human health and safety demands later in the year.	This rate allows the CVP the ability to maintain a one-unit operation. Water exported at Jones Pumping Plant is primarily diverted for meeting municipal and industrial (M&I) public health and safety demands, wildlife refuge demands as required under CVPIA and senior water right holder obligations.

If you have any questions, please reach out to me or Kristin White of Reclamation.
