

**CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD**  
**SAN FRANCISCO BAY REGION**  
1515 Clay Street, Suite 1400, Oakland, California 94612  
waterboards.ca.gov/sanfranciscobay

**REVISED TENTATIVE ORDER R2-2022-00XX**  
**NPDES PERMIT CA0038768**

The following Discharger is subject to the waste discharge requirements (WDRs) set forth in this Order:

Discharger                    **City of American Canyon**  
Name of Facility            **American Canyon Water Reclamation Facility  
and its collection system**  
Facility Address          **151 Mezzetta Court  
American Canyon, CA 94503  
Napa County**

**Table 1. Discharge Locations**

<b>Discharge Point</b>	<b>Effluent Description</b>	<b>Discharge Point Latitude (North-South)</b>	<b>Discharge Point Longitude (East-West)</b>	<b>Receiving Water</b>
001	Advanced-Secondary-Treated Municipal Wastewater	38.1879°N	-122.2771°W	North Slough (Napa River)
003	Advanced-Secondary-Treated Municipal Wastewater	38.1849°N	-122.2791°W	Constructed Freshwater Wetlands

This Order was adopted on:  
This Order shall become effective on:  
This Order shall expire on:  
CIWQS regulatory measure number:

**<Adoption Date>**  
**August 1, 2022**  
**July 31, 2027**  
**<XXXXX>**

The Discharger shall file a Report of Waste Discharge as an application for updated WDRs in accordance with title 23, California Code of Regulations, and an application for reissuance of a National Pollutant Discharge Elimination System (NPDES) permit no later than **November 3, 2026**. The U.S. Environmental Protection Agency (U.S. EPA) and the California Regional Water Quality Control Board, San Francisco Bay Region (Regional Water Board) have classified this discharge as “**Major**.”

I hereby certify that this Order with all attachments is a full, true, and correct copy of the Order adopted by the Regional Water Board on the date indicated above.

---

Thomas Mumley, Interim Executive Officer

## 1. FACILITY INFORMATION

Information describing the American Canyon Water Reclamation Facility and its collection system (collectively, the Facility) is summarized on the cover page and in Fact Sheet (Attachment F) sections 1 and 2. Fact Sheet section 1 also includes information regarding the permit application.

## 2. FINDINGS

The Regional Water Board finds the following:

- 2.1. Legal Authorities.** This Order serves as WDRs pursuant to California Water Code article 4, chapter 4, division 7 (commencing with § 13260). This Order is also issued pursuant to federal Clean Water Act (CWA) section 402 and implementing regulations adopted by U.S. EPA and Water Code chapter 5.5, division 7 (commencing with § 13370). It shall serve as an NPDES permit authorizing the Discharger to discharge into waters of the United States as described in Table 1 subject to the WDRs in this Order.
- 2.2. Background and Rationale for Requirements.** The Regional Water Board developed the requirements in this Order based on information the Discharger submitted as part of its application, information obtained through monitoring and reporting programs, and other available information. The Fact Sheet contains background information and rationale for the requirements in this Order and is hereby incorporated into and constitutes findings for this Order. Attachments A through E, G, and H are also incorporated into this Order.
- 2.3. Notification of Interested Parties.** The Regional Water Board notified the Discharger and interested agencies and persons of its intent to prescribe these WDRs and has provided an opportunity to submit written comments and recommendations. Fact Sheet section 8.1 provides details regarding the notification.
- 2.4. Consideration of Public Comment.** The Regional Water Board, in a public meeting, heard and considered all comments pertaining to the discharge. Fact Sheet section 8.3 provides details regarding the public hearing.

THEREFORE, IT IS HEREBY ORDERED that Order R2-2017-0008 (previous order), as amended by Orders R2-2021-0019 and R2-2021-0028, is rescinded upon the effective date of this Order, except for enforcement purposes, and, in order to meet the provisions contained in Water Code division 7 (commencing with § 13000) and regulations adopted thereunder and the provisions of the CWA and regulations and guidelines adopted thereunder, the Discharger shall comply with the requirements in this Order. This action in no way prevents the Regional Water Board from taking enforcement action for violations of the previous order.

### 3. DISCHARGE PROHIBITIONS

- 3.1. Discharge of treated or partially-treated wastewater at a location or in a manner different than described in this Order is prohibited.
- 3.2. Bypass of untreated or partially-treated wastewater to waters of the United States is prohibited, except as provided for in Attachment D section 1.7 of this Order.
- 3.3. Average dry weather influent flow greater than 2.5 million gallons per day is prohibited. Average dry weather influent flow shall be determined from three consecutive dry weather months each year, with compliance based on flows measured at Monitoring Locations INF-001 and INF-002, described in the Monitoring and Reporting Program (MRP, Attachment E).
- 3.4 Any sanitary sewer overflow that results in a discharge of untreated or partially-treated wastewater to waters of the United States is prohibited.
- 3.5 Discharge to the receiving water at Discharge Point 001 is prohibited from May 1 through October 31 unless Facility inflow will exceed the influent storage capacity (after factoring in anticipated wet weather storage needs) and Facility effluent flow will exceed the capacity of the recycled water distribution and storage system (described in Fact Sheet section 4.1.1.5) to meet recycled water demand. Discharge shall not arise from the Discharger’s failure to produce, use, or supply demand for recycled water that the Regional Water Board has authorized. Discharge during the dry season shall be monitored, shall meet applicable effluent limitations and discharge specifications, and shall consist of fully-treated effluent.

If there is discharge during the dry weather season, the Discharger shall describe in the transmittal letter of the next self-monitoring report the reasons for the discharge, with supporting information, and include a table that describes the volume and duration of the discharge to the receiving water. In accordance with the MRP, all discharge volume and quality data shall be reported in the appropriate monthly self-monitoring report.

### 4. EFFLUENT LIMITATIONS

- 4.1. **Effluent Limitations.** The discharge at Discharge Points 001 and 003 shall meet the following effluent limitations, with compliance measured at Monitoring Location EFF-001 as described in the MRP:

**Table 2. Effluent Limitations**

Parameter	Units	Average Monthly	Average Weekly	Maximum Daily	Instantaneous Minimum	Instantaneous Maximum
Biochemical Oxygen Demand, 5-day @ 20°C (BOD <sub>5</sub> )	mg/L	10	15	—	—	—

Parameter	Units	Average Monthly	Average Weekly	Maximum Daily	Instantaneous Minimum	Instantaneous Maximum
Total Suspended Solids (TSS)	mg/L	10	15	—	—	—
pH <sup>(1)</sup>	standard units	—	—	—	6.5	8.5
Turbidity	NTU	—	—	10	—	—
Copper, Total Recoverable	µg/L	8.4	—	16	—	—
Nickel, Total Recoverable	µg/L	6.6	—	11	—	—
Cyanide, Total	µg/L	6.9	—	14	—	—
Dioxin-TEQ	µg/L	1.4 x 10 <sup>-8</sup>	—	2.8 x 10 <sup>-8</sup>	—	—
Ammonia, Total	mg/L as N	2.0	3.0	—	—	—

**Footnote:**

<sup>(1)</sup> If the Discharger monitors pH continuously, pursuant to 40 C.F.R. section 401.17 the Discharger shall be in compliance with this pH limitation provided that both of the following conditions are satisfied: (i) the total time during which the pH is outside the required range shall not exceed 7 hours and 26 minutes in any calendar month; and (ii) no individual excursion from the required pH range shall exceed 60 minutes.

**4.2. Percent Removal.** The average monthly percent removal of biochemical oxygen demand (BOD) and total suspended solids (TSS) at Discharge Points 001 and 003 shall be at least 85 percent. In other words, the arithmetic mean effluent BOD and TSS concentrations at Monitoring Location EFF-001 shall not exceed 15 percent of the flow-weighted arithmetic mean influent BOD and TSS concentrations at Monitoring Locations INF-001 and INF-002. Monitoring Locations INF-001, INF-002, and EFF-001 are described in the MRP.

**4.3. Enterococcus Bacteria.** The discharge at Discharge Points 001 and 003 shall meet the following enterococcus bacteria effluent limitations, with compliance measured at Monitoring Location EFF-001 as described in the MRP:

4.3.1. The six-week rolling geometric mean of enterococcus bacteria shall not exceed 30 colony forming units per 100 milliliters (CFU/100 mL). Compliance with this limit shall be determined weekly by calculating the geometric mean of all enterococcus bacteria sample results from the past six weeks.

4.3.2. No more than 10 percent of all enterococcus bacteria samples collected in a calendar month shall exceed 110 CFU/100 mL. Compliance with this limit shall be determined based on measured sample results. The Discharger shall not report interpolated results. If the Discharger has 9 or fewer sample results in a calendar month, compliance shall be based on the highest result. If the Discharger has 10 to 19 sample results, compliance shall be based on the second highest result, and so on.

**4.4. Acute Toxicity.** The discharge at Discharge Points 001 and 003 shall meet the following acute toxicity effluent limitations, with compliance measured at Monitoring Location EFF-001, as described in the MRP. If the Discharger can

demonstrate that toxicity exceeding this acute toxicity limit is caused solely by ammonia and that the ammonia in the discharge complies with the ammonia effluent limits in Table 2 of this Order, then such toxicity shall not constitute a violation of these acute toxicity limitations.

- 4.4.1. The single sample maximum shall not exhibit less than 70 percent survival (i.e., a bioassay test showing survival of less than 70 percent shall represent a violation of this effluent limitation).
- 4.4.2. The three-sample median shall not exhibit less than 90 percent survival (i.e., a bioassay test showing survival of less than 90 percent shall represent a violation of this effluent limit if one or more of the past two bioassay tests also show less than 90 percent survival).

## **5. RECEIVING WATER LIMITATIONS**

- 5.1. The discharge shall not cause the following conditions at any place in receiving waters:
  - 5.1.1. Floating material, including solids, liquids, foams, and scum, in concentrations that cause nuisance or adversely affect beneficial uses;
  - 5.1.2. Alteration of suspended sediment in such a manner as to cause nuisance or adversely affect beneficial uses or detrimental increase in the concentrations of toxic pollutants in sediments or aquatic life;
  - 5.1.3. Suspended material in concentrations that cause nuisance or adversely affect beneficial uses;
  - 5.1.4. Bottom deposits or aquatic growths to the extent that such deposits or growths cause nuisance or adversely affect beneficial uses;
  - 5.1.5. Alteration of temperature beyond present natural background levels unless it can be demonstrated to the satisfaction of the Regional Water Board that such alteration in temperature does not adversely affect beneficial uses;
  - 5.1.6. Changes in turbidity that cause nuisance or adversely affect beneficial uses, or increases from normal background light penetration or turbidity greater than 10 percent in areas where natural turbidity is greater than 50 nephelometric turbidity units, or above 55 nephelometric turbidity units in areas where natural turbidity is less than or equal to 50 nephelometric turbidity units;
  - 5.1.7. Coloration that causes nuisance or adversely affects beneficial uses;
  - 5.1.8. Visible, floating, suspended, or deposited oil or other products of petroleum origin; or

5.1.9. Toxic or other deleterious substances in concentrations or quantities that cause deleterious effects on wildlife, waterfowl, or other aquatic biota, or render any of these unfit for human consumption, either at levels created in the receiving waters or as a result of biological concentration.

5.2. The discharge shall not cause the following limits to be exceeded at any place in receiving waters within one foot of the water surface:

5.2.1. Dissolved Oxygen 5.0 mg/L, minimum

The median dissolved oxygen concentration for any three consecutive months shall not be less than 80 percent of the dissolved oxygen content at saturation. When natural factors cause concentrations less than that specified above, the discharge shall not cause further reduction in ambient dissolved oxygen concentrations

5.2.2. Dissolved Sulfide Natural background levels

5.2.3. pH The pH shall not be depressed below 6.5 nor raised above 8.5. The discharge shall not cause changes greater than 0.5 pH units in normal ambient pH levels.

5.2.4. Nutrients Waters shall not contain biostimulatory substances in concentrations that promote aquatic growths to the extent that such growths cause nuisance or adversely affect beneficial uses.

5.3. The discharge shall not cause a violation of any water quality standard for receiving waters adopted by the Regional Water Board or State Water Resources Control Board (State Water Board) as required by the CWA and regulations adopted thereunder beyond any mixing zone established through this Order. If more stringent water quality standards are promulgated or approved pursuant to CWA section 303, or amendments thereto, the Regional Water Board may revise or modify this Order in accordance with the more stringent standards.

## 6. PROVISIONS

### 6.1. Standard Provisions

6.1.1. The Discharger shall comply with all "Standard Provisions" in Attachment D.

6.1.2. The Discharger shall comply with all applicable provisions of the "Regional Standard Provisions, and Monitoring and Reporting Requirements for NPDES Wastewater Discharge Permits" in Attachment G.

6.1.3. If there is any conflict, duplication, or overlap between provisions in this Order, the more stringent provision shall apply.

## 6.2. Monitoring and Reporting Provisions

The Discharger shall comply with the Monitoring and Reporting Program (MRP, Attachment E) and future revisions thereto, and applicable monitoring and reporting requirements in Attachments D and G.

## 6.3. Special Provisions

- 6.3.1. **Reopener Provisions.** The Regional Water Board may modify or reopen this Order prior to its expiration date in any of the following circumstances as allowed by law or as otherwise authorized by law. The Discharger may request a permit modification based on any of these circumstances. With any such request, the Discharger shall include antidegradation and anti-backsliding analyses as necessary.
- 6.3.1.1. If present or future investigations demonstrate that the discharges governed by this Order have or will have a reasonable potential to cause or contribute to adverse impacts on water quality or beneficial uses of the receiving waters;
  - 6.3.1.2. If new or revised water quality objectives or total maximum daily loads (TMDLs) come into effect for San Francisco Bay or contiguous water bodies (whether statewide, regional, or site-specific). In such cases, effluent limitations in this Order may be modified as necessary to reflect the updated water quality objectives or wasteload allocations. Adoption of the effluent limitations in this Order is not intended to restrict in any way future modifications based on legally-adopted water quality objectives or TMDLs or as otherwise permitted under federal regulations governing NPDES permit modifications;
  - 6.3.1.3. If translator, dilution, or other water quality studies provide a basis for determining that a permit condition should be modified;
  - 6.3.1.4. If a State Water Board precedential decision, new policy, new law, or new regulation is adopted;
  - 6.3.1.5. If an administrative or judicial decision on a separate NPDES permit or WDRs addresses requirements similar to this discharge; or
  - 6.3.1.6. If the Discharger requests adjustments in effluent limits due to the implementation of stormwater diversion pursuant to the Municipal Regional Stormwater Permit (NPDES Permit CAS612008) for redirecting dry weather and first flush discharges from a storm drain system to the sanitary sewer system as a stormwater pollutant control strategy.

### 6.3.2. Effluent Characterization Study and Report

6.3.2.1. **Study Elements.** The Discharger shall characterize and evaluate the discharge from Discharge Points 001 and 003 as required by the MRP to verify that the reasonable potential analysis conclusions of this Order remain valid and to inform the next permit reissuance. If concentrations of any of the priority pollutants listed in Attachment G, Table B, significantly increase over past performance, the Discharger shall investigate the cause of any such increase. The investigation may include, but need not be limited to, an increase in monitoring frequency, monitoring of internal process streams, and monitoring of influent sources. The Discharger shall establish remedial measures addressing any increase resulting in reasonable potential to cause or contribute to an exceedance of applicable water quality objectives. This requirement may be satisfied through identification of the constituent as a “pollutant of concern” in the Discharger’s Pollutant Minimization Program, described in Provision 6.3.3.

### 6.3.2.2. Reporting Requirements

6.3.2.2.1. **Routine Reporting.** The Discharger shall report the pollutants detected at or above applicable water quality objectives (see Fact Sheet Table F-6 for the objectives) in the transmittal letter for the self-monitoring report associated with the month in which samples were collected. This requirement does not apply to pollutants with effluent limitations (see Table 2 of this Order).

6.3.2.2.2. **Annual Reporting.** The Discharger shall summarize the annual data evaluation and source investigation in the annual self-monitoring report associated with the year in which samples were collected.

### 6.3.3. Pollutant Minimization Program

6.3.3.1. The Discharger shall continue to improve its existing Pollutant Minimization Program to promote minimization of pollutant loadings to the treatment plant and therefore to the receiving waters.

6.3.3.2. The Discharger shall submit an annual report no later than **February 28** of each calendar year. Each annual report shall include at least the following information:

6.3.3.2.1. **Brief description of treatment plant.** The description shall include the service area and treatment plant processes.

6.3.3.2.2. **Discussion of current pollutants of concern.** Periodically, the Discharger shall analyze its circumstances to determine which pollutants are currently a problem and which pollutants may be potential future problems. This discussion shall include the reasons for choosing the pollutants.

- 6.3.3.2.3. **Identification of sources for pollutants of concern.** This discussion shall include how the Discharger intends to estimate and identify pollutant sources. The Discharger shall include sources or potential sources not directly within the ability or authority of the Discharger to control, such as pollutants in the potable water supply and air deposition.
- 6.3.3.2.4. **Identification of tasks to reduce the sources of pollutants of concern.** This discussion shall identify and prioritize tasks to address the Discharger's pollutants of concern. The Discharger may implement the tasks by itself or participate in group, regional, or national tasks that address its pollutants of concern. The Discharger is strongly encouraged to participate in group, regional, or national tasks that address its pollutants of concern whenever it is efficient and appropriate to do so. An implementation timeline shall be included for each task.
- 6.3.3.2.5. **Outreach to employees.** The Discharger shall inform employees about the pollutants of concern, potential sources, and how they might be able to help reduce the discharge of these pollutants of concern into the Facility. The Discharger may provide a forum for employees to provide input.
- 6.3.3.2.6. **Continuation of Public Outreach Program.** The Discharger shall prepare a pollution prevention public outreach program for its service area. Outreach may include participation in existing community events, such as county fairs; initiating new community events, such as displays and contests during Pollution Prevention Week; conducting school outreach programs; conducting plant tours; and providing public information in newspaper articles or advertisements, radio or television stories or spots, newsletters, utility bill inserts, or web sites. Information shall be specific to target audiences. The Discharger shall coordinate with other agencies as appropriate.
- 6.3.3.2.7. **Discussion of criteria used to measure Pollutant Minimization Program and task effectiveness.** The Discharger shall establish criteria to evaluate the effectiveness of its Pollutant Minimization Program. This discussion shall identify the specific criteria used to measure the effectiveness of each task in Provisions 6.3.3.2.3, 6.3.3.2.4, 6.3.3.2.5, and 6.3.3.2.6.
- 6.3.3.2.8. **Documentation of efforts and progress.** This discussion shall detail all of the Discharger's Pollutant Minimization Program activities during the reporting year.
- 6.3.3.2.9. **Evaluation of Pollutant Minimization Program and task effectiveness.** The Discharger shall use the criteria established in Provision 6.3.3.2.7 to evaluate the program and task effectiveness.

- 6.3.3.2.10. **Identification of specific tasks and timelines for future efforts.** Based on the evaluation, the Discharger shall explain how it intends to continue or change its tasks to more effectively reduce the amount of pollutants flowing to the treatment plant, and subsequently in its effluent.
- 6.3.3.3. The Discharger shall develop and conduct a Pollutant Minimization Program as described below when there is evidence that a priority pollutant is present in the effluent above an effluent limitation (e.g., sample results reported as detected but not quantified (DNQ) when the effluent limitation is less than the method detection limit (MDL), sample results from analytical methods more sensitive than those methods required by this Order, presence of whole effluent toxicity, health advisories for fish consumption, or results of benthic or aquatic organism tissue sampling) and either:
- 6.3.3.3.1. A sample result is reported as DNQ and the effluent limitation is less than the Reporting Level (RL); or
- 6.3.3.3.2. A sample result is reported as not detected (ND) and the effluent limitation is less than the MDL, using definitions described in Attachment A and reporting protocols described in the MRP.
- 6.3.3.4. If triggered for a reason set forth in Provision 6.3.3.3, above, the Discharger's Pollutant Minimization Program shall include, but not be limited to, the following actions and submittals:
- 6.3.3.4.1. An annual review and semi-annual monitoring of potential sources of the reportable priority pollutants, which may include fish tissue monitoring and other bio-uptake sampling, or alternative measures when source monitoring is unlikely to produce useful analytical data;
- 6.3.3.4.2. Quarterly monitoring for the reportable priority pollutants in the influent to the wastewater treatment system. The Executive Officer may approve alternative measures when influent monitoring is unlikely to produce useful analytical data;
- 6.3.3.4.3. Submittal of a control strategy designed to proceed toward the goal of maintaining concentrations of the reportable priority pollutants in the effluent at or below the effluent limitation;
- 6.3.3.4.4. Implementation of appropriate cost-effective control measures for the reportable priority pollutants, consistent with the control strategy; and
- 6.3.3.4.5. Inclusion of the following specific items within the annual report required by Provision 6.3.3.2, above:
- 6.3.3.4.5.1. All Pollutant Minimization Program monitoring results for the previous year;

- 6.3.3.4.5.2. List of potential sources of the reportable priority pollutants;
- 6.3.3.4.5.3. Summary of all actions undertaken pursuant to the control strategy; and
- 6.3.3.4.5.4. Description of actions to be taken in the following year.

#### 6.3.4. **Special Provisions for Publicly-Owned Treatment Works**

6.3.4.1. **Pretreatment Program.** The Discharger shall implement and enforce its pretreatment program in accordance with the substantive requirements in federal pretreatment regulations (40 C.F.R. part 403) and the requirements in Attachment H, "Pretreatment Requirements," except that the Discharger is not required to have a pretreatment program that meets the criteria established in 40 C.F.R 403.9 or requires approval in accordance with 40 C.F.R 403.11. The Discharger's responsibilities include, but are not limited to, the following:

- 6.3.4.1.1. Enforcement of the National Pretreatment Standards of 40 C.F.R. sections 403.5 and 403.6;
- 6.3.4.1.2. Implementation of its pretreatment program in accordance with legal authorities, policies, procedures, and financial provisions described in the National Pretreatment Program (40 C.F.R. part 403);
- 6.3.4.1.3. Submission of reports to the State Water Board and the Regional Water Board as described in Attachment H; and
- 6.3.4.1.4. Evaluation of the need to revise local limits under 40 C.F.R. section 403.5(c)(1) and, by March 1, 2023, submission of a report describing the changes, with a plan and schedule for implementation.

#### 6.3.4.2. **Sludge and Biosolids Management**

- 6.3.4.2.1. Sludge and biosolids treatment and storage shall not create a nuisance, such as objectionable odors or flies, or result in groundwater contamination.
- 6.3.4.2.2. The sludge and biosolids treatment and storage site shall have facilities adequate to divert surface runoff from adjacent areas, to protect site boundaries from erosion, and to prevent conditions that would cause drainage from the stored materials. Adequate protection is defined as protection from at least a 100-year storm and the highest possible tidal stage that may occur.
- 6.3.4.2.3. This Order does not authorize permanent onsite sludge or biosolids storage or disposal. The Discharger shall file a Report of Waste Discharge and bring the site into compliance with applicable regulations prior to commencement of any such activity.

6.3.4.3. **Collection System Management.** The Discharger shall properly operate and maintain its collection system (see Attachments D and G, section 1.4), report any noncompliance with respect to its collection system (see Attachment D, section 5.5.1, and Attachment G, sections 5.5.1 and 5.5.2), and mitigate any discharges in violation of this Order associated with its collection system (see Attachments D and G, [section 1.3](#)).

State Water Board Order 2006-0003-DWQ, Statewide General Waste Discharge Requirements for Sanitary Sewer Systems, as amended by State Water Board Order WQ 2013-0058-EXEC (statewide WDRs), contains requirements for operation and maintenance of collection systems and for reporting and mitigating sanitary sewer overflows. The statewide WDRs clearly and specifically stipulate requirements for operation and maintenance and for reporting and mitigating sanitary sewer overflows. Implementing the requirements for operation and maintenance and mitigation of sanitary sewer overflows set forth in the statewide WDRs (and any subsequent order updating these requirements) shall satisfy the corresponding federal NPDES requirements specified in Attachments D and G of this Order for the collection systems. Following the reporting requirements set forth in the statewide WDRs (and any subsequent order updating those requirements) shall satisfy the NPDES reporting requirements for sanitary sewer overflows specified in Attachments D and G.

6.3.5. **Other Special Provisions**

6.3.5.1. **Copper Action Plan.** The Discharger shall implement pretreatment, source control, and pollution prevention for copper in accordance with the following tasks and time schedule:

**Table 3. Copper Action Plan**

Task No.	Task	Deadline
1	<b>Implement Copper Control Program.</b> Continue implementing existing program to reduce identified copper sources.	Implementation shall be ongoing
2	<b>Implement Additional Actions.</b> If the Regional Water Board notifies the Discharger that the three-year rolling mean dissolved copper concentration in San Pablo Bay exceeds 3.0 µg/L, then within 90 days of the notification, evaluate the effluent copper concentration trend and, if it is increasing, develop and begin implementation of additional measures to control copper discharges. Report the conclusion of the trend analysis and provide a schedule for any new actions to be taken within the next 12 months.	With next annual pollution minimization program report due February 28 (at least 90 days following notification)
3	<b>Report Status.</b> Submit an annual report documenting copper control program implementation that evaluates the effectiveness of the actions taken, including any additional actions required by Task 2 above, and provides a schedule for actions to be taken within the next 12 months.	Annually, with annual pollution minimization program report due February 28 each year

6.3.5.2. **Cyanide Action Plan.** The Discharger shall implement monitoring and surveillance, pretreatment, source control, and pollution prevention for cyanide in accordance with the following tasks and time schedule:

**Table 4. Cyanide Action Plan**

Task No.	Task	Deadline
1	<p><b>Review Potential Cyanide Sources.</b> Submit an up-to-date inventory of potential cyanide sources. If no cyanide source is identified, Tasks 2 and 3, below, are not required unless the Discharger receives a request to discharge detectable levels of cyanide to the sewer. In such case, notify the Executive Officer and implement Tasks 2 and 3.</p>	<p>With annual pollution minimization program report due February 28, 2023</p>
2	<p><b>Implement Cyanide Control Program.</b> Implement a control program to minimize cyanide discharges consisting, at a minimum, of the following elements:</p> <ul style="list-style-type: none"> <li>a. Inspect each potential source to assess the need to include that source in the control program.</li> <li>b. Inspect sources included in the control program annually. Inspection elements may be based on U.S. EPA guidance, such as <i>Industrial User Inspection and Sampling Manual for POTWs</i> (EPA 831 B 94 01).</li> <li>c. Develop and distribute educational materials regarding the need to prevent cyanide discharges to sources included in the control program.</li> <li>d. Prepare an emergency monitoring and response plan to be implemented if a significant cyanide discharge occurs.</li> </ul> <p>If the plant influent cyanide concentration exceeds 23 µg/L, the Discharger shall collect a follow-up sample within 5 days of becoming aware of the laboratory results. If the results of the follow-up sample also exceed 23 µg/L, then a “significant cyanide discharge” is occurring.</p>	<p>Implementation shall be ongoing following Executive Officer notification under Task 1</p>
3	<p><b>Implement Additional Measures.</b> If the Regional Water Board notifies the Discharger that ambient monitoring shows cyanide concentrations are 1.0 µg/L or higher in the main body of San Francisco Bay, then within 90 days of the notification, commence actions to identify and abate cyanide sources responsible for the elevated ambient concentrations, report on the progress and effectiveness of the actions taken, and provide a schedule for actions to be taken within the next 12 months.</p>	<p>With next annual pollution minimization program report due February 28 (at least 90 days following notification)</p>
4	<p><b>Report Status of Cyanide Control Program.</b> Submit an annual report documenting cyanide control program implementation and addressing the effectiveness of actions taken, including any additional cyanide controls required by Task 3, above, and provide a schedule for actions to be taken within the next 12 months.</p>	<p>Annually, with annual pollution minimization program report due February 28 each year</p>

6.3.5.3. **Anaerobically-Digestible Material.** If the Discharger receives hauled-in anaerobically-digestible material for injection into an anaerobic digester, the Discharger shall notify the Regional Water Board and develop and implement Standard Operating Procedures for this activity. The Standard Operating Procedures shall be developed by the effective date of this Order or prior to initiation of hauling. The Standard Operating Procedures shall address

material handling, including unloading, screening, or other processing prior to anaerobic digestion; transportation; spill prevention; spill response; avoidance of the introduction of materials that could cause interference, pass through, or upset of the treatment processes; avoidance of prohibited material; vector control; odor control; operation and maintenance; and the disposition of any solid waste segregated from introduction to the digester. The Discharger shall train its staff on the Standard Operating Procedures and maintain records for a minimum of three years for each load received, describing the hauler, waste type, and quantity received. In addition, the Discharger shall maintain records for a minimum of three years for the disposition, location, and quantity of cumulative pre-digestion segregated solid waste hauled offsite.

- 6.3.5.4. **Average Annual Selenium Load.** The Discharger shall report the average annual selenium load with its application for permit reissuance. The average annual load shall be the arithmetic mean of the annual mass discharges for the previous permit term. Annual mass emissions shall be computed as follows:

$$\text{Annual Mass emission rate (kg/day)} = (3.785/N) \sum Q_i C_i$$

where:

$N$  = number of samples in a year

$Q_i$  = flow rate (MGD) associated with the  $i^{\text{th}}$  sample, valid until a new sample is collected

$C_i$  = selenium concentration (mg/L) associated with the  $i^{\text{th}}$  sample, valid until a new sample is collected

When calculating selenium loads, the Discharger shall use estimated values and assume data reported below the method detection limit equal half of the detection limit.

- 6.3.5.5. **Constructed Freshwater Wetlands Management and Management Plan Update.**

- 6.3.5.5.1. The Discharger shall continue to operate and maintain the constructed wetlands in accordance with the Discharger's *Constructed Wetlands Demonstration Project Management Plan* (August 2001) or the most recent version developed in accordance with the Regional Water Board's *Policy on the Use of Wastewater to Create, Restore, and/or Enhance Wetlands* (Resolution 94-086). The Discharger shall include monitoring results from any monitoring described in the plan in its monthly self-monitoring reports (MRP, Attachment E § 9.2.2.1) and shall report results of the wildlife monitoring census described in the plan quarterly. The Discharger shall report any factors that could affect the finding of net environmental benefit (see Fact Sheet section 4.1.2.2) in its annual self-monitoring report (MRP, Attachment E § 9.2.2.2). Such factors could include, for example, changes in

the ability of the discharge to support freshwater wetlands or changes in plant and animal species and uses.

- 6.3.5.5.2. The Discharger shall review its August 2001 constructed wetlands management plan to ensure it remains up-to-date. By August 1, 2023, the Discharger shall submit an updated constructed wetlands management plan that reflects any changes in plant, recycled water, and wetland operational practices. If the Discharger determines that no update is needed, the Discharger shall submit a letter to that effect.

## ATTACHMENT A – DEFINITIONS AND ABBREVIATIONS

### DEFINITIONS

#### **Arithmetic Mean ( $\mu$ )**

Also called the average, sum of measured values divided by the number of samples. For ambient water concentrations, the arithmetic mean is calculated as follows:

$$\text{Arithmetic mean} = \mu = \Sigma x / n$$

where:  $\Sigma x$  is the sum of the measured ambient water concentrations,  
and  $n$  is the number of samples

#### **Average Monthly Effluent Limitation (AMEL)**

Highest allowable average of daily discharges over a calendar month, calculated as the sum of all daily discharges measured during a calendar month divided by the number of daily discharges measured during that month.

#### **Average Weekly Effluent Limitation (AWEL)**

Highest allowable average of daily discharges over a calendar week (Sunday through Saturday), calculated as the sum of all daily discharges measured during a calendar week divided by the number of daily discharges measured during that week.

#### **Bioaccumulative**

Taken up by an organism from its surrounding medium through gill membranes, through epithelial tissue, or from food and subsequently concentrated and retained in the body of the organism.

#### **Carcinogenic**

Known to cause cancer in living organisms.

#### **Coefficient of Variation (CV)**

Measure of data variability calculated as the estimated standard deviation divided by the arithmetic mean of the observed values.

#### **Daily Discharge**

Either: (1) the total mass of a constituent discharged over a calendar day (12:00 a.m. through 11:59 p.m.) or any 24-hour period that reasonably represents a calendar day for purposes of sampling (as specified in the permit) for a constituent with limitations expressed in units of mass; or (2) the unweighted arithmetic mean measurement of a constituent over a day for a constituent with limitations expressed in other units of measurement (e.g., concentration).

The daily discharge may be determined by the analytical results of a composite sample taken over the course of one day (a calendar day or other 24-hour period defined as a day) or by the arithmetic mean of analytical results from one or more grab samples taken over the course of the day.

For composite sampling, if 1 day is defined as a 24-hour period other than a calendar day, the analytical result for the 24-hour period is considered the result for the calendar day in which the 24-hour period ends.

### **Detected, but Not Quantified (DNQ)**

Sample results less than the RL, but greater than or equal to the laboratory's MDL. Sample results reported as DNQ are estimated concentrations.

### **Dilution Credit**

Amount of dilution granted to a discharge in the calculation of a water quality-based effluent limitation, based on the allowance of a specified mixing zone. It is calculated from the dilution ratio or determined through conducting a mixing zone study or modeling of the discharge and receiving water.

### **Effluent Concentration Allowance (ECA)**

Value derived from the water quality criterion or objective, dilution credit, and ambient background concentration that is used, in conjunction with the CV for the effluent monitoring data, to calculate a long-term average (LTA) discharge concentration. The ECA has the same meaning as wasteload allocation (WLA) as used in U.S. EPA guidance (*Technical Support Document for Water Quality-based Toxics Control*, March 1991, second printing, EPA/505/2-90-001).

### **Enclosed Bays**

Indentations along the coast that enclose an area of oceanic water within distinct headlands or harbor works. Enclosed bays include all bays where the narrowest distance between the headlands or outermost harbor works is less than 75 percent of the greatest dimension of the enclosed portion of the bay. Enclosed bays include, but are not limited to, Humboldt Bay, Bodega Harbor, Tomales Bay, Drake's Estero, San Francisco Bay, Morro Bay, Los Angeles-Long Beach Harbor, Upper and Lower Newport Bay, Mission Bay, and San Diego Bay. Enclosed bays do not include inland surface waters or ocean waters.

### **Estimated Chemical Concentration**

Concentration that results from the confirmed detection of a substance below the ML by the analytical method.

### **Estuaries**

Waters, including coastal lagoons, located at the mouths of streams that serve as areas of mixing for fresh and ocean waters. Coastal lagoons and mouths of streams that are temporarily separated from the ocean by sandbars shall be considered estuaries. Estuarine waters are considered to extend from a bay or the open ocean to a point upstream where there is no significant mixing of fresh water and seawater. Estuarine waters included, but are not limited to, the Sacramento-San Joaquin Delta, as defined in Water Code section 12220; Suisun Bay; Carquinez Strait downstream to the Carquinez Bridge; and appropriate areas of the Smith, Mad, Eel, Noyo, Russian, Klamath, San Diego, and Otay rivers. Estuaries do not include inland surface waters or ocean waters.

### **Inland Surface Waters**

All surface waters of the state that are not the ocean, enclosed bays, or estuaries.

### **Instantaneous Maximum Effluent Limitation**

Highest allowable value for any single grab sample or aliquot (i.e., each grab sample or aliquot is independently compared to the instantaneous maximum limitation).

### **Instantaneous Minimum Effluent Limitation**

Lowest allowable value for any single grab sample or aliquot (i.e., each grab sample or aliquot is independently compared to the instantaneous minimum limitation).

### **Maximum Daily Effluent Limitation (MDEL)**

Highest allowable daily discharge of a pollutant, over a calendar day (or 24-hour period). For pollutants with limitations expressed in units of mass, the daily discharge is calculated as the total mass of the pollutant discharged over the day. For pollutants with limitations expressed in other units of measurement, the daily discharge is calculated as the arithmetic mean measurement of the pollutant over the day.

### **Median**

Middle measurement in a data set. The median of a data set is found by first arranging the measurements in order of magnitude (either increasing or decreasing order). If the number of measurements ( $n$ ) is odd, then the median =  $X_{(n+1)/2}$ . If  $n$  is even, then the median =  $(X_{n/2} + X_{(n/2+1)})/2$  (i.e., the midpoint between  $n/2$  and  $n/2+1$ ).

### **Method Detection Limit (MDL)**

Minimum concentration of a substance that can be reported with 99 percent confidence that the measured concentration is distinguishable from method blank results, as defined in 40 C.F.R. part 136, Appendix B.

### **Minimum Level (ML)**

Concentration at which the entire analytical system must give a recognizable signal and acceptable calibration point. The ML is the concentration in a sample that is equivalent to the concentration of the lowest calibration standard analyzed by a specific analytical procedure, assuming that all the method specified sample weights, volumes, and processing steps have been followed.

### **Mixing Zone**

Limited volume of receiving water allocated for mixing with a wastewater discharge where water quality criteria can be exceeded without causing adverse effects to the overall water body.

### **Not Detected (ND)**

Sample results less than the laboratory's MDL.

### **Persistent Pollutants**

Substances for which degradation or decomposition in the environment is nonexistent or very slow.

### **Pollutant Minimization Program**

Program of waste minimization and pollution prevention actions that include, but are not limited to, product substitution, waste stream recycling, alternative waste management methods, and education of the public and businesses. The goal of a Pollutant Minimization Program is to reduce all potential sources of a priority pollutant through pollutant minimization (control) strategies, including pollution prevention measures as appropriate, to maintain the effluent concentration at or below the water quality-based effluent limitation. Pollution prevention measures may be particularly appropriate for persistent bioaccumulative priority pollutants where there is evidence that beneficial uses are being impacted. Cost effectiveness may be considered when establishing the requirements of a Pollutant Minimization Program. The completion and implementation of a Pollution Prevention Plan, if required pursuant to Water Code section 13263.3(d), is considered to fulfill the Pollutant Minimization Program requirements.

### **Pollution Prevention**

Any action that causes a net reduction in the use or generation of a hazardous substance or other pollutant discharged into water and includes, but is not limited to, input change, operational improvement, production process change, and product reformulation (as defined in Water Code section 13263.3). Pollution prevention does not include actions that merely shift a pollutant in wastewater from one environmental medium to another environmental medium, unless clear environmental benefits of such an approach are identified to the satisfaction of the State Water Resources Control Board or Regional Water Board.

### **Reporting Level (RL)**

ML (and its associated analytical method) chosen by the Discharger for reporting and compliance determination from the MLs included in this Order, including an additional factor if applicable as discussed herein. For priority pollutants, the MLs included in this Order correspond to approved analytical methods for reporting a sample result that are selected by the Regional Water Board either from State Implementation Plan (SIP) Appendix 4 in accordance with SIP section 2.4.2 or established in accordance with SIP section 2.4.3. The ML is based on the proper application of method-based analytical procedures for sample preparation and the absence of any matrix interferences. Other factors may be applied to the ML depending on the specific sample preparation steps employed. For example, the treatment typically applied in cases where there are matrix-effects is to dilute the sample or sample aliquot by a factor of ten. In such cases, this additional factor must be applied to the ML in the computation of the RL.

### **Source of Drinking Water**

Any water designated as municipal or domestic supply (MUN) beneficial use.

### **Standard Deviation ( $\sigma$ )**

Measure of variability calculated as follows:

$$\text{Standard deviation} = \sigma = (\sum[(x - \mu)^2]/(n - 1))^{0.5}$$

where:  $x$  is the observed value  
 $\mu$  is the arithmetic mean of the observed values  
 $n$  is the number of samples

### **Toxicity Reduction Evaluation (TRE)**

Study conducted in a step-wise process designed to identify the causative agents of effluent or ambient toxicity, isolate the sources of toxicity, evaluate the effectiveness of toxicity control options, and then confirm the reduction in toxicity. The first steps of the TRE consist of the collection of data relevant to the toxicity, including additional toxicity testing, and an evaluation of facility operations and maintenance practices, and best management practices. A Toxicity Identification Evaluation (TIE) may be required as part of the TRE, if appropriate. A TIE is a set of procedures to identify the specific chemicals responsible for toxicity. These procedures are performed in three phases (characterization, identification, and confirmation) using aquatic organism toxicity tests.

## ABBREVIATIONS

<b>%</b>	Percent
<b>µg/L</b>	Micrograms per liter
<b>1/Blending Event</b>	Once per blending event
<b>1/Day</b>	Once per day
<b>1/Month</b>	Once per month
<b>1/Quarter</b>	Once per quarter
<b>1/Week</b>	Once per week
<b>1/Year</b>	Once per year

3.	STANDARD PROVISIONS – MONITORING .....	D-6
4.	STANDARD PROVISIONS – RECORDS .....	D-6
5.	STANDARD PROVISIONS – REPORTING.....	D-7
6.	STANDARD PROVISIONS – ENFORCEMENT .....	D-12
7.	ADDITIONAL PROVISIONS – NOTIFICATION LEVELS .....	D-12

## ATTACHMENT D – STANDARD PROVISIONS

### 1. STANDARD PROVISIONS – PERMIT COMPLIANCE

#### 1.1. Duty to Comply

- 1.1.1. The Discharger must comply with all of the terms, requirements, and conditions of this Order. Any noncompliance constitutes a violation of the Clean Water Act (CWA) and the California Water Code and is grounds for enforcement action; permit termination, revocation and reissuance, or modification; denial of a permit renewal application; or a combination thereof. (40 C.F.R. § 122.41(a); Wat. Code, §§ 13261, 13263, 13265, 13268, 13000, 13001, 13304, 13350, 13385.)
- 1.1.2. The Discharger shall comply with effluent standards or prohibitions established under CWA section 307(a) for toxic pollutants within the time provided in the regulations that establish these standards or prohibitions, even if this Order has not yet been modified to incorporate the requirement. (40 C.F.R. § 122.41(a)(1).)

**1.2. Need to Halt or Reduce Activity Not a Defense.** It shall not be a defense for a Discharger in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this Order. (40 C.F.R. § 122.41(c).)

**1.3. Duty to Mitigate.** The Discharger shall take all reasonable steps to minimize or prevent any discharge in violation of this Order that has a reasonable likelihood of adversely affecting human health or the environment. (40 C.F.R. § 122.41(d).)

**1.4. Proper Operation and Maintenance.** The Discharger shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) that are installed or used by the Discharger to achieve compliance with the conditions of this Order. Proper operation and maintenance also includes adequate laboratory controls and appropriate quality assurance procedures. This provision requires the operation of backup or auxiliary facilities or similar systems that are installed by a Discharger only when necessary to achieve compliance with the conditions of this Order. (40 C.F.R. § 122.41(e).)

#### 1.5. Property Rights

- 1.5.1. This Order does not convey any property rights of any sort or any exclusive privileges. (40 C.F.R. § 122.41(g).)
- 1.5.2. The issuance of this Order does not authorize any injury to persons or property or invasion of other private rights, or any infringement of state or local law or regulations. (40 C.F.R. § 122.5(c).)

**1.6. Inspection and Entry.** The Discharger shall allow the Regional Water Board, State Water Board, U.S. EPA, and/or their authorized representatives (including an authorized contractor acting as their representative), upon the presentation of credentials and other documents, as may be required by law, to (33 U.S.C. § 1318(a)(4)(B); 40 C.F.R. § 122.41(i); Wat. Code, §§ 13267, 13383):

- 1.6.1. Enter upon the Discharger's premises where a regulated facility or activity is located or conducted, or where records are kept under the conditions of this Order (33 U.S.C. § 1318(a)(4)(B)(i); 40 C.F.R. § 122.41(i)(1); Wat. Code, §§ 13267, 13383);
- 1.6.2. Have access to and copy, at reasonable times, any records that must be kept under the conditions of this Order (33 U.S.C. § 1318(a)(4)(B)(ii); 40 C.F.R. § 122.41(i)(2); Wat. Code, §§ 13267, 13383);
- 1.6.3. Inspect and photograph, at reasonable times, any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this Order (33 U.S.C. § 1318(a)(4)(B)(ii); 40 C.F.R. § 122.41(i)(3); Wat. Code, §§ 13267, 13383); and
- 1.6.4. Sample or monitor, at reasonable times, for the purposes of ensuring Order compliance or as otherwise authorized by the CWA or the Water Code, any substances or parameters at any location. (33 U.S.C. § 1318(a)(4)(B); 40 C.F.R. § 122.41(i)(4); Wat. Code, §§ 13267, 13383.)

## **1.7. Bypass**

### **1.7.1. Definitions**

- 1.7.1.1. "Bypass" means the intentional diversion of waste streams from any portion of a treatment facility. (40 C.F.R. § 122.41(m)(1)(i).)
- 1.7.1.2. "Severe property damage" means substantial physical damage to property; damage to the treatment facilities, which causes them to become inoperable; or substantial and permanent loss of natural resources that can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production. (40 C.F.R. § 122.41(m)(1)(ii).)

1.7.2. **Bypass not exceeding limitations.** The Discharger may allow any bypass to occur that does not cause exceedances of effluent limitations, but only if it is for essential maintenance to ensure efficient operation. These bypasses are not subject to the provisions listed in Standard Provisions – Permit Compliance sections 1.7.3, 1.7.4, and 1.7.5 below. (40 C.F.R. § 122.41(m)(2).)

1.7.3. **Prohibition of bypass.** Bypass is prohibited, and the Regional Water Board may take enforcement action against a Discharger for bypass, unless (40 C.F.R. § 122.41(m)(4)(i)):

- 1.7.3.1. Bypass was unavoidable to prevent loss of life, personal injury, or severe property damage (40 C.F.R. § 122.41(m)(4)(i)(A));
- 1.7.3.2. There were no feasible alternatives to the bypass, such as the use of auxiliary treatment facilities, retention of untreated wastes, or maintenance during normal periods of equipment downtime. This condition is not satisfied if adequate back up equipment should have been installed in the exercise of reasonable engineering judgment to prevent a bypass that occurred during normal periods of equipment downtime or preventive maintenance (40 C.F.R. § 122.41(m)(4)(i)(B)); and
- 1.7.3.3. The Discharger submitted notice to the Regional Water Board as required under Standard Provisions – Permit Compliance section 1.7.5 below. (40 C.F.R. § 122.41(m)(4)(i)(C).)
- 1.7.4. **Approval.** The Regional Water Board may approve an anticipated bypass, after considering its adverse effects, if the Regional Water Board determines that it will meet the three conditions listed in Standard Provisions – Permit Compliance section 1.7.3 above. (40 C.F.R. § 122.41(m)(4)(ii).)
- 1.7.5. **Notice**
  - 1.7.5.1. **Anticipated bypass.** If the Discharger knows in advance of the need for a bypass, it shall submit prior notice, if possible, at least 10 days before the date of the bypass. The notice shall be sent to the Regional Water Board. As of December 21, 2025, a notice shall also be submitted electronically to the initial recipient defined in Standard Provisions – Reporting section 5.10 below. Notices shall comply with 40 C.F.R. part 3, 40 C.F.R. section 122.22, and 40 C.F.R. part 127. (40 C.F.R. § 122.41(m)(3)(i).)
  - 1.7.5.2. **Unanticipated bypass.** The Discharger shall submit a notice of an unanticipated bypass as required in Standard Provisions – Reporting section 5.5 below (24-hour notice). The notice shall be sent to the Regional Water Board. As of December 21, 2025, a notice shall also be submitted electronically to the initial recipient defined in Standard Provisions – Reporting section 5.10 below. Notices shall comply with 40 C.F.R. part 3, 40 C.F.R. section 122.22, and 40 C.F.R. part 127. (40 C.F.R. § 122.41(m)(3)(ii).)
- 1.8. **Upset.** Upset means an exceptional incident in which there is unintentional and temporary noncompliance with technology-based permit effluent limitations because of factors beyond the reasonable control of the Discharger. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation. (40 C.F.R. § 122.41(n)(1).)

- 1.8.1. **Effect of an upset.** An upset constitutes an affirmative defense to an action brought for noncompliance with such technology-based permit effluent limitations if the requirements of Standard Provisions – Permit Compliance section 1.8.2 below are met. No determination made during administrative review of claims that noncompliance was caused by upset, and before an action for noncompliance, is final administrative action subject to judicial review. (40 C.F.R. § 122.41(n)(2).)
- 1.8.2. **Conditions necessary for a demonstration of upset.** A Discharger who wishes to establish the affirmative defense of upset shall demonstrate, through properly signed, contemporaneous operating logs or other relevant evidence that (40 C.F.R. § 122.41(n)(3)):
  - 1.8.2.1. An upset occurred and that the Discharger can identify the cause(s) of the upset (40 C.F.R. § 122.41(n)(3)(i));
  - 1.8.2.2. The permitted facility was, at the time, being properly operated (40 C.F.R. § 122.41(n)(3)(ii));
  - 1.8.2.3. The Discharger submitted notice of the upset as required in Standard Provisions – Reporting section 5.5.2.2 below (24-hour notice) (40 C.F.R. § 122.41(n)(3)(iii)); and
  - 1.8.2.4. The Discharger complied with any remedial measures required under Standard Provisions – Permit Compliance section 1.3 above. (40 C.F.R. § 122.41(n)(3)(iv).)
- 1.8.3. **Burden of proof.** In any enforcement proceeding, the Discharger seeking to establish the occurrence of an upset has the burden of proof. (40 C.F.R. § 122.41(n)(4).)

## 2. STANDARD PROVISIONS – PERMIT ACTION

- 2.1. **General.** This Order may be modified, revoked and reissued, or terminated for cause. The filing of a request by the Discharger for modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance does not stay any Order condition. (40 C.F.R. § 122.41(f).)
- 2.2. **Duty to Reapply.** If the Discharger wishes to continue an activity regulated by this Order after the expiration date of this Order, the Discharger must apply for and obtain a new permit. (40 C.F.R. § 122.41(b).)
- 2.3. **Transfers.** This Order is not transferable to any person except after notice to the Regional Water Board. The Regional Water Board may require modification or revocation and reissuance of the Order to change the name of the Discharger and incorporate such other requirements as may be necessary under the CWA and Water Code. (40 C.F.R. §§ 122.41(l)(3), 122.61.)

### **3. STANDARD PROVISIONS – MONITORING**

- 3.1.** Samples and measurements taken for the purpose of monitoring shall be representative of the monitored activity. (40 C.F.R. § 122.41(j)(1).)
- 3.2.** Monitoring must be conducted according to test procedures approved under 40 C.F.R. part 136 for the analyses of pollutants unless another method is required under 40 C.F.R. chapter 1, subchapter N. Monitoring must be conducted according to sufficiently sensitive test methods approved under 40 C.F.R. part 136 for the analysis of pollutants or pollutant parameters or as required under 40 C.F.R. chapter 1, subchapter N. For the purposes of this paragraph, a method is sufficiently sensitive when:
  - 3.2.1.** The method minimum level (ML) is at or below the level of the most stringent effluent limitation established in the permit for the measured pollutant or pollutant parameter, and either the method ML is at or below the level of the most stringent applicable water quality criterion for the measured pollutant or pollutant parameter or the method ML is above the applicable water quality criterion but the amount of the pollutant or pollutant parameter in the facility's discharge is high enough that the method detects and quantifies the level of the pollutant or pollutant parameter in the discharge; or
  - 3.2.2.** The method has the lowest ML of the analytical methods approved under 40 C.F.R. part 136 or required under 40 C.F.R. chapter 1, subchapter N, for the measured pollutant or pollutant parameter.

In the case of pollutants or pollutant parameters for which there are no approved methods under 40 C.F.R. part 136 or otherwise required under 40 C.F.R. chapter 1, subchapter N, monitoring must be conducted according to a test procedure specified in this Order for such pollutants or pollutant parameters. (40 C.F.R. §§ 122.21(e)(3), 122.41(j)(4), 122.44(i)(1)(iv).)

### **4. STANDARD PROVISIONS – RECORDS**

- 4.1.** The Discharger shall retain records of all monitoring information, including all calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation, copies of all reports required by this Order, and records of all data used to complete the application for this Order, for a period of at least three (3) years from the date of the sample, measurement, report, or application. This period may be extended by request of the Regional Water Board Executive Officer at any time. (40 C.F.R. § 122.41(j)(2).)
- 4.2.** Records of monitoring information shall include:
  - 4.2.1.** The date, exact place, and time of sampling or measurements (40 C.F.R. § 122.41(j)(3)(i));

- 4.2.2. The individual(s) who performed the sampling or measurements (40 C.F.R. § 122.41(j)(3)(ii));
  - 4.2.3. The date(s) analyses were performed (40 C.F.R. § 122.41(j)(3)(iii));
  - 4.2.4. The individual(s) who performed the analyses (40 C.F.R. § 122.41(j)(3)(iv));
  - 4.2.5. The analytical techniques or methods used (40 C.F.R. § 122.41(j)(3)(v)); and
  - 4.2.6. The results of such analyses. (40 C.F.R. § 122.41(j)(3)(vi).)
- 4.3.** Claims of confidentiality for the following information will be denied (40 C.F.R. § 122.7(b)):
- 4.3.1. The name and address of any permit applicant or Discharger (40 C.F.R. § 122.7(b)(1)); and
  - 4.3.2. Permit applications and attachments, permits, and effluent data. (40 C.F.R. § 122.7(b)(2).)

## **5. STANDARD PROVISIONS – REPORTING**

**5.1. Duty to Provide Information.** The Discharger shall furnish to the Regional Water Board, State Water Board, or U.S. EPA within a reasonable time, any information that the Regional Water Board, State Water Board, or U.S. EPA may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this Order or to determine compliance with this Order. Upon request, the Discharger shall also furnish to the Regional Water Board, State Water Board, or U.S. EPA copies of records required to be kept by this Order. (40 C.F.R. § 122.41(h); Wat. Code, §§ 13267, 13383.)

### **5.2. Signatory and Certification Requirements**

- 5.2.1. All applications, reports, or information submitted to the Regional Water Board, State Water Board, and/or U.S. EPA shall be signed and certified in accordance with Standard Provisions – Reporting sections 5.2.2, 5.2.3, 5.2.4, 5.2.5, and 5.2.6 below. (40 C.F.R. § 122.41(k).)
- 5.2.2. For a corporation, all permit applications shall be signed by a responsible corporate officer. For the purpose of this section, a responsible corporate officer means: (1) a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy- or decision-making functions for the corporation, or (2) the manager of one or more manufacturing, production, or operating facilities, provided the manager is authorized to make management decisions that govern the operation of the regulated facility, including having the explicit or implicit duty of making major capital investment recommendations, and initiating and directing other comprehensive measures to ensure long term environmental

compliance with environmental laws and regulations; the manager can ensure that the necessary systems are established or actions taken to gather complete and accurate information for permit application requirements; and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures. (40 C.F.R. § 122.22(a)(1).)

For a partnership or sole proprietorship, all permit applications shall be signed by a general partner or the proprietor, respectively. (40 C.F.R. § 122.22(a)(2).)

For a municipal, state, federal, or other public agency, all permit applications shall be signed by either a principal executive officer or ranking elected official. For purposes of this provision, a principal executive officer of a federal agency includes (1) the chief executive officer of the agency, or (2) a senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., Regional Administrators of U.S. EPA). (40 C.F.R. § 122.22(a)(3).)

- 5.2.3. All reports required by this Order and other information requested by the Regional Water Board, State Water Board, or U.S. EPA shall be signed by a person described in Standard Provisions – Reporting section 5.2.2 above, or by a duly authorized representative of that person. A person is a duly authorized representative only if:
  - 5.2.3.1. The authorization is made in writing by a person described in Standard Provisions – Reporting section 5.2.2 above (40 C.F.R. § 122.22(b)(1));
  - 5.2.3.2. The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity, such as the position of plant manager, operator of a well or a well field, superintendent, position of equivalent responsibility, or an individual or position having overall responsibility for environmental matters for the company. (A duly authorized representative may thus be either a named individual or any individual occupying a named position.) (40 C.F.R. § 122.22(b)(2)); and
  - 5.2.3.3. The written authorization is submitted to the Regional Water Board and State Water Board. (40 C.F.R. § 122.22(b)(3).)
- 5.2.4. If an authorization under Standard Provisions – Reporting section 5.2.3 above is no longer accurate because a different individual or position has responsibility for the overall operation of the facility, a new authorization satisfying the requirements of Standard Provisions – Reporting section 5.2.3 above must be submitted to the Regional Water Board and State Water Board prior to or together with any reports, information, or applications to be signed by an authorized representative. (40 C.F.R. § 122.22(c).)
- 5.2.5. Any person signing a document under Standard Provisions – Reporting section 5.2.2 or 5.2.3 above shall make the following certification:

“I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.” (40 C.F.R. § 122.22(d).)

- 5.2.6. Any person providing the electronic signature for documents described in Standard Provisions – Reporting sections 5.2.1, 5.2.2, or 5.2.3 that are submitted electronically shall meet all relevant requirements of Standard Provisions – Reporting section 5.2, and shall ensure that all relevant requirements of 40 C.F.R. part 3 (Cross-Media Electronic Reporting) and 40 C.F.R. part 127 (NPDES Electronic Reporting Requirements) are met for that submission. (40 C.F.R. § 122.22(e).)

### **5.3. Monitoring Reports**

- 5.3.1. Monitoring results shall be reported at the intervals specified in the Monitoring and Reporting Program (Attachment E) in this Order. (40 C.F.R. § 122.41(l)(4).)
- 5.3.2. Monitoring results must be reported on a Discharge Monitoring Report (DMR) form or forms provided or specified by the Regional Water Board or State Water Board. All reports and forms must be submitted electronically to the initial recipient defined in Standard Provisions – Reporting section 5.10 and comply with 40 C.F.R. part 3, 40 C.F.R. section 122.22, and 40 C.F.R. part 127. (40 C.F.R. § 122.41(l)(4)(i).)
- 5.3.3. If the Discharger monitors any pollutant more frequently than required by this Order using test procedures approved under 40 C.F.R. part 136, or another method required for an industry-specific waste stream under 40 C.F.R. chapter 1, subchapter N, the results of such monitoring shall be included in the calculation and reporting of the data submitted in the DMR or reporting form specified by the Regional Water Board or State Water Board. (40 C.F.R. § 122.41(l)(4)(ii).)
- 5.3.4. Calculations for all limitations that require averaging of measurements shall utilize an arithmetic mean unless otherwise specified in this Order. (40 C.F.R. § 122.41(l)(4)(iii).)

- 5.4. Compliance Schedules.** Reports of compliance or noncompliance with, or any progress reports on, interim and final requirements contained in any compliance schedule of this Order shall be submitted no later than 14 days following each schedule date. (40 C.F.R. § 122.41(l)(5).)

## 5.5. Twenty-Four Hour Reporting

- 5.5.1. The Discharger shall report any noncompliance that may endanger health or the environment. Any information shall be provided orally within 24 hours from the time the Discharger becomes aware of the circumstances. A written report shall also be provided within five (5) days of the time the Discharger becomes aware of the circumstances. The report shall contain a description of the noncompliance and its cause; the period of noncompliance, including exact dates and times, and, if the noncompliance has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent reoccurrence of the noncompliance.

For noncompliance related to combined sewer overflows, sanitary sewer overflows, or bypass events, these reports must include the data described above (with the exception of time of discovery) as well as the type of event (i.e., combined sewer overflow, sanitary sewer overflow, or bypass event), type of overflow structure (e.g., manhole, combined sewer overflow outfall), discharge volume untreated by the treatment works treating domestic sewage, types of human health and environmental impacts of the event, and whether the noncompliance was related to wet weather.

As of December 21, 2025, all reports related to combined sewer overflows, sanitary sewer overflows, or bypass events must be submitted to the Regional Water Board and must be submitted electronically to the initial recipient defined in Standard Provisions – Reporting section 5.10. The reports shall comply with 40 C.F.R. part 3, 40 C.F.R. section 122.22, and 40 C.F.R. part 127. The Regional Water Board may also require the Discharger to electronically submit reports not related to combined sewer overflows, sanitary sewer overflows, or bypass events under this section. (40 C.F.R. § 122.41(l)(6)(i).)

- 5.5.2. The following shall be included as information that must be reported within 24 hours:
- 5.5.2.1. Any unanticipated bypass that exceeds any effluent limitation in this Order. (40 C.F.R. § 122.41(l)(6)(ii)(A).)
- 5.5.2.2. Any upset that exceeds any effluent limitation in this Order. (40 C.F.R. § 122.41(l)(6)(ii)(B).)
- 5.5.3. The Regional Water Board may waive the above required written report on a case-by-case basis if an oral report has been received within 24 hours. (40 C.F.R. § 122.41(l)(6)(ii)(B).)

- 5.6. Planned Changes.** The Discharger shall give notice to the Regional Water Board as soon as possible of any planned physical alterations or additions to the permitted facility. Notice is required under this provision only when (40 C.F.R. § 122.41(l)(1)):

- 5.6.1. The alteration or addition to a permitted facility may meet one of the criteria for determining whether a facility is a new source in 40 C.F.R. section 122.29(b) (40 C.F.R. § 122.41(l)(1)(i)); or
- 5.6.2. The alteration or addition could significantly change the nature or increase the quantity of pollutants discharged. This notification applies to pollutants that are not subject to effluent limitations in this Order unless the discharge is an existing manufacturing, commercial, mining, or silvicultural discharge as referenced in 40 C.F.R. section 122.42(a). (40 C.F.R. § 122.41(l)(1)(ii).) If the discharge is an existing manufacturing, commercial, mining, or silvicultural discharge as referenced in 40 C.F.R. section 122.42(a), this notification applies to pollutants that are subject neither to effluent limitations in this Order nor to notification requirements under 40 C.F.R. section 122.42(a)(1) (see Additional Provisions – Notification Levels section 7.1.1). (40 C.F.R. § 122.41(l)(1)(ii).)
- 5.7. Anticipated Noncompliance.** The Discharger shall give advance notice to the Regional Water Board of any planned changes in the permitted facility or activity that may result in noncompliance with this Order’s requirements. (40 C.F.R. § 122.41(l)(2).)
- 5.8. Other Noncompliance.** The Discharger shall report all instances of noncompliance not reported under Standard Provisions – Reporting sections 5.3, 5.4, and 5.5 above at the time monitoring reports are submitted. The reports shall contain the information listed in Standard Provision – Reporting section 5.5 above. For noncompliance related to combined sewer overflows, sanitary sewer overflows, or bypass events, these reports shall contain the information described in Standard Provision – Reporting section 5.5 and the applicable required data in appendix A to 40 C.F.R. part 127. The Regional Water Board may also require the Discharger to electronically submit reports not related to combined sewer overflows, sanitary sewer overflows, or bypass events under this section. (40 C.F.R. § 122.41(l)(7).)
- 5.9. Other Information.** When the Discharger becomes aware that it failed to submit any relevant facts in a permit application, or submitted incorrect information in a permit application or in any report to the Regional Water Board, State Water Board, or U.S. EPA, the Discharger shall promptly submit such facts or information. (40 C.F.R. § 122.41(l)(8).)
- 5.10. Initial Recipient for Electronic Reporting Data.** The owner, operator, or duly authorized representative is required to electronically submit NPDES information specified in appendix A to 40 C.F.R. part 127 to the initial recipient defined in 40 C.F.R. section 127.2(b). U.S. EPA will identify and publish the list of initial recipients on its website and in the Federal Register, by state and by NPDES data group [see 40 C.F.R. section 127.2(c)]. U.S. EPA will update and maintain this list. (40 C.F.R. § 122.41(l)(9).)

## 6. STANDARD PROVISIONS – ENFORCEMENT

6.1. The Regional Water Board is authorized to enforce the terms of this permit under several provisions of the Water Code, including, but not limited to, Water Code sections 13268, 13385, 13386, and 13387.

## 7. ADDITIONAL PROVISIONS – NOTIFICATION LEVELS

7.1. **Non-Municipal Facilities.** Existing manufacturing, commercial, mining, and silvicultural Dischargers shall notify the Regional Water Board as soon as they know or have reason to believe (40 C.F.R. § 122.42(a)):

7.1.1. That any activity has occurred or will occur that would result in the discharge, on a routine or frequent basis, of any toxic pollutant that is not limited in this Order, if that discharge will exceed the highest of the following “notification levels” (40 C.F.R. § 122.42(a)(1)):

7.1.1.1. 100 micrograms per liter ( $\mu\text{g/L}$ ) (40 C.F.R. § 122.42(a)(1)(i));

7.1.1.2. 200  $\mu\text{g/L}$  for acrolein and acrylonitrile; 500  $\mu\text{g/L}$  for 2,4 dinitrophenol and 2-methyl 4,6 dinitrophenol; and 1 milligram per liter ( $\text{mg/L}$ ) for antimony (40 C.F.R. § 122.42(a)(1)(ii));

7.1.1.3. Five (5) times the maximum concentration reported for that pollutant in the Report of Waste Discharge (40 C.F.R. § 122.42(a)(1)(iii)); or

7.1.1.4. The level established by the Regional Water Board in accordance with 40 C.F.R. section 122.44(f). (40 C.F.R. § 122.42(a)(1)(iv).)

7.1.2. That any activity has occurred or will occur that would result in the discharge, on a non-routine or infrequent basis, of any toxic pollutant that is not limited in this Order, if that discharge will exceed the highest of the following “notification levels” (40 C.F.R. § 122.42(a)(2)):

7.1.2.1. 500 micrograms per liter ( $\mu\text{g/L}$ ) (40 C.F.R. § 122.42(a)(2)(i));

7.1.2.2. 1 milligram per liter ( $\text{mg/L}$ ) for antimony (40 C.F.R. § 122.42(a)(2)(ii));

7.1.2.3. Ten (10) times the maximum concentration reported for that pollutant in the Report of Waste Discharge (40 C.F.R. § 122.42(a)(2)(iii)); or

7.1.2.4. The level established by the Regional Water Board in accordance with 40 C.F.R. section 122.44(f). (40 C.F.R. § 122.42(a)(2)(iv).)

## 7.2 Publicly Owned Treatment Works (POTWs)

7.2.1. All POTWs shall provide adequate notice to the Regional Water Board of any new introduction of pollutants into the POTW from an indirect discharger that

would be subject to CWA sections 301 or 306 if it were directly discharging those pollutants (40 C.F.R. § 122.42(b)(1)).

- 7.2.2. All POTWs shall provide adequate notice to the Regional Water Board of any substantial change in the volume or character of pollutants being introduced into that POTW by a source introducing pollutants into the POTW at the time of adoption of this Order. (40 C.F.R. § 122.42(b)(2).)
- 7.2.3. Adequate notice shall include information on the quality and quantity of effluent introduced into the POTW as well as any anticipated impact of the change on the quantity or quality of effluent to be discharged from the POTW. (40 C.F.R. § 122.42(b)(3).)

## **ATTACHMENT E – MONITORING AND REPORTING PROGRAM**

Clean Water Act (CWA) section 308 and 40 C.F.R. sections 122.41(h), (j)-(l), 122.44(i), and 122.48 require that all NPDES permits specify monitoring and reporting requirements. Water Code section 13383 also authorizes the Regional Water Board to establish monitoring, inspection, entry, reporting, and recordkeeping requirements. This MRP establishes monitoring, reporting, and recordkeeping requirements that implement the federal and state laws and regulations.

### **1. GENERAL MONITORING PROVISIONS**

- 1.1. The Discharger shall comply with this MRP. The Executive Officer may amend this MRP pursuant to 40 C.F.R. section 122.63. If any discrepancies exist between this MRP and the “Regional Standard Provisions, and Monitoring and Reporting Requirements (Supplement to Attachment D) for NPDES Wastewater Discharge Permits” (Attachment G), this MRP shall prevail.
- 1.2. The Discharger shall conduct all monitoring in accordance with Attachment D section 3, as supplemented by Attachment G. Equivalent test methods must be more sensitive than those specified in 40 C.F.R. section 136 and must be specified in this permit.
- 1.3. For the analysis of monitoring samples, the Discharger shall use laboratories certified by the State Water Resources Control Board (State Water Board) in accordance with Water Code section 13176 and shall obtain quality assurance/quality control data with laboratory reports. For any onsite field tests (e.g., turbidity, pH, temperature, dissolved oxygen, conductivity, disinfectant residual) analyzed by a noncertified laboratory, the Discharger shall implement a Quality Assurance-Quality Control Program. The Discharger shall keep a manual onsite containing the steps followed in this program and shall demonstrate sufficient capability to adequately perform these field tests (e.g., qualified and trained employees, properly calibrated and maintained field instruments). The program shall conform to U.S. EPA guidelines or other approved procedures.
- 1.4. The Discharger shall ensure that the results of the Discharge Monitoring Report-Quality Assurance (DMR-QA) Study or most recent Water Pollution Performance Evaluation Study are submitted annually to the State Water Board at the following address:

State Water Resources Control Board;  
Quality Assurance Program Officer;  
Office of Information Management and Analysis;  
1001 I Street  
Sacramento, CA 95814

## 2. MONITORING LOCATIONS

The Discharger shall establish the following monitoring locations to demonstrate compliance with the effluent limitations, discharge specifications, and other requirements of this Order:

**Table E-1. Monitoring Locations**

Sampling Location Type	Monitoring Location Name	Monitoring Location Description <sup>[1]</sup>
Influent	INF-001	Any point at the plant headworks where all waste tributary to the North Aeration Basin (i.e., industrial waste) is present and preceding any phase of treatment. <i>Latitude 38.18772°N Longitude – 122.27817°W</i>
Influent	INF-002	Any point at the plant headworks where all waste tributary to the Main Aeration Basin (i.e., domestic waste) is present and preceding any phase of treatment. <i>Latitude 38.18772°N Longitude – 122.27817°W</i>
Effluent	EFF-001	Any point following all treatment, including disinfection, prior to the cascade weir box where effluent is diverted either to Discharge Point 001 or 003. <i>Latitude 38.18819°N Longitude – 122.27733°W</i>
Effluent	EFF-001-S	Any point in the plant outfall to the North Slough after aeration at the cascade weir box and prior to contact with the receiving water. <i>Latitude 38.18792°N Longitude – 122.27713°W</i>
Effluent	REC-001	Any point following all treatment, including disinfection, that represents all wastewater directed to the recycled water distribution system. <i>Latitude 38.18830°N Longitude – 122.27719°W</i>
Effluent	EFF-003	Any point in the plant outfall to the constructed freshwater wetlands after the cascade weir box and prior to contact with the constructed wetlands. <i>Latitude 38.18792°N Longitude – 122.27719°W</i>
Receiving Water	RSW-002	A point in the North Slough 500 feet downstream of the center of the outfall (Discharge Point 001). <i>Latitude 38.18653 °N Longitude – 122.27708°W</i>
Receiving Water	RSW-003	A point in the North Slough 2,000 feet downstream of the center of the outfall (Discharge Point 001). <i>Latitude 38.18111°N Longitude – 122.278111°W</i>
Receiving Water	RSW-004	Any point in Pond 1 of the constructed freshwater wetlands. <i>Latitude 38.18486°N Longitude – 122.28036°W</i>
Receiving Water	RSW-005	Any point in Pond 2 of the constructed freshwater wetlands. <i>Latitude 38.18397°N Longitude – 122.28144°W</i>
Biosolids	BIO-003	Any point after dewatering (i.e., post-screw press) and before disposal.

Footnote:

[1] Latitudes and longitudes are approximate for administrative purposes.

### 3. INFLUENT MONITORING

The Discharger shall monitor plant influent at Monitoring Locations INF-001 and INF-002 as follows:

**Table E-2. Influent Monitoring**

Parameter	Unit	Sample Type	Minimum Sampling Frequency
Flow <sup>[1]</sup>	MGD/MG	Continuous	Continuous/D
Biochemical Oxygen Demand (5-day @ 20°C)(BOD)	mg/L	C-24	1/Week <sup>[2]</sup>
Total Suspended Solids (TSS)	mg/L	C-24	1/Week <sup>[2]</sup>
Cyanide <sup>[3]</sup>	µg/L	Grab	1/Month

**Footnotes:**

<sup>[1]</sup> The following flow information shall be reported in monthly self-monitoring reports:

- Daily average flow (MGD)
- Total monthly flow volume (MG)

<sup>[2]</sup> BOD<sub>5</sub> and TSS samples shall be collected concurrently with effluent samples.

<sup>[3]</sup> The Discharger may, at its option, analyze for cyanide as weak acid dissociable cyanide using protocols specified in Standard Method Part 4500-CN-I, U.S. EPA Method OI 1677, or an equivalent method in the latest Standard Method edition.

### 4. EFFLUENT MONITORING

4.1. **Discharge Points 001 and 003.** The Discharger shall monitor discharges from Discharge Points 001 and 003 as follows.

4.1.1 **Monitoring Location EFF-001.** The Discharger shall monitor discharges from Discharge Points 001 and 003 at Monitoring Location EFF-001 as shown in the following table:

**Table E-3. Effluent Monitoring – Monitoring Location EFF-001**

Parameter	Unit	Sample Type	Minimum Sampling Frequency
Flow <sup>[1]</sup>	MGD/MG	Continuous	Continuous/D
pH <sup>[2]</sup>	standard units	Continuous or Grab	5/Week <sup>[3]</sup>
Biochemical Oxygen Demand (5-day @ 20°C)(BOD) <sup>[4]</sup>	mg/L	C-24	1/Week
Total Suspended Solids (TSS) <sup>[4]</sup>	mg/L	C-24	1/Week
Enterococcus Bacteria <sup>[5, 6]</sup>	CFU/100mL	Grab	2/Week
Turbidity	NTU	C-24	2/Week
Temperature <sup>[7]</sup>	°C	Grab	5/Week <sup>[3]</sup>
Salinity	ppt	Grab	1/Week
Acute Toxicity <sup>[8]</sup>	% Survival	Static Renewal	1/Quarter
Chronic Toxicity <sup>[9]</sup>	TU <sub>c</sub>	C-24	1/Quarter
Ammonia, Total	mg/L as N	C-24	1/Month <sup>[3]</sup>
Copper, Total Recoverable	µg/L	C-24	1/Month

Parameter	Unit	Sample Type	Minimum Sampling Frequency
Nickel, Total Recoverable	µg/L	C-24	1/Month
Cyanide, Total <sup>[10]</sup>	µg/L	Grab	1/Month
Dioxin-TEQ	µg/L	Grab	Once
Selenium	µg/L	C-24	1/Year
Priority Pollutants <sup>[11]</sup>	µg/L	Grab	Once

**Footnotes:**

- <sup>[1]</sup> The following flow information shall be reported in monthly self-monitoring reports:
  - Daily average flow rate (MGD)
  - Total monthly flow volume (MG)
- <sup>[2]</sup> If pH is monitored continuously, the minimum and maximum for each day shall be reported in self-monitoring reports.
- <sup>[3]</sup> Ammonia monitoring shall be performed on the same day as pH and temperature monitoring. If pH or temperature is monitored continuously, the daily average may be used to calculate the un-ionized ammonia fraction.
- <sup>[4]</sup> BOD and TSS samples shall be collected concurrently with influent samples. BOD and TSS percent removal shall be reported for each calendar month in accordance with section 4.2 of the Order.
- <sup>[5]</sup> U.S. EPA Method 1600 or an equivalent method is suggested to measure culturable enterococci. Results may be reported as colony forming units per 100 milliliters (CFU/100 mL) if the laboratory method used provides results in CFU/100 mL.
- <sup>[6]</sup> The Discharger shall report each six-week geometric mean enterococcus value, calculated weekly, in monthly self-monitoring reports. The Discharger shall report the calculated monthly enterococcus value in each monthly self-monitoring report.
- <sup>[7]</sup> If temperature is monitored continuously, the daily average temperature for each day shall be reported in self-monitoring reports.
- <sup>[8]</sup> Acute bioassay tests shall be performed in accordance with MRP section 5.1.
- <sup>[9]</sup> Chronic bioassay tests shall be performed in accordance with MRP section 5.2.
- <sup>[10]</sup> The Discharger may, at its option, analyze for cyanide as weak acid dissociable cyanide using protocols specified in Standard Method Part 4500-CN-I, U.S. EPA Method OI 1677, or an equivalent method in the latest edition.
- <sup>[11]</sup> The Discharger shall monitor for the pollutants listed in Attachment G, Table B.

**4.1.2 Monitoring Location EFF-001-S.** The Discharger shall monitor discharges from Discharge Point 001 (to the North Slough) at Monitoring Location EFF-001-S as shown in the following table:

**Table E-4. Effluent Monitoring – Monitoring Location EFF-001-S**

Parameter	Units	Sample Type	Minimum Sampling Frequency
Flow <sup>[1]</sup>	MGD/MG	Continuous	Continuous/D

**Footnotes:**

- <sup>[1]</sup> The following flow information shall be reported in monthly self-monitoring reports:
  - Daily average flow rate (MGD)
  - Total monthly flow volume (MG)

**4.1.3. Monitoring Location EFF-003.** The Discharger shall monitor discharges from Discharge Point 003 (to the constructed wetlands) at Monitoring Location EFF-003 as shown in the following table:

**Table E-5. Effluent Monitoring – Monitoring Location EFF-003**

Parameter	Units	Sample Type	Minimum Sampling Frequency
Flow <sup>[1]</sup>	MGD/MG	Continuous	Continuous/D

Footnotes:

- <sup>[1]</sup> The following flow information shall be reported in monthly self-monitoring reports:
- Daily average flow rate (MGD)
  - Total monthly flow volume (MG)

**4.2 Recycled Water Distribution.** The Discharger shall monitor discharges of treated wastewater to the recycled water distribution system at Monitoring Location REC-001 as shown in the following table:

**Table E-6. Effluent Monitoring – Monitoring Location REC-001**

Parameter	Units	Sample Type	Minimum Sampling Frequency
Flow <sup>[1]</sup>	MGD/MG	Continuous	Continuous/D

Footnotes:

- <sup>[1]</sup> The following flow information shall be reported in monthly self-monitoring reports:
- Daily average flow rate (MGD)
  - Total monthly flow volume (MG)

**5. TOXICITY MONITORING**

**5.1. Acute Toxicity**

- 5.1.1. Compliance with the acute toxicity effluent limitation shall be evaluated at Monitoring Location EFF-001 by measuring survival of test organisms exposed to 96-hour static renewal bioassays.
- 5.1.2. Test organisms shall be fathead minnow (*Pimephales promelas*). Alternatively, the Executive Officer may specify a more sensitive organism or, if testing a particular organism proves unworkable, the most sensitive organism available.
- 5.1.3. All bioassays shall be performed according to the most up-to-date protocols in 40 C.F.R. part 136, currently *Methods for Measuring the Acute Toxicity of Effluents and Receiving Water to Freshwater and Marine Organisms*, 5th Edition (EPA-821-R-02-012). If these protocols prove unworkable, the Executive Officer and the Environmental Laboratory Accreditation Program may grant exceptions in writing upon the Discharger’s request with justification.
- 5.1.4. If the Discharger demonstrates that specific identifiable substances in the discharge are rapidly rendered harmless upon discharge to the receiving water, compliance with the acute toxicity limit may be determined after test samples are adjusted to remove the influence of those substances. Written acknowledgement that the Executive Officer concurs with the Discharger’s demonstration and that the adjustment will not remove the influence of other substances must be obtained prior to any such adjustment. The Discharger may manually adjust the pH of whole effluent acute toxicity samples prior to performing bioassays to minimize ammonia toxicity interference.

5.1.5. Bioassay monitoring shall include, on a daily basis, pH, dissolved oxygen, ammonia (if toxicity is observed), temperature, hardness, and alkalinity. These results shall be reported. If final or intermediate results of an acute bioassay test indicate a violation (e.g., the percentage of surviving test organisms is less than 70 percent), the Discharger shall initiate a new test as soon as practical and shall investigate the cause of the mortalities and report its findings in the next self-monitoring report. The Discharger shall repeat the test until a test fish survival rate of 90 percent or greater is observed. If the control fish survival rate is less than 90 percent, the bioassay test shall be restarted with new fish and shall continue as soon as practical until an acceptable test is completed (i.e., control fish survival rate is 90 percent or greater).

## 5.2. Chronic Toxicity

### 5.2.1. Monitoring Requirements

5.2.1.1. **Sampling.** The Discharger shall collect 24-hour composite effluent samples at Monitoring Location EFF-001 for critical life stage toxicity testing as indicated below. Effluent samples may be before disinfection for toxicity tests. For toxicity tests requiring renewals, the Discharger shall collect 24-hour composite samples on consecutive or alternating days.

5.2.1.2. **Test Species.** The test species shall be the mysid shrimp (*Americamysis bahia*). The Discharger shall conduct a screening chronic toxicity test as described in Appendix E-1, or as described in applicable State Water Board plan provisions that become effective after adoption of this Order, following any significant change in the nature of the effluent. If there is no significant change in the nature of the effluent, the Discharger shall conduct a screening test if required by an applicable State Water Board plan and submit the results with its application for permit reissuance. Upon completion of the chronic toxicity screening, the Discharger shall use the most sensitive species to conduct subsequent monitoring.

5.2.1.3. **Frequency.** Chronic toxicity monitoring shall be as specified in Table E-3 above.

5.2.1.3.1. The Discharger shall accelerate monitoring to monthly after exceeding a three-sample median of 1 chronic toxicity unit (TUc) or a single-sample maximum of 2 TUc. Based on the TUc results, the Executive Officer may specify a different accelerated monitoring frequency to ensure that accelerated monitoring provides useful information.

5.2.1.3.2. The Discharger shall return to routine monitoring if accelerated monitoring does not exceed the trigger in section 5.2.1.3.1, above.

5.2.1.3.3. If accelerated monitoring confirms consistent toxicity greater than the trigger in section 5.2.1.3.1, above, the Discharger shall continue

accelerated monitoring and initiate toxicity reduction evaluation (TRE) procedures in accordance with section 5.2.3, below.

- 5.2.1.3.4. The Discharger shall return to routine monitoring after implementing appropriate elements of the TRE, and either the toxicity drops below the trigger in 5.2.1.3.1, above, or, based on the TRE results, the Executive Officer determines that accelerated monitoring would no longer provide useful information.
- 5.2.1.3.5. Monitoring conducted pursuant to a TRE shall satisfy the requirements for routine and accelerated monitoring while the TRE is underway.
- 5.2.1.4. **Methodology.** Sample collection, handling, and preservation shall be in accordance with U.S. EPA protocols. Bioassays shall be conducted in compliance with the most recently promulgated test methods, as shown in Appendix E-2. These are *Short Term Methods for Estimating the Chronic Toxicity of Effluents and Receiving Waters to West Coast Marine and Estuarine Organisms*, currently 1st edition (EPA/600/R-95-136), *Short-Term Methods for Estimating the Chronic Toxicity of Effluents and Receiving Waters to Marine and Estuarine Organisms*, currently third edition (EPA-821-R-02-014) and *Short-Term Methods for Estimating the Chronic Toxicity of Effluents and Receiving Waters to Freshwater Organisms*, currently fourth edition (EPA-821-R2-02-013). If these protocols prove unworkable, the Executive Officer and the Environmental Laboratory Accreditation Program may grant exceptions in writing upon the Discharger's request with justification.

If the Discharger demonstrates that specific identifiable substances in the discharge are rapidly rendered harmless upon discharge to the receiving water, compliance with the chronic toxicity trigger may be determined after test samples are adjusted to remove the influence of those substances. The adjustment shall not remove the influence of other substances. Written acknowledgement that the Executive Officer concurs with the Discharger's demonstration must be obtained prior to any such adjustment.

- 5.2.1.5. **Dilution Series.** The Discharger shall conduct tests at 100%, 50%, 25%, 12.5%, and 6.25% effluent with a control (0% effluent). The "%" represents percent effluent as discharged. Test sample pH may be controlled to the level of the effluent sample as received prior to being salted up.
- 5.2.2. Reporting Requirements.** The Discharger shall provide toxicity test results with self-monitoring reports and shall include the following, at a minimum, for each test:
- 5.2.2.1. Sample date;
- 5.2.2.2. Test initiation date;

- 5.2.2.3. Test species;
- 5.2.2.4. End point values for each dilution (e.g., number of young, growth rate, percent survival);
- 5.2.2.5. No Observable Effect Level (NOEL) values in percent effluent. The NOEL shall equal the IC25 or EC25 (see MRP Appendix E-1). If the IC25 or EC25 cannot be statistically determined, the NOEL shall equal the No Observable Effect Concentration (NOEC) derived using hypothesis testing. The NOEC is the maximum percent effluent concentration that causes no observable effect on test organisms based on a critical life stage toxicity test;
- 5.2.2.6. IC15, IC25, IC40, and IC50 values (or EC15, EC25, EC40, and EC50) as percent effluent;
- 5.2.2.7. TU values (100/NOEL and upper and lower confidence intervals, where NOEL = IC25, EC25, or NOEC);
- 5.2.2.8. Mean percent mortality ( $\pm$ standard deviation) after 96 hours in 100% effluent (if applicable);
- 5.2.2.9. IC50 or EC50 values for reference toxicant tests;
- 5.2.2.10. Available water quality measurements for each test (e.g., pH, dissolved oxygen, temperature, conductivity, hardness, salinity, ammonia); and
- 5.2.2.11. The results of the three most recent chronic toxicity tests and the three-sample median for these results.

### **5.2.3. Toxicity Reduction Evaluation (TRE)**

- 5.2.3.1. The Discharger shall prepare a generic TRE work plan within 90 days of the effective date of this Order to be ready to respond to toxicity events. The Discharger shall review and update the work plan as necessary so that it remains current and applicable to the discharge and discharge facilities.
- 5.2.3.2. Within 30 days of exceeding the chronic toxicity trigger in section 5.2.1.3.1, above, the Discharger shall submit a TRE work plan, which shall be the generic work plan revised as appropriate for this toxicity event after consideration of available discharge data.
- 5.2.3.3. Within 30 days of completing an accelerated monitoring test observed to exceed the trigger in section 5.2.1.3.1, above, the Discharger shall initiate a TRE in accordance with a TRE work plan that incorporates any and all Executive Officer comments.
- 5.2.3.4. The TRE shall be specific to the discharge and be in accordance with current technical guidance and reference materials, including U.S. EPA guidance

materials. The Discharger shall conduct the TRE as a tiered evaluation as summarized below:

- 5.2.3.4.1. Tier 1 shall consist of basic data collection (routine and accelerated monitoring).
- 5.2.3.4.2. Tier 2 shall consist of evaluation of treatment process, including operational practices and in-plant process chemicals.
- 5.2.3.4.3. Tier 3 shall consist of a toxicity identification evaluation (TIE).
- 5.2.3.4.4. Tier 4 shall consist of a toxicity source evaluation.
- 5.2.3.4.5. Tier 5 shall consist of a toxicity control evaluation, including options for modifications of in-plant treatment processes.
- 5.2.3.4.6. Tier 6 shall consist of implementation of selected toxicity control measures, and follow-up monitoring and confirmation of implementation success.
- 5.2.3.5. The Discharger may end the TRE at any stage if monitoring finds there is no longer consistent toxicity (i.e., compliance with the trigger in section 5.2.1.3.1, above).
- 5.2.3.6. The objective of the TIE shall be to identify the substance or combination of substances causing the observed toxicity. The Discharger shall employ all reasonable efforts using currently available TIE methodologies.
- 5.2.3.7. As toxic substances are identified or characterized, the Discharger shall continue the TRE by determining the sources and evaluating alternative strategies for reducing or eliminating the toxic substances from the discharge. The Discharger shall take all reasonable steps to reduce toxicity to levels below the chronic toxicity trigger.
- 5.2.3.8. Many recommended TRE elements parallel required or recommended efforts related to source control, pollution prevention, and stormwater control programs. TRE efforts should be coordinated with such efforts. To prevent duplication of efforts, evidence of complying with requirements or recommended efforts of such programs may be acceptable to demonstrate compliance with TRE requirements.

## **6. RECEIVING WATER MONITORING**

The Discharger shall continue to participate in the Regional Monitoring Program, which collects data on pollutants and toxicity in San Francisco Bay water, sediment, and biota. The Discharger shall also provide supplemental funding to the Regional Monitoring Program to support additional studies for constituents of emerging concern. The Discharger shall, either individually or in collaboration with other

dischargers, submit or cause to submit a report each year that indicates the status of its RMP payment. The report shall be due on the same day as the letters certifying the Discharger’s annual payment in support of RMP receiving water monitoring (currently February 1 each year).

The Discharger shall also monitor ambient receiving water conditions at Monitoring Locations RSW-002 through RSW-005 as follows:

**Table E-7. Receiving Water Monitoring**

Parameter	Units	Sample Type	Minimum Sampling Frequency
<b>Monitoring Locations RSW-002 and RSW-003</b>			
pH	standard units	Grab	2/Year
Turbidity	NTU	Grab	2/Year
Temperature	°C	Grab	2/Year
Salinity	ppt	Grab	2/Year
Total Ammonia <sup>[1]</sup>	mg/L as N	Grab	2/Year
Dissolved Oxygen (DO)	mg/L	Grab	2/Year
DO Saturation	%	Grab	2/Year
Hardness	mg/L as CaCO <sub>3</sub>	Grab	2/Year
Standard Observations <sup>[2]</sup>	—	—	2/Year
<b>Monitoring Locations RSW-004 and RSW-005</b>			
Flow from Pond 2 to North Slough	MG	Continuous/D	Continuous/D
pH	standard units	Grab	2/Year
Temperature	°C	Grab	2/Year
Salinity	ppt	Grab	2/Year
Total Ammonia <sup>[1]</sup>	mg/L as N	Grab	2/Year
DO	mg/L	Grab	2/Year
DO Saturation	% saturation	Grab	2/Year
Hardness	mg/L as CaCO <sub>3</sub>	Grab	2/Year

Footnotes:

<sup>[1]</sup> Monitoring for total ammonia shall occur concurrently with monitoring for temperature and pH for determination of the un-ionized ammonia fraction.

<sup>[2]</sup> Standard observations are specified in Attachment G section 3.2.

**7. PRETREATMENT AND BIOSOLIDS MONITORING**

The Discharger shall comply with the following pretreatment monitoring requirements for influent at Monitoring Location INF-001, effluent at Monitoring Location EFF-001, and biosolids at Monitoring Location BIO-003. The Discharger shall report summaries of analytical results in pretreatment reports in accordance with Attachment H. At its option, the Discharger may also report biosolids analytical results in its electronic

self-monitoring reports by manual entry, by Electronic Data Format or CIWQS Data Format (EDF/CDF), or as an attached file.

**Table E-8. Pretreatment and Biosolids Monitoring**

Parameters	Influent (INF-001) Sampling Frequency <sup>[7]</sup>	Effluent (EFF-001) Sampling Frequency <sup>[7]</sup>	Biosolids (BIO-001) Sampling Frequency	Influent and Effluent Sample Type	Biosolids Sample Type <sup>[9]</sup>
VOC <sup>[1]</sup>	Once	Once	Once	Grab	Grab
BNA <sup>[2]</sup>	Once	Once	Once	Grab	Grab
Metals and other Elements <sup>[3]</sup>	1/Month	1/Month	1/Year	C-24 <sup>[8]</sup>	Grab
Hexavalent Chromium <sup>[4]</sup>	1/Month	1/Month	1/Year	Grab	Grab
Mercury <sup>[5]</sup>	1/Quarter	1/Quarter	1/Year	Grab <sup>[8]</sup>	Grab
Cyanide, Total <sup>[6]</sup>	1/Month	1/Month	1/Year	Grab	Grab

**Footnotes:**

- <sup>[1]</sup> VOC: volatile organic compounds
- <sup>[2]</sup> BNA: base/neutrals and acid extractable organic compounds
- <sup>[3]</sup> Metals and other elements are arsenic, cadmium, copper, lead, nickel, selenium, silver, and zinc.
- <sup>[4]</sup> The Discharger may choose to monitor and report total chromium instead of hexavalent chromium. Samples collected for total chromium measurements may be 24-hour composites.
- <sup>[5]</sup> The Discharger shall use ultra-clean sampling (U.S. EPA Method 1669) and ultra-clean analytical methods (U.S. EPA Method 1631) for mercury monitoring at EFF-001.
- <sup>[6]</sup> The Discharger may, at its option, analyze for cyanide as weak acid dissociable cyanide using protocols specified in 40 C.F.R. part 136 or an equivalent method in the latest Standard Method edition.
- <sup>[7]</sup> Influent and effluent monitoring conducted in accordance with MRP Tables E-2 and E-3 may be used to satisfy these pretreatment monitoring requirements.
- <sup>[8]</sup> If an automatic compositor is used, the Discharger shall obtain 24-hour composite samples through flow-proportioned composite sampling. Alternatively, 24-hour composite samples may consist of discrete grab samples combined (volumetrically flow-weighted) prior to analysis or mathematically flow-weighted.
- <sup>[9]</sup> The biosolids sample shall be a composite of the biosolids. Biosolids pumped from the ponds shall be composited into a separate sample when applicable. Biosolids collection and monitoring shall comply with the requirements specified in Attachment H, Appendix H-4.

## 8. RECYCLED WATER MONITORING

The Discharger shall comply with the following recycled water monitoring requirements. The Executive Officer may modify these requirements to reflect any changes made to the requirements of State Water Board Order WQ 2019-0037 EXEC (Amending Monitoring and Reporting Programs for Waste Discharge Requirements, National Pollutant Discharge Elimination System Permits, Water Reclamation Requirements, Master Recycling Permits, and General Waste Discharge Requirements).

**8.1. Influent Monitoring.** The Discharger shall monitor the monthly volume of influent to the treatment plant.

**8.2. Production Monitoring.** The Discharger shall monitor the monthly volume of each level of treated effluent (e.g., secondary or tertiary) at Monitoring Location REC-001.

**8.3. Discharge Monitoring.** The Discharger shall monitor the monthly volumes discharged to each of the following, for each level of treated effluent (e.g., secondary or tertiary) from the treatment plant:

- 8.3.1. Inland surface waters, specifying volumes required to maintain minimum instream flow;
- 8.3.2. Enclosed bays, estuaries and coastal lagoons, and ocean waters;
- 8.3.3. Natural systems, such as wetlands, wildlife habitats, and duck clubs, where augmentation or restoration has occurred, and that are not part of a wastewater treatment or water recycling treatment plant;
- 8.3.4. Underground injection wells, such as those classified by U.S. EPA's Underground Injection Control Program, excluding groundwater recharge via subsurface application intended to reduce seawater intrusion into a coastal aquifer with a seawater interface; and
- 8.3.5. Land, where beneficial use is not taking place, including evaporation or percolation ponds, overland flow, or spray irrigation disposal, excluding pastures or fields with harvested crops.

**8.4. Reuse Monitoring.** The Discharger shall monitor the following in compliance with California Code of Regulations, title 22:

- 8.4.1. Monthly volume of recycled water distributed; and
- 8.4.2. Annual volumes of treated wastewater distributed for use in each of the use categories listed below:
  - 8.4.2.1. Agricultural irrigation: pasture or crop irrigation;
  - 8.4.2.2. Landscape irrigation: irrigation of parks, greenbelts, and playgrounds; school yards; athletic fields; cemeteries; residential landscaping, common areas; commercial landscaping; industrial landscaping; and freeway, highway, and street landscaping;
  - 8.4.2.3. Golf course irrigation: irrigation of golf courses, including water used to maintain aesthetic impoundments within golf courses;
  - 8.4.2.4. Commercial application: commercial facilities, business use (such as laundries and office buildings), car washes, retail nurseries, and appurtenant landscaping that is not separately metered;
  - 8.4.2.5. Industrial application: manufacturing facilities, cooling towers, process water, and appurtenant landscaping that is not separately metered;
  - 8.4.2.6. Geothermal energy production: augmentation of geothermal fields;

- 8.4.2.7. Other non-potable uses: including but not limited to dust control, flushing sewers, fire protection, fill stations, snow making, and recreational impoundments;
- 8.4.2.8. Groundwater recharge: the planned use of recycled water for replenishment of a groundwater basin or an aquifer that has been designated as a source of water supply for a public water system. Includes surface or subsurface application, except for seawater intrusion barrier use;
- 8.4.2.9. Seawater intrusion barrier: groundwater recharge via subsurface application intended to reduce seawater intrusion into a coastal aquifer with a seawater interface;
- 8.4.2.10. Reservoir water augmentation: the planned placement of recycled water into a raw surface water reservoir used as a source of domestic drinking water supply for a public water system, as defined in Health and Safety Code section 116275, or into a constructed system conveying water to such a reservoir (Water Code § 13561);
- 8.4.2.11. Raw water augmentation: the planned placement of recycled water into a system of pipelines or aqueducts that delivers raw water to a drinking water treatment plant that provides water to a public water system as defined in Health and Safety Code section 116275 (Water Code § 13561); and
- 8.4.2.12. Other potable uses: both indirect and direct potable reuse other than for groundwater recharge, seawater intrusion barrier, reservoir water augmentation, or raw water augmentation.

## 9. REPORTING REQUIREMENTS

**9.1. General Monitoring and Reporting Requirements.** The Discharger shall comply with all Standard Provisions (Attachments D and G) related to monitoring, reporting, and recordkeeping.

### 9.2. Self-Monitoring Reports (SMRs)

9.2.1. **SMR Format.** The Discharger shall electronically submit SMRs using the State Water Board's [California Integrated Water Quality System \(CIWQS\) Program website](http://waterboards.ca.gov/water_issues/programs/ciwqs) (waterboards.ca.gov/water\_issues/programs/ciwqs). The CIWQS website will provide additional information for SMR submittal in the event of a planned service interruption for electronic submittal.

9.2.2. **SMR Due Dates and Contents.** The Discharger shall submit SMRs by the due dates, and with the contents, specified below:

9.2.2.1. **Monthly SMRs** —Monthly SMRs shall be due 30 days after the end of each calendar month, covering that calendar month. Each SMR shall contain the applicable items described in Provision 6.3.2 (Effluent Characterization Study

and Report) of the Order, Attachment D section 5.2, and Attachment G section 5.3. Each SMR shall include all new monitoring results obtained since the last SMR was submitted. If the Discharger monitors any pollutant more frequently than required by this Order, the Discharger shall include the results of such monitoring in the calculations and reporting for the SMR.

9.2.2.2. **Annual SMR** — Annual SMRs shall be due February 1 each year, covering the previous calendar year. The annual SMR shall contain the applicable items described in Provisions 6.3.2 (Effluent Characterization Study and Report) and Attachment G section 5.3.1.6.

9.2.3. **Specifications for Submitting SMRs to CIWQS.** The Discharger shall submit analytical results and other information using one of the following methods:

**Table E-9. CIWQS Reporting**

Parameter	Method of Reporting: EDF/CDF data upload	Attached File
All parameters identified in influent, effluent, and receiving water monitoring tables (except Dissolved Oxygen and Temperature)	Required for all results	—
Dissolved Oxygen, Temperature	Required for monthly maximum and minimum results only <sup>[1]</sup>	Discharger may use this method for all results or keep records
Antimony, Arsenic, Beryllium, Cadmium, Chromium, Copper, Cyanide, Lead, Mercury, Nickel, Selenium, Silver, Thallium, Zinc, Dioxins & Furans (by U.S. EPA Method 1613), Other Pollutants (by U.S. EPA Methods 601, 602, 608, 610, 614, 624, and 625)	Required for all results <sup>[2]</sup>	—
Volume and Duration of Blended Discharge <sup>[3]</sup>	Required for all blended effluent discharges	—
Analytical Method	Not required (Discharger may select “data unavailable”) <sup>[1]</sup>	—
Collection Time, Analysis Time	Not required	—

**Footnotes:**

- <sup>[1]</sup> The Discharger shall continue to monitor at the minimum frequency specified in this MRP, keep records of the measurements, and make the records available upon request.
- <sup>[2]</sup> These parameters require EDF/CDF data upload or manual entry regardless of whether monitoring is required by this MRP or other provisions of this Order (except for biosolids, sludge, or ash provisions).
- <sup>[3]</sup> The requirement for volume and duration of blended discharge applies only if this Order authorizes the Discharger to discharge blended effluent.

The Discharger shall arrange all reported data in a tabular format and summarize data to clearly illustrate whether the Facility is operating in compliance with effluent limitations. The Discharger is not required to duplicate the submittal of data entered in a tabular format within CIWQS. When electronic submittal of data is required and CIWQS does not provide for entry into a tabular format, the Discharger shall electronically submit the data in a tabular format as an attachment.

9.2.4. **Monitoring Periods.** Monitoring periods for all required monitoring shall be as set forth below unless otherwise specified:

**Table E-10. Monitoring Periods**

Sampling Frequency	Monitoring Period Begins On...	Monitoring Period
Continuous/D	Order effective date	All times
1/Week 2/Week 5/Week	First Sunday following or on Order effective date	Sunday through Saturday
1/Month	First day of calendar month following or on Order effective date	First day of calendar month through last day of calendar month
1/Quarter	Closest January 1, April 1, July 1, or October 1 before or after Order effective date <sup>[1]</sup>	January 1 through March 31 July 1 through September 30 April 1 through June 30 October 1 through December 31
1/Year	Closest January 1 before or after Order effective date <sup>[1]</sup>	January 1 through December 31
2/Year	Closest November 1 or February 1 before or after Order effective date <sup>[1]</sup>	November 1 through April 30 May 1 through October 31
Once	Order effective date	Once during Order term within 12 months prior to applying for permit reissuance

Footnote:

<sup>[1]</sup> Monitoring performed under NPDES Permit CA0037869 (for the EBDA Common Outfall) may be used to satisfy monitoring required by this Order.

9.2.5. **RL and MDL Reporting.** The Discharger shall report with each sample result the Reporting Level (RL) and Method Detection Limit (MDL) as determined by the procedure in 40 C.F.R. part 136. The Discharger shall report the results of analytical determinations for the presence of chemical constituents in a sample using the following reporting protocols:

9.2.5.1. Sample results greater than or equal to the RL shall be reported as measured by the laboratory (i.e., the measured chemical concentration in the sample).

9.2.5.2. Sample results less than the RL, but greater than or equal to the laboratory’s MDL, shall be reported as “Detected, but Not Quantified,” or DNQ. The estimated chemical concentration of the sample shall also be reported.

For purposes of data collection, the Discharger shall require the laboratory to write the estimated chemical concentration next to DNQ. The laboratory may, if such information is available, include numerical estimates of the data quality for the reported result. Numerical estimates of data quality may be percent accuracy ( $\pm$  a percentage of the reported value), numerical ranges (low to high), or any other means the laboratory considers appropriate.

9.2.5.3. Sample results less than the laboratory’s MDL shall be reported as “Not Detected”, or ND.

- 9.2.5.4. The Discharger shall instruct laboratories to establish calibration standards so that the minimum level (ML) value (or its equivalent if there is differential treatment of samples relative to calibration standards) is the lowest calibration standard. At no time is the Discharger to use analytical data derived from extrapolation beyond the lowest point of the calibration curve.
- 9.2.6. **Compliance Determination.** Compliance with effluent limitations shall be determined using sample reporting protocols defined above, in the Fact Sheet, and in Attachments A, D, and G. For purposes of reporting and administrative enforcement by the Regional Water Board and State Water Board, the Discharger shall be deemed out of compliance with effluent limitations if the concentration of the pollutant in the monitoring sample is greater than the effluent limitation and, if applicable, greater than or equal to the RL.
- 9.3. Discharge Monitoring Reports (DMRs).** DMRs are U.S. EPA reporting requirements. The Discharger shall electronically certify and submit DMRs together with SMRs using Electronic Self-Monitoring Reports module eSMR 2.5 or the latest upgraded version. Electronic DMR submittal shall be in addition to electronic SMR submittal. Information about electronic DMR submittal is available at the [DMR website](https://waterboards.ca.gov/water_issues/programs/discharge_monitoring) (waterboards.ca.gov/water\_issues/programs/discharge\_monitoring).
- 9.4 Recycled Water Reports.** The Discharger shall electronically submit annual reports to the State Water Board by April 30 each year covering the previous calendar year using the [State Water Board's GeoTracker website](https://geotracker.waterboards.ca.gov) (geotracker.waterboards.ca.gov) under a site-specific global identification number. For the 2021 calendar year, the Discharger shall submit a report by April 30, 2022, covering January through December 2021. The annual report shall include the elements specified in section 8, above.

Information for setting up and using the GeoTracker system can be found in the ESI Guide for Responsible Parties document on the [State Water Board's website](https://waterboards.ca.gov/ust/electronic_submittal/index.html) (waterboards.ca.gov/ust/electronic\_submittal/index.html).

## APPENDIX E-1

### CHRONIC TOXICITY DEFINITION OF TERMS AND SCREENING PHASE REQUIREMENTS

#### 1. Definition of Terms

- 1.1. **No observed effect level (NOEL).** For compliance determination, the NOEL is equal to IC25 or EC25. If the IC25 or EC25 cannot be statistically determined, the NOEL shall be equal to the NOEC derived using hypothesis testing.
- 1.2. **Effective concentration (EC).** The EC is a point estimate of the toxicant concentration that would cause an adverse effect on a quantal, "all or nothing," response (such as death, immobilization, or serious incapacitation) in a given percent of the test organisms. If the effect is death or immobility, the term lethal concentration (LC) may be used. EC values may be calculated using point estimation techniques such as probit, logit, and Spearman-Kärber. EC25 is the concentration of toxicant (in percent effluent) that causes a response in 25 percent of the test organisms.
- 1.3. **Inhibition concentration (IC).** The IC is a point estimate of the toxicant concentration that would cause a given percent reduction in a nonlethal, nonquantal biological measurement, such as growth. For example, an IC25 is the estimated concentration of toxicant that would cause a 25 percent reduction in average young per female or growth. IC values may be calculated using a linear interpolation method such as U.S. EPA's Bootstrap Procedure.
- 1.4. **No observed effect concentration (NOEC).** The NOEC is the highest tested concentration of an effluent or a toxicant at which no adverse effects are observed on the aquatic test organisms at a specific time of observation. It is determined using hypothesis testing.

#### 2. Chronic Toxicity Screening Phase Requirements

- 2.1. The Discharger shall perform screening phase monitoring after any significant change in the nature of the effluent discharged through changes in sources or treatment, except those changes resulting from reductions in pollutant concentrations attributable to source control efforts, or
- 2.2 Design of the screening phase shall, at a minimum, consist of the following elements:
  - 2.2.1. Use of test species specified in Appendix E-2, attached, and use of the protocols referenced in those tables.
  - 2.2.2. Two stages:

- 2.2.2.1. Stage 1 shall consist of a minimum of one battery of tests conducted concurrently. Selection of the type of test species and minimum number of tests shall be based on Appendix E-2 (attached).
  - 2.2.2.2. Stage 2 shall consist of a minimum of two test batteries conducted at a monthly frequency using the three most sensitive species based on the Stage 1 test results.
  - 2.2.3. Appropriate controls.
  - 2.2.4. Concurrent reference toxicant tests.
  - 2.2.5. Dilution series of 100%, 50%, 25%, 12.5%, 6.25%, and 0.0%, where “%” is percent effluent as discharged, or as otherwise approved by the Executive Officer if different dilution ratios are needed to reflect discharge conditions.
- 2.3.** The Discharger shall submit a screening phase proposal. The proposal shall address each of the elements listed above. If within 30 days, the Executive Officer does not comment, the Discharger shall commence with screening phase monitoring.

## APPENDIX E-2

### SUMMARY OF TOXICITY TEST SPECIES REQUIREMENTS

**Table AE-1. Critical Life Stage Toxicity Tests for Estuarine Waters**

Species	Scientific Name	Effect	Test Duration	Reference
Alga	<i>Skeletonema costatum</i> , <i>Thalassiosira pseudonana</i>	Growth rate	4 days	1
Red alga	<i>Champia parvula</i>	Number of cystocarps	7–9 days	3
Giant kelp	<i>Macrocystis pyrifera</i>	Percent germination; germ tube length	48 hours	2
Abalone	<i>Haliotis rufescens</i>	Abnormal shell development	48 hours	2
Oyster Mussel	<i>Crassostrea gigas</i> , <i>Mytilus edulis</i>	Abnormal shell development; percent survival	48 hours	2
Echinoderms Urchins Sand dollar	<i>Strongylocentrotus purpuratus</i> , <i>S. franciscanus</i> , <i>Dendraster excentricus</i>	Percent fertilization or larval development	1 hour or 72 hours	2
Shrimp	<i>Americamysis bahia</i>	Percent survival; growth	7 days	3
Shrimp	<i>Holmesimysis costata</i>	Percent survival; growth	7 days	2
Topsmelt	<i>Atherinops affinis</i>	Percent survival; growth	7 days	2
Silverside	<i>Menidia beryllina</i>	Larval growth rate; percent survival	7 days	3

**Table AE-3. Toxicity Test Requirements for Stage One Screening Phase**

<b>Requirements</b>	<b>Receiving Water Characteristics: Discharges to Ocean</b>	<b>Receiving Water Characteristics: Discharges to Marine/ Estuarine Waters<sup>[1]</sup></b>	<b>Receiving Water Characteristics: Discharges to Freshwater</b>
Taxonomic diversity	1 plant 1 invertebrate 1 fish	1 plant 1 invertebrate 1 fish	1 plant 1 invertebrate 1 fish
Number of tests of each salinity type:			
Freshwater <sup>[2]</sup>	0	1 or 2	3
Marine/Estuarine	4	3 or 4	0
Total number of tests	4	5	3

Footnotes:

- <sup>[1]</sup> (a) Marine refers to receiving water salinities greater than 10 parts per thousand (ppt) at least 95 percent of the time during a normal water year.  
 (b) Freshwater refers to receiving water with salinities less than 1 ppt at least 95 percent of the time during a normal water year.  
 (c) Estuarine refers to receiving water salinities that fall between those of marine and freshwater, as described above.
- <sup>[2]</sup> The freshwater species may be substituted with marine species if:  
 (a) The salinity of the effluent is above 1 ppt greater than 95 percent of the time, or  
 (b) The ionic strength (TDS or conductivity) of the effluent at the test concentration used to determine compliance is documented to be toxic to the test species.

## ATTACHMENT F – FACT SHEET

This Fact Sheet includes the legal requirements and technical rationale that serve as the basis for the requirements of this Order. As described in section 2.2 of the Order, the Regional Water Board incorporates this Fact Sheet as findings supporting the issuance of the Order.

### 1. PERMIT INFORMATION

The following table summarizes administrative information related to the facility.

**Table F-1. Facility Information**

<b>WDID</b>	2 283021001
<b>CIWQS Place ID</b>	205477
<b>Discharger</b>	City of American Canyon
<b>Facility Name</b>	American Canyon Water Reclamation Facility and its collection system
<b>Facility Address</b>	151 Mezzetta Court American Canyon CA 94503 Napa County
<b>Facility Contact, Title, and Phone</b>	Jay Atkinson Plant Operations Manager (707) 647-4526
<b>Authorized Person to Sign and Submit Reports</b>	Same as facility contact, or designee
<b>Mailing Address</b>	151 Mezzetta Court American Canyon CA 94503 Napa County
<b>Billing Address</b>	Same as Mailing Address
<b>Facility Type</b>	Publicly-Owned Treatment Works (POTW)
<b>Major or Minor Facility</b>	Major
<b>Water Quality Threat</b>	1
<b>Complexity</b>	A
<b>Pretreatment Program</b>	Yes (not subject to U.S. EPA approval)
<b>Recycling Requirements</b>	State Water Board Order WQ 2016-0068-DDW
<b>Mercury and PCBs Requirements</b>	NPDES Permit CA0038849
<b>Nutrients Requirements</b>	NPDES Permit CA0038873
<b>Facility Permitted Flow</b>	2.5 million gallons per day (MGD) (average dry weather flow)
<b>Facility Design Flow</b>	2.5 MGD (average dry weather flow) 4.0 MGD (peak dry weather flow) 5.0 MGD (peak wet weather flow)
<b>Watershed</b>	San Pablo Bay
<b>Receiving Water</b>	North Slough (Napa River) and constructed freshwater wetlands
<b>Receiving Water Type</b>	Estuarine

1.1. The City of American Canyon (Discharger) owns and operates the American Canyon Water Reclamation Facility (plant) and its associated collection system

(collectively, the Facility). The Facility is a publicly-owned treatment works (POTW). The plant provides advanced-secondary treatment of wastewater collected from its service area and discharges it to the North Slough, a tributary to the tidal portion of the Napa River, during the wet weather season, and to constructed freshwater wetlands year-round. The North Slough and the constructed wetlands are waters of the United States.

For the purposes of this Order, references to the “discharger” or “permittee” in applicable federal and state laws, regulations, plans, and policies are held to be equivalent to references to the Discharger herein.

- 1.2.** The Discharger is regulated pursuant to National Pollutant Discharge Elimination System (NPDES) Permit CA0038768. The Discharger was previously subject to Order R2-2017-0008 as amended by Orders R2-2021-0019 and R2-2021-0028 (previous order). The Discharger filed a Report of Waste Discharge and submitted an application for reissuance of its Waste Discharge Requirements (WDRs) and NPDES permit on September 20, 2021.
- 1.3** The Discharger is authorized to discharge subject to WDRs in this Order at the discharge locations described in Table 1 of this Order. Regulations at 40 C.F.R. section 122.46 limit the duration of NPDES permits to a fixed term not to exceed five years. Accordingly, this Order limits the effective period for the discharge authorization. Pursuant to California Code of Regulations, title 23, section 2235.4, the terms and conditions of an expired permit are automatically continued pending reissuance of the permit if the Discharger complies with all federal NPDES regulation requirements for continuation of expired permits (40 C.F.R § 122.6[d]).
- 1.4.** This Order incorporates the amendments the Regional Water Board made to the previous order by adopting the following orders:
  - Order R2-2016-0008 amended the previous order to provide for an alternate monitoring program.
  - Order R2-2021-0028 amended Order R2-2016-0008 and the previous order to provide updated monitoring requirements and require supplemental funding for the Regional Monitoring Program (RMP).
  - Order R2-2021-0019 amended the previous order to update effluent limits and monitoring requirements for total residual chlorine and remove effluent limits and monitoring requirements for oil and grease.

The Discharger is also regulated under NPDES Permits CA0038849 and CA0038873, which establish requirements on mercury and polychlorinated biphenyls (PCBs) and nutrients from wastewater discharges to San Francisco Bay. This Order does not affect those permits.

- 1.5. When applicable, state law requires dischargers to file a petition with the State Water Resources Control Board (State Water Board), Division of Water Rights, and receive approval for any change in the point of discharge, place of use, or purpose of use of treated wastewater that decreases the flow in any portion of a watercourse. The State Water Board retains separate jurisdictional authority to enforce such requirements under Water Code section 1211. This is not an NPDES permit requirement.

## 2. FACILITY DESCRIPTION

### 2.1. Wastewater Collection and Treatment

- 2.1.1. **Service Area and Collection System.** The plant provides advanced-secondary treatment of domestic and industrial wastewater from within the City of American Canyon, and serves a population of about 20,000 people and several industrial dischargers, including a food processing facility, a winery, and a beverage bottling company.

The Discharger owns and operates two separate collection systems, one for domestic wastewater (85 to 90 percent of the influent) and one for industrial wastewater (10 to 15 percent of the influent). These collection systems include approximately 54 miles of gravity sewer, 4.9 miles of force main, and five pump stations.

- 2.1.2. **Wastewater Treatment.** Treatment consists of flow equalization and aeration, micro-screening and grit removal, biological secondary treatment, membrane filtration, disinfection, and, for discharges at Discharge Point 001, post-discharge aeration. The plant has an average daily treatment capacity of up to 2.5 MGD and a peak wet weather capacity of 5.0 MGD. From June 2017 through December 2021, the plant treated an average daily flow of 1.5 MGD and a maximum daily flow of 3.3 MGD. Attachment C provides the plant flow schematic.

The secondary treatment system consists of four parallel biological treatment trains, each providing anoxic and aerobic biological treatment, and membrane filtration. The four treatment trains can be used to segregate domestic wastewater (Main Aeration Basin) from industrial wastewater (North Aeration Basin). The Discharger typically operates the plant to combine domestic and industrial wastewater before secondary treatment but may begin to segregate domestic wastewater from industrial wastewater more frequently as recycled water production increases. Treated wastewater discharges are disinfected by ultraviolet light (UV). Recycled water is disinfected using chlorine (see § 2.1.4.).

- 2.1.3. **Sludge and Biosolids Management.** Biosolids generated during the treatment process are stored in two 5-million-gallon earthen clay-lined sludge storage basins, one of which is lined with an impermeable polyethylene liner. The basins provide biosolids storage capacity sufficient for about 10 years. Biosolids

from the sludge storage basins are dewatered with a screw press, then hauled to a landfill.

2.1.4. **Recycling.** The plant produces recycled wastewater under the State Water Board’s *General Water Reuse Order* (WQ 2016-0068-DDW) year-round for irrigation and non-potable indoor uses, such as toilet flushing. Domestic wastewater is typically lower in total dissolved solids than the Facility’s industrial wastewater, thus it is more suitable for recycling. The Discharger, American Canyon High School, and local vineyards use the recycled water for irrigation. The plant’s recycling facilities include a separate chlorine contact basin used only to disinfect recycled water, a one-million-gallon storage tank, and a recently constructed 1.5-million-gallon storage tank; the Discharger also has at least ten miles of recycled water pipelines.

2.1.5 **Stormwater Management.** The Discharger directs all onsite stormwater to the plant headworks for treatment; therefore, coverage under the State Water Board’s *General NPDES Permit for Stormwater Discharges Associated With Industrial Activities* (NPDES General Permit CAS000001) is unnecessary.

2.2. **Discharge Points and Receiving Water.** The plant either distributes treated wastewater for recycling or discharges effluent from either Discharge Point 001 to the North Slough or Discharge Point 003 to two constructed wetland ponds (Pond 1 and Pond 2) tributary to the North Slough. Treated wastewater is discharged at Discharge Point 001 during the wet season (November 1 through April 30), but discharge at Discharge Point 001 is prohibited during the dry season (May 1 through October 31). Treated wastewater is discharged at Discharge Point 003 year-round. The North Slough and the constructed wetlands are waters of the United States within the San Pablo Bay watershed.

2.3. **Previous Requirements and Monitoring Data.** The table below presents the previous order’s effluent limitations and representative monitoring data from the previous order term (June 2017 – December 2021):

**Table F-2. Existing Effluent Limitations and Monitoring Data**

Parameter	Unit	Average Monthly Limit	Average Weekly Limit	Maximum Daily Limit	Other Limit	Long-Term Average <sup>[1]</sup>	Highest Daily Value <sup>[1]</sup>
Carbonaceous Biochemical Oxygen Demand (5 day @ 20°C) (BOD)	mg/L	10	15	—	—	ND<5.0	3.0
Total Suspended Solids (TSS)	mg/L	10	15	—	—	ND<2.0	1.3
BOD percent removal	%	85 (minimum)	—	—	—	100	99 <sup>[2]</sup>
TSS percent removal	%	85 (minimum)	—	—	—	100	99 <sup>[2]</sup>

Parameter	Unit	Average Monthly Limit	Average Weekly Limit	Maximum Daily Limit	Other Limit	Long-Term Average <sup>[1]</sup>	Highest Daily Value <sup>[1]</sup>
Oil and grease	mg/L	—	—	10		2.0	9.0
pH	s.u.	—	—	—	6.5 – 8.5 <sup>[3]</sup>	7.3	7.2 – 7.4 <sup>[4]</sup>
Total Residual Chlorine	mg/L	—	—	—	0.013 <sup>[5]</sup>	<sup>[6]</sup>	<sup>[6]</sup>
Turbidity	NTU	—	—	10	—	0.25	0.50
Copper, Total Recoverable	µg/L	10	—	16	—	4.4	12 <sup>[7]</sup>
Nickel, Total Recoverable	µg/L	7.6	—	11	—	3.4	22 <sup>[8]</sup>
Cyanide, Total	µg/L	6.9	—	14	—	ND<2.0	5.9
Dioxin-TEQ	µg/L	1.4 x 10 <sup>-8</sup>	—	2.8 x 10 <sup>-8</sup>	—	ND	ND
Ammonia, Total	mg/L as N	2.0	3.0	—	—	0.20	2.2 <sup>[9]</sup>

**Footnotes:**

- <sup>[1]</sup> Arithmetic mean based on monitoring data for June 2017 through December 2021. For data sets including non-detect and estimated values, the median calculated per State Implementation Plan §2.4.5 is presented instead of the arithmetic mean.
- <sup>[2]</sup> Lowest monthly percent removal value.
- <sup>[3]</sup> Instantaneous minimum and instantaneous maximum.
- <sup>[4]</sup> Range of lowest to highest pH values.
- <sup>[5]</sup> This is the updated water quality-based limit imposed by Order R2-2021-0019 (see Fact Sheet § 1.4).
- <sup>[6]</sup> Discharge was not disinfected with chlorine during the term of the previous order.
- <sup>[7]</sup> This value was detected in October 2021. The average for the month was 4.7 µg/L, which did not violate the average monthly limit.
- <sup>[8]</sup> This value was detected in May 2020. Because the May 2020 data set included ND and estimated values, the monthly median of ND<3.0 µg/L was used to evaluate compliance with the average monthly limit.
- <sup>[9]</sup> This value was detected in August 2018. The average for the month was 1.5 mg/L, which did not violate the average monthly limit.

## 2.4. Compliance Summary

2.4.1. **Treatment Plant.** On May 7, 2020, the Discharger exceeded the previous order’s maximum daily effluent limitation for nickel of 11 µg/L with a nickel concentration of 22 µg/L at Monitoring Location EFF-001. Accelerated monitoring commenced on May 15, 2020, as soon as the lab notified the Discharger of the result. The subsequent nickel results ranged from non-detect to an estimated detection of 3.4 µg/L, so accelerated monitoring was terminated on May 19, 2020. Regional Water Board enforcement is pending.

The Discharger reported deficient monitoring in July and November 2020. These events are described below:

- The Discharger found the weekly BOD results from July 31, 2020, to be abnormal and requested that the laboratory review them. Upon review, the laboratory found it had made several errors that rendered the results unreportable. By that time, it was too late to collect replacement samples. The lab took steps to ensure the error will not be repeated.

- The weekly influent and effluent BOD analyses for November 18, 2020, did not pass laboratory QA/QC requirements and were cancelled by the lab. Again, it was too late to collect replacement samples. The dilution water used in the analyses had been contaminated. The lab took corrective action to prevent a recurrence.

2.4.2. **Collection System.** The table below summarizes the Discharger’s Category 1 sanitary sewer overflow (SSO) rates for the last five years. Category 1 SSOs are those that reach waters of the United States and thus may violate Prohibition 3.4 of this Order.

**Table F-3. Collection System and Category 1 SSO Rates (SSOs/100 miles)**

(Values based on CIWQS data analysis completed in June 2021) <sup>[1]</sup>

Agency (and Pipe Types)	Length (miles)	Average Pipe Age (years)	2016	2017	2018	2019	2020
Discharger (Main and Lower Lateral Lines)	54 <sup>[2]</sup>	46	0.0	0.0	0.0	0.0	0.0
San Francisco Bay Region (all systems, large and small) – Main and Lower Lateral Lines	17,700	46 <sup>[3]</sup>	1.2	1.7	0.71	1.4	0.67
State of California (all systems, large and small) – Main and Lower Lateral Lines	111,100	44 <sup>[3]</sup>	0.46	0.68	0.39	0.57	0.33

Footnotes:

<sup>[1]</sup> The State Water Board’s *Enrollees’s Guide to the SSO Database* defines “Total number of SSOs per 100 miles of Sewer” as “...the number of SSOs, for which the reporting enrollee is responsible, for every 100 miles of pipe or sewer lines in an enrollee’s sanitary sewer system. Due to the large variation in facility specific characteristics, this metric should only be viewed as a rough comparison of the operation and maintenance performance of enrollees and their sanitary sewer systems.”

<sup>[2]</sup> Lengths shown are based on 2020 data.

<sup>[3]</sup> The average pipe age for the State of California is estimated based on the percentages of piping constructed during each decade as reported by enrollees under State Water Board Order 2006-0003-DWQ, Statewide General Waste Discharge Requirements for Sanitary Sewer Systems, as amended by State Water Board Order WQ 2013-0058-EXEC.

The above SSO rates are normalized relative to a distance of 100 miles. During the previous order term, the Discharger’s SSO rates were zero, significantly lower than those for the San Francisco Bay Region and State. In 2017, the Discharger formed a dedicated collections division with three full-time employees. The new division initiated a preventative maintenance schedule of proactive cleaning and inspections, which has helped to prevent SSOs. The Discharger keeps a list of hot spots, which are visually inspected weekly and cleaned as needed, and a list of problem laterals, which are inspected by video camera quarterly and cleaned as needed. The American Canyon collection system is jet-cleaned every three years. The Discharger plans several significant sewer rehabilitation/replacement projects for the next 10 years.

**2.5. Sea Level Rise.** The Facility is not located within the FEMA 100-year flood plain and is unlikely to be affected by sea level rise according to the Bay Area Clean Water Agencies’ January 9, 2018, draft technical memo *Sea Level Rise*

*Assessment.* The draft memo states the sum of the existing 100-year-flood water surface elevation (11 feet) and forecast 100-year sea level rise (6.2 feet) is less than the elevation of the discharge points (18 feet). However, the draft memo does not address the potential vulnerability of the constructed wetlands, which are at a lower elevation than the discharge points. The Discharger is re-evaluating its responses to a Regional Water Board request for information on its potential vulnerability to sea level rise, actions to adapt, and the need to update its contingency plan, emergency response plan, and hazard mitigation plans.

**2.6. Planned Changes.** The Discharger does not plan any significant changes to the plant during the term of this Order.

### **3. APPLICABLE PLANS, POLICIES, AND REGULATIONS**

The requirements contained in this Order are based on the requirements and authorities described in this section.

**3.1. Legal Authorities.** This Order serves as WDRs pursuant to California Water Code article 4, chapter 4, division 7 (commencing with § 13260). This Order is also issued pursuant to federal Clean Water Act (CWA) section 402 and implementing regulations adopted by the U.S. EPA, and Water Code chapter 5.5, division 7 (commencing with § 13370). It serves as an NPDES permit authorizing the Discharger to discharge into waters of the United States at the discharge location described in Table 1 subject to the WDRs in this Order.

**3.2. California Environmental Quality Act (CEQA).** Under Water Code section 13389, this action to adopt an NPDES permit is exempt from the provisions of the California Environmental Quality Act (CEQA), Public Resources Code division 13, chapter 3 (commencing with § 21100).

#### **3.3. State and Federal Laws, Regulations, Policies, and Plans**

**3.3.1. Water Quality Control Plan.** The Regional Water Board adopted the *Water Quality Control Plan for the San Francisco Bay Basin* (Basin Plan), which designates beneficial uses, establishes water quality objectives, and contains implementation programs and policies to achieve those objectives for all waters addressed through the plan. Requirements in this Order implement the Basin Plan. Beneficial uses applicable to the tidal portion of the Napa River are as follows:

**Table F-4. Beneficial Uses**

Discharge Point	Receiving Water	Beneficial Uses
001	Napa River (tidal)	Commercial and Sport Fishing (COMM) Estuarine Habitat (EST) Fish Migration (MIGR) Preservation of Rare and Endangered Species (RARE) Wildlife Habitat (WILD) Water Contact Recreation (REC1) Non-Contact Water Recreation (REC2) Navigation (NAV)

State Water Board Resolution 88-63 establishes as State policy that all waters, with certain exceptions, should be considered suitable or potentially suitable for municipal or domestic supply (MUN). Discharge Point 001 discharges to the North Slough, tributary to the tidal portion of the Napa River; Discharge Point 003 discharges to constructed wetlands tributary to the North Slough. Total dissolved solids exceed 3,000 mg/L in the tidal portion of the Napa River. Therefore, the tidal portion of the Napa River meets an exception to State Water Board Resolution 88-63 and does not support the municipal or domestic supply beneficial use.

- 3.3.2. **National Toxics Rule (NTR) and California Toxics Rule (CTR).** The NTR and CTR contain federal water quality criteria for priority pollutants. U.S. EPA adopted the NTR on December 22, 1992, and amended it on May 4, 1995, and November 9, 1999. About 40 NTR criteria apply in California. U.S. EPA adopted the CTR on May 18, 2000. The CTR promulgated new toxics criteria for California and incorporated the NTR criteria that applied in the state. U.S. EPA amended the CTR on February 13, 2001.
- 3.3.3. **State Implementation Policy.** On March 2, 2000, the State Water Board adopted the *Policy for Implementation of Toxics Standards for Inland Surface Waters, Enclosed Bays, and Estuaries of California* (State Implementation Policy or SIP). The SIP establishes implementation provisions for priority pollutant criteria and objectives, and provisions for chronic toxicity control. The SIP became effective on April 28, 2000, with respect to the priority pollutant criteria U.S. EPA promulgated for California through the NTR and the priority pollutant objectives the Regional Water Board established through the Basin Plan. The SIP became effective on May 18, 2000, with respect to the priority pollutant criteria U.S. EPA promulgated through the CTR. The State Water Board adopted amendments to the SIP on February 24, 2005, that became effective on July 13, 2005. Requirements of this Order implement the SIP.
- 3.3.4. **Bacteria Objectives.** The State Water Board adopted the *Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California – Part 3, Bacteria Provisions and a Water Quality Standards Variance Policy* on August 7, 2018, and it became effective on March 22, 2019. This plan establishes enterococcus bacteria water quality objectives and related

implementation provisions for discharges to marine and estuarine waters that support the water contact recreation beneficial use.

- 3.3.5. **Sediment Quality.** The State Water Board adopted the *Water Quality Control Plan for Enclosed Bays and Estuaries – Part 1, Sediment Quality* on September 16, 2008, and it became effective on August 25, 2009. The State Water Board adopted amendments to the plan on June 5, 2018, that became effective on March 11, 2019. This plan establishes sediment quality objectives and related implementation provisions for specifically defined sediments in most bays and estuaries.
- 3.3.6. **Antidegradation Policy.** Federal regulations at 40 C.F.R. section 131.12 require that state water quality standards include an antidegradation policy consistent with the federal policy. The State Water Board established California's antidegradation policy through State Water Board Resolution 68-16, *Statement of Policy with Respect to Maintaining High Quality of Waters in California*, which incorporates the federal antidegradation policy where the federal policy applies under federal law. Resolution 68-16 requires that existing water quality be maintained unless degradation is justified based on specific findings. The Basin Plan implements, and incorporates by reference, both the state and federal antidegradation policies. Permitted discharges must be consistent with the antidegradation provisions of 40 C.F.R. section 131.12 and State Water Board Resolution 68-16.
- 3.3.7. **Anti-Backsliding Requirements.** CWA sections 402(o) and 303(d)(4) and 40 C.F.R. section 122.44(l) restrict backsliding in NPDES permits. These anti-backsliding provisions require that effluent limitations in a reissued permit be as stringent as those in the previous permit, with some exceptions in which limitations may be relaxed.
- 3.3.8. **Endangered Species Act Requirements.** This Order does not authorize any act that results in the taking of a threatened or endangered species or any act that is now prohibited, or becomes prohibited in the future, under either the California Endangered Species Act (Fish and Game Code §§ 2050 to 2097) or Federal Endangered Species Act (16 U.S.C.A. §§ 1531 to 1544). This Order requires compliance with effluent limits, receiving water limits, and other requirements to protect the beneficial uses of waters of the state, including protecting rare, threatened, or endangered species. The Discharger is responsible for meeting all applicable Endangered Species Act requirements.
- 3.3.9. **Sewage Sludge and Biosolids.** U.S. EPA administers 40 C.F.R. part 503, Standards for the Use or Disposal of Sewage Sludge, which regulates the final use or disposal of sewage sludge generated during the treatment of domestic sewage in a municipal wastewater treatment facility. The Discharger is responsible for meeting applicable requirements of 40 C.F.R. part 503. This Order does not authorize any act that violates those requirements.

**3.4. Impaired Water Bodies on CWA section 303(d) List.** On April 6, 2018, U.S. EPA approved a revised list of impaired waters pursuant to CWA section 303(d), which requires identification of specific water bodies where it is expected that water quality standards will not be met after implementation of technology-based effluent limitations on point sources. Where it has not done so already, the Regional Water Board plans to adopt Total Maximum Daily Loads (TMDLs) for pollutants on the 303(d) list. TMDLs establish wasteload allocations for point sources and load allocations for nonpoint sources and are established to achieve water quality standards.

The Napa River in the vicinity of the discharge is listed as impaired by nutrients and pathogens. San Pablo Bay, to which the Napa River is tributary, is listed for mercury, PCBs, selenium, chlordane, DDT, dieldrin, invasive species, dioxins and furans, and nickel.

On February 29, 2008, U.S. EPA approved a TMDL for pathogens in the Napa River. This Order's enterococcus limitations are more stringent than the Napa River pathogens TMDL requires.

The discharge is a source of nutrients to the Napa River and is currently regulated by the Regional Water Board through the Nutrient Watershed Permit (NPDES Permit CA0038873, Order R2-2019-0017). If additional nutrient control measures are necessary, the Regional Water Board will implement such measures through that permit.

On February 12, 2008, U.S. EPA approved a TMDL for mercury in San Francisco Bay. On March 29, 2010, U.S. EPA approved a TMDL for PCBs in San Francisco Bay. The TMDLs for mercury and PCBs apply to this discharge and are implemented under NPDES Permit CA0038849.

On August 23, 2016, U.S. EPA approved a TMDL for selenium in North San Francisco Bay, which includes San Pablo Bay. The selenium TMDL does not require effluent limits for municipal wastewater dischargers because these discharges have an insignificant impact on North San Francisco Bay water quality.

As shown in Fact Sheet section 4.3.3, the discharge is not a significant source of chlordane, DDT, or dieldrin because these pollutants have not been detected in the discharge. The discharge is also not a source of invasive species because it is disinfected. It is not a significant source of dioxins and furans because discharge concentrations are consistently below water quality objectives. This Order contains nickel effluent limits to ensure that nickel in effluent is kept below water quality objectives.

#### **4. RATIONALE FOR EFFLUENT LIMITATIONS AND DISCHARGE SPECIFICATIONS**

The CWA requires point source dischargers to control the amount of conventional, non-conventional, and toxic pollutants discharged into waters of the United States. The control of pollutants discharged is established through effluent limitations and

other requirements in NPDES permits. There are two principal bases for effluent limitations: 40 C.F.R. section 122.44(a) requires that permits include applicable technology-based limitations and standards, and 40 C.F.R. section 122.44(d) requires that permits include water quality-based effluent limitations to attain and maintain applicable numeric and narrative water quality criteria to protect the beneficial uses of receiving waters.

#### 4.1. Discharge Prohibitions

##### 4.1.1. Prohibitions in this Order

- 4.1.1.1. **Discharge Prohibition 3.1 (No discharge other than as described):** This prohibition is based on 40 C.F.R. section 122.21(a) and Water Code section 13260, which require filing an application and Report of Waste Discharge before a discharge can occur. Discharges not described in the application and Report of Waste Discharge, and subsequently in this Order, are prohibited.
- 4.1.1.2. **Discharge Prohibition 3.2 (No bypass to waters of the United States):** This prohibition is based on 40 C.F.R. section 122.41(m) (see Attachment D section 1.7).
- 4.1.1.3. **Discharge Prohibition 3.3 (No average dry weather influent flow greater than 2.5 MGD):** This Order prohibits average dry weather influent flows greater than 2.5 MGD because the plant design average dry weather treatment capacity (i.e., its historical and tested treatment reliability) is 2.5 MGD. Exceeding this flow could result in lower reliability and greater potential to violate water quality requirements.
- 4.1.1.4. **Discharge Prohibition 3.4 (No sanitary sewer overflows to waters of the United States):** Basin Plan Table 4-1, Discharge Prohibition 15, and the CWA prohibit the discharge of wastewater to surface waters, except as authorized under an NPDES permit. Publicly-owned treatment works must achieve secondary treatment at a minimum and any more stringent limitations necessary to meet water quality standards. A sanitary sewer overflow that results in the discharge to waters of the United States of raw sewage or wastewater not meeting this Order's effluent limitations is therefore prohibited under the Basin Plan and CWA.
- 4.1.1.5. **Discharge Prohibition 3.5 (Dry season discharge to Napa River is prohibited):** Basin Plan Table 4-1, Discharge Prohibition 1, prohibits wastewater discharges with particular characteristics of concern to beneficial uses at any point at which the wastewater does not receive a minimum of at least 10:1 initial dilution. The North Slough is a seasonal tidal wetland that does not provide 10:1 dilution during the dry season; therefore, discharge is prohibited during this period to protect beneficial uses of the receiving water.

Discharge from Discharge Point 001 is allowed during the wet season, as discussed in Fact Sheet section 4.1.2 below.

4.1.2. **Basin Plan Discharge Prohibition 1.** Basin Plan Table 4-1, Discharge Prohibition 1, prohibits discharges of wastewater that do not receive a minimum of 10:1 initial dilution or discharges into any nontidal water, dead-end slough, or similar confined waters and their tributaries. Basin Plan section 4.2 provides for exceptions to Basin Plan Discharge Prohibition 1 under certain circumstances:

- An inordinate burden would be placed on the Discharger relative to the beneficial uses protected, and an equivalent level of environmental protection can be achieved by alternate means;
- A discharge is approved as part of a reclamation project;
- Net environmental benefits will be derived as a result of the discharge; or
- A discharge is approved as part of a groundwater cleanup project.

The Basin Plan further states:

In reviewing requests for exceptions, the Water Board will consider the reliability of the discharger's system in preventing inadequately treated wastewater from being discharged to the receiving water and the environmental consequences of such discharges.

This Order grants exceptions to Basin Plan Discharge Prohibition 1 for the discharges from Discharge Points 001 and 003 as described below:

- 4.1.2.1. **Discharge Point 001.** The wet-season discharge from Discharge Point 001 qualifies for an exception to Discharge Prohibition 1 under Basin Plan section 4.2 because construction of a deep-water outfall to provide dilution would be inordinately burdensome and the Discharger provides an equivalent level of protection. Construction of a deep-water outfall would be inordinately burdensome because the plant is located 10 miles from the nearest deep-water channel, in Carquinez Strait. The Discharger provides an equivalent level of protection by providing advanced-secondary treatment (see Fact Sheet section 4.2.2).
- 4.1.2.2. **Discharge Point 003.** The discharge from Discharge Point 003 qualifies for an exception to Discharge Prohibition 1 by the same rationale as that for Discharge Point 001. Furthermore, this year-round discharge provides a net environmental benefit by supporting constructed freshwater wetlands that would not exist without the discharge. The constructed wetlands are managed consistent with the Regional Water Board's *Policy on the Use of Wastewater to Create, Restore, and/or Enhance Wetlands* (Regional Water Board Resolution 94-086). Multiple varieties of vegetation have been cultivated in the freshwater wetlands to create nesting habitat for fresh and

brackish water bird species. Provision 6.3.5.5 of this Order requires quarterly biological surveys. The constructed freshwater wetlands also provide a transition zone to the brackish wetlands of the North Slough.

## 4.2. Technology-Based Effluent Limitations

### 4.2.1. Scope and Authority

CWA section 301(b) and 40 C.F.R. section 122.44 require that permits include conditions meeting technology-based requirements, at a minimum, and any more stringent effluent limitations necessary to meet water quality standards. The discharges authorized by this Order must meet minimum federal technology-based requirements based on the secondary treatment standards at 40 C.F.R. section 133 as summarized below. Basin Plan Table 4-2 contains additional requirements for certain pollutants.

**Table F-5. Secondary Treatment Standards**

Parameter	Monthly Average	Weekly Average
Biochemical Oxygen Demand (BOD) <sup>[1,2]</sup>	30 mg/L	45 mg/L
Carbonaceous Biochemical Oxygen Demand (CBOD) <sup>[1,2]</sup>	25 mg/L	40 mg/L
Total Suspended Solids TSS <sup>[2]</sup>	30 mg/L	45 mg/L
pH	6.0 – 9.0 standard units	

Footnotes:

<sup>[1]</sup> CBOD effluent limitations may be substituted for BOD limitations.

<sup>[2]</sup> The monthly average percent removal, by concentration, is not to be less than 85 percent.

### 4.2.2. Technology-Based Effluent Limitations

4.2.2.1. **BOD and TSS.** This Order’s BOD and TSS effluent limitations, excluding the 85 percent removal requirement, are more stringent than the secondary treatment standards. These more stringent limits demonstrate a level of water quality protection equivalent to complying with Basin Plan Discharge Prohibition 1 (see Fact Sheet section 4.1, above). The BOD and TSS 85 percent removal requirements are based on the secondary treatment standards and Basin Plan Table 4-2. Effluent data show that compliance with these limits is feasible.

4.2.2.2. **pH.** This Order’s pH effluent limitations are based on Basin Plan Table 4-2, which requires more stringent pH limits for shallow water discharges than those required by the Secondary Treatment Standards.

4.2.2.3. **Turbidity.** The turbidity effluent limitation represents adequate and reliable secondary and advanced-secondary wastewater treatment. This limitation demonstrates a level of water quality protection equivalent to complying with Basin Plan Discharge Prohibition 1 (see Fact Sheet section 4.1.2). Effluent data show that compliance with this limit is feasible for the Facility’s advanced wastewater treatment technologies.

### 4.3. Water Quality-Based Effluent Limitations

#### 4.3.1. Scope and Authority

CWA section 301(b) and 40 C.F.R. section 122.44(d) require permits to include limitations more stringent than federal technology-based requirements where necessary to achieve water quality standards. According to 40 C.F.R. section 122.44(d)(1)(i), permits must include effluent limitations for all pollutants that are or may be discharged at levels that have a reasonable potential to cause or contribute to an exceedance of a water quality standard, including numeric and narrative objectives within a standard. Where reasonable potential has been established for a pollutant, but there is no numeric criterion or objective, water quality-based effluent limitations (WQBELs) must be established using (1) U.S. EPA criteria guidance under CWA section 304(a), supplemented where necessary by other relevant information; (2) an indicator parameter for the pollutant of concern; or (3) a calculated numeric water quality criterion, such as a proposed state criterion or policy interpreting a narrative criterion, supplemented with relevant information. The process for determining reasonable potential and calculating WQBELs when necessary is intended to achieve applicable water quality objectives and criteria, and thereby protect designated beneficial uses of receiving waters.

#### 4.3.2. Beneficial Uses and Water Quality Criteria and Objectives

Fact Sheet section 3.3.1 (Table F-4) identifies the beneficial uses of the tidal portion of the Napa River. Water quality criteria and objectives to protect these beneficial uses are described below.

4.3.2.1. **Basin Plan Objectives.** The Basin Plan specifies numerous water quality objectives, including numeric objectives for 10 priority pollutants and un-ionized ammonia. The Basin Plan also specifies narrative water quality objectives for toxicity and bioaccumulation.

4.3.2.1.1. **Un-ionized Ammonia.** Basin Plan section 3.3.20 contains water quality objectives for un-ionized ammonia of 0.025 mg/L (as nitrogen) as an annual median and 0.16 mg/L (as nitrogen) as a maximum for Central San Francisco Bay and upstream waters. These water quality objectives apply to San Pablo Bay, to which the North Slough is tributary via the Napa River. To determine the un-ionized ammonia fraction, pH, salinity, and temperature data were used from local receiving water stations and from effluent. The un-ionized fraction of total ammonia was calculated as follows:

$$\text{Fraction of un-ionized ammonia} = (1 + 10^{[pK - pH]})^{-1}$$

Where, for salinity less than 1 ppt:

$$pK = 0.09018 + 2729.92/T$$

T = temperature in Kelvin

For salinity greater than 10 ppt:

$$pK = 9.245 + 0.116*(I) + 0.0324*(298-T) + 0.0415*(P)/T$$

I = molal ionic strength of saltwater

$$= 19.9273*(S)/(1000-1.005109*S)$$

S = salinity (parts per thousand)

T = temperature in Kelvin

P = pressure (one atmosphere)

- 4.3.2.1.2. **Toxicity.** The narrative toxicity objective (Basin Plan § 3.3.18) states, “All waters shall be maintained free of toxic substances in concentrations that are lethal to or that produce other detrimental responses in aquatic organisms. Detrimental responses include, but are not limited to, decreased growth rate and decreased reproductive success of resident or indicator species. There shall be no acute toxicity in ambient waters. ... There shall be no chronic toxicity in ambient waters.”

This Order translates the narrative objective for chronic toxicity into a numeric criterion of 1.0 chronic toxicity unit (TUc). At 1.0 TUc, there is no observable detrimental effect when the indicator organism is exposed to 100 percent effluent; therefore, 1.0 TUc is a direct translation of the narrative objective into a number. Moreover, in U.S. EPA’s *Technical Support Document for Water Quality-based Toxics Control* (EPA/505/2 90 001; see section 3.3.3, “Step 3: Decision Criteria for Permit Limit Development”), U.S. EPA recommends that 1.0 TUc be used as a criterion continuous concentration (typically a four-day average). It further states that reasonable potential is shown where an effluent is projected to cause an excursion above the criterion continuous concentration. This document applies here as guidance because it directly addresses effluent characterization for toxicity.

- 4.3.2.1.3. **Bioaccumulation and Dioxin-TEQ.** The narrative bioaccumulation objective (Basin Plan § 3.3.2) states, “Many pollutants can accumulate on particulates, in sediments, or bioaccumulate in fish and other aquatic organisms. Controllable water quality factors shall not cause a detrimental increase in concentrations of toxic substances found in bottom sediments or aquatic life. Effects on aquatic organisms, wildlife, and human health will be considered.” Because it is the consensus of the scientific community that dioxins and furans associate with particulates, accumulate in sediments, and bioaccumulate in the fatty tissue of fish and other organisms, the Basin Plan’s narrative bioaccumulation water quality objective applies to these pollutants. Elevated levels of dioxins and furans in San Francisco Bay fish tissue demonstrate that the narrative bioaccumulation water quality objective is not being met. U.S. EPA has therefore placed San Pablo Bay, to which the North Slough is tributary via

the Napa River, on its 303(d) list of receiving waters where water quality objectives are not being met after imposition of applicable technology-based requirements.

When the CTR was promulgated, U.S. EPA stated its support for the regulation of dioxin and dioxin-like compounds through the use of toxicity equivalencies (TEQs). U.S. EPA stated, “For California waters, if the discharge of dioxin or dioxin-like compounds has reasonable potential to cause or contribute to a violation of a narrative criterion, numeric water quality-based effluent limits for dioxin or dioxin-like compounds should be included in NPDES permits and should be expressed using a TEQ scheme” (Fed. Reg. Vol. 65, No. 97, pages 31695-31696, May 18, 2000). This Order uses a TEQ scheme based on a set of toxicity equivalency factors (TEFs) the World Health Organization developed in 2005, and a set of bioaccumulation equivalency factors (BEFs) U.S. EPA developed for the Great Lakes region (40 C.F.R. § 132, Appendix F) to convert the concentration of any congener of dioxin or furan into an equivalent concentration of 2,3,7,8-tetrachlorinated dibenzo-p-dioxin (2,3,7,8-TCDD). Although the 2005 World Health Organization scheme includes TEFs for dioxin-like PCBs, they are not included in this Order’s TEQ scheme. The CTR has established a specific water quality criterion for PCBs, and dioxin-like PCBs are included in the analysis of total PCBs.

The CTR establishes a numeric water quality objective for 2,3,7,8-TCDD of  $1.4 \times 10^{-8}$  µg/L for the protection of human health when water and aquatic organisms are consumed. This CTR criterion is used as a criterion for dioxin-TEQ because dioxin-TEQ represents a toxicity-weighted concentration equivalent to 2,3,7,8 TCDD, thus translating the narrative bioaccumulation objective into a numeric criterion.

- 4.3.2.2. **CTR Criteria.** The CTR specifies numeric aquatic life and human health criteria for numerous priority pollutants. These criteria apply to inland surface waters and enclosed bays and estuaries. Some human health criteria are for consumption of “water and organisms” and others are for consumption of “organisms only.” The criteria applicable to “organisms only” apply to the North Slough in the vicinity of this discharge and to the constructed wetlands because they are not drinking water sources, as described in Fact Sheet section 3.3.1.
- 4.3.2.3. **NTR Criteria.** The NTR establishes numeric aquatic life and human health criteria for a number of toxic pollutants for San Francisco Bay waters upstream to and including Suisun Bay and the Sacramento-San Joaquin Delta. The NTR criteria apply to San Pablo Bay, to which the North Slough is tributary via the Napa River.
- 4.3.2.4. **Bacteria Objectives.** The *Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California – Part 3, Bacteria*

*Provisions and a Water Quality Standards Variance Policy* establishes enterococcus bacteria water quality objectives to limit cases of gastrointestinal illness from water contact recreation. The enterococcus bacteria objectives apply to marine and estuarine waters.

4.3.2.5. **Sediment Quality Objectives.** The *Water Quality Control Plan for Enclosed Bays and Estuaries – Part 1, Sediment Quality* contains the following narrative water quality objectives:

4.3.2.5.1. “Pollutants in sediments shall not be present in quantities that, alone or in combination, are toxic to benthic communities in bays and estuaries of California.” This objective is to be implemented by integrating three lines of evidence: sediment toxicity, benthic community condition, and sediment chemistry. The policy requires that if the Regional Water Board determines that a discharge has reasonable potential to cause or contribute to an exceedance of this objective, it is to impose the objective as a receiving water limit.

4.3.2.5.2. “Pollutants shall not be present in sediments at levels that will bioaccumulate in aquatic life to levels that are harmful to human health in bays and estuaries of California.” This objective is to be implemented by a three-tiered procedure based on pollutant concentrations in sediment and fish tissue.

4.3.2.5.3. “Pollutants shall not be present in sediment at levels that alone or in combination are toxic to wildlife and resident finfish by direct exposure or bioaccumulate in aquatic life at levels that are harmful to wildlife or resident finfish by indirect exposure in bays and estuaries of California.” This objective is to be implemented on a case-by-case basis, based upon an ecological risk assessment.

4.3.2.6. **Receiving Water Salinity.** Basin Plan section 4.6.2 (like the CTR and NTR) states that the salinity characteristics (i.e., freshwater vs. saltwater) of the receiving water are to be considered in determining the applicable water quality objectives. Freshwater criteria apply to discharges to waters with salinities equal to or less than one part per thousand (ppt) at least 95 percent of the time. Saltwater criteria apply to discharges to waters with salinities equal to or greater than 10 ppt at least 95 percent of the time in a normal water year. For discharges to water with salinities in between these two categories, or tidally-influenced freshwaters that support estuarine beneficial uses, the water quality objectives are the lower of the salt or freshwater criteria (the latter calculated based on ambient hardness) for each substance.

The Discharger monitored receiving water salinity near the discharge at Monitoring Locations RSW-003, RSW-004, and RSW-005 from August 2017 to November 2021. During that period, the salinity at Monitoring Location

RSW-003, in the North Slough, was greater than 10 ppt in 72 percent of the samples and between 1.0 and 10 ppt in 28 percent of the samples. Salinity at Monitoring Locations RSW-004 and RSW-005, in the constructed wetlands, was between 1.0 and 10 ppt in 36 percent of samples and less than 1.0 ppt in 64 percent of samples. Therefore, the reasonable potential analysis and WQBELs are based on the more stringent of the freshwater and saltwater water quality criteria and objectives.

4.3.2.7. **Receiving Water Hardness.** Ambient hardness values collected at Monitoring Locations RSW-004 and RSW-005, located in the constructed wetlands, were used to calculate freshwater WQOs that are hardness dependent. The geometric mean hardness at Monitoring Locations RSW-004 and RSW-005 of 220 mg/L as calcium carbonate was used to calculate the freshwater WQOs for this Order.

4.3.2.8. **Metals Translators.** Effluent limitations for metals must be expressed as total recoverable metal (40 C.F.R. § 122.45 [c]). Since the water quality objectives for metals are typically expressed as dissolved metal, translators must be used to convert metals concentrations from dissolved to total recoverable and vice versa. The CTR contains default translators; however, site-specific conditions, such as water temperature, pH, total suspended solids, and organic carbon may affect the form of metal (dissolved, non-filterable, or otherwise) present and therefore available to cause toxicity. In general, dissolved metals are more available and more toxic to aquatic life than other forms. Site-specific translators can account for site-specific conditions, thereby preventing overly stringent water quality objectives.

CTR default translators were used for all metals except copper. Site-specific copper translators that the Napa Sanitation District developed in its *Napa River Copper Translator Study* (Larry Walker Associates, June 2002) were used: 0.57 (acute) and 0.42 (chronic).

#### 4.3.3. Reasonable Potential Analysis

4.3.3.1. **Available Information.** The reasonable potential analysis for this Order is based on effluent data the Discharger collected from June 2017 through December 2021 and ambient data for ammonia and conventional parameters the Discharger collected from August 2017 through November 2021 (ammonia calculations are based on these data). Ambient data for priority pollutants were collected as part of the Collaborative Napa River Receiving Water Evaluation in 2002 (*Collaborative Napa River Receiving Water Study*, Napa Sanitation District, April 24, 2003, letter to Regional Water Board), and were supplemented by additional copper, nickel, and selenium data collected in 2008 and 2009.

This Order does not contain WQBELs for pollutants that do not demonstrate reasonable potential; however, the MRP (Attachment E) still requires

monitoring for those pollutants. If pollutant concentrations are found to have increased significantly, Provision 6.3.2 of this Order requires the Discharger to investigate the sources of the increased concentrations and implement remedial measures if those increased concentrations pose a threat to receiving water quality.

4.3.3.2. **Priority Pollutants and Dioxin-TEQ.** SIP section 1.3 sets forth the methodology used to assess whether a priority pollutant has reasonable potential to exceed CTR and NTR water quality objectives. Here, SIP section 1.3 is also used as guidance for dioxin-TEQ. The analysis begins with identifying the maximum effluent concentration (MEC) observed for each pollutant based on available effluent concentration data and the ambient background concentration (B). SIP section 1.4.3 states that ambient background concentrations are either the maximum ambient concentration observed or, for water quality objectives intended to protect human health, the arithmetic mean of observed concentrations. There are three triggers in determining reasonable potential:

- **Trigger 1** is activated if the maximum effluent concentration is greater than or equal to the lowest applicable water quality objective ( $MEC \geq$  water quality objective).
- **Trigger 2** is activated if the ambient background concentration observed in the receiving water is greater than the lowest applicable water quality objective ( $B >$  water quality objective) and the pollutant is detected in any effluent sample.
- **Trigger 3** is activated if a review of other information indicates that a WQBEL is needed to protect beneficial uses.

The maximum effluent concentrations, most stringent applicable water quality criteria and objectives, and ambient background concentrations used in the analysis are presented in the following table, along with the reasonable potential analysis results (yes, no, or unknown) for each pollutant. Basin Plan sections 4.7.2.2 and 7.2.1.2 require copper and cyanide WQBELs for all individual NPDES permits for municipal wastewater treatment facilities. Based on this analysis, the only pollutants that demonstrate reasonable potential are copper, cyanide, nickel, and dioxin-TEQ.

**Table F-6. Reasonable Potential Analysis for Priority Pollutants**

CTR No.	Pollutant	C or Governing Criterion or Objective (µg/L)	MEC or Minimum DL (µg/L) <sup>[1][2]</sup>	B or Minimum DL (µg/L) <sup>[1][2]</sup>	RPA Result <sup>[3]</sup>

Footnotes:

<sup>[1]</sup> The MEC and ambient background concentration are the actual detected concentrations unless preceded by a “<” sign, in which case the value shown is the minimum detection level (MDL).

- [2] The MEC or ambient background concentration is "Unavailable" when there are no monitoring data for the constituent.
- [3] RPA Results = Yes, if MEC  $\geq$  WQC, B > WQC and MEC is detected, or Trigger 3  
= No, if MEC and B are < WQC or all effluent data are undetected  
= Unknown (U) if no criteria have been promulgated or data are insufficient.
- [4] Basin Plan sections 7.2.1.2 and 4.7.2.2 require copper and cyanide WQBELs.
- [5] SIP section 1.3 excludes from its reasonable potential analysis procedure priority pollutants for which a TMDL has been developed. TMDLs have been developed for mercury and PCBs in San Francisco Bay. Mercury and PCBs from wastewater discharges are regulated by NPDES Permit CA0038849, which implements the San Francisco Bay Mercury and PCBs TMDLs. A TMDL has also been developed for selenium in North San Francisco Bay, which includes Central San Francisco Bay. Basin Plan section 7.2.4.5 finds that municipal wastewater dischargers have no reasonable potential to cause or contribute to the selenium impairment in San Francisco Bay segments and, therefore, are not required to have numeric effluent limitations.
- [6] Asbestos sampling is only required for discharges to waters with the municipal or domestic supply (MUN) beneficial use. Lower San Francisco Bay does not have the MUN beneficial use.

4.3.3.3. **Total Residual Chlorine.** A water quality-based effluent limitation for total residual chlorine is not required because the Facility disinfects its effluent with UV, not chlorine, and has process control safeguards that stop discharge immediately if residual chlorine from other sources (such as site washdown) is detected in the effluent from the membrane filters. The Discharger has no plans to disinfect with chlorine instead of UV. The discharge therefore does not have reasonable potential to contain chlorine above the new water quality objectives established by Regional Water Board Resolution R2-2020-0031.

#### 4.3.3.4. **Ammonia**

4.3.3.4.1. **Methodology.** Ammonia is a toxic pollutant but not a priority pollutant as defined by the CTR; therefore, the procedure outlined in *the Technical Support Document for Water Quality-based Toxics Control* (Technical Support Document) (EPA/505/2-90-001, March 1991) was used to determine if ammonia in the discharge has reasonable potential to cause a water quality objective to be exceeded in the receiving water. According to the Technical Support Document, the reasonable potential analyses can be performed based on the receiving water concentrations projected using effluent data or measured receiving water concentrations. Both values may be compared directly to the Basin Plan un-ionized ammonia objectives.

The following steps summarize the process for determining reasonable potential for a pollutant using the Technical Support Document method:

- **Step 1.** Determine the total number of samples (n) and the maximum effluent concentration (MEC).
- **Step 2.** Determine the coefficient of variation (CV). For a data set where  $n < 10$ , the CV is estimated to equal 0.6. For a dataset where  $n \geq 10$ , the CV is calculated as the standard deviation divided by the mean.

- **Step 3.** Determine a ratio (R) for projecting an upper-bound concentration at a desired confidence interval assuming a lognormal distribution. Use the following procedure:

Calculate the percentile ( $P_n$ ) represented by the MEC in the data set of  $n$  samples based on a selected confidence interval (e.g., 95% or 99%). The 95% confidence interval was used for evaluating reasonable potential for ammonia for this Order.

$$P_n = (1 - \text{confidence interval})^{1/n}$$

Calculate the projected  $C_{P_n}$ , corresponding to  $P_n$ , and  $C_{\text{upper bound}}$ , corresponding to the selected upper-bound percentile (typically 99<sup>th</sup> percentile), using the following equation.

$$C_p = \exp(Z_p\sigma - 0.5\sigma^2)$$

Where:

$p$  = percentile (upper bound or  $p_n$ )

$Z_p$  = standard normal distribution Z value for the percentile  $p$   
(available from statistical references)

$$\sigma^2 = \ln(\text{CV}^2 + 1)$$

Then calculate R as follows:

$$R = C_{\text{upperbound}}/C_{P_n}$$

- **Step 4.** Calculate the projected maximum receiving water concentration (RWC) as follows:

$$\text{RWC} = (\text{MEC} \times R) / \text{dilution ratio}$$

The dilution ratio can be defined as:

$$\text{Dilution ratio} = (D + [1 \text{ part effluent}]) / (1 \text{ part effluent})$$

Where D is the parts receiving water available to dilute 1 part effluent

Therefore:

$$\text{RWC} = (\text{MEC} \times R) / (D + 1)$$

- **Step 5.** Compare the RWC to the most stringent water quality objective for the pollutant. There is reasonable potential if the RWC is greater than or equal to the lowest applicable water quality objective.

- 4.3.3.4.2. **Dilution Credit.** For the purpose of this analysis, no dilution was assumed ( $D=0$ ) and the receiving water concentration projected from effluent data was assumed to be the same as the projected upper bound concentration:

$RWC = MEC \times R$  (see Step 4 in Fact Sheet section 4.3.3.3.1., above).

- 4.3.3.4.3. **Analysis Based on Effluent Data.** Translated un-ionized ammonia effluent data from June 2017 through December 2021 were used to evaluate reasonable potential for ammonia. From the 57 samples collected, the MEC was 0.023 mg/L when expressed as un-ionized ammonia (as N). The confidence interval was set at 95 percent. The percentile represented by the MEC ( $P_n$ ) was calculated to be 0.949, indicating that the MEC represents the 94.9th percentile of all observed ammonia effluent data. With the upper bound set at the 99th percentile, the R value was determined to be 1.7 ( $Cp_n$  was 2.6 and Copper bound was 4.5), and the projected receiving water concentration was 0.039 mg/L, which is less than the Basin Plan un-ionized ammonia acute objective of 0.16 mg/L.

The highest actual running annual median un-ionized ammonia concentration based on the effluent data was calculated and compared with the chronic objective, which itself is expressed as an annual median. No projection is needed to establish the central tendency of the data. The maximum annual median, 0.0068 mg/L, is less than the annual median objective of 0.025 mg/L.

- 4.3.3.4.4. **Analysis Based on Receiving Water Data.** Receiving water monitoring data from Monitoring Location RSW-002 were collected for total ammonia, pH, salinity, and temperature. The maximum un-ionized ammonia concentration (0.029 mg/L) was less than the maximum water quality objective (0.16 mg/L). The highest running annual median un-ionized ammonia concentration (0.023 mg/L) was less than the annual median water quality objective (0.025 mg/L).

- 4.3.3.4.5. **Conclusion.** While effluent and receiving water data for ammonia support finding no reasonable potential, there would be reasonable potential if the Discharger were to discontinue nitrifying its effluent. During the previous order term, the Discharger successfully operated the plant to treat ammonia to below the Basin Plan objectives. However, without regulatory assurance that nitrification will continue, the un-ionized ammonia in the effluent could increase. Therefore, the total ammonia effluent limitations from the previous order are retained to avoid backsliding and to ensure that the Discharger maintains its nitrification performance.

- 4.3.3.5. **Enterococcus Bacteria.** The *Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California – Part 3, Bacteria Provisions and a Water Quality Standards Variance Policy* requires

*Enterococcus* bacteria effluent limitations for discharges to marine and estuarine receiving waters that support the water contact recreation (REC1) beneficial use.

- 4.3.3.6. **Acute Toxicity.** Basin Plan section 4.5.5.3.1 requires acute toxicity monitoring and limitations, implying there is reasonable potential for the discharge to cause or contribute to exceedances of the acute toxicity water quality objective.
- 4.3.3.7. **Chronic Toxicity.** There is no reasonable potential for chronic toxicity in the receiving water, and no WQBEL is required. The Technical Support Document allows for a mixing zone and dilution credit to be considered when conducting a reasonable potential analysis. This analysis uses a dilution ratio of 3.25:1 ( $D=2.25$ ), which is the same as the dilution credit for cyanide listed in Table 4-6 of the Basin Plan. This approach is consistent with Basin Plan section 4.5.5.3.2, which allows chronic toxicity dilution credits “comparable to those allowed for numeric chemical-specific objectives.”

During the previous order term, the Discharger conducted quarterly chronic toxicity tests using the mysid shrimp (*Americamysis bahia*). All chronic toxicity results were  $<1.0$  TU<sub>c</sub>. Applying the dilution credit of 3:25:1 to 1.0 TU<sub>c</sub>, the resulting toxicity is 0.31 TU<sub>c</sub>, which is less than the translated chronic toxicity objective (1.0 TU<sub>c</sub>).

- 4.3.3.8. **Sediment Quality.** Pollutants in some receiving water sediments may be present in quantities that alone or in combination are toxic to benthic communities. However, to date there is no evidence directly linking compromised sediment conditions to the discharges subject to this Order; therefore, the Regional Water Board cannot draw a conclusion about reasonable potential for these discharges to cause or contribute to exceedances of the sediment quality objectives. Nevertheless, the Discharger continues to participate in the Regional Monitoring Program, which routinely monitors San Francisco Bay sediment and seeks to identify stressors responsible for degraded sediment quality.

#### 4.3.4. **Water Quality-Based Effluent Limitations**

WQBELs were developed for the pollutants determined to have reasonable potential to cause or contribute to exceedances of water quality objectives. Except for acute toxicity, and *Enterococcus* bacteria (discussed below), the WQBEL calculations are based on the procedures in SIP section 1.4.

- 4.3.4.1. **WQBEL Expression.** NPDES regulations at 40 C.F.R. section 122.45(d) require that permit limits for publicly-owned treatment works be expressed as average weekly and average monthly limits, unless impracticable. This Order contains daily limits instead of weekly limits because daily limits better protect against acute water quality effects and are necessary to prevent fish

kills or mortality to aquatic organisms. Weekly limits could allow acute and chronic toxicity to occur over shorter periods (acute and chronic aquatic life criteria are typically expressed as one-hour and four-day averages).

4.3.4.2. **Mixing Zones and Dilution Credits.** For cyanide, this Order provides a dilution credit of 3.25:1 (3.25 parts combined effluent and receiving water to 1 part effluent, or D = 2.25) based on Basin Plan Table 4-6.

For chronic toxicity, Basin Plan section 4.5.5.3.2 allows dilution credits “comparable to those allowed for numeric chemical-specific objectives.” Therefore, this Order establishes the same dilution credit for chronic toxicity as it provides for cyanide, 3:25:1.

4.3.4.3. **WQBEL Calculations.** The following table shows the copper, nickel, cyanide, and dioxin-TEQ effluent limit calculations in accordance with SIP section 1.4.

**Table F-7. WQBEL Calculations**

4.3.4.4. **Acute Toxicity.** This Order includes acute toxicity effluent limitations based on Basin Plan Table 4-3. Based on Basin Plan section 3.3.20, if the Discharger can demonstrate that ammonia causes acute toxicity in excess of the acute toxicity limitations in this Order, and that the ammonia in the discharge complies with the ammonia effluent limitations in this Order, then such toxicity does not constitute a violation of the effluent limitations for whole effluent acute toxicity.

- 4.3.4.5. **Enterococcus Bacteria.** This Order includes enterococcus effluent limitations based on the *Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California – Part 3, Bacteria Provisions and a Water Quality Standards Variance Policy*, which requires these limitations for discharges to receiving waters with the water contact recreation beneficial use.

#### 4.4. Discharge Requirement Considerations

- 4.4.1. **Anti-Backsliding.** This Order complies with the anti-backsliding provisions of CWA sections 402(o) and 303(d)(4), and 40 C.F.R. section 122.44(l), which generally require comparable effluent limitations in a reissued permit to be as stringent as those in the previous order. Although Clean Water Act section 402(o) prohibits backsliding, with certain exceptions, Clean Water Act section 303(d)(4) allows backsliding when consistent with antidegradation policies. The requirements of this Order are at least as stringent as those in the previous order, except for oil and grease, total residual chlorine, and *Enterococcus* bacteria as discussed below.

Order R2-2021-0019 replaced the previous order's total residual chlorine technology-based effluent limitation (0.0 mg/L) with a higher water quality-based effluent limitation (0.13 mg/L) and removed the previous order's technology-based effluent limit for oil and grease. These changes complied with federal and state antidegradation policies as explained in Order R2-2021-0019.

This Order does not retain effluent limits for total residual chlorine because there is no reasonable potential for total residual chlorine to exceed water quality objectives (see Fact Sheet § 4.3.3.3). This is consistent with State Water Board Order WQ 2001-16. Furthermore, the receiving waters are not impaired by chlorine; therefore Clean Water Act section 303(d)(4) allows the total residual chlorine limit to be relaxed if doing so complies with antidegradation requirements (see Fact Sheet § 4.4.2, below).

This Order contains new *Enterococcus* bacteria effluent limits based on the *Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California – Part 3, Bacteria Provisions and a Water Quality Standards Variance Policy*. The new effluent limits are expressed using different averaging periods than the previous limits and are therefore not directly comparable.

- 4.4.2. **Antidegradation.** Federal regulations at 40 C.F.R. section 131.12 require that state water quality standards include an antidegradation policy consistent with federal requirements. The State Water Board's "Statement of Policy with Respect to Maintaining High Quality of Waters in California" (Resolution 68-16) sets forth California's antidegradation policy. Where the federal antidegradation policy is applicable, the State Water Board has interpreted Resolution 68-16 to incorporate the federal antidegradation policy. A permitted discharge must be

consistent with the antidegradation provision of 40 C.F.R. section 131.12 and State Water Board Resolution 68-16.

Where a receiving water is of higher quality than applicable water quality standards, the higher water quality must be maintained unless certain conditions are met. Any decrease in water quality must be consistent with the maximum benefit to the people of the State, must not unreasonably affect any current or anticipated beneficial uses, and must not result in lower water quality than that prescribed in the policies. Activities that produce an increased volume or concentration of waste and that discharge to existing high quality waters must meet waste discharge requirements that will “result in the best practicable treatment or control of the discharge necessary to assure that (a) a pollution or nuisance will not occur and (b) the highest water quality consistent with maximum benefit to the people of the State will be maintained” (Resolution 68-16).

This Order does not authorize lowering water quality as compared to the level of discharge authorized in the previous order, which is the baseline by which to measure whether degradation will occur. This Order does not allow for an increased flow or a reduced level of treatment relative to the previous order. Although this Order eliminates total residual chlorine limits, water quality will not be degraded because the Facility does not discharge total residual chlorine. Although this Order modifies the *Enterococcus* bacteria limits, the new limits serve a comparable purpose and reflect the most up-to-date water quality objectives.

- 4.4.3. **Stringency of Requirements for Individual Pollutants.** This Order contains both technology-based and water quality-based effluent limitations for individual pollutants. The technology-based requirements implement minimum, applicable federal technology-based requirements. In addition, this Order contains more stringent effluent limitations as necessary to meet water quality standards. Collectively, this Order’s restrictions on individual pollutants are no more stringent than required to implement CWA requirements.

This Order’s WQBELs have been derived to implement water quality objectives that protect beneficial uses. The beneficial uses and water quality objectives have been approved pursuant to federal law and are the applicable federal water quality standards. To the extent that WQBELs were derived from the CTR, the CTR is the applicable standard pursuant to 40 C.F.R. section 131.38. The procedures for calculating these WQBELs are based on the CTR, as implemented in accordance with the SIP, which U.S. EPA approved on May 18, 2000. U.S. EPA approved most Basin Plan beneficial uses and water quality objectives prior to May 30, 2000. Beneficial uses and water quality objectives submitted to U.S. EPA prior to May 30, 2000, but not approved by U.S. EPA before that date, are nonetheless “applicable water quality standards for purposes of the CWA” pursuant to 40 C.F.R. section 131.21(c)(1). U.S. EPA approved the remaining beneficial uses and water quality objectives, so they

are also applicable water quality standards pursuant to 40 C.F.R. section 131.21(c)(2).

## **5. RATIONALE FOR RECEIVING WATER LIMITATIONS**

The receiving water limitations in sections 5.1 and 5.2 of the Order are based on Basin Plan narrative and numeric water quality objectives. The receiving water limitation in section 5.3 of the Order requires compliance with federal and state water quality standards in accordance with the CWA and regulations adopted thereunder.

## **6. RATIONALE FOR PROVISIONS**

### **6.1. Standard Provisions**

Attachment D contains standard provisions that apply to all NPDES permits in accordance with 40 C.F.R. section 122.41 and additional conditions applicable to specific categories of permits in accordance with 40 C.F.R. section 122.42. The Discharger must comply with these provisions. The conditions set forth in 40 C.F.R. sections 122.41(a)(1) and (b) through (n) apply to all state-issued NPDES permits and must be incorporated into permits either expressly or by reference.

In accordance with 40 C.F.R. section 123.25(a)(12), states may omit or modify conditions to impose more stringent requirements. Attachment G contains standard provisions that supplement the provisions in Attachment D. This Order omits the federal conditions that address enforcement authority specified in 40 C.F.R. sections 122.41(j)(5) and (k)(2) because the state's enforcement authority under the Water Code is more stringent. In lieu of these conditions, this Order incorporates Water Code section 13387(e) by reference.

### **6.2. Monitoring and Reporting Provisions**

CWA section 308 and 40 C.F.R. sections 122.41(h), 122.41(j)-(l), 122.44(i), and 122.48 require that NPDES permits specify monitoring and reporting requirements. Water Code section 13383 also authorizes the Regional Water Board to establish monitoring, inspection, entry, reporting, and recordkeeping requirements. The MRP establishes monitoring, reporting, and recordkeeping requirements that implement federal and State requirements. For more information, see Fact Sheet section 7.

### **6.3. Special Provisions**

#### **6.3.1. Reopener Provisions**

These provisions are based on 40 C.F.R. sections 122.62 and 122.63 and allow modification of this Order and its effluent limitations as necessary in response to updated water quality objectives, regulations, or other new and relevant

information that may become available in the future, and other circumstances as allowed by law.

### 6.3.2. **Effluent Characterization Study and Report**

This Order does not include WQBELs for pollutants that do not demonstrate reasonable potential, but this provision requires the Discharger to evaluate monitoring data to verify that the reasonable potential analysis conclusions of this Order remain valid. This requirement is authorized pursuant to 40 C.F.R. section 122.41(h) and Water Code section 13383. It is necessary to inform the next permit reissuance and to ensure that the Discharger takes timely steps in response to any unanticipated change in effluent quality during the term of this Order.

### 6.3.3. **Pollutant Minimization Program**

This provision is based on Basin Plan section 4.13.2 and SIP section 2.4.5.

### 6.3.4. **Special Provisions for Publicly-Owned Treatment Works**

- 6.3.4.1. **Pretreatment Program.** This provision is based on 40 C.F.R. part 403. The Discharger implements a pretreatment program due to the nature and volume of influent to the plant. This provision lists the Discharger's responsibilities regarding its pretreatment program and requires compliance with the provisions in Attachment H, Pretreatment Requirements.
- 6.3.4.2. **Sludge and Biosolids Management.** This provision is based on Basin Plan section 4.17. "Sludge" refers to the solid, semisolid, and liquid residue removed during primary, secondary, and advanced wastewater treatment processes. "Biosolids" refers to sludge that has been treated and may be beneficially reused.
- 6.3.4.3. **Collection System Management.** The Discharger's collection system is part of the Facility regulated through this Order. This provision requires compliance with Attachments D and G and states that these requirements may be satisfied by separately complying with State Water Board Order 2006-0003-DWQ, Statewide General Waste Discharge Requirements for Sanitary Sewer Systems, as amended by State Water Board Order WQ 2013-0058-EXEC and any subsequent order updating these requirements. These statewide WDRs require public agencies that own or operate sanitary sewer systems with one or more miles of sewer lines to enroll for coverage and comply with requirements to develop sanitary sewer management plans and report sanitary sewer overflows, among other provisions and prohibitions. The statewide WDRs contain requirements for operation and maintenance of collection systems and for reporting and mitigating sanitary sewer overflows that are more extensive and, therefore, more stringent than the standard provisions in Attachments D and G.

Compliance with the statewide WDRs will satisfy the corresponding requirements in Attachments D and G.

### 6.3.5. Other Special Provisions

- 6.3.5.1. **Copper Action Plan.** This provision is based on Basin Plan section 7.2.1.2 and is necessary to ensure that use of copper site-specific objectives is consistent with antidegradation policies. This Order requires the Discharger to implement source control and pollution prevention for identified sources. Additional actions may be necessary depending on the three-year rolling mean copper concentration in San Pablo Bay. Data the San Francisco Estuary Institute compiled for 2015-2019 indicate no degradation of San Francisco Bay water quality with respect to copper (<https://www.sfei.org/pages/copper-site-specific-objective-3-year-rolling-averages-0>).
- 6.3.5.2. **Cyanide Action Plan.** This provision is based on Basin Plan section 4.7.2.2 and is necessary to ensure that use of cyanide site-specific objectives is consistent with antidegradation policies. The threshold for considering influent cyanide concentrations to indicate a possible “significant cyanide discharge” in the Discharger’s service area is set at 23 µg/L. This concentration is from the previous order. During the previous order term (2016 – 2021), the maximum influent cyanide concentration was 32 µg/L at Monitoring Location INF-001, which monitors industrial influent. That concentration would have indicated a significant cyanide discharge to the plant if the next sample had been greater than 23 µg/L, but it was less (17 µg/L). This Order retains the previous threshold to ensure that the Discharger will take action if influent cyanide concentrations increase.
- 6.3.5.3. **Anaerobically Digestible Material.** Standard Operating Procedures are required for publicly-owned treatment works that accept hauled waste food, fats, oil, and grease for injection into anaerobic digesters. The development and implementation of Standard Operating Procedures for management of these materials is intended to allow the California Department of Resources Recycling and Recovery to exempt this activity from separate and redundant permitting programs. Some POTWs choose to accept organic material, such as waste food, fats, oils, and grease, into their anaerobic digesters to increase production of methane and other biogases for energy production and to prevent such materials from being discharged into the collection system and potentially causing sanitary sewer overflows. The California Department of Resources Recycling and Recovery has proposed to exempt publicly-owned treatment works from Process Facility/Transfer Station permit requirements when the same activity is regulated under WDRs or NPDES permits. The proposed exemption is restricted to anaerobically digestible materials that have been prescreened, slurried, processed, and conveyed in a closed system for codigestion with regular sewage sludge. The exemption requires that the publicly-owned treatment works develop Standard

Operating Procedures for proper handling, processing, tracking, and management of anaerobically digestible material.

- 6.3.5.4. **Average Annual Selenium Load.** This provision is based on Basin Plan section 7.2.4.5. The information will be used to confirm that selenium loads are consistent with wasteload allocations established in the North San Francisco Bay Selenium TMDL. The requirements regarding treatment of estimated and non-detect values are consistent with the load calculations.
- 6.3.5.5. **Constructed Freshwater Wetlands Management and Management Plan Update.**
- 6.3.5.5.1. **Constructed Freshwater Wetlands Management.** This provision requires the Discharger to continue management and monitoring of its constructed freshwater wetlands in accordance with the Discharger's *Constructed Wetlands Demonstration Project Management Plan* (August 2001) or the most recent version, developed in accordance with the Regional Water Board's *Policy on the Use of Wastewater to Create, Restore, and/or Enhance Wetlands* (Resolution 94-086). This provision is necessary to continue to justify an exception to Basin Plan Discharge Prohibition 1 for discharges to the constructed wetlands as described in Fact Sheet section 4.2. above.
- 6.3.5.5.2. **Constructed Freshwater Wetlands Management Plan Update.** This provision requires the Discharger to review and update its August 2021 management plan for the constructed wetlands. This provision is necessary to ensure the plan remains useful and relevant.

## 7. RATIONALE FOR MONITORING AND REPORTING REQUIREMENTS

The following provides the rationale for the monitoring and reporting requirements in the MRP.

### 7.1 Monitoring Requirements Rationale

- 7.1.1. **Influent Monitoring.** Influent flow monitoring at Monitoring Locations INF-001 and INF-002 is necessary to understand Facility operations and to evaluate compliance with Prohibition 3.3, which prohibits average dry weather influent flow greater than 2.5 MGD. Influent BOD and TSS monitoring is necessary to evaluate compliance with this Order's 85 percent removal requirements. Basin Plan section 4.7.2.2 requires cyanide monitoring because this Order's cyanide effluent limits implement site-specific cyanide water quality objectives.
- 7.1.2. **Effluent Monitoring.** Effluent flow monitoring at Monitoring Locations EFF-001, EFF-001-S, EFF-003, and REC-001 is necessary to understand Facility operations and to evaluate compliance with Discharge Prohibition 3.5, which prohibits dry season discharges from Discharge Point 001. Monitoring for the other parameters at Monitoring Location EFF-001 is necessary to evaluate

compliance with this Order's effluent limitations and to provide information for future reasonable potential analyses.

- 7.1.3. **Toxicity Monitoring.** Acute toxicity tests are necessary to evaluate compliance with this Order's acute toxicity effluent limitations. Chronic toxicity tests are necessary to evaluate whether chronic toxicity triggers the need for a TRE based on Basin Plan sections 4.5.5.3.2 and 4.5.5.3.3 and Basin Plan Table 4-5.

Because the Discharger elected to participate in the *Alternate Monitoring and Reporting Requirements for Municipal Wastewater Discharges for the Purpose of Adding Support to the San Francisco Bay Regional Monitoring Program* (Order R2-2016-0008) and there was no significant change in the nature of effluent, the Discharger did not conduct a chronic toxicity screening phase study for this permit reissuance. The MRP specifies that mysid shrimp (*Americamysis bahia*) is to be used for chronic toxicity testing unless a more sensitive species is identified.

- 7.1.4. **Receiving Water Monitoring.** Receiving water monitoring is necessary to evaluate compliance with receiving water limitations. Monitoring for hardness is necessary to determine applicable water quality objectives. Monitoring for pH and temperature is necessary to provide data to translate the Basin Plan's un-ionized ammonia water quality objectives into total ammonia criteria. Monitoring for total ammonia is needed to complete future reasonable potential analyses.

The Discharger is also required to participate in the RMP, which involves collecting data on pollutants and toxicity in San Francisco Bay water, sediment, and biota. This monitoring is necessary to characterize the receiving water and the effects of the discharges this Order authorizes. Additionally, this Order requires the Discharger to provide supplemental funding to the Regional Monitoring Program to support additional studies for constituents of emerging concern.

- 7.1.5. **Pretreatment and Biosolids Monitoring.** The pretreatment and biosolids monitoring requirements for influent, effluent, and biosolids are necessary to evaluate compliance with pretreatment requirements.

- 7.1.6. **Recycled Water Monitoring.** The recycled water monitoring and reporting requirements incorporate the existing requirements of State Water Board Order WQ 2019-0037-EXEC (*Amending Monitoring and Reporting Programs for Waste Discharge Requirements, National Pollutant Discharge Elimination System Permits, Water Reclamation Requirements, Master Recycling Permits, and General Waste Discharge Requirements*), issued on July 24, 2019, pursuant to Water Code sections 13267 and 13383.

- 7.1.7. **Other Monitoring Requirements.** Pursuant to CWA section 308, U.S. EPA requires some dischargers to participate in a Discharge Monitoring Report-Quality Assurance (DMR-QA) Study Program that evaluates the analytical

abilities of laboratories that perform or support NPDES permit-required monitoring. The program applies to discharger laboratories and contract laboratories and evaluates each laboratory’s ability to analyze wastewater samples to produce quality data that ensure the integrity of the NPDES program. There are two options to comply: (1) the Discharger may obtain and analyze DMR-QA samples, or (2) pursuant to a waiver U.S. EPA issued to the State Water Board, the Discharger may submit results from the most recent Water Pollution Performance Evaluation Study. MRP section 1.4 requires the Discharger to ensure that the results of the DMR-QA Study or most recent Water Pollution Performance Evaluation Study are submitted to the State Water Board, which forwards the results to U.S. EPA.

**7.2. Monitoring Requirements Summary.** The table below summarizes routine monitoring requirements. This table is for informational purposes only. The actual requirements are specified in the MRP and elsewhere in this Order. In addition to undertaking the monitoring below, the Discharger must conduct receiving water monitoring by continuing to participate in the Regional Monitoring Program.

**Table F-8. Monitoring Requirements Summary**

Parameter <sup>[1]</sup>	Influent INF-001	Influent INF-002	Effluent EFF-001	Effluent EFF-001-S, REC-001, and EFF-003	Receiving Water RSW-002 and RSW-003 <sup>[1]</sup>	Receiving Water RSW-004 and RSW-005 <sup>[1]</sup>	Biosolids BIO-003

Standard Observations	—	—	—	—	2/Year	—	—

**Footnotes:**

- <sup>[1]</sup> The Discharger must also comply with the monitoring requirements in the Mercury and PCBs Watershed Permit (NPDES Permit CA0038849) and the Nutrients Watershed Permit (NPDES Permit CA0038873), and continue supporting the RMP.
- <sup>[2]</sup> Priority pollutant monitoring is required by Provision 6.3.2 of this Order.
- <sup>[3]</sup> VOC: volatile organic compounds; BNA: base/neutrals and acid extractable organic compounds
- <sup>[4]</sup> The metals and other elements are arsenic, cadmium, chromium (total or hexavalent), lead, mercury, nickel, selenium, silver, and zinc.
- <sup>[5]</sup> Biosolids collection and monitoring shall be in accordance with the requirements specified in Attachment H, Appendix H-4.

## 8. PUBLIC PARTICIPATION

The Regional Water Board considered the issuance of WDRs that will serve as an NPDES permit for the Facility. As a step in the WDR adoption process, Regional Water Board staff developed tentative WDRs and encouraged public participation in the WDR adoption process.

**8.1. Notification of Interested Parties.** The Regional Water Board notified the Discharger and interested agencies and persons of its intent to prescribe WDRs for the discharge and provided an opportunity to submit written comments and recommendations. The public had access to the agenda and any changes in dates and locations through the [Regional Water Board's website](http://waterboards.ca.gov/sanfranciscobay) (waterboards.ca.gov/sanfranciscobay).

**8.2. Written Comments.** Interested persons were invited to submit written comments concerning the tentative WDRs as explained through the notification process. Comments were to be submitted either in person, by e-mail, or by mail to the Executive Office at the Regional Water Board at 1515 Clay Street, Suite 1400, Oakland, California 94612, to the attention of John Madigan.

For full staff response and Regional Water Board consideration, the written comments were due at the Regional Water Board office by 5:00 p.m. on May 18, 2022.

**8.3. Public Hearing.** The Regional Water Board held a public hearing on the tentative WDRs during its meeting at the following date and time:

Date: June 8, 2022  
Time: 9:00 a.m.

Contact: John Madigan, (510) 622-2405, [John.Madigan@waterboards.ca.gov](mailto:John.Madigan@waterboards.ca.gov)

Interested persons were provided notice of the hearing and information on how to participate. At the public hearing, the Regional Water Board heard testimony pertinent to the discharge, WDRs, and permit. For accuracy of the record, important testimony was requested to be in writing.

If the date or venue of any public hearing changes, the changes will be reflected in the most current agenda posted on the [Regional Water Board's website](http://waterboards.ca.gov/sanfranciscobay) (waterboards.ca.gov/sanfranciscobay).

**8.4. Reconsideration of Waste Discharge Requirements.** Any person aggrieved by this Regional Water Board action may petition the State Water Board to review the action in accordance with Water Code section 13320 and California Code of Regulations, title 23, sections 2050. The State Water Board must receive the petition at the following address within 30 calendar days of the date of Regional Water Board action:

State Water Resources Control Board  
Office of Chief Counsel  
P.O. Box 100, 1001 I Street  
Sacramento, CA 95812-0100

A petition may also be filed by email at [waterqualitypetitions@waterboards.ca.gov](mailto:waterqualitypetitions@waterboards.ca.gov).

For instructions on how to file a water quality petition for review, see the [Water Board's petition instructions](http://waterboards.ca.gov/public_notices/petitions/water_quality/wqpetition_instr.shtml) (waterboards.ca.gov/public\_notices/petitions/water\_quality/wqpetition\_instr.shtml).

**8.5. Information and Copying.** Supporting documents and comments received are on file. To review these documents, contact Melinda Wong the Regional Water

Board's custodian of records by calling (510) 622-2300 or emailing [Melinda.Wong@waterboards.ca.gov](mailto:Melinda.Wong@waterboards.ca.gov). Document copying may be arranged.

- 8.6. Register of Interested Persons.** Any person interested in being placed on the mailing list for information regarding the WDRs and NPDES permit should contact the Regional Water Board, reference the Facility, and provide a name, address, and phone number.
- 8.7. Additional Information.** Requests for additional information or questions regarding this Order should be directed to John Madigan, (510) 622-2405, [John.Madigan@waterboards.ca.gov](mailto:John.Madigan@waterboards.ca.gov).

**ATTACHMENT G – REGIONAL STANDARD PROVISIONS,  
AND MONITORING AND REPORTING REQUIREMENTS  
(SUPPLEMENT TO ATTACHMENT D)**

**APPLICABILITY**

This document supplements the requirements of Federal Standard Provisions (Attachment D). For clarity, these provisions are arranged using the same headings as those used in Attachment D.

**1. STANDARD PROVISIONS – PERMIT COMPLIANCE**

**1.1. Duty to Comply** – Not Supplemented

**1.2. Need to Halt or Reduce Activity Not a Defense** – Not Supplemented

**1.3. Duty to Mitigate** – Supplement to Attachment D, Provision 1.3.

**1.3.1. Contingency Plan.** The Discharger shall maintain a Contingency Plan as prudent in accordance with current facility emergency planning. The Contingency Plan shall describe procedures to ensure that existing facilities remain in, or are rapidly returned to, operation in the event of a process failure or emergency incident, such as employee strike, strike by suppliers of chemicals or maintenance services, power outage, vandalism, earthquake, or fire. The Discharger may combine the Contingency Plan and Spill Prevention Plan (see Provision 1.3.2, below) into one document. In accordance with Regional Water Board Resolution 74-10, discharge in violation of the permit where the Discharger has failed to develop and implement a Contingency Plan as described below may be the basis for considering the discharge a willful and negligent violation of the permit pursuant to California Water Code section 13387. The Contingency Plan shall, at a minimum, provide for the following:

- 1.3.1.1. Sufficient personnel for continued facility operation and maintenance during employee strikes or strikes against contractors providing services;
- 1.3.1.2. Maintenance of adequate chemicals or other supplies, and spare parts necessary for continued facility operations;
- 1.3.1.3. Emergency standby power;
- 1.3.1.4. Protection against vandalism;
- 1.3.1.5. Expedient action to repair failures of, or damage to, equipment, including any sewer lines;

- 1.3.1.6. Reporting of spills and discharges of untreated or inadequately treated wastes, including measures taken to clean up the effects of such discharges; and
- 1.3.1.7. Maintenance, replacement, and surveillance of physical condition of equipment and facilities, including any sewer lines.
- 1.3.2. **Spill Prevention Plan.** The Discharger shall maintain a Spill Prevention Plan to prevent accidental discharges and to minimize the effects of any such discharges. The Spill Prevention Plan shall do the following:
  - 1.3.2.1. Identify the possible sources of accidental discharge, untreated or partially-treated waste bypass, and polluted drainage;
  - 1.3.2.2. State when current facilities and procedures became operational and evaluate their effectiveness; and
  - 1.3.2.3. Predict the effectiveness of any proposed facilities and procedures and provide an implementation schedule with interim and final dates when the proposed facilities and procedures will be constructed, implemented, or operational.
- 1.4. **Proper Operation and Maintenance** – Supplement to Attachment D, Provision 1.4
  - 1.4.1. **Operation and Maintenance Manual.** The Discharger shall maintain an Operation and Maintenance Manual to provide the plant and regulatory personnel with a source of information describing all equipment, recommended operational strategies, process control monitoring, and maintenance activities. To remain a useful and relevant document, the Operation and Maintenance Manual shall be kept updated to reflect significant changes in treatment facility equipment and operational practices. The Operation and Maintenance Manual shall be maintained in usable condition and be available for reference and use by all relevant personnel and Regional Water Board staff.
  - 1.4.2. **Wastewater Facilities Status Report.** The Discharger shall maintain a Wastewater Facilities Status Report and regularly review, revise, or update it, as necessary. This report shall document how the Discharger operates and maintains its wastewater collection, treatment, and disposal facilities to ensure that all facilities are adequately staffed, supervised, financed, operated, maintained, repaired, and upgraded as necessary to provide adequate and reliable transport, treatment, and disposal of all wastewater from both existing and planned future wastewater sources under the Discharger's service responsibilities.
  - 1.4.3. **Proper Supervision and Operation of Publicly-Owned Treatment Works (POTWs).** POTWs shall be supervised and operated by persons possessing

certificates of appropriate grade pursuant to Title 23, section 3680, of the California Code of Regulations.

**1.5. Property Rights** – Not Supplemented

**1.6. Inspection and Entry** – Not Supplemented

**1.7. Bypass** – Not Supplemented

**1.8. Upset** – Not Supplemented

**1.9. Other** – Addition to Attachment D

1.9.1. Neither the treatment nor the discharge of pollutants shall create pollution, contamination, or nuisance as defined by California Water Code section 1305<0.

1.9.2. Collection, treatment, storage, and disposal systems shall be operated in a manner that precludes public contact with wastewater. If public contact with wastewater could reasonably occur on public property, warning signs shall be posted.

1.9.3. If the Discharger submits a timely and complete Report of Waste Discharge for permit reissuance, this permit shall continue in force and effect until the permit is reissued or the Regional Water Board rescinds the permit.

**2. STANDARD PROVISIONS – PERMIT ACTION – NOT SUPPLEMENTED**

**3. STANDARD PROVISIONS – MONITORING**

**3.1. Sampling and Analyses** – Supplement to Attachment D, Provisions 3.1 and 3.2

3.1.1. **Certified Laboratories.** Water and waste analyses shall be performed by a laboratory certified for these analyses in accordance with California Water Code section 13176.

3.1.2. **Minimum Levels.** For the 126 priority pollutants, the Discharger should use the analytical methods listed in Table B unless the Monitoring and Reporting Program (MRP, Attachment E) requires a particular method or minimum level (ML). All monitoring instruments and equipment shall be properly calibrated and maintained to ensure accuracy of measurements.

3.1.3. **Monitoring Frequency.** The MRP specifies the minimum sampling and analysis schedule.

**3.1.3.1. Sample Collection Timing**

3.1.3.1.1. The Discharger shall collect influent samples on varying days selected at random and shall not include any plant recirculation or other sidestream

wastes, unless otherwise stipulated in the MRP. The Executive Officer may approve an alternative influent sampling plan if it is representative of plant influent and complies with all other permit requirements.

- 3.1.3.1.2. The Discharger shall collect effluent samples on days coincident with influent sampling, unless otherwise stipulated by the MRP. If influent sampling is not required, the Discharger shall collect effluent samples on varying days selected at random, unless otherwise stipulated in the MRP. The Executive Officer may approve an alternative effluent sampling plan if it is representative of plant discharge and in compliance with all other permit requirements.
- 3.1.3.1.3. The Discharger shall collect effluent grab samples during periods of daytime maximum peak flows (or peak flows through secondary treatment units for facilities that recycle effluent).
- 3.1.3.1.4. Effluent sampling for conventional pollutants shall occur on at least one day of any multiple-day bioassay the MRP requires. During the course of the bioassay, on at least one day, the Discharger shall collect and retain samples of the discharge. In the event that a bioassay result does not comply with effluent limitations, the Discharger shall analyze the retained samples for pollutants that could be toxic to aquatic life and for which it has effluent limitations.
  - 3.1.3.1.4.1. The Discharger shall perform bioassays on final effluent samples; when chlorine is used for disinfection, bioassays shall be performed on effluent after chlorination and dechlorination; and
  - 3.1.3.1.4.2. The Discharger shall analyze for total ammonia nitrogen and calculate the amount of un-ionized ammonia whenever test results fail to meet effluent limitations.

### 3.1.3.2. **Conditions Triggering Accelerated Monitoring**

- 3.1.3.2.1. **Average Monthly Effluent Limitation Exceedance.** If the results from two consecutive samples of a constituent monitored in a particular month exceed the average monthly effluent limitation for any parameter (or if the required sampling frequency is once per month or less and the monthly sample exceeds the average monthly effluent limitation), the Discharger shall, within 24 hours after the results are received, increase its sampling frequency to daily until the results from the additional sampling show that the parameter complies with the average monthly effluent limitation.
- 3.1.3.2.2. **Maximum Daily Effluent Limitation Exceedance.** If a sample result exceeds a maximum daily effluent limitation, the Discharger shall, within 24 hours after the result is received, increase its sampling frequency to daily until the results from two samples collected on consecutive days show compliance with the maximum daily effluent limitation.

- 3.1.3.2.3. **Acute Toxicity.** If final or intermediate results of an acute bioassay indicate a violation or threatened violation (e.g., the percentage of surviving test organisms of any single acute bioassay is less than 70 percent), the Discharger shall initiate a new test as soon as practical or as described in applicable State Water Board plan provisions that become effective after adoption of these Regional Standard Provisions. The Discharger shall investigate the cause of the mortalities and report its findings in the next self-monitoring report.
- 3.1.3.2.4. **Chlorine.** The Discharger shall calibrate chlorine residual analyzers against grab samples as frequently as necessary to maintain accurate control and reliable operation. If an effluent violation is detected, the Discharger shall collect grab samples at least every 30 minutes until compliance with the limitation is achieved, unless the Discharger monitors chlorine residual continuously. In such cases, the Discharger shall continue to conduct continuous monitoring.
- 3.1.3.2.5. **Bypass.** Except as indicated below, if a Discharger bypasses any portion of its treatment facility, it shall monitor flows and collect samples at affected discharge points and analyze samples for all constituents with effluent limitations on a daily basis for the duration of the bypass. The Discharger need not accelerate chronic toxicity monitoring. The Discharger also need not collect and analyze samples for mercury, dioxin-TEQ, and PCBs after the first day of the bypass. The Discharger may satisfy the accelerated acute toxicity monitoring requirement by conducting a flow-through test or static renewal test that captures the duration of the bypass (regardless of the method specified in the MRP). If bypassing disinfection units only, the Discharger shall only monitor bacteria indicators daily.
- 3.1.3.2.5.1. **Bypass for Essential Maintenance.** If a Discharger bypasses a treatment unit for essential maintenance pursuant to Attachment D section 1.7.2, the Executive Officer may reduce the accelerated monitoring requirements above if the Discharger (i) monitors effluent at affected discharge points on the first day of the bypass for all constituents with effluent limitations, except chronic toxicity; and (ii) identifies and implements measures to ensure that the bypass will continue to comply with effluent limitations.
- 3.1.3.2.5.2. **Approved Wet Weather Bypasses.** If a Discharger bypasses a treatment unit or permitted outfall during wet weather with Executive Officer approval pursuant to Attachment D section 1.7.4, the Discharger shall monitor flows and collect and retain samples for affected discharge points on a daily basis for the duration of the bypass. The Discharger shall analyze daily for TSS using 24 hour composites (or more frequent increments) and for bacteria indicators with effluent limitations using grab samples. If TSS exceeds 45 mg/L in any

composite sample, the Discharger shall also analyze daily the retained samples for all other constituents with effluent limitations, except oil and grease, mercury, PCBs, dioxin-TEQ, and acute and chronic toxicity. Additionally, at least once each year, the Discharger shall analyze the retained samples for one approved bypass for all other constituents with effluent limitations, except oil and grease, mercury, PCBs, dioxin-TEQ, and acute and chronic toxicity. This monitoring shall be in addition to the minimum monitoring specified in the MRP.

### 3.2. Standard Observations – Addition to Attachment D

- 3.2.1. **Receiving Water Observations.** The following requirements only apply when the MRP requires standard observations of receiving waters. Standard observations shall include the following:
- 3.2.1.1. **Floating and Suspended Materials (e.g., oil, grease, algae, and other macroscopic particulate matter)** — presence or absence, source, and size of affected area.
  - 3.2.1.2. **Discoloration and Turbidity** — color, source, and size of affected area.
  - 3.2.1.3. **Odor** — presence or absence, characterization, source, and distance of travel.
  - 3.2.1.4. **Beneficial Water Use** — estimated number of water-associated waterfowl or wildlife, fisherpeople, and other recreational activities.
  - 3.2.1.5. **Hydrographic Condition** — time and height of high and low tides (corrected to nearest National Oceanic and Atmospheric Administration location for the sampling date and time).
  - 3.2.1.6. **Weather Conditions** — wind direction, air temperature, and total precipitation during five days prior to observation.
- 3.2.2. **Wastewater Effluent Observations.** The following requirements only apply when the MRP requires standard observations of wastewater effluent. Standard observations shall include the following:
- 3.2.2.1. **Floating and Suspended Material of Wastewater Origin** (e.g., oil, grease, algae, and other macroscopic particulate matter) — presence or absence.
  - 3.2.2.2. **Odor** — presence or absence, characterization, source, distance of travel, and wind direction.
- 3.2.3. **Beach and Shoreline Observations.** The following requirements only apply when the MRP requires standard observations of beaches or shorelines. Standard observations shall include the following:

- 3.2.3.1. **Material of Wastewater Origin** — presence or absence, description of material, estimated size of affected area, and source.
- 3.2.3.2. **Beneficial Use** — estimate of number of people participating in recreational water contact, non-water contact, and fishing activities.
- 3.2.4. **Waste Treatment and/or Disposal Facility Periphery Observations.**  
The following requirements only apply when the MRP requires standard observations of the periphery of waste treatment or disposal facilities. Standard observations shall include the following:
  - 3.2.4.1. **Odor** — presence or absence, characterization, source, and distance of travel.
  - 3.2.4.2. **Weather Conditions** — wind direction and estimated velocity.

#### 4. STANDARD PROVISIONS – RECORDS

##### 4.1. Records to be Maintained – Supplement to Attachment D, Provision 4.1

The Discharger shall maintain records in a manner and at a location (e.g., the wastewater treatment plant or the Discharger's offices) such that the records are accessible to Regional Water Board staff. The minimum retention period specified in Attachment D, Provision IV, shall be extended during the course of any unresolved litigation regarding permit-related discharges, or when requested by Regional Water Board or U.S. EPA, Region IX, staff.

A copy of the permit shall be maintained at the discharge facility and be available at all times to operating personnel.

##### 4.2. Records of Monitoring – Supplement to Attachment D, Provision 4.2

Monitoring records shall include the following:

- 4.2.1. **Analytical Information.** Records shall include analytical method detection limits, minimum levels, reporting levels, and related quantification parameters.
- 4.2.2. **Disinfection Process.** For the disinfection process, records shall include the following:
  - 4.2.2.1. For bacteriological analyses:
    - 4.2.2.1.1. Wastewater flow rate at the time of sample collection; and
    - 4.2.2.1.2. Required statistical parameters for cumulative bacterial values (e.g., moving median or geometric mean for the number of samples or sampling period identified in the MRP).

- 4.2.2.2. For the chlorination process (when chlorine is used for disinfection), at least daily average values for the following:
  - 4.2.2.2.1. Chlorine residual of treated wastewater as it enters the chlorine contact basin (mg/L);
  - 4.2.2.2.2. Chlorine dosage (kg/day); and
  - 4.2.2.2.3. Dechlorination chemical dosage (kg/day).
- 4.2.3. **Wastewater Treatment Process Solids.** For each treatment unit process that involves solids removal from the wastewater stream, records shall include the following:
  - 4.2.3.1. Total volume or mass of solids removed from each collection unit (e.g., grit, skimmings, undigested biosolids, or combination) for each calendar month or other time period as appropriate, but not to exceed annually; and
  - 4.2.3.2. Final disposition of such solids (e.g., landfill, other subsequent treatment unit).
- 4.2.4. **Treatment Process Bypasses.** For all treatment process bypasses, including wet weather blending, records shall include the following:
  - 4.2.4.1. Chronological log of treatment process bypasses;
  - 4.2.4.2. Identification of treatment processes bypassed;
  - 4.2.4.3. Beginning and ending dates and times of bypasses;
  - 4.2.4.4. Bypass durations;
  - 4.2.4.5. Estimated bypass volumes; and
  - 4.2.4.6. Description of, or reference to other reports describing, the bypasses, their cause, the corrective actions taken (except for wet weather blending explicitly approved within the permit and in compliance with any related permit conditions), and any additional monitoring conducted.
- 4.2.5. **Treatment Plant Overflows.** The Discharger shall retain a chronological log of overflows at the treatment plant, including the headworks and all units and appurtenances downstream, and records supporting the information provided in accordance with Provision 5.5.2, below.

#### 4.3. Claims of Confidentiality – Not Supplemented

### 5. STANDARD PROVISIONS – REPORTING

#### 5.1. Duty to Provide Information – Not Supplemented

#### 5.2. Signatory and Certification Requirements – Not Supplemented

#### 5.3. Monitoring Reports – Supplement to Attachment D, Provision 5.3

5.3.1. **Self-Monitoring Reports.** For each reporting period established in the MRP, the Discharger shall submit a self-monitoring report to the Regional Water Board in accordance with the requirements listed in the MRP and below:

5.3.1.1. **Transmittal Letter.** Each self-monitoring report shall be submitted with a transmittal letter that includes the following:

- 5.3.1.1.1. Identification of all violations of effluent limitations or other waste discharge requirements found during the reporting period;
- 5.3.1.1.2. Details regarding the violations, such as parameters, magnitude, test results, frequency, and dates;
- 5.3.1.1.3. Causes of the violations;
- 5.3.1.1.4. Corrective actions taken or planned to resolve violations and prevent recurrences, and dates or time schedules for implementation (the Discharger may refer to previously submitted reports that address the corrective actions);
- 5.3.1.1.5. Explanation for any data invalidation. Data should not be submitted in a self-monitoring report if it does not meet quality assurance/quality control standards. However, if the Discharger wishes to invalidate a measurement after submitting it in a self-monitoring report, the Discharger shall identify the measurement suspected to be invalid and state the Discharger's intent to submit, within 60 days, a formal request to invalidate the measurement. The formal request shall include the original measurement in question, the reason for invalidating the measurement, all relevant documentation that supports invalidation (e.g., laboratory sheet, log entry, test results), and a discussion of the corrective actions taken or planned (with a time schedule for completion) to prevent recurrence of the sampling or measurement problem;
- 5.3.1.1.6. Description of blending, if any. If the Discharger blends, it shall describe the duration of blending events and certify whether the blending complied with all conditions for blending;

- 5.3.1.1.7. Description of other bypasses, if any. If the Discharger bypasses any treatment units (other than blending), it shall describe the duration of the bypasses and effluent quality during those times; and
- 5.3.1.1.8. Signature. The transmittal letter shall be signed in accordance with Attachment D, Provision 5.2.
- 5.3.1.2. **Compliance Evaluation Summary.** Each self-monitoring report shall include a compliance evaluation summary that addresses each parameter for which the permit specifies effluent limitations, the number of samples taken during the monitoring period, and the number of samples that exceed the effluent limitations.
- 5.3.1.3. **More Frequent Monitoring.** If the Discharger monitors any pollutant more frequently than required by the MRP, the Discharger shall include the results of such monitoring in the calculation and reporting of the data submitted in the self-monitoring report.
- 5.3.1.4. **Analysis Results**
- 5.3.1.4.1. **Tabulation.** Each self-monitoring report shall include tabulations of all required analyses and observations, including parameters, dates, times, sample stations, types of samples, test results, method detection limits, method minimum levels, and method reporting levels (if applicable), signed by the laboratory director or other responsible official.
- 5.3.1.4.2. **Multiple Samples.** Unless the MRP specifies otherwise, when determining compliance with effluent limitations (other than instantaneous effluent limitations) and more than one sample result is available, the Discharger shall compute the arithmetic mean. If the data set contains one or more results that are “Detected, but Not Quantified (DNQ) or “Not Detected” (ND), the Discharger shall instead compute the median in accordance with the following procedure:
- 5.3.1.4.2.1. The data set shall be ranked from low to high, reported ND determinations lowest, DNQ determinations next, followed by quantified values (if any). The order of the individual ND or DNQ determinations is unimportant.
- 5.3.1.4.2.2. The median of the data set shall be determined. If the data set has an odd number of data points, the median is the middle value. If the data set has an even number of data points, the median is the average of the two values around the middle, unless one or both of these values is ND or DNQ, in which case the median shall be the lower of the two results (where DNQ is lower than a quantified value and ND is lower than DNQ).

5.3.1.4.3. **Duplicate Samples.** The Discharger shall report the average of duplicate sample analyses when reporting for a single sample result (or the median if one or more of the duplicates is DNQ or ND [see Provision 5.3.1.4.2, above]). For bacteria indicators, the Discharger shall report the geometric mean of the duplicate analyses.

5.3.1.4.4. **Dioxin-TEQ.** The Discharger shall report for each dioxin and furan congener the analytical results of effluent monitoring, including the reporting level, the method detection limit, and the measured concentration. The Discharger shall report all measured values of individual congeners, including data qualifiers. When calculating dioxin-TEQ, the Discharger shall set congener concentrations below the minimum levels (MLs) to zero. The Discharger shall calculate and report dioxin-TEQ using the following formula, where the MLs, toxicity equivalency factors (TEFs), and bioaccumulation equivalency factors (BEFs) are as provided in Table A:

$$\text{Dioxin-TEQ} = \sum (C_x \times \text{TEF}_x \times \text{BEF}_x)$$

where:  $C_x$  = measured or estimated concentration of congener  $x$   
 $\text{TEF}_x$  = toxicity equivalency factor for congener  $x$   
 $\text{BEF}_x$  = bioaccumulation equivalency factor for congener  $x$

**Table A**  
**Minimum Levels, Toxicity Equivalency Factors,**  
**and Bioaccumulation Equivalency Factors**

Dioxin or Furan Congener	Minimum Level (pg/L)	2005 Toxicity Equivalency Factor (TEF)	Bioaccumulation Equivalency Factor (BEF)
2,3,7,8-TCDD	10	1.0	1.0
1,2,3,7,8-PeCDD	50	1.0	<0.9
1,2,3,4,7,8-HxCDD	50	<0.1	<0.3
1,2,3,6,7,8-HxCDD	50	<0.1	<0.1
1,2,3,7,8,9-HxCDD	50	<0.1	<0.1
1,2,3,4,6,7,8-HpCDD	50	<0.01	<0.05
OCDD	100	<0.0003	<0.01
2,3,7,8-TCDF	10	<0.1	<0.8
1,2,3,7,8-PeCDF	50	<0.03	<0.2
2,3,4,7,8-PeCDF	50	<0.3	1.6
1,2,3,4,7,8-HxCDF	50	<0.1	<0.08
1,2,3,6,7,8-HxCDF	50	<0.1	<0.2
1,2,3,7,8,9-HxCDF	50	<0.1	<0.6
2,3,4,6,7,8-HxCDF	50	<0.1	<0.7
1,2,3,4,6,7,8-HpCDF	50	<0.01	<0.01
1,2,3,4,7,8,9-HpCDF	50	<0.01	<0.4
OCDF	100	<0.0003	<0.02

5.3.1.5. **Results Not Yet Available.** The Discharger shall make all reasonable efforts to obtain analytical data for required parameter sampling in a timely manner. Certain analyses may require additional time to complete analytical processes and report results. In these cases, the Discharger shall describe the circumstances in the self-monitoring report and include the data for these parameters and relevant discussions of any violations in the next self-monitoring report due after the results are available.

5.3.1.6. **Annual Self-Monitoring Reports.** By the date specified in the MRP, the Discharger shall submit an annual self-monitoring report covering the previous calendar year. The report shall contain the following:

5.3.1.6.1. Comprehensive discussion of treatment plant performance, including documentation of any blending or other bypass events, and compliance with the permit. This discussion shall include any corrective actions taken or planned, such as changes to facility equipment or operation practices that may be needed to achieve compliance, and any other actions taken or planned that are intended to improve the performance and reliability of wastewater collection, treatment, or disposal practices;

5.3.1.6.2. List of approved analyses, including the following:

5.3.1.6.2.1. List of analyses for which the Discharger is certified;

5.3.1.6.2.2. List of analyses performed for the Discharger by a separate certified laboratory (copies of reports signed by the laboratory director of that laboratory need not be submitted but shall be retained onsite); and

5.3.1.6.2.3. List of “waived” analyses, as approved;

5.3.1.6.3. Plan view drawing or map showing the Discharger’s facility, flow routing, and sampling and observation station locations; and

5.3.1.6.4. Results of facility report reviews. The Discharger shall regularly review, revise, and update, as necessary, the Operation and Maintenance Manual, Contingency Plan, Spill Prevention Plan, and Wastewater Facilities Status Report so these documents remain useful and relevant to current practices. At a minimum, reviews shall be conducted annually. The Discharger shall describe or summarize its review and evaluation procedures, recommended or planned actions, and estimated time schedule for implementing these actions. The Discharger shall complete changes to these documents to ensure that they remain up-to-date.

#### **5.4. Compliance Schedules – Not supplemented**

## **5.5. Twenty-Four Hour Reporting – Supplement to Attachment D, Provision 5.5**

### **5.5.1. Oil or Other Hazardous Material Spills**

- 5.5.1.1. Within 24 hours of becoming aware of a spill of oil or other hazardous material not contained onsite and completely cleaned up, the Discharger shall report as follows:
  - 5.5.1.1.1. If the spill exceeds reportable quantities for hazardous materials listed in 40 C.F.R. part 302. The Discharger shall call the California Office of Emergency Services (800 852-7550).
  - 5.5.1.1.2. If the spill does not exceed reportable quantities for hazardous materials listed in 40 C.F.R., part 302, the Discharger shall call the Regional Water Board (510-622-2369).
- 5.5.1.2. The Discharger shall submit a written report to the Regional Water Board within five working days following either of the above telephone notifications unless directed otherwise by Regional Water Board staff. A report submitted electronically is acceptable. The written report shall include the following:
  - 5.5.1.2.1. Date and time of spill, and duration if known;
  - 5.5.1.2.2. Location of spill (street address or description of location);
  - 5.5.1.2.3. Nature of material spilled;
  - 5.5.1.2.4. Quantity of material spilled;
  - 5.5.1.2.5. Receiving water body affected, if any;
  - 5.5.1.2.6. Cause of spill;
  - 5.5.1.2.7. Estimated size of affected area;
  - 5.5.1.2.8. Observed impacts to receiving waters (e.g., oil sheen, fish kill, water discoloration);
  - 5.5.1.2.9. Corrective actions taken to contain, minimize, or clean up the spill;
  - 5.5.1.2.10. Future corrective actions planned to prevent recurrence, and implementation schedule; and
  - 5.5.1.2.11. Persons or agencies notified.

## 5.5.2. **Unauthorized Municipal Wastewater Treatment Plant Discharges**<sup>1</sup>

5.5.2.1. **Two-Hour Notification.** For any unauthorized discharge that enters a drainage channel or surface water, the Discharger shall, as soon as possible, but not later than two hours after becoming aware of the discharge, notify the California Office of Emergency Services (800-852-7550) and the local health officer or director of environmental health with jurisdiction over the affected water body. Notification shall include the following:

- 5.5.2.1.1. Incident description and cause;
- 5.5.2.1.2. Location of threatened or involved waterways or storm drains;
- 5.5.2.1.3. Date and time that the unauthorized discharge started;
- 5.5.2.1.4. Estimated quantity and duration of the unauthorized discharge (to the extent known), and estimated amount recovered;
- 5.5.2.1.5. Level of treatment prior to discharge (e.g., raw wastewater, primary-treated wastewater, or undisinfected secondary-treated wastewater); and
- 5.5.2.1.6. Identity of person reporting the unauthorized discharge.

5.5.2.2. **Five-Day Written Report.** Within five business days following the two-hour notification, the Discharger shall submit a written report that includes, in addition to the information listed in Provision 5.5.2.1, above, the following:

- 5.5.2.2.1. Methods used to delineate the geographical extent of the unauthorized discharge within receiving waters;
- 5.5.2.2.2. Efforts implemented to minimize public exposure to the unauthorized discharge;
- 5.5.2.2.3. Visual observations of the impacts (if any) noted in the receiving waters (e.g., fish kill, discoloration of receiving water) and extent of sampling if conducted;
- 5.5.2.2.4. Corrective measures taken to minimize the impact of the unauthorized discharge;

---

<sup>1</sup> California Code of Regulations, Title 23, section 2250(b), defines an unauthorized discharge to be a discharge, not regulated by waste discharge requirements, of treated, partially-treated, or untreated wastewater resulting from the intentional or unintentional diversion of wastewater from a collection, treatment, or disposal system.

- 5.5.2.2.5. Measures to be taken to minimize the potential for a similar unauthorized discharge in the future;
- 5.5.2.2.6. Summary of Spill Prevention Plan or Operation and Maintenance Manual modifications to be made, if necessary, to minimize the potential for future unauthorized discharges; and
- 5.5.2.2.7. Quantity and duration of the unauthorized discharge, and the amount recovered.

**5.6. Planned Changes** – Not supplemented

**5.7. Anticipated Noncompliance** – Not supplemented

**5.8. Other Noncompliance** – Not supplemented

**5.9. Other Information** – Not supplemented

**6. STANDARD PROVISIONS – ENFORCEMENT – NOT SUPPLEMENTED**

**7. ADDITIONAL PROVISIONS – NOTIFICATION LEVELS – NOT SUPPLEMENTED**

**8. DEFINITIONS – ADDITION TO ATTACHMENT D**

More definitions can be found in Attachment A of this NPDES Permit.

**8.1. Arithmetic Calculations**

- 8.1.1. **Geometric Mean.** The antilog of the log mean or the back-transformed mean of the logarithmically transformed variables, which is equivalent to the multiplication of the antilogarithms. The geometric mean can be calculated with either of the following equations:

$$\text{Geometric Mean} = \text{Anti log} \left( \frac{1}{N} \sum \text{Log } C_i \right)$$

or

$$\text{Geometric Mean} = (C_1 \times C_2 \times \dots \times C_N)^{1/N}$$

Where “N” is the number of data points for the period analyzed and “C” is the concentration for each of the “N” data points.

- 8.1.2. **Mass Emission Rate.** The rate of discharge expressed in mass. The mass emission rate is obtained from the following calculation for any calendar day:

$$\text{Mass emission rate (lb/day)} = \frac{8.345}{N} \sum_{i=1}^N Q_i C_i$$

$$\text{Mass emission rate (kg/day)} = \frac{3.785}{N} \sum_{i=1}^N Q_i C_i$$

In which “N” is the number of samples analyzed in any calendar day and “Q<sub>i</sub>” and “C<sub>i</sub>” are the flow rate (MGD) and the constituent concentration (mg/L) associated with each of the “N” grab samples that may be taken in any calendar day. If a composite sample is taken, “C<sub>i</sub>” is the concentration measured in the composite sample and “Q<sub>i</sub>” is the average flow rate occurring during the period over which the samples are composited. The daily concentration of a constituent measured over any calendar day shall be determined from the flow weighted average of the same constituent in the combined waste streams as follows:

$$C_d = \text{Average daily concentration} = \frac{1}{Q_t} \sum_{i=1}^N Q_i C_i$$

In which “N” is the number of component waste streams and “Q” and “C” are the flow rate (MGD) and the constituent concentration (mg/L) associated with each of the “N” waste streams. “Q<sub>t</sub>” is the total flow rate of the combined waste streams.

- 8.1.3. **Removal Efficiency.** The ratio of pollutants removed by the treatment facilities to pollutants entering the treatment facilities (expressed as a percentage). The Discharger shall determine removal efficiencies using monthly averages (by calendar month unless otherwise specified) of pollutant concentration of influent and effluent samples collected at about the same time and using the following equation (or its equivalent):

$$\text{Removal Efficiency (\%)} = 100 \times [1 - (\text{Effluent Concentration} / \text{Influent Concentration})]$$

- 8.2. **Blending** – the practice of bypassing biological treatment units and recombining the bypass wastewater with biologically-treated wastewater.
- 8.3. **Composite Sample** – a sample composed of individual grab samples collected manually or by an automatic sampling device on the basis of time or flow as specified in the MRP. For flow-based composites, the proportion of each grab sample included in the composite sample shall be within plus or minus five percent (+/-5%) of the representative flow of the waste stream being measured at the time of grab sample collection. Alternatively, equal volume grab samples may be individually analyzed with the flow-weighted average calculated by averaging flow-weighted ratios of each grab sample analytical result. Grab samples comprising time-based composite samples shall be collected at intervals not greater than those specified in the MRP. The quantity of each grab sample comprising a time-based composite sample shall be a set of flow proportional volumes as specified in

the MRP. If a particular time-based or flow-based composite sampling protocol is not specified in the MRP, the Discharger shall determine and implement the most representative protocol.

- 8.4. Duplicate Sample** – a second sample taken from the same source and at the same time as an initial sample (such samples are typically analyzed identically to measure analytical variability).
- 8.5. Grab Sample** – an individual sample collected during a short period not exceeding 15 minutes. Grab samples represent only the condition that exists at the time the sample is collected.
- 8.6. Overflow** – the intentional or unintentional spilling or forcing out of untreated or partially-treated waste from a transport system (e.g., through manholes, at pump stations, or at collection points) upstream of the treatment plant headworks or from any part of a treatment plant.
- 8.7. Priority Pollutants** – those constituents referred to in 40 C.F.R. part 122 as promulgated in the Federal Register, Vol. 65, No. 97, Thursday, May 18, 2000, also known as the California Toxics Rule.
- 8.8. Untreated waste** – raw wastewater.

Footnotes:

- [1] Minimum levels are from the *State Implementation Policy*. They are the concentration of the lowest calibration standard for that technique based on a survey of contract laboratories. Laboratory techniques are defined as follows: GC = Gas Chromatography; GCMS = Gas Chromatography/Mass Spectrometry; LC = High Pressure Liquid Chromatography; Color = Colorimetric; FAA = Flame Atomic Absorption; GFAA = Graphite Furnace Atomic Absorption; ICP = Inductively Coupled Plasma; ICPMS = Inductively Coupled Plasma/Mass Spectrometry; SPGFAA = Stabilized Platform Graphite Furnace Atomic Absorption (i.e., U.S. EPA 20<0.9); Hydride = Gaseous Hydride Atomic Absorption; CVAA = Cold Vapor Atomic Absorption; DCP = Direct Current Plasma.
- [2] The suggested method is the U.S. EPA Method unless otherwise specified (SM = Standard Methods). The Discharger may use another U.S. EPA-approved or recognized method if that method has a level of quantification below the applicable water quality objective. Where no method is suggested, the Discharger has the discretion to use any standard method.
- [3] Analysis for total chromium may be substituted for analysis of chromium (III) and chromium (VI) if the concentration measured is below the lowest hexavalent chromium criterion (11 ug/l).
- [4] The Discharger shall use ultra-clean sampling (U.S. EPA Method 1669) and ultra-clean analytical methods (U.S. EPA Method 1631) for mercury monitoring. The minimum level for mercury is 2 ng/l (or <0.002 ug/l).
- [5] MUN = Municipal and Domestic Supply. This designation, if applicable, is in the Findings of the permit.
- [6] Determination of Asbestos Structures over 10 [micrometers] in Length in Drinking Water Using MCE Filters, U.S. EPA 600/R-94-134, June 1994.
- [7] Detected as azobenzene.

## ATTACHMENT H – PRETREATMENT REQUIREMENTS

1. The Discharger shall be responsible and liable for the performance of all Control Authority pretreatment requirements contained in 40 C.F.R. 403, including any regulatory revisions to Part 403. Where a Part 403 revision is promulgated after the effective date of the Discharger's permit and places mandatory actions upon the Discharger as Control Authority but does not specify a timetable for completion of the actions, the Discharger shall complete the required actions within six months from the issuance date of this permit or six months from the effective date of the Part 403 revisions, whichever comes later.

(If the Discharger cannot complete the required actions within the above six-month period due to the need to process local adoption of sewer use ordinance modifications or other substantial pretreatment program modifications, the Discharger shall notify the Executive Officer in writing at least 60 days prior to the six-month deadline. The written notification shall include a summary of completed required actions, an explanation for why the six month deadline cannot be met, and a proposed timeframe to complete the rest of the required actions as soon as practical but not later than within twelve months of the issuance date of this permit or twelve months of the effective date of the Part 403 revisions, whichever comes later. The Executive Officer will notify the Discharger in writing within 30 days of receiving the request if the extension is not approved.)

The United States Environmental Protection Agency (U.S. EPA), the State and/or other appropriate parties may initiate enforcement action against a nondomestic user for noncompliance with applicable standards and requirements as provided in the Clean Water Act (Act).

2. The Discharger shall enforce the requirements promulgated under Sections 307(b), 307(c), 307(d) and 402(b) of the Act with timely, appropriate and effective enforcement actions. The Discharger shall cause nondomestic users subject to Federal Categorical Standards to achieve compliance no later than the date specified in those requirements or, in the case of a new nondomestic user, upon commencement of the discharge.
3. The Discharger shall perform the pretreatment functions as required in 40 C.F.R. 403 and amendments or modifications thereto including, but not limited to:
  - 3.1. Implement the necessary legal authorities to fully implement the pretreatment regulations as provided in 40 C.F.R. 403.8(f)(1);
  - 3.2. Implement the programmatic functions as provided in 40 C.F.R. 403.8(f)(2);
  - 3.3. Publish an annual list of nondomestic users in significant noncompliance as provided per 40 C.F.R. 403.8(f)(2)(viii);
  - 3.4. Provide for the requisite funding and personnel to implement the pretreatment program as provided in 40 C.F.R. 403.8(f)(3); and

- 3.5.** Enforce the national pretreatment standards for prohibited discharges and categorical standards as provided in 40 C.F.R. 403.5 and 403.6, respectively.
- 4.** The Discharger shall submit annually a report to U.S. EPA Region 9, the State Water Board and the Regional Water Board describing its pretreatment program activities over the previous calendar year. In the event that the Discharger is not in compliance with any conditions or requirements of the Pretreatment Program, the Discharger shall also include the reasons for noncompliance and a plan and schedule for achieving compliance. The report shall contain, but is not limited to, the information specified in Appendix H-1 entitled, "Requirements for Pretreatment Annual Reports." The annual report is due each year on February 28.
- 5.** The Discharger shall submit a pretreatment semiannual report to U.S. EPA Region 9, the State Water Board and the Regional Water Board describing the status of its significant industrial users (SIUs). The report shall contain, but is not limited to, information specified in Appendix H-2 entitled, "Requirements for Pretreatment Semiannual Reports." The semiannual report is due July 31 for the period January through June. The information for the period July through December of each year shall be included in the Annual Report identified in Appendix H-1. The Executive Officer may exempt the Discharger from the semiannual reporting requirements on a case by case basis subject to State Water Board and U.S. EPA's comment and approval.
- 6.** The Discharger shall conduct the monitoring of its treatment plant's influent, effluent, and sludge (biosolids) as described in Appendix H-4 entitled, "Requirements for Influent, Effluent and Sludge (Biosolids) Monitoring." (The term "biosolids," as used in this Attachment, shall have the same meaning as wastewater treatment plant "sludge" and will be used from this point forward.) The Discharger shall evaluate the results of the sampling and analysis during the preparation of the semiannual and annual reports to identify any trends. Signing the certification statement used to transmit the reports shall be deemed to certify the Discharger has completed this data evaluation. A tabulation of the data shall be included in the pretreatment annual report as specified in Appendix H 4. The Executive Officer may require more or less frequent monitoring on a case by case basis.

## **APPENDIX H-1: REQUIREMENTS FOR PRETREATMENT ANNUAL REPORTS**

The Pretreatment Annual Report is due each year on February 28 and shall contain activities conducted during the previous calendar year. The purpose of the Annual Report is to:

- Describe the status of the Discharger's pretreatment program; and
- Report on the effectiveness of the program, as determined by comparing the results of the preceding year's program implementation.

The report shall contain, at a minimum, the following information:

### **1. Cover Sheet**

The cover sheet shall include:

- 1.1. The name(s) and National Pollutant Discharge Elimination Discharge System (NPDES) permit number(s) of the Discharger(s) that is part of the Pretreatment Program;
- 1.2. The name, address and telephone number of a pretreatment contact person;
- 1.3. The period covered in the report;
- 1.4. A statement of truthfulness; and
- 1.5. The dated signature of a principal executive officer, ranking elected official, or other duly authorized employee who is responsible for overall operation of the publicly-owned treatment works (POTW) (40 C.F.R. 403.12(m)).

### **2. Introduction**

This section shall include:

- 2.1. Any pertinent background information related to the Discharger and/or the nondomestic user base of the area;
- 2.2. List of applicable interagency agreements used to implement the Discharger's pretreatment program (e.g., Memoranda of Understanding (MOU) with satellite sanitary sewer collection systems); and
- 2.3. A status summary of the tasks required by a Pretreatment Compliance Inspection (PCI), Pretreatment Compliance Audit (PCA), Cleanup and Abatement Order (CAO), or other pretreatment-related enforcement actions required by the Regional Water Board or the U.S. EPA. A more detailed discussion can be referenced and included in the section entitled, "Program Changes," if needed.

### **3. Definitions**

This section shall include a list of key terms and their definitions that the Discharger uses to describe or characterize elements of its pretreatment program, or the Discharger may provide a reference to its website if the applicable definitions are available on-line.

### **4. Discussion of Upset, Interference and Pass Through**

This section shall include a discussion of Upset, Interference or Pass Through incidents, if any, at the Discharger's treatment plant(s) that the Discharger knows of or suspects were caused by nondomestic user discharges. Each incident shall be described, at a minimum, consisting of the following information:

- 4.1. A description of what occurred;
- 4.2. A description of what was done to identify the source;
- 4.3. The name and address of the nondomestic user responsible;
- 4.4. The reason(s) why the incident occurred;
- 4.5. A description of the corrective actions taken; and
- 4.6. An examination of the local and federal discharge limits and requirements for the purposes of determining whether any additional limits or changes to existing requirements may be necessary to prevent other Upset, Interference or Pass Through incidents.

### **5. Influent, Effluent and Biosolids Monitoring Results**

The Discharger shall evaluate the influent, effluent and biosolids monitoring results as specified in Appendix H-4 in preparation of this report. The Discharger shall retain the analytical laboratory reports with the Quality Assurance and Quality Control (QA/QC) data validation and make these reports available upon request.

This section shall include:

- 5.1. Description of the sampling procedures and an analysis of the results (see Appendix H-4 for specific requirements);
- 5.2. Tabular summary of the compounds detected (compounds measured above the detection limit for the analytical method used) for the monitoring data generated during the reporting year as specified in Appendix H-4;
- 5.3. Discussion of the investigation findings into any contributing sources of the compounds that exceed NPDES limits; and

- 5.4. Graphical representation of the influent and effluent metal monitoring data for the past five years with a discussion of any trends.

## 6. Inspection, Sampling and Enforcement Programs

This section shall include at a minimum the following information:

- 6.1. Inspections: Summary of the inspection program (e.g., criteria for determining the frequency of inspections and inspection procedures);
- 6.2. Sampling Events: Summary of the sampling program (e.g., criteria for determining the frequency of sampling and chain of custody procedures); and
- 6.3. Enforcement: Summary of Enforcement Response Plan (ERP) implementation including dates for adoption, last revision and submission to the Regional Water Board.

## 7. Updated List of Regulated SIUs

This section shall contain a list of all of the federal categories that apply to SIUs regulated by the Discharger. The specific categories shall be listed including the applicable 40 C.F.R. subpart and section, and pretreatment standards (both maximum and average limits). Local limits developed by the Discharger shall be presented in a table including the applicability of the local limits to SIUs. If local limits do not apply uniformly to SIUs, specify the applicability in the tables listing the categorical industrial users (CIUs) and non-categorical SIUs. Tables developed in Sections 7A and 7B can be used to present or reference this information.

- 7.1. CIUs - Include a table that alphabetically lists the CIUs regulated by the Discharger as of the end of the reporting period. This list shall include:
  - 7.1.1. Name;
  - 7.1.2. Address;
  - 7.1.3. Applicable federal category(ies);
  - 7.1.4. Reference to the location where the applicable Federal Categorical Standards are presented in the report;
  - 7.1.5. Identify all deletions and additions keyed to the list submitted in the previous annual report. All deletions shall be briefly explained (e.g., closure, name change, ownership change, reclassification, declassification); and
  - 7.1.6. Information, calculations and data used to determine the limits for those CIUs for which a combined waste stream formula is applied.

**7.2. Non-categorical SIUs** - Include a table that alphabetically lists the SIUs not subject to any federal categorical standards that were regulated by the Discharger as of the end of the reporting period. This list shall include:

- 7.2.1. Name;
- 7.2.2. Address;
- 7.2.3. A brief description of the type of business;
- 7.2.4. Identify all deletions and additions keyed to the list submitted in the previous annual report. All deletions shall be briefly explained (e.g., closure, name change, ownership change, reclassification, declassification); and
- 7.2.5. Indicate the applicable discharge limits (e.g., different from local limits) to which the SIUs are subject and reference to the location where the applicable limits (e.g., local discharge limits) are presented in the report.

## **8. SIU (categorical and non-categorical) Compliance Activities**

The information required in this section may be combined in the table developed in Section 7 above.

**8.1. Inspection and Sampling Summary:** This section shall contain a summary of all the SIU inspections and sampling activities conducted by the Discharger and sampling activities conducted by the SIU over the reporting year to gather information and data regarding SIU compliance. The summary shall include:

- 8.1.1. The number of inspections and sampling events conducted for each SIU by the Discharger;
- 8.1.2. The number of sampling events conducted by the SIU. Identify SIUs that are operating under an approved Total Toxic Organic Management Plan;
- 8.1.3. The quarters in which the above activities were conducted; and
- 8.1.4. The compliance status of each SIU, delineated by quarter, and characterized using all applicable descriptions as given below:
  - 8.1.4.1. Consistent compliance;
  - 8.1.4.2. Inconsistent compliance;
  - 8.1.4.3. Significant noncompliance;
  - 8.1.4.4. On a compliance schedule to achieve compliance (include the date final compliance is required);
  - 8.1.4.5. Not in compliance and not on a compliance schedule; and

8.1.4.6. Compliance status unknown, and why not.

**8.2. Enforcement Summary:** This section shall contain a summary of SIU compliance and enforcement activities during the reporting year. The summary may be included in the summary table developed in section 8A and shall include the names and addresses of all SIUs affected by the actions identified below. For each notice specified in enforcement action 8.2.1 through 8.2.4, indicate whether it was for an infraction of a federal or local standard/limit or requirement.

8.2.1. Warning letters or notices of violations regarding SIUs' apparent noncompliance with or violation of any federal pretreatment categorical standards and/or requirements, or local limits and/or requirements;

8.2.2. Administrative Orders regarding the SIUs' apparent noncompliance with or violation of any federal pretreatment categorical standards and/or requirements, or local limits and/or requirements;

8.2.3. Civil actions regarding the SIUs' apparent noncompliance with or violation of any federal pretreatment categorical standards and/or requirements, or local limits and/or requirements;

8.2.4. Criminal actions regarding the SIUs' apparent noncompliance with or violation of any federal pretreatment categorical standards and/or requirements, or local limits and/or requirements;

8.2.5. Assessment of monetary penalties. Identify the amount of penalty in each case and reason for assessing the penalty;

8.2.6. Order to restrict/suspend discharge to the Discharger; and

8.2.7. Order to disconnect the discharge from entering the Discharger.

**8.3. July-December Semiannual Data:** For SIU violations/noncompliance during the semiannual reporting period from July 1 through December 31, provide the following information:

8.3.1. Name and facility address of the SIU;

8.3.2. Indicate if the SIU is subject to Federal Categorical Standards; if so, specify the category including the subpart that applies;

8.3.3. For SIUs subject to Federal Categorical Standards, indicate if the violation is of a categorical or local standard;

8.3.4. Indicate the compliance status of the SIU for the two quarters of the reporting period; and

8.3.5. For violations/noncompliance identified in the reporting period, provide:

- 8.3.5.1. The date(s) of violation(s);
- 8.3.5.2. The parameters and corresponding concentrations exceeding the limits and the discharge limits for these parameters; and
- 8.3.5.3. A brief summary of the noncompliant event(s) and the steps that are being taken to achieve compliance.

## **9. Baseline Monitoring Report Update**

This section shall provide a list of CIUs added to the pretreatment program since the last annual report. This list of new CIUs shall summarize the status of the respective Baseline Monitoring Reports (BMR). The BMR must contain the information specified in 40 C.F.R. 403.12(b). For each new CIU, the summary shall indicate when the BMR was due; when the CIU was notified by the Discharger of this requirement; when the CIU submitted the report; and/or when the report is due.

## **10. Pretreatment Program Changes**

This section shall contain a description of any significant changes in the Pretreatment Program during the past year including, but not limited to:

- 10.1. Legal authority;
- 10.2. Local limits;
- 10.3. Monitoring/ inspection program and frequency;
- 10.4. Enforcement protocol;
- 10.5. Program's administrative structure;
- 10.6. Staffing level;
- 10.7. Resource requirements;
- 10.8. Funding mechanism;
- 10.9. If the manager of the Discharger's pretreatment program changed, a revised organizational chart shall be included; and
- 10.10. If any element(s) of the program is in the process of being modified, this intention shall also be indicated.

## **11. Pretreatment Program Budget**

This section shall present the budget spent on the Pretreatment Program. The budget, either by the calendar or fiscal year, shall show the total expenses required to implement the pretreatment program. A brief discussion of the source(s) of

funding shall be provided. In addition, the Discharger shall make available upon request specific details on its pretreatment program expense amounts such as for personnel, equipment, and chemical analyses.

## **12. Public Participation Summary**

This section shall include a copy of the public notice as required in 40 C.F.R. 403.8(f)(2)(viii). If a notice was not published, the reason shall be stated.

## **13. Biosolids Storage and Disposal Practice**

This section shall describe how treated biosolids are stored and ultimately disposed. If a biosolids storage area is used, it shall be described in detail including its location, containment features and biosolids handling procedures.

## **14. Other Pollutant Reduction Activities**

This section shall include a brief description of any programs the Discharger implements to reduce pollutants from nondomestic users that are not classified as SIUs. If the Discharger submits any of this program information in an Annual Pollution Prevention Report, reference to this other report shall satisfy this reporting requirement.

## **15. Other Subjects**

Other information related to the Pretreatment Program that does not fit into any of the above categories should be included in this section.

## **16. Permit Compliance System (PCS) Data Entry Form**

The annual report shall include the PCS Data Entry Form. This form shall summarize the enforcement actions taken against SIUs in the past year. This form shall include the following information:

- 16.1. Discharger's name,
- 16.2. NPDES Permit number,
- 16.3. Period covered by the report,
- 16.4. Number of SIUs in significant noncompliance (SNC) that are on a pretreatment compliance schedule,
- 16.5. Number of notices of violation and administrative Orders issued against SIUs,
- 16.6. Number of civil and criminal judicial actions against SIUs,

- 16.7. Number of SIUs that have been published as a result of being in SNC, and
- 16.8. Number of SIUs from which penalties have been collected.

## **APPENDIX H-2: REQUIREMENTS FOR JANUARY-JUNE PRETREATMENT SEMIANNUAL REPORT**

The pretreatment semiannual report is due on July 31 for pretreatment program activities conducted from January through June unless an exception has been granted by the Regional Water Board's Executive Officer (e.g., pretreatment programs without any SIUs may qualify for an exception to the pretreatment semiannual report). Pretreatment activities conducted from July through December of each year shall be included in the Pretreatment Annual Report as specified in Appendix H-1. The pretreatment semiannual report shall contain, at a minimum the following information:

### **1. Influent, Effluent and Biosolids Monitoring**

The influent, effluent and biosolids monitoring results shall be evaluated in preparation of this report. The Discharger shall retain analytical laboratory reports with the QA/QC data validation and make these reports available upon request. The Discharger shall also make available upon request a description of its influent, effluent and biosolids sampling procedures. Violations of any parameter that exceed NPDES limits shall be identified and reported. The contributing source(s) of the parameters that exceed NPDES limits shall be investigated and discussed.

### **2. Significant Industrial User (SIU) Compliance Status**

This section shall contain a list of all SIUs that were not in consistent compliance with all pretreatment standards/limits or requirements for the reporting period. For the reported SIUs, the compliance status for the previous semiannual reporting period shall be included. Once the SIU has determined to be out of compliance, the SIU shall be included in subsequent reports until consistent compliance has been achieved. A brief description detailing the actions that the SIU undertook to come back into compliance shall be provided.

For each SIU on the list, the following information shall be provided:

- 2.1.** Name and facility address of the SIU;
- 2.2.** Indicate if the SIU is subject to Federal Categorical Standards; if so, specify the category including the subpart that applies;
- 2.3.** For SIUs subject to Federal Categorical Standards, indicate if the violation is of a categorical or local standard;
- 2.4.** Indicate the compliance status of the SIU for the two quarters of the reporting period; and
- 2.5.** For violations/noncompliance identified in the reporting period, provide:
  - 2.5.1.** The date(s) of violation(s);

- 2.5.2. The parameters and corresponding concentrations exceeding the limits and the discharge limits for these parameters; and
- 2.5.3. A brief summary of the noncompliant event(s) and the steps that are being taken to achieve compliance.

### **3. Discharger's Compliance with Pretreatment Program Requirements**

This section shall contain a discussion of the Discharger's compliance status with the Pretreatment Program Requirements as indicated in the latest Pretreatment Compliance Audit (PCA) Report or Pretreatment Compliance Inspection (PCI) Report. It shall contain a summary of the following information:

- 3.1. Date of latest PCA or PCI report;
- 3.2. Date of the Discharger's response;
- 3.3. List of unresolved issues; and
- 3.4. Plan(s) and schedule for resolving the remaining issues.

**APPENDIX H-3:  
SIGNATURE REQUIREMENTS  
FOR PRETREATMENT ANNUAL AND SEMIANNUAL REPORTS**

The pretreatment annual and semiannual reports shall be signed by a principal executive officer, ranking elected official, or other duly authorized employee who is responsible for the overall operation of the Discharger (POTW - 40 C.F.R. section 403.12[m]). Signed copies of the reports shall be submitted to the State Water Board and the Regional Water Board through the electronic self-monitoring report (eSMR) module of the California Integrated Water Quality System (CIWQS). Signed copies of the reports shall also be submitted electronically to U.S. EPA at [R9Pretreatment@epa.gov](mailto:R9Pretreatment@epa.gov) or as instructed otherwise.

## **APPENDIX H-4: REQUIREMENTS FOR INFLUENT, EFFLUENT AND BIOSOLIDS MONITORING**

The Discharger shall conduct sampling of its treatment plant's influent, effluent and biosolids at the frequency shown in the pretreatment requirements table of the Monitoring and Reporting Program (MRP, Attachment E). When sampling periods coincide, one set of test results, reported separately, may be used for those parameters that are required to be monitored by both the influent and effluent monitoring requirements of the MRP and the Pretreatment Program. The Pretreatment Program monitoring reports as required in Appendices H-1 and H-2 shall be transmitted to the Pretreatment Program Coordinator.

### **1. Reduction of Monitoring Frequency**

The minimum frequency of Pretreatment Program influent, effluent, and biosolids monitoring shall be dependent on the number of SIUs identified in the Discharger's Pretreatment Program as indicated in Table H-1.

**Table H-1. Minimum Frequency of Pretreatment Program Monitoring**

Number of SIUs	Minimum Frequency
< 5	Once every five years
> 5 and < 50	Once every year
> 50	Twice per year

If the Discharger's required monitoring frequency is greater than the minimum specified in Table H-1, the Discharger may request a reduced monitoring frequency for that constituent(s) as part of its application for permit reissuance if it meets the following criteria:

The monitoring data for the constituent(s) consistently show non-detect (ND) levels for the effluent monitoring and very low (i.e., near ND) levels for influent and biosolids monitoring for a minimum of eight previous years' worth of data.

The Discharger's request shall include tabular summaries of the data and a description of the trends in the industrial, commercial, and residential customers in the Discharger's service area that demonstrate control over the sources of the constituent(s). The Regional Water Board may grant a reduced monitoring frequency in the reissued permit after considering the information provided by the Discharger and any other relevant information.

### **2. Influent and Effluent Monitoring**

The Discharger shall monitor for the parameters using the required sampling and test methods listed in the pretreatment table of the MRP. Any test method substitutions must have received prior written Executive Officer approval. Influent and effluent sampling locations shall be the same as those sites specified in the MRP.

The influent and effluent samples should be taken at staggered times to account for treatment plant detention time. Appropriately staggered sampling is considered consistent with the requirement for collection of effluent samples coincident with influent samples in Section 3.1.3.1.2 of Attachment G. All samples must be representative of daily operations. Sampling and analysis shall be performed in accordance with the techniques prescribed in 40 C.F.R. 136 and amendments thereto. For effluent monitoring, the reporting limits for the individual parameters shall be at or below the minimum levels (MLs) as stated in the Policy for Implementation of Toxics Standards for Inland Surface Waters, Enclosed Bays, and Estuaries of California (2000) [also known as the State Implementation Policy (SIP)]; any revisions to the MLs shall be adhered to. If a parameter does not have a stated ML, then the Discharger shall conduct the analysis using the lowest commercially available and reasonably achievable detection levels.

The following report elements should be used to submit the influent and effluent monitoring results. A similarly structured format may be used but will be subject to Regional Water Board approval. The monitoring reports shall be submitted with the Pretreatment Annual Report identified in Appendix H-1.

- 2.1. Sampling Procedures, Sample Dechlorination, Sample Compositing, and Data Validation (applicable quality assurance/quality control) shall be performed in accordance with the techniques prescribed in 40 C.F.R. 136 and amendments thereto. The Discharger shall make available upon request its sampling procedures including methods of dechlorination, compositing, and data validation.
- 2.2. A tabulation of the test results for the detected parameters shall be provided.
- 2.3. Discussion of Results – The report shall include a complete discussion of the test results for the detected parameters. If any pollutants are detected in sufficient concentration to upset, interfere or pass through plant operations, the type of pollutant(s) and potential source(s) shall be noted, along with a plan of action to control, eliminate, and/or monitor the pollutant(s). Any apparent generation and/or destruction of pollutants attributable to chlorination/dechlorination sampling and analysis practices shall be noted.

### **3. Biosolids Monitoring**

Biosolids should be sampled in a manner that will be representative of the biosolids generated from the influent and effluent monitoring events except as noted in 3.3 below. The same parameters required for influent and effluent analysis shall be included in the biosolids analysis. The biosolids analyzed shall be a composite sample of the biosolids for final disposal consisting of:

- 3.1. Biosolids lagoons – 20 grab samples collected at representative equidistant intervals (grid pattern) and composited as a single grab, or

- 3.2. Dried stockpile – 20 grab samples collected at various representative locations and depths and composited as a single grab, or
- 3.3. Dewatered biosolids - daily composite of 4 representative grab samples each day for 5 days taken at equal intervals during the daily operating shift taken from (a) the dewatering units or (b) each truckload, and combined into a single 5-day composite.

The U.S. EPA manual, POTW Sludge Sampling and Analysis Guidance Document, August 1989, containing detailed sampling protocols specific to biosolids is recommended as a guidance for sampling procedures. The U.S. EPA manual Analytical Methods of the National Sewage Sludge Survey, September 1990, containing detailed analytical protocols specific to biosolids, is recommended as a guidance for analytical methods.

In determining if the biosolids are a hazardous waste, the Discharger shall adhere to Article 2, "Criteria for Identifying the Characteristics of Hazardous Waste," and Article 3, "Characteristics of Hazardous Waste," of Title 22, California Code of Regulations, sections 66261.10 to 66261.24 and all amendments thereto.

The following report elements should be used to submit the biosolids monitoring results. A similarly structured form may be used but will be subject to Regional Water Board approval. The results shall be submitted with the Pretreatment Annual Report identified in Appendix H-1.

- Sampling Procedures and Data Validation (applicable quality assurance/quality control) shall be performed in accordance with the techniques prescribed in 40 C.F.R. 136 and amendments thereto. The Discharger shall make available upon request its biosolids sampling procedures and data validation methods.
- Test Results – Tabulate the test results for the detected parameters and include the percent solids.
- Discussion of Results – Include a complete discussion of test results for the detected parameters. If the detected pollutant(s) is reasonably deemed to have an adverse effect on biosolids disposal, a plan of action to control, eliminate, and/or monitor the pollutant(s) and the known or potential source(s) shall be included. Any apparent generation and/or destruction of pollutants attributable to chlorination/dechlorination sampling and analysis practices shall be noted.

The Discharger shall also provide a summary table presenting any influent, effluent or biosolids monitoring data for non-priority pollutants that the Discharger believes may be causing or contributing to interference, pass through or adversely impacting biosolids quality.
