LEGEND : The following definitions are based on subjective interpretation in determining vegetation quantities

nF-F : Non-irrigated fallow: field is relatively clear of vegetation, some residue exists on field

nF-F+ nC : Non-irrigated fallow Not cleared; field has evidence of discing but considerable standing vegetation and residue remains

nF-F+ n11 : Non-irrigated fallow and idle: field has large areas of both vegetation and fallow

nF-F+ NV : Non-irrigated fallow and native vegetation: field has areas of both vegetation and fallow, but vegetation areas are larger than fallowed

n11 : Non-irrigated idle - Field is mostly vegetation but small areas of fallow land are visible

NV : Native vegetation - Field is entirely vegetation

NV + D : Native vegetation but field is being disced.

NOTES:

- 1) Some fields have multiple entries. This is due to the variability in the vegetation within the fields.
- 2) The transition of a field from fallow to vegetated can be seen by the change in attributed week by week.
- 3) Fields 55 and 104-114 are not included as these fields are not in the project.
- 4) When a field has multiple points, the points are not geo-referenced. Additional processing is required to incorporate coordinates.
- 5) The increase in vegetation can be seen as a field progresses from F-F to NV
- 6) Field 101 is assigned to multiple polygons in the southwest portion of the island. Most were NV throughout the project, except when disced in early September.
