BACKGROUND

Section 303(d) of the Clean Water Act requires each state to identify waters of the United States that do not meet or are not expected to meet by the next listing cycle, applicable water quality standards and to prioritize those waters for development of a total maximum daily load, unless other corrective action is appropriate. Section 305(b) of the Clean Water Act requires each state to report on the overall condition of its surface waterbodies (commonly referred to as the “305(b) report”). California combines its 303(d) list and 305(b) report into one “Integrated Report.”

The State Water Board adopts the 303(d) list for California and submits it to the United States Environmental Protection Agency (“USEPA”) for approval. Neither agency takes formal approval action on the 305(b) report. The State Water Board does not solicit comments or generally respond to comments pertaining to the 305(b) portion of the California Integrated Report.

The 2026 CALIFORNIA INTEGRATED REPORT:

The 2026 California Integrated Report consists of assessments of waterbodies in the North Coast, Lahontan, and Colorado River Basin Regional Water Boards. Waterbodies within the San Joaquin River sub-area of the Central Valley Regional Water Board were also included. The San Joaquin River sub-area is defined as the San Joaquin River watershed and includes the mainstem of the San Joaquin River upstream of the legal boundary of the Sacramento-San Joaquin Delta and all surface waters tributary to the mainstem. Finally, some waterbodies in the regions of the Central Coast and San Diego Regional Water Boards are included as off-cycle assessments.

All readily available data and information for waterbodies in the on-cycle regions and the San Joaquin River sub area that were received prior to the data solicitation cut-off date of October 21, 2022, were considered. Data and information that met mapping and quality assurance requirements of the Listing Policy were assessed to determine if water quality standards are attained or not attained in a waterbody.

The 2026 California Integrated Report revises the 2024 California Integrated Report. The revisions are based on data and information collected from surface waterbodies (rivers, streams, lakes, bays, estuaries, enclosed lagoons, and coastal waters) located in the aforementioned on-cycle and off-cycle regions. The revisions include changes to the 303(d) list and the 305(b) report and describes the extent to which surface waters in California are supporting beneficial uses.

Approximately 435 new waterbody-pollutant combinations are recommended to be added to the 303(d) List, and 133 waterbody-pollutant combinations are recommended to be removed from the 303(d) List. An individual waterbody-segment may be impaired by one or more pollutants.

The State Water Board is administering the listing process for all waters assessed during the 2026 listing cycle, in accordance with Section 6.2 of the Water Quality Control Policy for Developing California's Clean Water Act Section 303(d) List ("Listing Policy"). To administer the listing process, the State Water Board is accepting written comments and will hold a hearing to receive oral comments as described in this notice. As stated above, the State Water Board will not be taking any action at the hearing. At a subsequent board meeting and after providing written responses to all timely written comments and oral comments made at the hearing, the State Water Board will consider adopting the proposed 303(d) List. Upon adoption of the 303(d) List of the 2026 California Integrated Report by the State Water Board, the 2026 California Integrated Report will be submitted to USEPA, which may make changes to the 303(d) List before it approves the final 303(d) List for California.
