

Total Maximum Daily Load Progress Report		San Luis Obispo Creek Nutrients TMDL	
Regional Water Board	Central Coast, Region 3	STATUS <input type="checkbox"/> Conditions Improving <input type="checkbox"/> Data Inconclusive <input checked="" type="checkbox"/> Improvement Needed <input type="checkbox"/> TMDL Achieved/Waterbody Delisted	
Beneficial uses affected:	MUN		
Pollutant(s) addressed:	Nitrate-Nitrogen		
Implemented through:	NPDES Permit , MS4 Permit , WDR Waiver		
Approval date:	August 4, 2006		

TMDL Summary

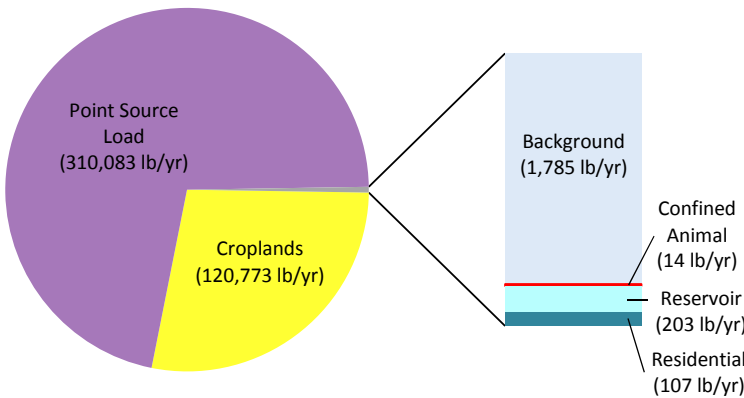

San Luis Obispo Creek is on the 2010 Clean Water Act section 303(d) list of impaired waters for nutrients. San Luis Obispo Creek's nitrate-nitrogen levels exceed Basin Plan objectives for the protection of the municipal water supply beneficial use (MUN). Wastewater discharge, urban stormwater, and agriculture were identified as the primary sources of nutrients. The Central Coast Water Board adopted a [TMDL for nutrients in San Luis Obispo Creek](#) that went in effect August 2006.

The TMDL established a numeric target of 10 mg/L nitrate-N, equal to the existing Basin Plan water quality objective. The TMDL established an implementation plan to achieve the TMDL through the use of National Pollutant Discharge Elimination System (NPDES) permits, MS4 permits, and Waste Discharge Requirements (WDR) for irrigated lands. The TMDL implementation schedule calls for achieving nutrient levels in San Luis Obispo Creek by 2012.

San Luis Obispo Creek Watershed

Annual Nitrate-N Conditions by Source Category

Total annual load is 432,964 lb NO₃-N/yr.

Water Quality Outcomes

- Water quality data demonstrate that the nitrate-N objectives are not being met in San Luis Obispo Creek.
- Water quality data for Prefumo Creek (310PRE), a San Luis Obispo Creek tributary, show significant improvement from 2002 to 2009.
- The City of San Luis Obispo NPDES permit will be revised to include a WRF discharge requirement to meet the TMDL nitrate-nitrogen numeric target.
- Continue implementation actions to reduce/eliminate nitrate-N loading from agriculture operations in the San Luis Obispo Creek watershed.
- Cal Poly recently enrolled in the [stormwater program](#) to achieve compliance with TMDL implementation actions.

San Luis Obispo Creek Water Quality

Wastewater Reclamation Facility (WRF) effluent discharge enters creek between stations 310PRE and 310SLV. See [Central Coast Ambient Monitoring Program \(CCAMP\) Website](#) for additional water quality monitoring data.
