Subject: Water Quality Klamath River

Hi, Hope all is well.

The water emerging from the lowest Klamath dam is pure poison. Nothing biological survives any exposure. Salmon and Steelhead that come into contact for a few seconds die. This is the same water used for consumption by people. This situation has to be addressed before the dams are relicensed. There can be no wiggle room to this situation. Not to mention the legal and moral issues of poisoning people. I hope your agency is not swayed by the powers of government as is frequently the case.

Sincerely Gregory Fitch
