Bio:

Kate Wing is the principal of K|W Consulting, where she works with social sector clients to design strategy, improve organizational operations, and support conservation. She's actively engaged in several projects to bring data science and cutting edge technology to ocean management, including a recent report on modernizing NOAA's fisheries data systems and her newsletter, the databranch. She was a 2016 resident at the open science space [Manylabs](), where she hosted the first-ever San Francisco Fishackathon, and she received a National Fish & Wildlife Foundation grant to automate the review of monitoring video from commercial fishing vessels. Prior to becoming a consultant, she managed a $20 million grant portfolio for the Gordon and Betty Moore Foundation's Marine Conservation Initiative, ran ocean campaigns at NRDC, and served as a Knauss Sea Grant Congressional Fellow.
