PROJECT DESCRIPTION:

The Camden Development Inc. proposes to discharge groundwater generated during dewatering operations associated with the construction of a new storm drain pipe along Seaside Way at Queens Way Entertainment Center located at 55 Chesnut Place, Long Beach. A desilting tank will be installed to clarify water before discharge.

VOLUME AND DESCRIPTION OF DISCHARGE:

Up to 140,000 gallons per day of groundwater will be discharged. The proposed discharge will be initiated during the month of November 2001 and will last up to 60 days. The groundwater will be discharged into a storm drain along the Seaside Way (Latitude: 33° 45' 76", Longitude: 118° 11' 77"). Discharge to the storm drain flows into Los Angeles River and Queensway Bay, waters of the United States. The site location map is shown in Figure 1.

FREQUENCY OF DISCHARGE:

The discharge will be intermittent for the duration of the project.

REUSE OF WATER:

Water reuse alternatives and its applicability at the site were evaluated. A small volume of groundwater will be used for dust control and as an aid in the compaction of soil. The majority of the groundwater will be discharged into the storm drain.
