PROJECT LOCATION

230 N. 2nd Avenue
Arcadia, CA 91066

FACILITY MAILING ADDRESS

11800 Goldring Road
Arcadia, CA 91066

PROJECT DESCRIPTION

City of Arcadia Public Works Services Department (The City) proposes to discharge groundwater from a recently constructed water well, St. Joseph No. 2, during a short term aquifer pumping test. The discharge is necessary to collect information requested by the California Department of Health Services in order to verify that the groundwater meets drinking water standards. The extracted groundwater will be analyzed prior to discharge into the flood control channel.

VOLUME AND DESCRIPTION OF DISCHARGE

Up to 4.32 million gallons per day (mgd) of groundwater will be discharged during the short term test that will last less than 72 hours. The water will be discharged into Santa Anita Wash (Latitude 34° 8' 45", Longitude 118° 2' 0"), thence into Rio Hondo which flows into Los Angeles River, a water of the United States. The site location is shown as Attachment I.

FREQUENCY OF DISCHARGE

The discharge will last for approximately 72 hours, and will be conducted in November 2001. The testing project will be completed in one day.

REUSE OF WATER

This is a short-duration one-time discharge. In addition, there is very limited landscaping area at the site for irrigation. Therefore, there are no feasible reuse options for the discharge.
