Fontana, CA 92334

**PROJECT DESCRIPTION**

Brutoco Engineering & Construction, Inc. (Brutoco) proposes to widen the existing Lankershim Bridge which goes over the Los Angeles River in Studio City. Dewatering is anticipated during construction of the bridge foundation. Brutoco proposes to store the groundwater in Baker tanks and to analyze the groundwater prior to discharge into the Los Angeles River. The analytical data of groundwater samples collected for NPDES permit application indicated that concentrations of pollutants of concern were below the limits specified in Attachment B of Order No. 97-045, and also were below method detection limits. Therefore, the discharger is not required to monitor for pollutants of concern specified in Attachment B of Order No. 97-045.

**VOLUME AND DESCRIPTION OF DISCHARGE**

Brutoco will discharge up to 0.34 million gallons per day (mgd) of groundwater during the construction project. The water will be discharged into a channel (Latitude 34° 8' 30", Longitude 118° 21' 45") that discharges into Los Angeles River, a water of the United States. The project location map is shown in Attachment 1.

**FREQUENCY OF DISCHARGE**

The discharge will be intermittent and is proposed to begin in July 2001. The construction project will be completed in October 2001.

## **REUSE OF WATER**

Some of the groundwater will be used during construction for such activities as dust control and wetting of the soil for compaction. Otherwise, there are no feasible reuse options for the major portion of the water.
