REVISED NOTICE OF PUBLIC HEARING

concerning

**TENTATIVE ORDER
WASTE DISCHARGE REQUIREMENTS ORDER R5-2024-XXXX
NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM
PERMIT CA0079260
FOR
CITY OF YUBA CITY
WASTEWATER TREATMENT FACILITY
SUTTER COUNTY**

Discharger and Tentative Order Information

The City of Yuba City (Discharger) is the owner and operator of the Wastewater Treatment Facility (Facility), located at 302 Burns Drive Yuba City, CA 95991. The Discharger provides sewerage service for the City of Yuba City and serves a population of approximately 53,000. In addition, the Facility accepts septage from unsewered portions of Sutter and Yuba Counties. The design average dry weather flow capacity of the Facility is 10.5 MGD. The Facility provides treatment to municipal and industrial wastewater and discharges secondary treated effluent, primarily to the Feather River via a side-bank discharge at Discharge Point 003 or a yet to be constructed multiport diffuser at Discharge Point 004. The existing multiport diffuser at Discharge Point 001 is rarely used due to a discharge prohibition requiring the diffuser be submerged 0.8 feet so adequate dilution can be achieved. The Facility discharges chlorinated, secondary treated effluent to disposal ponds, Discharge Point 002, within the levee on the eastern side of the Feather River while conducting maintenance at one of the other discharge points.

Discharges from the Facility are currently regulated by Waste Discharge Requirements Order R5-2019-0017-01, issued by the Central Valley Regional Water Quality Control Board (Central Valley Water Board) on 8 February 2019 and amended on 7 June 2019. An Order is proposed to renew the NPDES permit. The tentative Order includes more stringent effluent limits for copper and new effluent limitations for cyanide, bis(2-ethylhexyl) phthalate, and chronic toxicity. A compliance schedule and interim effluent chronic toxicity limitations are included in the tentative Order to bring the discharge in compliance with the new effluent limits. The tentative Order retains the ammonia effluent limitations from Order R5-2019-0017-01 and requires the Discharger to conduct an ammonia assessment to evaluate the Facility's discharge of ammonia. The tentative Order also includes additional groundwater monitoring, reporting, and studies along with increased disposal pond monitoring and reporting.
