Citizen Science Day - Celebrating Emergent Innovation

Celebrate Emergent Innovation

Under the name of Citizen Science, many innovative practices in which avocational scientists pose and answer real-world questions are growing rapidly worldwide. Citizen Science can furnish ready-made solutions with citizens playing an active role.

The field of citizen science research is growing and is experiencing contributions from diverse disciplines, promoting innovation in science, society, and policy. Inter- and transdisciplinary discussions and critical analyses are needed to use the current momentum to evaluate, demonstrate, and build on the advances that have been made in the past few years.

When coupled with big data, citizen science projects will expand yet further. Open platforms will give individuals access to data, models and analyses, so they can pose their own questions and find solutions. This will change the way we teach science in schools and perform research.

When: April 16, 2019

Where: The Joe Serna Jr. CalEPA Headquarters Building
1001 I Street P.O. Box 2815 Sacramento, CA 95812 (at the corner of 10th and I)
