Subject: 2/2/16 BOARD MEETING (Conservation Extended Emergency Regulation)

As a San Juan Water District customer, I am opposed to having the 33 percent conservation requirement considered in early February. I feel that a 33 percent conservation requirement is far too high based on the winter weather storms we have experienced so far this year, snow in the Sierras and recurrent rain. I believe conservation requirements should be reevaluated in April when the water supply conditions are better known.

Thank you!
