

CITY OF POWAY

(12/7/15) Public Workshop
Urban Water Conservation
Deadline: 12/2/15 by 12:00 noon

STEVE VAUS, Mayor
DAVE GROSCH, Deputy Mayor
JIM CUNNINGHAM, Councilmember
BARRY LEONARD, Councilmember
JOHN MULLIN, Councilmember

November 30, 2015

Jeanine Townsend, Clerk of the Board
State Water Resources Control Board
1001 I Street, 24th Floor
Sacramento, CA 95814

Dear Ms. Townsend:

Thank you for the opportunity to submit these comments regarding potential changes to the Emergency Regulation for Statewide Urban Water Conservation to the State Water Resources Control Board. I appreciate the Board's efforts to achieve increased water conservation during these drought conditions.

The current regulation's focus on achieving the state's water reduction standards solely through conservation does not allow regional or local water agencies to realize the benefits of their investments in water supply reliability. For example, here in San Diego County we have supported our water agencies as they have made billions of dollars in investments in developing a portfolio of sustainable water supplies specifically designed to make our region less vulnerable to drought. However, the current regulations strip away the drought protections these supplies provide by not allowing the region to benefit from these investments.

The imposition of demand reduction targets as the state's primary drought response places California at a competitive disadvantage in terms of business attraction and business expansion. Businesses are unlikely to relocate to, or expand their businesses in California under prolonged water use reduction mandates that ignore the availability of sustainable water supplies to meet our state's economic needs. These businesses and industries need to be convinced that the state is doing everything in its power to develop new and drought-resilient water supplies to serve their businesses. One of the things the state can do now is amend the regulation to provide credits for new supply development.

The emergency regulation has also contributed to rising water rates for residents and businesses, as we are forced to meet our revenue requirements on lower sales. It also enhances the level of frustration of all ratepayers who are upset by the concept of "paying more for using less," which undermines public support for ongoing conservation and continued investment in sustainable water supplies and infrastructure.

Finally, the regulations are threatening property values by inhibiting efforts to re-landscape dead lawns with water-smart plants, which require irrigation to establish even though they reduce overall water use in the long term and also provide aesthetic and environmental benefits. Without healthy landscapes, soil erosion and storm water runoff will increase, wildlife habitat will decrease and the urban heat island effect will intensify.

It is critical to maximize the water reliability benefits of drought-resilient and sustainable water supplies, such as the Carlsbad Desalination Project, during drought conditions to help support California's economy and quality of life. That's why I support modifications to the Emergency Regulation to allow water agencies to meet reduction targets through a combination of conservation and sustainable drinking water supplies, such as desalination, potable reuse and long-term transfers of conserved water.

Sincerely,

Steve Vaus
Mayor
