Subject: Comment on Draft Scoping Order for Studies on Once Through Cooling  
for Nuclear Power Plants

Dear Laurel Warddrip,

Thank you for your studies on phasing out once through cooling at California Nuclear Power Plants. Once through cooling is old technology that continues to cause significant harm to California's marine ecosystems.

Both the marine ecosystems and the fishing industry have been harmed, and have not been mitigated by PG&E, owner of Diablo Canyon Nuclear Power Plant (DCNPP). Is PG&E ignoring the fishing community while the fish stocks are devastated?

In original agreements with California, PG&E agreed to modify to fix problems causing harm to marine life, or they will mitigate. I could not find evidence of mitigation to the fishing community in San Luis Obispo County. Sincerely, Carol Georgi
