

As a homeowner in Sacramento County, I am opposed to the current draft being considered. The fact that farmers and commercial businesses are not included is appalling. I have been conserving water since last year, it is about time that everyone has to conserve not just homeowners. Since farmers use 80% of the consumption by humans, they can cut back 10% and it would be a huge savings. Likewise, commercial establishments should have to cut back too. I drove by a McDonalds today that not only had a lush green lawn, but it was very very wet. They should have to only water every other day, or similar. As it is, I only water once a week; and, I am allowing my lawn to die (again). I haven't washed my cars in over 6 months. My community (Orangevale) was noted as meeting the governor's goal last year of a 25% reduction. We are doing our part; but, now we may have to face a 36% reduction while others are not even being asked to reduce!!!! Everyone, including businesses and farmers need to do their part.

Sincerely,
