PROJECT DESCRIPTION:

The Southern California Gas Company (The Gas Company) will be relocating two natural gas pipelines (Line 235 and Line 335 in parallel) to accommodate site grading work and subsequent residential development at the end of Canyon Park near Highway 14 in the City of Santa Clarita. The Gas Company proposes to discharge hydrostatic test water into a storm drain at Canyon Park Boulevard. Approximately 7,900 linear feet of 30-inch diameter steel pipeline will be tested.

Valencia Water District will supply the domestic hydrant water for hydrostatic testing. Testing of the lines will be done one at a time. The test water from the first line will be reused in the second line. If the total residual chlorine concentration in the wastewater is above the discharge limitation, sodium thiosulfate or sodium bisulfate will be added to dechlorinate the wastewater.

VOLUME AND DESCRIPTION OF DISCHARGE:

Up to 173,000 gallons of hydrostatic water will be discharged into the storm drain located at Canyon Park Boulevard (Latitude: 34° 24' 24.2", Longitude: 118° 26' 49.5"). Discharge to the storm drain flows into Santa Clara River.

FREQUENCY OF DISCHARGE:

The discharge will occur only once.

REUSE OF WATER:

There is no feasible reuse option for hydrostatic water at the site.
