

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
COLORADO RIVER BASIN REGION

BOARD ORDER R7-2016-0027

WASTE DISCHARGE REQUIREMENTS
FOR

WM. BOLTHOUSE FARMS, INC., HOLTVILLE PLANT,
OWNER/OPERATOR WASHWATER FACILITY

Holtville – Imperial County

The California Regional Water Quality Control Board, Colorado River Basin Region (Colorado River Basin Water Board), finds that:

1. Wm. Bolthouse Farms Inc., (Discharger), 7200 E. Brundage Lane, Bakersfield, CA 93307, submitted a Report of Waste Discharge (ROWD) on April 4, 2016, to update Waste Discharge Requirements (WDRs) for the Discharger's carrot processing plant (Facility) located at 275 Walnut Avenue, Holtville, CA 92250. The Assessor's Parcel Number is (045-330-076) and the longitude and latitude coordinates are 115.376791 degrees W and 32.806630 degrees N, respectively. The Facility is assigned the California Integrated Water Quality System (CIWQS) number CW-272859; the Waste Discharger Identification (WDID) number 7A132028021.
2. The Discharger owns and operates the Facility, which has a design disposal capacity of 10,000 gallons-per-day (gpd) and currently discharges an average of 1,500 gpd of wastewater (process wastewater and cooling tower blowdown) into two unlined evaporation/percolation ponds located in the NW 1/4 of Section 36, Township 15 South, Range 15 East, San Bernardino Base & Meridian. A site map is attached and is incorporated herein and made a part of this Order. Domestic wastewater from the Facility is discharged into the City of Holtville's sewage collection system that flows to its Municipal Wastewater Treatment Plant, which is regulated by Board Order R7-2011- 0020.
3. Carrot processing wastewater flows directly into a settling pond to allow gravity settling of any sediment present. Wastewater from the settling pond then flows through a pipe into a second pond. A portion of the discharged wastewater is applied to on-site dirt roads for dust control and the remainder is allowed to percolate or evaporate from the ponds (Attachments A & B).
4. The discharge of the process wastewater and cooling tower blowdown are from the following activities:
 - a. Process wastewater is the result of rinsing, icing and boxing approximately 14 tons of bunched carrots per day. Bunched carrots are rinsed in the field

during harvesting and contain only a small amount of sediment when arriving at the plant. The carrot processing plant is in operation from late November of each year through the end of May of the following year.

- b. In addition, the Discharger provides ice to other agricultural users on a year round basis. This results in the ongoing generation of cooling tower blowdown. Approximately ten percent of the cooling water that is used in the cooling tower is discharged as cooling tower blowdown. Cooling tower blowdown is discharged to maintain the chemical properties of the cooling tower water.
5. Domestic water supply from the City of Holtville is used for carrot processing, ice making, and cooling tower makeup.
 6. Storm water runoff from the City of Holtville and fresh water diversions from Holtville's reservoir system have occasionally entered the pond system due to the close proximity of the city's storm water channel. These discharges have been infrequent and have not impacted the operation of the ponds.
 7. No chemicals are added to the carrot processing water. The following chemicals are added to the cooling tower water:

<i>Name of Chemical</i>	<i>Purpose</i>
COOLING CARE 8141 Sodium molybdate	Scale/corrosion control
MULTIBROM TABLETS Bromine, Chlorine	Biological growth control

8. The Discharger reported the following average characteristics of the discharged wastewater:
 - a. 20°C Biochemical Oxygen Demand (BOD) 35 mg/L
 - b. Total Dissolved Solids (TDS) 1300 mg/L
 - c. pH 8.20 mg/L
 - d. Suspended Solids 170 mg/L
9. There are no domestic water wells within 1,000 feet of the discharge facilities described in Finding No. 2 above.
10. The depth-to-ground water at the site is about 14 feet.
11. The soil profile of the land where the wastewater is applied is clayish with small traces of sand.
12. Annual rainfall in the area ranges from one to one and one-half inches, and the

evaporation rate at the site is about 84 inches per year.

13. The Water Quality Control Plan for the Colorado River Basin Region of California (Basin Plan), which was adopted on November 17, 1993, and amended on November 13, 2012, designates the beneficial uses of ground and surface waters in this Region, and contains implementation programs and policies to achieve water quality objectives, including narrative objectives for ground water quality, in Chapter 3, section IV, Ground Water Objectives.
14. The designated beneficial uses of ground water in the Imperial Hydrologic Unit are:
 - a. Municipal Supply (MUN)
 - b. Industrial Supply (IND)
15. Within the Imperial Valley area of the Imperial Hydrologic Unit, much of the groundwater is too saline for municipal use. Consequently, the existing municipal use of groundwater in this area is practically nonexistent.
16. The Discharger has been subject to Waste Discharge Requirements in Board Order No. 94-051, adopted on June 29, 1994, and Order No. 01-158, adopted on November 14, 2001.
17. Section 13267 of the California Water Code (CWC) authorizes the regional water boards to require technical and monitoring reports. The Monitoring and Reporting Program (MRP) establishes monitoring and reporting requirements to implement federal and state requirements
18. State Water Resources Control Board (State Water Board) Resolution 68-16 ("Policy with Respect to Maintaining High Quality Waters of the State") (hereinafter Resolution 68-16) requires the Colorado River Basin Water Board in regulating the discharge of waste to maintain high quality waters of the State (i.e., historic background water quality) until it is demonstrated that any change in quality will be consistent with maximum benefit to the people of the State, will not unreasonably affect beneficial uses, and will not result in water quality less than as described in plans and policies (e.g. violation of any water quality objective). Moreover, and in any event the Discharger is required to implement best practicable treatment or control (BPTC) of the discharge necessary to assure that pollution or nuisance will not occur, and that the highest water quality consistent with maximum benefit to the people will be maintained.
19. Some degradation of groundwater from the recycling system and the two evaporation/percolation ponds is consistent with Resolution No. 68-16, provided degradation:
 - a. Is confined to a reasonable area;
 - b. Is minimized by means of full implementation, regular maintenance, and

optimal operation of BPTC measures; and

- c. Does not result in water quality less than that prescribed in the applicable basin plan, including violation of any water quality objective.
20. The discharge of carrot rinse water to the evaporation/percolation ponds, as permitted herein, reflects best practicable treatment and control. The BPTC measures assure that the discharge does not create a condition of pollution or nuisance, and that the highest water quality defined by the physical and chemical nature of the local groundwater will be maintained, which is consistent with the anti-degradation provisions of Resolution No. 68-16. The evaporation/percolation ponds are:
 - a. constructed outside the 100-year floodplain;
 - b. operated and maintained with a minimum of two (2) feet of freeboard at all times; and
 - c. dried-out at the end of each operational season. Soil particles that accumulate in the evaporation/percolation ponds will be removed and reused or disposed of at an approved off-site location as needed before the operational season begins.
21. The constituents in agricultural wastewater that present the greatest risk to groundwater are pesticides, nutrients, and dissolved salts (TDS). The WDRs contained in this Order minimize the risk of degradation to areal groundwater. The proposed project contributes to economic development in the area and reduces energy consumption and vehicle emissions. These factors are consistent with maximum benefit to the people of the State. Accordingly, the discharge as authorized is consistent with the anti-degradation provisions of Resolution No. 68-16.
22. This Order establishes WDRs pursuant to Division 7, Chapter 4, Article 4, of the CWC for discharges that are not subject to regulation under Clean Water Act (CWA) Section 402 (33 U.S.C. Section 1342).
23. Pursuant to CWC Section 13263(g), the discharge of waste is a privilege, not a right, and adoption of this Order does not create a vested right to continue the discharge.
24. It is the policy of the State of California that every human being has the right to safe, clean, affordable, and accessible water adequate for human consumption, cooking, and sanitary purposes. This Order promotes that policy by requiring discharges to meet maximum contaminant levels designed to protect human health and ensure that water is safe for domestic use.
25. In accordance with Section 15301, Chapter 3, Title 14 of the CCR, the issuance of these WDRs, which govern the operation of an existing facility involving negligible or no expansion of use beyond that previously existing, is exempt from

the provisions of the California Environmental Quality Act (Public Resources Code, Section 21000 et seq.).

26. The Colorado River Basin Water Board has notified the Discharger and all known interested agencies and persons of its intent to update WDRs for said discharge and has provided them with an opportunity for a public meeting and an opportunity to submit comments.
27. The Colorado River Basin Water Board in a public meeting heard and considered all comments pertaining to this discharge.

It is hereby ordered, that Board Order 01-158 is rescinded upon the adoption date of this Order, except for enforcement purposes, and, in Order to meet the provisions contained in Division 7 of the CWC, and regulations adopted thereunder, the Discharger shall comply with the following:

A. Effluent Limitations

1. Daily wastewater flow to the Basins shall not exceed 10,000 gpd.
2. The hydrogen ion (pH) of the effluent shall be maintained within the limits of 6.0 to 9.0.

B. Prohibitions

1. The direct discharge of any wastewater to any surface water or surface drainage courses is prohibited.
2. The discharge of process wastewater to a location or in a manner different from that described in Findings No. 2 and 3 above is prohibited.
3. The discharge or deposit of hazardous waste (as defined in Title 27 of the California Code of Regulations), and other wastes that pose a potential threat to water quality at this facility is prohibited.
4. Discharge of waste classified as “hazardous”, as defined in Title 23, CCR, Section 2521(a), or “designated”, as defined in California Water Code Section 13173, is prohibited.
5. Discharge of treated wastewater to a location or in a manner other than described in this Board Order is prohibited.

C. Specifications

1. The treatment or disposal of wastes at the WWTS shall not cause pollution or nuisance as defined in Sections 13050(l) and 13050(m) of Division 7 of the California Water Code, respectively.
2. The evaporation/percolation ponds shall be designed and operated to maintain a

minimum freeboard of two (2) feet at all times and freeboard shall be utilized for wake and waves of fluid motion, and emergency or natural disaster purposes only.

3. The evaporation/percolation ponds shall be managed to prevent breeding of mosquitoes. In particular:
 - a. An erosion control program should assure that small coves and irregularities are not created around the perimeter of the water surface.
 - b. Weeds shall be minimized through control of water depth, harvesting, or herbicides.
 - c. Dead algae, vegetation, and debris shall not accumulate on the water surface.
4. The evaporation/percolation ponds shall be operated and maintained to prevent inundation or washout due to a 100-year storm event.
5. The evaporation/percolation ponds shall have sufficient capacity to accommodate design seasonal precipitation based on a 100-year storm event, distributed monthly in accordance with historical rainfall patterns.
6. Public contact with wastewater shall be precluded through such means as fences, signs, and other acceptable alternatives.
7. The discharge shall not cause degradation of any water supply.
8. No wastewater other than process wastewater shall be discharged into the Basins.
9. Sediments removed from the Basins shall be hauled away to an appropriate waste management facility.

D. Provisions

1. The Discharger shall comply with Monitoring and Reporting Program R7-2016-0027 and future revisions thereto, which is incorporated herein and made a part of this Order by reference, as specified by the Colorado River Basin Water Board's Executive Officer.
2. Prior to the implementation of any modifications to the WWTS which would result in a material change in the quality or quantity of wastewater treated or discharged, or any material change in the location of discharge, the Discharger shall report all pertinent information in writing to the Colorado River Basin Water Board and obtain revised requirements.
3. Prior to any change in ownership or management of this operation, the Discharger shall transmit a copy of this Order to the succeeding owner/operator, and forward a copy of the transmittal letter to the Colorado River Basin Water Board.

4. The Discharger shall ensure that all site operating personnel are familiar with the content of this Order and shall maintain a copy of this Order at the site.
5. This Order does not authorize violation of any federal, state, or local laws or regulations.
6. Facilities shall be available to keep the wastewater disposal facilities in operation in the event of commercial power failure.
7. The Discharger shall allow the Colorado River Basin Water Board, or an authorized representative, upon presentation of credentials and other documents as may be required by law, to:
 - a. Enter upon the premises regulated by this Order, or the place where records must be kept under the conditions of this Order;
 - b. Have access to and copy, at reasonable times, any records that shall be kept under the conditions of this Order;
 - c. Inspect at reasonable times any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this Order; and
 - d. Sample or monitor at reasonable times, for the purpose of assuring compliance with this Order or as otherwise authorized by the California Water Code, any substances or parameters at this location.
8. The Discharger shall comply with all of the conditions of this Order. Any noncompliance with this Order constitutes a violation of the Porter-Cologne Water Quality Control Act and is grounds for enforcement action.
9. The Discharger shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) that are installed or used by the Discharger to achieve compliance with this Order. Proper operation and maintenance also includes adequate laboratory controls and appropriate quality assurance procedures.
10. This Order does not convey any property rights of any sort or any exclusive privileges, nor does it authorize any injury to private property or any invasion of personal rights, nor any infringement of federal, state, or local laws or regulations.
11. Unless otherwise approved by the Colorado River Basin Water Board's Executive Officer, all analyses shall be conducted at a laboratory certified for such analyses. All analyses shall be conducted in accordance with the latest edition of "Guidelines Establishing Test Procedures for Analysis of Pollutants", promulgated by the United States Environmental Protection Agency.
12. Adequate measures shall be taken to assure that flood or surface drainage waters do not erode or otherwise render portions of the discharge facilities inoperable.

13. Adequate measures shall be taken to assure that unauthorized persons are effectively excluded from contact with the wastewater disposal facilities.
14. The Discharger is the responsible party for the WDRs and the monitoring and reporting program for the WWTS. The Discharger shall comply with all conditions of these WDRs. Violations may result in enforcement actions, including Colorado River Basin Water Board Orders or court Orders, requiring corrective action or imposing civil monetary liability, or in modification or revocation of these WDRs by the Colorado River Basin Water Board.
15. The Discharger shall retain records of all monitoring information including all calibration and maintenance records, copies of all reports required by this Order, and records of all data used to complete the application for this Order. Records shall be maintained for a minimum of five years from the date of the sample, measurement, or report. This period may be extended during the course of any unresolved litigation regarding this discharge or when requested by the Colorado River Basin Water Board's Executive Officer.
16. The Discharger shall dispose of the untreated sludge from the septic tanks via a licensed hauler to an offsite facility permitted for that purpose. Otherwise, the Discharger shall obtain written approval from the Colorado River Basin Water Board's Executive Officer specifying location and method of disposal, before disposing of untreated sludge, or similar solid waste materials. In addition, the Discharger shall provide the results of any sludge analyses as specified by the Colorado River Basin Water Board's Executive Officer.
17. The Colorado River Basin Water Board and the Director of the County Environmental Health Department shall be notified immediately of any failure of the wastewater containment facilities. Such failure shall be promptly corrected in accordance with the requirements of this Order.
18. The Discharger shall remove and relocate any wastes which are discharged at this site in violation of these requirements.
19. The Colorado River Basin Water Board will review this Order periodically and may revise requirements when necessary.
20. All site operating personnel shall receive training on how to minimize pollutant discharges to the Basins. This instruction should include the following topics:
 - a. Proper disposal of materials handled at the WWTS.
 - b. Methods to wash tools and other objects so that no contaminants are introduced into the Basins.
 - c. Methods to wash hands so that no contaminants are introduced into the WWTS.
21. The Discharger shall report any noncompliance which may endanger health or the

environment. Any such information shall be provided verbally to the Colorado River Basin Water Board's Executive Officer within 24 hours from the time the Discharger becomes aware of the circumstances. A written submittal shall also be provided within five days of the time the Discharger becomes aware of the circumstances. The written submittal shall contain a description of the noncompliance and its cause; the period of noncompliance, including exact dates and times; and if the noncompliance has not been corrected, the anticipated time it is expected to continue and steps taken or planned to reduce, eliminate, and prevent recurrence of the noncompliance. The Colorado River Basin Water Board's Executive Officer, or an authorized representative, may waive the written report on a case-by-case basis, if the oral report has been received within 24 hours.

22. All monitoring instruments and devices used by the Discharger to fulfill the prescribed monitoring program shall be properly maintained and calibrated as necessary to ensure their continued accuracy.

23. The Discharger shall furnish, under penalty of perjury, technical monitoring program reports, and such reports shall be submitted in accordance with the specifications prepared by the Colorado River Basin Water Board's Executive Officer and in Monitoring and Reporting Program R7-2016-0027. Such specifications are subject to periodic revisions as may be warranted.

24. The Discharger shall submit all documents electronically, including those required to assure compliance with this Order. All such documents must be emailed on or prior to the regulatory due date. To accomplish electronic submittal of documents the Discharger shall convert the signed original document to Portable Document Format (PDF), or other appropriate Microsoft application Documents shall be emailed as attachments to:

RB7-wdrs_paperles@waterboards.ca.gov

Documents that are 50 MB or larger should be transferred to a disk and mailed to the Colorado River Basin Water board office in Palm Desert.

I, Jose L. Angel, Executive Officer, do hereby certify the foregoing is a full, true and correct copy of an Order adopted by the California Regional Water Quality Control Board, Colorado River Basin Region, on June 30, 2016.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
COLORADO RIVER BASIN REGION

MONITORING AND REPORTING PROGRAM R7-2016-0027
FOR

WM. BOLTHOUSE FARMS, INC., HOLTVILLE PLANT,
OWNER/OPERATOR WASHWATER TREATMENT FACILITY
Holtville – Imperial County

Monitoring

1. This Monitoring and Reporting Program (MRP) describes requirements for monitoring a wastewater system and groundwater quality (when needed). This MRP is issued pursuant to California Water Code (Water Code) section 13267. The Discharger shall not implement any changes to this MRP unless and until a revised MRP is issued by the Executive Officer.
2. Water Code section 13267 states, in part:

“In conducting an investigation specified in subdivision (a), the Colorado River Basin Water Board may require that any person who has discharged, discharges, or is suspected of having discharged or discharging, or who proposes to discharge waste within its region, or any citizen or domiciliary, or political agency or entity of this state who has discharged, discharges, or is suspected of having discharged or discharging, or who proposes to discharge, waste outside of its region that could affect the quality of waters within its region shall furnish, under penalty of perjury, technical or monitoring program reports which the regional board requires. The burden, including costs, of these reports shall bear a reasonable relationship to the need for the report and the benefits to be obtained from the reports. In requiring those reports, the regional board shall provide the person with a written explanation with regard to the need for the reports, and shall identify the evidence that supports requiring that person to provide the reports.”

3. Water Code section 13268 states, in part:

“(a) (1) Any person failing or refusing to furnish technical or monitoring program reports as required by subdivision (b) of § 13267, or failing or refusing to furnish a statement of compliance as required by subdivision (b) of Section 13399.2, or falsifying any information provided therein, is guilty of a misdemeanor, and may be liable civilly in accordance with subdivision (b). (b) (1) Civil liability may be administratively imposed by a regional board in accordance with Article 2.5 (commencing with § 13323) of Chapter 5 for a violation of subdivision (a) in an amount which shall not

exceed one thousand dollars (\$1,000) for each day in which the violation occurs.”

4. The Discharger owns and operates the wastewater system that is subject to Board Order R7-2016-0027. The reports are necessary to ensure that the Discharger complies with the Order. Pursuant to Water Code section 13267, the Discharger shall implement the MRP and shall submit monitoring reports described herein.
5. All samples shall be representative of the volume and nature of the discharge or matrix of material sampled. The time, date, and location of each grab sample shall be recorded on the sample chain of custody form. If composite samples are collected, the basis for sampling (time or flow weighted) shall be approved by Colorado River Basin Water Board staff.
6. Field test instruments (such as those used to test pH, dissolved oxygen, and electrical conductivity) may be used provided that:
 - a. The user is trained in proper use and maintenance of the instruments;
 - b. The instruments are field calibrated prior to monitoring events at the frequency recommended by the manufacturer;
 - c. Instruments are serviced and/or calibrated by the manufacturer at the recommended frequency; and
 - d. Field calibration reports are submitted as described in the “Reporting” section of this MRP.
7. The collection, preservation and holding times of all samples shall be in accordance with U. S. Environmental Protection Agency approved procedures. Unless otherwise approved by the Colorado River Basin Water Board Executive Officer, all analyses shall be conducted by a certified laboratory. All analyses shall be conducted in accordance with the latest edition of the “Guidelines Establishing Test Procedures for Analysis of Pollutants” (40 CFR Part 136), promulgated by the USEPA.
8. The Discharger shall retain records of all monitoring information, including all calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation, copies of all reports required under Board Order R7-2016- 0027, and records of all data used to complete the application for the Order, for a period of at least five (5) years from the date of the sample, measurement, report or application. Records of monitoring information shall include:
 - a. The date, exact place, and time of sampling or measurement(s);
 - b. The individual(s) who performed the sampling or measurement(s);

- c. The date(s) analyses were performed;
- d. The individual(s) who performed the analyses;
- e. The analytical techniques or method used; and
- f. The results of such analyses.

Effluent Monitoring

The wastewater in the primary settling pond shall be monitored for the following:

Constituents	Units	Sample Type	Sampling Frequency
20°C BOD5	mg/L ¹	Grab	Monthly
Total Dissolved Solids (TDS)	mg/L	Grab	Monthly
pH	----	Grab	Monthly
Suspended Solids	mg/L	Grab	Monthly
Volume of Wastewater	GPD ²	----	Daily (Reported Monthly)
Pesticide (EPA Method 608)	ug/L ³	Composite	Annually

Sediment Monitoring

Representative samples from accumulated sediments in the primary settling pond shall be collected and analyzed for the following:

Constituents	Units	Sample Type	Sampling Frequency
Pesticide (EPA Method 608)	ug/L	Composite	Annually

Reporting

1. The Discharger shall arrange the data in tabular form so that the specified information is readily discernible. The data shall be summarized in such a manner as to clearly illustrate whether the WWTS is operating in compliance with Colorado River Basin Water Board.

¹ Milligrams per Liter
² Gallons per Day
³ Micrograms per Liter

2. The results of any analysis performed more frequently than required using test procedures and locations specified in this Monitoring and Reporting Program shall be reported to the Regional Board.
3. Records of monitoring information shall include:
 - a. The date, exact place, and time of sampling or measurement(s);
 - b. The individual(s) who performed the sampling or measurement(s);
 - c. The date(s) analyses were performed;
 - d. The individual(s) who performed the analyses;
 - e. The analytical techniques or method used; and
 - f. The results of such analyses.
4. Each report shall contain the following statement:

“I declare under the penalty of law that I have personally examined and am familiar with the information submitted in this document, and that based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.”
5. A duly authorized representative of the Discharger may sign the documents if:
 - a. The authorization is made in writing by the person described above;
 - b. The authorization specified an individual or person having responsibility for the overall operation of the regulated disposal system; and
 - c. The written authorization is submitted to the Colorado River Basin Water Board's Executive Officer.
6. Report immediately any failure in the waste disposal system to the Colorado River Basin Water Board and the Director of the County Environmental Health Department by telephone with follow-up by letter.
7. Describe any changes in the operating procedure during the reporting period.
8. Monitoring reports shall be certified under penalty of perjury to be true and correct, and shall contain the required information at the frequency designated in this monitoring report.
9. All monitoring results and information required to be reported on an annual basis shall be included in the annual monitoring report. Annual monitoring reports for

the reporting period of January 1st through December 31st of each year shall be submitted to the Colorado River Basin Water Board by January 15th of the following year.

10. The Discharger shall submit all documents electronically, including those required to assure compliance with Board Order R7-2016-0027. All such documents must be submitted on or prior to the regulatory due date. To accomplish electronic submittal of documents the Discharger shall convert the signed original document to Portable Document Format (PDF), or other appropriate Microsoft application. Documents shall be emailed as attachments to:

RB7-wdrs_paperless@waterboards.ca.gov
