Subject: Comment Letter Draft Construction Permit

Dear Sirs,

Just what we need is another regulation or expansion thereof. In new subdivisions that have been approved in the last several years developers and builders have been required to address the detention of water and the retention of water and sediment. Please do not add additional cost and red tape to an already cumbersome process. Cost of building currently exceed income from sales. This will not help affordable housing and until documentation can be made showing these proposed regulations will be more affective than the current regulations, please do not put added burden on our industry.

Mark Rynearson
