

## Bio

Karen Worcester is a Senior Environmental Scientist at the Central Coast Water Board, working on water quality monitoring and assessment since 1992. She has been involved in the design, development and management of the Central Coast Ambient Monitoring Program since its inception, and other programs including the Morro Bay National Monitoring Program, the Morro Bay National Estuary Program, the Central Coast Long-term Assessment Network and the Central Coast Cooperative Monitoring Program for Agriculture. In the past, she has worked as a fisheries biologist for the California Department of Fish and Wildlife. Her Master's Degree involved habitat preferences of a now-endangered lagoon dwelling fish, the tidewater goby.
