**CLEAN WATER ACT SECTION 401 WATER QUALITY STANDARDS
CERTIFICATION FOR THE FOOTHILL BOULEVARD BIKE/PEDESTRIAN BRIDGE,
ROUTE 66 TRAILHEAD AND STREET IMPROVEMENT PROJECT, RANCHO
CUCAMONGA, COUNTY OF SAN BERNARDINO, CALIFORNIA (ACOE
REFERENCE NO. NOT AVAILABLE) (SARWQCB PROJECT NO. 362010-11)**

Dear Mr. Billings:

On May 10, 2010, we received an application for Clean Water Act Section 401 Water Quality Standards Certification ("Certification") from the City of Rancho Cucamonga for the proposed widening of the existing Foothill Boulevard bridge at Cucamonga Creek Channel, to accommodate 6 lanes of vehicle traffic, as well as bicycle and pedestrian traffic. This letter responds to your request for certification that the proposed project, described in your application and summarized below, will comply with State water quality standards outlined in the Water Quality Control Plan for the Santa Ana River Basin (1995) (Basin Plan) and subsequent Basin Plan amendments:

Project Description: Widen the existing 4 lane Foothill Boulevard bridge at Cucamonga Creek Channel, to accommodate 6 lanes of vehicle traffic, as well as foot and bicycle traffic. Install a raised median, between Grove Avenue and Vineyard Avenue. Replacement of the existing steel railroad bridge with a concrete through-girder pedestrian bridge. Also, realign Red Hill Country Club Drive to intersect Foothill Boulevard at a "T" intersection with a new traffic signal and add decorative features. The work will take place within Sections 28 and 29 of Township 3 South, Range 1 West, of the U.S. Geological Survey *El Casco* quadrangle map (33° 52' 12" N/ 117° 07' 12" W).

California Environmental Protection Agency

Receiving water: Cucamonga Creek Channel

Fill area: 0.034 acres of temporary impact to a streambed habitat (50 linear feet)

Dredge/Fill volume: N/A

Federal permit: U.S. Army Corps of Engineers Nationwide Permit No. 14

You have proposed to mitigate water quality impacts as described in your Certification application. The proposed mitigation is summarized below:

Onsite Water Quality Standards Mitigation Proposed:

- Project BMPs will be prepared and implemented during construction to comply with the City's water quality and urban runoff management requirements. Appropriate sediment control measures will be used within the channel to avoid transporting sediment downstream as part of the required Storm Water Pollution Prevention Plan (SWPPP).
- Vehicle maintenance, staging, storage, and dispensing of fuel shall occur on the existing access roads only, and spoil sites shall not be located within waters of the United States or in areas or in such a manner where spoil material could be washed into waters of the United States.
- Post construction BMPs will be implemented as illustrated in the project's Water Quality Management Plan (WQMP)

Offsite Water Quality Standards Mitigation Proposed:

- None

Should the proposed project impact state- or federally-listed endangered species or their habitat, implementation of measures identified in consultation with U.S. Fish and Wildlife Service and the California Department of Fish and Game will ensure those impacts are mitigated to an acceptable level.

Appropriate BMPs will be implemented to reduce construction and post-construction-related impacts to Waters of the State according to the requirements of Order No. R8-2010-0036 (NPDES Permit No. CAS618036), commonly known as the San Bernardino County Municipal Storm Water Permit, and subsequent iterations thereof. Order No. R8-2010-0036 requires that you substantially comply with the requirements of State Water Resources Control Board's General Permit for Storm Water Discharges Associated with Construction Activity.

Pursuant to California Code of Regulations, Title 14, Chapter 3, Section 15096, as a responsible agency, the Regional Board is required to consider an Environmental Impact Report (EIR) or Negative Declaration prepared by the lead agency in determining whether to approve a Section 401 Certification.

A responsible agency has responsibility for mitigating and avoiding only the direct and indirect environmental effects of those parts of the project which it decides to carry out, finance, or approve. Further, the responsible agency must make findings as required by Sections 15091 and, if necessary, 15093, for each and every significant impact of the project.

The City adopted a Mitigated Negative Declaration for this project on October 23, 2006. As required, the Regional Board has considered the City's Mitigated Negative Declaration in the issuance of this Certification. The Regional Board independently finds that changes or alterations have been required, or incorporated into the proposed project, which avoid or mitigate impacts to water quality to a less than significant level.

This 401 Certification is contingent upon the execution of the following conditions:

- 1) The applicant must comply with the requirements of the applicable Clean Water Act section 404 permit.
- 2) All materials generated from construction activities associated with this project shall be managed appropriately. This shall include identifying all potential pollution sources within the scope of work of this project, and incorporating all necessary pollution prevention BMPs as they relate to each potential pollution source identified.
- 3) Materials must not be placed in a manner where they could be discharged to surface waters except as authorized by this certification. In the event that trash or debris is discharged to surface waters, the discharger must recover the material.

- 4) The project proponent shall utilize Best Management Practices during project construction to minimize the controllable discharges of sediment and other wastes to drainage systems or other waters of the state and of the United States.
- 5) Post construction BMP implementation will be specified in a project specific Water Quality Management Plan, which will identify potential pollutants of concern and apply Structural, Non-Structural and Treatment BMPs accordingly. Once completed, the Project will become part of the City Municipal Activities Program, which includes operation and maintenance of treatment control BMPs.
- 6) Substances resulting from project-related activities that could be harmful to aquatic life, including, but not limited to, petroleum lubricants and fuels, cured and uncured cements, epoxies, paints and other protective coating materials, portland cement concrete or asphalt concrete, and washings and cuttings thereof, shall not be discharged to soils or waters of the state. All waste concrete shall be removed.
- 7) Motorized equipment shall not be maintained or parked within or near any stream crossing, channel or lake margin in such a manner that petroleum products or other pollutants from the equipment may enter these areas under any flow conditions. Vehicles shall not be driven or equipment operated in waters of the state on-site, except as necessary to complete the proposed project. No equipment shall be operated in areas of flowing water.
- 8) This Water Quality Certification is subject to the acquisition of all local, regional, state, and federal permits and approvals as required by law. Failure to meet any conditions contained herein or any conditions contained in any other permit or approval issued by the State of California or any subdivision thereof may result in the revocation of this Certification and civil or criminal liability.
- 9) A copy of this Certification and any subsequent amendments must be maintained on site for the duration of work.

Under California Water Code, Section 1058, and Pursuant to 23 CCR §3860, the following shall be included as conditions of all water quality certification actions:

- (a) Every certification action is subject to modification or revocation upon administrative or judicial review, including review and amendment pursuant to Section §13330 of the Water Code and Article 6 (commencing with Section 3867) of this Chapter.

- (b) Certification is not intended and shall not be construed to apply to any activity involving a hydroelectric facility and requiring a FERC license or an amendment to a FERC license unless the pertinent certification application was filed pursuant to Subsection §3855(b) of this Chapter and that application specifically identified that a FERC license or amendment to a FERC license for a hydroelectric facility was being sought.
- (c) Certification is conditioned upon total payment of any fee required under this Chapter and owed by the applicant.

If the above stated conditions are changed, any of the criteria or conditions as previously described are not met, or new information becomes available that indicates a water quality problem, the Regional Board may require the applicant to submit a report of waste discharge and obtain Waste Discharge Requirements.

In the event of any violation or threatened violation of the conditions of this certification, the holder of any permit or license subject to this certification shall be subject to any remedies, penalties, process or sanctions as provided for under state law. For purposes of section 401(d) of the Clean Water Act, the applicability of any state law authorizing remedies, penalties, process or sanctions for the violation or threatened violation constitutes a limitation necessary to assure compliance with the water quality standards and other pertinent requirements incorporated into this certification. Violations of the conditions of this certification may subject the applicant to civil liability pursuant to Water Code section 13350 and/or 13385.

This letter constitutes a Water Quality Standards Certification issued pursuant to Clean Water Act Section 401. I hereby issue an order certifying that any discharge from the referenced project will comply with the applicable provisions of Sections 301 (Effluent Limitations), 302 (Water Quality Related Effluent Limitations), 303 (Water Quality Standards and Implementation Plans), 306 (National Standards of Performance), and 307 (Toxic and Pretreatment Effluent Standards) of the Clean Water Act, and with other applicable requirements of State law.

This discharge is also regulated under State Water Resources Control Board Order No. 2003-0017-DWQ (Order No. 2003-0017-DWQ), "General Waste Discharge Requirements for Dredge and Fill Discharges That Have Received Water Quality Certification" which requires compliance with all conditions of this Water Quality Standards Certification. Order No. 2003-0017-DWQ is available at:
www.waterboards.ca.gov/board_decisions/adopted_orders/water_quality/2003/wqo/wqo_2003-0017.pdf
