<http://proesteros.cicese.mx/> Pro Esteros is a grassroots environmental organization in Baja California to conserve the coastal wetlands along the Baja California peninsula. Pro Esteros has worked with communities, government agencies and stakeholders to implement its environmental education programs, scientific research, and natural resource conservation projects, and environmentally sustainable community capacity building programs. They have links to other resources regarding water quality and have activities in which people can join.

<http://www.sdnhm.org/education/binational/index.php> PROBEA designs innovative curriculum and trains educators to motivate teachers, students, and others to participate in projects that benefit their local environment. Their water quality curriculum allows students to learn about water quality through performing

<http://www.fundacionlapuerta.org/> Fundacion La Puerte focuses on providing environmental education to the community especially to children. Not much water quality related information but they do have a Tecate River Clean Up and Tecate River Project which stresses the change in urban planning that restores the river and can result in a more sustainable environment. The goal of the Fundacion is to raise awareness of the environment and nature and in terms of the river, have the community become more

educated in it's current status and how it can be improved with community involvement.

<http://www.pronatura.org.mx/en/water/> Pronatura México A.C. focuses on the conservation of flora, fauna and priority ecosystems, while promoting society's development in harmony with nature. Their main themes in the program relate to Climate Change, Private and Social Land Conservation, Water, Green Funds, Priority Species. In the section dealing with water, Pronatura Mexico is a main proponent for water conservation in terms of distribution and accessibility of water. Their main concerns with water availability of water quality and quantity divide their water program into 5 categories:

1. Environmental policy
2. Watershed Conservation and Restoration
3. Water Harvesting
4. Communication
5. Water Rights for Conservation

They seem to have to right mindset but I'm not too sure to what they are actually doing in terms of fulfilling their goals.
