PROJECT DESCRIPTION

Whittier Narrows Golf Course (WNGC) proposes to discharge groundwater from an active irrigation water well, 3A, during a rehabilitation project to remove and cleanup the deteriorated well screen. The extracted groundwater will be neutralized prior to discharge into the Rio Hondo Wash which is in the vicinity of the site.

VOLUME AND DESCRIPTION OF DISCHARGE

Up to 0.9 million gallons per day (mgd) of groundwater will be discharged during the well rehabilitation project. The water will be discharged into Rio Hondo Wash (Latitude 34° 2' 12", Longitude 118° 4' 9"), which flows into Los Angeles River, a water of the United States. The site location map and the waste flow diagram are shown as Figure 1 & 2.

FREQUENCY OF DISCHARGE

The discharge will last for approximately 72 hours, and will be conducted in March 2002.

REUSE OF WATER

This is a short-duration, one-time discharge. In addition, the golf course cannot use additional irrigation water due to application of fertilizer at the site. Therefore, there are no feasible reuse options for the discharge.
