FACT SHEET  
WASTE DISCHARGE REQUIREMENTS  
FOR  
INDUSTRY URBAN DEVELOPMENT AGENCY  
(STAFFORD GROUNDWATER TREATMENT PLANT)

NPDES NO. CAG834001  
CI-8216

**FACILITY ADDRESS**

15566 East Stafford Street  
City of Industry, CA 91744

**FACILITY MAILING ADDRESS**

15651 East Stafford Street  
City of Industry, CA 91744

**PROJECT DESCRIPTION:**

Industry Urban Development Agency proposes to discharge treated groundwater via storm drain at Stafford Street. A groundwater treatment plant system will be constructed to treat gasoline-impacted groundwater located at 15566 Stafford Street, City of Industry, California. This site has a remedial action plan approved by this Regional Board, and the soil treatment is covered by Order No. 90-148, CI-7634.

The groundwater treatment plant system consists of three activated carbon units, installed in series and each unit contains 200 pounds of carbon. The system is expected to remove gasoline hydrocarbons from the water.

**VOLUME AND DESCRIPTION OF DISCHARGE:**

Up to 7,200 gallons per day of treated groundwater will be discharged into a storm drain at Stafford Street (Latitude: 34° 01' 28", Longitude: 117° 57' 28"). The discharge flows via San Jose Creek to San Gabriel River, a water of the United States.

**FREQUENCY OF DISCHARGE:**

Discharge will be continuous.

**REUSE OF WATER:**

There is no feasible reuse option for treated groundwater at the site; therefore, the treated water will be discharged to the storm drain.
