Los Angeles, CA 90012

**PROJECT DESCRIPTION:**

The City of Los Angeles, Department of Water and Power (LADWP) proposes to discharge hydrostatic test water from Encino Reservoir Water Quality Improvement Project located at 4500 Encino Avenue, Los Angeles. The hydrostatic test will be performed on a 1,605 linear-foot section of pipeline. LADWP will use potable water from the water hydrants at the construction site.

**VOLUME AND DESCRIPTION OF DISCHARGE:**

Up to 200,000 gallons of hydrostatic test water will be discharged during the testing of the Encino Reservoir Water Quality Improvement Project. Effluent will be discharged into a storm drain located at Encino Avenue (Latitude: 34° 09' 11", Longitude: 118° 30' 47"). The discharge flows to the Los Angeles River, a water of the United States. The site location map is shown in Figure 1.

**FREQUENCY OF DISCHARGE:**

The discharge will be intermittent and will last over a one year period.

**REUSE OF WATER:**

Discharge to the sewer is not feasible because of high cost of sewer connection. Due to intermittent flow and the inability to transport the wastewater economically for reuse, the effluent will be discharged to the storm drain.
