REVISED NOTICE OF PUBLIC HEARING

concerning

**TENTATIVE WASTE DISCHARGE REQUIREMENTS ORDER R5-2025-XXXX
AND
TENTATIVE TIME SCHEDULE ORDER
NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM
PERMIT CA0079049
FOR THE CITY OF DAVIS
WASTEWATER TREATMENT PLANT
YOLO COUNTY**

Discharger and Tentative Order Information

The City of Davis (Discharger) is the owner and operator of the City of Davis Wastewater Treatment Plant (Facility), located at 45400 County Road 28H, Davis, California. The Discharger provides sewerage service for the community of Davis and serves a population of approximately 68,000. The design average dry weather flow capacity of the Facility is 7.5 MGD. Tertiary treated disinfected wastewater from the Facility is discharged to Willow Slough Bypass and seasonally to the Main Conaway Canal, seasonally to groundwater via percolation from the Davis Wetlands and if the Davis Wetlands reach capacity during the rainy season, the Conaway Ranch Toe Drain. Willow Slough Bypass, the Main Conaway Canal, and the Conaway Ranch Toe Drain are all waters of the United States within the Yolo Bypass and Sacramento River Watershed.

Discharges from the Facility are currently regulated by Waste Discharge Requirements Order R5-2018-0086, issued by the Central Valley Regional Water Quality Control Board (Central Valley Water Board) on 7 December 2018. An Order is proposed to renew the National Pollutant Discharge Elimination System (NPDES) Order. The tentative NPDES Order includes new or updated effluent limitations for ammonia, total copper, and total cyanide plus chronic toxicity whole effluent toxicity effluent limitations per the new Statewide Toxicity Provisions. The tentative NPDES Order includes new land discharge specifications and monitoring, additional pond monitoring, along with increased groundwater monitoring requirements to monitor discharge to land from the Emergency Storage Ponds, Stormwater Percolation Ponds and/or the Recycled Water Storage Ponds. The tentative NPDES Order includes new special studies to evaluate the work needed for soil remediation of the former treatment ponds that are now used as storage ponds. The tentative NPDES Order also includes a compliance schedule for the Discharger to complete the installation of a liner at the Emergency Storage Ponds to protect high quality groundwater beneath the Facility.

The proposed tentative Time Schedule Order includes a compliance schedule with milestones for the Facility to come into compliance with total copper and cyanide effluent limitations.
