Subject: Comments to Malibu Proposed Groundwater Injection due 8.9.2012 4PM

We could locate no Public Notice but found news articles on this issue. Where is it on your website.

The RMC Concept Paper on Injection made no mention of weather patterns in the modeling other than the term "wet". No data was presented for the natural occurring tidal flows that hug the Southern California Bight from both the north and the south that meet at Dana Point, where it is open. Will contamination effect the injection or vice versa because of this pattern.
