**Subject:** Monterey Peninsula water

We live on the Monterey Peninsula and receive our water from CalAm. Our household is and has always been very frugal with our water and uses less than the already low CalAm average use. I am writing because we have been told that there is a possibility that outside water use will be prohibited to save water. It seems unfair to tell households how they can use water. If a household is conserving water inside the house they should be allowed to use water in their gardens, as long as it is done so in a responsible manner. Let's not kill all the plants in our gardens.
