FACT SHEET  
WASTE DISCHARGE REQUIREMENTS  
FOR  
ARCO TERMINAL SERVICES CORPORATION  
(EAST HYNES TERMINAL)

NPDES NO. CAG674001  
CI-8358

**FACILITY ADDRESS**

5905 Paramount Boulevard  
Long Beach, California

**FACILITY MAILING ADDRESS**

5905 Paramount Boulevard  
Long Beach, CA 90805

**PROJECT DESCRIPTION:**

Arco Terminal Services Corporation proposes to discharge hydrostatic test water from Tank No. 713 located at East Hynes Terminal, 5905 Paramount Boulevard, Long Beach. The hydrostatic testing will be conducted after the tank upgrade. Arco will use potable water supplied by the City of Long Beach during the hydrostatic testing.

**VOLUME AND DESCRIPTION OF DISCHARGE:**

A total of approximately 2.95 million gallons of hydrostatic water will be discharged to the Los Angeles River (Latitude: 33° 52' 39", Longitude: 118° 12' 36") a water of the United States. The discharge from tank 713 will be diverted into the facility's existing stormwater retention ponds. From the retention ponds, the discharge will be pumped into the storm drain at Cherry Avenue that drains into the Los Angeles River. The discharge will occur over a period of four days at a rate of up to 0.72 million gallons per day. The site plan location and a vicinity map is shown in Figures 1 and 2.

**FREQUENCY OF DISCHARGE:**

The discharge will be intermittent. Arco expects to begin hydrostatic testing in February 2002.

**REUSE OF WATER:**

The reuse of hydrostatic test water at the facility was evaluated. Only a very small portion of water can be used for irrigation. Therefore, the majority of the hydrostatic test water will be discharged into the storm drain.
