Discharger and Tentative Order Information

The United States Department of the Interior, National Park Service, Yosemite National Park Service (Discharger) is the owner and operator of the El Portal Wastewater Treatment Facility (Facility), located at 5083 Foresta Road, El Portal, California. The Facility provides sewerage services for the community of El Portal and the Yosemite Valley in Yosemite National Park. The Facility provides tertiary treatment for up to an average monthly daily flow of 1.0 million gallons per day (MGD). The Facility is permitted to discharge tertiary-treated wastewater to the Merced River, a water of the United States, either directly or via adjacent percolation ponds.

The Central Valley Regional Water Quality Control Board (Central Valley Water Board) will consider the renewal of the Waste Discharge Requirements/NPDES Permit for the discharge described above. The proposed NPDES permit includes new or updated effluent limitations for ammonia, biochemical oxygen demand, copper, total suspended solids and zinc. The proposed permit removes effluent limitations for acute toxicity, electrical conductivity, and mass based effluent limits for phosphorus. The electrical conductivity effluent limit will be replaced by an effluent trigger that, if exceeded, will trigger an evaluation of salinity sources and an update to the Discharger's Salinity Evaluation and Minimization Plan.

The Discharger submitted an infeasibility analysis requesting time to come into compliance with the final effluent limitations for total copper and total zinc. Therefore, a Time Schedule Order is proposed containing a schedule for compliance with final effluent limitations by 31 May 2030.
