PROJECT DESCRIPTION

The City of Los Angeles Department of Water and Power (LADPW) operates the Haynes Generating Station. LADPW is proposing to conduct hydrostatic testing of new pipelines and vessels to be installed at the site as part of the Haynes Generating Station Repowering Project. The source water for the hydrostatic testing will be potable water from fire hydrants located at the project site. Hydrostatic test water will be analyzed prior to discharge into San Gabriel River.

VOLUME AND DESCRIPTION OF DISCHARGE

Up to one million gallons per day of wastewater will be discharged into San Gabriel River (Latitude 31°45' 47", Longitude 118° 05' 44"), a water of the United States. The site location map is shown as Figure 1.

FREQUENCY OF DISCHARGE

The discharge is proposed to begin in January 2003. The discharge will be intermittent and last for approximately two years.

REUSE OF WATER

Landscaping area for use of irrigation water is limited at the site. There are no other feasible reuse options for the discharge. Therefore, the hydrostatic test water will be discharged to San Gabriel River.
