STATE OF CALIFORNIA  
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD  
LOS ANGELES REGION

ORDER 08-xxx  
NPDES PERMIT NO. CAS004002  
WASTE DISCHARGE REQUIREMENTS  
FOR

STORM WATER DISCHARGES FROM THE MUNICIPAL SEPARATE STORM  
SEWER SYSTEM WITHIN THE VENTURA COUNTY WATERSHED PROTECTION  
DISTRICT, COUNTY OF VENTURA AND THE INCORPORATED CITIES THEREIN

**FINDINGS**

The California Regional Water Quality Control Board, Los Angeles Region (hereinafter called Regional Water Board), finds that:

**A. Permit Parties and History**

1. Ventura County Watershed Protection District (Principal Permittee), County of Ventura, cities of Camarillo, Fillmore, Moorpark, Ojai, Oxnard, Port Hueneme, San Buenaventura (Ventura), Santa Paula, Simi Valley and Thousand Oaks (hereinafter referred to separately as Permittees) have joined together to form the Ventura Countywide Storm Water Quality Management Program to discharge wastes. The Permittees discharge or contribute to discharges of storm water and non-storm water from municipal separate storm sewer systems (MS4s), also called storm drain systems, into the Watershed Management Areas of Ventura River, Santa Clara River, Calleguas Creek, Malibu Creek and Miscellaneous Ventura Coastal all within Ventura County and Los Angeles County (see Attachment "A").
2. Prior to the issuance of this permit, storm water discharges from the Ventura County MS4 were covered under the countywide waste discharge requirements contained in Order No. 00-108, adopted by the Regional Water Board on July 27, 2000, which replaced Order No. 94-082, adopted by the Regional Water Board on August 22, 1994. Order No. 00-108 also served as a National Pollutant Discharge Elimination System (NPDES) permit for the discharge of municipal storm water.
3. The Ventura County Board of Supervisors approved the concept of a countywide NPDES permit program and the use of the Flood Management District (presently the Watershed Protection District) benefit assessment authority to finance it on April 14, 1992. On June 30, 1992, the Ventura County Board of Supervisors adopted a benefit assessment levy for storm water and flood management in the unincorporated areas of Ventura County and the cities within the County, to be used in part to finance the implementation of a countywide NPDES municipal storm water

E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

permit program. The Ventura County MS4 Permittees have entered into an agreement with the Watershed Protection District to finance the activities related to the Ventura County MS4 Permit for shared and district wide expenses. The Permittees are also given the option to use the Benefit Assessment Program to finance their respective activities related to reducing the discharge of storm water pollutants under the MS4 Permit.

- 4. The Regional Water Board may require a separate NPDES permit for any entity that discharges storm water into the watersheds of Ventura County. Such an entity can be any State or Federal facility, special district or other public or private party.

**B. Nature of Discharge**

- 1. Storm water discharges consist of surface water runoff generated from various land uses in all the hydrologic drainage basins, which discharge into Waters of the State. The quality of these discharges varies and is affected by geology, land use, season, hydrology, and sequence and duration of hydrologic events. Based on the Ventura Countywide Storm Water Monitoring Program's Water Quality Monitoring Reports which were required under Order No. 00-108, the dry weather and wet weather Pollutants of Concern (POC) in urban stormwater include an anion, bacteria, conventional pollutants, metals, a nutrient, organic compounds, and pesticides. The POC are identified in Attachment "B" of this Order. Many of the POC listed are causing impairments identified on the federal Clean Water Act (CWA) § 303(d) list of impaired waterbodies.

The State Water Board submits a report (a list of water quality limited segments (§ 303(d) list)) on the State's water quality to the U.S. EPA pursuant to § 305(b) of the 1972 CWA, and Title 40, CFR 130.7, every 2 years. The Report provides water quality information to the general public and serves as the basis for the U.S. EPA's National Water Quality Inventory Report to Congress. Section 303(d) requires that all waters that are not attaining standards after the implementation of those controls required by 1977, shall be included on the list. Title 40 CFR 130.7(b)(3) defines "water quality standard applicable to such waters" as "those water quality standards established under § 303 of the Clean Water Act, including numeric criteria, narrative criteria, waterbody uses, and antidegradation requirements."

- 2. Common pollutants in urban storm water and their respective sources are: bacteria from animal droppings and illegal discharges; Polycyclic Aromatic Hydrocarbons (PAHs) from the products of internal combustion engine operation and parking lot sealants wash off; nitrates from fertilizer application; pesticides from pest mitigating applications and from plant mitigating applications; bis (2-ethylhexyl) phthalate from the break down of plastic products; mercury from atmospheric fallout and improper disposal of mercury switches; lead from fuels, paints and automotive parts; copper

T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

from brake pad wear and roofing materials, zinc from tire wear and galvanized sheeting and fencing; sediment from land disturbance and erosion; and dioxins as products of combustion.

- 3. In general, the pollutants that are found in municipal storm water runoff can harm human health and aquatic ecosystems. In addition, the high volumes and high velocities of storm water discharged from MS4s into natural watercourses can adversely impact aquatic ecosystems and stream habitat and cause stream bank erosion and physical modifications. These changes are collectively termed hydromodification. Municipal point source discharges of runoff from urbanized areas remain a leading cause of impairment of surface waters in California.
- 4. Ammonia as Nitrogen, and Nitrate plus Nitrite as Nitrogen are biostimulatory substances that can cause or contribute to eutrophic effects such as low dissolved oxygen and algae growth impairing warm freshwater and wildlife habitats. Ammonia is highly toxic to fish and other aquatic life. Excessive ammonia can cause aquatic life toxicity.
- 5. Elevated bacterial indicator densities impair the water contact recreation (REC-1) beneficial use at beaches, creeks, estuaries, lagoons, and marinas. Swimming in waters with elevated bacterial indicator densities has been associated with adverse health effects. Specifically, local and national epidemiological studies indicate that there is a causal relationship between adverse health effects and recreational water quality, as measured by bacterial indicator densities. Sources of elevated bacteria to marine and fresh waters may also include illegal discharges from improperly maintained standard septic systems, onsite wastewater treatment systems (OWTS) and illicit discharges from private drains.
- 6. Pesticides are substances used to prevent, destroy, repel or mitigate pests such as insects, weeds, and microorganisms. Their effects can be direct (e.g. fish die from exposure to a pesticide entering waterways, or birds do not reproduce after ingesting contaminated fish), or indirect (a hawk becomes sick from eating a mouse dying from pesticide poisoning). Pesticide categories include: Organochlorine, Organophosphorus, Organophosphate, and Pyrethroid.
- 7. Polychlorinated Biphenyls (PCBs) are a subset of the synthetic organic chemicals known as chlorinated hydrocarbons. Concern over PCBs toxicity, persistence (chemical stability) in the environment and bioconcentration in aquatic organisms has led to prohibitions on PCBs.
- 8. Rising groundwater and swimming pool water have been found to be sources of pollutants such as salts (chloride). Salts increase the salinity of otherwise freshwater systems and disrupt physiological processes. The Regional Water Board has

T  
E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

waterbodies listed on the CWA § 303(d) list for impairment due to salts and has adopted Basin Plan amendments to include Total Maximum Daily Loads (TMDLs) for salts. This Order includes provisions to control the discharges from these activities in order to directly or indirectly reduce or eliminate the discharge of salts to fresh water systems where salts may impair water quality and beneficial uses.

- 9. Trash and debris are pervasive pollutants which accumulate in streams, rivers, bays, and ocean beaches throughout Southern California. They pose a serious threat to our oceans and coasts, navigation, biological resources, recreation, human health and safety, aesthetics, and economies.
- 10. Municipal storm water (wet weather) and non-storm water (dry weather) discharges may contain pollutants that cause or threaten to cause an exceedance of the water quality standards, as outlined in the Los Angeles Region's Basin Plan. Wet weather and dry weather discharges from the MS4 are subject to conditions and requirements established in the Basin Plan for point source discharges. Discharges from the MS4 may not cause or contribute to exceedances of water quality standards.
- 11. Biological communities act to integrate the effects of water quality conditions in a stream by responding with changes in their population abundances and species composition over time. These populations are sensitive to multiple aspects of water and habitat quality, and provide expressions of ecological health easier to understand than the results of chemical and toxicity tests. Biological assessments and criteria address the cumulative impacts of all stressors, especially habitat degradation, and chemical contamination, which result in a loss of biological diversity. Biological information can help provide an ecologically based assessment of the status of a waterbody. Bioassessment is a cost-effective tool and protocol for assessing the biological and physical habitat conditions of streams and rivers for evaluation of the overall health of a watershed. The Principal Permittee consents to participate in the Southern California Storm Water Monitoring Coalition (SMC) Southern California Regional Bioassessment Monitoring Program.
- 12. The increased volume, increased velocity, and discharge duration of storm water runoff from developed areas has the potential to greatly accelerate downstream erosion and impair stream habitat in natural drainages. Studies have demonstrated a direct correlation between the degree of imperviousness of an area and the degradation of its receiving waters. Significant declines in the biological integrity and physical habitat of streams and other receiving waters have been found to occur with as little as 3-10 percent conversion from natural to impervious surfaces. Percentage impervious cover is a reliable indicator and predictor of potential water quality degradation expected from new development.

E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- 13. Studies indicate that facilities with paved surfaces subject to frequent motor vehicular traffic (such as: strip malls, parking lots, commercial business parks, and fast food restaurants), or facilities that perform vehicle repair, maintenance, or fueling (automotive service facilities) are potential sources of POC in storm water.
- 14. Retail Gasoline Outlets (RGOs) are points of convergence for vehicular traffic and are similar to parking lots and urban roads. Studies indicate that storm water discharges from RGOs have high concentrations of hydrocarbons and heavy metals.
- 15. The industries and businesses listed in this Order that are to be inspected by Permittees have the potential to discharge contaminated storm water into the MS4. This storm water is an environmental threat because it can adversely impact public health and safety, and the quality of receiving waters. For example, pretreatment program compliance inspections and audits performed in the Los Angeles and Ventura Counties indicate that automotive service and food service facilities sometimes discharge polluted storm water to the MS4s. The POC in such wash waters include oil and grease, toxic chemicals, and food waste. Spills from clogged sanitary sewer lines have a high likelihood to reach the receiving waters via MS4s. Overall, the most common POC identified in storm water discharge to the MS4s are: (i) heavy metals, (ii) oil and grease/ PAHs, (iii) sediments, (iv) oxygen demanding substances, (v) litter/ trash/ debris, (vi) nutrients, (vii) other toxic materials, such as pesticides. Municipal storm water monitoring data and industrial storm water monitoring data indicate that industrial and commercial sites continue to contribute significant quantities of pollutants in storm water runoff.
- 16. Development and urbanization increase pollutant loads, volume, and discharge velocity. First, natural vegetated pervious ground cover is converted to impervious surfaces (paved) such as highways, streets, rooftops and parking lots. Natural vegetated soil can both absorb rainwater and remove pollutants providing an effective natural purification process. In contrast, impervious surfaces (such as pavement and concrete) can neither absorb water nor remove pollutants, and thus the natural purification characteristics are lost. Second, urban development creates new pollution sources as the increased density of human population brings proportionately higher levels of vehicle emissions, vehicle maintenance wastes, municipal sewage waste, pesticides, household hazardous wastes, pet wastes, trash, and other anthropogenic pollutants. Development and urbanization especially threaten environmentally sensitive areas. Such areas have a much lower capacity to withstand pollutant shocks than might be acceptable in the general circumstance. In essence, development that is ordinarily insignificant in its impact on the environment may become significant in a particularly sensitive environment. These environmentally sensitive areas (ESAs) designated by the State in the Ventura County watershed include:
  - (a) Drainages to waters identified in the Basin Plan as supporting the "Rare, Threatened, or Endangered Species (RARE)" Beneficial Use; and

T  
E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (b) California Coastal Commission's Environmentally Sensitive Habitat Areas as delineated on maps in Local Coastal Plans (LCPs).
- (c) Additional ESAs that may be identified by California Department of Fish and Game.

17. The implementation of Low Impact Development (LID) techniques across the United States and Canada has demonstrated that the proper implementation of LID techniques not only results in water quality protection benefits and in a reduction of the cost of land development and construction but also bears other positive attributes that go beyond economic benefits such as enhanced property values, improved habitat, aesthetic amenities, and improved quality of life. *Reducing Stormwater Costs through Low Impact Development (LID) Strategies and Practices, USEPA Doc No. EPA 841-F-07-006, December 2007.* Further, properly implemented LID techniques reduce the volume of runoff leaving a newly developed or re-developed area thereby lowering the peak rate of runoff, and thus minimizing the adverse affects of hydromodification on stream habitat. *A Review of Low Impact Development Policies: Removing Institutional Barriers to Adoption, Low Impact Development Center and State of California, State Water Resources Control Board, December 2007.* The requirements of this Order facilitate the implementation of LID strategies to protect water quality, reduce runoff volume, and to benefit from these additional enhancements.
18. The Regional Water Board adopted a Conditional Waiver of Waste Discharge Requirements for Discharges from Irrigated Lands (Order No. R4-2005-0080) on November 3, 2005. The objective of the program is to monitor runoff from irrigated agriculture facilities in the coastal watersheds of Ventura and Los Angeles Counties. The Basin Plan, which designates beneficial uses and establishes water quality objectives for the Region, recognizes that agricultural activities can generate pollutants such as sediment, pesticides, and nutrients that upon discharge to receiving water, can degrade water quality and impair beneficial uses. A category identified by the Conditional Waiver as a source of pollutants is nursery operations. This Order includes requirements for the municipal operator to confirm that nursery operators implement pollutant reduction and control measures with the objective of reducing pollutants in storm water runoff discharges.
19. Research conducted on the contribution of aerial deposition of trace heavy metals in Los Angeles County watersheds indicates that dry indirect deposition may account for a significant load of pollutants into surface waters. Similar patterns of aerial deposition likely occur in Ventura County. Of the atmospherically deposited pollutants on the watersheds, ten to twenty percent may account for the total load for copper, zinc, nickel, lead, and chromium to the waterbodies. Land reservoirs and sequestration may account for the remaining eighty to ninety percent of the atmospherically deposited pollutants on the watersheds. Emissions of semi-volatile

E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

organics such as polycyclic aromatic hydrocarbons (PAHs) and pesticides and their subsequent deposition may contribute to the contamination of receiving waters but appear to be less significant. The remaining percentage is stored in land reservoirs and eventually shows up in receiving waters.

**C. Permit Background**

1. The essential components of the Storm Water Management Program, as required by the Code of Federal Regulations (CFR) [40 CFR122.26(d)] are:
  - (a) Adequate Legal Authority.
  - (b) Fiscal Resources.
  - (c) Storm Water Quality Management Program (SMP)
    - (1) Public Information and Participation Program
    - (2) Industrial/ Commercial Facilities Program
    - (3) Planning and Land Development Program
    - (4) Development Construction Program
    - (5) Public Agency Activities Program
    - (6) Illicit Connection and Illicit Discharges Elimination Program
  - (d) Reporting Program (Monitoring Report and Program Report)
  
2. The Ventura County SMP, dated November 2001 (revision 2) identifies seven program areas, which are listed below and were previously approved under Board Order No. 00-108. For purposes of consistency, they are titled as follows:
  - (a) Ventura County SMP.
    - (1) Program Management
    - (2) Programs for Residents
    - (3) Programs for Industrial/ Commercial Businesses
    - (4) Programs for Planning and Land Development
    - (5) Programs for Construction Sites
    - (6) Programs for Public Agency Activities
    - (7) Programs for Illicit Connections/ Illegal Discharges
  - (b) For purposes of region-wide consistency, the program titles are revised and consolidated into the six areas listed in the preceding C.1(c). All Permittee storm water documents submitted to the Regional Water Board are to follow the organization enumerated in C.1(c).
  
3. The Permittees filed a Report of Waste Discharge (ROWD), dated January 26, 2005. The Permittees applied for renewal of their waste discharge requirements for a 5-year period, which serves as an NPDES permit to discharge wastes to surface waters.
  
4. The Regional Water Board reviewed the ROWD and determined it to be partially complete under the reapplication policy for MS4s issued by the United States Environmental Protection Agency (U.S. EPA) (61 Fed. Reg. 41697). The Regional

T  
E

V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

Water Board has prepared this Order so that implementation of provisions contained in this Order by Permittees will meet the requirements of the federal NPDES regulations at 40 CFR122.26.

- 5. The Permittees ROWD contained a proposed Storm Water Management Program and a Monitoring Program to be considered by the Regional Water Board for incorporation into an MS4 NPDES Permit as permit conditions and to demonstrate compliance with federal law.
- 6. To-date, the monitoring program has consisted of mass emission, receiving water (tributaries), and land-use monitoring stations, toxicity testing, special studies for bioassessment of the Ventura River and hydrology, identification of ESAs, implementation of the Storm Water Quality Urban Impact Mitigation Plan (SQUIMP), and has provided support for volunteer monitoring programs. This Order requires a monitoring program consisting of mass emission, toxicity, TMDL storm water (wet weather) MS4 water quality-based effluent limits, TMDL non-storm water (dry weather) MS4 water quality-based effluent limits, trash and debris study, Pyrethroid assessment study, continuation of the hydromodification study, low impact development study, and participation in the Southern California Regional Bioassessment Program and Southern California Bight Project (SCBP).
- 7. The Principal Permittee is a member of the Southern California Coastal Water Research Project (SCCWRP) Commission. The Principal Permittee also participates in the Regional Monitoring Programs and research partnerships, such as the Southern California Storm Water Monitoring Coalition (SMC) and the Bioassessment Working Group.

**D. Permit Coverage**

- 1. The area covered by this Order includes all areas within Ventura County boundaries and all areas within each co-permittee's boundaries (see Figure 1) that drain into the MS4.
- 2. The Permittees covered under this Order were designated on a system-wide basis under Phase I of the CWA § 402(p)(3)(B)(i). The action of covering all Ventura County municipalities under a single MS4 permit on a system-wide basis was consistent with the provisions of 40 CFR122.26(a)(3)(iv), which states that one permit application may be submitted for all or a portion of all municipal separate storm sewers within adjacent or interconnected large or medium municipal separate storm sewer systems; and the Regional Water Board may issue one system-wide permit covering all, or a portion of all municipal separate storm sewers in adjacent or interconnected large or medium municipal separate storm sewer systems.

T  
E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- 3. Federal, State, Regional, or local entities within the Permittees' boundaries or in jurisdictions outside the Ventura County Watershed Protection District, and not currently named in this Order, may operate storm drain facilities and/ or discharge storm water to storm drains and watercourses covered by this Order. The Permittees may lack legal jurisdiction over these entities under State and Federal constitutions. The Regional Water Board will coordinate with these entities to implement programs that are consistent with the requirements of this Order. The Regional Board may consider such facilities for coverage under its NPDES permitting scheme pursuant to USEPA Phase II storm water regulations.  
Permittees have expressed their intention to work cooperatively to control the contribution of pollutants from one portion of the MS4 to another portion of the system. Permittees shall make good faith efforts to control the contribution of pollutants to the MS4 from non-permittee dischargers such as Caltrans, the U.S. Department of Defense, and other state and federal facilities.
- 4. TMDLs are numerical calculations of the maximum amount of a pollutant that a waterbody can receive and still meet water quality standards, and an allocation of that amount to the pollutant's sources. A TMDL is the sum of the allowable loads of a single pollutant from all contributing point sources (Waste Load Allocation (WLA) and non-point sources (Load Allocation (LA)). Discharges from the MS4s are considered point sources discharges, because the MS4 is a point source.
- 5. This Order incorporates applicable WLAs that have been adopted by the Regional Water Board and have been approved by the Office of Administrative Law and the U.S. EPA. The TMDL WLAs in the Order are expressed as water quality-based effluent limits in a manner consistent with the assumptions and requirements of the TMDL from which they are derived.
- 6. The CWA and the California Water Code contain specific provisions on how wastewater discharges from point sources are to be permitted. Urban non-storm water (dry weather) discharge is not considered a storm water (wet weather) discharge.
- 7. Permittees should work cooperatively to control the contribution of pollutants from one portion of the MS4 to another portion of the system through inter-agency agreements or other formal arrangements.

E

**E. Federal, State and Regional Regulations**

- 1. The Water Quality Act of 1987 added § 402(p) to the CWA (33U.S.C. § 1251-1387). This section requires the U.S. EPA to establish regulations setting forth NPDES requirements for storm water discharges in 2 phases.

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (a) U.S. EPA Phase I storm water regulations were directed at MS4s serving a population of 100,000 or more, including interconnected systems and storm water discharges associated with industrial activities, including construction activities. The Phase I Final Rule was published on November 16, 1990 (55 Fed. Reg. 47990).
- (b) U.S. EPA Phase II storm water regulations are directed at storm water discharges not covered in Phase I, including small MS4s (population of less than 100,000), small construction projects (less than 5 acres), municipal facilities with delayed coverage under the Intermodal Surface Transportation Efficiency Act of 1991, and other discharges for which the U.S. EPA Administrator or the State determines that the storm water discharge contributes to a violation of a water quality standard, or is a significant contributor of pollutants to waters of the U.S. The Phase II Final Rule was published on December 8, 1999 (64 Fed. Reg. 68722).
2. The U.S. EPA published an Interpretative Policy Memorandum on Reapplication Requirements for MS4 permits on August 9, 1996 (61 Fed. Reg. 41697). This policy requires that MS4 reapplication for reissuance for a subsequent five-year permit term contain certain basic information and information for proposed changes and improvements to the storm water management program and monitoring program.
  3. The U.S. EPA has entered into a Memorandum of Agreement (MOA) with the U.S. Fish and Wildlife Service, and the National Marine Fisheries Service for enhancing coordination regarding the protection of endangered and threatened species under section 7 of the Endangered Species Act, and the CWA's water quality standards and NPDES programs. Among other actions, the MOA establishes a framework for coordination of actions by the U.S. EPA, the Services, and CWA delegated States on CWA permit issuance under § 402 of the CWA [66 Fed. Reg. 11202-11217].
  4. The CWA allows the U.S. EPA to authorize states with an approved environmental regulatory program to administer the NPDES program in lieu of the U.S. EPA. The State of California is a delegated State. The Porter-Cologne Water Quality Control Act (California Water Code) authorizes the State Water Resources Control Board (State Water Board), through the Regional Water Boards, to regulate and control the discharge of pollutants into all waters of the State, including waters of the United States, and tributaries thereto.
  5. Under CWA § 303(d) of the CWA, States are required to identify a list of impaired water-bodies and develop and implement TMDLs for these waterbodies (33 USC § 1313(d)(1)). The most recent 303(d) list's U.S. EPA approval date was June 28, 2007. The U.S. EPA entered into a consent decree with the Natural Resources Defense Council (NRDC), Heal the Bay, and the Santa Monica BayKeeper on March 22, 1999, under which the Regional Water Board must adopt all TMDLs

E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

for the Los Angeles Region within 13 years from that date. This Order incorporates provisions incorporating approved WLAs for municipal storm water discharges and requires amending the SMP after subsequent pollutant loads have been allocated and approved.

6. Collectively, the restrictions contained in the TMDL Provisions for Storm Water (Wet Weather) Discharges and Non-Storm Water (Dry Weather) Discharges of this Order on individual pollutants are no more stringent than required to implement the provisions of the TMDL, which have been adopted and approved in a manner that is consistent with the CWA. Where a TMDL has been approved, NPDES permits must contain effluent limits and conditions consistent with the assumptions and requirements of the available WLAs in TMDLs (40 CFR122.44(d)(1)(vii)(B)).

7. This Order does not constitute an unfunded local government mandate subject to subvention under Article XIIB, Section (6) of the California Constitution for several reasons, including, but not limited to, the following. This Order implements federally mandated requirements under CWA § 402, subdivision (p)(3)(B). (33 U.S.C. § 1342(p)(3)(B)) This includes federal requirements to effectively prohibit non-storm water discharges, to reduce the discharge of pollutants to the maximum extent practicable, and to include such other provisions as the Administrator or the State determines appropriate for the control of such pollutants. Federal cases have held these provisions require the development of permits and permit provisions on a case-by-case basis to satisfy federal requirements. (Natural Resources Defense Council, Inc. v. U.S. E.P.A. (9th Cir. 1992) 966 F.2d 1292, 1308, fn. 17.) The authority exercised under this Order is not reserved state authority under the Clean Water Act's savings clause (cf. Burbank v. State Water Resources Control Bd. (2005) 35 Cal.4th 613, 627-628 [relying on 33 U.S.C. § 1370, which allows a state to develop requirements which are not "less stringent" than federal requirements]), but instead, is part of a federal mandate to develop pollutant reduction requirements for municipal separate storm sewer systems. To this extent, it is entirely federal authority that forms the legal basis to establish the permit provisions. (See, City of Rancho Cucamonga v. Regional Water Quality Control Bd.-Santa Ana Region (2006) 135 Cal.App.4th 1377, 1389; Building Industry Ass'n of San Diego County v. State Water Resources Control Bd. (2004) 124 Cal.App.4th 866, 882-883.)

Likewise, the provisions of this Order to implement TMDLs are federal mandates. The CWA requires TMDLs to be developed for waterbodies that do not meet federal water quality standards (33 U.S.C. § 1313(d)). Once the U.S. EPA or a state develops a TMDL, federal law requires that permits must contain effluent limitations consistent with the assumptions of any applicable wasteload allocation. (40 CFR122.44(d)(1)(vii)(B)).

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

Second, the local agency Permittees' obligations under this Order are similar to, and in many respects less stringent than, the obligations of non-governmental dischargers who are issued NPDES permits for storm water discharges. With a few inapplicable exceptions, the Clean Water Act regulates the discharge of pollutants from point sources (33 U.S.C. § 1342) and the Porter-Cologne regulates the discharge of waste (Wat. Code, § 13263), both without regard to the source of the pollutant or waste. As a result, the "costs incurred by local agencies" to protect water quality reflect an overarching regulatory scheme that places similar requirements on governmental and nongovernmental dischargers. (See *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 57-58 [finding comprehensive workers compensation scheme did not create a cost for local agencies that was subject to state subvention].)

The Clean Water Act and the Porter-Cologne Water Quality Control Act largely regulate storm water with an even hand, but to the extent there is any relaxation of this even-handed regulation, it is in favor of the local agencies. Except for municipal separate storm sewer systems, the Clean Water Act requires point source dischargers, including discharges of storm water associated with industrial or construction activity, to comply strictly with water quality standards. (33 U.S.C. § 1311(b)(1)(C), *Defenders of Wildlife v. Browner* (1999) 191 F.3d 1159, 1164-1165 [noting that industrial storm water discharges must strictly comply with water quality standards].) As discussed in prior State Water Resources Control Board decisions, in many respects this Order does not require strict compliance with water quality standards. (SWRCB Order No. WQ 2001-15, p. 7.) The Order, therefore, regulates the discharge of waste in municipal storm water more leniently than the discharge of waste from non-governmental sources.

Third, the local agency Permittees have the authority to levy service charges, fees, or assessments sufficient to pay for compliance with this Order subject to certain voting requirements contained in the California Constitution. (See California Constitution XIII D, section 6, subdivision (c); see also *Howard Jarvis Taxpayers Association v. City of Salinas* (2002) 98 Cal. App. 4th 1351, 1358-1359.). The fact sheet demonstrates that numerous activities contribute to the pollutant loading in the municipal separate storm sewer system. Local agencies can levy service charges, fees, or assessments on these activities, independent of real property ownership. (See, e.g., *Apartment Ass'n of Los Angeles County, Inc. v. City of Los Angeles* (2001) 24 Cal.4th 830, 842 [upholding inspection fees associated with renting property].) The ability of a local agency to defray the cost of a program without raising taxes indicates that a program does not entail a cost subject to subvention. (*County of Fresno v. State of California* (1991) 53 Cal.3d 482, 487-488.)

Fourth, the Permittees have requested permit coverage in lieu of compliance with the complete prohibition against the discharge of pollutants contained in federal Clean Water Act section 301, subdivision (a) (33 U.S.C. § 1311(a)) and in lieu of numeric

T  
E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

restrictions on their discharges. (See finding 5., supra.) To the extent, the local agencies have voluntarily availed themselves of the permit, the program is not a state mandate. (Accord *County of San Diego v. State of California* (1997) 15 Cal.4th 68, 107-108.) Likewise, where MS4 Permittees are regulated under a Best Management Practices (BMP) based storm water management program rather than end-of-pipe numeric limits, there exists no compulsion of a specific regulatory scheme that would violate the 10<sup>th</sup> Amendment to the United States Constitution. (See *City of Abilene v. U.S. E.P.A.* (5th Cir. 2003) 325 F.3d 657, 662-663 [noting that municipalities can choose between a management permit or a permit with numeric limits].) The local agencies' voluntary decision to file a report of waste discharge proposing a program-based permit is a voluntary decision not subject to subvention. (See *Environmental Defense Center v. USEPA* (9th Cir. 2003) 344 F.3d 832, 845-848.)

Fifth, the local agencies' responsibility for preventing discharges of waste that can create conditions of pollution or nuisance from conveyances that are within their ownership or control under state law predates the enactment of Article XIII B, Section (6) of the California Constitution.

- 8. Under § 6217(g) of the Coastal Zone Act Reauthorization Amendments of 1990 (CZARA), Coastal States with approved coastal zone management programs are required to address non-point pollution impacting or threatening coastal water quality. CZARA addresses five sources of non-point pollution: 1) agriculture; 2) silviculture; 3) urban; 4) marinas; and 5) hydromodification. This Waste Discharge Requirement addresses the management measures required for the urban category and the hydromodification category, with the exception of septic systems.
- 9. The Regional Water Board addresses septic systems through the administration of non-Chapter 15 regulatory programs and the implementation of Regional Water Board Order No.R4-2004-0146. Septic systems are also addressed under State Assembly Bill (AB) 885 (2000). The Regional Water Board will implement and enforce regulations issued by the State Board pursuant to AB 885. Taken together, these State and Local agency requirements when imposed on septic system operators are expected to reduce the bacterial contamination of storm water from improperly maintained septic systems.
- 10. The State Water Board has issued waste discharge requirements for discharges from utility vaults (CAG990002). The Regional Water Board has issued waste discharge requirements for discharges from well heads and hydrostatic pipe testing (CAG674001). These discharges to the MS4 shall be conducted under coverage of a separate NPDES permit specific to that activity.
- 11. On May 18, 2000, the U.S. EPA established numeric criteria for priority toxic pollutants for the State of California (California Toxics Rule (CTR) 65 Fed. Reg.

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

31682 (40 CFR131.38) for the protection of human health and aquatic life. These apply as ambient water quality criteria for inland surface waters, enclosed bays and estuaries.

12. The State Water Board adopted a revised Water Quality Control Plan for Ocean Waters of California (Ocean Plan) in 2005. The California Ocean Plan establishes water quality objectives for California's ocean waters and provides the basis for regulation of wastes discharged into the State's coastal waters. It applies to point and nonpoint source discharges. The Ocean Plan identifies the applicable beneficial uses of marine waters that include preservation and enhancement of designated Areas of Special Biological Significance (ASBS) (now called "State Water Quality Protection Areas") and establishes a set of narrative and numerical water quality objectives designed to protect beneficial uses. The SWRCB adopted the California Ocean Plan, and both the SWRCB and the six coastal Regional Water Quality Control Boards (RWQCBs) implement and interpret the California Ocean Plan.
13. This Regional Water Board adopted a revised Water Quality Control Plan (Basin Plan) for the Los Angeles Region on June 13, 1994. The Basin Plan specifies the beneficial uses of Ventura County waterbodies and their tributary streams, and contains both narrative and numerical water quality objectives for these receiving waters. The following beneficial uses identified in the Basin Plan apply to all or portions of each watershed covered by this Order:
  - (a) Municipal and domestic supply
  - (b) Agricultural supply
  - (c) Industrial service supply
  - (d) Industrial process supply
  - (e) Ground water recharge
  - (f) Freshwater replenishment
  - (g) Navigation
  - (h) Hydropower generation
  - (i) Water contact recreation
  - (j) Non-contact water recreation
  - (k) Ocean commercial and sport fishing
  - (l) Warm freshwater habitat
  - (m) Cold freshwater habitat
  - (n) Preservation of Areas of Special Biological Significance
  - (o) Saline water habitat
  - (p) Wildlife habitat
  - (q) Preservation of rare and endangered species
  - (r) Marine habitat
  - (s) Fish migration
  - (t) Fish spawning
  - (u) Shellfish harvesting

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

14. On March 22, 1999 the Consent Decree in Heal the Bay, Inc.; Santa Monica BayKeeper, Inc. v. Browner, Case No. 98-4825 SBA was approved. Under Establishment of TMDLs- The parties understand that California has the initial opportunity pursuant to § 303(d) of the CWA to adopt and submit to U.S. EPA for approval TMDLs to be established under this Consent Decree. TMDLs developed by Regional Water Boards are generally adopted through Basin Plan amendments. Basin plan amendments adopted by the State Board pursuant to Water Code section 13246, and the regulatory portions must be approved by the Office of Administrative Law pursuant to Government Code section 11353(b). TMDLs established pursuant to CWA section 303(d)(1) must be submitted to U.S. EPA for approval pursuant to section 303(d)(2), and incorporated into the state's water quality management plan
15. The Regional Water Board has adopted amendments to the Basin Plan, to incorporate TMDLs for the following:
- (a) The following TMDLs have been or will be incorporated into the Basin Plan within the term of the Order.
- (1) Santa Clara River - Nitrogen Compounds
- (A) Regional Water Board Resolution No. 2003-011
- (B) State Water Board Resolution No. 2003-0073
- (C) OAL file No. 04-0123-35
- (D) U.S. EPA approval date March 18, 2004
- (E) Final fee exemption date March 23, 2004 (effective date).
- (F) Compliance is 1 year after effective date (March 23, 2005)
- (2) Malibu Creek and Lagoon - Bacteria.
- (A) Regional Water Board Resolution No. 2004-019
- (B) State Water Board Resolution No. 2005-0072
- (C) OAL file No. 05-1018-03 S
- (D) U.S. EPA approval date January 10, 2006
- (E) Final fee exemption date January 24, 2006 (effective date)
- (F) Compliance for Summer Dry is 3 years after effective date (January 24, 2009)
- (G) Compliance for Winter Dry is 6 years after effective date (January 24, 2012)
- (H) Compliance for Wet Weather is 10 years after effective date (January 24, 2016), which is beyond the term of this Order
- (3) Toxicity, Chlorpyrifos and Diazinon in the Calleguas Creek, Its Tributaries and Mugu Lagoon.
- (A) Regional Water Board Resolution No. 2005-009
- (B) State Water Board Resolution No. 2005-0067
- (C) OAL file No. 05-1110-02 S

  - (E) Final fee exemption date January 17, 2009 (effective date)

16. The Regional Water Board adopted and approved requirements for new development and significant redevelopment projects in Ventura County to control the discharge of storm water pollutants in post-construction storm water, on January 26, 2000, in Board Resolution No. R-00-02. The Regional Water Board Executive Officer issued the approved Standard Urban Storm Water Mitigation Plans (SUSMPs) on March 8, 2000 for Los Angeles County and the Cities in Los Angeles County. Since 2000, new development and redevelopment water quality criteria have been implemented by the Permittees to be consistent with SUSMP. The State Board affirmed the Regional Water Board action and SUSMPs in State Board Order No. WQ 2000-11, issued on October 5, 2000.

- (a) A statewide policy memorandum (dated December 26, 2000), which interprets the Order to provide broad discretion to Regional Water Boards and identifies potential future areas for inclusion in SUSMPs and the types of evidence and findings necessary. Such areas include ministerial projects, projects in environmentally sensitive areas, and water quality design criteria for Retail Gasoline Outlets (RGOs, see part 7 for definition). The Regional Water Board properly justified the extensions of SUSMPs and water quality criteria to ministerial projects, projects in environmentally sensitive areas, and RGOs, during the adoption of Regional Water Board Order 01-182. The Regional Water Board's action was upheld by the County of Los Angeles Superior Court (In Re: *County of Los Angeles v. State Water Resources Control Board* (2006) 143 Cal.App.4<sup>th</sup> 985).
- (b) The State Water Board's Chief Counsel interpreted the Order to encourage regional solutions and endorsed a mitigation fund or "bank" as alternatives for new development and significant redevelopment. The Regional Water Board has included provisions for regional solutions and the establishment of a mitigation bank in this Order.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- 17. The Regional Water Board supports Watershed Management planning to address water quality protection in the region. The objective of the Watershed Management planning is to provide a comprehensive and integrated strategy towards water resource protection, enhancement, and restoration while balancing economic and environmental impacts within a hydrologically defined drainage basin or watershed. It emphasizes cooperative relationships between regulatory agencies, the regulated community, environmental groups, and other stakeholders in the watershed to achieve the greatest environmental improvements with available resources.
- 18. To facilitate compliance with federal regulations, the State Water Board has issued the following 4 Statewide General NPDES Permits associated with storm water:
  - (a) Industrial General Permit (IASGP- Industrial Activities Storm Water General Permit), NPDES No. CAS000001, issued on November 19, 1991, reissued on September 17, 1992 and April 17, 1997, currently under review for reissuance.
  - (b) Construction General Permit (CASGP- Construction Activities Storm Water General Permit), NPDES No. CAS000002, issued on August 20, 1992, reissued August 19, 1999, currently under review for reissuance.
  - (c) Small Linear Underground/ Overhead Construction Projects General Permit (small LUPs), NPDES No. CAS000005, issued on June 18, 2003.
  - (d) Small MS4 Permit WQ Order No. 2003-0005-DWQ, NPDES No. CAS000004, adopted on April 30, 2003.
- 19. Facilities discharging storm water associated with industrial activities, construction projects that disturb one or more acres of soil, or construction projects that disturb less than one acre but are part of a larger common plan of development or sale that in total disturbs 1 or more acres, and construction activities associated with small linear underground/ overhead projects that result in land disturbances greater than one acre, but less than five acres (small LUPs), are all required to obtain individual NPDES permits for storm water discharges, or be covered by the statewide General Permits by completing and filing a Notice of Intent (NOI) with the State Board. The U.S. EPA guidance anticipates coordination of the state-administered programs for industrial and construction activities with the local agency program to reduce pollutants in storm water discharges to the MS4.
- 20. State Water Board Resolution No. 68-16 contains the state Antidegradation Policy, titled "Statement of Policy with Respect to Maintaining High Quality Waters in California" (Resolution 68-16), which applies to all waters of the state, including ground waters of the state, whose quality meets or exceeds (is better than) water quality objectives. Resolution No. 68-16 is considered to incorporate the federal Antidegradation Policy (40 CFR131.12) where the federal policy applies, (State Water Board Order WQO 86-17). Administrative policies that implement both, federal and state antidegradation policies acknowledge that an activity that results in a minor water quality lowering, even if incrementally small, can result in violation of

T  
E

A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

Antidegradation Policies through cumulative effects, for example, when the waste is a cumulative, persistent, or bioaccumulative pollutant.

(a) Federal Antidegradation Policy (40 CFR131.12) states that the State shall develop and adopt a statewide antidegradation policy and identify the methods for implementing such policy pursuant to this subpart. The antidegradation policy and implementation methods shall, at a minimum, be consistent with the following:

- (1) Existing instream water uses and the level of water quality necessary to protect the existing uses shall be maintained and protected.
- (2) Where the quality of the waters exceed levels necessary to support propagation of fish, shellfish, and wildlife and recreation in and on the water, that quality shall be maintained and protected unless the State finds, after full satisfaction of the intergovernmental coordination and public participation provisions of the State's continuing planning process, that allowing lower water quality is necessary to accommodate important economic or social development in the area in which the waters are located. In allowing such degradation or lower water quality, the State shall assure water quality adequate to protect existing uses fully. Further, the State shall assure that there shall be achieved the highest statutory and regulatory requirements for all new and existing point sources and all cost-effective and reasonable best management practices for nonpoint source control.
- (3) Where high quality waters constitute an outstanding National resource, such as waters of National and State parks and wildlife refuges and waters of exceptional recreational or ecological significance, that water quality shall be maintained and protected.
- (4) In those cases where potential water quality impairment associated with a thermal discharge is involved, the antidegradation policy and implementing method shall be consistent with section 316 of the Act.

(b) State Water Board Resolution No. 68-16 establishes essentially a 2-step process for compliance with the policy.

- (1) Step 1- if a discharge will degrade high quality water, the discharge may be allowed if any change in water quality:
  - (A) Will be consistent with maximum benefit to the people of the State.
  - (B) Will not unreasonably affect present and anticipated beneficial use of such water.
  - (C) Will not result in water quality less than that prescribed in state policies (e.g., water quality objectives in Water Quality Control Plans).
- (2) Step 2- any activities that result in discharges to high quality waters are required to:
  - (A) Meet waste discharge requirements that will result in the best practicable treatment or control of the discharge necessary to avoid a pollution or nuisance.

T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

(B) Maintain the highest water quality consistent with the maximum benefit to the people of the State.

- 21. The State Water Board on June 17, 1999, adopted Order No. WQ 99-05, which specifies standard receiving water limitation language to be included in all municipal storm water permits issued by the State and Regional Water Boards.
- 22. Cal. Water Code § 13263(a) requires that waste discharge requirements issued by Water Boards shall implement any relevant water quality control plans that have been adopted; shall take into consideration the beneficial uses to be protected and the water quality objectives reasonably required for that purpose; other waste discharges; and the need to prevent nuisance.
- 23. Clean Water Act section 402(p)(3)(B)(iii) requires municipal separate storm sewer system (MS4) operators to control pollution in storm water to the "maximum extent practicable" (MEP). The MEP requirement is analogous to a technology-based requirement in that it focuses upon the feasibility of pollutant reduction measures rather than achievement of water quality standards in the receiving waters to achieve improvements in the quality of the storm water that is discharged. Compliance with the MEP requirement can range from implementation of structural and nonstructural best management practices to installation of end-of-pipe treatment systems. MEP generally provides the MS4 operators the flexibility to determine what controls should be implemented through the development of a storm water management plan, subject to the Regional Board's approval. Nevertheless, MEP does not define the limits of pollution control measures that may be required of MS4 operators, and the requirement to implement controls that reduce pollutants to the MEP is not limited by the goal of attaining water quality standards. In some circumstances, compliance with MEP may result in controls more stringent than applicable WQS, and in others, less stringent. The Regional Board may use its discretion to impose other provisions beyond MEP, as it determines appropriate for the control of pollutants, including ensuring strict compliance with water quality standards. (*Defenders of Wildlife v. Browner* (1999) 191 F.3d 1159, 1168.)
- 24. The California Supreme Court has ruled that although Water Code section 13263 requires the Water Boards to consider the factors set forth in Water Code section 13241 when issuing an NPDES permit, the Water Boards may not consider the factors to justify imposing pollutant restrictions that are less stringent than the applicable federal regulations require (*City of Burbank v. State Water Resources Control Bd.* (2005) 35 Cal.4th 613). However, when the pollutant restrictions in an NPDES are more stringent than federal law requires, Water Code section 13263 requires that the Water Boards consider the factors described in section 13241 as they apply to those specific restrictions.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- 25 The City of Burbank case related to NPDES permits for publicly owned treatment works, not permits for municipal separate storm sewer systems (MS4s). Among other requirements, federal law requires MS4 permits to include requirements to effectively prohibit non-storm water discharges into the storm sewers, in addition to requiring controls to reduce the discharge of pollutants to the maximum extent practicable. Therefore, a 13241 analysis is not required for permit requirements that implement the effective prohibition on the discharge of non-storm water into the MS4, or for practicable controls to reduce the discharge of pollutants to the maximum extent, as those requirements are mandated by federal law.
- 26. The requirements in this Order may be more specific or detailed than those enumerated in federal regulations under 40 CFR122.26 or in U.S. EPA guidance. However, the requirements have been designed to be consistent with and within the federal statutory mandates described in CWA § 402(p)(3)(B)(ii) and (iii) and the related federal regulations. Consistent with federal law, all of the conditions in this permit could have been included in a permit adopted by U.S. EPA in the absence of the in lieu authority of California to issue NPDES permits.
- 27. The Board finds that all requirements in this order are practicable. Moreover, while commenters have alleged that the permit requirements are “beyond MEP,” no commenter has presented evidence that demonstrates that any particular permit requirement that is not dedicated to the effective prohibition on non-storm water discharges into the MS4, is not actually practicable.
- 28. Notwithstanding findings 23 through 27, the Regional Board has developed an economic analysis of the permit’s requirements, consistent with Water Code section 13241. That analysis is contained in the “Economic Considerations of the Proposed Storm Water (Wet Weather) and Non-Storm Water (Dry Weather) Discharges from the Municipal Separate Storm Sewer Systems within the Ventura County Watershed Protection District, County of Ventura and the Incorporated Cities Therein , June 2, 2008, which is contained in the administrative record for this Order. The Regional Board has considered all of the evidence that has been presented regarding the 13241 factors in adopting this permit, both as contained in the economic analysis and as reflected in the fact sheet and comments (and responses thereto) submitted to the many drafts of this permit. The Regional Board finds that the requirements in this Order are reasonably necessary to protect beneficial uses identified in the Basin Plan, and the economic information related to costs of compliance and other 13241 factors are not sufficient to justify failing to protect those beneficial uses. Where appropriate, additional time to implement certain measures and achieve water quality objectives can be provided through the iterative storm water management plan process.

**F. Implementation**

1. The California Environmental Quality Act (CEQA) (Cal. Pub. Resources Code § 2100 et seq.) requires that public agencies consider the environmental impacts of the projects they approve for development. CEQA applies to projects that are considered discretionary (a governmental agency can use its judgment in deciding whether and how to carry out or approve a project, § 15357) and does not apply to ministerial projects (the law requires a governmental agency to act on a project in a set way without allowing the agency to use its own judgment, § 15369). A ministerial project may be made discretionary by adopting local ordinance provisions or imposing conditions to create decision-making discretion in approving the project. In the alternative, Permittees may establish standards and objective criteria administratively for storm water mitigation for ministerial projects. For water quality purposes regardless of whether a project is discretionary or ministerial, the Regional Water Board considers that all new development and significant redevelopment activity in specified categories, that receive approval or permits from a municipality, are subject to storm water mitigation requirements in a manner that is consistent with and complies with the provisions of CEQA.
  
2. The objective of this Order is to ensure that discharges from the MS4 in Ventura County comply with water quality standards, including protecting the beneficial uses of receiving waters. To meet this objective, the Order requires that Best Management Practices (BMPs) will be implemented to reduce the discharge of pollutants in storm water to the maximum extent practicable (MEP), and achieve water quality objectives and standards. The U.S. EPA envisioned that municipal storm water programs would be implemented in an iterative manner and improved with each iteration by using information and experience gained during the previous permit term (*Interpretative Policy Memorandum on Reapplication Requirements for MS4 permits* - 61 Fed. Reg. 41697). Municipalities are required to evaluate what is effective and make improvements in order to protect beneficial uses of receiving waters. This Order requires implementation of an effective combination of pollution control and pollution prevention measures, education, public outreach, planning, and implementation of source control BMPs and Structural and Treatment Control BMPs. The better-tailored BMPs combined with the performance objectives outlined in this Order have the purpose of attaining water quality objectives and standards (*Interim Permitting Approach for Water Quality-Based Effluent Limitations in Storm Water Permits*- 61 Fed. Reg. 43761). Where WLAs have been adopted for storm water (wet weather) and non-storm water (dry weather) discharges from MS4s, this Order requires Permittees to implement controls to achieve the WLAs within the compliance schedule provided in the TMDLs.

T  
E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

3. The implementation of measures set forth in this Order are reasonably expected to reduce the discharge of pollutants conveyed in storm water discharges into receiving waters, and to meet the TMDL WLAs for discharges from MS4s that have been adopted by the Regional Water Board.
4. The U.S. EPA has recommended that all future TMDLs and TMDL amendments be expressed as daily increments consistent with a federal court ruling (*Friends of the Earth, Inc. v. EPA, et al.* No. 05-5015 (D.C. Cir. 2006)). However, this interpretation does not affect the discretionary authority of the Regional Water Board to express NPDES permit limits and conditions in non daily terms because there is no express or implied statutory limitation (CWA §502(11)) (*Establishing TMDL "Daily Loads" in Light of the Decision by the U.S. Court of Appeals for the D.C. Circuit in Friends of the Earth, Inc. v. EPA, et al. (April 2006) and Implications for NPDES Permits*, U.S. EPA Office of Water, memorandum, Nov 15, 2006). This Order translates MS4 TMDL WLAs adopted by the Regional Water Board into forms "consistent with the assumptions and requirements of the TMDL".
5. During the term of the Order, the Permittees shall implement all necessary control measures to reduce pollutant(s) which cause or continue to cause or contribute to water quality impairments, but for which TMDLs have not yet been developed or approved, to eliminate the water quality impairment(s). Successful efforts to reverse the wet weather impairments during the permit term for such pollutants, may avoid the need for a WLA for wet weather or the need to develop a TMDL in the future.
6. This Order promotes land development and redevelopment strategies that consider water quality and water management benefits associated with smart growth techniques. Such measures may include hydromodification mitigation requirements, minimization of impervious surfaces, integrated water resources planning, and low impact development guidelines. (Reference: *Protecting Water Resources with Smart Growth*, EPA 231-R- 04-002, U.S. EPA 2004; *Using Smart Growth Techniques as Storm Water Best Management Practices*, EPA 231-B-05-002, U.S. EPA 2005; *Parking Spaces/Community Places: Finding the Balance through Smart Growth Solutions*, EPA 231-K-06-001, U.S. EPA 2006; *Protecting Water Resources with Higher-Density Development*, EPA 231-R-06-001, U.S. EPA 2006.)
7. The implementation of an effective Public Information and Participation Program is a critical component of a storm water management program. While commercial and industrial facilities are traditionally subject to multiple environmental regulations and receive environmental protection guidance from multiple sources, the general public, in comparison, receives significantly less education in environmental protection. An effective Public Information and Participation Program is required because:
  - (a) Activities conducted by the public such as vehicle maintenance, improper household waste materials disposal, improper pet waste disposal and the improper

T  
E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

application of fertilizers and pesticides have the potential to generate a significant amount of pollutants that could be discharged in storm water.

(b) An increase in public knowledge of storm water regulations, proper storage and disposal of household wastes, proper disposal of pet wastes and appropriate home vehicle maintenance practices can lead to a significant reduction of pollutants discharged in storm water.

- 8. This Order also provides flexibility for Permittees to seek authorization from the Regional Water Board Executive Officer to substitute a BMP under this Order with an alternative BMP, if they can provide information and documentation on the effectiveness of the alternative, equal to or greater than the prescribed BMP in meeting the objectives of this Order.
- 9. This Order contemplates that the Permittees are responsible for considering potential storm water impacts when making planning decisions in order to fulfill the Permittees' CWA requirement to reduce the discharge of pollutants in municipal storm water to the MEP and attain water quality objectives from new development and redevelopment activities. However, the Permittees retain authority to make the final land-use decisions and retain full statutory authority for deciding what land uses are appropriate at specific locations within each Permittee's jurisdiction. This Order and its requirements are not intended to restrict or control local land use decision-making authority.
- 10. The State Water Board amended the Policy for the Implementation of Toxics Standards In Inland Surface Waters, Enclosed Bays and Estuaries of California (State Implementation Policy – SIP) on February 24, 2005. The SIP does not apply directly to the stormwater discharges. However, this Order includes a Monitoring Program that incorporates Minimum Levels (MLs) established under the State Implementation Policy. The MLs represent the lowest quantifiable concentration for priority toxic pollutants that is measurable with the use of proper method-based analytical procedures and factoring out matrix interference. The SIP's MLs therefore represent the best available science for determining MLs and are appropriate for a storm water monitoring program. The use of MLs allows the detection of toxic priority pollutants at concentrations of concern using recent advances in chemical analytical methods.
- 11. This Order establishes Municipal Action Levels (MALs) for selected pollutants based on regional Phase I MS4 monitoring data for pollutants in storm water. (<http://unix.eng.ua.edu/~rpitt/Research/Research.shtml>, last visited on August 14, 2007). The MALs were computed using one of three approaches recommended by the California Water Board's Storm Water Panel in its report, 'The Feasibility of Numerical Effluent Limits Applicable to Discharges of Storm Water Associated with Municipal, Industrial and Construction Activities (June 2006). MALs

T  
E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

are identified in Attachment "C". Permittees shall utilize the MALs to identify subwatersheds that require additional action to reduce the discharge of pollutants.

12. The International Storm Water Best Management Practices (BMP) Database was established in 1996 as a cooperative initiative between the U.S. EPA and the American Society of Civil Engineers (ASCE) to provide scientifically sound information to improve the design, selection and performance of storm water BMPs. The BMP database includes standardized BMP monitoring and reporting protocols, a storm water BMP database, BMP performance evaluation protocols, and BMP monitoring guidance. The storm water BMP database is updated approximately semi-annually to add new BMP studies and performance data. The International Storm Water Database is now maintained by the Water Environment Research Foundation (WERF).
13. This Order is not intended to prohibit the inspection for or abatement of vectors by the State Department of Public Health or local vector agencies in accordance with CA Health and Safety Code, § 116110 et seq. Certain Treatment Control BMPs if not properly designed, operated or maintained may create habitats for vectors (e.g. mosquitoes and rodents). This Order contemplates that the Permittees will closely cooperate and collaborate with local vector control agencies and the State Department of Public Health for the implementation, operation, and maintenance of Treatment Control BMPs in order to minimize the risk to public health from vector borne diseases.
14. This Order contemplates that Permittees will ensure that implemented Treatment Control BMPs will not pose a safety or health hazard to the public. This Order contemplates that Permittees will ensure that the maintenance of implemented Treatment Control BMPs will comply with all applicable health and safety regulations, such as, but not limited to requirements for worker entry into confined spaces under OSHA Safety and Training education, § 1926.21(b)(6)(i).
15. This Order incorporates presumptive BMPs to reduce pollutants in storm water discharges from construction sites to the MEP. The BMPs are identified in Table 6 (BMPs at Construction sites less than 1 acre), Table 7 (BMPs at Construction Sites 1 acre or greater but less than 5 acres), and Table 8 (BMPs at Construction sites 5 acres or greater). These BMPs include erosion control, sediment control, and construction site waste management practices. The BMPs listed in part 5.F of the Order were selected based on the Water Boards' experience of regulating such sites since 1992, and are referenced in the *California Stormwater Quality Association (CASQA) Storm Water Best Management Practice Handbook Construction (January 2003)* and from the *Stormwater Quality Handbooks, Project Planning and Design Guide, Stormwater Pollution Prevention Plan (SWPPP) and Water Pollution Control Plan (WPCP) Preparation Manual, Construction Site Best Management Practices (BMPs)*

Reference Manual, March 2007 (Caltrans Document Number CTSW-RT-06-171.11-1) which serve as an industry standard for California. The BMPs identified in the Tables are technically feasible, practicable, and cost-effective. Where an identified BMP may be impracticable on a particular site, this Order includes a provision to select and implement an alternative BMP, through the BMP substitution provisions in subpart 5.A.2.

16. This Order incorporates presumptive BMPs to reduce pollutants in storm water discharges from commercial and industrial sites to the MEP. The BMPs are identified in Table 2 (BMPs at Restaurants), Table 3 (BMPs at Automotive Service Facilities), Table 4 (BMPs at Retail Gasoline Outlets), and Table 5 (BMPs at Nurseries). These BMPs include the implementation of good housekeeping practices designed to control pollutants at the source, promote the use of proper waste management practices, and implement control practices to keep pollutants away from any entrance to the storm drainage system. The BMPs listed in part 5.D of the Order were selected based on the Water Boards' experience of regulating such sites since 1992 and referenced in the California Stormwater Quality Association (CASQA) Storm Water Best Management Practice Handbook Commercial/Industrial Activity (January 2003) and from the Caltrans Storm Water Quality Handbook Maintenance Staff Guide May 2003 (Caltrans Document Number CTSW-RT-02-057), which serve as an industry standard for California. The BMPs identified in the Tables are technically feasible, practicable, and cost-effective. Where an identified BMP may be impracticable, this Order includes a provision to select and implement an alternative BMP, through the BMP substitution provisions in subpart 5.A.2.

17. This Order incorporates presumptive BMPs to reduce pollutants in storm water discharges from Public Agency Activities to the MEP. The BMPs are identified in Table 9 (BMPs at Vehicle Maintenance/ Material Storage Facilities/ Corporation Yards). These BMPs include the implementation of good housekeeping practices designed to control pollutants at the source, promote the use of proper waste management practices, implement control practices to keep pollutants away from any entrance to the storm drainage system and from being deposited or discharged directly into waters of the U.S. The BMPs listed in part 5.G of the Order were selected based on the Water Boards' experience of regulating such sites since 1990, and are referenced in the Caltrans Storm Water Quality Handbook Maintenance Staff Guide May 2003 (Caltrans Document Number CTSW-RT-02-057), which serves as a statewide standard for the California Department of Transportation (Caltrans). The BMPs identified in the Table are technically feasible, practicable, and cost-effective, and are the standard of practice for Caltrans sites statewide. Where an identified BMP may be impracticable, this Order includes a provision to select and implement an alternative BMP, through the BMP substitution provisions in subpart 5.A.2.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- 18. This Order incorporates BMPs to ensure that authorized Non-Storm Water Discharges are not a source of pollutants to the MS4, Table 1 (Required Conditions for Non-Storm Water Discharges). The BMPs included are for the purpose of dechlorination and/or for prevention of erosion and sediment loss, or to reduce other harmful pollutants during the discharge of authorized non-storm water discharges to the MS4. The BMPs listed in part 1.B of the Order were selected from the *American Water Works Association AWWA Guidelines For The Development Of Your Best Management Practices (BMP) Manual For Drinking Water System Releases Developed by the CA-NV AWWA Environmental Compliance Committee (2005)* which serves as an industry standard for California, from the results of studies directed by the Los Angeles Water Board, - *Evaluation of Non-Storm Water Discharges to California Storm Drains and Potential Policies for Effective Prohibition Methods, Final Report*, University of California, Los Angeles, Contract No. 5-104-140-0 (1997), and *Water Quality Concerns and Regulatory Controls for Non Storm Water Discharges to Storm Drains*, Duke L.D. and M. Kihara, Journal of the American Water Resources Association, Vol. 34: 661-676, (1998), and from the Water Boards' experience of controlling authorized non-storm discharges to the MS4 since 1990. The BMPs identified in the Table are technically feasible, practicable, and cost-effective. Where an identified BMP may be impracticable, this Order includes a provision to select and implement an alternative BMP, through the BMP substitution provisions in subpart 5.A.2.
- 19. In accordance with Federal regulations at 40 CFR 124.8, a Fact Sheet has been prepared to explain the principal facts and the significant factual, legal, methodological, policy, and economic matters considered in preparing the Tentative Order. Also included are the analyses of factors required under Cal. Water Code 13241. This Fact Sheet has been made a part of the Administrative Record.
- 20. The State Water Board adopted statewide General Waste Discharge Requirements for Sanitary Sewer Systems, (WQ Order No. 2006-0003) on May 2, 2006, to provide a consistent, statewide regulatory framework to address sanitary sewer overflows ("SSO Orders"). The SSO Order establishes requirements for public agencies that own or operate sanitary sewer systems to develop and implement sewer system management plans and to report SSOs. SSOs that enter MS4s have the potential to impair the recreational use of receiving waters, and to harm public health. This Order establishes coordination, response, and notification requirements for MS4 Permittees when SSOs result in a discharge to the MS4 system.
- 21. This Order takes into consideration the housing needs in the area under the Permittees' jurisdiction by balancing the implementation of Smart Growth and Low Impact Development techniques with the protection of the water resources of the region. Although not required, the Regional Water Board considered the need for

T  
E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

housing and the appropriate techniques to allow for reasonable development while protecting the receiving waters from degradation.

- 22. This Order may have an effect on costs required for compliance with the provisions contained herein. Although not required, the Regional Water Board has considered costs in preparing this Order. Though also not required, the Regional Water Board has also considered the factors set forth in Water Code section 13241.

**G. Public Notification**

- 1. The issuance of waste discharge requirements pursuant to California Water Code section 13370 et seq. is exempt from the California Environmental Quality Act in accordance with California Water Code section 13389. *County of Los Angeles et al., v. California Water Boards et al.*, (2006), 143 Cal.App.4<sup>th</sup> 985.
- 2. The Regional Water Board has notified the Permittees, and interested agencies and persons of its intent to issue waste discharge requirements for this discharge, and has provided them with an opportunity to make statements and submit their comments.
- 3. The Regional Water Board staff has conducted more than 35 meetings from February 9, 2007 through December 19, 2008, with Permittees, their representatives (Larry Walker and Associates, and Somach, Simmons & Dunn), and various stakeholders (Building Industry Association of Southern California/ Greater Los Angeles Ventura Chapter (BIAGLA/ VC), California State Dept. of Health Services, Calleguas Water District, California Stormwater Quality Association (CASQA), City of Downey, City of Los Angeles-EMD, Collation for Practical Regulation (CPR), Construction Industry Coalition on Water Quality (CICWQ), County of Orange, Geosyntec Consultants, Golden State, Heal The Bay; Local Government commission, Los Angeles City; Los Angeles County Department of Public Works, Los Angeles County-SD, Los Angeles Department of Water & Power, Metropolitan Water District, Natural Resources Defense Council (NRDC), Richard Watson Association, San Bernardino Flood Control District, Santa Monica Bay Restoration Commission, Southern California Coastal Water Research Project, University of California Sea Grant, Ventura CoastKeeper). On April 5, 2007 and September 20, 2007 the Regional Water Board conducted workshops to discuss drafts of the NPDES Order and received input from the Permittees and the public regarding proposed changes.
- 4. This Order shall serve as a NPDES permit, pursuant to CWA § 402, and shall take effect 90 days from Order adoption date provided the Regional Administrator of the U.S. EPA has no objections.

- 5. Pursuant to Cal. Water Code § 13320, any aggrieved party may seek review of this Order by filing a petition with the State Board within 30 days of the date of adoption of the Order by the Regional Water Board. A petition must be sent to:

State Water Resources Control Board  
 Office of the Chief Counsel  
 P.O. Box 100  
 Sacramento, CA 95812-0100

- 6. This Order may be modified or alternatively revoked or reissued prior to its expiration date or any administrative extension thereto, in accordance with 40 CFR122.41(f) and 122.62.

**IT IS HEREBY ORDERED** that the Permittees, in order to meet the provisions contained in Division 7 of the Cal. Water Code and regulations adopted thereunder, and the provisions of the CWA and regulations adopted thereunder, shall comply with the following:

**PART 1 - DISCHARGE PROHIBITIONS**

**A. Prohibitions - Non-Storm Water Discharges**

- 1. The Permittees shall, within their respective jurisdictions, effectively prohibit non-storm discharges into the MS4 and watercourses, except where such discharges:
  - (a) Originate from a State, Federal, or other source for which they are pre-empted from regulating by State or Federal law; or
  - (b) Are covered by a separate individual or general NPDES permit, or conditional waiver for irrigated lands; or
  - (c) Fall within one of the categories below, are not a source of pollutants that exceed water quality standards, and meet all conditions where specified by the Regional Water Board Executive Officer:
    - (1) Category A – Natural flows
      - (A) Stream diversions authorized by the State Water Board
      - (B) Natural springs and rising ground water
      - (C) Uncontaminated ground water infiltration [as defined by 40 CFR35.2005(20)]<sup>1</sup>
      - (D) Flows from riparian habitats or wetlands
    - (2) Category B – Flows from emergency fire fighting activities.
    - (3) Category C – Flows incidental to urban activities, providing conditions listed in table below:
      - (A) Flows from non-emergency fire fighting activities
      - (B) Discharges from potable water sources<sup>2</sup>.

<sup>1</sup> NPDES permit for ground water dewatering is required within the Los Angeles Region including Ventura County.

<sup>2</sup> The term applies to low volume, incidental and infrequent releases that are innocuous from a water quality perspective. Those releases for dewatering or hydro-testing or flushing of water supply and distribution mains and

- (C) Gravity flow from foundation, footing and crawl space drains.
- (D) Air conditioning condensate
- (E) Reclaimed and potable landscape irrigation runoff
- (F) Dechlorinated/ debrominated swimming pool discharges [see def. part 7]
- (G) Non-commercial car washing by residents or non-profit organizations
- (H) Sidewalk rinsing
- (I) Pooled storm water from treatment BMPs<sup>1</sup>

Table 1 – Required Conditions for Non-Storm Water Discharges

Type of Discharges:	Conditions under which allowed:	Required conditions for discharge to occur:
Stream diversions permitted by the State Board;	Authorization by the State Water Board	Permittees shall comply with all conditions in the authorization.
Natural springs and rising ground water	1. Ground water dewatering requires a separate NPDES permit. 2. Segregate flow to prevent introduction of pollutants.	Permittees shall comply with all conditions in the authorization.
Uncontaminated ground water infiltration [as defined by 40 CFR 35.2005(20)] (Utility vault dewatering requires a separate NPDES permit.)	NPDES permit for ground water dewatering is required within the Los Angeles Region including Ventura County	Permittees shall comply with all conditions in the authorization.
Flows from riparian habitats or wetlands	Provided that all necessary permits or authorizations are received prior to diverting the stream flow.	Permittees shall comply with all conditions in the authorization.
Flows from emergency fire fighting activity	Pooled water after fire must be controlled.	
Discharges from potable water sources <sup>1</sup>	See Footnote #1. Provided discharges from water lines and	See Footnote #2. To be discharged, this type of water shall be dechlorinated using

incidental and infrequent releases from well heads shall be allowed with the implementation of appropriate BMPs until such time as a new General Permit is adopted that addresses those types of releases. Discharges from hydrostatic pipe testing shall be subject to separate NPDES general permit coverage (CAG674001) and discharges from utility vaults shall be conducted under coverage of a separate NPDES permit specific to that activity.

2 All storm water BMPs shall at a minimum be maintained at a frequency as specified by the manufacturer, and designed to drain within 72 hours of the end of a rain. Storm water treatment BMPs may be drained to the MS4 under this Order if the discharge is not a source of pollutants. Sediments shall be disposed of properly, in compliance with all applicable local, state, and federal policies, acts, laws, regulations, ordinances, and statutes.

BMPs such as sand bags or gravel bags, or other appropriate means shall be utilized to prevent sediment transport. All sediments shall be collected and disposed of in a legal and appropriate manner.
Drains for foundation, footing and crawl drains	Dewatering requires a separate NPDES permit.	Permittees shall comply with all conditions in the authorization.
Air conditioning condensate	Segregation of flow to prevent introduction of pollutants. Percolation whenever possible.	Permittees shall comply with all conditions in the authorization.
Water from crawl space pumps	Dewatering requires a separate NPDES permit within the Los Angeles Region including Ventura County	Permittees shall comply with all conditions in the authorization.
Reclaimed and potable landscape irrigation runoff	Segregation of flow to prevent introduction of pollutants.	Implement conservation programs to minimize this type of discharge by using less water.
Dechlorinated/ debrominated swimming pool discharges [see definition Part 8]	Where the discharge is not excepted by the sanitary sewer operator. Swimming pool discharges are to be dechlorinated, pH adjusted if necessary, aerated to remove chlorine if necessary, and volumetrically and velocity controlled to prevent resuspension of sediments.	Pool water may be dechlorinated using time, aeration, and/ or sodium thiosulfate.
	Cleaning waste water and filter back wash

2. If the Regional Water Board Executive Officer determines that any of the preceding categories of non-storm water discharges are a source of pollutants that exceed water quality standards, the Permittee(s) shall either:
  - (a) Prohibit the discharge from entering the MS4; or
  - (b) Authorize the discharge category and require implementation of appropriate or additional BMPs to ensure that the discharge will not be a source of pollutants; or

<sup>1</sup> All storm water BMPs shall at a minimum be maintained at a frequency as specified by the manufacturer, and designed to drain within 72 hours of the end of a rain. Storm water treatment BMPs may be drained to the MS4 under this Order if the discharge is not a source of pollutants. Sediments shall be disposed of properly, in compliance with all applicable local, state, and federal policies, acts, laws, regulations, ordinances, and statutes.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (c) Require or obtain coverage under a separate RWQCB or SWRCB permit for discharge into the MS4.
- 3. The following BMPs for non-stormwater discharges are required pursuant to this Order:
  - (a) Flows from non-emergency fire fighting activity: Implement a program to reduce pollutants from non-emergency activities such as controlled or practice blazes and maintenance activities identified to be significant sources of pollutants.
  - (b) Discharges from potable water system releases: Water shall be dechlorinated using aeration and/or sodium thiosulfate and/or other appropriate means and/or be allowed to infiltrate to the ground. BMPs such as sand bags or gravel bags shall be utilized to prevent sediment transport. All sediments shall be collected and disposed of in a legal and appropriate manner.
  - (c) Swimming pool discharges: Swimming pool discharges are to be dechlorinated, pH adjusted if necessary, aerated to remove chlorine if necessary, and volumetrically and velocity controlled to prevent resuspension of sediments.
  - (d) Sidewalk rinsing: Sidewalk rinsing in commercial areas may be undertaken only if high pressure low volume is used as described in the glossary under "sidewalk rinsing."

**PART 2 – MUNICIPAL ACTION LEVELS**

- 1. This Order establishes Municipal Action Levels (MALs) to identify subwatersheds requiring additional Best Management Practices (BMPs) to reduce pollutant loads and prioritize implementation of additional BMPs. MALs for selected pollutants based on a Climate Zone 6 subset of nationwide Phase I MS4 monitoring data for pollutants in storm water. (<http://unix.eng.ua.edu/~rpitt/Research/Research.shtml>, last visited on August 14, 2007). The MALs were obtained by computing the 80<sup>th</sup> percentile for selected pollutants. MALs are identified in Attachment "C".
- 2. Under this Order, the Municipal Action Levels (MALs) shall be utilized by Permittees to identify subwatersheds discharging pollutants at levels in excess of the MALs. Within those subwatersheds where pollutant levels in the discharge are in excess of the MALs, Permittees shall implement controls and measures necessary to reduce the discharge of pollutants.
- 3. In order to determine if MS4 discharges are in excess of the MALs, Permittees shall conduct outfall monitoring as required in the Monitoring and Reporting Program (MRP). A MAL Assessment Report shall be submitted to the Executive Officer as part of the Annual Report. The Report shall present the monitoring data in comparison to the applicable MALs, and identify those subwatersheds with a running average of twenty percent or greater of exceedances of the MALs listed in Attachment "C" in discharges of storm water from the MS4 to waters of the U.S..

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

4. Beginning Year 3 after Order adoption date, each Permittee shall submit a MAL Action Plan with the Annual Report (first MAL Action Plan due with Dec. 15, 2011 Annual Report) to the Executive Officer, for those subwatersheds with a running average of twenty percent or greater of exceedances of the MALs in any discharge of storm water from the MS4 to waters of the U.S.. The plan is to include an assessment of the sources responsible for the MAL exceedances, the existing stormwater programs and BMPs that address those sources, an assessment of potential program enhancements, alternative BMPs and actions the Permittee shall implement to reduce discharges to a level that is equivalent to or below the MALs, and an implementation schedule for such actions for Executive Officer approval. The MAL Action Plan shall provide the technical rationale to demonstrate the proposed measures and controls will attain the MALs. If the MAL Action Plan is not approved within 90 days of the due date, the Executive Officer may establish an appropriate plan with at least 90 day notification and consultation to the Permittees.
5. Within 90 days of the plan approval by the Regional Board Executive Officer, the Permittee shall initiate the BMPs and actions proposed in the MAL Action Plan, together with any other practicable BMPs or actions that the Executive Officer determines to be necessary to meet the MALs. The Permittee shall complete the proposed actions in accordance with the approved implementation schedule.
6. Upon completion of the actions specified in the approved MAL Action Plan, the Permittee shall re-monitor the subject subwatershed in accordance with the MRP, and submit a Post-Project MAL Assessment Report to the Executive Officer.
7. As additional data become available through the MRP or from the Regional Subset of the National Dataset, MALs may be revised annually by the Executive Officer in accordance with an equivalent statistical method as that used to establish the MALs in Attachment C of this order with at least 90 day notification and consultation to the Permittees.

**PART 3 – RECEIVING WATER LIMITATIONS**

1. Discharges from the MS4 that cause or contribute to a violation of water quality standards are prohibited.
2. Discharges from the MS4 of storm water, or non-storm water, for which a Permittee is responsible, shall not cause or contribute to a condition of nuisance.
3. The Permittee shall comply with Receiving Water Limitations 1 and 2 through timely implementation of control measures and other actions to reduce pollutants in the storm water discharges in accordance with the requirements of this Order including any modifications. The Permittees' Program shall be designed to achieve compliance with Receiving Water Limitations 1 and 2. If exceedance(s) of water quality

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

objectives or water quality standards (collectively WQS) persist, notwithstanding implementation of this permit, the Permittees shall ensure compliance with Receiving Water Limitations 1 and 2 by complying with the following procedure:

- (a) Upon determination by either the Permittees or the Regional Water Board that discharges are causing or contributing to an exceedance of an applicable WQS, the Permittee(s) upstream of the point of discharge shall promptly notify and thereafter submit a report to the Regional Water Board Executive Officer that describes BMPs that are currently being implemented and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedance of WQSs. The report may be included with the Annual Report, unless the Regional Water Board Executive Officer directs an earlier submittal. The Regional Water Board Executive Officer may require modifications to the report.
- (b) Submit any modifications to the report required by the Regional Water Board Executive Officer within 30 days of notification.
- (c) Within 30 days following approval of the Report described above by the Regional Water Board Executive Officer, the Permittees shall revise their Program and monitoring program to incorporate the approved modified BMPs that have been and will be implemented, the implementation schedule, and any additional monitoring required.
- (d) Implement the revised Program and monitoring program according to the approved schedule.

- 4. Permittees shall annually report the effectiveness of BMPs in reducing exceedances of receiving water limitations. The Regional Board Executive Officer may direct implementation of additional BMPs if there are continuing or recurring exceedances of the same receiving water limitation.

**PART 4 - STORM WATER QUALITY MANAGEMENT PROGRAM IMPLEMENTATION**

**A. General Requirements**

- 1. Each Permittee shall, at a minimum, adopt and implement applicable terms of this Order within its jurisdictional boundary. The Principal Permittee shall be responsible for program coordination as described in this Order as well as compliance with applicable portions of the permit within its jurisdiction. This Order shall be implemented no later than (90 days after Order adoption date), unless a later date has been specified for a particular provision in this Order and provided the Regional Administrator of the U.S. EPA has no objections.

T  
E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- 2. Each Permittee shall comply with the requirements of 40 CFR122.26(d)(2) and implement programs and control measures so as to reduce the discharges of pollutants in storm water to the MEP and achieve water quality standards.
- 3. Each Permittee shall require that treatment control BMPs being implemented under the provisions of this Order shall be designed, at a minimum, to achieve the BMPperformance criteria for storm water pollutants likely to be discharged as identified in Attachment "C", Table 3. Expected BMP pollutant removal performance for effluent quality was developed from the WERF-ASCE/ U.S. EPA International BMP Database. Permittees shall select Treatment BMPs based on the primary class of pollutants likely to be discharged from the site/facility (e.g. metals from an auto repair shop). Permittees may develop guidance for appropriate Treatment BMPs for project type based on Attachment "C". For the treatment of pollutants causing impairments within the drainage of the impaired waterbody, permittees shall select BMPs from the top three performing BMP categories or alternative BMPs that are designed to meet or exceed the performance of the highest performing BMP for the pollutant causing impairment.
- 4. Each Permittee shall implement programs and measures to comply with the TMDLs' WLAs for the MS4 as specified in Part 6.
- 5. If TMDL requirements, including Implementation Plans and Reports, address substantially similar requirements as the MS4 permit, the Executive Officer may approve the applicable reports, plans, data or submittals under the applicable TMDL as fulfilling requirements under the MS4.

V  
E

**B. Legal Authority**

- 1. Permittees shall possess the necessary legal authority to prohibit, including, but not limited to:
  - (a) Illicit connections and illicit discharges, and to remove illicit connections.
  - (b) The discharge of non-storm water to the MS4 from:
    - (1) Washing or cleaning of gas stations, auto repair garages, or other types of automotive service facilities
    - (2) Mobile auto washing, carpet cleaning, steam cleaning, sandblasting and other such mobile commercial and industrial operations
    - (3) Areas where repair of machinery and equipment which are visibly leaking oil, fluid or antifreeze, is undertaken
    - (4) Storage areas for materials containing grease, oil, or other hazardous substances, and uncovered receptacles containing hazardous materials
    - (5) Swimming pools<sup>1</sup> that have a concentration greater than:
      - (A) Chlorine/ bromine- 0.1mg/L

<sup>1</sup> MS4s discharging directly to the ocean are not subject to this prohibition.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (B) Chloride- 250mg/L
- (6) Swimming pool filter backwash
- (7) Decorative fountains and ponds
- (8) Industrial/ Commercial areas, including restaurant mats
- (9) Concrete truck cement, pumps, tools, and equipment washout
- (10) Spills, dumping, or disposal of materials other, such as:
  - (A) Litter, landscape and construction debris, garbage, food, animal waste, fuel or chemical wastes, batteries, and any other materials which have the potential to adversely impact water quality; and
  - (B) Any pesticide, fungicide or herbicide
- (11) Stationary and mobile pet grooming facilities
- (12) Trash container leachate

2. The Permittees shall possess adequate legal authority to:
  - (a) Control through interagency agreement, the contribution of pollutants from one portion of the MS4 to another portion of the MS4.
  - (b) Require persons within their jurisdiction to comply with conditions in the Permittees' ordinances, permits, contracts, model programs, or orders (i.e. hold dischargers to its MS4 accountable for their contributions of pollutants and flows).
  - (c) Utilize enforcement measures (e.g., stop work orders, notice of violations, fines, referral to City, County, and/ or District Attorneys, referral to strikeforces, etc.) by ordinances, permits, contracts, orders, administrative authority, and civil and criminal prosecution.<sup>1</sup>
  - (d) Control pollutants, including potential contribution<sup>2</sup> in discharges of storm water runoff associated with industrial activities, including construction activities to its MS4, and control the quality of storm water runoff from industrial sites, including construction sites.
  - (e) Carry out all inspections, surveillance and monitoring procedures necessary to determine compliance and non-compliance with permit conditions including the prohibition on illicit discharges to the MS4.
  - (f) Require the use of control measures to prevent or reduce the discharge of pollutants to achieve water quality objectives.
  - (g) Require that Treatment Control BMPs be properly operated and maintained.
  
3. Each Permittee has adopted a Storm Water Quality Ordinance based upon a countywide model. Each Permittee shall ensure, no later than (one year after Order adoption date), that its Storm Water Quality Ordinance authorizes the Permittee to enforce all requirements of this Order.

<sup>1</sup>In the case of private responsible parties such as, HOAs, the Permittee must retain enforcement authority.  
<sup>2</sup>“Potential contributions” and “potential to discharge,” means adequate legal authority to prevent an actual discharge of pollutants to the municipal separate storm sewer system.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- 4. Each Permittee shall submit no later than two years after Order adoption date, a statement by its legal counsel that the Permittee has obtained and possesses all necessary legal authority to comply with this Order through adoption of ordinances and/ or municipal code modifications.

**C. Fiscal Resources**

- 1. The Permittees shall implement the activities required to comply with the provisions of this Order.<sup>1</sup> Each Permittee shall:
  - (a) Submit an Annual Budget Summary that shall include:
    - (1) Budgets for the upcoming report year (estimated expenditure) for the following specific categories (estimated percentages and written explanations where necessary):
      - (A) Program Management Activities.
        - (i) Overall Administrative costs
      - (B) Program Implementation Activities (storm water related activities only). Provide figures breakdown of expenditures for the categories below:
        - (i) Illicit connection/ illicit discharge program.
        - (ii) Development planning and approval
        - (iii) Construction program including inspection activities
        - (iv) Industrial/ Commercial program including inspection activities
        - (v) Public Agency Activities
          - (I) Maintenance and inspection of Treatment Control BMPs
          - (II) Municipal Street Sweeping
          - (III) Municipal Drainage Maintenance including catch basin clean-outs
          - (IV) Other costs associated with storm water management (describe)
        - (vi) Public Information and Participation.
        - (vii) Monitoring Program
        - (viii) Miscellaneous Expenditures (describe)

**D. Modifications/ Revisions**

- 1. No later than two years after the Order adoption date, each Permittee shall modify its storm water management programs, protocols, practices, and municipal codes to make them consistent with the requirements herein.

---

<sup>1</sup> The sources of funding may be the general funds, and/or Benefit Assessment, plan review fees, permit fees, industrial/ commercial user fee, revenue bonds, grants or other similar funding mechanism.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

**E. Designation and Responsibilities of the Principal Permittee**

1. The Ventura County Watershed Protection District is hereby designated as the Principal Permittee. The Principal Permittee shall:
  - (a) Participate in the County Environmental Crimes Task Force
  - (b) Coordinate and facilitate activities necessary to comply with the requirements of this Order, but the Principal Permittee is not responsible for ensuring compliance of any other individual Permittee
  - (c) Coordinate permit activities among Permittees and act as liaison between the Permittees and the Regional Water Board on permitting issues
  - (d) Provide technical and administrative support for committees that will be organized to implement this Order and its requirements
  - (e) Evaluate, assess, and synthesize the results of the monitoring program and the effectiveness of the implementation of BMPs
  - (f) Convene the Committee Meetings constituted pursuant to subpart 4.F.1., below, upon designation of representatives
  - (g) Implement the Countywide Monitoring Program required under the Order and evaluate, assess and synthesize the results of the monitoring program
  - (h) Provide personnel and fiscal resources for the collection, processing and submittal to the Regional Water Board of monitoring and annual reports, and summaries of other reports required under this Order
  - (i) Comply with the "Responsibilities of the Permittees" in part 4.F. below

T  
E  
N  
T  
A

**F. Responsibilities of the Permittees**

1. Each Permittee is required to comply with the requirements of this Order applicable to discharges within its boundaries (see Findings- Permit Coverage D.1 and D.2). Permittees are not responsible for the implementation of the provisions applicable to the Principal Permittee or other Permittees. Each Permittee shall:
  - (a) Comply with the requirements of this Order and any modifications thereto
  - (b) Coordinate among its internal departments and agencies, as necessary, to facilitate the implementation of the requirements of this Order applicable to such Permittees in an efficient and cost-effective manner
  - (c) Participate in intra-agency coordination (e.g., Planning Department, Fire Department, Building and Safety, Code Enforcement, Public Health, Parks and Recreation, and others) necessary to successfully implement the provisions of this Order
  - (d) Report, in addition to the Budget Summary, any supplemental dedicated budgets for the same categories
  - (e) Participate in Committee Meetings, as necessary

T  
I  
V  
E

**PART 5 - SPECIAL PROVISIONS (BASELINE)**

**A. General Requirements**

- 1. This Order and the provisions herein, are intended to develop, achieve, and implement a timely, comprehensive, cost-effective storm water pollution control program to reduce the discharge of pollutants in storm water to the MEP and not cause or contribute to exceedances of water quality standards for the permitted areas in the County of Ventura.
- 2. Best Management Practice Substitution
  - (a) The Regional Water Board Executive Officer may approve any site-specific BMP substitution upon written request by a Permittee(s) and after public notice, if the Permittee can document that:
    - (1) The proposed alternative BMP or program will meet or exceed the objective of the original BMP or program in the reduction of storm water pollutants.
    - (2) The fiscal burden of the original BMP or program is greater than the proposed alternative and does not achieve a greater improvement in storm water quality.
    - (3) The proposed alternative BMP or program will be implemented within a similar period of time.
    - (4) BMP substitution will be in accordance with the public review provisions of the Order (Part 8C.1 and Part 8C.2).

**B. Watershed Initiative Participation**

- 1. The Principal Permittee shall participate in water quality meetings for watershed management and planning, including but not limited to the following:
  - (a) Southern California Stormwater Monitoring Coalition (SMC)
  - (b) Other Watershed planning groups as appropriate
- 2. The Principal Permittee shall participate in the following regional water quality programs, and projects for watershed management and planning:
  - (a) SMC Regional Monitoring Programs
    - (1) Southern California Regional Bioassessment
      - (A) Level of effort per watershed
        - (i) Probabilistic sites per watershed
          - (I) Ventura River - Six
          - (II) Santa Clara River - Three
          - (III) Calleguas Creek - Six

**C. Public Information and Participation Program (PIPP)**

1. The Principal Permittee shall implement a Public Information and Participation Program (PIPP) that includes, but is not limited to, the requirements listed in this part. The Principal Permittee shall coordinate with Permittees to implement specific PIPP requirements. The objectives of the PIPP are as follows:
  - (a) To increase the knowledge of the target audience about the MS4, the adverse impacts of storm water pollution on receiving waters and potential solutions to mitigate the impacts
  - (b) To change the waste disposal and storm water pollution generation behavior of target audiences by encouraging implementation of appropriate solutions
  - (c) To involve and engage communities in Ventura County to participate in mitigating the impacts of storm water pollution
2. Residential Program
  - (a) "No Dumping" Message
 

Each Permittee shall label all storm drain inlets that they own with a legible "no dumping" message. In addition, signs with prohibitive language discouraging illegal dumping shall be posted at designated public access points to creeks, other relevant waterbodies, and channels. Signage and storm drain messages shall be legible and maintained.
  - (b) Public Reporting
 

Each Permittee shall identify staff who will serve as the contact person(s) for reporting clogged catch basin inlets and illicit discharges/dumping, faded or missing catch basin labels, and general storm water management information. Permittees shall include this information, updated by July 1 of each year, in public information media such as the government pages of the telephone book, and internet web sites. The Principal Permittee shall compile a list of the general public reporting contacts submitted by all Permittees and make this information available on the web site (<http://www.vcstormwater.org/contact.htm>) and upon

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

request. Each Permittee is responsible for providing current, updated information to the Principal Permittee.

(c) Outreach and Education

- (1) Collaboratively, the Permittees shall implement the following activities:
  - (A) Conduct a Storm Water pollution prevention advertising campaign.
  - (B) Conduct Storm Water pollution prevention public service announcements.
  - (C) Distribute storm water pollution prevention public education materials to:
    - (i) Automotive parts stores
    - (ii) Home improvement centers/ lumber yards/ hardware stores
    - (iii) Pet shops/ feed stores
  - (D) Public education materials shall include, but are not limited to information on the proper disposal, storage, and use of:
    - (i) Vehicle waste fluids
    - (ii) Household waste materials
    - (iii) Construction waste materials
    - (iv) Pesticides and fertilizers (including integrated pest management practices-IPM)
    - (v) Green waste (including lawn clippings and leaves)
    - (vi) Animal wastes
  - (E) Work with existing local watershed groups or organize watershed Citizen Advisory Groups/ Committees to develop effective methods to educate the public about storm water pollution no later than (365 days after Order adoption date).
  - (F) Organize events targeted to residents and population subgroups; and
  - (G) Maintain the Countywide storm water website ([www.vcstormwater.org](http://www.vcstormwater.org)), which shall include educational material listed in the preceding subpart C.1(c)(1)(C).
- (2) The Principal Permittee shall develop a strategy to educate ethnic communities through culturally effective methods. Details of this strategy should be incorporated into the PIPP, and implemented, no later than (365 days after Order adoption date).
- (3) Each Permittee shall continue the existing outreach program to residents on the proper disposal of litter, green waste, pet waste, proper vehicle maintenance, lawn care and water conservation practices.
- (4) Each Permittee shall conduct educational activities within its jurisdiction and participate in countywide events.
- (5) The Permittees shall make a minimum of 5 million impressions per year to the general public related to storm water quality, with a minimum of 2.5 million impressions via newspaper, local TV access, local radio and/ or internet access.

T  
E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (6) The Principal Permittee, in cooperation with the Permittees, shall provide schools within each School District in the County with materials, including, but not limited to, videos, live presentations, and other information necessary to educate a minimum of 50 percent of all school children (K-12) every 2 years on storm water pollution. Alternatively, a Permittee may submit a plan to the Regional Water Board Executive Officer for consideration no later than (90 days after adoption of the Order), to provide outreach in lieu of the school curriculum. Pursuant to Water Code section 13383.6, the Permittees, in lieu of providing educational materials/ funding to School Districts in the County, may opt to provide an equivalent amount of funds or fraction thereof to the Environmental Education Account established within the State Treasury.
- (7) Each Permittee shall provide the contact information for their appropriate staff responsible for storm water public education activities to the Principal Permittee and contact information changes no later than 30 days after a change occurs.
- (8) The Permittees shall develop and implement a behavioral change assessment strategy no later than (365 days after Order adoption date), in order to determine whether the PIPP is demonstrably effective in changing the behavior of the public. The strategy shall be developed based on current sociological data and studies.

(d) Pollutant-Specific Outreach

The Principal Permittee, in cooperation with the Permittees, shall coordinate to develop outreach programs that focus on metals, urban pesticides, bacteria and nutrients as the pollutants of concern no later than (365 days after Order adoption date). Metals may be appropriately addressed through the Industrial/ Commercial Facilities Program (e.g. the distribution of educational materials on appropriate BMPs for metal fabrication and recycling facilities that have been identified as a potential source). Region-wide pollutants may be included in the Principal Permittee's mass media outreach program.

3. Businesses Program

(a) Corporate Outreach

- (1) The Permittees shall work with other regional or statewide agencies and, associations such as the California Storm Water Quality Association (CASQA), to develop and implement a Corporate Outreach program to educate and inform corporate franchise operators and/or local facility managers about storm water regulations and BMPs. Once developed, the program shall target a minimum of four Retail Gasoline Outlets (RGO) franchisers and cover a minimum of 80% of RGO franchisees in the county, four retail automotive parts franchisers, two home improvement center franchisers and six restaurant franchisers. Corporate outreach for all target facilities shall be conducted not less than twice during the term of this

T

I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

Order, with the first outreach contact to begin no later than two years after Order adoption date. At a minimum, this program shall include:

- (A) Confer with franchise operators and/or local facility managers to explain storm water regulations.
- (B) Distribution and discussion of educational material regarding storm water pollution and BMPs, and provide managers with recommendations to facilitate employee and facility compliance with storm water regulations.

(b) Business Assistance Program

- (1) The Permittees shall implement a Business Assistance Program to provide technical information to small businesses to facilitate their efforts to reduce the discharge of pollutants in storm water. The Program shall include:
  - (A) On-site, telephone or e-mail consultation regarding the responsibilities of businesses to reduce the discharge of pollutants, procedural requirements, and available guidance documents.
  - (B) Distribution of storm water pollution prevention education materials to operators of auto repair shops, car wash facilities (including mobile car detailing), mobile carpet cleaning services, commercial pesticide applicator services and restaurants.

**D. Industrial/ Commercial Facilities Program**

Each Permittee shall require implementation of pollutant reduction and control measures, unless precluded by local ordinances, at industrial and commercial facilities, with the objective of reducing pollutants in storm water. Except where specified otherwise in this Order, pollutant reduction and control measures may be used alone or in combination, and may include Treatment Control, Source Control BMPs, and operation and maintenance procedures, which may be applied before, during, and/ or after pollutant generating activities. At a minimum, the Industrial/ Commercial Facilities Control Program shall include requirements to:

- (a) Track
  - (b) Inspect
  - (c) Ensure compliance with municipal ordinances at industrial and commercial facilities that are critical sources of pollutants in storm water
1. Inventory of Critical Sources
- (a) Each Permittee shall maintain a watershed-based inventory or database of all facilities within its jurisdiction that are critical sources of storm water pollution. Critical Sources to be tracked are summarized below, and specified in Attachment "D":
    - (1) Commercial Facilities
      - (A) Restaurants
      - (B) Automotive service facilities
      - (C) RGOs and automotive dealerships
      - (D) Nurseries and nursery centers

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (2) U.S. EPA Phase I, II Facilities
- (3) Other Federally-mandated Facilities [as specified in 40 CFR122.26(d)(2)(iv)(C)]
  - (A) Municipal landfills
  - (B) Hazardous waste treatment, disposal, and recovery facilities
  - (C) Facilities subject to SARA Title III (also known as the Emergency Planning and Community Right-to-Know Act (EPCRA))
- (b) Each Permittee shall include the following minimum fields of information for each critical source industrial and commercial facility
  - (1) Name of facility and name of owner/ operator.
  - (2) Address of facility
  - (3) Coverage under the IASGP or other individual or general NPDES permits or any applicable waiver issued by the Regional or State Board pertaining to runoff discharges.
  - (4) A narrative description including Standard Industrial Classification (SIC) System/ North American Industry Classification System (NAICS) codes that best describe the industrial activities performed and principal products used at each facility and status of exposure to storm water.
- (c) The Regional Water Board recommends that Permittees include additional fields of information, such as material usage and/ or industrial output, and discrepancies between SIC System/ NAICS Code designations (as reported by facility operators) and identify the actual type of industrial activity that has the potential to pollute storm water. In addition, the Regional Water Board recommends the use of an automated database system, such as a Geographical Information System (GIS) or Internet-based system.
- (d) Each Permittee shall update its inventory of critical sources at least annually. The update may be accomplished through collection of new information obtained through field activities or through other readily available inter and intra-agency informational databases (e.g. business licenses, pretreatment permits, sanitary sewer hook-up permits, and similar information).

2. Inspect Critical Sources

- (a) Commercial Facilities
 

Permittee shall inspect all facilities identified in subpart 5.D.2. twice during the 5-year term of the Order, provided that the first inspection occurs no later than (2 years after Order adoption date). A minimum interval of 6 months between the first and the second mandatory compliance inspection is required. In addition, each Permittee shall implement the activities outlined in the following subparts. At each facility, inspectors shall verify that the operator is implementing the source control BMPs. The Permittees may require implementation of additional BMPs where storm water flows from the MS4 discharge to an environmentally sensitive area (ESA, see part 7 for definition) or a CWA § 303(d) listed waterbody (see subpart 3(b) below).

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

(1) Restaurants-

Level of inspections: Each Permittee, in cooperation with its appropriate department (such as health or public works), shall inspect all restaurants within its jurisdiction to confirm that storm water BMPs are being effectively implemented in compliance with State law, County and municipal ordinances. BMPs in Table 2 (BMPs at Restaurants) shall be implemented, unless the pollutant generating activity does not occur.

Table 2 - BMPs at Restaurants

Pollutant-Generating Activity	BMP Narrative Description	2003 California Stormwater BMP Handbook Industrial and Commercial BMP Identification #
Waste/ Hazardous Materials Storage, Handling and Disposal	Implementation of effective storage, handling and disposal procedures for hazardous materials.	By Municipality
Unauthorized Non-Storm Water Discharges	Effective elimination of non-storm water discharges.	SC-10
Accidental Spills/ Leaks	Implementation of effective spills/ leaks prevention and response procedures.	SC-11
Outdoor Storage of Raw Materials	Implementation of effective source control practices and structural devices.	SC-33
Storage and Handling of Solid Waste	Implementation of effective solid waste storage/ handling practices and appropriate control measures	SC-34
Parking/ Storage Area Maintenance	Implementation of effective parking/ storage area designs and housekeeping/ maintenance practices	SC-43
Storm Water Conveyance System Maintenance	Implementation of proper conveyance system operation and maintenance protocols.	SC-44

(2) Automotive Service Facilities-

Level of Inspection: Each Permittee shall confirm that BMPs are being effectively implemented at each facility within its jurisdiction, in compliance with County and municipal ordinances. The inspections shall verify that BMPs in Table 3 (BMPs at Automotive Service Facilities) are being implemented, unless the pollutant generating activity does not occur.

Table 3 - BMPs at Automotive Service Facilities

(b) Industrial Facilities

Each Permittee shall conduct compliance inspections as specified below.

(1) **Frequency of Inspection**

- (A) Each Permittee shall perform an initial inspection at all industrial facilities identified by the U.S. EPA in 40 CFR 122.26(c) no later than 2 years after Order adoption date. After the initial inspection, all facilities determined as having exposure of industrial activities to storm water are subject to a second mandatory compliance inspection. A minimum interval of 6 months between the first and the second compliance inspection is required.
- (B) Following the first mandatory compliance inspection, a Permittee shall perform a second mandatory compliance inspection yearly at a minimum of 20% of the facilities determined not to have exposure of industrial activities to storm water. The purpose of this inspection is to verify the continuity of the no exposure status. Facilities determined as having exposure will be notified that they must obtain coverage under the IASGP. A facility need not be inspected more than twice during the term of the Order unless subject to an enforcement action. A minimum interval of 6 months in between the first and the second compliance inspection is required.
- (C) Applicable to all facilities: A Permittee need not inspect facilities that have been inspected by the Regional Water Board within the previous 24 month interval. However, if the Regional Water Board performed only one inspection, the Permittee shall conduct the second required mandatory compliance inspection.

(2) **Level of Inspection:** Each Permittee shall confirm that each operator:

- (A) Has a current Waste Discharge Identification (WDID) number for facilities discharging storm water associated with industrial activity,

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

and that a Storm Water Pollution Prevention Plan (SWPPP) is available on-site.

- (B) Is effectively implementing BMPs in compliance with County and municipal ordinances. Facilities must implement the source control BMPs identified in subpart 5.D.3. and Appendix D, *California Stormwater Industrial and Commercial BMP Handbook (2003)*. The Permittees shall require implementation of additional BMPs where the storm water from the MS4 discharges to a CWA § 303(d) listed waterbody; or
- (C) Has applied and has a current No Exposure Certification (and WDID number) for facilities subject to this requirement.

3. Ensure Compliance of Critical Sources

- (a) **BMP Implementation:** Facilities must implement the source control BMPs identified in Part 5. D. 3. and, as applicable, Appendix D, *California Stormwater Industrial and Commercial BMP Handbook (2003)*. In the event that a Permittee determines that a BMP is infeasible at any site, the Permittee shall require implementation of similar BMPs that will achieve the equivalent reduction of pollutants in the storm water discharges. Likewise, for those BMPs that are not protective of water quality standards, Permittees may require additional site-specific controls.
- (b) **Environmentally Sensitive Areas (ESAs) and Impaired Waters:** For critical sources that discharge to MS4s that directly discharge to ESAs or to CWA § 303(d) listed impaired waterbodies, the Permittees shall require operators to implement additional pollutant specific controls to reduce pollutants in storm water runoff that are causing or contributing to exceedances of water quality objectives. A Regional Board approved TMDL Implementation Plan for the receiving water will substitute for this requirement.
- (c) **Progressive Enforcement:** Each Permittee shall implement a progressive enforcement policy to ensure that facilities are brought into compliance with all storm water requirements within a reasonable time period as specified below.
  - (1) In the event that a Permittee determines, based on an inspection conducted, that an operator has failed to adequately implement all necessary BMPs, that Permittee shall take progressive enforcement actions which, at a minimum, shall include a follow-up inspection within 4 weeks from the date of the initial inspection.
  - (2) In the event that a Permittee determines that an operator has failed to adequately implement BMPs after a follow-up inspection, that Permittee shall take further enforcement action as established through authority in its municipal code and ordinances or through the judicial system.
  - (3) Each Permittee shall maintain records and make them available on request to the Regional Water Board, including inspection reports, warning letters,

T  
E  
N  
T  
A  
T  
I  
V  
E

notices of violations, and other enforcement records, demonstrating a good faith effort to bring facilities into compliance.

4. Interagency Coordination

(a) **Referral of Violations of the Municipal Storm Water Ordinances and California Water Code § 13260:** A Permittee may refer a violation(s) of § 13260 by Industrial and Commercial facilities to the Regional Water Board provided that under its municipal storm water ordinance the Permittee has made a good faith effort of progressive enforcement. At a minimum, a Permittee's good faith effort must be documented with:

- (1) Two follow-up inspections
- (2) Two warning letters or notices of violation

(b) **Referral of Violations of the Industrial Activities Storm Water General Permit (IASGP), including Requirements to File a Notice of Intent or No Exposure Certification:** For those facilities in violation of the municipal storm water ordinance and subject to the IASGP, Permittees may escalate referral of such violations to the Regional Water Board (electronically on a quarterly basis to the Regional Water Board's Storm Water Site at MS4stormwaterrb4@waterboards.ca.gov) after one inspection and one written notice (copied to the Regional Water Board) to the operator regarding the violation. In making such referrals, Permittees shall include, at a minimum, the following documentation:

- (1) Name of the facility
- (2) Operator of the facility
- (3) Owner of the facility
- (4) WDID Number (if applicable)
- (5) Industrial activity being conducted at the facility that is subject to the IASGP
- (6) Records of communication with the facility operator regarding the violation, which shall include at least an inspection report
- (7) The written notice of the violation copied to the Regional Water Board

(c) **Investigation of Complaints Regarding Facilities – Transmitted by the Regional Water Board Staff:** Each Permittee shall initiate, within one business day,<sup>1</sup> investigation of complaints of non-storm water discharges to the MS4 from facilities within its jurisdiction (other than non-storm water discharges). The initial investigation shall include, at a minimum, a limited inspection of the facility to confirm the complaint to determine if the facility is effectively complying with the municipal storm water urban runoff ordinances, and, if necessary, to oversee corrective action.

<sup>1</sup> Permittees may comply with the Permit by taking initial steps (such as logging, prioritizing, and tasking) to "initiate" the investigation within that one business day. However, the Regional Water Board would expect that the initial investigation, including a site visit, to occur within four business days.

T  
E  
N  
T  
A  
T  
I  
V  
E

- (d) **Assistance of Regional Water Board Enforcement Actions:** As directed by the Regional Water Board Executive Officer, Permittees shall assist Regional Water Board enforcement actions by: helping in identification of current owners, operators, and lessees of facilities; providing staff, when available, for joint inspections with Regional Water Board inspectors; appearing as witnesses in Regional Water Board enforcement hearings; and providing copies of inspection reports and other progressive enforcement documentation.
- (e) **Participation in a Task Force:** The Permittees shall participate with the Regional Water Board, and other public agencies on an enforcement task force such as the Storm Water Task Force, to communicate concerns regarding special cases of storm water violations by industrial and commercial facilities and to develop a coordinated approach to enforcement action.

**E. Planning and Land Development Program**

**I. Purpose**

- 1. The Permittees shall implement a Planning and Land Development Program pursuant to part 5.E. for all New Development and Redevelopment projects subject to this Order to:
  - (a) Minimize the adverse impacts from storm water runoff on the biological integrity of Natural Drainage Systems and the beneficial uses of waterbodies in accordance with requirements under CEQA (Cal. Pub. Resources Code § 21100).
  - (b) Minimize the percentage of impervious surfaces on land developments to mimic predevelopment water balance through infiltration, evapotranspiration and reuse.
  - (c) Minimize pollutant loadings from impervious surfaces such as roof-tops, parking lots, and roadways through the use of properly designed, technically appropriate BMPs (including Source Control BMPs such as good housekeeping practices), Low Impact Development Strategies, and Treatment Control BMPs.
  - (d) Properly select, design and maintain Treatment Control BMPs and Hydromodification Control BMPs to address pollutants that are likely to be generated, assure long-term function, and to avoid the breeding of vectors.<sup>1</sup>
  - (e) Prioritize the selection of BMPs suites to remove storm water pollutants, reduce storm water runoff volume, and beneficially reuse storm water to support an integrated approach to protecting water quality and managing water resources in the following order of preference:
    - (1) Infiltration BMPs
    - (2) BMPs that store and reuse storm water runoff.
    - (3) BMPs that incorporate vegetation to promote pollutant removal and runoff volume reduction and integrate multiple uses

<sup>1</sup> Treatment BMPs when designed to drain within 48 hours of the end of rainfall minimize the potential for the breeding of vectors.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (4) BMPs which percolate runoff through engineered soil and allow it to discharge downstream slowly
- (5) Approved modular/ proprietary treatment control BMPs that are based on LID concepts and that meet pollution removal goals

**II. Applicability**

1. New Development Projects.

- (a) Development projects subject to Permittee conditioning and approval for the design and implementation of post-construction controls to mitigate storm water pollution, prior to completion of the project(s), are:
  - (1) All development projects equal to 1 acre or greater of disturbed area and adding more than 10,000 square feet of impervious surface area
  - (2) Industrial park 10,000 square feet or more of impervious surface area
  - (3) Commercial strip mall 10,000 square feet or more of impervious surface area
  - (4) Retail gasoline outlet 5,000 square feet or more of impervious surface area
  - (5) Restaurant (SIC 5812) 5,000 square feet or more of impervious surface area
  - (6) Parking lot 5,000 square feet or more of impervious surface area, or with 25 or more parking spaces
  - (7) Streets, roads, highways, and freeway construction of 10,000 square feet or more of impervious surface area shall incorporate USEPA guidance regarding Managing Wet Weather with Green Infrastructure: Green Streets to the maximum extent practicable.
  - (8) Automotive service facilities (SIC 5013, 5014, 5511, 5541, 7532-7534 and 7536-7539) [5,000 square feet or more of impervious surface area]
  - (9) Redevelopment projects in subject categories that meet Redevelopment thresholds (identified in subpart E.II.2 below)
  - (10) Projects located in or directly adjacent to, or discharging directly to an Environmentally Sensitive Area (ESA), where the development will:
    - (A) Discharge storm water runoff that is likely to impact a sensitive biological species or habitat; and
    - (B) Create 2,500 square feet or more of impervious surface area
  - (11) Single-family hillside homes. To the extent that a Permittee may lawfully impose conditions, mitigation measures or other requirements on the development or construction of a single-family home in a hillside area as defined in the applicable Permittee's Code and Ordinances, each Permittee shall require that during the construction of a single-family hillside home, the following measures to be implemented:
    - (A) Conserve natural areas
    - (B) Protect slopes and channels
    - (C) Provide storm drain system stenciling and signage

T  
E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (D) Divert roof runoff to vegetated areas before discharge unless the diversion would result in slope instability
- (E) Direct surface flow to vegetated areas before discharge unless the diversion would result in slope instability

2. Redevelopment Projects

- (a) Redevelopment projects subject to Permittee conditioning and approval for the design and implementation of post-construction controls to mitigate storm water pollution, prior to completion of the project(s), are:
  - (1) Land-disturbing activity that results in the creation or addition or replacement of 5,000 square feet or more of impervious surface area on an already developed site on development categories identified in subpart 5.E.II.1.
  - (2) Where Redevelopment results in an alteration to more than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post development storm water quality control requirements, the entire project must be mitigated.
  - (3) Where Redevelopment results in an alteration to less than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post development storm water quality control requirements, only the alteration must be mitigated, and not the entire development.
- (b) Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of facility or emergency redevelopment activity required to protect public health and safety. Impervious surface replacement, such as the reconstruction of parking lots and roadways which does not disturb additional area and maintains the original grade and alignment, is considered a routine maintenance activity. Redevelopment does not include the repaving of existing roads to maintain original line and grade.
- (c) Existing single-family dwelling and accessory structures are exempt from the Redevelopment requirements unless such projects create, add, or replace 10,000 square feet of impervious surface area.

- 3. Effective Date –The New Development and Redevelopment requirements contained in Section E of the Order shall begin 90 calendar days after Regional Board Executive Officer approval of the changes to the Technical Guidance Manual needed to comply with this permit. After that date all discretionary permit projects or project phases that have not been deemed complete for processing, or discretionary permit projects without vesting tentative maps that have not requested and received an extension of previously granted approvals must comply with the requirements in Section E. Projects that have been deemed complete prior to the update of the technical design manual are not subject to this section. For Permittee’s projects the effective date shall be the date the governing body approves authorization to advertize to bid the project.

V  
E

**III. New Development/ Redevelopment Performance Criteria**

- 1. Integrated Water Quality/ Flow Reduction/ Resources Management Criterion
  - (a) Permittees shall establish standards for all New Development and Redevelopment projects identified in subpart 5.E.II to control pollutants, pollutant loads, and runoff volume emanating from impervious surfaces through percolation, infiltration, storage, or evapo-transpiration, by reducing the percentage of Effective Impervious Area (EIA). The standards shall be based on the type of development, site conditions (including soils and groundwater), community constraints, and shall consider USEPA's "Managing Wet Weather with Green Infrastructure, Action Strategy, 2008".
  - (b) The goal of the New Development and Redevelopment standards shall be to reduce the effective impervious area (EIA) to 5% or less. This goal may be implemented through use of site features, a Redevelopment Project Area Master Plan (RPAMP), payment of an in-lieu fee, or use of stormwater mitigation credits as described in this section. For development projects in undeveloped areas, the project shall comply with the goal of 5% EIA or less. For redevelopment projects, or development projects that can be demonstrated that the 5% EIA goal is infeasible, the project shall comply with the surface discharge requirements of 5.E.III.4
  - (c) All features structured constructed to render impervious surfaces "ineffective" as described in provision (b), above, shall be properly sized to infiltrate or store for beneficial reuse at least the volume of water that meets the criteria in subpart 5.E.III.3.
  - (d) Impervious surfaces may be rendered "ineffective" if the storm water runoff is:
    - (1) Drained into a vegetated cell, over a vegetated surface, or through a vegetated swale, having soil characteristics either as native material or amended medium using approved soil engineering techniques; or
    - (2) Collected and stored for beneficial use such as irrigation, or other reuse purpose; or
    - (3) Discharged into an infiltration trench
  - (e) Any excess surface discharge of the storm water runoff shall be mitigated in accordance with subpart 5.E.III.3
- 2. Hydromodification (Flow/ Volume/ Duration) Control Criteria
  - (a) Each Permittee shall require all New Development and Redevelopment projects identified in subpart 5.E.II to implement hydrologic control measures, to prevent accelerated downstream erosion and to protect stream habitat in natural drainage systems. The purpose of the hydrologic controls is to minimize changes in post-development hydrologic storm water runoff discharge rates, velocities, and

T  
E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

duration. This shall be achieved by maintaining the project's pre-project storm water runoff flow rates and durations.

(1) Description

- (A) Hydromodification control in natural drainage systems shall be achieved by maintaining the Erosion Potential ( $E_p$ ) in streams at a value of 1, unless an alternative value can be shown to be protective of the natural drainage systems from erosion, incision, and sedimentation that can occur as a result of flow increases from impervious surfaces and damage stream habitat (see Attachment "E" - Determination of Erosion Potential)
- (B) Hydromodification control may include one, or a combination of on-site, regional subregional hydromodification control BMPs, LID strategies, or stream restoration measures, with preference given to LID strategies and hydromodification control BMPs. Any in-stream restoration measure shall not adversely affect the beneficial uses of the natural drainage systems
- (C) Natural drainage systems, which include unlined or unimproved (not engineered) creeks, streams, rivers and their tributaries, are located in the following watersheds:
  - (i) Ventura River
  - (ii) Santa Clara River
  - (iii) Calleguas Creek
  - (iv) Miscellaneous Ventura Coastal
- (D) The Southern California Storm Water Monitoring Coalition (SMC) is developing a regional methodology to eliminate or mitigate the adverse impacts of hydromodification as a result of urbanization, including hydromodification assessment and management tools.
  - (i) The SMC has identified the following objectives for the Hydromodification Control Study (HCS):
    - (I) Establishment of a stream classification for Southern California streams
    - (II) Development of a deterministic or predictive relationship between changes in watershed impervious cover and stream-bed/ stream bank enlargement
    - (III) Development of a numeric model to predict stream-bed/ stream bank enlargement and evaluate the effectiveness of mitigation strategies
- (E) The Permittees shall participate in the SMC HCS to develop:
  - (i) A regional stream classification system
  - (ii) A numerical model to predict the hydrological changes resulting from new development
  - (iii) A numerical model to identify effective mitigation strategies

A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (F) Until the completion of the SMC HCS, Permittees shall implement the Interim Hydromodification Control Criteria, described in subpart 5.E.III.3(a)(2) below, to control the potential adverse impacts of changes in hydrology that may result from new development and redevelopment projects identified in subpart 5.E.II
  - (G) Existing single-family structures are exempt from the Hydromodification control requirements unless such projects disturb one acre or more of land or create, add, or replace 10,000 square feet or more of impervious surface area
- (2) Exemptions to Hydromodification Controls. Permittees may exempt the following New Development and Redevelopment projects from implementation of Hydromodification controls where assessments of downstream channel conditions and proposed discharge hydrology indicate that adverse Hydromodification effects to present and future beneficial uses of Natural Drainage Systems are unlikely:
- (A) All projects that disturb less than one acre.
  - (B) Projects that are replacement, maintenance or repair of a Permittee's existing flood control facility, storm drain, or transportation network.
  - (C) Redevelopment Projects in the Urban Core that do not increase the effective impervious area or decrease the infiltration capacity of pervious areas compared to the pre-project conditions.
  - (D) Projects that have any increased discharge go directly or via a storm drain to a sump, lake, area under tidal influence, into a waterway that has a 100-year peak flow (Q100) of 25,000 cfs or more, or other receiving water that is not susceptible to Hydromodification impacts;
  - (E) Projects that discharge directly or via a storm drain into concrete or improved (not natural) channels (e.g., rip rap, sackcrete, etc.), which, in turn, discharge into receiving water that is not susceptible to Hydromodification impacts (as in D above).
- (3) Interim Hydromodification Control Criteria
- (A) The Interim Hydromodification Control Criteria to protect natural drainage systems until Permittees complete Hydromodification Control Plans (HCPs), described in subpart 5.E.III.3(a)(3) below, are as follows:
    - (i) **Projects disturbing land area of less than fifty acres** will be subject to LID and/or source or treatment BMPs as addressed in this permit. The combined effects of LID and the

T  
E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

treatment BMPs are considered adequate for Hydromodification control for projects that disturb less than 50 acres.

(ii) **Projects disturbing land areas of fifty acres or greater**

Projects in this category shall develop and implement a Hydromodification Analysis Study (HAS) that demonstrates that post development conditions are expected to approximate the pre-project erosive effect of sediment transporting flows in receiving waters. The HAS must lead to the incorporation into the project design features intended to approximate, to the extent feasible, an Erosion Potential value of 1 or any alternative value that can be shown to be protective of the natural drainage systems from erosion, incision, and sedimentation that can occur as a result of flow increases from impervious surfaces and damage stream habitat in natural drainage systems, or

- (4) Alternatively, project proponents in this category may elect to develop, in partnership with Permittees, an equivalent implementation method based on flow duration control in the form of nomographs relating planned impervious area and local soil type (infiltration rates) to determine hydromodification control BMP volume and land area requirements for the proposed project. The nomographs shall be derived from continuous simulation modeling using Ventura County specific rain gauge records and soil types, and calibrated using data from a local undeveloped watershed with similar conditions; or
- (5) Alternatively, the Co-Permittees may revise the Ventura County Technical Guidance Manual for Stormwater Quality Control Measures to address projects that disturb more than 50 acres.

(4) Final Criteria

(A) The Permittees shall develop and implement watershed specific HCPs no later than 180 days after the completion of the SMC HCS.

(i) The HCP shall identify:

- (I) Stream classifications
- (II) Flow rate and duration control methods
- (III) Sub-watershed mitigation strategies
- (IV) Stream restoration measures, which will maintain the stream and tributary Erosion Potential at 1 unless an alternative value can be shown to be protective of the natural drainage systems from erosion, incision, and sedimentation that can occur as a result of flow increases from impervious surfaces and damage stream habitat in natural drainage system tributaries

(B) The HCP shall contain the following elements:

3. Water Quality Mitigation Criteria

(a) Each Permittee shall require all New Development and Redevelopment projects identified in subpart 5.E.II to implement post-construction storm water treatment BMPs and control measures to mitigate storm water pollution as follows:

(1) Projects disturbing land areas less than 50 acres

(A) Volumetric Treatment Control BMP

- (i) The 85th percentile 24-hour runoff event determined as the maximized capture storm water volume for the area using a 48 to 72-hour draw down time, from the formula recommended in *Urban Runoff Quality Management, WEF Manual of Practice No. 23/ASCE Manual of Practice No. 87, (1998)*; or
- (ii) The volume of annual runoff based on unit basin storage water quality volume, to achieve 80 percent or more volume treatment by the method recommended in the Ventura County Technical Guidance Manual for Storm Water Quality Control Measures (July 2002 and its revisions); or
- (iii) The volume of runoff produced from a 0.75 inch storm event, prior to its discharge to a storm water conveyance system;<sup>1</sup> and/ or

(B) Flow Based Treatment Control BMP

- (i) The flow of runoff produced from a rain event equal to at least 0.2 inches per hour intensity; or

<sup>1</sup> This option is available only for construction projects that disturb land area less than 5 acres.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (ii) The flow of runoff produced from a rain event equal to at least 2 times the 85th percentile hourly rainfall intensity as determined from local rainfall records; or
  - (iii) Eight percent of the 50-year storm design flow rate as determined from the method recommended in the Ventura County Technical Guidance Manual for Storm Water Quality Control Measures (July 2002 and its revisions)
- (2) Projects disturbing land area of 50 acres or greater
- (A) Eighty percent of the average runoff volume using an appropriate public domain continuous flow model (such as Storm Water Management Model (SWMM) or Hydrologic Engineering Center – Hydrologic Simulation Program – Fortran (HEC-HSPF), using the local rainfall record and relevant BMP Performance data.

**IV. Implementation**

1. Maintenance Agreement and Transfer

- (a) Prior to issuing approval for final occupancy each Permittee shall require that all new development and redevelopment projects subject to post-construction BMP requirements provide an operation and maintenance plan and verification of ongoing maintenance provisions for LID practices, Treatment Control BMPs, and Hydromodification Control BMPs including but not limited to: final map conditions, legal agreements, covenants, conditions or restrictions, CEQA mitigation requirements, conditional use permits, and/ or other legally binding maintenance agreements.
  - (1) Verification at a minimum shall include the developer's signed statement accepting responsibility for maintenance until the responsibility is legally transferred; and either
    - (A) A signed statement from the public entity assuming responsibility for BMP maintenance; or
    - (B) Written conditions in the sales or lease agreement, which require the property owner or tenant to assume responsibility for BMP maintenance and conduct a maintenance inspection at least once a year; or
    - (C) Written text in project covenants, conditions, and restrictions (CCRs) for residential properties assigning BMP maintenance responsibilities to the Home Owners Association (HOA); or
    - (D) Any other legally enforceable agreement or mechanism that assigns responsibility for the maintenance of BMPs.
- (b) Each Permittee shall require all development projects subject to post-construction BMP requirements to provide a plan for the operation and maintenance of all structural and treatment controls. The Operation and Maintenance plan shall follow the Technical Guidance Manual Appendix D

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

“Maintenance Plan Guidance” (or subsequent guidance manual) for each BMP component. The plan shall be submitted for examination of relevance to keeping the BMPs in proper working order. Where BMPs are transferred to Permittee for ownership and maintenance, the plan shall also include all relevant costs for upkeep of BMPs in the transfer. Operation and Maintenance plans for private BMPs shall be kept on site for periodic review by Permittee inspectors.

2. Tracking, Inspection, and Enforcement of Post-Construction BMPs

(a) Each Permittee shall implement a tracking system, and an inspection and enforcement program for new development and redevelopment post-construction storm water BMPs as set forth in part 5.E no later than (365 days after Order adoption date).

(1) Implement a GIS or other electronic system for tracking projects that have been conditioned for post-construction BMPs. The electronic system, at a minimum, should contain the following information:

- (A) Municipal Project ID
- (B) State WDID No
- (C) Project Acreage
- (D) BMP Type and Description
- (E) BMP Location (coordinates)
- (F) Date of Acceptance
- (G) Date of Maintenance Agreement
- (H) Maintenance Records
- (I) Inspection Date and Summary
- (J) Corrective Action
- (K) Date Certificate of Occupancy Issued
- (L) Replacement or Repair Date

(b) Inspect all development sites upon completion of construction and prior to the issuance of occupancy certificates to ensure proper installation of LID measures, structural BMPs, treatment control BMPs and Hydromodification control BMPs. The inspection may be combined with other inspections provided it is conducted by trained personnel.

(c) Verify proper maintenance and operation of post-construction BMPs previously approved for new development and redevelopment and operated by the Permittees. The post construction BMP maintenance inspection program shall incorporate the following elements:

- (1) Post-construction BMP Maintenance Inspection checklist.
- (2) Inspection at least once every 2 years, beginning (365 days after Order adoption date), of post-construction BMPs to assess operation conditions with particular attention to:
- (3) Criteria and procedures for post construction Treatment Control and Hydromodification Control BMP repair, replacement, or re-vegetation.

T  
E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (d) For post construction BMPs operated and maintained by parties other than the Permittees the Permittees shall require annual reports by the other parties demonstrating proper maintenance and operations.
- (e) Undertake enforcement as appropriate based on the results of the inspection.

3. Alternative Post Construction Storm Water Mitigation Programs

- (a) A Permittee or a coalition of Permittees may apply to the Regional Water Board for approval of a Redevelopment Project Area Master Plan (RPAMP) for redevelopment projects within the Redevelopment Project Areas, in consideration of exceptional site constraints that inhibit site-by-site or project-by-project implementation of post-construction requirements.
- (b) Upon review and a determination by the Regional Water Board Executive Officer that the proposal is technically valid and appropriate, the Regional Water Board may consider for approval such a program if its implementation will:
  - (1) Result in equivalent or superior reduction of storm water pollutant loads in comparison to individual projects regulated by this permit.
  - (2) Satisfy, on a Redevelopment Project Area-wide basis, the hydromodification criteria of this section.
  - (3) Reduce the percentage of Effective Impervious Area (EIA) to a target of less than 5 percent of the Redevelopment Project Area, using properly sized storm water treatment/collection features, as described in this Section.
  - (4) Be fiscally sustainable and have secure funding; and
  - (5) Be completed in four years of the adoption date of this permit.
- (c) The RPAMP should prioritize the implementation of LID storm water mitigation measures, as described in this section.
- (d) A Permittee or a coalition of Permittees may apply to the Regional Water Board for approval of a Redevelopment Project Area Master Plan (RPAMP) that takes into consideration the balancing of water quality protection with the needs for adequate housing, population growth, public transportation and management, land recycling, and urban revitalization.
- (e) For the RPAMP to be considered, a technical panel of the Local Government Commission or an equivalent state or regional planning agency must have reviewed and approved the proposed RPAMP, prior to its submittal to the Regional Water Board. The Regional Water Board Executive Officer may then consider the RPAMP for approval, or elect to submit it to the Regional Water Board for consideration.
- (f) The RPAMP, on approval, may substitute in part or wholly for post-construction requirements.
- (g) Redevelopment Project Areas include the following:
  - (1) City Center areas
  - (2) Historic District areas
  - (3) Brownfield areas
  - (4) Infill Development areas
  - (5) Urban Transit Villages

- (6) Any other redevelopment area so designated by the Regional Water Board
- (h) Nothing in these provisions shall be construed as to delay the implementation of post-construction control requirements, as approved in this Order.

4. Mitigation Funding

- (a) The Principal Permittee or a coalition of Permittees shall create a management framework to fund regional or subregional solutions to storm water pollution, where any of the following situations occur:
  - (1) A waiver for impracticability is granted
  - (2) Funds become available
  - (3) Off-site mitigation is required because of loss of environmental habitat; or
  - (4) An approved watershed management plan, or an integrated water resources management plan, or a regional storm water mitigation plan, or a wetlands recovery plan exists that incorporates an equivalent or improved strategy for storm water pollution mitigation

T  
E  
N

5. Developer Technical Guidance and Information

- (a) The Permittees shall update the Ventura County Technical Guidance Manual for Storm Water Quality Control Measures to include, at a minimum, the following:
  - (1) Hydromodification Control criteria described in this Order, including numerical criteria.
  - (2) Expected BMP pollutant removal performance including effluent quality (ASCE/ U.S. EPA International BMP Database, CASQA New Development BMP Handbook, technical reports, local data on BMP performance, and the scientific literature appropriate for southern California geography and climate).
  - (3) Selection of appropriate BMPs for storm water pollutants of concern.
  - (4) Data on Observed Local Effectiveness and performance of implemented BMPs.
  - (5) BMP Maintenance and Cost Considerations.
  - (6) Guiding principles to facilitate integrated water resources planning and management in the selection of BMPs, including water conservation, groundwater recharge, public recreation, multipurpose parks, open space preservation, and redevelopment retrofits.
  - (7) LID principles and specifications, including the objectives and specifications for integration of LID strategies in the areas of:
    - (A) Site Assessment.
    - (B) Site Planning and Layout.
    - (C) Vegetative Protection, Revegetation, and Maintenance.
    - (D) Techniques to Minimize Land Disturbance.
    - (E) Techniques to Implement LID Measures at Various Scales
    - (F) Integrated Water Resources Management Practices.
    - (G) LID Design and Flow Modeling Guidance.

T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

(H) Hydrologic Analysis.

(I) LID Credits.

- (b) Permittees shall update the Technical Guidance Manual within 365 days of the adoption of this Order.
- (c) The Permittees shall facilitate implementation of LID by providing key industry, regulatory, and other stakeholders with information regarding LID objectives and specifications contained in the LID Technical Guidance Section through a training program. The LID training program will include the following:
  - (1) LID targeted sessions and materials for builders, design professionals, regulators, resource agencies, and stakeholders
  - (2) A combination of awareness on national efforts and local experience gained through LID pilot projects and demonstration projects
  - (3) Materials and data from LID pilot projects and demonstration projects including case studies
  - (4) Guidance on how to integrate LID requirements into the local regulatory program(s) and requirements
  - (5) Availability of the LID Technical Guidance regarding integration of LID measures at various project scales
  - (6) Guidance on the relationship among LID strategies, Source Control BMPs, Treatment Control BMPs, and Hydromodification Control requirements

6. Project Coordination

- (a) Each Permittee shall facilitate a process for effective approval of post-construction storm water control measures. The process shall include:
  - (1) Detailed BMP review including BMP sizing calculations, BMP pollutant removal performance, and municipal approval; and
  - (2) An established structure for communication and delineated authority between and among municipal departments that have jurisdiction over project review, plan approval, and project construction through memoranda of understanding (MOU) or an equivalent agreement.

V. State Statute Conformity

1. California Environmental Quality Act (CEQA) Document Update

- (a) Each Permittee shall incorporate into its CEQA process no later than (6 months from Order adoption date), those additional procedures necessary for considering potential storm water quality impacts and providing for appropriate mitigation when preparing and reviewing CEQA documents.
  - (1) The procedures shall require consideration of the following:
    - (A) Potential impact of project construction on storm water runoff.
    - (B) Potential impact of project post-construction activity on storm water runoff.

T  
E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (C) Potential for discharge of storm water from areas from material storage, vehicle or equipment fueling, vehicle or equipment maintenance (including washing), waste handling, hazardous materials handling or storage, delivery areas or loading docks, or other outdoor work areas.
- (D) Potential for discharge of storm water to impair the beneficial uses of the receiving waters.
- (E) Potential for the discharge of storm water to cause significant harm on the biological integrity of the waterways and waterbodies.
- (F) Potential for significant changes in the flow velocity or volume of storm water runoff to cause harm to or impair the beneficial uses of natural drainage systems.
- (G) Potential for significant increases in erosion at the project site or surrounding areas.

2. General Plan Update

- (a) Each Permittee shall amend, revise or update its General Plan to include watershed and storm water quality and quantity management considerations and policies when any of the following General Plan elements are updated or amended:
  - (1) Land Use
  - (2) Housing
  - (3) Conservation
  - (4) Open Space
- (b) Each Permittee shall provide the Regional Water Board with the draft amendment or revision when a listed General Plan element or General Plan is noticed for comment in accordance with Cal. Govt. Code § 65350 *et seq.*

**F. Development Construction Program**

- I. Each Permittee shall implement a construction program that prevents illicit construction-related discharges of pollutants into the MS4, implements and maintains structural and non-structural BMPs to reduce pollutants in stormwater runoff from construction sites, reduces construction site discharges of pollutants from the MS4 to the MEP, and prevents construction site discharges from the MS4 from causing or contributing to a violation of water quality standards.
  - 1. BMP Implementation - Construction Sites Less Than One Acre

4. Enhanced Construction BMP Implementation.

- (a) Each Permittee shall implement, or require implementation of, enhanced practices that preclude impacts to water quality posed by all construction sites on hillsides as defined in this Order and construction sites that directly discharge to a waterbody listed on the CWA § 303 (d) list for siltation or sediment, or that occur within or directly adjacent to an Environmentally Sensitive Area (ESAs).

T  
E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

Construction sites located on hillsides, adjacent to CWA 303(d) listed waters for siltation or sediment, and directly adjacent to ESAs are termed "High risk sites."  
 (b) Each Permittee shall require implementation of enhanced practices for high risk sites which shall include increased BMP inspection and maintenance requirements.

- (1) Each Permittee shall require that high risk sites shall be inspected by the project proponent's Qualified SWPPP Developer or Qualified SWPPP Practitioner or personnel or consultants who are Certified Professionals in Erosion and Sediment Control (CPESC) at the time of BMP installation, at least weekly during the wet season, and at least once each 24 hour period during a storm event that generates runoff from the site, to identify BMPs that need maintenance to operate effectively, that have failed or could fail to operate as intended.
- (2) During the wet season, the area of disturbance shall be limited to the area that can be controlled with an effective combination of erosion and sediment control BMPs. Enhanced sediment controls should be used in combination with erosion controls and should target portions of the site that cannot be effectively controlled by standard erosion controls described above. Effective sediment and erosion control BMPs proposed by the proponent shall include the BMPs listed in Table 9 below. The project proponents are responsible to implement the BMPs below unless shown unnecessary. The Permittee shall require that the project proponent retain records of the inspection and a determination and rationale of the BMPs selected to control runoff.

(c) The Permittees shall require the project proponent to collect representative samples during wet weather events in accordance with the SWRCB general construction permit or equivalent monitoring program as developed by the Permittees on approval by the Executive Officer.

5. Local Agency Requirements

(a) Each Permittee shall require for all construction sites 1 acre or greater, compliance with all conditions identified in the preceding subparts F.1, - F.5, and the following requirements:

(1) Local Storm Water Pollution Prevention Plan (Local SWPPP),

(A) Each Permittee shall require the preparation and submittal of a Local SWPPP, for the Permittee's review and written approval prior to issuance of a grading or construction permit for construction or

<sup>1</sup> If appropriate given natural background stormwater runoff and receiving water quality conditions.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

demolition projects. The Permittees' approval signature shall be contained within the first pages of the Local SWPPP

- (i) The Permittee shall not approve any Local SWPPP unless it contains appropriate site-specific construction site BMPs, specific locations, and maintenance schedules.
- (ii) The Local SWPPP must include the rationale used for selecting or rejecting BMPs for various construction phases and weather conditions. The project architect, or engineer of record, or authorized qualified designee, must sign a statement on the Local SWPPP to the effect:

(I) *"As the architect/ engineer of record, I have selected appropriate BMPs to effectively minimize the negative impacts of this project's construction activities on storm water quality. The project owner and contractor are aware that the selected BMPs must be installed, monitored, and maintained to ensure their effectiveness. The BMPs not selected for implementation are redundant or deemed not applicable to the proposed construction activity."*

(2) Certification Statement

(A) Each Permittee shall require that each landowner or the landowner's agent sign a statement on the Local SWPPP to the effect:

- (i) *"I certify that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, to the best of my knowledge and belief, the information submitted is true, accurate, and complete. I am aware that submitting false and/ or inaccurate information, failing to update the Local SWPPP to reflect current conditions, or failing to properly and/ or adequately implement the Local SWPPP may result in revocation of grading and/ or other permits or other sanctions provided by law."*

- (ii) The Local SWPPP certification shall be signed by the property owner or owner's representative/designee. If the Local SWPPP or SWPPP is being prepared by the local agency then the appropriate authority of the local agency shall sign the document.

6. Roadway Paving or Repaving Operations (For Private or Public Projects)

- (a) Each Permittee shall require that for any project that includes roadbed or street paving, repaving, patching, digouts, or resurfacing roadbed surfaces, that the following BMPs be implemented for each project.

T  
E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (b) Restrict paving and repaving activity to exclude periods of rainfall or predicted rainfall unless required by emergency conditions
- (c) Install sand bags or gravel bags and filter fabric at all susceptible storm drain inlets and at manholes to prevent spills of paving products and tack coat
- (d) Prevent the discharge of release agents including soybean oil, other oils, or diesel to the storm water drainage system or watercourses
- (e) Minimize non storm water runoff from water use for the roller and for evaporative cooling of the asphalt
- (f) Clean equipment over absorbent pads, drip pans, plastic sheeting or other material to capture all spillage and dispose of properly
- (g) Collect liquid waste in a container, with a secure lid, for transport to a maintenance facility to be reused, recycled or disposed of properly
- (h) Collect solid waste by vacuuming or sweeping and securing in an appropriate container for transport to a maintenance facility to be reused, recycled or disposed of properly
- (i) Cover the "cold-mix" asphalt (i.e., pre-mixed aggregate and asphalt binder) with protective sheeting during a rainstorm
- (j) Cover loads with tarp before haul-off to a storage site, and do not overload trucks
- (k) Minimize airborne dust by using water spray during grinding
- (l) Avoid stockpiling soil, sand, sediment, asphalt material and asphalt grindings materials or rubble in or near storm water drainage system or watercourses
- (m) Protect stockpiles with a cover or sediment barriers during a rain

7. Electronic Site Tracking System

- (a) Each Permittee shall use an electronic system to track grading permits, encroachment permits, demolition permits, building permits, or construction permits (and any other municipal authorization to move soil and/ or construct or destruct that involves land disturbance) issued by each Permittee. To satisfy this requirement, the use of a database or GIS system is encouraged, but not required.

8. Inspections

- (a) Each Permittee shall inspect all construction sites for the implementation of storm water quality controls a minimum of once during the wet season. Concurrently, each Permittee shall ensure that:
  - (1) The Local SWPPP is reviewed for compliance with local codes, ordinances, and permits.
  - (2) A follow-up inspection takes place within two weeks for inspected sites that have not adequately implemented their Local SWPPP.
- (b) Each Permittee shall take additional enforcement actions to achieve compliance as specified in municipal codes, if compliance with municipal codes, ordinances, or permits has not been attained.
- (c) Each Permittee can refer sites to the Regional Water Board for further joint enforcement actions for violation of municipal storm water ordinances and the

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

Construction Activities Storm Water General Permit (CASGP), or Small Linear Underground/ Overhead Construction Projects General Permit (small LUPs), after conducting a minimum of 2 site inspections and issuing a minimum of 2 written notices to the operator regarding the violation (copied to the Regional Water Board). In making such referrals, Permittees shall include, at a minimum, the following documentation:

- (1) Name of the site
- (2) WDID number
- (3) Site developer
- (4) Site owner
- (5) Records of communication with the site operator regarding the violation(s), which shall include at least an inspection report
- (6) Written notice of the violation copied to the Regional Water Board
- (d) Prior to approving and/ or signing off for occupancy and issuing the Certificate of Occupancy for all construction projects subject to post-construction controls, each Permittee shall inspect the constructed site design, source control and treatment control BMPs to verify that they have been constructed in compliance with all specifications, plans, permits, ordinances, and this Order. The initial/ acceptance BMP verification inspection does not constitute a maintenance and operation inspection, as required in the preceding subpart E.IV.2(c).

9. State Conformity Requirements

- (a) Each Permittee shall ensure that no grading permit, encroachment permit, demolition permit, building permit, electrical permit, or construction permit (or any other municipal authorization to move soil and/ or construct or destruct that involves land disturbance) is issued for any project requiring coverage under the CASGP or Small LUP General Permit<sup>1</sup> unless:
  - (1) Proof of filing a Notice of Intent for coverage under a State NPDES permit is demonstrated).
  - (2) Demonstration or Certification that a SWPPP has been prepared by the project developer.
  - (3) Proof of Change of Information form (COI) and a copy of the modified SWPPP(s) at any time a transfer of ownership takes place for the entire development or portions of the common plan of development where construction activities are still on-going.

10. Interagency Coordination

- (a) **Referral of Violations:**

<sup>1</sup> NPDES Permit No. CAS000005, Waste Discharge Requirements For Discharges of Storm Water Runoff Associated with Small Linear Underground/ Overhead Construction Projects (Small LUP General Permit) for any linear land disturbing activity or activities (cumulatively) that will cause one acre or more of land disturbance but not more than 5 acres.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

A Permittee may refer a violator of the municipal storm water ordinance and CWC § 13260 to the Regional Water Board provided that the Permittee has made a good faith effort at progressive enforcement consistent with the preceding subpart F.8(c). At a minimum, the Permittee's good faith effort shall be documented with:

- (1) A minimum of 2 follow-up inspection reports (inspections completed within 3 months).
- (2) A minimum of two warning letters or NOV's.

**(b) Referral of Non-filers under the CASGP or the Small LUP General Permit:**

Each Permittee shall refer non-filers (i.e., those projects which cannot demonstrate that they have a WDID number) under the CASGP or Small LUP General Permit, to the Regional Water Board, no later than 15 days after making a determination of failure to file. In making such referrals, Permittees shall include, at a minimum, the following documentation:

- (1) Project location address
- (2) Project description
- (3) Developer or owners name with complete mailing address
- (4) Project size
- (5) Records of communication with the developer or owner regarding filing requirements

**(c) Investigation of Complaints Regarding Facilities – Transmitted by the Regional Water Board Staff:**

- (1) Each Permittee shall initiate, within one business day,<sup>1</sup> an initial investigation of complaint(s) (other than non-storm water discharges) on the construction site(s) within its jurisdiction.
  - (A) The initial investigation shall include, at a minimum, an inspection on the facility and its perimeter to confirm the complaint and to determine if the site operator is effectively complying with the municipal storm water/ urban runoff ordinances, and to oversee corrective action.

**(d) Support of Regional Water Board Enforcement Actions – As directed by the Regional Water Board Executive Officer:**

- (1) Each Permittee shall support Regional Water Board enforcement actions by:
  - (A) Assisting in identification of current owners, operators, and lessees of properties and sites.
  - (B) Providing staff, when available, for joint inspections with Regional Water Board inspectors.
  - (C) Appearing to testify as witnesses in Regional Water Board enforcement hearings.
  - (D) Providing copies of inspection reports and other progressive enforcement documentation.

<sup>1</sup> Permittees may comply with the Permit by taking initial steps (such as logging, prioritizing, and tasking) to "initiate" the investigation within that one business day. However, the Regional Water Board would expect that the initial investigation, including a site visit, to occur within four business days.

**G. Public Agency Activities Program**

- I. Each Permittee shall implement a Public Agency Activities Program to minimize storm water pollution impacts from public agency activities. Public Agency requirements consist of:
  - i. Public Construction Activities Management.
  - ii. Vehicle Maintenance/ Material Storage Facilities/ Corporation Yards Management/ Municipal Operations.
  - iii. Vehicle and Equipment Wash Areas
  - iv. Landscape and Recreational Facilities Management
  - v. Storm Drain Operation and Management
  - vi. Streets and Roads Maintenance
  - vii. Public Industrial Activities Management
  - viii. Emergency Procedures
  - ix. Employee Training
  - x. Infrastructure Maintenance
  
- 1. Public Construction Activities Management
  - (a) Each Permittee shall implement and comply with the Planning and Land Development Program requirements in part 5.E. of this Order at Permittee owned or operated public construction projects for project types identified in part 5.E of this Order.
  - (b) Each Permittee shall implement and comply with the appropriate Development Construction Program requirements in part 5.F. of this Order at Permittee owned or operated construction projects as applicable.
  - (c) For public projects including those under a Capital Improvement Project Plan that disturb less than one acre of soil the Permittees shall require the development and implementation of a Storm Water Pollution Control Plan. The SWPCP shall include BMPs as identified in Tables 5, 9 and 10.
  
- 2. Vehicle Maintenance/ Material Storage Facilities/ Corporation Yards Management/ Long Term Maintenance Programs
  - (a) Each Permittee shall implement the activity specific BMPs<sup>1</sup> listed in Table 9 when such activities occur at Permittee owned/leased facilities and job sites including but not limited to vehicle/ equipment maintenance facilities, material storage facilities, and corporation yards, and at any area that includes the activities as described in the following Tables. Additionally, for any activity or area

3. Vehicle and Equipment Wash Areas
- (a) Each Permittee shall eliminate discharges of wash waters from vehicle and equipment washing no later than (365 days after Order adoption date) by

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

implementing any of the following measures at existing facilities with vehicle or equipment wash areas:

- (1) Self-contain, and haul off for disposal
  - (2) Equip with a clarifier
  - (3) Equip with an alternative pre-treatment device; or
  - (4) Plumb to the sanitary sewer
- (b) Each Permittee shall ensure that any municipal facilities constructed, redeveloped, or replaced has all vehicle and equipment wash areas plumbed to the sanitary sewer or be self contained and all wastewater/ washwater hauled for legal disposal.

4. Landscape, Park, and Recreational Facilities Management

(a) Integrated Pest Management (IPM)

IPM is an ecosystem-based strategy that focuses on long-term prevention of pests or their damage through a combination of techniques such as biological control, habitat manipulation, modification of cultural practices, and use of resistant varieties. Each Permittee shall implement an IPM program that includes the following:

- (1) Pesticides are used only if, after monitoring indicates they are needed according to established guidelines.
  - (2) Treatments are made with the goal of removing only the target organism.
  - (3) Pest controls are selected and applied in a manner that minimizes risks to human health, beneficial, non-target organisms, and the environment.
  - (4) Its use of pesticides, including Organophosphates and Pyrethroids do not threaten water quality.
  - (5) Partner with other agencies and organizations to encourage the use of IPM.
  - (6) Adopt and verifiably implement policies, procedures, and/ or ordinances requiring the minimization of pesticide use and encouraging the use of IPM techniques (including beneficial insects) in the Permittees' overall operations and on municipal property.
  - (7) Policies, procedures, and ordinances shall include commitments and timelines to reduce the use of pesticides that cause impairment of surface waters by implementing the following procedures:
    - (A) Quantify pesticide use by its staff and hired contractors.
    - (B) Prepare and annually update an inventory of pesticides used by all internal departments, divisions, and other operational units.
    - (C) Demonstrate reductions in pesticide use.
- (b) Each Permittee shall implement the following requirements no later than (180 days after Order adoption date):
- (1) Use a standardized protocol for the routine and non-routine application of pesticides (including pre-emergents), and fertilizers.

T  
E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (2) Ensure no application of pesticides or fertilizers are applied to an area immediately prior to, during, or immediately after a rain event, or when water is flowing off the area.
- (3) Ensure that no banned or unregistered pesticides are stored or applied.
- (4) Ensure that all staff applying pesticides are certified in the appropriate category by the California Department of Pesticide Regulation, or are under the direct supervision of a pesticide applicator certified in the appropriate category.
- (5) Implement procedures to encourage the retention and planting of native vegetation to reduce water, pesticide and fertilizer needs; and
- (6) Store pesticides and fertilizers indoors or under cover on paved surfaces or use secondary containment.
  - (A) Reduce the use, storage, and handling of hazardous materials to reduce the potential for spills.
  - (B) Regularly inspect storage areas.
- (7) Comply with the provisions and the monitoring requirements for application of aquatic pesticides to surface waters (WQ Order No. 2004-0008-DWQ).

5. Storm Drain Operation and Management

(a) Catch Basin Cleaning

- (1) Each Permittee shall designate catch basin inlets within its jurisdiction as one of the following:
  - Priority A: Catch basins that are designated as consistently generating the highest volumes of trash.
  - Priority B: Catch basins that are designated as consistently generating moderate volumes of trash.
  - Priority C: Catch basins that are designated as generating low volumes of trash.

Within one year of Order adoption, Permittees shall submit a map or list of Catch Basins with their GPS coordinates and their designations. The map or list shall contain the rationale or data to support designations.
- (2) Each Permittee shall inspect catch basins according to the following schedule:
  - Priority A: A minimum of 3 times during the wet season and once during the dry season every year.
  - Priority B: A minimum of once during the wet season and once during the dry season every year.
  - Priority C: A minimum of once per year.

Catch basins shall be cleaned as necessary on the basis of inspections. Permittees shall maintain inspection records for Regional Board review.
- (3) In addition to the preceding schedule, Permittees shall ensure that any catch basin that is determined to be at least 25% full of trash shall be cleaned out.

(b) Trash Management at Public Events

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (1) Each Permittee shall require for any event in the public right of way or wherever it is foreseeable that substantial quantities of trash and litter may be generated, the following measures:
  - (A) Proper management of trash and litter generated; and
  - (B) Arrangement for temporary screens to be placed on catch basins; or
  - (C) Provide clean out of catch basins, trash receptacles, and grounds in the event area within 24 hours subsequent to the event.
- (c) Trash Receptacles
  - (1) Each Permittee shall install trash receptacles, or equivalent trash capturing devices in areas subject to high trash generation within its jurisdiction no later than (one year after Order adoption date).
  - (2) Each Permittee shall ensure that all trash receptacles are cleaned out and maintained as necessary to prevent trash overflow.
- (d) Catch Basin Labels
  - (1) Each Permittee shall inspect the legibility of the catch basin stencil or label nearest each catch basin and inlet before the rainy season begins.
  - (2) Each Permittee shall record and re-stencil or re-label within 15 days of inspection, catch basins with illegible stencils.
- (e) Additional Trash Management Practices
  - (1) Each Permittee shall install trash excluders, or equivalent devices on or in catch basins or outfalls to prevent the discharge of trash to the storm drain system or receiving water no later than two years after Order adoption date in areas defined as Priority A (Provision 1a(2)) except in sites where the application of such BMP(s) alone will cause flooding. Lack of maintenance that causes flooding is not an acceptable exception to the requirement to install BMPs. Alternatively the Permittee may implement alternative or enhanced BMPs beyond the provisions of this permit (such as but not limited to increased street sweeping, adding trash cans near trash generation sites, prompt enforcement of trash accumulation, increased trash collection on public property, increased litter prevention messages or trash nets within the MS4) that provide substantially equivalent removal of trash. Permittees shall demonstrate that BMPs, which substituted for trash excluders provide equivalent trash removal performance as excluders. When outfall trash capture is provided, revision of the schedule for inspection and cleanout of catch basins in task (a) may be proposed by the Permittee for approval by the Executive Officer.
- (f) Storm Drain Maintenance
  - (1) Each Permittee shall implement a program for Storm Drain Maintenance no later than (180 days after Order adoption date) that includes the following:
    - (A) Visual monitoring of Permittee-owned open channels and other drainage structures for debris at least annually.
    - (B) Remove trash and debris from open channel storm drains a minimum of once per year before the storm season.

T  
E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (C) Eliminate the discharge of contaminants during MS4 maintenance and clean outs.
- (D) Quantify the amount of materials removed using techniques appropriate for quantifying solid waste and ensure the materials are properly disposed of.
- (g) Spill Response Plan
  - (1) Each Permittee shall implement a response plan for spills to the MS4 within their respective jurisdiction. The response Plan shall clearly identify agencies responsible and telephone numbers and e-mail address for contact and shall contain at a minimum the following:
    - (A) Investigation of all complaints received within 24 hours of the incident report.
    - (B) Response within 2 hours to spills for containment upon notification, except where such overflows occur on private property, in which case the response should be within 2 hours of gaining legal access to the property.
    - (C) Notification to appropriate public health agencies and the Office of Emergency Services (OES).
- (h) Permittee Owned Treatment Control BMPs
  - (1) Each Permittee shall implement an inspection and maintenance program for all Permittee owned treatment control BMPs, including post-construction treatment control BMPs.
  - (2) Each Permittee shall ensure proper operation of all treatment control BMPs and maintain them as necessary for proper operation, including all post-construction treatment control BMPs.
  - (3) Any residual water produced by a treatment control BMP and not being internal to the BMP performance when being maintained shall be:
    - (A) Hauled away and legally disposed of; or
    - (B) Applied to the land without runoff; or
    - (C) Discharged to the sanitary sewer system (with permits or authorization); or
    - (D) Treated or filtered to remove bacteria, sediments, nutrients, and meet the limitations set in Table 11 (Discharge Limitations for Dewatering Treatment BMPs) prior to discharge to the MS4.

6. Streets and Roads Maintenance

(a) Maintenance

- (1) Each Permittee shall perform street sweeping of curbed streets in commercial areas and areas subject to high trash generation to control trash and debris at least two times per month.

(b) Road Reconstruction

- (1) Each Permittee shall require that for any project that includes roadbed or street paving, repaving, patching, digouts, or resurfacing roadbed surfaces, that the following BMPs be implemented for each project.
  - (A) Restrict paving and repaving activity to exclude periods of rainfall or predicted rainfall<sup>1</sup> unless required by emergency conditions.
  - (B) Install sand bags or gravel bags and filter fabric at all susceptible storm drain inlets and at manholes to prevent spills of paving products and tack coat;
  - (C) Prevent the discharge of release agents including soybean oil, other oils, or diesel to the storm water drainage system or watercourses.
  - (D) Minimize non storm water runoff from water use for the roller and for evaporative cooling of the asphalt.
  - (E) Clean equipment over absorbent pads, drip pans, plastic sheeting or other material to capture all spillage and dispose of properly.
  - (F) Collect liquid waste in a container, with a secure lid, for transport to a maintenance facility to be reused, recycled or disposed of properly.
  - (G) Collect solid waste by vacuuming or sweeping and securing in an appropriate container for transport to a maintenance facility to be reused, recycled or disposed of properly.
  - (H) Cover the "cold-mix" asphalt (i.e., pre-mixed aggregate and asphalt binder) with protective sheeting during a rainstorm.
  - (I) Cover loads with tarp before haul-off to a storage site, and do not overload trucks.
  - (J) Minimize airborne dust by using water spray during grinding.
  - (K) Avoid stockpiling soil, sand, sediment, asphalt material and asphalt grindings materials or rubble in or near storm water drainage system or watercourses.
  - (L) Protect stockpiles with a cover or sediment barriers during a rain.

7. Emergency Procedures

- (a) Each Permittee may conduct repairs of essential public service systems and infrastructure in emergency situations with a self-waiver of the provisions of this Order.

- (1) Where the self-waiver has been invoked, the Permittee shall submit to the Regional Water Board Executive Officer a statement of the occurrence of

<sup>1</sup> A probability of precipitation (POP) of 50% is required.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

the emergency, an explanation of the circumstances, and the measures that were implemented to reduce the threat to water quality, no later than 30 business days after the situation of emergency has passed.

- (2) Minor repairs of essential public service systems and infrastructure in emergency situations (can be completed in less than one day) are not subject to the notification provisions. Appropriate BMPs to reduce the threat to water quality shall be implemented.

8. Municipal Employee and Municipal Contractor Training

- (a) Each Permittee shall, no later than (12 months after Order adoption date and annually thereafter before June 30), train all of their employees and contractors in targeted positions (whose interactions, jobs, and activities affect storm water quality) on the requirements of the overall storm water management program to:
  - (1) Promote a clear understanding of the potential for activities to pollute storm water.
  - (2) Identify opportunities to require, implement, and maintain appropriate BMPs in their line of work.
- (b) Each Permittee shall, no later than (12 months after Order adoption date and annually thereafter before June 30), train all of their employees and contractors who use or have the potential to use pesticides or fertilizers (whether or not they normally apply these as part of their work). Training programs shall address:
  - (1) The potential for pesticide-related surface water toxicity.
  - (2) Proper use, handling, and disposal of pesticides.
  - (3) Least toxic methods of pest prevention and control, including IPM.
  - (4) Reduction of pesticide use.
- (c) Each Permittee shall, no later than (12 months after Order adoption date) and annually thereafter before June 30, train all of their employees and contractors who are responsible for illicit connections and illicit/ illegal discharges. Training programs shall address:
  - (1) Identification
  - (2) Investigation
  - (3) Termination
  - (4) Cleanup
  - (5) Reporting of Incidents
  - (6) Documentation of Incidents

**H. Illicit Connections and Illicit Discharges Elimination Program**

- I. Each Permittee shall implement an Illicit Connections and Illicit Discharges (IC/ IDs) program to eliminate IC/IDs to the storm drain system, and shall document, track, and report all such cases in accordance with the elements and performance measures specified in the following subsections.
  - 1. General

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (a) Implementation - Each Permittee shall implement an IC/ ID Program. The IC/ ID procedures shall be documented and made available for public review.
- (b) Tracking - All Permittees shall, no later than (3 years after Order adoption date), map at a scale and in a format specified by the Principal Permittee all known connections to their storm drain system. All Permittees shall map at a scale and in a format specified by the Principal Permittee incidents of illicit connections and discharges since January 2009 on their baseline maps, and shall transmit this information to the Principal Permittee no later than (3 years after Order adoption date). Permittees shall use this information to identify priority areas for further investigation and elimination of IC/ ID.

2. Public Reporting

- (a) Permittees shall establish and maintain a phone hotline and internet site to receive all reports of IC/ ID complaints.
- (b) Permittees shall document the location of the reported IC/ ID and the actions undertaken in response to all IC/ ID complaints.

3. Illicit Connections

(a) Screening for Illicit Connections

- (1) Each Permittee shall submit to the Principal Permittee:
  - (A) A map at a scale and in a format specified by the Principal Permittee showing the location and length of underground pipes 18 inches and greater in diameter, and channels within their permitted area and operated by the Permittee in accordance with the following schedule:
    - (i) All channeled portions of the storm drain system no later than (365 days after Order adoption date).
    - (ii) All portions of the storm drain system consisting of storm drain pipes 36 inches in diameter or greater, (no later than 3 years after Order adoption date).
    - (iii) All portions of the storm drain system consisting of storm drain pipes 18 inches in diameter or greater, (no later than 5 years after Order adoption date).
  - (B) The status of suspected, confirmed, and terminated illicit connections.
- (2) Permittees shall conduct field screening of their storm drain systems in accordance with screening procedures described in the Illicit Discharge Detection and Elimination, A Guidance Manual for Program Development and Technical Assessments (2004)<sup>1</sup>. Permittees shall conduct field screening of their storm drain system that has not been previously screened and reported to the Regional Board, for illicit connections in accordance with the following schedule:

<sup>1</sup> *Illicit Discharge Detection and Elimination, A Guidance Manual for Program Development and Technical Assessments*. The Center for Watershed Protection, Pitt R., October 2004. Chapter 13, 13.1,13.2, 13.3, 13.4

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (A) All portions of the storm drain system consisting of storm drain pipes 36 inches in diameter or greater, no later than (3 years after Order adoption date).
- (B) High priority areas identified during the mapping of illicit connections and discharges, no later than (3 years after Order adoption date).
- (C) All portions of storm drain systems 50 years or older in age, no later than (3 years after Order adoption date).
- (3) Each Permittee shall maintain a list containing all connections under investigation for possible illicit connection and their status.
- (b) Response to Illicit Connections
  - (1) Investigation -  
Each Permittee, upon discovery or upon receiving a report of a suspected illicit connection, shall complete an investigation within 21 days, to determine the following:
    - (A) Source of the connection.
    - (B) Nature and volume of discharge through the connection.
    - (C) Responsible party for the connection.
  - (2) Termination -  
Each Permittee, upon confirmation of an illicit storm drain connection, shall ensure the following:
    - (A) Termination of the connection within 180 days of completion of the investigation, using formal enforcement authority to eliminate the illicit connection.
  - (3) Documentation -  
Each Permittee shall keep records of all illicit connection investigations and the formal enforcement taken to eliminate all illicit connections.

4. Illicit Discharges

- (a) Investigation -  
Each Permittee shall investigate an illicit/ illegal discharge during or immediately following containment and cleanup activities, and shall take appropriate enforcement action to eliminate the illegal discharge.
- (b) Abatement and Cleanup -  
Each Permittee shall respond, within 1 business day of discovery or a report of a suspected illicit/ illegal discharge, with actions to abate, contain, and/or clean up all illegal discharges, including hazardous waste.
- (c) Documentation -  
Each Permittee shall maintain records of all illicit/ illegal discharge discoveries, reports of suspected illicit/ illegal discharges, their response to the illicit/ illegal discharges and suspected illicit/ illegal discharges, and the formal enforcement taken to eliminate all illicit/ illegal discharges.

I. REPORTING PROGRAM

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

1. The Principal Permittee in consultation with the Permittees and Regional Water Board staff shall convene an adhoc working group to develop an Electronic Reporting Program, the basis of which shall be the requirements in this Order. The Committee shall no later than (12 months after Order adoption date) submit the electronic reporting form in each subsequent year.
2. Each Permittee shall submit information required in the Reporting Program in a method as appropriate to the format approved by the Regional Water Board Executive Officer.
3. The Principal Permittee shall submit by December 15<sup>th</sup> of each year, an Annual Report to the Regional Water Board Executive Officer in the form one hard copy and three compact disk (CD) copies (or an electronic equivalent).
4. The Annual Report shall document the status of the Municipal Storm Water Program, an integrated summary of the results of analyses from:
  - (a) The monitoring program described under Part 1- Monitoring Report.
  - (b) The requirements described under Part 2- Program Report.
5. Plans shall be submitted to the Regional Water Board Executive Officer in the form of one hard copy and three compact disk (CD) copies (or an electronic equivalent).
6. Study Reports shall be submitted to the Regional Water Board Executive Officer in the form of one hard copy and three compact disk (CD) copies (or an electronic equivalent).
7. Progress Reports shall be submitted to the Regional Water Board Executive Officer in the form of one hard copy and three compact disk (CD) copies (or an electronic equivalent).

**PART 6 - TOTAL MAXIMUM DAILY LOAD PROVISIONS**

- I. Part 6 of this Order incorporates provisions to assure that Ventura County MS4 permittees comply with WLAs and other requirements of TMDLs covering impaired waters impacted by the permittees' discharges.
- II. Each permittee shall attain the storm water WLAs incorporated into this Order by implementing BMPs in accordance with the MS4 effluent quality workplan and source identification approved by the Executive Officer.
- III. TMDLs in effect and covered in this Order are the following:

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

1. TMDL for Nitrogen Compounds for the Santa Clara River - (Effective date: March 23, 2004).
  2. TMDL for Toxicity, Chlorpyrifos and Diazinon in the Calleguas Creek, its Tributaries and Mugu Lagoon - (Effective date: March 24, 2006).
  3. TMDL for Organochlorine Pesticides, Polychlorinated Biphenyls, and Siltation in Calleguas Creek, its Tributaries and Mugu Lagoon - (Effective date: March 24, 2006).
  4. TMDL for Bacteria in Malibu Creek and Lagoon - (Effective date: January 24, 2006).
  5. TMDL for Metals and Selenium in the Calleguas Creek, its Tributaries and Mugu Lagoon (Effective date: March 26, 2007)
  6. TMDL for Trash in Revolon Slough and Beardsley Wash (Effective date: March 6, 2008).
  7. TMDL for Trash in the Ventura River Estuary (Effective date: March 6, 2008).
  8. TMDL for Bacteria in Harbor Beaches of Ventura County (Effective date: September 23, 2008).
- IV. TMDL Interim WLAs incorporated into this Order due to compliance dates which exceed the term of this Order are the following:
1. Final Wet Weather Bacteria WLAs for Malibu Creek and Lagoon - (Compliance date: January 24, 2016).
  2. Final Organochlorine Pesticides, Polychlorinated Biphenyls, and Siltation WLAs for Calleguas Creek, its Tributaries and Mugu Lagoon - (Compliance date: March 24, 2026).
  3. Final Metals and Selenium WLAs for Calleguas Creek, its Tributaries and Mugu Lagoon (Compliance date: March 26, 2022)
- V. TMDL WLAs and Other TMDL Provisions Incorporated into this Order are as follows:
1. TMDL for Nitrogen Compounds in the Santa Clara River
    - (a) Waste Load Allocations:
      - (1) The Ventura County MS4 permittees discharging to the Santa Clara River (the cities of Fillmore and Santa Paula) ("Santa Clara MS4 permittees") shall implement BMPs to achieve the following MS4 wasteload allocations applicable to River Reach 3:
 

Ammonia nitrogen 30-day average	2.0 mg/L
Ammonia nitrogen 1-hour average	4.2 mg/L
Nitrate + Nitrite nitrogen 30-day average	8.1 mg/L
    - (b) Compliance Monitoring:
      - (1) Compliance with the WLAs is to be determined through receiving water monitoring conducted in accordance with the Santa Clara River Nitrogen TMDL Monitoring Program approved by the Executive Officer.

T  
E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for further enforcement action.
- (c) Actions and Special Studies required of Santa Clara MS4 permittees:
  - (1) Annual Progress Reports. Santa Clara River MS4 permittees, either independently or in conjunction with other stakeholders, shall submit an annual progress report with respect to achievement of the WLAs.
- 2. TMDL for Toxicity, Chlorpyrifos, and Diazinon in the Calleguas Creek, its Tributaries and Mugu Lagoon.
  - (a) Waste Load Allocations:
    - (1) MS4 permittees discharging to Calleguas Creek, its tributaries and Mugu Lagoon (Ventura County Watershed Protection District, County of Ventura and the cities of Camarillo, Moorpark, Oxnard, Simi Valley and Thousand Oaks) ("Calleguas MS4 permittees") shall implement BMPs to achieve the following MS4 WLAs:
 

Toxicity WLA	1.0 TUc
Chlorpyrifos WLA	0.014 ug/L
Diazinon WLA	0.10 ug/L
    - (2) Pursuant to the TMDL, the final storm water WLAs for Toxicity, Chlorpyrifos and Diazinon, listed above, are receiving water concentrations measured in-stream at the base of each subwatershed within the Calleguas Creek watershed.
  - (b) Compliance Monitoring:
    - (1) Compliance with the WLAs is to be determined through the measurement of in-stream water quality at the base of each of the Calleguas Creek subwatersheds, in accordance with the Calleguas Creek Watershed TMDL Monitoring Program approved by the Executive Officer.
    - (2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for further enforcement action.
    - (3) If as a result of compliance monitoring and subsequent investigations it is determined that a Calleguas MS4 permittee is responsible for exceedance of the in-stream Toxicity WLA, that permittee shall initiate the TRE/TIE process as outlined in U.S. EPA's "Understanding and Accounting for Method Variability in Whole Effluent Toxicity Applications Under the National Pollutant Discharge Elimination System Program" (2000) or the approved Toxicity TMDL monitoring plan, and take appropriate action to eliminate the identified source of the toxicity.
  - (c) Actions and Special Studies required of Calleguas MS4 permittees:

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (1) Special Study #1. Together with Calleguas POTW permittees, investigate the pesticides that will replace diazinon and chlorpyrifos in the urban environment, their potential impact on receiving waters and potential control measures. Special Study #1 was completed by March 24, 2008.
  - (2) Special Study #2. Together with Calleguas Agricultural Dischargers, consider results of monitoring of sediment concentrations by source/land use type through the special study required in the Calleguas OC Pesticide, PCB and Siltation TMDL Implementation Plan. Complete within 6 months of completion of the OCs TMDL special study #1.
  - (3) Pesticide Collection Program. Together with Calleguas POTW permittees, develop and implement a collection program for diazinon and chlorpyrifos and an educational program. Collection and education could occur through existing programs such as household hazardous waste collection events. The Pesticide Collection Program is to be implemented by March 24, 2009.
  - (4) Special Study #3. Together with Calleguas Agricultural Dischargers, consider the findings of transport rates developed through the OC Pesticide, PCB and Siltation TMDL Implementation Plan. Complete within 6 months of completion of the OCs TMDL special study #1.
3. TMDL for Organochlorine (OC) Pesticides, Polychlorinated Biphenyls (PCBs) and Siltation in the Calleguas Creek, its Tributaries and Mugu Lagoon.
- (a) Waste Load Allocations:
- (1) MS4 permittees discharging to Calleguas Creek, its tributaries or Mugu Lagoon (Ventura County Watershed Protection District, County of Ventura and the cities of Camarillo, Moorpark, and Simi Valley) ("Calleguas MS4 permittees") shall implement BMPs to achieve the interim WLAs listed in Table 11.

Table 12. Interim Sediment Concentration WLAs (ng/g)

Constituent	Subwatershed					
	Mugu Lagoon	Calleguas Creek	Revolon Slough	Arroyo Las Posas	Arroyo Simi	Conejo Creek
Chlordane	25	17	48	3.3	3.3	3.4
4,4-DDD	69	66	400	290	140	5.3
4,4-DDE	300	470	1600	950	170	20
4,4-DDT	39	110	690	670	25	2
Dieldrin	19	3	5.7	1.1	1.1	3
PCBs	180	3800	7600	25700	25700	3800
Toxaphene	22900	260	790	230	230	260

- (2) Pursuant to the TMDL, the interim storm water WLAs for OC Pesticides, PCBs and Siltation, listed above, are annual average, sediment-based

T

T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

concentrations measured in surface waters at the base of each subwatershed within the Calleguas Creek watershed.

(b) Compliance Monitoring:

- (1) Compliance with the WLAs is to be determined through the measurement of in-stream water quality at the base of each of the Calleguas Creek subwatersheds; in accordance with the Calleguas Creek Watershed TMDL Monitoring Program approved by the Executive Officer.
- (2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for further enforcement action.

(c) Actions and Special Studies required of Calleguas MS4 permittees:

- (1) Pesticide Collection Program. Together with Calleguas POTW permittees, implement a collection program and source control measures pursuant to a work plan approved by the Executive Officer. The Pesticide Collection Program is to be implemented by March 24, 2011.
- (2) Special Study #1. Together with Calleguas POTW permittees, Calleguas Agricultural Dischargers, and the Point Mugu Naval Base, submit a work plan to quantify sedimentation in the Calleguas Creek Watershed, evaluate management methods to control siltation and contaminated sediment transport to Calleguas Creek, identify appropriate BMPs to reduce sediment loadings and evaluate the effect of sediment on habitat preservation in Mugu Lagoon for approval by the Executive Officer. This special study is also to evaluate the concentration of OC pesticides and PCBs in sediments from various sources/land use types. Special Study #1 is to be completed by March 24, 2014.
- (3) Special Study #2. Together with Calleguas Agricultural Dischargers, identify areas of high OC concentrations and evaluate the effects of watershed protection and land use practices on water quality. Such practices include but are not limited to management of sediment reduction practices and structures, streambank stabilization, and other projects related to stormwater conveyance and flood control improvements in the Calleguas Creek watershed. Special Study #2 is to be completed based on the schedule provided in the workplan, submitted in March, 2007
- (4) Special Study #3 – Together with Calleguas POTW permittees, Calleguas Agricultural Dischargers, and the Point Mugu Naval Base, evaluate natural attenuation rates and evaluate methods to accelerate organochlorine pesticide and polychlorinated biphenyl attenuation and examine the attainability of wasteload and load allocations in the Calleguas Creek Watershed. Special Study #3 is to be completed by March 24, 2016.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

4. TMDL for Metals and Selenium in the Calleguas Creek, its Tributaries and Mugu Lagoon.

(a) Waste Load Allocations:

- (1) MS4 permittees discharging to Calleguas Creek, its tributaries or Mugu Lagoon (Ventura County Watershed Protection District, County of Ventura and the cities of Camarillo, Moorpark, Oxnard, Simi Valley and Thousand Oaks) ("Calleguas MS4 permittees") shall implement BMPs to achieve the interim WLAs listed in Table 12 and Table 13.

Table 13. Interim WLAs for Copper, Nickel and Selenium (ug/L)

Constituent	Calleguas and Conejo Creek (a)			Revolon Slough		
	Dry Daily Maximum (ug/L)	Dry Monthly Average (ug/L)	Daily Maximum (ug/L)	Dry Daily Maximum (ug/L)	Dry Monthly Average (ug/L)	Daily Maximum (ug/L)
Copper	23	19	204	23	19	204
Nickel	15	13	(a)	15	13	(a)
Selenium	(b)	(b)	(b)	14(c)	13(c)	(a)

- (A) The current loads do not exceed the TMDL under wet conditions, interim limits are not required
- (B) Selenium allocations have not been developed for this reach as it is not on the 303(d) list
- (C) Attainment of interim limits will be evaluated in consideration of background loading data, if available
- (2) Pursuant to the TMDL, the interim storm water WLAs for copper, nickel, and selenium are receiving water concentrations measured in-stream at the base of Calleguas Creek and Revolon Slough and in Mugu Lagoon.

Table 14. Mass-based WLAs for copper, nickel and selenium

Annual Cumulative Flow (million gallons per year)	Calleguas Creek (lbs/yr)	Revolon Slough (lbs/yr)
0-15,000	3.3	1.7
15,000-25,000	10.5	4
Above 25,000	64.6	10.2

- (3) Pursuant to the TMDL, the interim storm water WLAs for mercury are suspended sediment loads measured in-stream at the base of Calleguas Creek and Revolon Slough and in Mugu Lagoon.
- (4) Determination of the applicable interim WLA will be determined by calculating the total annual flow (October 1-September 30) in the Calleguas Creek watershed as measured by the flow gage at CSUCI.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

(b) Compliance Monitoring:

- (1) Compliance with the WLAs is to be determined through the measurement of in-stream water quality and total suspended solids (TSS) at the base of Calleguas Creek, Revolon Slough and in Mugu Lagoon, in accordance with the Calleguas Creek Watershed TMDL Monitoring Program approved by the Executive Officer.
- (2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for further enforcement action.

(c) Actions and Special Studies required of Calleguas MS4 permittees:

- (1) Conduct a source control study, develop and submit an Urban Water Quality Management Program (UWQMP) for copper, mercury, nickel, and selenium. Complete by March 26, 2009.
- (2) Implement the UWQMP within one year of approval by Executive Officer.
- (3) In cooperation with agricultural dischargers, evaluate the results of the OCs TMDL special study on sediment transport rates for applicability to the metals and selenium TMDL. Complete within 6 months of completion of the OCs TMDL special study #1.
- (4) In cooperation with agricultural dischargers, include monitoring for copper, mercury, nickel and selenium in the OC pesticides TMDL special study – Monitoring of Sediment by Source and Land Use Type. The special study is to be completed by March 26, 2014.
- (5) Evaluate the results of the OC Pesticides TMDL Special Study – Effects of BMPs on Sediment and Siltation, to determine the impacts on metals and selenium. Complete within 6 months of completion of the OC Pesticides special study #1.
- (6) Evaluate the effectiveness of BMPs implemented under the UWQMP in controlling metals and selenium discharges. This is to be completed by March 26, 2013.
- (7) Re-evaluate agricultural and urban waste load allocations for copper, mercury, nickel and selenium based on the evaluation of BMP effectiveness. By March 26, 2012, urban dischargers will have a required 25% reduction in the difference between the loadings at the time of the TMDL preparation and the final WLAs effective in 2022.
- (8) In cooperation with POTW permittees and agricultural dischargers, conduct a study to identify selenium contaminated groundwater sources. Special Study is to be completed within one year of the approval of the workplan.
- (9) In cooperation with agricultural dischargers, conduct a study to investigate metals “hot spots” and natural soils concentrations. This special study is to be completed within 2 years of the approval of the workplan.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- 5. TMDL for Bacteria in Malibu Creek and Lagoon
  - (a) Waste Load Allocations:
    - (1) MS4 permittees discharging to Malibu Creek or its tributaries (Ventura County Watershed Protection District, County of Ventura and the cities of Thousand Oaks and Simi Valley) ("Malibu MS4 permittees") shall achieve the WLAs identified in Resolution 2004-19. . These WLAs are expressed as the number of daily or weekly sample days that may exceed the single sample limits or 30-day geometric mean bacteria targets in Resolution 2004-19.

Table 15 - Bacteria Targets

Parameters	Unit	Fresh Water Targets	
		Geometric Mean	Single Sample
E. coli	mg	126/ 100	235/ 100
Fecal coliform	mg	200/ 100	400/ 100

- (2) The wasteload allocations are to be achieved no later than January 26, 2012.
  - (b) Compliance Monitoring:
    - (1) Achievement of the WLAs is to be determined through receiving water monitoring conducted in accordance with the Santa Monica Bacteria TMDL Compliance Monitoring Program approved by the Executive Officer.
    - (2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for further enforcement action.
  - (c) Actions and Special Studies required of Malibu MS4 permittees:
    - (1) If TMDL compliance monitoring indicates that the Malibu MS4 permittees are causing or contributing to an exceedance of the WLAs in the receiving waters, the permittees shall conduct a source identification study and implement additional controls sufficient to achieve the WLAs in the receiving waters.

- 6. TMDL for Trash in Revolon Slough and Beardsley Wash
  - (a) Wasteload Allocations
    - (1) MS4 permittees discharging to Revolon Slough and Beardsley Wash (Ventura County Watershed Protection District, County of Ventura and the cities of Camarillo and Oxnard) shall implement BMPs to achieve the WLAs of zero trash.
  - (b) Compliance Monitoring
    - (1) Responsible jurisdictions will develop a TMRP for Executive Officer approval that describes the methodologies that will be used to assess and monitor trash in Revolon Slough and Beardsley Wash and/or within

T  
E  
N  
T

T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

responsible jurisdiction land areas. The TMRP shall include a plan to establish the trash Baseline WLAs.

- (2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for further enforcement action.
- (c) Actions and Special Studies required of Revolon Slough and Beardsley Wash MS4 permittees
  - (1) Per the adopted Basin Plan Amendment, compliance with the TMDL may be either through a progressive implementation schedule of full capture devices or implementation of other measures to attain the required trash reduction.

7. TMDL for Trash in the Ventura River Estuary

- (a) Wasteload Allocations
  - (1) MS4 permittees discharging to the Ventura River Estuary (Ventura County Watershed Protection District, County of Ventura and the City of Ventura) shall implement BMPs to achieve the WLAs of zero trash.
- (b) Compliance Monitoring
  - (1) Responsible jurisdictions will develop a TMRP for Executive Officer approval that describes the methodologies that will be used to assess and monitor trash in the Ventura River Estuary and/or within responsible jurisdiction land areas. The TMRP shall include a plan to establish the trash Baseline WLAs.
  - (2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for further enforcement action.
- (c) Actions and Special Studies required of Revolon Slough and Beardsley Wash MS4 permittees
  - (1) Per the adopted Basin Plan Amendment, compliance with the TMDL may be either through a progressive implementation schedule of full capture devices or implementation of other measures to attain the required trash reduction.

8. TMDL for Bacteria in Harbor Beaches of Ventura County

- (a) Waste Load Allocations
  - (1) MS4 permittees discharging to the Channel Islands Harbor Beaches (the County of Ventura, the Ventura County Watershed Protection District (VCWPD) and associated Municipal Separate Storm Sewer System (MS4) permittees in the Channel Islands Harbor subwatershed, and the City of

I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

Oxnard shall implement BMPs to achieve the interim WLAs listed in Table 15. All WLAs for summer dry-weather single sample bacteria densities at the Harbor Beaches of Ventura County are zero (0) days of allowable exceedances; winter dry weather and wet weather final WLAs are listed in Table 17 below.

The Basin Plan objectives that serve as the numeric targets for this TMDL are (single sample limits):

- a. Total coliform density shall not exceed 10,000/100 ml.
- b. Fecal coliform density shall not exceed 400/100 ml.
- c. Enterococcus density shall not exceed 104/100 ml.
- d. Total coliform density shall not exceed 1,000/100ml, if the ratio of fecal-to-total coliform exceeds 0.1.

Table 16. Interim WLAs for Single Sample Exceedance Days

Location	Summer Dry Weather		Winter Dry Weather		Wet Weather	
	Daily Sampling	Weekly Sampling	Daily Sampling	Weekly Sampling	Daily Sampling	Weekly Sampling
Kiddie Beach	54	8	23	4	32	5
Hobie Beach	40	6	25	4	38	6

Table 17. Final Allowable Exceedance Days by Location

Location	Summer Dry-weather		Winter Dry-weather		Wet-weather	
	Daily Sampling	Weekly Sampling	Daily Sampling	Weekly Sampling	Daily Sampling	Weekly Sampling
Hobie Beach	0	0	3	1	17	3
Kiddie Beach	0	0	3	1	17	3

- (2) Pursuant to the TMDL, the interim storm water WLAs for bacteria are from samples taken at existing monitoring sites in ankle to knee- high depths.
- (b) Compliance Monitoring
  - (1) Compliance and monitoring for Harbor Beaches of Ventura County is based on existing monitoring protocols and locations. Monitoring shall continue at sampling locations (VCEHD 36000 and VCEHD37000) and at the current weekly monitoring frequency, consistent with AB411 compliance monitoring. Monitoring shall be conducted on a year-round basis at the current monitoring locations including the summer months (i.e., April to October) and winter months (i.e., November to March).

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

Bacteria sampling shall be conducted in ankle- to knee-high water, consistent with AB411. However, if additional monitoring stations are added or if changes are made to the sampling frequencies or existing monitoring locations, then submittal of a monitoring plan is required for Executive Officer approval.

- (2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for further enforcement action.
- (c) Actions and Special Studies required of Harbor Beaches of Ventura County MS4 permittees
  - (1) Per the adopted Basin Plan Amendment, compliance with the TMDL may be either through structural and non-structural BMPs or implementation of other measures to attain the required source control.
  - (2) Special studies are not required for implementation of the TMDL though conducting special studies is within the discretion of the responsible parties.

**PART 7 - DEFINITIONS**

The following are definitions for terms in this Order:

**Adverse Impact** - means a detrimental effect upon water quality or beneficial uses caused by a discharge or loading of a pollutant or pollutants.

**Agriculture** - means the science, art, and business of cultivating the soil, producing crops, and raising livestock.

**Antidegradation Policies** - means policies which protect surface and ground waters from degradation, and federal policies, which protect high quality surface waters. In particular, this policy protects waterbodies where existing quality is higher than that necessary for the protection of beneficial uses including the protection of fish and wildlife propagation and recreation on and in the water (*Statement of Policy with Respect to Maintaining High Quality Water in California*, State Board Resolution No. 68-16; 40 CRF 131.12).

**Applicable Standards and Limitations** - means all State, interstate, and Federal standards and limitations to which a "discharge" or a related activity is subject under the CWA, including effluent limitations, water quality standards, standards of performance, toxic effluent standards or prohibitions, best management practices, and pretreatment standards under § 301, § 302, § 303, § 304, § 306, § 307, § 308, § 403, and § 404 of CWA.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

**Areas of Special Biological Significance (ASBS)** - means all those areas of this state listed as ASBS, listed specifically within the California Ocean Plan or so designated by the State Board which, among other areas, includes the area from Mugu Lagoon to Latigo Point: Oceanwater within a line originating from Laguna Point at 34° 5' 40" north, 119° 6' 30" west, thence southeasterly following the mean high tideline to a point at Latigo Point defined by the intersection of the mean high tide line and a line extending due south of Benchmark 24; thence due south to a distance of 1000 feet offshore or to the 100 foot isobath, whichever distance is greater; thence northwesterly following the 100 foot isobath or maintaining a 1,000-foot distance from shore, whichever maintains the greater distance from shore, to a point lying due south of Laguna Point, thence due north to Laguna Point.

**Authorized Discharge** - means any discharge that is authorized pursuant to an NPDES permit, waste discharge requirement, conditional waiver from waste discharge requirements, or meets the conditions set forth in this Order.

**Automotive Repair Shop** - means a facility that is categorized in any one of the following Standard Industrial Classification (SIC) codes: 5013, 5014, 5541, 7532-7534, or 7536-7539.

**Automotive Service Facilities** - means a facility that is categorized in any one of the following Standard Industrial Classification (SIC) and North American Industry Classification System (NAICS) codes. For inspection purposes, Permittees need not inspect facilities with SIC codes 5013, 5014, 5541, 5511, provided that these facilities have no outside activities or materials that may be exposed to storm water.

SIC Code	Corresponding NAICS Code
5013	425120, 441310, 425110, & 423120
5014	425120, 425110, 423130, & 441320
5511	441110
5541	447110, & 447190
7532	811121
7533	811112
7534	326212, & 811198
7536	811122
7537	811113
7538	811111
7539	811198, & 811118

**Bacteria Total Maximum Daily Load (TMDL) Dry Weather** - defined in the Bacteria TMDLs as those days with less than 0.1 inch of rainfall and those days occurring more than 3 days after a rain.

**Bacteria Total Maximum Daily Load (TMDL) Wet Weather** - defined in the Bacteria TMDLs as a day with 0.1 inch or more of rain and 3 days following the rain event.

T  
E  
N  
T  
A  
T  
I  
V  
E

**Basin Plan** - means the Water Quality Control Plan, Los Angeles Region, Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties, adopted by the Regional Water Board on June 13, 1994 and subsequent amendments.

**Beneficial Uses** - means the existing or potential uses of receiving waters in the permit area as designated by the Regional Water Board in the Basin Plan.

**Best Management Practices (BMPs)** - means methods, measures, or practices designed and selected to reduce or eliminate the discharge of pollutants to surface waters from point and nonpoint source discharges including storm water. BMPs include structural and nonstructural controls, and operation and maintenance procedures, which can be applied before, during, and/or after pollution producing activities.

**California Environmental Quality Act (CEQA)** - means a California statute that requires state and local agencies to identify significant environmental impacts of their actions and to avoid or mitigate those impacts, if feasible (Reference: California Public Resources Code § 21000 et seq.)

**Channel** - means an open conduit either naturally or artificially created which periodically or continuously contains moving water, or which forms a connecting link between two waterbodies.

**Chronic Toxicity** - means a measurement of a sublethal effect (e.g., reduced growth, reproduction) to experimental test organisms exposed to an effluent or ambient waters compared to that of the control organisms.

**Commercial Area(s)** - means any geographic area of the Permittees' jurisdiction that is not heavy industrial or residential. A commercial area includes, but is not limited to areas surrounding: commercial activity, hospitals, laboratories and other medical facilities, educational institutions, recreational facilities, plant nurseries, car wash facilities, mini-malls and other business complexes, shopping malls, hotels, office buildings, public warehouses and other light industrial complexes.

**Commercial Development** - means any development on private land that is not heavy industrial or residential. The category includes, but is not limited to: hospitals, laboratories and other medical facilities, educational institutions, recreational facilities, plant nurseries, car wash facilities, mini-malls and other business complexes, shopping malls, hotels, office buildings, public warehouses and other light industrial complexes.

**Construction** - Construction activity includes any construction or demolition activity, clearing, grading, grubbing, or excavation or any other activity that results in a land disturbance. Construction does not include emergency construction activities required to immediately protect public health and safety or routine maintenance activities required to maintain the integrity of structures by performing minor repair and restoration work, maintain original line and grade,

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

hydraulic capacity, or original purpose of the facility. See "Routine Maintenance" definition for further explanation. Where clearing, grading or excavating of underlying soil takes place during a repaving operation, State General Construction Permit coverage is required if more than one acre is disturbed or the activities are part of a larger plan.

**Construction Activities Storm Water General Permit (CASGP)** - means the general NPDES permit adopted by the State Board, which authorizes the discharge of storm water from construction activities under certain conditions.

**Control** - means to minimize, reduce, eliminate, or prohibit by technological, legal, contractual or other means, the discharge of pollutants from an activity or activities.

**Critical Sources** - means commercial facilities and businesses that have a potential to contribute pollutants to stormwater runoff if effective BMPs are not implemented. Attachment "D" specifies the commercial facilities and businesses that have been identified as Critical Sources.

**Dechlorinated/ Debrominated Swimming Pool Discharge** - means any swimming pool discharge with a residual chlorine or bromine level of 0.1mg/L or less; and does not contain any detergents, wastes, algaecides, or cyanuric acid in excess of 50 ppm, or any other chemicals including salts from pools commonly referred to as "salt water pools". The term does not include swimming pool filter backwash or swimming pool water containing bacteria.

**Development** - means any construction, rehabilitation, redevelopment or reconstruction of any public or private residential project (whether single-family, multi-unit or planned unit development); industrial, commercial, retail and any other non-residential projects, including public agency projects; or mass grading for future construction.

**Directly Adjacent** - means situated within 200 feet of the contiguous zone required for the continued maintenance, function, and structural stability of the environmentally sensitive area.

**Directly Discharging** - means outflow from a drainage conveyance system that is composed entirely or predominately of flows from the subject, property, development, subdivision, or industrial facility and not commingled with the flows from adjacent lands.

**Discharge** - means when used without qualification the "discharge of a pollutant."

**Discharging Directly** - means outflow from a drainage conveyance system that is composed entirely or predominantly of flows from the subject, property, development, subdivision, or industrial facility, and not commingled with the flows from adjacent lands.

**Discharge of a Pollutant** - means any addition of any "pollutant" or combination of pollutants to "waters of the United States" from any "point source" or, any addition of any pollutant or

T  
E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

combination of pollutants to the waters of the "contiguous zone" or the ocean from any point source other than a vessel or other floating craft, which is being used as a means of transportation. The term discharge includes additions of pollutants into waters of the United States from: surface runoff which is collected or channeled by man; discharges through pipes, sewers, or other conveyances owned by a State, municipality, or other person which do not lead to a treatment works; and discharges through pipes, sewers, or other conveyances, leading into privately owned treatment works.

**Disturbed Area** - means any area that is altered as a result of land disturbance. Examples include but are not limited to: clearing, grading, grubbing, stockpiling and/ or excavation, etc...

**Dry Day** - means a non-wet day for Malibu Creek and Lagoon Bacteria TMDL WLA. A wet day is defined as a day with a 0.1 inch or more of rain and 3 days following the rain event is a non-wet day for Bacteria TMDL WLA.

**Effect Concentration (EC)** is a point estimate of the toxicant concentration that would cause an observable adverse effect (e.g., death, immobilization, or serious incapacitation) in a given percent of the test organisms, calculated from a continuous model (e.g., Probit Model). EC<sub>25</sub> is a point estimate of the toxicant concentration that would cause an observable adverse effect in 25 percent of the test organisms.

**Effective Impervious Surface** - means that portion of the surface area that is hydrologically connected via sheet flow over a hardened conveyance or impervious surface without any intervening medium to mitigate flow volume.

**Effluent limitation** - means any restriction imposed by the Permitting Authority (PA) on quantities, discharge rates, concentrations, and/ or mass loadings of "pollutants" which are "discharged" from "point sources" into "waters of the United States," the waters of the "contiguous zone," or the ocean.

**Emergency** - means a sudden, unexpected occurrence, involving a clear and imminent danger, demanding immediate action to prevent or mitigate loss of, or damage to, life, health, property, or essential public services. "Emergency" includes such occurrences as fire, flood, earthquake, or other soil or geologic movements, as well as such occurrences as riot, accident, or sabotage. (Reference: California Public Resources Code § 21060.3. Emergency).

**End-of-Pipe** - means the end of the major outfall as defined in 40 CFR122.26 (b)(5) and 40 CFR122.26 (b)(6).

**Endpoint** - means a biological measurement used to quantify the results obtained from analytical methods such as whole effluent toxicity testing [e.g., lethal concentration (LC<sub>50</sub>); inhibition concentration (IC<sub>25</sub>); and no observed effect concentration (NOEC)]. Such endpoints are quantitative measurements of the responses of test organisms (e.g., survival, growth, mobility,

T  
E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

reproduction, and weight gain or loss) in response to exposure to a serial dilution of effluent.

**Environment** - means the physical conditions, which exist within the area and which will be affected by a proposed project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historical or aesthetic significance. The area involved shall be the area in which significant effects would occur either directly or indirectly as a result of the project. The "environment" includes both natural and man-made conditions.

**Environmentally Sensitive Area (ESA)** - means an area "in which plant or animal life or their habitats are either rare or especially valuable because of their special nature or role in an ecosystem and which would be easily disturbed or degraded by human activities and developments" (Reference: California Public Resources Code § 30107.5). ESAs will include Clean Water Act 303d Listed Water Bodies in all reaches that are unimproved, all California Coastal Commission's Environmentally Sensitive Habitat Areas as delineated on maps in Local Coastal Plans and Regional Water Quality Control Board's Basin Plan Rare, Threatened or Endangered Species (RARE) and Preservation of Biological Habitats (BIOL) designated waterbodies. The California Department of Fish and Game's Significant Natural Areas map will be considered for inclusion as the department field verifies the designated locations. Watershed restoration projects will be considered for inclusion as the department field verifies the designated locations.

**Erosivity Factor** - The Erosivity Factor is a criterion that to assess the risk of erosion on disturbed land. It is described in "Predicting soil erosion by water: A guide to conservation planning with the Revised Universal Soil Loss Equation (RUSLE), Agricultural Handbook 703, USDA-ARS, U.S. Government Printing Office, Washington, D.C., 1997 by Renard, K.C., G.R. Foster, G.A. Weesies, D.K. McCool, and D.C. Yoder.

**Federal Clean Water Act (CWA)** - means (formerly referred to as the Federal Water Pollution Control Act or Federal Water Pollution Control Act Amendments of 1972) Public Law 92—500, as amended by Public Law 95—217, Public Law 95—576, Public Law 96—483 and Public Law 77—117, codified at 33 U.S.C. 1251 et seq.

**First Storm Event** - means the first storm event of the wet season that produces at least 0.25 inches of rain.

**Forest Land** - means land at least 10 percent stocked with live trees, or land that had this minimum tree stocking in the past and is not currently developed for nonforest use. The minimum area recognized is 1 acre.

**Groundwater Dewatering** - means the active practice of removing standing water from soil excavations using a pump(s) or other means.

**Hillside** - means property located in an area with known erosive soil conditions, where the

T  
E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

development will result in grading on any slope that is 20% or greater or an area designated by the Municipality under a General Plan or ordinance as a "hillside area".

**Horse Stables** - means a property where at least one horse is stabled at least part of the year.

**Hydromodification** - means the alteration away from a natural state of stream flows or the beds or banks of rivers, streams, or creeks, including ephemeral washes, which results in hydrogeomorphic changes.

**Illegal Discharge** - means any discharge to the municipal separate storm sewer (storm drain system) that is prohibited under local, state, or federal statutes, ordinances, codes, or regulations. The term illegal discharge includes all non-storm water discharges not composed entirely of storm water except discharges pursuant to an NPDES permit, discharges that are identified in part 1, "Discharge Prohibitions" of this order, or discharges authorized by the Regional Water Board Executive Officer.

**Illicit Connection** - means any engineered conveyance that is connected to the storm drain system without a permit or municipal authorization. It also means any engineered conveyance through which discharges of pollutants to the separate storm drainage systems, which are not composed entirely of storm water or are not authorized by an NPDES permit, may occur.

**Illicit Discharge** - means any discharge to a municipal separate storm sewer (storm drain system) that is prohibited under local, state, or federal statutes, ordinances, codes, or regulations. The term illicit discharge includes all non-storm water discharges not composed entirely of storm water except discharges pursuant to a NPDES permit (other than the NPDES permit for discharges from the municipal separate storm sewer) and discharges that are identified in part 1, "Discharge Prohibitions" of this order, or authorized by the Regional Water Board Executive Officer.

**Illicit Disposal** - means any disposal, either intentionally or unintentionally, of material(s) or waste(s) that can pollute storm water.

**Industrial/ Commercial Facility** - means any facility involved and/ or used in the production, manufacture, storage, transportation, distribution, exchange or sale of goods and/ or commodities, and any facility involved and/ or used in providing professional and non-professional services. This category of facilities includes, but is not limited to, any facility defined by either the Standard Industrial Classifications (SIC) or the North American Industry Classification System (NAICS). Facility ownership (federal, state, municipal, private) and profit motive of the facility are not factors in this definition.

**Industrial Activities Storm Water General Permit (IASGP)** - means the general NPDES permit adopted by the State Board, which authorizes the discharge of storm water from certain industrial activities under certain conditions.

T  
E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

**Industrial Park** - means a land development that is set aside for industrial development. Industrial parks are usually located close to transport facilities, especially where more than one transport modalities coincide: highways, railroads, airports, and navigable rivers. It includes office parks, which have offices and light industry.

**Inhibition Concentration (IC)** - means a point estimate of the toxicant concentration that would cause a given percent reduction in a non-lethal biological measurement (e.g., reproduction or growth), calculated from a continuous model (i.e., Interpolation Method). IC25 is a point estimate of the toxic concentration that would cause a 25-percent reduction in a non-lethal biological measurement.

**Inspection** - means entry and the conduct of an on-site review of a facility and its operations, at reasonable times, to determine compliance with specific municipal or other legal requirements. The steps involved in performing an inspection, include, but are not limited to:

1. Pre-inspection documentation research
2. Request for entry
3. Interview of facility personnel
4. Facility walk-through
5. Visual observation of the condition of facility premises
6. Examination and copying of records as required
7. Sample collection (if necessary or required)
8. Exit conference (to discuss preliminary evaluation)
9. Report preparation, and if appropriate, recommendations for coming into compliance

**Integrated Pest Management (IPM)** - means a sustainable approach to managing pests by combining biological, cultural, physical and chemical tools in a way that minimizes economic, health, and environmental risks.

**Large Municipal Separate Storm Sewer System (MS4)** - means all MS4s that serve a population greater than 250,000 (1990 Census) as defined in 40 CFR122.26 (b)(4). The Regional Water Board designated Ventura County as a large MS4 in 1990, based on: (i) the U.S. Census Bureau 1990 population count of 669,016 thousand, and (ii) the interconnectivity of the MS4s in the incorporated and unincorporated areas within the County.

**Local SWPPP** - means the Local Storm Water Pollution Prevention Plan (LSWPPP) required by the local agency for a project that disturbs one or more acres of land. Shall mean a plan identifying potential pollutant sources from a construction site and describing proposed design, placement and implementation of BMPs, to effectively prevent non-storm water discharges and reduce pollutants in storm water discharges to the storm drain system, during construction activities. Also referred as a Storm Water Pollution Control Plan (SWPCP).

T  
E  
N  
T  
A  
T  
I  
V  
E

**Low Impact Development (LID)** – means a design strategy with the goal of maintaining or replicating the pre-development hydrologic regime through the use of design techniques to create a functionally equivalent hydrologic site design. Hydrologic functions of storage, infiltration and ground water recharge, as well as the volume and frequency of discharges are maintained through the use of integrated and distributed micro-scale storm water retention and detention areas, reduction of impervious surfaces, and the lengthening of runoff flow paths and flow time. Other strategies include the preservation/protection of environmentally sensitive site features such as riparian buffers, wetlands, steep slopes, valuable (mature) trees, flood plains, woodlands, and highly permeable soils.

**Major Municipal Separate Storm Sewer Outfall (“or major outfall”)** - means a major municipal separate storm sewer outfall that discharges from a single pipe with an inside diameter of 36 inches or more or its equivalent (discharge from a single conveyance other than circular pipe which is associated with a drainage area of more than 50 acres); or for municipal separate storm sewers that receive storm water from lands zoned for industrial activity (based on comprehensive zoning plans or the equivalent), an outfall that discharges from a single pipe with an inside diameter of 12 inches or more or from its equivalent (discharge from other than a circular pipe associated with a drainage area of 2 acres or more), as defined in 40 CFR 122.26 (b)(5).

**Major Outfall** - means a major municipal separate storm sewer outfall, as defined in 40 CFR 122.26 (b)(6).

**Maximum Extent Practicable (MEP)** – The technology-based permit requirement established by Congress in CWA section 402(p)(3)(B)(iii) that municipal dischargers of storm water must meet. Technology-based requirements, including MEP, establish a level of pollutant control that is derived from available technology or other controls. MEP requires municipal dischargers to perform at maximum level that is practicable. Compliance with MEP may be achieved by emphasizing pollution prevention and source control BMPs in combination with structural and treatment methods where appropriate. The MEP approach is an ever evolving and advancing concept, which considers technical and economic feasibility.

**Method Detection Limit (MDL)** - means the minimum concentration of a substance that can be measured and reported with 99 percent confidence that the analyte concentration is greater than zero, as defined in 40 CFR 136, Appendix "G" of this Order.

**Minimum Level (ML)** - means the concentration at which the entire analytical system must give a recognizable signal and acceptable calibration point. The ML is the concentration in a sample that is equivalent to the concentration of the lowest calibration standard analyzed by a specific analytical procedure, assuming that all the method specified sample weights, volumes, and processing steps have been followed. The ML value represents the lowest quantifiable concentration in a sample based on the proper application of all method-based analytical procedures and the absence of any matrix interferences. Assuming that all method-specific

T  
E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

analytical steps are followed, the ML value will also represent, after the appropriate application of method-specific factors, the lowest standard in the calibration curve for that specific analytical technique.

**Minimum Significant Difference (MSD)** - means a measure of test sensitivity that establishes the minimum difference required between a control and a test treatment in order for that difference to be considered statistically significant.

**Municipal Action Levels (MALs)** – means an action level that is derived from a statistical analysis of relevant data that is utilized to identify areas and subwatersheds that require additional or improved BMPs to reduce the discharge of pollutants to the maximum extent practicable. MALs may be revised as additional data are obtained so that MALs can continue to be used to effectively prioritize BMP implementation as the storm water program progresses. MALs are one measure of the effectiveness of the storm water program. MALs are not effluent limitations as defined by this Order, and/or as defined by Water code section 13385.1(c).

**Municipal Separate Storm Sewer System (MS4)** - means a conveyance or system of conveyances (including roads w/ drainage systems, municipal streets, catch basins, curbs, gutters, ditches, manmade channels, or storm drains), as defined in 40 CFR122.26(b)(8):

1. Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under § 208 of the Federal Clean Water Act (CWA) that discharges into waters of the United States
2. Designed or used for collecting or conveying storm water
3. Which is not a combined sewer
4. Which is not part of a Publicly Owned Treatment Works (POTW), as defined in 40 CFR122.2

**NAICS** - means North American Industry Classification System.

**National Pollutant Discharge Elimination System (NPDES)** - means the national program for issuing, modifying, revoking and reissuing, terminating, monitoring and enforcing permits, and imposing and enforcing pretreatment requirements, under CWA § 307, 402, 318, and 405.

**Natural Drainage Systems** - means unlined or unimproved (not engineered) creeks, streams, rivers or similar waterways.

**New Development** - means land disturbing activities; structural development, including construction or installation of a building or structure, creation and replacement of impervious surfaces; and land subdivision.

E

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

**Non-Storm Water Discharge** - means any discharge to a storm drain that is not composed entirely of storm water.

**No Observed Effect Concentration (NOEC)** - means the highest tested concentration of an effluent or toxicant that causes no observable adverse effect on the test organisms (i.e., the highest concentration of toxicant at which the values for the observed responses are not statistically different from the controls).

**Nuisance** - means anything that meets all of the following requirements: (1) is injurious to health, or is indecent or offensive to the senses, or an obstruction to the free use of property, so as to interfere with the comfortable enjoyment of life or property; (2) affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal.; (3) occurs during, or as a result of, the treatment or disposal of wastes.

**Nursery** - means NAICS classification to describe nursery operations and determine the type of operations covered under this Order and those covered under the Conditional Waiver of Waste Discharge Requirements for Discharges from Irrigated Lands (Conditional Waiver).

1. There are 3 broad NAICS sectors available to classify nurseries:

- (1) 111xxx - Crop Production - Agriculture
- (a) 424xxx - Merchant Wholesalers, Nondurable Goods
- (b) 44xxxx - Retail Trade

(1) **Nursery (Agricultural Facilities - Crop Production)** - means Nursery and Floriculture Production under NAICS Code 11142x. These operations are subject to the **Conditional Waiver**. This industry comprises establishments primarily engaged in (1) growing nursery and floriculture products (e.g., nursery stock, shrubbery, cut flowers, flower seeds, foliage plants, sod) under cover or in open fields and/ or (2) growing short rotation woody trees with a growing and harvesting cycle of 10 years or less for pulp or tree stock (e.g., cut Christmas trees, cottonwoods).

(2) **Nursery (Commercial Facilities - Merchant Wholesalers, Nondurable Goods, and Retail Trade)** - means industries Flower, Nursery Stock, and Florists' Supplies Merchant Wholesalers under NAICS Code 424930; and Nursery, Garden Center, and Farm Supply Stores under NAICS Code 444220. This Order covers these types of operations. The industry in NAICS Code 424930 comprises establishments primarily engaged in the merchant wholesale distribution of flowers, florists' supplies, and/ or nursery stock (except plant seeds and plant bulbs). The industry in NAICS Code 444220 comprises establishments primarily engaged in retailing nursery and garden products, such as trees, shrubs, plants, seeds, bulbs, floriculture products and sod, which are predominantly grown elsewhere. These establishments may sell a limited amount of a product they grow themselves.

E

**Open Channel** - means a storm drainage channel that is not a natural water course.

**Parking Lot** - means land area or facility for the parking or storage of motor vehicles used for businesses, commerce, industry, or personal use.

**Percent Minimum Significant Difference (PMSD)** - means the minimum significant difference divided by the control mean, expressed as a percent (see minimum significant difference).

**Permit** - means an authorization, license, or equivalent control document issued by U.S. EPA or an "approved State" to implement the requirements of 40 CFR Parts 122, 123, and 124. "Permit" includes an NPDES "general permit" (§ 122.28). Permit does not include any permit, which has not yet been the subject of final agency action, such as a "draft permit" or a "proposed permit."

**Permittee(s)** - means co-permittee(s) and any agency named in this Order as being responsible for permit conditions within its jurisdiction, as defined by Federal Regulation. Permittees to this Order include the Ventura Water Protection District, Ventura County, and the cities of Camarillo, Fillmore, Moorpark, Ojai, Oxnard, Port Hueneme, San Buenaventura, Santa Paula, Simi Valley and Thousand Oaks.

**Point Source** - means any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged. This term does not include agricultural storm water discharges and return flows from irrigated agriculture.

**Point Zero** - means in the context of the TMDLs, the point at which water from the storm drain or creek initially mixes with water. Point zero has been selected as the compliance point for the TMDL numeric target because access to these drains is, on the whole, not restricted.

**Pollutants** - means those "pollutants" defined in CWA § 502(6) (33.U.S.C.§ 1362(6)), and incorporated by reference into California Water Code § 13373.

**Pollutants of Concern** - means constituents that have exceeded Basin Plan Objectives, and CTR- Chronic or Acute Objectives during monitoring at Mass Emission, Receiving Water, and Land Use stations.

**Potable Water Sources** - means the potable water system for the treatment, distribution, and provision of water for residential, commercial, industrial, or institutional use that meets all California safe drinking water regulatory standards for human consumption.

**Pre-Developed Condition** - means native vegetation and soils that existed at a site prior to first development. The pre-developed condition may be assumed to be an area with the typical

T  
E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

vegetation, soil, and storm water runoff characteristics of open space areas in coastal Southern California unless reasonable historic information is provided that the area was atypical.

**Priority Pollutants** - means those constituents referred to in 40 CFR401.15 and listed in the U.S. EPA NPDES Application Form 2C, pp. V-3 through V-9.

**Project** - means all development, redevelopment, and land disturbing activities. The term is not limited to "Project" as defined under CEQA (Reference: California Public Resources Code § 21065).

**Qualified SWPPP Developer or Qualified SWPPP Practitioner** – refer to State of California General Construction Stormwater Permit for definition.

**Rare, Threatened, or Endangered Species (RARE)** - means a beneficial use for waterbodies in the Los Angeles Region, as designated in the Basin Plan (Table 2-1), that supports habitats necessary, at least in part, for the survival and successful maintenance of plant or animal species established under state or federal law as rare, threatened, or endangered.

**Redevelopment** - means land-disturbing activity that results in the creation, addition, or replacement of 5,000 square feet or more of impervious surface area on an already developed site. Redevelopment includes, but is not limited to: the expansion of a building footprint; addition or replacement of a structure; replacement of impervious surface area that is not part of a routine maintenance activity; and land disturbing activities related to structural or impervious surfaces. It does not include routine maintenance to maintain original line and grade, hydraulic capacity, or original purpose of facility, nor does it include emergency construction activities required to immediately protect public health and safety.

**Regional Administrator** - means the Regional Administrator of the Regional Office of the U.S. EPA or the authorized representative of the Regional Administrator.

**Report of Waste Discharge (ROWD)** - means an application for renewal of the NPDES Permit for Waste Discharge Requirements for Municipal Separate Storm Sewer Discharges Within the Ventura County Watershed Protection District, County of Ventura and the Incorporated Cities Therein.

**Restaurant** - means a facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (SIC Code 5812).

**Restoration** - means the reestablishment of predisturbance aquatic functions and related physical, chemical and biological characteristics (Reference: National Research Council. 1992. Restoration of Aquatic Ecosystems: Science, Technology and Public Policy. National Academy Press, Washington, D.C.).

T

E

V

E

**Retail Gasoline Outlet (RGO)** - means any facility engaged in selling gasoline and lubricating oils- SIC 5541 and NAICS 447110 & 447190.

1. RGOs: 447190 Other Gasoline Stations:

This industry comprises establishments known as gasoline stations (except those with convenience stores) primarily engaged in one of the following: (1) retailing automotive fuels (e.g., diesel fuel, gasohol, gasoline) or (2) retailing these fuels in combination with activities, such as providing repair services; selling automotive oils, replacement parts, and accessories; and/ or providing food services.

2. RGOs: 447110 Gasoline Stations with Convenience Stores:

Retailing automotive fuels in combination with a convenience store or food mart.

**Routine Maintenance** -Routine maintenance projects include, but are not limited to projects conducted to:

1. Maintain the original line and grade, hydraulic capacity, or original purpose of the facility.
2. Perform as needed restoration work to preserve the original design grade, integrity and hydraulic capacity of flood control facilities.
3. Includes road shoulder work, regrading dirt or gravel roadways and shoulders and performing ditch cleanouts.
4. Update existing lines\* and facilities to comply with applicable codes, standards, and regulations regardless if such projects result in increased capacity.
5. Repair leaks

Routine maintenance does not include construction of new\*\* lines or facilities resulting from compliance with applicable codes, standards and regulations.

\* Update existing lines includes replacing existing lines with new materials or pipes.

\*\* New lines are those that are not associated with existing facilities and are not part of a project to update or replace existing lines.

**Screening** - means using proactive methods to identify illicit connections through a continuously narrowing process. The methods may include: performing baseline monitoring of open channels, conducting special investigations using a prioritization approach, analyzing maintenance records for catch basin and storm drain cleaning and operation, and verifying all permitted connections into the storm drains. Special investigation techniques may include: dye testing, visual inspection, smoke testing, flow monitoring, infrared, aerial and thermal photography, and remote control camera operation.

**Sidewalk Rinsing** - means only sidewalk rinsing using high pressure and low volume of water with no additives and at an average usage of 0.006 gallons per square foot of surface area to be rinsed. Any waste generated from the activity must be collected and properly and legally disposed of. It does not mean hosing of any sidewalk or street with a garden hose with a pressure nozzle.

**Site** - means the land or water area where any "facility or activity" is physically located or conducted, including adjacent land used in connection with the facility or activity.

T  
E  
N  
T  
A  
T  
I  
V  
E

**Small Construction** - means any soil disturbing activities less than 5 acres.

**Source Control BMP** - means any schedules of activities, prohibitions of practices, maintenance procedures, managerial practices or operational practices that aim to prevent storm water pollution by reducing the potential for contamination at the source of pollution.

**Southern California Stormwater Monitoring Coalition (SMC)** - means the Stormwater Monitoring Coalition, which is a collaborative research/ monitoring partnership of the Southern California Water Boards, Municipal Storm Water Agencies, and municipalities to develop the methodologies and assessment tools to more effectively understand urban storm water and non-storm water (anthropogenic) impacts to receiving waters and to conduct research/ monitoring through Subsequent Research Implementation Agreements. The first original cooperative agreement was entered into on February 8, 2001.

**Stream** - means a body of flowing water; natural water course containing water at least part of the year. In hydrology, it is generally applied to the water flowing in a natural channel as distinct from a canal (Reference: US Geological Survey).

**Strip Mall** - means a commercial development that is a shopping center where the stores are arranged in a row, with a sidewalk in front. Strip malls are typically developed as a unit and have large parking lots in front. They face major traffic arterials and tend to be self-contained with few pedestrian connections to surrounding neighborhoods. It is also called a plaza.

**Storm Event Monitoring**- means a rainfall event that produces more than 0.25 inch of precipitation and is separated from the previous storm event by at least 1 week of dry weather, for the purpose of monitoring.

**Storm Water** - means storm water runoff, snow melt runoff, and surface runoff and drainage, as defined in 40 CFR122.26(b)(13).

**Storm Water Discharge Associated with Industrial Activity** - means industrial discharge, as defined in 40 CFR122.26(b)(14).

**Storm Water Quality Management Program** - means the Ventura Countywide Storm Water Quality Management Plan, which includes descriptions of programs, collectively developed by the Permittees in accordance with provisions of the NPDES Permit, to comply with applicable federal and state law, as the same is amended from time to time.

**Structural BMP** - means any structural facility designed and constructed to mitigate the adverse impacts of storm water runoff pollution (e.g. canopy, structural enclosure). The category may include both Treatment Control BMPs and Source Control BMPs.

T  
E  
N  
T  
A  
T  
I  
V  
E

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

**Summer Dry Weather** - means dry weather days occurring from April 1 through October 31 of each year.

**t-Test** (formally Student's t-test) - means a statistical analysis comparing two sets of replicate observations, in the case of WET, only two test concentrations (e.g., a control and 100% effluent). The purpose of this test is to determine if the means of the two sets of observations are different [e.g., if the 100% effluent concentration differs from the control (i.e., the test pass or fails)].

**Targeted Employees** - means management and staff who perform or direct activities that directly or indirectly have an effect of storm water quality. The employees generally are employed in the following areas: department of public works, engineering, sanitation, storm water maintenance, drainage and flood control, transportation, streets and roads, parks and recreation, public landscaping and corporation yards, planning or community development, code enforcement, building and safety, harbor or port departments, airports, or general services and fleet services.

**Total Maximum Daily Load (TMDL)** - means the sum of the individual waste load allocations for point sources and load allocations for nonpoint sources and natural background.

**Toxicity Identification Evaluation (TIE)** - means a set of procedures to identify the specific chemical(s) responsible for toxicity through a process of chemical/ physical manipulations of samples followed by toxicity tests. These procedures are performed in 3 phases (Phase I- Toxicity Characterization Procedure, Phase II- Toxicity Identification Procedure, and Phase III- Toxicity Confirmation Procedure) using aquatic organism toxicity tests.

**Toxicity Reduction Evaluation (TRE)** - means a study conducted in a step-wise process to identify the causative agents of effluent or ambient toxicity, isolate the sources of toxicity, evaluate the effectiveness of toxicity control options, and then confirm the reduction in toxicity.

**Toxicity Test** - means a procedure using living organisms to determine whether a chemical or an effluent is toxic. A toxicity test measures the degree of the effect of a specific chemical or effluent on exposed test organisms.

**Toxic Unit (TU)** - means a measure of toxicity in an effluent as determined by the acute toxicity units (TUa) or chronic toxicity units (TUc) measured. The larger the TU, the greater the toxicity.

**Toxic Unit - Chronic (TUc)** - means 100 times the reciprocal of the effluent concentration that causes no observable effect on the test organisms in a chronic toxicity test ( $TUc = 100/NOEC$  or  $100/EC25$ ) (see NOEC).

**Treatment** - means the application of engineered systems that use physical, chemical, or biological processes to remove pollutants. Such processes include, but are not limited to,

T  
E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

filtration, gravity settling, media absorption, biodegradation, biological uptake, chemical oxidation and UV radiation.

**Treatment Control BMP** - means any engineered system designed to remove pollutants by simple gravity settling of particulate pollutants, filtration, biological uptake, media absorption or any other physical, biological, or chemical process.

**Urbanization** - means the process of changing of land use and land patterns from rural characteristics to urban (city-like) characteristics. These changes include (i) the replacement of pervious surfaces with impervious surfaces such as rooftops and buildings, and impervious materials such as asphalt and concrete; and (ii) the conversion of rural land to house new residents, support new businesses, and facilitate vehicular traffic flow.

**U.S. EPA Phase I Facilities** - means facilities in specified industrial categories that are required to obtain an NPDES permit for storm water discharges, as required by 40 CFR122.26(c). These categories include:

1. Facilities subject to storm water effluent limitation guidelines, new source performance standards, or toxic pollutant effluent standards (40 CFR N)
2. Manufacturing facilities
3. Oil and gas/ mining facilities
4. Hazardous waste treatment, storage, or disposal facilities
5. Landfills, land application sites, and open dumps
6. Recycling facilities
7. Steam electric power generating facilities
8. Transportation facilities
9. Sewage of wastewater treatment works
10. Light manufacturing facilities

**Vehicle Maintenance/ Material Storage Facilities/ Corporation Yards** - means any Permittee owned or operated facility or portion thereof that:

1. Conducts industrial activity, operates or stores equipment or materials, and provides services similar to Federal Phase I facilities;
2. Performs fleet vehicle service/ maintenance including repair, maintenance, washing, or fueling;
3. Performs maintenance and/ or repair of machinery/ equipment; or
4. Stores chemicals, raw materials, or waste materials.

**Waste Load Allocations (WLAs)** - means a portion of a receiving water's Total Maximum Daily Pollutant Load (TMDL) that is allocated to one of its existing or future point sources of pollution (Reference: 40 CFR130.2(h)).

**Water Quality Objectives** - means water quality criteria contained in the Basin Plan, the California Ocean Plan, the National Toxics Rule, the California Toxics Rule, and other state or

T

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

federally approved surface water quality plans. Such plans are used by the Regional Water Board to regulate all discharges, including storm water discharges.

**Water Quality Standards** - means the State Water Quality Standards, which are comprised of beneficial uses, water quality objectives and the State's Antidegradation Policy.

**Waters of the State** - means any surface water or groundwater, including saline waters, within boundaries of the state (Reference: California Water Code § 13050).

**Waters of the United States or Waters of the US** - means:

1. All waters that are currently used, were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide;
2. All interstate waters, including interstate "wetlands";
3. All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, "wetlands," sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds where the use, degradation, or destruction of which would affect or could affect interstate or foreign commerce including any such waters:
  - a. Which are or could be used by interstate or foreign travelers for recreational or other purposes
  - b. From which fish or shellfish are or could be taken and sold in interstate or foreign commerce; or
  - c. Which are used or could be used for industrial purposes by industries in interstate commerce
4. All impoundment's of waters otherwise defined as waters of the United States under this definition;
5. Tributaries of waters identified in the preceding paragraph (1) through (4) of this definition;
6. The territorial sea; and
7. "Wetlands" adjacent to waters (other than waters that are themselves wetlands) identified in the preceding paragraph (1) through (6) of this definition.  
(Reference: 33 CFR328)

**Watercourse** - means any natural or artificial channel for passage of water, including the VCFCD jurisdictional channels included in the List of Channels within the Comprehensive Plan of the VCFCD, as approved by the Board of Supervisors of the VCFCD on October 4, 1993, and any amendments thereto.

**Watershed Management** - means approach for water resources protection. It is a strategy for integrating and managing resources, both human and fiscal that focuses on regulation of point sources, to a more regional approach that acknowledges environmental impacts from other activities.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

**Watershed Management Areas (WMA)** - means the geographically-defined watershed areas where the Regional Water Board will implement the watershed approach. These generally involve a single large watershed within which exists smaller subwatersheds but in some cases may be an area that does not meet the strict hydrologic definition of a watershed e.g., several small Ventura coastal waterbodies in the region are grouped together into one WMA.

**Wet Season** - means the calendar period beginning October 1 through April 15.

**Winter Dry Weather** - means dry weather days occurring from November 1 - March 31 of each year.

**Whole Effluent Toxicity** - means the aggregate toxic effect of an effluent measured directly by a toxicity test.

**PART 8 - STANDARD PROVISIONS**

**A. General Requirements**

- 1. The Permittee shall comply with all provisions and requirements of this Order.
- 2. Should the Permittee discover that it failed to submit any relevant facts or that it submitted incorrect information in a report it shall promptly submit the missing or correct information.
- 3. The Permittee shall report all instances of non-compliance not otherwise reported at the time monitoring reports are submitted.
- 4. This Order includes Attachment "H", the Reporting Program, which is a part of this Order and must be complied with.

**B. Regional Water Board Review**

- 1. The Regional Water Board may review any formal determinate or approval made by the Regional Water Board Executive Officer pursuant to the provisions of this Order.
  - (a) Permittee(s) or a member of the public may request such review upon petition within 30 day of the effective date of the notification of such decision to the Permittee(s) and interested parties on file at the Regional Water Board.

**C. Public Review**

- 1. All documents submitted to the Regional Water Board in compliance with the terms and conditions of this Order shall be made available to members of the public

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

pursuant to the Freedom of Information Act (5 U.S.C. § 552), as amended, and the Public Records Act (California Government Code § 6250 et seq.).

- 2. All documents submitted to the Regional Water Board Executive Officer for approval shall be made available to the public for a 30-day period to allow for public comment.

**D. Duty to Comply [40 CFR122.41(a)]**

- 1. Each Permittee must comply with all of the terms, requirements, and conditions of this Order. Any violation of this order constitutes a violation of the Clean Water Act, its regulations and the California Water Code, and is grounds for enforcement action, Order termination, Order revocation and reissuance, denial of an application for reissuance, or a combination thereof [40 CFR122.41(a), CAL. WATER CODE § 13261, 13263, 13265, 13268, 13300, 13301, 13304, 13340, 13350].
- 2. A copy of these waste discharge specifications shall be maintained by each Permittee so as to be available during normal business hours to Permittee employees and members of the public.
- 3. Any discharge of wastes at any point(s) other than specifically described in this Order is prohibited, and constitutes a violation of the Order.

**E. Duty to Mitigate [40 CFR122.41 (d)]**

- 1. Each Permittee shall take all reasonable steps to minimize or prevent any discharge that has a reasonable likelihood of adversely affecting human health or the environment.

**F. Inspection and Entry; Investigations; Responsibilities [40 CFR122.41(i), Cal. Water Code § 13225 and § 13267]**

- 1. The Regional Water Board, U.S. EPA, and other authorized representatives shall be allowed:
  - (a) Entry upon premises where a regulated facility is located or conducted, or where records are kept under conditions of this Order;
  - (b) Access to copy any records, at reasonable times that are kept under the conditions of this Order;
  - (c) To inspect at reasonable times any facility, equipment (including monitoring and control equipment), practices, or operations regulated or required under this Order;
  - (d) To photograph, sample, and monitor at reasonable times for the purpose of assuring compliance with this Order, or as otherwise authorized by the CWA and the CAL. WATER CODE;

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (e) To review any water quality control plan or waste discharge requirements, or in connection with any action relating to any plan or requirement to investigate the quality of any waters of the state within its region; and,
- (f) To require as necessary any state or local agency to investigate and report on any technical factors involved in water quality control or to obtain and submit analyses of water.

**G. Proper Operation and Maintenance [40 CFR122.41 (e), Cal. Water Code § 13263(f)]**

- 1. The Permittees shall at all times properly operate and maintain all facilities and systems of treatment (and related appurtenances) that are installed or used by the Permittees to achieve compliance with this Order. Proper operation and maintenance includes:
  - (a) adequate laboratory controls; and
  - (b) appropriate quality assurance procedures.
- 2. This provision requires the operation of backup or auxiliary facilities or similar system that are installed by a Permittee only when necessary to achieve compliance with the conditions of this Order.

**H. Signatory Requirements [40 CFR122.41(k) & 122.22]**

- 1. Except as otherwise provided in this Order, all applications, reports, or information submitted to the Regional Water Board shall be signed by the City Manager or Mayor, or authorized designee and certified as set forth in 40 CFR122.22.

**I. Reopener and Modification [40 CFR122.41(f) & 122.62]**

- 1. This Order may only be modified, revoked, or reissued, prior to the expiration date, by the Regional Water Board, in accordance with the procedural requirements of the CAL. WATER CODE and CCR Title 23 for the issuance of waste discharge requirements, 40 CFR122.62, and upon prior notice and hearing, to:
  - (a) Address changed conditions identified in the required reports or other sources deemed significant by the Regional Water Board;
  - (b) Incorporate applicable requirements or statewide water quality control plans adopted by the State Board or amendments to the Basin Plan, including TMDLs;
  - (c) Comply with any applicable requirements, guidelines, and/ or regulations issued or approved pursuant to CWA § 402(p); and/ or,
  - (d) Consider any other federal, or state laws or regulations that became effective after adoption of this Order.
- 2. After notice and opportunity for a hearing, this Order may be terminated or modified for cause, including, but not limited to:
  - (a) Violation of any term or condition contained in this Order;

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (b) Obtaining this Order by misrepresentation, or failure to disclose all relevant facts;  
or,
  - (c) A change in any condition that requires either a temporary or permanent reduction or elimination of the authorized discharge.
3. The filing of a request by the Principal Permittee or Permittees for a modification, revocation and re-issuance, or termination, or a notification of planned changes or anticipated noncompliance does not stay any condition of this Order.
  4. This Order may be modified to make corrections or allowances for changes in the permitted activity listed in this section, following the procedures at 40 CFR122.63, if processed as a minor modification. Minor modifications may only:
    - (a) Correct typographical errors; or
    - (b) Require more frequent monitoring or reporting by the Permittee.

T

**J. Severability**

1. The provisions of this Order are severable; and if any provision of this Order or the application of any provision of this Order to any circumstance is held invalid, the application of such provision to other circumstances and the remainder of this Order shall not be affected.

**K. Duty to Provide Information [40 CFR122.41(h)]**

1. The Permittees shall furnish, within a reasonable time, any information the Regional Water Board or U.S. EPA may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this Order.
2. The Permittees shall also furnish to the Regional Water Board, upon request, copies of records required to be kept by this Order.

**L. Twenty-Four Hour Reporting [40 CFR122.41(l)(6)]<sup>1</sup>**

1. The Permittees shall report to the Regional Water Board any noncompliance that may endanger health or the environment. Any information shall be provided orally within 24 hours from the time any Permittee becomes aware of the circumstances. A written submission shall also be provided within 5 days of the time the Permittee becomes aware of the circumstances. The written submission shall contain a description of the noncompliance and its cause; the period of noncompliance, including exact dates and times and, if the noncompliance has not been corrected, the anticipated time it is

<sup>1</sup> This provision applies to incidents where effluent limitations (numerical or narrative) as provided in this Order or in the Ventura County SMP are exceeded, and which endanger public health or the environment.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

expected to continue; and steps taken or planned to reduce, eliminate, and prevent reoccurrence of the noncompliance.

- 2. The Regional Water Board may waive the required written report on a case-by-case basis.

**M. Bypass [40 CFR122.41(m)]<sup>1</sup>**

- 1. Bypass (the intentional diversion of waste streams from any portion of a treatment facility) is prohibited. The Regional Water Board may take enforcement action against Permittees for bypass unless:
  - (a) Bypass was unavoidable to prevent loss of life, personal injury or severe property damage. (Severe property damage means substantial physical damage to property, damage to the treatment facilities that causes them to become inoperable, or substantial and permanent loss of natural resources that can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production.);
  - (b) There were no feasible alternatives to bypass, such as the use of auxiliary treatment facilities, retention of untreated waste, or maintenance during normal periods of equipment down time. This condition is not satisfied if adequate back-up equipment should have been installed in the exercise of reasonable engineering judgment to prevent a bypass that could occur during normal periods of equipment downtime or preventive maintenance;
  - (c) The Permittee submitted a notice at least ten days in advance of the need for a bypass to the Regional Water Board; or,
  - (d) Permittees may allow a bypass to occur that does not cause effluent limitations to be exceeded, but only if it is for essential maintenance to assure efficient operation. In such a case, the above bypass conditions are not applicable. The Permittee shall submit notice of an unanticipated bypass as required.

**N. Upset [40 CFR122.41(n)]<sup>2</sup>**

- 1. Upset means an exceptional incident in which there is unintentional and temporary noncompliance with technology based permit effluent limitations because of factors beyond the reasonable control of the Permittee. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation.

<sup>1</sup> This provision applies to the operation and maintenance of storm water controls and BMPs as provided in this Order or in the Ventura County SMP.

<sup>2</sup> This provision applies to incidents where effluent limitations (numerical or narrative) as provided in this Order or in the Ventura County SMP are exceeded, and which endanger public health or the environment.

T  
E  
N  
T  
A  
T  
I  
V  
E

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- 2. A Permittee that wishes to establish the affirmative defense of an upset in an action brought for non compliance shall demonstrate, through properly signed, contemporaneous operating logs, or other relevant evidence that:
  - (a) An upset occurred and that the Permittee can identify the cause(s) of the upset;
  - (b) The permitted facility was being properly operated by the time of the upset;
  - (c) The Permittee submitted notice of the upset as required; and,
  - (d) The Permittee complied with any remedial measures required.
- 3. No determination made before an action for noncompliance, such as during administrative review of claims that non-compliance was caused by an upset, is final administrative action subject to judicial review.
- 4. In any enforcement proceeding, the Permittee seeking to establish the occurrence of an upset has the burden of proof.

**O. Property Rights [40 CFR122.41(g)]**

- 1. This Order does not convey any property rights of any sort, or any exclusive privilege.

**P. Enforcement**

- 1. Violation of any of the provisions of the NPDES permit or any of the provisions of this Order may subject the violator to any of the penalties described herein, or any combination thereof, at the discretion of the prosecuting authority; except that only one kind of penalties may be applied for each kind of violation. The CWA provides the following:
  - (a) Criminal Penalties for:
    - (1) Negligent Violations [CWA 309 (c)(1)(B)]:  
The CWA provides that any person who negligently violates permit conditions implementing CWA § 301, 302, 306, 307, 308, 318, or 405 is subject to a fine of not less than \$2,500 nor more than \$25,000 per day for each violation, or by imprisonment for not more than 1 year, or both.
    - (2) Knowing Violations [CWA 309 (c)(2)(B)]:  
The CWA provides that any person who knowingly violates permit conditions implementing CWA § 301, 302, 306, 307, 308, 318, or 405 is subject to a fine of not less than \$5,000 nor more than \$50,000 per day of violation, or by imprisonment for not more than 3 years, or both.
    - (3) Knowing Endangerment [CWA 309 (c)(3)(A)]:  
The CWA provides that any person who knowingly violates permit conditions implementing CWA § 301, 302, 307, 308, 318, or 405 and who knows at that time that he is placing another person in imminent danger of death or serious bodily injury is subject to a fine of not more than \$250,000, or by imprisonment for not more than 15 years, or both.

(4) False Statement [CWA 309 (c)(4)]:

The CWA provides that any person who knowingly makes any false material statement, representation, or certification in any application, record, report, plan, or other document filed or required to be maintained under the Act or who knowingly falsifies, tampers with, or renders inaccurate, any monitoring device or method required to be maintained under the Act, shall upon conviction, be punished by a fine of not more than \$10,000 or by imprisonment for not more than two years, or by both. If a conviction is for a violation committed after a first conviction of such person under this paragraph, punishment shall be by a fine of not more than \$20,000 per day of violation, or by imprisonment of not more than four years, or by both.

(b) Civil Penalties [[CWA 309 (d)]

The CWA provides that any person who violates a permit condition implementing CWA § 301, 302, 306, 307, 308, 318, or 405 is subject to a civil penalty not to exceed \$27,500 per day for each violation.

2. Violation of any of the provisions of the NPDES permit or any of the provisions of this Order may subject the violator to any of the penalties described herein, or any combination thereof, at the discretion of the prosecuting authority; except that only one kind of penalties may be applied for each kind of violation. The Cal Water Code § 13885 provides the following:

(a) Any person who violates any of the following shall be liable civilly in accordance with this section:

- (1) Section 13375 or 13376.
- (2) Any waste discharge requirements or dredged or fillmaterial permit issued pursuant to this chapter or any water quality certification issued pursuant to Section 13160.
- (3) Any requirements established pursuant to Section 13383.
- (4) Any order or prohibition issued pursuant to Section 13243 or Article 1 (commencing with Section 13300) of Chapter 5, if the activity subject to the order or prohibition is subject to regulation under this chapter.
- (5) Any requirements of Section 301, 302, 306, 307, 308, 318, 401, or 405 of the Clean Water Act, as amended.
- (6) Any requirement imposed in a pretreatment program approved pursuant to waste discharge requirements issued under Section 13377 or approved pursuant to a permit issued by the administrator.

**Q. Need to Halt or Reduce Activity not a Defense [40 CFR122.41(c)]**

1. It shall not be a defense for a Permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this Order.

**R. Termination~~Rescission~~ of Board Order**

- 1. Regional Water Board Order No. 00-108 is hereby terminated~~rescinded~~.

**S. Board Order Expiration Date**

- 1. This Order expires on ~~XX~~May 7, 2014. The Permittees must submit a Report of Waste Discharge (ROWD) and a proposed Storm Water Quality Management Program in accordance with CCR Title 23 as application for reissuance of waste discharge requirements no later than 180 days in advance of such date.

**T. MS4 Annual Reporting Program [40 CFR122.42(c)]**

- 1. The Annual Program Reporting shall include the following information:
  - (a) *Municipal separate storm sewer systems.*  
 The operator of a large or medium municipal separate storm sewer system or a municipal separate storm sewer that has been designated by the Director under 40 CFR122.26(a)(1)(v) of this part must submit an annual report by the anniversary of the date of the issuance of the permit for such system. The report shall include:
    - (1) The status of implementing the components of the storm water management program that are established as permit conditions;
    - (2) Proposed changes to the storm water management programs that are established as permit condition. Such proposed changes shall be consistent with 40 CFR122.26(d)(2)(iii) of this part;
    - (3) Revisions, if necessary, to the assessment of controls and the fiscal analysis reported in the permit application under 40 CFR122.26(d)(2)(iv) and (d)(2)(v) of this part;
    - (4) A summary of data, including monitoring data that is accumulated throughout the reporting year;
    - (5) Annual expenditures and budget for year following each annual report;
    - (6) A summary describing the number and nature of enforcement actions, inspections, and public education programs; and
    - (7) Identification of water quality improvements or degradation.

**Reporting Program Requirements**

The Principal Permittee shall submit by December 15<sup>th</sup> of each year, beginning the year of 2007, an Annual Report to the Regional Water Board Executive Officer in the form of one hard copy and three compact disks (CD) (or equivalent electronic format).

1. The Annual Report shall document the status of the General Storm Water Program, an integrated summary of the results of analyses from:
  - (a) The monitoring program described under Part 1-Monitoring Report; and
  - (b) The requirements described under Part 2- Program Report.
2. Plans shall be submitted to the Regional Water Board Executive Officer in the form of a hard copy and on a compact disk (CD), submit 1 hard copy and 3 CD copies.
3. Study Reports shall be submitted to the Regional Water Board Executive Officer in the form of a hard copy and on a CD, submit 1 hard copy and 3 CD copies.
4. Progress Reports shall be submitted to the Regional Water Board Executive Officer in the form of a hard copy and on a CD, submit 1 hard copy and 3 CD copies.

**PART 1 - MONITORING REPORT****A. The following shall be included in the Annual Report:**

1. Mass Emissions
  - (a) Assess the variability of storm water constituents from the results of all monitored storms events.
  - (b) Rain totals and hydrographs for monitoring events in both narrative and graphic formats.
  - (c) A summary of the mass emission station annual monitoring results highlighting exceedences (POC) with corresponding sampling.
2. Major Outfalls
  - (a) Assess the variability of storm water constituents from the results of all monitored storms events.
  - (b) Rain totals and hydrographs for monitoring events in both narrative and graphic formats.
  - (c) A summary of the major outfalls station annual monitoring results highlighting exceedences (POC) with corresponding sampling dates.
  - (d) Outfall(s) name and ID number (if applicable).

3. Aquatic Toxicity Monitoring
    - (a) An analysis of the mass emission station and major outfall station samples for aquatic toxicity.
    - (b) A report on the development, implementation, and results for each TRE Corrective Action Plan in the Annual Report, beginning the year following the identification of each pollutant or pollutant class causing toxicity.
    - (c) Report on the development, implementation, and results for each TRE Corrective Action Plan, beginning the year following the identification of each pollutant or pollutant class causing toxicity.
    - (d) All constituents (POCs) that caused toxicity or exceeded any applicable water quality objectives at the associated mass emission and/ or major outfall station the previous year shall be listed.
    - (e) A summary of the mass emission station and major outfall station annual monitoring results with corresponding sampling dates and Tox output.
  
  4. TMDL Compliance Monitoring
    - (a) A summary of the annual monitoring results for each TMDL.
      - (1) Corresponding sampling dates and Tox output (if applicable).
  
  5. Bioassessment
    - (a) Assess the effects of MS4 discharges on the biological integrity of the waterbody.
    - (b) Permittees shall conduct bioassessment, [using Southern California Regional Bioassessment protocol], at one fixed site in each of the watersheds below on an annual basis:
      - (1) Ventura River
      - (2) Santa Clara River
      - (3) Calleguas Creek
- B. The following shall be submitted to the Regional Water Board Executive Officer:**
1. Aquatic Toxicity Monitoring
    - (a) A TRE Corrective Action Plan within 30 days after the source of toxicity and appropriate BMPs are identified.
  
  2. Pyrethroid Insecticides Study
    - (a) Pyrethroid insecticides study final report, no later than 8 months after completion of the study.
  
  3. Hydromodification Control Study
    - (a) Letter stating how the Principal Permittee is satisfying this requirement, no later than 2 months after deciding to either conduct or participate in special studies.
  
  4. Non-Compliance

- (a) When monitoring can not be performed to comply with the requirements of this Order due to circumstances beyond the Permittees' control, then within 48 hours the following shall be submitted:
  - (1) Statement of situation.
  - (2) Explanation of circumstance(s) with documentation.
  - (3) Statement of corrective action for the future.

5. Low Impact Development

- (a) Letter stating how the Principal Permittee is satisfying this requirement, no later than 2 months after deciding to either conduct or participate in special studies.

6. Volunteer Monitoring Program

- (a) Results as obtained by volunteer monitoring programs in the Ventura watersheds including, but not limited to, the following:
  - (1) Ventura River - (Ventura Stream Team)
  - (2) Santa Clara River - (Santa Clara River Stream Team)
  - (3) Calleguas Creek - (Calleguas Creek Watershed Quality Monitoring Program)
  - (4) Malibu Creek - (Malibu Creek Watershed Quality Monitoring Program)

**C. Submitted electronically to the Regional Water Board, the following shall be:**

1. Mass Emissions

- (a) Monitoring results no later than 45 days from sample collection date.

2. Major Outfalls

- (a) Monitoring results no later than 45 days from sample collection date.

3. Aquatic Toxicity Monitoring

- (a) Monitoring results no later than 45 days from sample collection date.

3. TMDL Compliance Monitoring

- (a) Monitoring results no later than 45 days from sample collection date.

4. Non-Compliance

- (a) When the Order 's monitoring requirements can not be performed due to circumstances beyond the Permittees' control, then within 48 hours the following shall be submitted to the Regional Water Board Executive Officer:
  - (1) Statement of situation.
  - (2) Explanation of circumstance(s) with documentation.
  - (3) Statement of corrective action for the future.

5. Data transmitted shall be in the SMCs Standardized Data Transfer Formats (SDTFs) and all updates are to be adhered to.<sup>1</sup>
  - (a) Regional Water Board's Storm Water E-mail Address:  
[MS4stormwaterrb4@waterboards.ca.gov](mailto:MS4stormwaterrb4@waterboards.ca.gov)
6. Beach Water Monitoring
  - (a) Assess bacteriological levels at various beaches in Ventura County, ensuring compliance with beach water quality standards.
  - (b) Reports of beach monitoring shall be submitted to the Regional Board electronically within one business day of completion of analysis..

## PART 2 - PROGRAM REPORT

On an annual basis the Permittees shall complete an Annual Monitoring Program Report that responds adequately to the evaluative questions below which correspond to the Order.

### DISCHARGE PROHIBITIONS

- (a) Have you effectively prohibited all non-storm discharges into the MS4 and watercourses?
- (b) If there are any exceptions in the municipal code, list the exceptions to the municipal code. In other words, which non-storm water discharges does your municipality allow? Under what conditions are they allowed (with BMPs)? List which BMPs are required prior to discharge.
- (c) Do you have a procedure to assure that any project within your jurisdiction which may undertake ground water dewatering obtain a permit from the Regional Water Board?
- (d) How many projects are permitted to dewater in your jurisdiction?
- (e) How many are permanent dewatering to continue after construction is completed?
- (f) Do you have a permitting/ permission system for the discharge of dechlorinated/ debrominated swimming pool discharges? Explain it.
- (g) If yes, how many swimming pools are drained with the agency's permit/ permission?
- (h) How do you ensure that discharge limits for chlorine, bromine, etc are not exceeded?
- (i) Do you allow the discharge of "salt water" swimming pool discharges? If yes
- (j) Do you have a permitting/ permission system for the discharge of "salt water" swimming pool discharges? Explain it.

<sup>1</sup> The SMC developed a SDTFs for use by member agencies for electronic recording and transfer of storm water monitoring data. Southern California Coastal Water Research Project, Technical Report 421 (August, 2004).

**RECEIVING WATER LIMITATIONS**

1. At any time, has the discharge from the MS4 caused or contributed to the violation of water quality objectives or water quality standards?
2. At any time, has the discharge from the MS4 for which a Permittee is at least partially responsible, caused or contributed to a condition of nuisance?
3. At any time, has the discharge of pollutant(s) from the MS4 exceeded the MS4 Waste Load Allocation(s) for Wet Weather Discharges?
4. For pollutant(s) which continue to cause or contribute to water quality impairments, but for which TMDLs have not yet been developed or approved, what has the Permittee implemented to eliminate future water quality impairments?

**PART 3 - STORM WATER QUALITY MANAGEMENT PROGRAM IMPLEMENTATION**

**A. General Requirements**

**B. Legal Authority**

1. Does your municipal agency possess all the necessary legal authority to implement and enforce each requirement of this Order?
2. If the answer is no, explain why not.
3. By what date certain will the municipal agency have all the necessary legal authority?
4. Attach a copy of the new or updated statement by its legal counsel that the Permittee has obtained all necessary legal authority to comply with this Order through adoption of ordinances and/ or municipal code modifications.
5. After submitting the Statement from your legal counsel, was your city's municipal code (or other legal authority) changed (Any section that applies to or affects storm water permitting or requirements)? On what date(s) was it changed? Provide the changes.

**C. Fiscal Resources**

1. Provide a detailed Annual Budget Summary of the Permittee's allocation of funds expended to implement the activities required to comply with the conditions of this Order.
2. Indicate the source(s) of funding (whether general funds; and/ or Benefit Assessment Program funds; plan review fees; permit fees; industrial/ commercial user fee; revenue bonds; grants; or other funding mechanism. Each Permittee's Annual Budget Summary shall separately include:
3. Annual Budget Summary of expenditures applied to the storm water management program and also identify the storm water budget for the following year, using

T  
E  
N  
T  
A  
T  
I  
V  
E

estimated percentages and written explanations where necessary, for the specific categories noted below:

- (a) Program Overall Management Activities;
  - (1) Administrative costs
- (b) Program Required Activities Implementation;
 

Provide an estimated percent breakdown of expenditures for the categories below:

  - (1) Illicit connection/ illicit discharge
  - (2) Development planning
  - (3) Development construction
  - (4) Construction inspection activities
  - (5) Industrial/ Commercial inspection activities
  - (6) Public Agency Activities
  - (7) Maintenance of Structural BMPs and Treatment Control BMPs
    - (A) Municipal Street Sweeping for Commercial/ Industrial landuse only;
    - (B) Catch basin clean-outs (including dumping fees);
    - (C) Storm drain clean-outs (including dumping fees); and
    - (D) Other costs (describe).
  - (8) Public Information and Participation;
  - (9) Monitoring Program; and
  - (10) Miscellaneous Expenditures (describe).

#### **D. Designation and Responsibilities of the Principal Permittee**

The Principal Permittee shall submit within the Annual Program Report information on the implementation of the following:

1. Coordination and facilitation of activities to comply with the requirements of this Order;
2. Evaluation, assessment, and summary of the results of the monitoring program and the effectiveness of the implementation of BMPs and any recommended change.

#### **E. Responsibilities of the Permittees**

Each Permittee shall include within the Annual Program Report information on the implementation of the following:

1. A statement under penalty of perjury that the Permittee is or is not in compliance with the requirements of this Order and any subsequent modifications thereto.
2. A summary of how coordination occurs among its internal departments and agencies to ensure the implementation of the requirements of this Order.
3. Description of the intra-agency coordination by Agency departments (e.g. Community Development (Planning), Public Works, Sanitation, Engineering, Fire Department, Building and Safety, Code Enforcement, Public Health, Water and/ or Power Department, etc.) to ensure the successful implementation of the provisions of this Order.

4. In addition to the Budget Summary, identify any supplemental dedicated budgets for the storm water categories listed.
5. Identify the staff which participated at all committee or subcommittee meetings and when.

**PART 4 - SPECIAL PROVISIONS**

**A. General Requirements**

1. Best Management Practice Substitution
  - (a) Did the Regional Water Board Executive Officer approve any site-specific BMP substitution for your agency?
  - (b) If so, describe implementation of that/ those BMP(s).

**B. Watershed Initiative Participation**

1. Describe your participation (Principal Permittee) and present data results in the following:
  - (a) Southern California Stormwater Monitoring Coalitions' (SMC) Regional Monitoring program for the Southern California Regional Bioassessment.

**C. Public Information and Participation Program (PIPP)**

1. Describe the Permittee successes in:
  - Measurably increasing the knowledge of the target audiences regarding the MS4, the impacts of storm water pollution on receiving waters and potential solutions to mitigate the problems caused;
  - Measurably changing the waste disposal and runoff pollution generation behavior of target audiences by encouraging implementation of appropriate solutions;
  - Involving and engaging communities in Ventura County to participate in mitigating the impacts of storm water pollution.
2. Residential Program
  - (a) Did the Permittee label each storm drain inlet that they own with a legible "no dumping" message.
  - (b) How many inlets were labeled this year?
  - (c) How many inlets were labeled cumulatively?
  - (d) Did the Permittee install signs with prohibitive language discouraging illegal dumping at designated public access points to creeks, other relevant water bodies, and channels?
  - (e) How many?

Public Reporting

T  
E  
N  
T  
A  
T  
I  
V  
E

- (a) Identify the staff person(s) who will serve as the contact person(s) for reporting clogged catch basin inlets and illicit discharges/ dumping, faded or lack of catch basin stencils, and general storm water management information.
- (b) Did the Permittee update this information by July 1 of this year?
- (c) The Principal Permittee shall compile a list of the general public reporting contacts from all Permittees and make this information available on the web site (<http://www.vcstormwater.org/contact.htm>) and upon request.

#### Outreach and Education

- (1) Provide documentation to show that the Permittees implemented the following activities:
  - Storm Water pollution prevention advertising campaign.
  - Storm Water pollution prevention public service announcements.
  - Distribution of storm water pollution prevention public education materials to auto parts stores, home improvement centers and pet shops/ feed stores in regards to information on the proper storage and disposal of household waste materials, construction waste materials and vehicle waste fluids, the proper use of fertilizers and pesticides and the proper disposal of animal wastes.
  - Organization of watershed Citizen Advisory Groups/ Committees to develop/ implement effective methods to educate the public about storm water pollution.
  - Organization of events for residents and population subgroups.
  - Maintenance of the Countywide storm water website ([www.vcstormwater.org](http://www.vcstormwater.org)), including educational materials.
- (2) Provide documentation to show that the Principal Permittee implemented the strategy to educate ethnic communities through culturally acceptable and effective methods.
- (3) Did each Permittee implement outreach efforts to residents and school children related to the proper disposal of litter, green waste, pet waste, proper vehicle maintenance, lawn care and water conservation practices?
- (4) Did the Permittees make demonstrable positive effects on the general public related to storm water quality?
- (5) On 4 above, explain how so.
- (6) Did the Principal Permittee, in cooperation with the Permittees, provide schools within each School District in the County with materials, including, but not limited to, videos, live presentations, and other information necessary to educate a minimum of 50 percent of all school children (K-12) every 2 years on storm water pollution?
- (8) Provide the contact information for their appropriate staff responsible for storm water public education activities to the Principal Permittee and changes to contact information no later than 30 days after a change occurs.

E

- (9) Provide the assessment of the strategy to measure the effectiveness of in-school educational programs.

Businesses Program

- (a) Corporate Outreach  
(b) Provide a progress update on the Corporate Outreach program.

**D. Industrial/ Commercial Facilities Program**

Each Permittee shall require implementation of pollutant reduction and control measures at industrial and commercial facilities, with the objective of reducing pollutants in storm water runoff. Except as specified in other sections of this Order, pollutant reduction and control measures may be used alone or in combination, and may include Structural Treatment Control, Source Control BMPs, and operation and maintenance procedures, which may be applied before, during, and/ or after pollution generating activities. At a minimum, the Industrial/ Commercial Facilities Control Program Report shall include requirements to: (1) track, (2) inspect, and (3) ensure compliance with municipal ordinances at industrial and commercial facilities that are critical sources of pollutants in storm water runoff.

1. Inventory of Critical Sources

- (a) Describe how the critical sources are inventoried. (whether via a watershed-based inventory or database or GIS. Provide a sample.  
(b) Each Permittee shall include the following minimum fields of information for each critical sources industrial and commercial facility.  
(1) Name of facility and owner/ operator.  
(2) Address of facility.  
(3) Coverage under the ISWGP or other individual or general NPDES permits or any applicable waiver issued by the Regional or State Board pertaining to runoff discharges.  
(4) A narrative description including SIC (NAICS) codes that best describe the industrial activities performed and principal products used at each facility and status of exposure to storm water.  
(c) Did each Permittee update its inventory of critical sources annually?  
(d) Critical Source Inventory Database

Did you (individually or jointly) update the Database for Critical Sources Inventory?	Yes <input type="checkbox"/>
	No <input type="checkbox"/>

Comments/ Explanation/ Conclusion:

2. Inspection Program

(a) The Permittee shall verify the following for each inspection:

- (1) The facility has a current Waste Discharge Identification (WDID) number or a current No Exposure Certification for discharging storm water associated with industrial activity?
- (2) A Storm Water Pollution Prevention Plan available on-site?
- (3) The facility is effectively implementing BMPs in compliance with County and municipal ordinances including the source control BMPs outlined in Part 4.D. of this Order
- (4) The facility needs to implement additional treatment control BMPs where the storm water from the MS4 discharges to a CWA §303(d) listed water body?

Comments/ Explanation/ Conclusion:				

Nurseries and nursery centers

- (a) At nurseries subject to the agricultural waiver issued by the Regional Water Board, provide a spreadsheet with the following information:
  - How many operators have enrolled under the waiver?
  - What is their identification number?
  - How many nonfilers did you notify to apply under the agricultural waiver?
- (b) Did you submit electronically semiannually to the Regional Water Board a list with the names of facilities notified to apply for the waiver?

Ensuring Compliance of Critical Sources

- (a) On how many sites did you determine that a BMP is infeasible, and require implementation of other BMPs that will achieve the equivalent reduction of pollutants in the storm water discharges?
- (b) For critical sources that discharge to ESAs or that are tributary to CWA § 303(d) impaired water bodies, does the Permittee require operators to implement additional controls to reduce pollutants in storm water runoff that are causing or contributing to exceedences of Water Quality Standards?

Investigation of Complaints Regarding Facilities – Transmitted by the RB Staff

- (a) How many investigations were conducted as a result of USEPA or Regional Water Board staff referrals of violators to the Permittee?
- (b) Was the investigation initiated within one business day of being contacted?
- (c) What were the results of each investigation?

**E. Planning and Land Development Program**

1. Low Impact Development

- (a) Did all new development and redevelopment projects integrate Low Impact Development (LID) principles into project design?
- (b) How many did?
- (c) How many did not?
- (d) If not, Why not?

Numeric Hydromodification Mitigation Criteria

1. Hydrologic (Flow/ Volume/ Duration) Control

- (a) Did the Permittees require all new developments and redevelopment projects to implement hydrologic control measures, to prevent accelerated downstream erosion and to protect stream habitat in natural drainage systems?
- (b) How many did?
- (c) How many did not?
- (d) Why not?

2. Post Construction Storm Water BMP Program

T  
E  
N  
T  
A  
T  
I  
V  
E

- (a) For each project, did each Permittee require that during the construction of a single-family hillside home, actions be taken to:
    - (1) Conserve natural areas?
    - (2) Protect slopes and channels?
    - (3) Provide storm drain system stenciling and signage?
    - (4) Divert roof runoff to vegetated areas before discharge unless the diversion would result in slope instability? and
    - (5) Direct surface flow to vegetated areas before discharge unless the diversion would result in slope instability?
  - (b) Did each Permittee require that all development projects equal to 1 acre or greater be subject to conditioning and approval of post-construction BMPs as approved by the Regional Water Board in Board Resolution No. R 00-02?
  - (c) Did each Permittee require that the following development projects be subject to conditioning and approval of post-construction BMPs?
    - (1) Retail gasoline outlets 5,000 square feet or more of surface area; How many sites?
    - (2) Restaurants (SIC 5812) 5,000 square feet or more of surface area; How many sites?
    - (3) Parking lots 5,000 square feet or more of surface area or with 25 or more parking spaces; How many sites?
    - (4) Automotive service facilities (SIC 5013,5014,5541,7532-7534 and 7536-7539) [5,000 square feet or more of surface area]; How many sites? and
    - (5) Redevelopment projects in subject categories that meet Redevelopment thresholds. How many sites?
  - (d) Did each Permittee require that post construction BMPs be subject to conditioning and approval for development projects located in or directly adjacent to or discharging directly to an Environmentally Sensitive Area (ESA), where the development will:
    - (1) Discharge storm water and urban runoff that is likely to impact a sensitive biological species or habitat.
    - (2) Create 2,500 square feet or more of impervious surface area.
3. Numeric Water Quality Design Criteria

**Projects disturbing land areas less than 50 acres**

- (a) How many did the Permittee require that post-construction Treatment Control BMPs incorporate, at a minimum, a volumetric and/ or hydrologic (flow based) treatment control design standard, as identified below to mitigate (infiltrate, filter or treat) storm water runoff as specified below?
- (b) How many sites were exempted from the requirement?
- (c) Why were they exempted?

T  
E  
N  
T  
A  
T  
I  
V  
E

**Projects disturbing land area of 50 acres or greater**

For sites 50 acres or greater how many did the Permittee require that post-construction Treatment Control BMPs be,

- (a) Designed using an appropriate public domain hydrodynamic model (such as Storm Water Management Model (SWMM) 5 or Hydrologic Engineering Center – Hydrologic Simulation Program – Fortran (HEC-HSPF); and incorporate
- (b) Rainfall intensity based on hourly rainfall records;
- (c) An adjustment factor for within hour rainfall variability; and
- (d) Hydraulics of BMP Performance.
- (e) How many projects did this apply to?
- (f) Were there any sites that were exempted from the requirement?
- (g) How many sites were exempted?
- (h) Why were they exempted?

## 4. Applicability of Numerical Criteria

Did the Permittee require all projects equal to 1 acre or greater and the following additional projects to design and implement post-construction treatment controls to mitigate storm water pollution for the following?:

- (a) Automotive service facilities (SIC 5013, 5014, 5541, 7532-7534 and 7536-7539) [5,000 square feet or more of surface area].
- (b) Retail gasoline outlets [5,000 square feet or more of impervious surface area and with projected Average Daily Traffic (ADT) of 100 or more vehicles].  
Subsurface Treatment Control BMPs which may endanger public safety (i.e., create an explosive environment) are considered not appropriate.
- (c) Restaurants (SIC 5812) [5,000 square feet or more of surface area].
- (d) Parking lots 5,000 square feet or more of surface area or with 25 or more parking spaces.
- (e) Projects located in, adjacent to or discharging directly to an ESA that meet threshold conditions identified above in 2(d).
- (f) Redevelopment projects in subject categories that meet Redevelopment thresholds.
- (g) How many projects did this apply to?
- (h) Were there any sites that were exempted from the requirement?
- (i) How many sites were exempted?
- (j) Why were they exempted?

## 5. Site Specific Mitigation

- (a) List how many sites did each Permittee require the implementation of a site-specific plan to mitigate post-development storm water for new development and redevelopment not identified in Section XX but which may potentially have

adverse impacts on post-development storm water quality, with one or more of the following project characteristics:

- (1) Vehicle or equipment fueling areas. How many?
- (2) Vehicle or equipment maintenance areas, including washing
- (3) and repair. How many?
- (4) Commercial or industrial waste handling or storage. How many?
- (5) Outdoor handling or storage of hazardous materials. How many?
- (6) Outdoor manufacturing areas. How many?
- (7) Outdoor food handling or processing. How many?
- (8) Outdoor animal care, confinement, or slaughter. How many?
- (9) Outdoor horticulture activities. How many?
- (b) Were there any sites that were exempted from the requirement?
- (c) How many sites were exempted?
- (d) Why were they exempted?

6. Redevelopment Projects

- (a) Did the Permittees apply the post construction BMP requirements, or site specific requirements including post-construction storm water mitigation to all projects that undergo significant Redevelopment in their respective categories?
- (b) How many?
- (c) Were there any sites that were exempted from the requirement?
- (d) How many sites were exempted?
- (e) Why were they exempted?

7. Maintenance Agreement and Transfer

- (a) How many developments subject to post construction BMP requirements and site specific plan requirements actually provided verification of maintenance provisions for Structural and Treatment Control BMPs, including but not limited to legal agreements, covenants, CEQA mitigation requirements, and or conditional use permits?
- (b) How many of each verification were received?
- (c) The developer's signed statement accepting responsibility for maintenance until the responsibility is legally transferred?
- (d) A signed statement from the public entity assuming responsibility for Structural or Treatment Control BMP maintenance and that it meets all local agency design standards?
- (e) Written conditions in the sales or lease agreement, which requires the recipient to assume responsibility for maintenance and conduct a maintenance inspection at least once a year?
- (f) Written text in project conditions, covenants and restrictions (CCRs) for residential properties assigning maintenance responsibilities to the Home Owners Association for maintenance of the Structural and Treatment Control BMPs?

- (g) Written conditions in the sales or lease agreement, which requires the recipient to assume responsibility for maintenance and conduct a maintenance inspection at least once a year?
- (h) Another type of legally enforceable agreement that assigns responsibility for the maintenance of post-construction Structural or Treatment Control BMPs?
8. Development Planning Coordination and Enforcement
- (a) Did you inspect each new development and redevelopment project for post construction controls prior to approving and signing off for occupancy?
- (b) How many?
- (c) Were there any sites that were exempted from the requirement?
- (d) How many sites were exempted?
- (e) Why were they exempted?
9. Regional Storm Water Mitigation Program
- (a) Have you applied to the Regional Water Board for approval of a regional or sub-regional storm water mitigation program to substitute in part or wholly for on-site post-construction requirements?
10. Inspection and Tracking System for Post Construction Treatment BMPs
- (a) Did you implement the required Geographic Information System (GIS) or other electronic system for tracking projects conditioned for post construction treatment control BMPs?
- (b) Does include the following information? (Answer each separately)
- (1) Municipal Project ID?
- (2) State WDID No.?
- (3) Project Acreage?
- (4) BMP Type and Description?
- (5) BMP Location (GPS coordinates)?
- (6) Date of Acceptance?
- (7) Date of O&M Certification?
- (8) Maintenance Records
- (9) Inspection Date and Summary?
- (10) Corrective Action?
- (11) Replacement or Repair Dates?
- (c) Did you inspect all facilities to verify proper maintenance and operation of Treatment BMPs previously approved?
- (d) Did you accomplish the following?
- (e) BMP acceptance inspection to ensure proper installation?
- (1) Inspection once every two years of high priority post-construction BMPs to ensure treatment effectiveness, hydraulic function, and vector risk minimization?

11. Developer Technical Guidance and Information

- (a) List dates as to when the Ventura County Technical Guidance Manual for Stormwater Quality Control Measures was last updated to include the following:
- (1) Hydrologic (Peak Flow) Control criteria for volume control described herein and the interim criteria based on hydrograph matching?
  - (2) Expected BMP pollutant removal performance including consistent effluent quality and removal efficiency ranges (International BMP Database, technical reports and the scientific literature?
  - (3) Improved Correlation of BMPs with storm water POC?
  - (4) Data on Observed Local Effectiveness and performance of implemented BMPs?
  - (5) BMP Maintenance and Cost considerations?
  - (6) Criteria to facilitate integrated water resources planning and management in the selection of BMPs, including water conservation, groundwater recharge, public recreation, multipurpose parks, open space preservation, and redevelopment retrofits?

12. Project Review and Inter Department Coordination

- (a) Did you ensure that a detailed BMP review was performed including BMP sizing calculations, BMP pollutant removal appropriateness, for each plan submitted with a signed certification?
- (b) How many?
- (c) Were there any sites that were exempted from the requirement?
- (d) How many sites were exempted?
- (e) Why were they exempted?
- (f) Did you ensure that a clear structure for communication and delineated authority are established between and among municipal departments which have jurisdiction over project review, plan approval, project construction, and site maintenance?
- (g) Explain how?

13. California Environmental Quality Act (CEQA) Document Update

Did you incorporate into the CEQA process procedures for considering potential storm water quality impacts and providing for appropriate mitigation when preparing and reviewing CEQA documents? (Answer each below separately.)

- (a) Potential impact of project construction on storm water runoff?
- (b) Potential impact of project post-construction activity on Storm Water runoff?
- (c) Potential for discharge of storm water from areas from material storage, vehicle or equipment fueling, vehicle or equipment maintenance (including washing), waste handling, hazardous materials handling or storage, delivery areas or loading docks, or other outdoor work areas?
- (d) Potential for discharge of storm water to impair the beneficial uses of the receiving waters or areas that provide water quality benefit?

T  
E

- (e) Potential for the discharge of storm water to cause significant harm on the biological integrity of the waterways and water bodies?
- (f) Potential for significant changes in the flow velocity or volume of Storm Water runoff that can cause environmental harm?
- (g) Potential for significant increases in erosion of the project site or surrounding areas?

15. General Plan Update

- (a) Was your General Plan amended, revised or updated to include watershed and storm water quality and quantity management considerations and policies when any of the following General Plan elements are updated or amended?  
(Answer each separately)
  - (1) Land Use?
  - (2) Housing?
  - (3) Conservation?
  - (4) Open Space?
- (b) Did you provide the Regional Water Board with the draft amendment or revision when a listed General Plan element or the General Plan was noticed for comment in accordance with Cal. Govt. Code § 65350 *et seq*?
- (c) When?

**F. Development Construction Program**

- 1. Did you implement a program to control runoff from construction activity at all construction sites within your jurisdiction to ensure that the following requirements are effectively implemented? (Answer each separately)
  - (a) For construction projects within or adjacent to an environmentally sensitive area (ESAs), did you prohibit grading between October 1 and April 15?
  - (b) For construction projects, which include grading on slopes greater than 5:1, that no grading shall occur between October 1 and April 15?
  - (c) All construction projects, which directly discharge into a sedimentation/ siltation impaired water body and is listed on the CWA §303 (d) list. No grading shall be occurring between October 1 and April 15?
  - (d) If grading operations were not completed before the rainy season began, was grading halted and erosion control measures put in place to minimize erosion until grading resumes after April 15?
- 2. Did you require construction site operators to seek separate coverage from the Regional Water Board wherever ground water dewatering may be necessary, is anticipated, or likely?
  - (a) Small Construction Sites

T  
E  
N  
T  
A  
T  
I  
V  
E

- (1) For each construction site did you require and inspect to ensure that at each construction site, the minimum set of BMPs were implemented to minimize erosion and sediment loss, and prevent pollution from construction waste?
3. For each construction site 1 acre and greater:
- (a) Did you review and approve a Local Storm Water Pollution Prevention Plan (Local SWPPP), for approval prior to issuance of a grading permit for construction projects?
  - (b) Did you inspect all construction sites for storm water quality requirements during routine inspections a minimum of once during the wet season?
  - (c) Was the Local SWPPP reviewed for compliance with local codes, ordinances, and permits?
  - (d) For inspected sites that have not adequately implemented their Local SWPPP, a follow-up inspection to ensure compliance shall take place within 2 weeks?
  - (e) If compliance had not been attained, did the Permittee take additional actions to achieve compliance (as specified in municipal codes)?
  - (f) How many?
  - (g) For small construction sites one acre and greater (or part of a larger plan of development or sale), did you require, prior to issuing any grading permit, demolition permit, building permit, or construction permit [or any other municipal authorization to move soil and/ or construct or destruct that involves soil disturbance], for all projects requiring coverage under the state general permit, proof of a Waste Discharger Identification (WDID) Number for filing a Notice of Intent (NOI) for coverage under the CASGP and a certification that a SWPPP has been prepared by the project developer?
  - (h) Does your agency accept a Local SWPPP as a substitute for the State SWPPP?
  - (i) Is the Local SWPPP at least as inclusive in controls and BMPs as the State SWPPP?
  - (j) Do you require proof of an NOI and a copy of the SWPPP at any time a transfer of ownership takes place for the entire development or portions of the common plan of development where construction activities are still on-going?
  - (k) What system do you use to track grading permits issued by your agency?
4. Linear Construction
- (a) Do you require for any linear construction project or projects (cumulatively) that will cause one acre or more of soil disturbance but not more than 5 acres that coverage be obtained under the Small Linear Underground/ Overhead Construction Projects General Permit?
  - (b) Do you require proof of a Waste Discharger Identification Number (WDID) for filing a Notice of Intent (NOI) for coverage under the and a certification that a SWPPP has been prepared by the project developer, prior to issuing a grading permit, demolition permit building permit, or construction permit (or other authorization to move soil and/ or construct or destruct that involves soil disturbance)?

5. CASGP Violation Referrals
  - (a) Did you make any referral of violations of the new development and redevelopment post construction requirements and municipal storm water ordinances to the Regional Water Board?
  - (b) Did you make any referral for suspected violations of the CASGP or Linear Permit coverage requirements

#### G. Public Agency Activities Program

1. Sewage System Maintenance, Overflow, and Spill Prevention
  - (a) Did you implement a response plan for overflows of the sanitary sewer system within their respective jurisdiction that clearly identifies agencies responsible and telephone numbers and email for any contact?
  - (b) How many overflows did you have?
  - (c) How many did you respond to?
  - (d) Do you own and/ or operate a sanitary sewer system?
  - (e) If so, did you also Identify, repair, and remediate sanitary sewer blockages, exfiltration, overflow, and wet weather overflows from sanitary sewers to the MS4?
  - (f) Did you implement procedures and maintenance schedules to prevent sewage spills or leaks from sewage facilities from entering the MS4?
  - (g) If you are a Permittee with septic systems in your jurisdiction, how many do you have?
  - (h) Did you implement the following for flows of septic leachate to surface waters within their respective jurisdiction, which shall consist at a minimum of the following:
    - (1) Investigation of any complaints received?
    - (2) Immediately respond to overflows for containment, upon notification?
    - (3) Notification to appropriate agencies and public health agencies when a septic system fails and flows to the MS4?
2. Public Construction Activities Management
  - (a) Did you comply with all the Development Planning Program requirements in at public construction projects?
  - (b) Did you comply with all the Development Construction Program requirements at Permittee owned or operated construction sites?
  - (c) Did you obtain coverage under the CSWGP for all construction activities for (non linear) capital improvement project(s), or contracts, that individually or cumulatively equals or surpass the 1 acre land disturbance threshold?
  - (d) Did you obtain coverage under the Statewide General Permit for Storm water Discharges Associated with Construction Activity from Small Linear Underground/ Overhead Projects (Small LUP General Permit) for Small Linear

Underground/ Overhead Projects disturbing at least 1 acre, but less than 5 acres  
(including trenching and staging areas)?

3. Vehicle Maintenance/ Material Storage Facilities/ Corporation Yards Management.

- (a) Did you implement the required BMPs for each maintenance yard and activity specified in the tables Permittee shall implement the following BMPs at all Permittee owned, leased facilities including but not limited to vehicle/ equipment maintenance facilities, material storage facilities, and corporation yards, and at any area that includes the activities as described in the tables below. Answer each separately.

- (b) Are all of your existing facilities that are not plumbed to the sanitary sewer with vehicle and equipment washing areas:
- (1) Self-contained? How many?
  - (2) Equipped with a clarifier? How many?
  - (3) Equipped with an alternative pre-treatment device? How many?
  - (4) To be plumbed to the sanitary sewer? How many? When?
    - (A) Are all new facilities, or during redevelopment of existing facilities (including fire stations), all vehicle and equipment wash areas to be plumbed to the sanitary sewer and be equipped with a pre-treatment device in accordance with requirements of the sewer agency? If not state why.

#### 4. Landscape and Recreational Facilities Management

##### Control Program for Registered Pesticides

- (a) Did you adopt and implement policies, procedures, and/ or ordinances requiring the minimization of pesticide use and the use of integrated pest management (IPM) techniques in your operations and on municipal property?
- (b) What was your previous year's pesticide use? Answer in gallons or pounds for each type used.
- (c) Using estimated projections, what is your expected use this coming fiscal year? Answer in gallons or pounds for each type used.
- (d) Do you have commitments to reduce or phase-out, and ultimately eliminate use of pesticides that cause impairment of surface waters? State for each, by when.
- (e) Describe your Integrated Pesticide Management (IPM) program.
- (f) Attach the program elements.
- (g) Did you comply with the following requirements?:
  - (1) Use a standardized protocol for the routine and non-routine application of pesticides, herbicides (including pre-emergents), and fertilizers?
  - (2) Ensure no application of pesticides or fertilizers immediately before, during, or immediately after a rain event or when water is flowing off the area to be applied?
  - (3) Ensure that no banned or unregistered pesticides are stored or applied?
  - (4) Ensure that all staff applying pesticides are certified by the California Department of Food and Agriculture, or are under the direct supervision of a certified pesticide applicator?
  - (5) Implement procedures to encourage retention and planting of native vegetation and to reduce water, fertilizer, and pesticide needs?
  - (6) Store fertilizers and pesticides indoors or under cover on paved surfaces or use secondary containment?
    - (A) Reduce the use, storage, and handling of hazardous materials to reduce the potential for spills?
    - (B) Regularly inspect storage areas to ensure no environmental harm?

5. Storm Drain Operation and Management

Catch Basin Cleaning

- (a) How many catch basins did you designate as one of the following:
  - Priority A: Catch basins that are designated as consistently generating the highest volumes of trash and/ or debris?
  - Priority B: Catch basins that are designated as consistently generating moderate volumes of trash and/ or debris?
  - Priority C: Catch basins that are designated as generating low volumes of trash and/ or debris?
- (b) Did you clean all catch basins according to the following schedule?:
  - Priority A: A minimum of three times during the wet season and once during the dry season every year? How many?
  - Priority B: A minimum of once during the wet season and once during the dry season every year? How many?
  - Priority C: A minimum of once per year? How many?
- (c) Did you ensure that any catch basin that is at least 25% full of trash and/ or debris was cleaned out? How many?

For each type of catch basin (A, B, or C) state how much trash and debris was collected and state the units (wet tons, dry pounds, etc...)

- (1) Did you require for any special event that they arrange for temporary screens to be placed on catch basins or for catch basins in that area to be cleaned out subsequent to the event and prior to any rain event? How many events did this apply to?
- (2) How much trash and debris was collected? (wet tons, dry pounds, etc...)

Trash Controls

- (a) Did you install trash receptacles at transit stops as required?
- (b) How many?
- (c) How much trash and debris was collected? (wet tons, dry pounds, etc...)
- (d) Did you install trash excluders, or similar devices upon catch basins to prevent the discharge of trash to the storm drain system?
- (e) How many?
- (f) How much trash and debris was collected? (wet tons, dry pounds, etc...)

Catch Basin Labels

- (a) Did you inspect the legibility of the catch basin label by all inlets?
- (b) How many?
- (c) Were catch basins with illegible stencils shall be recorded and re-stenciled or re-labeled within 180 days of inspection?
- (d) How many were recorded?
- (e) How many were relabeled?

Storm Drain Maintenance

- (a) Did you inspect all Permittee-owned open channels and other drainage structures for debris and identify and prioritize problem areas of illicit discharge for regular inspection?
- (b) Do your maintenance activities assure that appropriate storm water BMPs are being utilized to protect water quality?
- (c) Did you remove trash and debris from open channel storm drains before the storm season?
- (d) Did you minimize the discharge of contaminants during MS4 maintenance and clean outs?
- (e) How?
- (f) Did you properly dispose of material removed?
- (g) How much trash and debris was collected? (wet tons, dry pounds, etc...)
- (h) Have you obtained coverage under the CASGP for Long-term maintenance programs for flood control channels (such as vegetation removal) if one or more acres of soil are disturbed by grading, clearing or excavation activities for an individual project or as part of several projects part of the Permittee's long-term maintenance plan?
- (i) How many projects?
- (j) Which projects?
- (k) Were all municipally owned treatment control BMPs as maintained as necessary to ensure optimal pollutant reduction?
- (l) Was any pooled water shall be discharged to the sanitary sewer system?
- (m) Was any of the pooled water treated to remove pollutants and discharged to the storm drain?
- (n) Was every discharge monitored to ensure compliance?
6. Streets and Roads Maintenance
- (a) Did you conduct street sweeping of curbed streets in commercial areas to control trash and debris at least 2 times per month?
- (b) How much trash and debris was collected? (wet tons, dry pounds, etc...)
- (c) Did you obtain coverage under the CASGP for long-term maintenance programs for roadside maintenance (such as: vegetation removal ) if 1 or more acres of soil are disturbed including: grading, clearing or excavation activities that disturb 1 or more acres of land either for an individual project or as part of a long-term maintenance plan?
7. Parking Facilities Management
- (a) Were all Permittee-owned parking lots exposed to storm water cleaned to be kept clear of debris and excessive oil buildup and cleaned no less that 2 times per month?
- (b) How much trash and debris was collected? (wet tons, dry pounds, etc...)

- 8. Public Industrial Activities Management
  - (a) Did you obtain separate coverage under the IASGP for any municipal activity subject to it for the discharge of storm water associated with industrial activity?
  - (b) For how many facilities?
  - (c) Which facilities?
  
- 9. Municipal Drinking Water System Discharges
  - (a) From your municipal drinking system did you maintain the system by flushing hydrants or other fixtures?
  - (b) How many gallons total were discharged in the year?
  - (c) If the discharges in an annual period were less than 100,000 gallons for the entire city did you implement a BMP or suite of BMPs to ensure that the chlorine level of the discharge is 0.1mg/L or less?
  - (d) Did you sample or take a test every time to ensure dechlorination of the water to 0.1mg/L or less?
  - (e) Did you ensure that the BMP or suite of BMPs were implemented so that no erosion is caused by the discharge of the potable water?
  - (f) What BMPs were implemented?
  
- 10. Emergency Procedures
  - (a) Were there any emergencies that caused the Permittee to invoke this section? Explain the situation.
  
- 11. Municipal Employee (and municipal contractor) Training
  - (a) Did you train all of your employees in targeted positions regarding the requirements of the overall storm water management program?
  - (b) Did you promote a clear understanding of the potential for activities to pollute storm water?
  - (c) Did they learn to identify opportunities to require, implement, and maintain appropriate BMPs in their work?
  - (d) Did they learn the appropriate ways of identification, investigation, termination, cleanup, and reporting of illicit connections and discharges?
  - (e) Will they ensure that the requirements of this Order are met?
  - (f) For those employees or contractors who use or have the potential to use pesticides (whether or not they normally apply pesticides as part of their work), which includes pesticides available over the counter, did you address the potential for pesticide-related surface water toxicity?
  - (g) Proper use, handling, and disposal of pesticides?
  - (h) Least toxic methods of pest prevention and control?
  - (i) Encourage the use of IPM?
  - (j) Require the quantifiable reduction of pesticide use?
  - (k) Training - All Permittees shall train all targeted employees who are responsible for on an annual basis. In public agency?

## H. Illicit Connections/ Illegal Discharge Program

1. IC/ ID Program
  - (a) Did you implement an IC/ ID Program?
  - (b) The IC/ ID Program must be documented and available for review.
  - (c) Did you map all permitted connections to the storm drain system?
  - (d) Did you map all illicit connections and discharges on baseline maps?
  - (e) Did you transmit this information to the Principal Permittee?
  - (f) Did you use this mapping information to identify priority areas for further investigation?
  - (g) Did you eliminate all known illicit connections and illicit discharges?
  
2. Public Reporting
  - (a) Did you establish and maintain a phone hotline to receive illicit discharge/ connection complaints?
  - (b) Did you establish and maintain an internet homepage to receive illicit discharge/connection complaints?
  - (c) For all complaints received, did you document the location of the illicit discharge/ connection?
  - (d) Have you documented the actions undertaken in response to all illicit discharge/ connection complaints?
  
3. Illicit Connections
  - Screening for Illicit Connections
    - (a) Did you conduct field screening of your storm drain system for illicit connections?
    - (b) For those portions of the storm drain system consisting of storm drain pipes 36 inches in diameter of greater, how many miles did you field screen this year?
    - (c) Out of how many miles total?
    - (d) Did you conduct field screening for high priority areas identified during the mapping of illicit connections and discharges?
    - (e) How many miles were completed this year?
    - (f) Out of how many miles total?
    - (g) How much of the storm drain system that is 50 years or older in age did you field screen?
    - (h) Out of how many miles total?
    - (i) Did you submit to the Principal Permittee a GIS layer showing the location and length of underground pipes greater than 18" in diameter and channels within their jurisdiction?
    - (j) Did you also include the status of suspected, confirmed, and terminated illicit connections?
    - (k) Did you maintain a list containing all connections under investigation for possible illicit connection and their status?

(l) Did you attach that list to this Annual Report?

Response to Illicit Connections

- (a) Did you complete an investigation within 21 days of notice of a suspected illicit connection?
- (b) Did you determine the Source of each connection?
- (c) Did you determine the nature and volume of discharge through the connection?
- (d) Did you identify the responsible party of the connection?
- (e) How many suspected illicit connections were there this year?
- (f) Upon confirmation of the illicit nature of a storm drain connection did you terminate the connection within 180 days of completion of the investigation?
- (g) Did you document all illicit connection discoveries and your response to each?

4. Illicit Discharges

(a) Abatement and Cleanup

- (1) Did you respond and cleanup within 1 business day of discovery or of receiving a report of a suspected illicit discharge?
- (2) Did you keep records of all illicit discharge discoveries, reports of suspected illicit discharges and their response to the illicit discharges and suspected illicit discharges?
- (3) How many did you receive?
- (4) How many did you respond to?

(b) Investigation

- (1) Did you investigate illicit discharges during or immediately following containment and cleanup activities, and take enforcement action as appropriate?

**MONITORING PROGRAM**

1. The primary objectives of the Monitoring Program include, but are not limited to:
  - (a) Assessing the chemical, physical, and biological impacts of municipal storm water sewer system discharges on receiving waters.
  - (b) Assessing the overall health and evaluating long-term trends in receiving water quality.
  - (c) Assessing compliance with TMDL targets and water quality objectives.
  - (d) Characterization of the quality of storm water discharges.
  - (e) Identifying sources of pollutants.
  - (f) Measuring and improving the effectiveness of measures implemented under this Order.
  
2. The results of the monitoring requirements outlined below shall be used to refine BMPs for the reduction of pollutant loading and the protection and enhancement of the beneficial uses of the receiving waters in Ventura County.
  
3. The Permittees shall implement the Monitoring Program as follows:

**CORE MONITORING**

**A. Mass Emissions**

- I. The Principal Permittee shall monitor mass emissions to accomplish the following objectives:
  - i. Estimate the mass emissions from the MS4 to the watershed.
  - ii. Assess trends in the mass emissions over time.
  - iii. Determine if the MS4 is contributing to exceedances of water quality objectives by comparing results to applicable water quality objectives in the Water Quality Control Plan Los Angeles Region (Basin Plan) and the California Toxics Rule (CTR).
  
1. The Principal Permittee shall monitor mass emissions from the following 3 mass emission stations:
  - (a) ME-VR2 for Ventura River
  - (b) ME-SCR for Santa Clara River
  - (c) ME-CC for Calleguas Creek

T  
E  
N  
T  
A  
T  
I  
V  
E

2. The Principal Permittee shall monitor the 3 mass emission stations on an annual basis as per A.3. below.
3. The Principal Permittee shall monitor each mass emission station each year as follows:
  - (a) The first storm event of the wet season that produces a 20% or greater increase in base stream flow, and 2 additional storm events; all storm events shall be separated by 7 days of dry weather (less than 0.1 inch of rainfall) from the previously measurable storm event (0.25 inches of rain).
  - (b) A total of 4 monitoring events (3 wet-weather storm events, 1 dry-weather) per mass emission station.
4. Samples for mass emission monitoring may be taken with the same type of automatic sampler used under Order 00-108. . Sampling shall be in accordance with USEPA "NPDES Storm Water Sampling Guidance Document, EPA 833-8-92-001, July 1992" or other protocol approved by the Executive Officer.
5. Samplers shall be set to monitor storms that produce a 20% or greater increase in base stream flow.
6. Samples shall be flow-weighted composites, collected during the first 24 hours or for the duration of the storm if it is less than 24 hours.
7. Samples shall be collected from the discharge resulting from a storm event that is 0.25 inches or greater, samples may be analyzed if a predicted storm event produces between 0.15 and 0.24 inches of rain.
8. The flow-weighted composite sample for a storm water discharge shall be taken with a continuous sampler, or it shall be taken as a combination of a minimum of 3 sample aliquots, taken in each hour of discharge for the first 24 hours of the discharge or for the entire discharge if the storm event is less than 24 hours, with each aliquot being separated by a minimum of 15 minutes within each hour of discharge, unless the Regional Water Board Executive Officer approves an alternate protocol.
9. Flow may be estimated using U.S. EPA methods at sites where flow measurement devices are not in place.
10. Grab samples shall be taken only for pathogen indicators, hardness (as mg/L CaCO<sub>3</sub>) and pH, temperature, and DO.
11. Each mass emission shall analyze for all of the Pollutants of Concern (POC) in its specific watershed listed in Attachment "B" (Calleguas Creek Watershed,

T  
E  
N  
T  
A  
T  
I  
V  
E

February 24, 2009 - Tentative

Santa Clara River Watershed, and Ventura River Watershed Pollutants of Concern).

12. Each mass emission station shall screen for all constituents listed in Attachment "G" (Storm Water Monitoring Program's Constituents with Associated Minimum Levels), during the first storm event of the wet season for each year sampled. If a constituent is not detected at the Method Detection Limit (MDL) for its respective test method it need not be further analyzed unless the observed occurrence shows concentrations greater than the state water quality objective, and/ or the California Toxics Rule (CTR) for acute criteria. If a constituent is detected exceeding a Basin Plan objective, and/ or CTR criteria then the constituent shall be analyzed for the remainder of the Order, at the mass emission station where it was detected.
13. At a minimum, a sufficient sample volume must be collected to perform all of the required biological and chemical tests.
14. When monitoring can not be performed to comply with the requirements of this Order due to circumstances beyond the Permittee's control, then within two working days the following shall be submitted to the Regional Water Board Executive Officer:
  - (a) Statement of situation.
  - (b) Explanation of circumstance(s) with documentation.
  - (c) Statement of corrective action for the future.
15. Monitoring results submitted to the Regional Water Board shall include:
  - (a) Rain totals and hydrographs for monitoring events in both narrative and graphic formats.
  - (b) A narrative description of the date and duration of the storm event(s) sampled, rainfall estimates of the storm event which generated the sampled discharge and the duration between the storm event sampled and the end of the previous measurable storm event.
  - (c) All applicable Standard Monitoring Provisions listed in part "J".
16. Results of monitoring from each mass emission station conducted in accordance with the Standard Operating Procedure submitted under Standard Provision 14 of this Attachment shall be sent electronically to the Regional Water Board's Storm Water site at MS4stormwaterRB4@waterboards.ca.gov, no later than 90 days from sample collection date, highlighting exceedances (Pollutants of Concern, POC) to the Basin Plan objectives for all test results, and the CTR for acute criteria with corresponding sampling dates per mass emission station. The sample data transmitted shall be in the most recent update of the Southern California Municipal Storm Water Monitoring Coalition's (SMC) Standardized Data Transfer Formats (SDTFs).

T  
E  
N  
T  
A  
T  
I  
V  
E

February 24, 2009 - Tentative

- 17. A summary of the annual mass emission monitoring results highlighting exceedances (POC) of the Basin Plan objectives and the CTR for acute criteria, with corresponding sampling dates per mass emission station, shall be included with the Annual Storm Water Report.

**B. Major Outfalls**

- I. The Principal Permittee shall monitor major storm drain outfalls to accomplish the following objectives:
  - i. Estimate the annual pollutant load of the cumulative discharges to waters of the State.
  - ii. Estimate the event mean concentration of the cumulative discharges to waters of the State.
  - iii. Assess trends in the major outfalls over time.
  - iv. Estimate the annual pollutant load of discharges to Waters of the U.S.
  - v. Estimate the event mean concentration of discharges to Waters of the U.S.
  - vi. Assess trends in the major outfalls over time.
  - vii. Determine if the MS4 is contributing to exceedances of MALs, and water quality objectives in the Water Quality Control Plan Los Angeles Region (Basin Plan), and the California Toxics Rule (CTR).

- 1. The Principal Permittee shall monitor:
  - (a) End-of-pipe of major outfalls, identified in Attachment I, transporting representative discharges from each Permittee's Municipal drainage area to:
    - (1) Major outfalls listed in Attachment "P" (Storm Water Monitoring Program's Major Outfall Stations).
    - (b) The first storm event of the wet season that produces at least 0.25 inches of rain, and 2 additional storm events per year, all storm events shall be separated by 7 days of dry weather (less than 0.1 inch) from the previously measurable storm event (0.25 inches).
    - (c) A total of 4 monitoring events (3 wet-weather storm events, 1 dry-weather) shall be sampled per identified major outfall.
    - (d) In the first year after permit adoption, 4 major outfall stations shall be monitored. Thereafter, all major outfall stations listed in Attachment H are to be monitored annually according to the schedule above.
- 2. If an identified monitoring site is found to be unworkable due to immitigable factors the sampling location may be relocated upon Executive Officer's approval of another location. Best professional judgment shall be used to balance the site selection rationale and criteria to determine the most appropriate site. Due to limited potential locations of urban outfalls to be monitored, there may be no sites that satisfy all criteria and rationale. Sites will be selected to satisfy the following criteria:

T  
E  
N  
T  
A  
T  
I  
V  
E

- (a) Maximize urban runoff contribution;
  - (b) Greater than 60% of catchment shall be Permittee's MS4;
  - (c) Attempt shall be made to avoid outfalls that contain discharge from extra-jurisdictional areas (e.g. agriculture land and other NPDES discharges).
  - (d) Drainage area should contain representative land uses in a ratio of use as similar as reasonably possible to that found in the Permittee's jurisdiction.
  - (e) Drainage areas with a higher percentage of the Permittee's MS4 are preferred;
  - (f) Ability to accurately measure flow
  - (g) Safety of monitoring personnel is the highest priority. Specific location of sampling collection may be upstream of the actual outfall if field safety or accurate flow measurement require it.
3. Samples shall be collected from the discharge resulting from a storm event that is 0.25 inches or greater, samples may be analyzed if a predicted storm event produces between 0.15 inches and 0.24 inches of rain.
  4. Samples shall be collected during the first 24 hours of storm water discharge or for the entire storm water discharge if it is less than 24 hours.
  5. Samples shall be flow-weighted composites and can be collected automatically or manually (see subparts A.7 and A.8) in accordance with U.S. EPA protocol or other procedure approved by the Executive Officer.
  6. Grab samples shall be taken only for pathogen indicators, hardness (as mg/L CaCO<sub>3</sub>) and pH, temperature, and DO.
  7. Major outfall samples taken within a subwatershed shall be analyzed for the biological and chemical parameters listed in the preceding subpart B.6, and for all of the constituents in Attachment "C" (Municipal Action Levels), Tables 1 & 2, as listed below:
    - (a) pH
    - (b) TSS
    - (c) COD
    - (d) Kjeldahl Nitrogen (TKN)
    - (e) Nitrate & Nitrite- Total
    - (f) P- Total
    - (g) Cd- Total
    - (h) Cr- Total
    - (i) Cu- Total
    - (j) Pb- Total
    - (k) Ni- Total
    - (l) Zn- Total
    - (m) Hg- Total

8. Each major outfall station shall screen for all constituents listed in Attachment "G" (Storm Water Monitoring Program's Constituents with Associated Minimum Levels) twice per wet season, per year, (1<sup>st</sup> storm event of the wet season and one other storm event of the wet season). If a constituent is not detected at the Method Detection Limit (MDL) for its respective test method it need not be further analyzed unless the observed occurrence shows concentrations greater than the state water quality objective, and/ or the California Toxics Rule (CTR) acute criteria. If a constituent is detected exceeding a Basin Plan objective, and/or acute CTR criteria then the constituent shall be sampled for the remainder of the Order, at the major outfall station where it was detected.
9. At a minimum, a sufficient sample volume must be collected to perform all of the required biological and chemical tests. Sampling shall be in accordance with USEPA "NPDES Storm Water Sampling Guidance Document, EPA 833-8-92-001, July 1992" or other protocol approved by the Executive Officer.
10. When monitoring can not be performed to comply with the requirements of this Order due to circumstances beyond the Permittee's control, then within 2 working days the following shall be submitted to the Regional Water Board Executive Officer:
  - (a) Statement of situation
  - (b) Explanation of circumstance(s) with documentation
  - (c) Statement of corrective action for the future
11. Monitoring results submitted to the Regional Water Board shall include:
  - (a) Rain totals and hydrographs for monitoring events in both narrative and graphic formats.
  - (b) A narrative description of the date and duration of the storm event(s) sampled, rainfall estimates of the storm event which generated the sampled discharge and the duration between the storm event sampled and the end of the previous measurable storm event.
  - (c) All applicable Standard Monitoring Provisions listed in part "J".
12. Results of monitoring from each major outfall station conducted in accordance with the Standard Operating Procedure submitted under Standard Provision 14 of this Attachment shall be sent electronically to the Regional Water Board's Storm Water Site at MS4stormwaterRB4@waterboards.ca.gov, no later than 90 days from sample collection date, highlighting exceedances to the MALs, the Basin Plan objectives for all test results, and the CTR for acute criteria with corresponding sampling dates per major outfall station. The sample data transmitted shall be in the most recent update of the Southern California

## Municipal Storm Water Monitoring Coalition's (SMC) Standardized Data Transfer Formats (SDTFs).

13. A summary of the annual major outfall monitoring results, highlighting exceedences (pollutants of concern POC) to the MALs, the Basin Plan objectives, and the CTR for acute criteria with corresponding sampling dates per major outfall station, shall be included with the Annual Storm Water Report.

**C. Dry Weather Analytical Monitoring**

- I. The Principal Permittee shall develop and implement a monitoring program to characterize pollutant discharges from representative MS4 outfalls in each municipality and in the unincorporated County area during dry weather. This monitoring program shall be implemented within each jurisdiction and shall begin within the 2010-2011 monitoring year.
1. Dry weather analytical monitoring shall include:
    - (a) Analytical monitoring, field measurements and observations at selected stations.
    - (b) Reports of analytical data in a SWAMP comparable format.
  2. Selection of Dry Weather Analytical Monitoring stations: Based upon a review program data, the storm drain system and land uses, the Co-Permittees shall select dry weather analytical monitoring stations within their jurisdiction. At least 5 dry weather analytical monitoring stations need to be identified per Co-Permittee. The dry weather analytical monitoring stations shall be established using the following guidelines and criteria:
    - (a) Stations should be located downstream of municipal land uses where illegal or illicit activity may occur;
    - (b) Stations shall be located at accessible downstream locations within the storm drain system of each municipality or at major outfalls;
    - (c) Hydrological conditions, total drainage area of the site, traffic density, age of the structures or buildings in the area, history of the area, and land use types shall be considered in locating stations;
    - (d) Each Co-Permittee shall determine a primary station and at least 4 alternate stations to be sampled in case primary stations do not have flow in dry weather. The dry weather monitoring may utilize the same outfalls as those used for wet weather monitoring, if such outfalls are found to discharge during dry weather.
    - (e) Fact sheets of general information such as site descriptions (i.e., conveyance type, dominant watershed land uses) shall be created.

February 24, 2009 - Tentative

3. The Principal and Co-Permittees shall develop and/or update written procedures for dry weather analytical monitoring (these procedures must be consistent with 40 CFR part 136), including field observations, monitoring, and analyses to be conducted. At a minimum, the procedures must meet the following guidelines and criteria:
  - (a) Dry weather analytical monitoring shall be conducted at each identified station at least once between May 1st and September 30th of each year.
  - (b) If flow or ponded runoff is observed at a dry weather analytical monitoring station and there has been at least seventy-two (72) hours of dry weather, make observations and collect at least one (1) grab sample.
  - (c) Record general information such as site descriptions (i.e., conveyance type, dominant watershed land uses), flow estimation (i.e., width of water surface, approximate depth of water, approximate flow velocity, flow rate), and visual observations (i.e., odor, color, clarity, floatables, deposits/stains, vegetation condition, structural condition, and biology).
4. At a minimum, collect samples for analytical laboratory analysis of the following constituents:
  - (a) Total Hardness
  - (b) Total Organic Carbon or Oil and Grease
  - (c) Lead (Dissolved)
  - (d) Zinc (Dissolved)
  - (e) Copper (Dissolved)
  - (f) Total Coliform bacteria
  - (g) E. Coli bacteria
5. Other required field observations include:
  - (a) Flow Estimation
  - (b) Temperature
  - (c) pH
  - (d) Odor
  - (e) Color
  - (f) Turbidity
  - (g) Floatables (foam, oil sheen)
  - (h) Staining
  - (i) Algal growth
6. If the station is dry (no flowing or ponded runoff), make and record all applicable observations and select another station from the list of alternate stations for monitoring.
7. Visually assess the presence of trash in receiving waters and urban runoff. Assessments of trash shall provide information on the spatial extent and amount of trash present, as well as the nature of the types of trash present.

T  
E  
N  
T  
A  
T  
I  
V  
E

February 24, 2009 - Tentative

- 8. Develop and/or update procedures for source identification follow up investigations in the event elevated levels are found. These procedures shall be consistent with procedures required in IC/ID section.

**D. Aquatic Toxicity Monitoring**

- I. The objective of aquatic toxicity monitoring is to evaluate if storm water (wet weather) discharges are causing or contributing to chronic toxic impacts on aquatic life by the following:
  - i. Toxicity testing at mass emission and major outfall stations to assess impacts on the marine and freshwater environments.
- 1. The Principal Permittee shall collect and analyze mass emission and major outfall samples for toxicity to evaluate the extent and causes of toxicity in receiving waters. Permittees shall utilize documents such as: Ventura County's Technical Guidance Manual for Storm Water Quality Control Measures and U.S. EPA's National Management Measures to Control Nonpoint Source Pollution from Urban Areas to implement measures to eliminate or reduce sources of toxicity in storm water.
- 2. Toxicity samples may be flow-weighted composite samples or grab samples for both wet and dry event sampling (see subparts A.7 and A.8).
- 3. Volume of sample shall be determined by specific test methods to be used. At a minimum it is suggested to collect 5 gallons for baseline testing, and an additional 5 gallons for TIE studies. Sufficient sample volume shall be collected to perform the required toxicity tests.
- 4. All toxicity tests shall be conducted as soon as possible following sample collection. The 36-hour sample holding time for test initiation shall be targeted. However, no more than 72 hours shall elapse before initial use of a sample.
- 5. When toxicity tests can not be performed to comply with the requirements of this Order due to circumstances beyond the Permittee's control, then the following shall be submitted to the Regional Water Board Executive Officer within 2 working days:
  - (a) Statement of situation
  - (b) Explanation of circumstance(s) with documentation
  - (c) Statement of corrective action for the future
- 6. The Principal Permittee shall conduct critical life stage chronic toxicity tests on undiluted samples in accordance with:
  - (a) U.S. EPA's Short Term Methods for Estimating the Chronic Toxicity of Effluents and Receiving Waters to *West Coast Marine and Estuarine*

T  
E  
N  
T  
A  
T

Organisms, (EPA/600/R-95/136, 1995) for all mass emission stations, and for major outfalls discharging to marine and estuarine environments, or  
(b) U.S. EPA's Short Term Methods for Estimating the Chronic Toxicity of Effluents and Receiving Waters to Freshwater Organisms, October 2002 (EPA/821/R-02/013, 2002) or current version for major outfalls discharging to freshwater environments.

7. The Principal Permittee shall analyze samples for chronic toxicity according to the schedule below:
  - (a) During the first year of the Order, 2 storm events shall be monitored at each mass emission and major outfall station. The first storm event of the wet season that produces at least 0.25 inches of rain, and 1 additional storm event. All storm events shall be separated by 7 days of dry weather (less than 0.1 inch of rain) from the previously measurable storm event.
    - (1) During the first year of the Order, all 3 test species shall be used for their respective chronic toxicity test method for the 2 storm events monitored, to determine the most sensitive test species for each monitoring station (see subparts D.8 and D.9 below).
  - (b) During the next 4 years of the Order, the first storm event of the wet season that produces at least 0.25 inches of rain shall be monitored for each mass emission and major outfall station.
    - (1) During the next 4 years of the Order, the most sensitive test species determined from the first year of testing at each mass emission and major outfall station shall be used for its respective chronic toxicity test method (see subpart D.6).
  
8. Marine and Estuarine Species and Test Methods.
  - (a) Marine and estuarine species and short-term test methods for estimating the chronic toxicity of NPDES effluents shall be used and are found in the first edition of *Short-term Methods for Estimating the Chronic Toxicity of Effluents and Receiving Waters to West Coast Marine and Estuarine Organisms* (EPA/600/R-95/136, 1995) and applicable water quality standards; also see 40 CFR Parts 122.41(j)(4) and 122.44(d)(1)(iv).
    - (1) The Permittee shall conduct:
      - (A) A static renewal toxicity test with the topsmelt, *Atherinops affinis* (Larval Survival and Growth Test Method 1006.01)
      - (B) A static non-renewal toxicity test with the giant kelp *Macrocystis pyrifera* (Germination and Growth Test Method 1009.0); and
      - (C) A static non-renewal toxicity test with the purple sea urchin, *Strongylocentrotus purpuratus*, (Fertilization Test Method 1008.0)

*Effluents, Phase I* (EPA/600/6-91/005F, 1992); *Methods for Aquatic Toxicity Identification Evaluations, Phase II Toxicity Identification Procedures for Samples Exhibiting Acute and Chronic Toxicity* (EPA/600/R-92/080, 1993); *Methods for Aquatic Toxicity Identification Evaluations, Phase III Toxicity Confirmation Procedures for Samples Exhibiting Acute and Chronic Toxicity* (EPA/600/R-92/081, 1993); and *Marine Toxicity Identification Evaluation (TIE): Phase I Guidance Document* (EPA/600/R-96-054, 1996).

14. The Principal Permittee shall complete chronic Phase I (Toxicity Characterization Procedures) TIEs for all sites showing toxicity. For the purpose of triggering TIE (Toxicity Characterization Procedures), significant toxicity is defined as at least 50% mortality. The 50% mortality threshold is consistent with the approach recommended in guidance published by USEPA for conducting TIEs (USEPA, 1996), which recommends a minimum threshold of 50% mortality because the probability of completing a successful TIE decreases rapidly for samples with less than this level of toxicity.
- (a) The TIE shall be conducted on test species, demonstrating the most sensitive toxicity response at a sampling station. However, a TIE(s) may be conducted on an additional test species with the caveat that once the toxicant(s) has been identified then the most sensitive test species triggering the TIE event needs to be tested additionally to verify that the toxicant has been identified and addressed.
15. A TIE Prioritization Metric may be utilized to rank sites for TIEs.<sup>2</sup>
16. Toxicity Reduction Evaluation (TRE) when toxicity is identified
- (a) When the same pollutant or class of pollutants is identified through 2 consecutive TIE evaluations, a TRE shall be performed for that identified toxic pollutant.
- (b) The TRE development shall be performed by a neutral third party (retained by the Permittees), in consultation with the Regional Water Board staff.
- (c) The TRE shall include all reasonable steps to identify the source(s) of toxicity and discuss appropriate BMPs to eliminate the causes of toxicity. No later than 30 days after the source of toxicity and appropriate BMPs are identified, the Permittees shall submit the TRE Corrective Action Plan to the Regional Water Board Executive Officer for approval. At a minimum, the Plan shall include a discussion of the following items:
- (1) The potential sources of pollutant(s) causing toxicity.
  - (2) A list of municipalities and agencies that may have jurisdiction over sources of pollutant(s) causing toxicity.
  - (3) Recommended BMPs to reduce the pollutant(s) causing toxicity.

(b) In no case shall the preceding toxicity test species be substituted with another organism unless written authorization from the Regional Water Board Executive Officer is received.

9. Freshwater Species and Test Methods.

(a) Species and short-term test methods for estimating the chronic toxicity of NPDES effluent shall be used and are found in the fourth edition of *Short-term Methods for Estimating the Chronic Toxicity of Effluents and Receiving Waters to Freshwater Organisms* (EPA/821/R-02/013, 2002; Table IA, 40 CFR Part 136).

(1) The Permittee shall conduct

- (A) A static renewal toxicity test with the fathead minnow, *Pimephales promelas* (Larval Survival and Growth Test Method 1000.0<sup>1</sup>)
- (B) A static renewal toxicity test with the daphnid, *Ceriodaphnia dubia* (Survival and Reproduction Test Method 1002.0<sup>1</sup>); and
- (C) A static renewal toxicity test with the green alga, *Selenastrum capricornutum* (also named *Raphidocelis subcapitata*) (Growth Test Method 1003.0)

(b) In no case shall the preceding toxicity test species be substituted with another organism unless written authorization from the Regional Water Board Executive Officer is received.

10. The test endpoint data is analyzed using a standard t-test approach. Statistical analysis methods shall be consistent with U.S. EPA test method manuals.

11. If significant toxicity is found then according to paragraph 10.2.6.2 of the U.S. EPA freshwater test methods manual, all chronic toxicity test results from the multi-concentration tests required by this Order must be reviewed and reported according to U.S. EPA guidance on the evaluation of concentration-response relationships found in *Method Guidance and Recommendations for Whole Effluent Toxicity (WET) Testing (40 CFR 136)* (EPA/821/B-00-004, 2000).

12. Toxic samples shall be immediately subjected to Toxicity Identification Evaluation (TIE) procedures to identify the toxic chemical(s) if toxicity is determined by the standard t-test.

13. A TIE is to be performed to identify the causes of toxicity using the same species and test method and, as guidance, U.S. EPA test method manuals: *Toxicity Identification Evaluation: Characterization of Chronically Toxic*

<sup>1</sup> Daily observations for mortality make it possible to calculate acute toxicity for desired exposure periods (i.e., 7-day LC50, 96-hour LC50, etc.).

- (4) Proposed post construction control measures to reduce the pollutant(s) causing toxicity.
  - (5) Follow-up monitoring to demonstrate that toxicity has been removed.
  - (d) The TRE process shall be coordinated with TMDL development and implementation (i.e., If a TMDL for 4,4'-DDD is being implemented when a TRE for 4,4'-DDD is required, the efforts shall be coordinated to avoid overlap).
17. Results of Toxicity monitoring conducted in accordance with the Standard Operating Procedure under Standard Provision 14 of this Attachment shall be sent to the Regional Board's Storm Water Site at MS4stormwaterRB4@waterboards.ca.gov, no later than 90 days from sample collection date for the initial toxicity test and no more than 30 days from completion of each aspect of the analysis for TIEs/TREs. The sample data transmitted shall be in the most recent update of the Southern California Municipal Storm Water Monitoring Coalition's (SMC) Standardized Data Transfer Formats (SDTFs).
18. The Annual Storm Water Report shall include:
- (a) A full laboratory report for all toxicity testing.
  - (b) A summary of the years' mass emission and major outfall monitoring station's toxicity test results reported according to the test methods manual chapter on report preparation and test review.
  - (c) The dates of sample collection and initiation of each toxicity test.
  - (d) All results for effluent parameters monitored concurrently with the toxicity test(s).
  - (e) TIE Phase testing (Phase I, Phase II, and Phase III) that has been or is in the process of being conducted per monitoring station.
  - (f) The development, implementation, and results for each TRE Corrective Action Plan in the Annual Storm Water Report, beginning the year following the identification of each pollutant or pollutant class causing toxicity.
19. When the SMC Standardized Toxicity Testing Guidance is completed, the Regional Water Board Executive Officer may direct Permittees to replace the current toxicity program with the standardized guidance procedure.

**SPECIAL STUDIES**

**E. Pyrethroid Insecticides Study**

- I. The Principal Permittee shall perform a Pyrethroid Insecticides study to accomplish the following objectives:
  - i. Establish baseline data for major watersheds

February 24, 2009 - Tentative

- ii. Evaluate whether Pyrethroid Insecticide concentrations are at or approaching levels known to be toxic to sediment-dwelling aquatic organisms.
  - iii. Determine if Pyrethroids discovered are from urban sources.
  - iv. Assess any trends over the permit term.
1. The Permittees shall incorporate monitoring for Pyrethroid Insecticides within the Calleguas Creek, Santa Clara River and Ventura River Watersheds according to the following:
    - (a) No later than the second year of this Order, monitoring shall begin.
    - (b) Quality Assurance Project Plan (QAPP) to be submitted to the Regional Board for approval 12 months prior to beginning monitoring.
    - (c) In selecting sites to conduct monitoring for Pyrethroid Insecticides, Permittees shall review existing monitoring programs in the watersheds by other public and private entities, watershed coalitions, and citizen volunteers, so as to complement and not duplicate efforts.
    - (d) Establish at least 2 stations along the mainstems of each major watershed river that are influenced by urban discharges.
    - (e) The study shall be repeated in the fifth year of the permit term.
  2. The Principal Permittee shall monitor Pyrethroid Insecticides stations according to the following:
    - (a) The Principal Permittee shall monitor 1 sampling event per station per monitoring year.
      - (1) Monitoring shall occur after sediment has settled within the waterbody, and safe access can be assured.
    - (b) Sufficient sediment is to be collected at each station in a pre-cleaned glass jar by skimming the upper 1 cm of the sediment column with a steel scoop, and held on ice until returned to the laboratory.
    - (c) Sediment shall be homogenized in the laboratory by hand mixing, then held at 4 °C (toxicity samples) or -20 °C (chemistry samples).
    - (d) All samples taken shall be analyzed for the following Pyrethroids:
      - (1) bifenthrin
      - (2) cyfluthrin
      - (3) cypermethrin
      - (4) deltamethrin
      - (5) esfenvalerate
      - (6) lambda-cyhalothrin
      - (7) permethrin
      - (8) tralomethrin (if laboratory is capable of analyzing for it)
    - (e) Detection limits for all Pyrethroids shall be as close to 1ng/g (dry weight) as reasonably achievable.
    - (f) Each sediment sample is to measure the following:
      - (1) total organic carbon (TOC).

T  
E  
N  
T  
A  
T  
I

- 3. All samples shall be tested for toxicity to 7 to 10 day old *Hyalella azteca* according to standard U.S. EPA testing methods.<sup>3</sup>
  - (a) Use of the approach described in *Aquatic Toxicity Due to Residential Use of Pyrethroid Insecticides*<sup>4</sup> for toxicity testing shall be used.
- 4. Analysis by a laboratory that has performed sediment toxicity testing for Pyrethroid Insecticides is preferred.
- 5. Monitoring results from each station shall be sent electronically to the Regional Board's Storm Water Site at MS4stormwaterRB4@waterboards.ca.gov, no later than 90 days from sample collection date. The sample data transmitted shall be in the most recent update of the Southern California Municipal Storm Water Monitoring Coalition's (SMC) Standardized Data Transfer Formats (SDTFs).
- 6. If toxicity is attributed to Pyrethroids then consultation with staff at U.S. EPA, the California Department of Pesticide Regulations and the California Stormwater Quality Association's (CASQA) pesticides committee (UP3 Project web site), shall be required to obtain relevant information to use in developing the recommendations to mitigate Pyrethroids in the Final Report.
- 7. Final Report for the Pyrethroid Insecticides study shall contain the following:
  - (a) Executive summary
  - (b) Methods
  - (c) Results (including map depicting monitoring stations)
  - (d) Discussion
  - (e) Recommendations to mitigate Pyrethroids
- 8. The Final Report shall be completed and submitted to the Executive Officer of the Regional Water Board no later than 8 months after completion of the study.

**F. Hydromodification Control Study**

1. The Principal Permittee shall conduct or participate in special studies to develop tools to predict and mitigate the adverse impacts of Hydromodification, and to comply with hydromodification control criteria. This can be achieved by the following:
  - (a) Develop a mapping and classification system for streams based on their susceptibility to the effects of hydromodification.
  - (b) Establish protocols for ongoing monitoring to assess the effects of hydromodification.
  - (c) Develop dynamic models to assess the effects of hydromodification on stream condition.
  - (d) Develop a series of tools that managers can easily apply to make recommendations or set requirements relative to hydromodification for new development and redevelopment.
2. The Principal Permittee may satisfy this requirement by participating in the 'Development of Tools for Hydromodification Assessment and Management' Project undertaken by the SMC and coordinated by the SCCWRP.
3. The Principal Permittee shall continue to partner with the SMC and collect data or sponsor its collection for the Ventura County sites to reduce statistical uncertainty and/ or improve model predictability.
4. The Principal Permittee shall submit a letter to the Regional Water Board Executive Officer stating how they will satisfy this requirement, no later than (2 months after Order adoption date).

E

**H. Southern California Bight Project**

- 1. The Principal Permittee and Permittees shall participate with other government organizations regulating discharges in southern California in the collaboration to conduct a regional monitoring survey (Southern California Bight Project (SCBP)), which was started in 2008 and to be continued in successive years. The survey's primary objective is to assess the spatial extent and magnitude of ecological disturbances on the mainland continental shelf of the SCB and to describe relative conditions among different regions of the SCBP.
- 2. The Principal Permittee shall participate on the Steering Committee for the bight-wide monitoring project, and assist with the estuary and nearshore sampling effort requirement of the proposed monitoring project for Ventura County as defined in the SCBP plan.

**I. Bioassessment**

- 1. The Principal Permittee consents to participate in the following regional water quality program for watershed management and planning:
  - (a) SMC Regional Monitoring Program
    - (1) Southern California Regional Bioassessment
      - (A) Level of effort per watershed
        - (i) Probabilistic sites per watershed
          - (I) Ventura River - Six
          - (II) Santa Clara River - Three
          - (III) Calleguas Creek - Six
        - (ii) Integrator sites per watershed
          - (A) Ventura River - One
          - (B) Santa Clara River - One
          - (C) Calleguas Creek - One
    - (b) Ventura County Bioassessment: Permittees shall conduct bioassessment at one fixed site in each of the watersheds above on an annual basis. Southern California Regional Bioassessment protocols shall be used to conduct the Ventura County Bioassessment program.

**J. Volunteer Monitoring Programs**

- 1. The Permittees shall provide limited assistance if requested in the development and implementation of volunteer monitoring programs in the Ventura watersheds. These include, but are not limited to the following:
  - (a) Ventura River - (Ventura Stream Team).
  - (b) Santa Clara River - (Santa Clara River Stream Team).
  - (c) Calleguas Creek - (Calleguas Creek Watershed Quality Monitoring Program).
  - (d) Malibu Creek - (Malibu Creek Watershed Quality Monitoring Program).

**K. Standard Monitoring Provisions**

- I. All monitoring activities shall meet the following requirements.
1. Monitoring and Records [40 CFR 122.41(j)(1)]
    - (a) Samples and measurements taken for the purpose of monitoring shall be representative of the monitored activity.
  2. Monitoring and Records [40 CFR 122.41(j)(2)] [CWC §13383(a)]
    - (a) The Principal Permittee and Permittees shall retain records of all monitoring information, including all calibration and maintenance of monitoring instrumentation, copies of all reports required by this Order, and records of all data used to complete the Report of Waste Discharge (ROWD) and application for this Order, for a period of at least five (5) years from the date of the sample, measurement, report, or application. This period may be extended by request of the Regional Water Board or U.S. EPA at any time and shall be extended during the course of any unresolved litigation regarding this discharge.
  3. Monitoring and Records [40 CFR 122.21(j)(3)]
    - (a) Records of monitoring information shall include:
      - (1) The date, time of sampling or measurements; exact place, weather conditions, and rain fall amount.
      - (2) The individual(s) who performed the sampling or measurements.
      - (3) The date(s) analyses were performed.
      - (4) The individual(s) who performed the analyses.
      - (5) The analytical techniques or methods used.
      - (6) The results of such analyses.
      - (7) The data sheets showing toxicity test results.
  4. Monitoring and Records [40 CFR 122.21(j)(4)]
    - (a) All sampling, sample preservation, and analyses must be conducted according to test procedures under 40 CFR Part 136, unless other test procedures have been specified in this Order. If a particular Minimum Level (ML) is not attainable in accordance with procedures set forth in 40 CFR 136, the lowest quantifiable concentration of the lowest calibration standard analyzed by a specific analytical procedure may be used instead.
  5. Monitoring and Records [40 CFR 122.21(j)(5)]
    - (a) The CWA provides that any person who falsifies, tampers with, or knowingly renders inaccurate any monitoring device or method required to be maintained under this Order shall, upon conviction, be punished by a fine of not more than \$10,000, or by imprisonment for not more than 2 years, or both. If a conviction of a person is for a violation committed after a first conviction of such person under this paragraph, punishment is a fine of not

E  
N  
T  
A  
T  
I  
V  
E

more than \$20,000 per day of violation, or by imprisonment of not more than four years, or both.

- 6. All chemical, bacteriological, and toxicity analyses shall be conducted at a laboratory:
  - (a) Certified for such analyses by an appropriate governmental regulatory agency.
  - (b) Participated in 'Intercalibration Studies' for storm water pollutant analysis conducted by the SMC.<sup>5</sup>
  - (c) Which performs laboratory analyses consistent with the storm water monitoring guidelines as specified in, the *Stormwater Monitoring Coalition Laboratory Guidance Document*, 2nd Edition R. Gossett and K. Schiff (2007), and its revisions.
  
- 7. For priority toxic pollutants that are identified in the CTR (65 Fed. Reg. 31682), the MLs published in Appendix 4 of the *Policy for Implementation of Toxics Standards for Inland Surface Waters, Enclosed Bays and Estuaries of California* (SIP) shall be used for all analyses, unless otherwise specified. The MLs from the SIP are incorporated into Attachment "G".
  
- 8. The Monitoring Report shall specify the analytical method used, the Method Detection Level (MDL) and the ML for each pollutant. For the purpose of reporting compliance with numerical limitations, performance goals, and receiving water limitations, analytical data shall be reported with 1 of the following methods, as appropriate:
  - (a) An actual numerical value for sample results greater than or equal to the ML.
  - (b) "Not-detected (ND)" for sample results less than the laboratory's MDL with the MDL indicated for the analytical method used.
  - (c) "Detected, but Not Quantified (DNQ)" if results are greater than or equal to the laboratory's MDL but less than the ML. The estimated chemical concentration of the sample shall also be reported. This is the concentration that results from the confirmed detection of the substance by the analytical method below the ML value.
  
- 9. For priority toxic pollutants, if the Permittee can demonstrate that a particular ML is not attainable, in accordance with procedures set forth in 40 CFR 136, the lowest quantifiable concentration of the lowest calibration standard analyzed by a specific analytical procedure (assuming that all the method specified sample weights, volumes, and processing steps have been followed) may be used

<sup>5</sup> The 'Intercalibration Studies' are conducted periodically by the SMC to establish a consensus based approach for achieving minimal levels of comparability among different testing laboratories for storm water samples to minimize analytical procedure bias. Stormwater Monitoring Coalition Laboratory Document, Technical Report 420 (2004) and subsequent revisions and augmentations.

instead of the ML listed in Appendix 4 of the SIP. The Principal Permittee must submit documentation from the laboratory to the Regional Water Board Executive Officer for approval prior to raising the ML for any constituent.

10. Monitoring Reports [40 CFR 122.41(I)(4)(ii)]
  - (a) If the Principal Permittee monitors any pollutant more frequently than required by the Order using test procedures approved under 40 CFR part 136, unless otherwise specified in the Order, the results of this monitoring shall be included in the calculation and reporting of the data submitted in the Annual Monitoring Reports.
11. Monitoring Reports [40 CFR 122.41(I)(4)(iii)]
  - (a) Calculations for all limitations, which require averaging of measurements, shall utilize an arithmetic mean unless otherwise specified in this Order.
12. If no flow occurred during the reporting period, then the Monitoring Report shall, so state.
13. The Regional Water Board Executive Officer or the Regional Board, consistent with 40 CFR 122.41, may approve changes to the Monitoring Program, after providing the opportunity for public comment, either:
  - (a) By petition of the Principal Permittee or by petition of interested parties after submittal of the Monitoring Report. Such petition shall be filed not later than 60 days after the Monitoring Report submittal date, or
  - (b) As deemed necessary by the Regional Water Board Executive Officer following notice to the Principal Permittee.
14. The Principal Permittee must provide a copy of the Standard Operation Procedures (SOPs) for the Monitoring Program No. CI 7388 to the Regional Water Board upon request. The SOP will consist of five elements: Title page, Table of Contents, Procedures, Quality Assurance/ Quality Control (QA/ QC), and References. Briefly describe the purpose of the work or process, including any regulatory information or standards that are appropriate to the SOP process, and the scope to indicate what is covered. Denote what sequential procedures should be followed, divided into significant sections; e.g., possible interferences, equipment needed personnel qualifications, and safety considerations. Describe QA/ QC activities, and list any cited or significant references.

**L. Total Maximum Daily Load (TMDL) Monitoring**

1. TMDL monitoring is to determine compliance with the TMDL Waste Load Allocations (WLAs) and numeric targets for the MS4 Permittees that have been adopted by the Regional Water Board and have been approved by the Office of Administrative Law and the U.S. EPA.

February 24, 2009 - Tentative

2. TMDL monitoring is in accordance with approved TMDLs as discussed in part 6 of the permit. TMDL monitoring for specific watersheds is in accordance with the agreed upon monitoring plans submitted by stakeholders, including MS4 Permittees.

**M. Beach Water Quality Monitoring**

If funding from state and federal sources is not available for beach water quality monitoring during the winter season (October 15 – April 15) the Principal Permittee within thirty days of notice shall conduct beach water quality sampling and analysis at a maximum of ten sites in accordance with the procedures and locations used in AB 411 monitoring and listed below:

1. Rincon Beach – 25 yards south of the creek mouth\*
  2. Oil Piers Beach – south of the drain, bottom of the wood staircase
  3. Faria County Park – south of the drain at the north end of the park\*
  4. Solimar Beach – south (end of east gate access road)\*
  5. Emma Wood State Beach – 50 yards south of first drain
  6. Oxnard Beach – at J Street drain
  7. Surfer’s Point at Seaside – end of the access path via wooden gate
  8. Promenade Park – Figueroa Street
  9. Surfer’s Knoll – beach adjacent to the parking lot\*
  10. San Buenaventura Beach – south of drain at San Jon Road
- \* Not associated with MS4 discharges.

Determination of Erosion Potential

$E_p$  is determined as follows- The *total effective work* done on the channel boundary is derived and used as a metric to predict the likelihood of channel adjustment given watershed and stream hydrologic and geomorphic variables. The index under urbanized conditions is compared to the index under pre-urban conditions expressed as a ratio ( $E_p$ ). The effective work index ( $W$ ) is computed as the excess shear stress that exceeds a critical value for streambed mobility or bank material erosion integrated over time and represents the total work done on the channel boundary:

$$W = \sum_{i=1}^n (\tau_i - \tau_c)^{1.5} \cdot V \cdot \Delta t_i \quad (1)$$

Where  $\tau_c$  = critical shear stress that initiates bed mobility or erodes the weakest bank layer,  $\tau_i$  = applied hydraulic shear stress,  $\Delta t$  = duration of flows (in hours), and  $n$  = length of flow record. The effective work index for presumed stable stream channels under pre-urban conditions is compared to stable and unstable channels under current urbanized conditions. The comparison, expressed as a ratio, is defined as the Erosion Potential ( $E_p$ )<sup>1</sup> (McRae (1992, 1996).

$$E_p = \frac{W_{post}}{W_{pre}} \quad (2)$$

where:

$W_{post}$  = work index estimated for the post-urban condition  
 $W_{pre}$  = work index estimated for the pre-urban condition

## Camarillo

**Waterbody:** Camarillo Hills Drain (tributary to Revolon Slough)

**Location:** Daily Rd. overcrossing (34°13'10.00"N, 119° 3'58.06"W)

**Pros:** Likely well-defined rating table

**Cons:** Moderate potential for vandalism

**Outstanding Site Selection Tasks:** None

**Other Potential Sites:** None

**Dry Season Flow Potential:** Likely intermittent year-round flow due to urban runoff

**Fillmore**

**Waterbody:** North Fillmore Drain (tributary to Sespe Creek)

**Location:** 75 yds. southwest of Old Telegraph Rd. (34°24'16.51"N, 118°55'50.47"W)

**Pros:** Some portion of vegetation could be cleared by City of Fillmore  
**Cons:** Potential for vandalism

**Outstanding Site Selection Tasks:** None

**Other Potential Sites:** C Street Drain and Central Ave. Drain

**Dry Season Flow Potential:** Likely intermittent year-round flow due to urban runoff

**Meiners Oaks (Unincorporated)**

**Waterbody:** Baldwin Rd. Drain (tributary to Ventura River)

**Location:** Northwest of Baldwin Rd. and Old Baldwin Rd. intersection (34°25'44.34"N, 119°17'41.25"W)

**Pros:** Good horizontal control, fairly good access

**Cons:** Vertical control varied (grouted rip-rap), moderate visibility

**Outstanding Site Selection Tasks:** Assess private property issues

**Other Potential Sites:** Approximately 100 yds. downstream at Baldwin Rd.

**Dry Season Flow Potential:** Unknown at end of rainy season; unlikely later in summer

## Moorpark

**Waterbody:** Gabbert Canyon Drain (tributary to Arroyo Las Posas)

**Location:** North side of SR 118 near southwest corner of So. Cal. Edison property (34°16'44.29"N, 118°54'19.40"W)

**Pros:** Likely well-defined rating table

**Cons:** Aerial deposition from vehicular traffic on 118, potential for vandalism

**Outstanding Site Selection Tasks:** Move sampling location shown on watershed map

**Other Potential Sites:** Upstream current location, although site would interfere with access road

**Dry Season Flow Potential:** Likely intermittent year-round flow due to urban runoff

## Ojai

**Waterbody:** Fox Canyon Barranca (tributary to San Antonio Creek)

**Location:** Concrete box channel upstream Ojai Valley Athletic Club and downstream pedestrian walkway (34°26'41.25"N, 119°14'28.43"W)

**Pros:** Numerous bridges to sample from, located behind VCWPD gate, likely well-defined rating table

**Cons:** Some potential for vandalism

**Outstanding Site Selection Tasks:** Work with VCWPD O&M to ensure enclosure doesn't interfere with maintenance activities

**Other Potential Sites:** Downstream where Stewart Canyon crosses beneath Ventura St. (bioassessment #8)

**Dry Season Flow Potential:** Likely intermittent year-round flow due to urban runoff

## Oxnard

**Waterbody:** El Rio Drain (tributary to Santa Clara River)

**Location:** Manhole near pedestrian walkway along Ventura Rd., 185 yards southwest of railroad tracks (34°14'17.38"N, 119°11'23.08"W)

**Pros:** Likely well-defined rating table, fairly secure inside manhole

**Cons:** All equipment below-ground (maintenance and trouble-shooting more complicated)

**Outstanding Site Selection Tasks:** Move sampling location shown on watershed map

**Other Potential Sites:** 150 yds. to northeast before El Rio Drain goes underground

**Dry Season Flow Potential:** Likely intermittent year-round flow due to urban runoff

## Port Hueneme

**Waterbody:** Hueneme Drain (tributary to Pacific Ocean)

**Location:** Pedestrian bridge 200 yds. downstream Surfside Dr. (34° 8'29.30"N, 119°11'21.09"W)

**Pros:** Grass-covered sides fairly stable

**Cons:** Lots of activity nearby, high potential for vandalism, stagnant water

**Outstanding Site Selection Tasks:** Verify positive flow

**Other Potential Sites:** At Surfside Rd. at lower end of Bubbling Springs Park

**Dry Season Flow Potential:** Likely year-round flow due to urban runoff and groundwater contribution

## Simi Valley

**Waterbody:** Bus Canyon Drain (tributary to Arroyo Simi)

**Location:** North of intersection at 5<sup>th</sup> St. and Los Angeles Ave. (34°16'18.59"N, 118°47'1.51"W)

**Pros:** Likely well-defined rating table, located behind VCWPD gate

**Cons:** Pedestrian traffic on levee nearby

**Outstanding Site Selection Tasks:** Assess impacts of large groundwater discharge upstream, move sampling location shown on watershed map

**Other Potential Sites:** Upstream at 5<sup>th</sup> and Ventura Ave.

**Dry Season Flow Potential:** Likely year round flow due to urban runoff and groundwater discharge upstream

## Santa Paula

**Waterbody:** 11<sup>th</sup> Street Drain (tributary to Santa Clara River)

**Location:** Upstream Santa Paula Airport (34°20'54.99"N, 119° 3'19.82"W)

**Pros:** Excellent flat pad on top of outfall for sampling equipment

**Cons:** High potential for vandalism

**Outstanding Site Selection Tasks:** None

**Other Potential Sites:** None

**Dry Season Flow Potential:** Likely intermittent year-round flow due to urban runoff. No flow at time of initial observation

## Ventura

**Waterbody:** Moon Ditch (tributary to Santa Clara River)

**Location:** Between Leland St. and US 101, north of Johnson Dr. (34°14'35.86"N, 119°11'40.86"W)

**Pros:** Likely well-defined rating table, fairly good protection (located behind VCWPPD gate)

**Cons:** Wide concrete bottom will spread out low flows, placement of intake somewhat difficult

**Outstanding Site Selection Tasks:** None

**Other Potential Sites:** None

**Dry Season Flow Potential:** Likely intermittent year-round flow due to urban runoff

Ventura County Municipal Storm Water Permittees

### TENTATIVE VENTURA COUNTY MUNICIPAL SEPARATE STORM SEWER SYSTEM ORDER (NPDES PERMIT No. CAS004002) - LETTER OF TRANSMITTAL

Dear Mr. Pratt:

We are pleased to transmit to you the Tentative National Pollutant Discharge Elimination System (NPDES) Municipal Separate Storm Sewer System (MS4) Order (attached) and waste discharge requirements for storm water discharges and non-storm water discharges from the MS4 within the Ventura County Watershed Protection District, County of Ventura and the incorporated cities therein. The Ventura County MS4 Order requires the Ventura County Watershed Protection District, herein referred to as the Principal Permittee, and other Co-Permittees to implement the NPDES Permit No. CAS004002, including the Reporting Program (Monitoring Report and Program Report).

Permittee comments and comments from the public and other interested persons on the Tentative Ventura County MS4 Order are appreciated and due to the California Regional Water Quality Control Board, Los Angeles Region (Los Angeles Water Board) by 5 p.m. on April 10, 2009. Comments may be mailed to the Regional Water Board, attention: Tracy Woods, Storm Water Permitting at the above address or e-mailed to:

[VenturaMS4Comments041009@waterboards.ca.gov](mailto:VenturaMS4Comments041009@waterboards.ca.gov). The Los Angeles Water Board will conduct a public hearing at the Ventura County Government Center on May 7, 2009 to receive comments on the Tentative Ventura County MS4 Order, and consider renewing the Ventura County MS4 Order.

*California Environmental Protection Agency*

*Our mission is to preserve and enhance the quality of California's water resources for the benefit of present and future generations.*

**E000226**

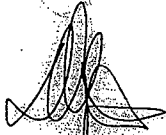

Mr. Jeff Pratt, Director  
Ventura Countywide Stormwater Quality Management Program  
Ventura Watershed Protection District

February 24, 2009

We welcome the Principal Permittee and other Municipal Permittees' continued participation and assistance during the development of the MS4 permit. Should you have any questions, please do not hesitate to call me at (213) 576-6605, or Samuel Unger at (213) 576-6622.

Sincerely,

Chief Deputy S.O.

Tracy J. Egoscue

**Public Notice No. 09-070  
NPDES No. CAS004002**

**NOTICE**

**NATIONAL POLLUTANT DISCHARGE ELIMINATION PERMIT AMENDMENT  
for  
THE COUNTY OF VENTURA WATERSHED PROTECTION DISTRICT  
THE COUNTY OF VENTURA AND INCORPORATED CITIES THEREIN  
(Municipal Separate Storm Sewer System)**

The County of Ventura Watershed Protection District, the County of Ventura and the Incorporated Cities Therein (hereinafter Permittee) discharged waste from its Municipal Separate Storm Sewer System under waste discharge requirements, which served as an NPDES permit, contained in Order No. 00-108, adopted by the Regional Board on July 27, 2000 (NPDES Permit No. CAS004002).

The area covered by this Order includes all areas within Ventura County boundaries and all areas within each co-permittee's boundaries that drain into the MS4. The Permittees covered under this Order were designated on a system-wide basis under Phase I of the CWA § 402(p)(3)(B)(i). The action of covering all Ventura County municipalities under a single MS4 permit on a system-wide basis was consistent with the provisions of 40 CFR122.26(a)(3)(iv), which states that one permit application may be submitted for all or a portion of all municipal separate storm sewers within adjacent or interconnected large or medium municipal separate storm sewer systems; and the Regional Water Board may issue one system-wide permit covering all, or a portion of all municipal separate storm sewers in adjacent or interconnected large or medium municipal separate storm sewer systems.

Permittees have expressed their intention to work cooperatively to control the contribution of pollutants from one portion of the MS4 to another portion of the system. Permittees filed a report of waste discharge (ROWD) and applied for renewal of its WDRs and NPDES permit for discharge of wastes to surface waters on January 26, 2005.

Storm water discharges consist of surface water runoff generated from various land uses in all the hydrologic drainage basins, which discharge into Waters of the State. The quality of these discharges varies and is affected by geology, land use, season, hydrology, and sequence and duration of hydrologic events. Based on the Ventura Countywide Storm Water Monitoring Program's Water Quality Monitoring Reports which were required under Order No. 00-108, the dry weather and wet weather Pollutants of Concern (POC) in urban storm water include an anion, bacteria, conventional pollutants, metals, a nutrient, organic compounds, and pesticides. The POC are identified in Attachment "B" of this Order. Many of the POC listed are causing

impairments identified on the federal Clean Water Act (CWA) § 303(d) list of impaired waterbodies.

Common pollutants in urban storm water and their respective sources are: bacteria from animal droppings and illegal discharges; Polycyclic Aromatic Hydrocarbons (PAHs) from the products of internal combustion engine operation and parking lot sealants wash off; nitrates from fertilizer application; pesticides from pest mitigating applications and from plant mitigating applications; bis (2-ethylhexyl) phthalate from the break down of plastic products; mercury from atmospheric fallout and improper disposal of mercury switches; lead from fuels, paints and automotive parts; copper from brake pad wear and roofing materials, zinc from tire wear and galvanized sheeting and fencing; sediment from land disturbance and erosion; and dioxins as products of combustion.

In general, the pollutants that are found in municipal storm water runoff can harm human health and aquatic ecosystems. In addition, the high volumes and high velocities of storm water discharged from MS4s into natural watercourses can adversely impact aquatic ecosystems and stream habitat and cause stream bank erosion and physical modifications. These changes are collectively termed hydromodification. Municipal point source discharges of runoff from urbanized areas remain a leading cause of impairment of surface waters in California.

This proposed Order includes the updates associated with a revised Record of Waste Discharge submitted by the Discharger

On the basis of a preliminary staff review and application of lawful standards and regulations, the Regional Water Quality Control Board, Los Angeles Region, tentatively proposes to renew Order 2009-XXX and terminate the requirements in Order R4-00-108 incorporating changes requested by the State Board and updates reflecting new information provided in an updated ROWD and supporting documentation from the Discharger.

#### HEARING DATE AND LOCATION

Date: May 7, 2009  
Time: 9:00 a.m.  
Place: Ventura County Board of Supervisors Meeting Room  
800 S. Victoria Ave.  
Ventura, California 93009

Please check the website address (<http://www.waterboards.ca.gov/losangeles/>) for the most up to date public hearing location as it is subject to change.

#### SCOPE OF HEARING

NOTE: The matter before the Board is the renewal of Waste Discharge Requirements for discharges from the Municipal Storm Water Separate Sewer System in Ventura County.

#### AVAILABILITY OF DOCUMENTS

The proposed language and other information and documents relied upon are available for inspection and copying between the hours of 8:00 a.m. and 4:30 p.m. by appointment at the following address:

Los Angeles Regional Water Quality Control Board  
320 West 4<sup>th</sup> Street, Suite 200  
Los Angeles, CA 90013

Arrangements for file review and/or obtaining copies of the documents may be made by calling the Los Angeles Regional Board at (213) 576-6600. The entire file will become a part of the administrative record of this proceeding, irrespective of whether individual documents are specifically referenced during the hearing or contained in the agenda packet. The entire file will not be present in the hearing room. Should any interested persons desire staff to bring to the hearing any particular documents that are not included in the agenda packet, they must submit a written or electronic request to staff during business hours, not later than five business days before the hearing. The request must identify the documents with enough specificity for staff to locate them.

Additionally, the Tentative Waste Discharge Requirements, Tentative Monitoring and Reporting Programs, Staff Report/Fact Sheet and other related documents can be found on the Regional Board's website:

[http://www.waterboards.ca.gov/rwqcb4/water\\_issues/programs/stormwater/municipal/ventura\\_ms4/venturams4\\_draft\\_tentative\\_permit.shtml](http://www.waterboards.ca.gov/rwqcb4/water_issues/programs/stormwater/municipal/ventura_ms4/venturams4_draft_tentative_permit.shtml)

#### PUBLIC COMMENTS AND SUBMITTAL OF EVIDENCE

Persons wishing to comment on, or object to, the tentative TSO, or submit evidence for the Board to consider, are invited to submit them in writing to Tracy Woods at the above address, or send them electronically to: [VenturaMS4Comments041009@waterboards.ca.gov](mailto:VenturaMS4Comments041009@waterboards.ca.gov). To be evaluated and responded to by Regional Board staff, included in the Board's agenda folder, and fully considered by the Board, written comments or testimony regarding the tentative revisions must be received at the Regional Board office no later than close of business on **April 10, 2009**. Failure to comply with these requirements is grounds for the Regional Water Board to refuse to admit the proposed written comment or exhibit into evidence pursuant to section 648.4, title 23 of the California Code of Regulations.

#### NATURE OF HEARING

This proceeding will be a formal adjudicatory proceeding. For such proceedings, the Regional Board follows procedures established by the State Water Resources Control Board, which are set forth in regulations commencing with section 647 of title 23 of the California Code of Regulations, in particular, Article 2, commencing with section 648. While this proceeding is formal, as an administrative proceeding, the Board does not generally require the prior identification or cross examination of witnesses, or other procedures not specified in this notice, that might typically be expected of parties in a courtroom.

## PARTIES TO THE HEARING

The following are the parties to this proceeding:

1. The County of Ventura Watershed Protection District
2. The County of Ventura
3. Cities of Camarillo, Fillmore, Moorpark, Ojai, Oxnard, Port Hueneme, San Buenaventura (Ventura), Santa Paula, Simi Valley and Thousand Oaks

Any other persons requesting party status must submit a written or electronic request to staff not later than 20 business days before the hearing. All parties will be notified if other persons are so designated.

## HEARING PROCEDURE

The board meeting, of which the hearing will be a part, will start at 9:00 a.m. Interested persons are invited to attend. When the agenda item is called, staff will present the matter under consideration, after which oral statements from parties or interested persons will be heard. For accuracy of the record, all important testimony should be in writing. The Board will include in the administrative record written transcriptions of oral testimony that is actually presented at the hearing. Oral testimony may be limited to five minutes or less for each interested person, depending on the number of persons wishing to be heard. Parties or interested persons with similar concerns or opinions are encouraged to choose one representative to speak, and are encouraged to coordinate their presentations with each other. Parties will be advised after the receipt of public comments, but prior to the date of the hearing, of the amount of time each is allocated for presentations. That decision will be based upon the complexity and number of issues under consideration, the extent to which the parties have coordinated, the number of parties and interested persons anticipated, and the time available for the hearing. The parties are invited to contact staff not later than April 10, 2009, to discuss how much time they believe is necessary for their presentations, and staff will endeavor to accommodate reasonable requests. At the conclusion of testimony, the Board will deliberate in open or close session, and render a decision.

Parties or persons with special procedural requests or requests for alternative hearing procedures should contact staff, who will endeavor to accommodate reasonable requests. Objections to any procedure to be used during the hearing must be submitted in writing no later than close of business 15 business days prior to the date of the hearing. (Any objections related to the amount of time allocated for parties' presentations must be submitted within two business days of notice thereof, if that date is less than 15 business days before the hearing.) Absent such objections, any procedure not specified in this hearing notice will be waived pursuant to section 648(d) of title 23 of the California Code of Regulations. Procedural objections will not be entertained at the hearing.

If there should not be a quorum on the scheduled date of this meeting, all cases will be automatically continued to the next scheduled meeting on June 4, 2009. A continuance will not extend any time set forth herein.

## STAFF CONTACTS

If you have any question regarding this proposed action, please contact Tracy Woods at (213) 620-2095 or via email at [twoods@waterboards.ca.gov](mailto:twoods@waterboards.ca.gov).

Meeting May 7 and 8,  
2009 item to be heard on  
May 7, 2009.

NOTICE

RENEWAL OF WASTE  
DISCHARGE  
REQUIREMENTS FOR  
STORMWATER  
DISCHARGES FROM THE  
MUNICIPAL SEWER  
SYSTEM WITHIN THE  
VENTURA COUNTY  
WATERSHED  
PROTECTION DISTRICT,  
COUNTY OF VENTURA  
AND THE  
INCORPORATED  
CITIES THEREIN

The following filed Reports of Waste Discharge and applied for Waste Discharge Requirements for discharges of wastes to waters of the United States.

A. RENEWAL NAME AND NPDES NO:  
Municipal Separate Storm Sewer System Discharges within the Ventura County Watershed Protection District, Ventura County, and the Incorporated Cities Therein; CAS004002

B. DISCHARGE LOCATIONS (Receiving Waters)  
Receiving Waters within Ventura County, including but not limited to Malibu Creek, Calleguas Creek, Santa Clara River, Ventura River, tributaries to the aforementioned waterbodies and the Pacific Ocean

C. TYPE OF WASTE  
Stormwater and Urban Runoff

On the basis of preliminary staff review and application of lawful standard regulation, the California Regional Water Quality Control Board, Los Angeles Region proposes to renew waste discharge requirements (WDRs) including municipal action

levels and special provisions, and terminate requirements no longer needed. Persons wishing to comment upon, or object to, the tentative discharge requirements or termination order are invited to submit them in writing to the above address. Interested persons should submit written comments no later than April 10, 2009 by 5:00-P.M. The Board will hold a public hearing on May 7 and 8, 2009, (with this item being heard on May 7, 2009) at the Ventura County Government Center, 800 South Victoria Avenue, Ventura, CA 93009. Interested persons are invited to attend. The Board will hear any testimony pertinent to the waste discharge and the tentative WDRs. Oral statements will be heard; however, for accuracy of the record, all important testimony should be in writing. The meeting which the hearing is a part, will begin at 9:00 a.m.

If the item is not completed on May 7, 2009, it shall be continued to May 8, 2009. If there should not be a quorum on the scheduled date of this meeting, all cases will be automatically continued to the next regularly scheduled meeting. That meeting will be held on June 4, 2009.

The Report of Waste Discharge, hearing notice, related documents, tentative requirements, comments received and other information are on file, and may be inspected at 320 W. 4th Street, Suite 200, Los Angeles, California 90013. Arrangement for copies may be made.

## I. PURPOSE

The purpose of this Fact Sheet/Staff Report is to provide permittees (Ventura County Watershed Protection District, the County of Ventura and the incorporated cities therein and interested parties) an overview of the Ventura County NPDES Permit for storm water discharges from municipal separate storm sewer systems (MS4s), adopted on May 5, 2009. This Fact Sheet/Staff Report also provides the technical basis for the permit requirements. Sections 1 through xx describe water quality problems for storm water and urban runoff, and permit conditions to address these problems. Sections xx and xx discuss each major element of the Permittees' Storm Water Quality Management Plan (SQMP), and are meant to be used as a companion reference document to the permit. Section xx addresses changes that were made at the Xxx xx, 200x Regional Board Meeting.

## II. INTRODUCTION - THE NEED TO REGULATE STORM WATER DISCHARGES

### A. Impacts

The quality of storm water and urban runoff is fundamentally important to the environmental and economic health of the Los Angeles Region (Region), and to the quality of life in southern California. Polluted municipal storm water runoff is one of the leading causes of water quality impairment in the Region. Storm water and urban runoff (during wet and dry weather) are often contaminated with bacteria from animal droppings; Polycyclic Aromatic Hydrocarbons (PAHs), from the products of internal combustion engine operation and parking lot sealants wash off; nitrates from fertilizer application; pesticides from pest mitigating applications; herbicides from plant mitigating applications; bis (2-ethylhexyl) phthalate from the break down of plastic products; mercury from atmospheric fallout and improper disposal of mercury switches; lead from fuels, paints, automotive parts; copper from brake pad wear and roofing materials, zinc from tire wear and galvanized sheeting and fencing; sediment from land disturbance and erosion;

and dioxins as products of combustion. Water flowing over the Permittee's residential, industrial, and commercial areas carries these untreated pollutants through the storm drain systems directly into the receiving waters of the Region. Water quality impacts and public health risks from Municipal Separate Storm Sewer System (MS4) discharges that affect receiving waters nationwide and within the Region are well documented.

Water quality assessments conducted by the Regional Board have identified impairments and threatened impairments of beneficial uses of water bodies in the Ventura Watersheds. These impairments include many of the Pollutants of Concern (POC) identified by the Ventura Countywide Storm Water Monitoring Program. These impairments are identified on the State of California § 303(d) list of impaired water bodies.

Studies and research conducted by other Regional agencies, and academic institutions have also identified storm water urban runoff as significant sources of pollutants to surface waters in Southern California. A regional survey of the microbiological water quality along the shoreline of the Southern California Bight (SCB), from Point Conception south to Ensenada, Mexico, was conducted during August, 1998, by 36 agencies under the coordination of the Southern California Coastal Water Research Project (SCCWRP). It was found that freshwater outlets,

T  
E  
N  
T  
A  
T  
I  
V  
E

comprised mainly of storm drains, had the poorest water quality with 60% and 40% of the shoreline miles exceeding monthly and daily thresholds, respectively. Freshwater outlets were also more likely to demonstrate exceedances by multiple indicators at a single site, and repeat exceedances at sites over the five-week period.<sup>1</sup>

Urban runoff has been found to cause significant receiving water impacts on aquatic life. In order to best identify and understand these impacts, it is necessary to include biological monitoring, using a variety of techniques, and sediment quality analyses, in a monitoring program. Water column testing alone has been shown to be very misleading. Most aquatic life impacts associated with urbanization are probably related to long-term problems caused by polluted sediments and food web disruption. An adequate analysis of receiving water biological impacts must include investigations of a number of biological organism groups in addition to studies of water and sediment quality<sup>2</sup>.

### III. INTRODUCTION

#### History of Ventura MS4 NPDES Permit

In 1987, the U.S. Congress amended the Clean Water Act to specifically require storm water discharges including those from municipalities with populations 100,000 or greater, conveyed by a separate storm sewer system to be addressed as point sources of pollution under the NPDES. These municipalities were required to reduce the discharge of storm water pollutants to the maximum extent practicable (commonly referred to as the MEP standard). The U.S. and California Courts have since interpreted federal statutes to give the permitting authority the discretion to also require compliance with water quality standards. In addition, conditions in NPDES permits must be consistent with the assumptions of TMDL WLA's that have been adopted.

The USEPA issued the Final Storm Water Regulations in Nov 1990, which required medium and large municipalities to submit a two part application. The first part required basic system description and ownership identity information. Part 2 required storm water pollutant discharge characterization data from one wet season, and a proposed storm water quality management plan.

In 1990, populations in Oxnard, Thousand Oaks, and Unincorporated Ventura County met the Census definition of medium size municipalities.

The City of Oxnard submitted a Part 1 application in 1991. After discussions with the Ventura County Flood Control District, and the City of Thousand Oaks, the Water Board decided that the VCFD as Principal Permittee would submit a system wide Part 2 application on behalf of all the municipalities in Ventura County, because of the interconnected nature of the flood control system.

A consolidated Part 2 application was submitted in 1993, and the Water Board issued the first term system-wide municipal storm water permit for Ventura County in 1994.

T  
E  
N  
T  
A  
T  
I  
V  
E

The first term MS4 permit was adopted in 1994, and the focus of the permit was to require Ventura County municipalities to develop storm water pollution control programs in the areas of public involvement/ education; business/ industry outreach; development planning; development construction; public agency activities; and illicit connection/ discharge elimination, in addition to implementing a basic monitoring program to characterize the quality of municipal storm water discharges.

The second term MS4 permit was adopted in 2000, and the focus of the permit was the implementation of a comprehensive storm water quality management program, to reduce the discharge of storm water pollutants to the MEP, and to meet water quality standards. The monitoring program was expanded to assess mass emissions of pollutants from Ventura County Rivers to coastal waters, and to better understand the quality of wet weather discharges and their adverse impacts.

No doubt the Ventura County MS4 Program, under the leadership of the Ventura County Watershed Protection District has made significant strides in implementing programs to reduce storm water pollution. Yet, more than a decade after the first permit was issued, we continue to see exceedances of water quality standards for storm water pollutants such as bacteria, and heavy metals. In addition, the Ventura County MS4 program having run its second term is a step behind that of Los Angeles County, which closed out its third term last December.

The third term MS4 permit for the first time includes Municipal Action Levels, derived using the USEPA's monitoring dataset for large and medium MS4s. The permit identifies a default set of specific storm water BMPs that industry, construction, and public agencies must implement based on activity to reduce the discharge of storm water pollutants. The permit promotes the implementation of LID strategies for new development and redevelopment, which have the objective of maintaining pre-development hydrology and utilizing natural controls to reduce storm water pollution. The permit incorporates for the first time TMDL WLAs adopted by the Board for impaired water bodies which is consistent with USEPA's TMDL Policy.

Report of Waste Discharge

T  
E  
N  
T  
A  
T  
I  
V  
E

The permittees filed a Report of Waste Discharge (ROWD), dated January 26, 2005. The permittees applied for renewal of their waste discharge requirements for a 5-year period, which serves as an NPDES permit to discharge wastes to surface waters.

The Regional Water Board reviewed the ROWD and determined it to be partially complete under the reapplication policy for MS4s issued by the United States Environmental Protection Agency (U.S. EPA) (61 Fed. Reg. 41697). The Regional Water Board has prepared this Order so that implementation of provisions contained in this Order by permittees will meet the requirements of the federal NPDES regulations at 40 CFR122.26.

The permittees Report of Waste Discharge contained a proposed Storm Water Management Program and a Monitoring Program to be considered by the Regional Water Board for incorporation into an MS4 NPDES Permit as permit conditions and to demonstrate compliance with federal law. The permittees are entitled, but did not elect to pursue a permit with numeric end-of-pipe limits for storm water discharges, which would have required them to satisfy specific effluent limitations rather than implement storm water management programs. Where a MS4 permittee voluntarily chooses a Best Management Practice (BMP) based storm water management program as permit effluent limitations rather than end-of-pipe numeric effluent limits, there exists no compulsion of a specific regulatory scheme that would violate the 10th Amendment to the United States Constitution. (City of Abilene V. EPA, 325 F.3d 657 (5th Cir. 2003)).

#### Meetings

The Regional Water Board staff has conducted meetings from October 2005 through January 2009, with permittees their representatives (Larry Walker and Associates, and Somach, Simmons & Dunn), and various stakeholders (Building Industry Association of Southern California/ Greater Los Angeles Ventura Chapter (BIAGLA/ VC), California State Dept. of Health Services, Calleguas Water District, California Stormwater Quality Association (CASQA), City of Downey, City of Los Angeles-EMD, Collation for Practical Regulation (CPR), Construction Industry Coalition on Water Quality (CICWQ), County of Orange, Geosyntec Consultants, Golden State, Heal The Bay; Local Government Commission, Los Angeles City;

T

E

Los Angeles County Department of Public Works, Los Angeles County-SD, Los Angeles Department of Water & Power, Metropolitan Water District, Natural Resources Defense Council (NRDC), Richard Watson Association, San Bernardino Flood Control District, Santa Monica Bay Restoration Commission, Southern California Coastal Water Research Project, University of California Sea Grant, Ventura CoastKeeper, and Charles Abbott Associate. On April 5, 2007, September 20, 2007, and July 10, 2008 the Regional Water Board conducted workshops to discuss drafts of the NPDES Order and received input from the permittees and the public regarding proposed changes.

#### **IV. STATUTORY AND REGULATORY HISTORY OF THE STORMWATER PROGRAM**

The federal Clean Water Act (CWA) generally prohibits the “discharge of any pollutant,” 33 U.S.C. § 1311(a), from a “point source” into the navigable waters of the United States. 33 U.S.C. § 1362(12)(A). An entity can, however, obtain a National Pollutant Discharge Elimination System (NPDES) permit that allows conditionally for the discharge of some pollutants. 33 U.S.C. § 1342(a)(1). The CWA defines point sources as “discernible, confined and discrete conveyances, including but not limited to, any pipe, ditch, channel, tunnel, conduit, well, discrete fissure” such as a pipe, ditch, container, rolling stock, concentrated animal feeding operation, landfill leachate collections system, vessel or other floating craft from which pollutants are or may be discharged. 33 U.S.C. § 1362; 40 CFR 122.2.

In 1987, the U.S. Congress enacted the Water Quality Act recognizing both the environmental threats posed by storm water runoff and the U.S. EPA’s problems in implementing regulations for storm water discharges (NRDC II, 966 F.2d at 1296). These Amendments to the CWA

T  
E  
N  
T  
A  
T  
I  
V  
E

established new statutory requirements to control industrial and municipal storm water discharges to waters of the United States (CWA § 402(p)).

The amendments require NPDES permits for storm water discharges from Municipal Separate Storm Sewer Systems (MS4s) to waters of the United States, and the MS4 was designated a “point source”. The storm water discharge permits for MS4s (i) may be issued on a system- or jurisdiction-wide basis; (ii) shall include a requirement to effectively prohibit [unauthorized] non-storm water discharges into the storm sewers; and (iii) shall require controls to reduce the discharge of pollutants from storm water to the maximum extent practicable, including management practices, control techniques and systems, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants. (See CWA §402(p) (3) (B)).

Ordinarily, an NPDES permit imposes [numerical] effluent limitations on such discharges. See 33 U.S.C. § 1342(a)(1) (incorporating effluent limitations found in 33 U.S.C. § 1311). First, a permit-holder “shall . . . achiev[e] . . . effluent limitations . . . which shall require the application of the best practicable control technology [BPT] currently available.” 33 U.S.C. § 1311(b)(1)(A). Second, a permit-holder “shall . . . achiev[e] . . . any more stringent limitation, including those necessary to meet water quality standards, treatment standards or schedules of compliance, established pursuant to any State law or regulations (under authority preserved by section 1370 of this title).” 33 U.S.C. § 1311(b)(1)(C). In the case of MS4 NPDES discharge permits, federal courts have ruled that the U.S. EPA has the discretionary authority under “33 U.S.C. § 1342(p)(2)(E) to determine that ensuring strict compliance with state water-quality standards is

T  
E  
N  
T  
A  
T  
I  
V  
E

necessary to control pollutants, or to require less than strict compliance with state water-quality standards, such as a BMP approach” (*Defenders of Wildlife v. Browner*, 191 F.3d 1159 (9<sup>th</sup> Cir., 1999)). Under 33 U.S.C. § 1342(p)(3)(B)(iii), the U.S. EPA has the choice to include either best management practices or numeric limitations in the permits. NRDC II, 966 F.2d at 1308 (“Congress did not mandate a minimum standards approach or specify that [the] EPA develop minimal performance requirements.”).

Regulatory Scheme

On November 16, 1990, pursuant to CWA § 402(p), the U.S. EPA promulgated regulations at 40 CFR 122.26 which established requirements for storm water discharges under the NPDES program. The U.S. EPA defines storm water at 40 CFR 122.26 (b)(13) as ‘storm water runoff, snow melt runoff, and surface runoff and drainage’ [related to storm events or snow melt] (55 Fed. Reg. 47990, 47995). Non storm water discharges to the MS4 are to be “effectively prohibited” by the MS4 operator. “Effective prohibition” meant that the MS4 Permittee was to implement programs to eliminate “illicit discharges” to the storm drain system unless authorized under NPDES permits issued independent of the MS4 permit (55 Fed. Reg. 47995). The storm water regulations also intended to not hold MS4 Permittees responsible for certain categories of non storm water discharges, such as uncontaminated ground water infiltration, natural springs, rising groundwater, stream and diversions, from the MS4. Such discharges might need to be addressed under independent NPDES permits when specifically identified on a case-by case basis by the MS4 Permittee or the permitting authority.

T  
E  
N  
T  
A  
T  
I  
V  
E

The U.S. EPA intended that storm water discharges from the MS4 be primarily addressed through the implementation of BMPs on an iterative approach because of the intermittent and variable nature of storm flows and pollutant concentrations as well as insufficient data rather than numerical effluent limitations (61 FR 43761). However, the U.S. EPA's scheme for non-storm water discharges from the MS4 is to bring them under the existing framework of the NPDES program at 40 CFR 122.44(d). (55 Fed. Reg. 47995). Non-numerical limitations such as BMPs for non-storm water discharges may be authorized only where numerical limits are not feasible (40 CFR 122.44(k)). In any case, if the Permittee fails to implement adequate BMPs to prevent exceedance of the receiving water objectives, the permitting authority "may have to consider other approaches to water quality protection" (61 Fed. Reg. 43761; *Interim Permitting Approach*, Response #6, EPA 833-D-96-00, 1996).

The CWA §303(d)(1)(A) requires each State to conduct a biennial assessment of its waters, and identify those waters that are not achieving water quality standards. The resulting list is referred to as the 303(d) list. The CWA also requires States to establish a priority ranking for waters on the 303(d) list of impaired waters and to develop and implement TMDLs for these waters. A TMDL specifies the maximum amount of a pollutant that a waterbody can receive and still meet water quality standards, and allocates the acceptable pollutant load to point and nonpoint sources. The elements of a TMDL are described in 40 CFR 130.2 and 130.7. A TMDL is defined as "the sum of the individual waste load allocations for point sources and load allocations for nonpoint sources and natural background" (40 CFR 130.2). Regulations further require that TMDLs must be set at "levels necessary to attain and maintain the applicable narrative and

T  
E  
N  
T  
A  
T  
I  
V  
E

numeric water quality standards with seasonal variations and a margin of safety that takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality” (40 CFR 130.7 (c) (1)). The regulations at 40 CFR 130.7 also state that TMDLs shall take into account critical conditions for stream flow, loading and water quality parameters. The U.S. EPA has issued guidance for establishing WLAs for storm water discharges in TMDLs and their incorporation as numerical limitations in MS4 Storm Water Permits (U.S. EPA Office of Water Memo, *Establishing Total Maximum Daily Load Wasteload Allocations for Storm Water Sources and NPDES Permit Requirements Based on those WLAs*, Nov 22, 2002 Memo).

Since provisions in NPDES permits must reflect the assumptions and requirements of available TMDLs (40 CFR 122.44 (d)(1)(vii)(B)), the NPDES permit must incorporate the WLAs as either BMPs (reasonably expected to achieve the WLAs when implemented and properly maintained), under specified circumstances (40 CFR 122.44(k)(2) & (3)), or as a Water Quality Based Limitation (WQBEL) expressed numerically. Where a non-numeric effluent limitation is selected, the permits administrative record must support the expectation that the BMPs are sufficient to achieve the WLAs. (40 CFR 124.8, 124.9, and 124.18.)

#### State Regulatory Authority and Permit History

The State of California is one of forty-five States with duly delegated authority under the CWA to implement the NPDES permitting program. The Porter-Cologne Act (California Water Code) authorizes the State Board, through the nine regional boards, to issue NPDES permits, and regulate and control the discharge of pollutants into waters of the State. To comply with the

CWA, the Los Angeles Regional Water Board (LA Water Board) issued the first storm water permit (“predecessor permit”) for the County of Ventura on August 22, 1994, to the municipalities (Permittees) in Ventura County (Order No. 94-082; NPDES Permit No. CAxxxxx). The Ventura County MS4 Permit was reissued on July 27, 2000 (Order No. 00-108; NPDES Permit No. CAS004002).

Because of the complexity and networking of the storm drain system and drainage facilities within and tributary to the County of Ventura, the LA Water Board adopted a countywide approach in permitting storm water and urban runoff discharges. The permit requires Permittees to conduct monitoring and to implement programs in the areas of public involvement and participation, industrial/commercial inspection, development planning, development construction, public agency activities, and to reduce the discharge of pollutants in storm water to the Maximum Extent Practicable (MEP) from the permitted areas in the County of Ventura to the waters of the U.S. In addition, Permittees are required to effectively prohibit the discharge of unauthorized non storm water into the MS4 (except where they are authorized under a NPDES permit), by implementing a program to detect and eliminate illicit discharges/connections to the MS4.

The Ventura County MS4 Permit requires Permittees to develop, and implement a timely, comprehensive, cost-effective storm water pollution control program to reduce the discharge of pollutants in storm water to the Maximum Extent Practicable (MEP) to the waters of the U.S. In addition, it states that discharges from the MS4 to waters of the U.S. including Calleguas Creek, Santa Clara River, Ventura River, Malibu Creek, and Ventura County Coastal areas are required

T  
E  
N  
T  
A  
T  
I  
V  
E

to meet water quality standards. Upon establishment of TMDLs by the State or the U.S. EPA, the State is required to incorporate the TMDLs into the State Water Quality Management Plan (40 CFR 130.6 (c) (1), 130.7). The Water Quality Control Plan for the Los Angeles Region (Basin Plan), and applicable statewide plans, serves as the State Water Quality Management Plan governing the watersheds under the jurisdiction of the LA Water Board. LA Water Board-issued NPDES permits must contain provisions consistent with the State Water Quality Management Plan.

## V. DISCUSSION OF SPECIAL PROVISIONS

### A. General Requirements

#### **Non Storm Water Discharges** Discharges from Potable Water Sources

Federal Regulations promulgated on November 16, 1990 at 40 CFR 122.26 required Permittees to effectively prohibit all non-storm water discharges. However, the federal regulations also included a list of specific non-storm water discharges that "need not be prohibited." These discharges include among others, discharges from potable water sources.

This Regional Board, on April XX 2009, issued an NPDES permit for releases of potable water from distribution systems. Releases may occur only with the implementation of appropriate BMPs and dechlorination prior to discharge

## Municipal Action Levels

### Introduction

The draft Tentative Ventura County MS4 Order establishes Municipal Action Levels (MALs) for selected pollutants based on a regional subset of nationwide Phase I MS4 monitoring data for pollutants in storm water. (<http://unix.eng.ua.edu/~rpitt/Research/Research.shtml>, last visited on August 14, 2007). The MALs were computed using the statistical based population approach, one of three approaches recommended by the California Water Board's Storm Water Panel in its report, 'The Feasibility of Numerical Effluent Limits Applicable to Discharges of Storm Water Associated with Municipal, Industrial and Construction Activities (June 2006). The MALs were obtained by calculating the 80<sup>th</sup> percentile value of selected pollutants. The end-of-pipe assessment points for the determination of MAL exceedances are the major outfalls, as defined in 40 CFR122.26(b)(5) and (b)(6). Staff chose to incorporate MALs derived from a USEPA Climate Zone 6 subset of nationwide MS4 data, included in the National Stormwater Quality Database, because of the large number of events sampled for each pollutant. A Climate Zone 6 subset of the nationwide MS4 dataset was used to assure that the calculated values were relevant to Ventura County monitoring data (Ventura County is in USEPA Climate Zone 6). The California Water Board's Storm Water Panel Final Report states, "the statistically based population approach would once again rely on the average distribution of measured water quality values developed from many water quality samples taken for many events at many locations." Over 100 events were sampled for all MAL pollutant included in the Order. Approximately 350 events were sampled for most MAL pollutants. In addition, the use of the nationwide dataset provided for the sampling of a wide variety of storm events. The Climate Zone 6 subset of the nationwide data includes events sampled for storms ranging from 0.02" to 9.85" rainfall depth. The nationwide data incorporates monitoring events from various areas/climate zones in the nation, notably USEPA Climate Zone 6, which includes Ventura County. The nationwide MS4 data is derived from the sampling of runoff from multiple land uses and drainage areas of varying sizes, from 0.4 acres to over 10,000 acres. The California Water Board's Storm Water Panel Final Report states, "In built-out urbanized environments, there are greater opportunities to examine various data sets for setting Action Levels." The report acknowledges the importance of monitoring various land uses, which are included in the National Stormwater Quality Database, and setting Action Levels based on a large number of sampling events, which are

T  
E  
N  
T  
A  
T  
I  
V  
E

included in the National Stormwater Quality Database. Staff selected common storm water pollutants as MALs with the presumption that appropriate control of the selected pollutants would lead to appropriate control of the majority of storm water pollutants and serve as a quantifiable measure of storm water management program effectiveness.

Discussion of New Requirement

- 1) Beginning Year 3 after Order adoption date, a running average of twenty percent or greater of exceedances of any discharge of storm water from the MS4 to waters of the U.S. that exceed the Municipal Action Levels (MALs) for the pollutants listed in Attachment "C" (Municipal Action Levels) will require each permittee to affirmatively augment and implement all necessary storm water controls and measures to reduce the discharge of the associated class of pollutant(s) in accordance with the Maximum Extent Practicable (MEP) provision. Staff chose to incorporate a running average of 20% or greater exceedances of a MAL over a three year period to require Permittees to address pollutants that consistently demonstrated a potential threat to storm water quality. The purpose of this requirement is to help ensure that Permittee's do not act on sampling anomalies, but focus on identifying and eliminating sources of pollutants that consistently exceed MALs. The MAL requirement in the Ventura MS4 Order does not require that all outfalls be retrofitted with treatment Best Management Practices (BMPs). Staff's intent in incorporating the MAL requirement is to require Permittees to assess and implement effective program components such as industrial/construction inspections, public education and public agency activities to control pollutants in MS4 storm water discharges to the MEP
- 2) Permittees who have storm water discharges that continue to exceed a MAL pollutant(s) after Year 3 of the operative MAL(s) are required to demonstrate they have implemented adequate storm water control measures and BMPs to comply with the MEP criteria. To demonstrate compliance with the MEP standard, Permittees must submit to the Executive Officer (within three years of Permit Adoption), an MAL Action Plan for those subwatersheds with discharges in excess of the MALs. The plan should include an assessment of their storm water program, the sources responsible for the abnormal pollutant levels and the methodology used in identifying those sources (e.g. storm water computer modeling), the existing BMPs that address those sources, the additional practicable BMPs

T  
E  
N  
T  
A  
T  
I  
V  
E

and/or actions the Permittee proposes to ensure compliance with the MEP standard, and a BMP implementation schedule for all structural and non-structural BMPs.

- 3) Within 90 days of the plan approval, the Permittee shall initiate the BMPs and actions proposed in the MAL Action Plan, together with any other practicable BMPs or actions that the Executive Officer determines to be necessary to comply with the MEP standard. The Permittee shall complete the proposed actions in accordance with the approved implementation schedule. Upon completion of the actions specified in the approved MAL Action Plan, the Permittee shall re-monitor the subject subwatershed in accordance with the MRP, and submit a Post-Project MAL Assessment Report to the Executive Officer. The Executive Officer will either accept the report as evidence that the Permittee has complied with the MEP standard or, alternatively, identify additional actions which the Executive Officer determines necessary to comply with the standard.

## **B. Watershed Initiative Participation**

### Introduction

The Principal Permittee consents to participate in water quality meetings for watershed management and planning, including but not limited to the Southern California Stormwater Monitoring Coalition (SMC) and other Watershed planning groups, as appropriate.

### Participation

The Principal Permittee consents to participate in the following regional water quality programs, and projects for watershed management and planning:

- (a) SMC Regional Monitoring Programs
  - (1) Southern California Regional Bioassessment
    - (A) Level of effort per watershed
      - (i) Probabilistic sites per watershed
        - (I) Ventura River - Six

- (II) Santa Clara River - Three
- (III) Calleguas Creek - Six
- (ii) Integrator sites per watershed
  - (I) Ventura River - One
  - (II) Santa Clara River - One
  - (III) Calleguas Creek - One
  - (IV) Six
- (iii) Fixed sites per watershed
  - (I) Ventura River - One
  - (II) Santa Clara River - One
  - (III) Calleguas Creek - One
- (b) Southern California Bight Projects
  - (1) Regional Monitoring Survey - 2008, and successive years.

### C. Public Information and Participation Program

#### Introduction

Implementation of a PIPP is a critical BMP and a necessary component of a storm water management program. The State Board Technical Advisory Committee "recognizes that education with an emphasis on pollution prevention is the fundamental basis for solving nonpoint source pollution problems." The USEPA Phase II Fact Sheet 2.3 (Fact Sheet 2.3) finds that "An informed and knowledgeable community is critical to the success of a storm water management program since it helps insure the following: (i) greater support for the program as the public gains a greater understanding of the reasons why it is necessary and important, and (ii) greater compliance with the program as the public becomes aware of the personal responsibilities expected of them and others in the community, including the individual actions they can take to protect or improve the quality of area waters."

The USEPA's, Public Participation/Involvement Minimum Control Measure- fact Sheet, finds that Public education and outreach involves using effective mechanisms and programs, guided

T  
E  
N  
T  
A  
T  
I  
V  
E

by a detailed outreach strategy, to engage the public's interest in preventing stormwater pollution. A key factor to consider when developing a strategy is that the public has varying levels of background knowledge of both storm water management and their role in reducing storm water pollution. Furthermore, the public can provide valuable input and assistance to a municipal storm water management program and, therefore, should play an active role in the development and implementation of the program. An active and involved community is essential to the success of a storm water management program because it allows for:

- Broader public support since residents who participate in the development and decision making process are partially responsible for the program and, therefore, are more likely to take an active role in its implementation.
- Shorter implementation schedules due to fewer obstacles in the form of public and legal challenges and increased sources in the form of residents volunteers.
- A broader base of expertise and economic benefits since the community can be a valuable, and free, intellectual resource; and A conduit to other programs as residents involved in the storm water program development process make important cross-connections and relationships with other community and government programs.

This benefit is particularly valuable when trying to implement a storm water program on a watershed basis.

Discussion of New Requirements

- 1) The Draft Ventura MS4 Permit requires Permittees to establish watershed Citizen Advisory Groups/ Committees. The intent of this requirement is to solicit public input for messages/activities that will persuade the public to modify their common activities to reduce/prevent pollutants from being discharged in storm water. A paper presented by David Galvin during the 4th National Conference Nonpoint Source and Stormwater Pollution Education Programs October 17-20, 2005 \*Measuring Results from Outreach and Education Programs: Can We See Improvements Downstream? states, "Experiential programs appear

T  
E  
N  
T  
A  
T  
I  
V  
E

to be more powerful than information campaigns, more likely to connect people with their watershed. Activities such as citizen volunteer monitoring, hands-on restoration, storm-drain-stenciling projects, and other ways to get an experiential element incorporated into the program have a greater likelihood of success. Get peoples' feet wet and their hands dirty. Once they have invested in the watershed, even in a tiny part of it, they will have more ownership." Direct feedback from the public on storm water pollution prevention messages can be an inexpensive alternative to traditional surveys and studies as well as promoting increased public support for storm water pollution prevention campaigns. The Draft Ventura MS4 Permit requires Permittees to establish watershed Citizen Advisory Groups/ Committees, which can be a subset of existing committees/groups. The intent of this requirement is to solicit public input for messages/activities that will persuade the public to modify their common activities to reduce/prevent pollutants from being discharged in storm water. A paper presented by David Galvin during the 4th National Conference Nonpoint Source and Stormwater Pollution Education Programs October 17-20, 2005 \*Measuring Results from Outreach and Education Programs: Can We See Improvements Downstream? states, "Experiential programs appear to be more powerful than information campaigns, more likely to connect people with their watershed. Activities such as citizen volunteer monitoring, hands-on restoration, storm-drain-stenciling projects, and other ways to get an experiential element incorporated into the program have a greater likelihood of success. Get peoples' feet wet and their hands dirty. Once they have invested in the watershed, even in a tiny part of it, they will have more ownership." Direct feedback from the public on storm water pollution prevention messages can be an inexpensive alternative to traditional surveys and studies as well as promoting increased public support for storm water pollution prevention campaigns.

- 2) The Draft Ventura MS4 Permit requires an increase in media impressions and identifies the media venues. The intent of these changes is to provide an increase in public knowledge of storm water pollution prevention practices in an effective and cost efficient manner. Several studies have found that an increase in the frequency of storm water pollution prevention messages contributes to the likelihood that these messages will be remembered.
- 3) The Draft Ventura MS4 Permit requires outreach to ethnically diverse communities. The USEPA, Tailoring Outreach Programs to Minority and Disadvantaged Communities and

T  
E  
N  
T  
A  
T  
I  
V  
E

Children Fact Sheet finds that, “many residents of ethnically and culturally diverse communities don't speak English. English messages contained in public education outreach materials may not be effectively reaching a significant portion of some communities. The intent of this provision is to encourage behavior changes that reduce pollutants in storm water to a portion of the population who might otherwise be overlooked.

- 4) The Draft Ventura MS4 Permit requires Permittees to work with other regional and/or statewide agencies and associations such as the California Storm Water Quality Association (CASQA), to develop a corporate outreach program to educate and inform corporate and local managers about storm water regulations and Best Management Practices (BMPs). The intent of this provision is to ensure that management is aware of the potential impacts their business can have on storm water quality, facilitate compliance with storm water requirements, and give management sufficient guidance to train staff throughout their business on appropriate business practices to mitigate the potential water quality impacts of their operations.
- 5) The Draft Ventura MS4 Permit requires Permittees to implement a Business Assistance Program to provide technical information to small businesses to facilitate their efforts to reduce the discharge of pollutants in storm water. The provision requires the distribution of storm water pollution prevention education materials to operators of auto repair shops, car wash facilities (including mobile car detailing), mobile carpet cleaning services, commercial pesticide applicator services and restaurants providing guidance on appropriate business practices to mitigate the potential impacts their business practices can have on storm water quality.

#### **D. Industrial/Commercial Businesses Program**

##### Purpose

The purpose of the **Industrial/Commercial Businesses Program** is to assure that the implementation of adequate controls and inspection and monitoring activities at

T  
E  
N  
T  
A  
T  
I  
V  
E

industrial/commercial sites will assist municipalities comply with the Maximum Extent Practicable and water quality standards for discharges from their MS4s. The goal of the program is also to assure that the need not be permitted non-stormwater discharges, such as air conditioning condensate, drains for foundations, footings, and crawl spaces, etc., are not a significant source of pollution and the Permittees are actively enforcing the prohibition against non-stormwater discharges. The Permittees have the legal authority to actively control pollutants in storm water discharges, to prohibit illegal discharges/illicit connections, to control spills, and to require compliance with the local ordinances, including the implementation of source control BMPs and other necessary control measures and carry out inspections within their respective jurisdictions.

#### Legal Framework

In this third iteration of the MS4 stormwater discharges permit to be issued to Ventura County MS4 Permittees, there are a number of upgrades for the industrial/commercial business program in comparison with the previous 2000 permit. The upgrades are in line with the current requirements in the Los Angeles MS4 permit issued in 2001 and other MS4 permits recently issued in California, e.g. Sacramento, San Bernardino MS4 permits and nationwide, e.g. Seattle, Washington. This iterative approach for MS4 stormwater discharge permits, to contain better tailored BMPs, it is described by the USEPA in its *Interpretative Policy Memorandum on Reapplication Requirements* of MS4s issued by USEPA (61 Fed. Reg. 41697). In the Memorandum, USEPA specifies that "...[it] is seeking to improve existing MS4 storm water management programs by using information and experience municipalities have gained during the previous permit term." In its *Interpretative Memorandum Q&As* part (EPA 833-D-96-001), USEPA further clarified that based on the Section 301 of the Clean Water Act (CWA), it is required that discharger permits include effluent limitations necessary to meet State Water Quality Standards (WQS). However, under the CWA and NPDES regulations, permitting authorities may employ a variety of conditions and limitations in storm water permits, including BMPs, performance objectives, narrative conditions, monitoring triggers, action levels (e.g., monitoring benchmarks, toxicity reduction action levels, etc.), as the necessary water quality-based effluent limitations.

The types of activities proposed in the new Ventura MS4 permit are similar with the conditions currently found in the Los Angeles MS4 permit. It is important to note that similar controls for industrial/commercial sites required by the Los Angeles MS4 permit, including inspection activities, are also required in the San Bernardino MS4 permit that was challenged in Court. In the decision for that case, the Appellate Court found that “[...] permittees are responsible for inspecting construction and industrial sites and commercial facilities within their jurisdiction for compliance with and enforcement of local municipal ordinances and permits” (*City of Rancho Cucamonga v. Regional Water Quality Control Bd.- Santa Ana Region (2006) Feb 27 Cal/4 E037079*).

On a separate action that challenged the Los Angeles MS4 permit, the Superior Court determined “that the Permit contains reasonable inspection requirements for these types of facilities... Addressing pollution after it has entered the storm sewer system is not working to meet legislative goals. More work is required at the source of pollution... Federal law requires [municipal] permittees to inspect dischargers... Nothing in the regulations precludes the inspections of facilities with state-issued permits...” (*In Re L.A. County Municipal Storm Water Permit Litigation (2004) BS080548*) In a subsequent decision, the Appellate Court upheld the Superior Court decision and the inclusion in the permit of the requirement to inspect industrial/commercial and construction sites (*County of Los Angeles et al. v. California State Water Resources Control Board et al. (2006) Nov 6 Cal/5 B184034*): “The legal authority extended to: requiring persons to comply with permittees’ ordinances; holding dischargers to storm drain systems accountable; controlling pollutants and their potential contributors; inspecting, watching, and monitoring procedures to insure compliance with the permit including prohibition of illicit discharges into storm drain systems; and requiring the use of best management practices to reduce pollutant discharge into the storm drain systems to the maximum extent possible”(underlined added). In addition, the Court recognized the Regional Board’s authority to require in NPDES permits the implementation of specific better-tailored BMPs that achieve compliance with the MEP and WQS: “the regional board has the authority to impose additional restrictions... the federal Clean Water Act authorizes National Pollutant Discharge Elimination Systems permits to set forth specific practices which will restrict polluted storm water runoff... Thus, nothing in state law is violated by the specific pollution control requirements imposed on the permittees.”

T  
E  
N  
T  
A  
T  
I  
V  
E

Regional Board is authorized under 40 CFR 122.44(k)(2) to require BMPs in lieu of numeric effluent limitations in NPDES permits when the Regional Board finds numeric effluent limitations to be infeasible. The Regional Board may also impose BMPs which are "reasonably necessary... to carry out the purposes of the Clean Water Act" under 40 CFR 122.44(k)(3). Both of these standards for imposing BMPs were recognized in *NRDC v. Costle, 568 F.2d 1369, 1380 (D.C. Cir. 1977)*. Furthermore as mentioned before, the same authority was recognized in the state Appellate Circuit in *County of Los Angeles et al. v. California State Water Resources Control Board et al. (2006) Nov 6 Cal/5 B184034*.

State of the pollution at sites of industrial/commercial activity

Since the NURP study<sup>1</sup> in early 1980s, sites of industrial activity demonstrated the potential of contributing higher quantities of pollutants into the stormwater runoff when compared with other land uses. Data from the NURP study were analyzed further in the *U.S. Geological Survey (USGS) Urban Storm Water Data Base for 22 Metropolitan Areas Throughout the United States*

---

<sup>1</sup> Results of the Nationwide Urban Runoff Program, Volume 1—Final Report. U.S. EPA. 1983. Office of Water. Washington, D.C.

E

study<sup>1</sup>. The USGS report summarized additional monitoring data compiled during the mid-1980s, covering 717 storm events at 99 sites in 22 metropolitan areas, and documented problems associated with metals and sediment concentrations in urban stormwater runoff.

The *California Stormwater BMP Handbook - Industrial and Commercial* published in January 2003 by California Stormwater Quality Association (CASQA) lists as potential pollutants from sites of industrial activities: sediments, nutrients, metals, organics and toxicants, oil and grease, bacteria, pesticides. The type of activity or facility that potentially discharge those pollutants in stormwater runoff include vehicle & equipment fueling, vehicle & equipment maintenance and repair, outdoor loading & unloading of materials, outdoor storage of raw materials, products, and byproducts, building and grounds maintenance, parking/storage area maintenance.

USEPA's *Considerations in the Design of Treatment BMPs to improve Water Quality* (EPA 600/R-03/103, September 2002) also shows that lands of industrial/commercial use contribute significant loads of pollutant in urban areas. As examples, the industrial land uses may typically

---

<sup>1</sup> U.S. Geological Survey Urban Storm Water Data Base for 22 Metropolitan Areas Throughout the United States. Driver, N.E., M.H. Mustard, R.B. Rhinesmith, and R.F. Middleburg. 1985. Report No. 85-337 USGS. Lakewood, CO.

contribute 0.2 lb/ac/yr of lead, 0.4 lbs/ac/yr of zinc, 0.6 lb/ac/yr of chromium, 500 lb/ac/yr of suspended solids, while commercial land uses typically contribute 2.7 lb/ac/yr of lead, 2.1 lb/ac/yr of zinc, 0.15 lb/ac/yr of chromium, 1,000 lb/ac/yr of suspended solids. In the same document urban stormwater pollutants event mean concentrations for different U.S. regions show concentrations for copper, lead, zinc consistently above water quality standards.

The water quality monitoring data submitted by the Ventura MS4 Permittees (Annual Monitoring Report 04-05) reveal that a number of constituents, such as metals, PAHs, pesticides exceeded the receiving water quality standards during wet events. Because studies and research demonstrated that the same types of pollutants are typically released in higher quantities into stormwater runoff from sites of industrial and commercial activities, there is a strong presumption that pollutants in stormwater runoff discharges from those sites cause or contribute to the exceedances.

Studies that are more recent confirm that tendency. The *Critical Source Selection and Monitoring Report*<sup>1</sup> performed on behalf of Los Angeles MS4 Permittees, identified seven highest ranked pollution potential activities to be, in order of ranking: (i) wholesale trade (scrap,

auto dismantling), (ii) *automotive repair/parking*, (iii) fabricated metal products, (iv) motor freight (including trucking), (v) chemical and allied products, (vi) automotive dealers/gas stations, (vii) primary metals products. It is significant to note that five out of seven categories of activities are subject to Phase I industrial storm water regulations. Although *automotive repair/parking* and *automotive dealers/gas stations* categories were not the focus of the Phase I storm water regulations, the study identified these commercial categories as significant potential pollutant contributors based on the principles developed in the critical source criteria study.

Rank (pollution potential) <sup>1</sup>	Industrial Category	SIC Code
1	Wholesale trade (scrap, auto dismantling)	50
2	Automotive repair/parking	75
3	Fabricated metal products	34

More recent research reviewing stormwater monitoring data reveals that the stormwater runoff from industrial sites contains significant loads of pollutants. In *Utility of Stormwater Monitoring- H. Lee, M.K. Stenstrom- Water Environ. Res., 77, 219 (2005)*, the authors reviewed three years of stormwater monitoring data from industrial sites in Los Angeles County covered by the statewide Industrial Activities Stormwater General Permit (IASGP). The authors concluded that the data clearly show that certain industrial sectors contribute higher quantities of pollutants in the stormwater runoff. In addition, concentrations of metals exceeded the stormwater benchmark values suggested by the US EPA more frequently than the basic water-quality parameters. In *Industrial Storm Water Monitoring Program Existing Statewide Permit Utility and Proposed Modifications (H. Lee, M.K. Stenstrom -US EPA cooperative agreement CP-82969201 from the California State Water Resources Control Board, contract number 02-172-140-0, 2005)* the authors examined data collected over the nine-year period from 1992 to 2001 from industrial sites in Los Angeles and Ventura County covered by the statewide IASGP. The analysis of the expanded data set confirmed the conclusions of the prior research that industrial/commercial sites contribute higher quantities of pollutants in the stormwater runoff.

Nationwide and statewide research and monitoring data has shown that nurseries are also a category of facilities that tend to release a higher quantity of pollutants in stormwater runoff. Recognizing this class of facilities and activities as a potential source of pollutants, the Regional Board adopted a *Conditional Waiver of Waste Discharge Requirements for Discharges from Irrigated Lands within the Los Angeles Region (Waiver)*, Order No. R4-2005-0080. The Waiver

T  
E  
N  
T  
A  
T  
I  
V  
E

covers discharges from “irrigated lands where water is applied for producing crops and, ... includes, but is not limited to, land planted for row, vineyard, field and tree crops as well as nurseries, nursery stock production, and greenhouse operations... which are not subject to waste discharge requirements, including Municipal Separate Storm Sewer System (MS4) or other National Pollutant Discharge Elimination System (NPDES) permits.” However, because the non-agricultural nurseries present in the urban environment can manifest the same characteristics as their agricultural counterparts, the nurseries under specified NAICS codes are covered under the current Ventura MS4 permit.

Proposed Enhancements

The new permit requirements build on the activities and experience gained in the previous ones and moves from a more educational effort to the next iteration of better source control BMPs implementation, inspection and enforcement. A special emphasis is put on mandatory implementation of a baseline minimum set of common sense source control BMPs recommended by the California Stormwater Quality Association (CASQA) BMP Handbook similar to the approach suggested by the Permittees in their ROWD for controlling pollution in stormwater discharges from construction sites.

In their ROWD, the Ventura County Permittees did not propose an enhancement of their program to control pollutants in stormwater runoff from industrial/commercial sites into the MS4 further than the provisions contained in the 2000 permit. The Permittees also did not propose any improvements in the monitoring program to better characterize the discharge of pollutants from sites of industrial or commercial use and prioritize the activities to control them. In addition, the Permittees did not propose any improvements in the type and extent of BMPs that must be implemented at industrial/commercial sites in order to control the quantity of pollutants into the stormwater runoff discharged into their MS4s. The Permittees must require the implementation of such controls at industrial/commercial sites to the extent that municipalities can comply with the MEP and water quality standards for discharges of stormwater from their MS4s.

T  
E  
N  
T  
A  
T  
I  
V  
E

Based on the dual coverage and partnership approach between the permitting authority and municipalities that the USEPA called for in the storm water regulations and in order to best use limited resources at the State and local level, the permit includes the following improvements.

Recognizing that this permit represents a *third iteration* permit, and building upon the experience and tools developed under the previous permits, the Industrial/Commercial program has been elevated to an inspection, baseline mandatory source control BMPs implementation and enforcement program. Based also on the extensive educational effort performed by the Permittees since mid 1990s to familiarize industrial and commercial site operators with the requirements of the stormwater pollution prevention techniques and municipal regulations the new permit includes a number of enhancements. Municipalities are required to control the storm water discharges associated with industrial activities and other commercial facilities identified as significant contributors of pollutants through the implementation of a mandatory baseline minimum set of source control BMPs;

performance of an inspection program to verify the adequacy of BMPs implementation in the field and compliance with the municipal ordinances; and assist the Regional Board in ensuring that industrial activities subject to regulations are covered by the general industrial stormwater permit. Regional Board will also assist the municipalities in case of instances of egregious non-compliance with the municipal ordinances and state and federal laws and regulations.

Many owner/operators of industrial/commercial sites should be familiar by now with the legal requirements outlined in the municipal ordinances and the type of BMPs necessary to minimize the contribution of pollutants into stormwater runoff from their sites. The enhancements are also based on the results of the monitoring data showing that pollutants of concern that are typically discharged from sites of industrial and commercial activities cause or contribute to the exceedances of the water quality standards. The permit includes conditions that the Permittees:

- Continue to update the inventory of industrial/commercial sites under their jurisdiction;
- Perform routine inspections;

T  
E  
N  
T  
A  
T  
I  
V  
E

- Require minimum set of source control BMPs implementation as a baseline;
- Enforce against violators of the municipal ordinances requirements.

The permit also provides for an enhanced coordination between Municipal and RB stormwater industrial programs.

Costs Evaluation

These permit enhancements have a limited financial impact and represent only an incremental increase in costs. A number of municipalities are already performing inspections, many of them in a very efficient way by combining various regulatory aspects, e.g. industrial waste, stormwater, etc., into one consolidated inspection program. Therefore, for those municipalities the increase in costs may be fiscally minimal to neutral. For those municipalities that performed site visits only, the increase may be incrementally elevated but by sharing in the experience of the municipalities that use a consolidated inspection program where the stormwater inspections are an addition to an already existing inspection program, those costs can be minimized. The *Pollution Source Control Practices Manual 8* (Center for Watershed Protection, July 2004) estimates that non-regulatory site inspections (site visits) range in cost between \$30 to \$80 per facility. The regular site inspections range in cost between \$75 to \$175 per facility. For on site illicit discharge investigations where the threat to water quality is higher or the damage already occurred the costs range from \$200 to \$900 per facility, but the municipalities in many cases can recuperate those costs through an enforcement action allowed under municipal ordinances. In order to alleviate some of the added costs, a number of municipalities use a permitting approach for sites of industrial/commercial activity discharging stormwater runoff into the MS4. The cities collect a fee as a consolidated charge for permitting a facility for various municipal services such as pretreatment, stormwater, potable water, solid waste, etc., programs.

The *California Stormwater BMP Handbook - Industrial and Commercial* states that source control BMPs are preferred over treatment control BMPs because they are generally effective if implemented properly and are usually, but not always, less costly than treatment control BMPs. Typical source control nonstructural (operational) and structural BMPs include using alternative less toxic chemicals and covering an activity area that is a pollutant source. The BMP Handbook

T  
E  
N  
T  
A  
T  
I  
V  
E

continues to state: "the axiom of "80% of the problem can be solved with 20% of the effort" probably is true for most industries. Low or modest cost BMPs, many of which may already be in place, will usually provide satisfactory protection." The BMP Handbook provides a list of the categories of structural and operational source control BMPs that should be considered:

- Installing berms or simple curbing to divert runoff water from around the activity area to reduce the amount of polluted stormwater leaving the area;
- Implementing overhead coverage: this includes structures that provide horizontal coverage of materials, chemicals, and pollutant sources from contact with stormwater and authorized non-stormwater discharges;
- Using secondary containment structures: this generally includes containment structures around storage tanks and other areas for the purpose of collecting any leaks or spills;
- Moving an outdoor operation indoors;
- Designating equipment wash areas;
- Good housekeeping;
- Preventive maintenance;
- Spill prevention and response;
- Material handling and storage;
- Material and practices substitution;
- Waste handling and recycling;
- Employee training;
- Routine inspections;
- Record keeping and internal reporting;
- Quality assurance

As early as the early 1990's, USEPA recognized that: "EPA believes the pollution prevention approach is the most environmentally sound and cost-effective way to control the discharge of pollutants in stormwater runoff from industrial facilities... The first class of management practices includes those that are low in cost, applicable to a broad class of industries and substances, and widely considered essential to a good pollution control program. Some examples of practices in this class are good housekeeping, employee training, and spill response and

prevention procedures. The second class includes management practices that provide a second line of defense against the release of pollutants. This class addresses containment, mitigation, and cleanup... Experience with these practices and controls has shown that they can be used in permits to reduce pollutants in storm water discharges in a cost-effective manner.” (58 Fed. Reg. 61162) A number of municipalities in the nation, such as Pierce County, Washington, under Ordinance No. 96-47 are already requiring the implementation of mandatory source control BMPs since the late 1990’s.

Although the operational source control measures are considered inexpensive, typically involving the costs of staff performing good housekeeping activities with the use of low cost materials and tools, for some of the structural source control BMPs some costs data is available. For example, in the *Pollution Source Control Practices Manual* the costs for storage protection devices range from \$3.50 to \$5.00 per square foot of concrete slab (6”), containment pallets from \$50 to \$350 based on the size and number of barrels to be stored, for storage buildings from \$6 to \$11 per square foot, and between \$25 to \$500 for tarps and canopies depending on the size of area to cover. Also, discounted spill containment kits, storm drain plugs, drip pans, tarps, range in cost from \$60 to \$250 per facility.

For the educational aspect of their program, it is estimated that a presentation to a business group ranges in cost between \$40 to \$60 per hour, while a business recognition program, such as Sacramento’s *Clean Water Business Partner Program* range in cost between \$40 to \$75 per facility. Municipalities can also employ a Stormwater School concept that requires owners/operators found in minor violation of the stormwater ordinances to participate in a mandatory stormwater quality protection seminar. Similar techniques used for the Pretreatment Program showed that participation by high-level management from non-compliant permittees in such courses demonstrated a higher rate of compliance after the participation. This technique can be used in lieu of a fine or issuance of a Notice of Violation for minor violations of the municipal code.

In some cases, the baseline source control measures alone may not be sufficient to assure the reduction of pollutants in stormwater runoff to levels that will guarantee compliance with the applicable standards. In those instances, the municipalities have the legal authority to require the

T  
E  
N  
T  
A  
T  
I  
V  
E

mitigation of pollution through the implementation of additional treatment controls. This is of elevated importance for areas of the MS4s that may discharge into receiving waters of increased environmental sensitivity or in need of special protection.

Conclusion

Because the ROWD submitted by the applicants does not include any proposed significant improvements and because the monitoring data submitted by the Permittees shows exceedances of water quality standards for a number of pollutants that can be released in stormwater runoff from industrial/commercial sites the proposed enhancements are appropriate and reasonable. The municipalities have performed an extensive effort to educate the industrial/commercial site owners/operators about the source control pollution prevention techniques for over a decade. They also familiarized the facility owners/operators with the requirements of the municipal ordinances as they pertain to the protection of the quality of stormwater runoff. The types of baseline source control measures required by the permit are proven very effective and inexpensive in most cases. Many of these measures should be part of the routine operations by now, such as good housekeeping, employee training, elimination of non-stormwater discharges, removal of illicit connections, etc. Since many of these techniques are already implemented, they should not represent a significant fiscal burden for compliance for the industrial/commercial facilities.

There is ample case law that demonstrates and supports Regional Board's authority to require the enhancements proposed in this permit. The additional requirements represent only an incremental fiscal burden for the Permittees, many of whom currently perform activities close to the level expected by the proposed permit. The permit also builds on the tools and activities prescribed in the previous permits in an iterative mode, focusing on implementation of better-tailored BMPs, inspection, enforcement activities and a better coordination with the Regional Board's activity for a more efficient use of limited resources.

The administrative record contains a substantial volume of technical and legal material that supports the findings of this permit. The significant amount of documentation material currently available demonstrates that many effective techniques and methods are available, in many cases

T  
E  
N  
T  
A  
T  
I  
V  
E

at low or moderate costs levels. One of the remaining challenges is to assure their full and unequivocal implementation at every industrial/commercial site that contributes or has the potential to contribute significant quantities of pollutants in the stormwater runoff discharges. [Briefly, the level to be achieved is the "Pharmacy Cleanliness" level due to aggressive source control and pollution prevention BMPs implementation, inspection and enforcement.]

**E. Planning and Land Development Program**

Post construction land development control requirements on new development and redevelopment offer the most cost-effective strategy to reduce pollutant loads to surface waters. Retrofit of existing development will be expensive and may be considered on a targeted basis. Studies on the economic impacts of watershed protection indicate that storm water quality management has a positive or at least neutral economic effect while greatly improving the quality of surface waters.<sup>1</sup>

---

<sup>1</sup> *The Economics of Watershed Protection*, T. Schueler (1999), Center for Watershed Protection, Endicott, MD. The article summarizes nationwide studies to support the statement that watershed planning and storm water management provides positive economic benefits.

The USEPA storm water regulations at 40 CFR 122.26 require that pollutants in storm water be reduced to MEP. The USEPA's definition is intentionally broad to provide maximum flexibility in MS4 permitting and to give municipalities the opportunity to optimize pollutant reductions on a program-to-program basis.<sup>1</sup> The definition of MEP has generally been applied to mean implementation of economically achievable management practices. Because storm water runoff rates can vary from storm to storm, the statistical probabilities of rainfall or runoff events become economically significant and are central to the control of pollutants through cost effective BMPs. Further, it is recommended that storm water BMPs be designed to manage both flows and water quality for best performance.<sup>2</sup> It is equally important that treatment control BMPs once implemented be routinely maintained.

<sup>1</sup> *Storm Water Phase II Final Rule – Pre-Federal Register Version*, p 87 (USEPA 1999). See USEPA's discussion in response to challenges that the definition is sufficiently vague to be deemed adequate notice for purposes of compliance with the regulation.

<sup>2</sup> *Urban Runoff Pollution – Summary Thoughts – The State of Practice Today and For the 21<sup>st</sup> Century*. Wat. Sci. Tech. 39(2) pp. 353-360. L.A. Roesner (1999)

Financing the MS4 program offers a considerable challenge for municipalities. A proven successful financing mechanism is the establishment of a storm water utility.<sup>1</sup> Utility fees, which are assessed on the property owner based on some estimate of storm water runoff generated for the site, are a predictable and dedicated source of funds. Utility fees can also provide a mechanism to provide incentives to commercial and industrial property owners to reduce impervious surface areas. Such incentives offer flexibility to property owners to choose the better economic option – paying more fees or making improvements to reduce runoff from the site.

#### Review of Design Standards

The American Society of Civil Engineers (ASCE) and the Water Environment Federation (WEF) have recommended a numerical BMP design standard for storm water that is derived from a mathematical equation to maximize treatment of runoff volume for water quality based on rainfall/ runoff statistics and which is economically sound.<sup>2</sup> The maximized treatment volume is

<sup>1</sup> *Preliminary Data Summary of Urban Storm Water Best Management Practices* (1999), Report No. USEPA-821-R-99-012, USEPA. The document reviews municipal financing mechanisms and summarizes experience in the U.S. to date.

<sup>2</sup> *In Urban Runoff Quality Management, WEF Manual of Practice No. 23, ASCE Manual and Report on Engineering Practice No. 87*. WEF, Alexandria, VA; ASCE, Reston, VA. 259 pp. (1998).

T  
A  
T  
I  
V  
E

cut-off at the point of diminishing returns for rainfall/ runoff frequency. On the basis of this equation the maximized runoff volume for eighty-five percent treatment of annual runoff volumes in California can range from 0.08 to 0.86 inches depending on the imperviousness of the watershed area and the mean rainfall.<sup>1</sup>

Other methods of establishing numerical BMP design standards include: (i) Percent treatment of the annual runoff; (ii) Full treatment of runoff from rainfall event equal to or less than a predetermined size; and (iii) Percent reduction in runoff based on a rainfall event of standard size.<sup>2</sup> These numerical design standards have been applied to Development Planning in Puget Sound, WA; Alexandria, VA; Montgomery County, MD; Denver, CO; Orlando, FL; Portland, OR; and Austin, TX.

Some States have established numerical standards for sizing storm water post-construction BMPs for new development and significant redevelopment. The State of Maryland has

E

established storm water numerical criteria for water quality of 0.9 to 1 inch, and BMP design standards in a unified approach combining water quality, stream erosion potential reduction, groundwater recharge, and flood control objectives.<sup>1</sup> The State of Florida has used numerical criteria to require treatment of storm water from new development since 1982, including BMPs sized for 80 percent reduction (95 percent for impaired waters) in annual TSS loads derived from the 90 percent (or greater for impaired waters) annual runoff treatment volume method for water quality.<sup>2</sup> The State of Washington has proposed at least six different approaches of establishing storm water numerical mitigation criteria for new development, which add 10,000 square feet of impervious surface or more for residential development, and 5,000 square feet of impervious surface or more for other types of development.<sup>3</sup> Other mitigation criteria options include the

<sup>1</sup> *Maryland Storm Water Design Manual* - (Maryland Department of the Environment 2000).  
<sup>2</sup> *Florida Development Manual: A Guide to Sound Land and Water Management* (Florida Department of Environmental Protection 19xx). The manual describes structural and non-structural construction and post construction BMPs design criteria.  
<sup>3</sup> *Storm Water Management in Washington State Volumes 1 – 5*. (Washington Department of Ecology 2001). The volumes 1,3 and 5 are most relevant to new development standards and cover Hydrologic and Flow Control Designs, Minimum Technical Requirements and Treatment BMPs. The volumes were adopted as statewide standards in late 2001.

90<sup>th</sup> percentile 24-hour rainfall event (used by the State of Maryland) and the six month 24 hour rainfall event (used by the State of Washington).

On a national level, the USEPA is planning to standardize minimum BMP design and performance criteria for post-construction BMPs, and will likely build from the experience of effective state and local programs to establish national criteria.<sup>1</sup> The USEPA, based on the NURP, supports the first half-inch of rainfall as generating first flush runoff.<sup>2</sup> First flush runoff is associated with the highest pollutant concentrations, and not pollutant load. The USEPA considers the first flush treatment method, the rainfall volume method, and the runoff capture volume method as common approaches for sizing of water quality BMPs.

On April 22, 1999, the Los Angeles Regional Board approved a List of BMPs for MS4 Permittees to select from and required implementation of the most effective BMPs in their Development Planning and Development Construction programs.<sup>3</sup> The State Board issued a

- f) the flow of runoff produced from a rain event equal to at least two times the 85<sup>th</sup> percentile hourly rainfall intensity for Ventura County; or
- g) the flow of runoff produced from a rain event that will result in treatment of the same portion of runoff as treated using volumetric standards above.

The present Order integrates and advances the post-construction requirements in the Land Development and Planning Section as follows ----

#### **F. Development Construction Program**

##### Introduction

Soil disturbing activities during construction and demolition exacerbate sediment losses. Sediment is a primary pollutant impacting beneficial uses of watercourses. Sediments, and other construction activity pollutants must be properly controlled to reduce or eliminate adverse impacts.

1. Enhanced BMPs
  - (a) Each permittee shall implement a program to control storm water discharges from construction activity at all construction sites within its jurisdiction.
  - (b) Each Permittee shall implement, or require implementation of, enhanced practices to address the threat to water quality posed by all construction sites on hillsides as defined in this Order and construction sites that directly discharge to a waterbody listed on the CWA § 303 (d) list for siltation or sediment, or that occur within or directly adjacent to an Environmentally Sensitive Area (ESAs). Construction sites located on hillsides, adjacent to CWA 303(d) listed waters for siltation or sediment, and directly adjacent to ESAs are termed "High risk sites."

T  
E  
N  
T  
A  
T  
I  
V  
E

- (A) On hillsides with slopes 20% or steeper prior to land disturbance (If hillside development is not defined by a zoning ordinance, then the prohibition will apply to steep or long continuous slopes, or areas with silty soils, fine sands, or soils lacking vegetative cover.).
  - (B) Directly discharging to a waterbody listed on the CWA § 303 (d) list for siltation or sediment; or
  - (C) Within or adjacent to an environmentally sensitive area (ESAs)
- (c) Depending on the project area, the developer shall implement the Erosion and Sediment control BMPs listed in the following Tables 6, 7, and 8.

2. Construction Sites Less than an Acre

This permit intends that each permittee shall require the implementation of an effective combination of the following BMPs at all construction sites (see Table 6-BMPs at Construction sites less than 1 acre) to prevent erosion and sediment loss, and the discharge of construction wastes. The BMPs are from the California BMP

5. Local Agency Requirements

(a) Each permittee shall require for all construction sites 1 acre or greater, compliance with all conditions identified in the preceding subparts F.1 - F.5, and the following requirements:

(1) Local Storm Water Pollution Prevention Plan (Local SWPPP),

(A) Each permittee shall require the preparation and submittal of a Local SWPPP, for the permittee's review and written approval prior to issuance of a grading or construction permit for construction projects. If the Local SWPPP is revised, the permittee shall review and approve those revisions. The permittees' approval signature shall be contained within the first pages of the Local SWPPP (with sufficient room for approval of revisions.)

T  
E  
N  
T  
A  
T  
I  
V  
E

- (i) The permittee shall not approve any Local SWPPP unless it contains appropriate site-specific construction site BMPs, specific locations, and maintenance schedules.
  - (ii) The Local SWPPP must include the rationale used for selecting or rejecting BMPs. The project architect, or engineer of record, or authorized qualified designee, must sign a statement on the Local SWPPP to the effect:
    - (I) ***“As the architect/ engineer of record, I have selected appropriate BMPs to effectively minimize the negative impacts of this project’s construction activities on storm water quality. The project owner and contractor are aware that the selected BMPs must be installed, monitored, and maintained to ensure their effectiveness. The BMPs not selected for implementation are redundant or deemed not applicable to the proposed construction activity.”***
- (2) Certification Statement
- (A) Each permittee shall require that each landowner or the landowner’s agent sign a statement on the Local SWPPP to the effect:
    - (i) ***“I certify that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, to the best of my knowledge and belief, the information submitted is true, accurate, and complete. I am aware that submitting false and/ or inaccurate information, failing to update the Local SWPPP to reflect current conditions, or failing to properly and/ or adequately implement the Local SWPPP may result in revocation of grading and/ or other permits or other sanctions provided by law.”***

T  
E  
N  
T  
A  
T  
I  
V  
E

- (B) The Local SWPPP certification shall be signed by the landowner as follows:
  - (i) Corporation - by a responsible corporate officer which means the following:
    - (I) President, secretary, treasurer, or vice president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation; or
    - (II) Manager of the construction activity if authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures;
  - (ii) Partnership or sole proprietorship - by a general partner or the proprietor; or
  - (iii) Municipality or other public agency - by an elected official, a ranking management official (e.g., County/ City Administrative Officer, City Manager, Director of Public Works, or City Engineer).
- 6. Roadway Paving or Repaving Operations (For Private or Public Projects)
  - (a) Each permittee shall require that for any project that includes roadbed or street paving, repaving, patching, digouts, or resurfacing roadbed surfaces, that the following BMPs be implemented for each project.
    - (1) Restrict paving and repaving activity to exclude periods of rainfall or predicted rainfall unless required by emergency conditions
    - (2) Install sand bags or gravel bags and filter fabric at all susceptible storm drain inlets and at manholes to prevent spills of paving products and tack coat
    - (3) Prevent the discharge of release agents including soybean oil, other oils, or diesel to the storm water drainage system or watercourses
    - (4) Minimize non storm water runoff from water use for the roller and for evaporative cooling of the asphalt
    - (5) Clean equipment over absorbent pads, drip pans, plastic sheeting or other material to capture all spillage and dispose properly

T  
E  
N  
T  
A  
T  
I  
V  
E

- (6) Collect liquid waste in a container, with a secure lid, for transport to a maintenance facility to be reused, recycled or disposed off properly
  - (7) Collect solid waste by vacuuming or sweeping and securing in an appropriate container for transport to a maintenance facility to be reused, recycled or disposed of properly
  - (8) Cover the "cold-mix" asphalt (i.e., pre-mixed aggregate and asphalt binder) with protective sheeting during a rainstorm
  - (9) Cover loads with tarp before haul-off to a storage site, and do not overload trucks
  - (10) Minimize airborne dust by using water spray during grinding
  - (11) Avoid stockpiling soil, sand, sediment, asphalt material and asphalt grindings materials or rubble in or near storm water drainage system or watercourses
  - (12) Protect stockpiles with a cover or sediment barriers during a rain
7. Site Tracking System
- (a) Each permittee shall use an site system to track grading permits, encroachment permits, demolition permits, building permits, or construction permits (and any other municipal authorization to move soil and/ or construct or destruct that involves land disturbance) issued by each permittee. To satisfy this requirement, the use of a database or GIS system is encouraged.
8. Inspections
- (a) Each permittee shall inspect all construction sites for the implementation of storm water quality controls a minimum of once during the wet season. Concurrently, each permittee shall ensure that:
    - (1) The Local SWPPP is reviewed for compliance with local codes, ordinances, and permits.
    - (2) A follow-up inspection takes place within two weeks for inspected sites that have not adequately implemented their Local SWPPP.

T  
E  
N  
T  
A  
T  
I  
V  
E

- (b) Each permittee shall take additional enforcement actions to achieve compliance as specified in municipal codes, if compliance with municipal codes, ordinances, or permits has not been attained.
- (c) Each permittee can refer sites to the Regional Water Board for further joint enforcement actions for violation of municipal storm water ordinances and the Construction Activities Storm Water General Permit (CASGP), or Small Linear Underground/ Overhead Construction Projects General Permit (small LUPs), after conducting a minimum of 2 site inspections and issuing a minimum of 2 written notices to the operator regarding the violation (copied to the Regional Water Board). In making such referrals, permittees shall include, at a minimum, the following documentation:
  - (1) Name of the site
  - (2) WDID number
  - (3) Site developer
  - (4) Site owner
  - (5) Records of communication with the site operator regarding the violation(s), which shall include at least an inspection report
  - (6) Written notice of the violation copied to the Regional Water
- (d) Prior to approving and/ or signing off for occupancy and issuing the Certificate of Occupancy for all construction projects subject to post-construction controls, each permittee shall inspect the constructed site design, source control and treatment control BMPs to verify that they have been constructed in compliance with all specifications, plans, permits, ordinances, and this Order. The initial/ acceptance BMP verification inspection does not constitute a maintenance and operation inspection, as required in the preceding subpart E.IV.2(c).

9. State Conformity Requirements

- (a) Each permittee shall ensure that no grading permit, encroachment permit, demolition permit, building permit, electrical permit, or construction permit (or any other municipal authorization to move soil and/ or construct or destruct

T  
E  
N  
T  
A  
T  
I

that involves land disturbance) is issued for any project requiring coverage under the CASGP or Small LUP General Permit<sup>1</sup> unless:

- (1) Proof of coverage under a State NPDES permit is demonstrated (a copy of a letter from the State Water Board showing a valid Waste Discharger Identification Number (WDID) for that site).
- (2) Demonstration or Certification that a SWPPP has been prepared by the project developer.
- (3) Proof of an updated NOI(s) and a copy of the modified SWPPP(s) at any time a transfer of ownership takes place for the entire development or portions of the common plan of development where construction activities are still on-going.

10. Interagency Coordination
    - (a) Referral of Violations:
- 

<sup>1</sup> NPDES Permit No. CAS000005, Waste Discharge Requirements For Discharges of Storm Water Runoff Associated with Small Linear Underground/ Overhead Construction Projects (Small LUP General Permit) for any linear land disturbing activity or activities (cumulatively) that will cause one acre or more of land disturbance but not more than 5 acres.

A permittee may refer a violator of the municipal storm water ordinance and CWC § 13260 to the Regional Water Board provided that the permittee has made a good faith effort at progressive enforcement consistent with the preceding subpart F.8(c). At a minimum, the permittee's good faith effort shall be documented with:

- (1) A minimum of 2 follow-up inspection reports (inspections completed within 3 months).
  - (2) A minimum of two warning letters or NOVs.
- (b) Referral of Non-filers under the CASGP or the Small LUP General Permit: Each permittee shall refer non-filers (i.e., those projects which cannot demonstrate that they have a WDID number) under the CASGP or Small LUP General Permit, to the Regional Water Board, no later than 15 days after making a determination of failure to file. In making such referrals, permittees shall include, at a minimum, the following documentation:
- (1) Project location address
  - (2) Project description
  - (3) Developer or owners name with complete mailing address
  - (4) Project size

E

- (5) Records of communication with the developer or owner regarding filing requirements
- (c) Investigation of Complaints Regarding Facilities – Transmitted by the Regional Water Board Staff:
  - (1) Each permittee shall initiate, within one business day,<sup>1</sup> an initial investigation of complaint(s) (other than non-storm water discharges) on the construction site(s) within its jurisdiction.
    - (A) The initial investigation shall include, at a minimum, an inspection on the facility and its perimeter to confirm the complaint and to determine if the site operator is effectively complying with the municipal storm water/ urban runoff ordinances, and to oversee corrective action.
- (d) Support of Regional Water Board Enforcement Actions – As directed by the Regional Water Board Executive Officer:
  - (1) Each permittee shall support Regional Water Board enforcement actions by:

T

---

<sup>1</sup> Permittees may comply with the Permit by taking initial steps (such as logging, prioritizing, and tasking) to “initiate” the investigation within that one business day. However, the Regional Water Board would expect that the initial investigation, including a site visit, to occur within four business days.

- (A) Assisting in identification of current owners, operators, and lessees of properties and sites.
- (B) Providing staff, when available, for joint inspections with Regional Water Board inspectors.
- (C) Appearing to testify as witnesses in Regional Water Board enforcement hearings.

Providing copies of inspection reports and other progressive enforcement documentation.

**G. Public Agency Activities Program**

- I. Each permittee shall implement a Public Agency Activities Program to minimize storm water pollution impacts from public agency activities. Public Agency requirements consist of:
  - i. Public Construction Activities Management.
  - ii. Vehicle Maintenance/ Material Storage Facilities/ Corporation Yards Management/ Municipal Operations.
  - iii. Vehicle and Equipment Wash Areas
  - iv. Landscape and Recreational Facilities Management
  - v. Storm Drain Operation and Management
  - vi. Streets and Roads Maintenance
  - vii. Infrastructure Maintenance - Long-term
  - viii. Public Industrial Activities Management
  - ix. Emergency Procedures
  - x. Employee Training
- I. Public Construction Activities Management
  - (a) Each permittee shall implement and comply with the Planning and Land Development Program requirements in part 5.E. of this Order at permittee owned or operated public construction projects for project types identified in part 5.E of this Order.

3. Vehicle and Equipment Wash Areas
  - (a) Each permittee shall eliminate discharges of wash waters from vehicle and equipment washing no later than (365 days after Order adoption date) by implementing any of the following measures at existing facilities with vehicle or equipment wash areas:
    - (1) Self-contain, and haul off for disposal
    - (2) Equip with a clarifier
    - (3) Equip with an alternative pre-treatment device; or
    - (4) Plumb to the sanitary sewer
  - (b) Each permittee shall ensure that any municipal facilities constructed, redeveloped, or replaced has all vehicle and equipment wash areas plumbed to the sanitary sewer or be self contained and all wastewater/ washwater hauled for legal disposal.
  
4. Landscape, Park, and Recreational Facilities Management
  - (a) Integrated Pest Management (IPM)
 

IPM is an ecosystem-based strategy that focuses on long-term prevention of pests or their damage through a combination of techniques such as biological control, habitat manipulation, modification of cultural practices, and use of resistant varieties. Each permittee shall implement a jurisdiction-wide IPM program and includes the following:

    - (1) Pesticides are used only if, after monitoring indicates they are needed according to established guidelines.
    - (2) Treatments are made with the goal of removing only the target organism.

T  
E  
N  
T  
A  
T  
I  
V  
E

- (3) Pest controls are selected and applied in a manner that minimizes risks to human health, beneficial, non-target organisms, and the environment.
  - (4) Its use of pesticides, including Organo-phosphates and Pyrethroids do not threaten water quality.
  - (5) Partner with other agencies and organizations to ensure that pesticide use within their jurisdiction does not threaten water quality.
  - (6) Adopt and verifiably implement policies, procedures, and/ or ordinances requiring the minimization of pesticide use and encouraging the use of IPM techniques (including beneficial insects) in the permittees' overall operations and on municipal property.
  - (7) Policies, procedures, and ordinances shall include commitments and timelines to reduce the use of pesticides that cause impairment of surface waters by implementing the following procedures:
    - (A) Quantify pesticide use by its staff and hired contractors.
    - (B) Prepare and annually update an inventory of pesticides used by all internal departments, divisions, and other operational units.
    - (C) Demonstrate reductions in pesticide use.
- (b) Each permittee shall implement the following requirements no later than (180 days after Order adoption date):
- (1) Use a standardized protocol for the routine and non-routine application of pesticides (including pre-emergents), and fertilizers.
  - (2) Comply with the provisions and the monitoring requirements for application of aquatic pesticides to surface waters (WQ Order No. 2004-0008-DWQ).
  - (3) Ensure no application of pesticides or fertilizers are applied to an area immediately prior to, during, or immediately after a rain event, or when water is flowing off the area.
  - (4) Ensure that no banned or unregistered pesticides are stored or applied.
  - (5) Ensure that all staff applying pesticides are certified in the appropriate category by the California Department of Pesticide Regulation, or are under the direct supervision of a pesticide applicator certified in the appropriate category.

T  
E  
N  
T  
A  
T  
I  
V  
E

- (6) Implement procedures to encourage the retention and planting of native vegetation to reduce water, pesticide and fertilizer needs; and
  - (7) Store pesticides and fertilizers indoors or under cover on paved surfaces or use secondary containment.
    - (A) Reduce the use, storage, and handling of hazardous materials to reduce the potential for spills.
    - (B) Regularly inspect storage areas.
5. Storm Drain Operation and Management
- (a) Catch Basin Cleaning
    - (1) Each Permittee shall designate catch basin inlets within its jurisdiction as one of the following:
      - Priority A: Catch basins that are designated as consistently generating the highest volumes of trash.
      - Priority B: Catch basins that are designated as consistently generating moderate volumes of trash.
      - Priority C: Catch basins that are designated as generating low volumes of trash.Within one year of Order adoption, Permittees shall submit a map or list of Catch Basins with their GPS coordinates and their designations. The map or list shall contain the rationale or data to support designations.
    - (2) Each Permittee shall inspect catch basins according to the following schedule:
      - Priority A: A minimum of 3 times during the wet season and once during the dry season every year.
      - Priority B: A minimum of once during the wet season and once during the dry season every year.
      - Priority C: A minimum of once per year.Catch basins shall be cleaned as necessary on the basis of inspections. Permittees shall maintain inspection records for Regional Board review.
    - (3) In addition to the preceding schedule, Permittees shall ensure that any catch basin that is determined to be at least 25% full of trash shall be cleaned out.

T  
E  
N  
T  
A  
T  
I  
V  
E

- (b) Trash Management at Public Events
  - (1) Each Permittee shall require for any event in the public right of way or wherever it is foreseeable that substantial quantities of trash and litter may be generated, the following measures:
    - (A) Proper management of trash and litter generated; and
    - (B) Arrangement for temporary screens to be placed on catch basins; or
    - (C) Provide clean out of catch basins, trash receptacles, and grounds in the event area within 24 hours subsequent to the event.
- (c) Trash Receptacles
  - (1) Each Permittee shall install trash receptacles, or equivalent trash capturing devices in areas subject to high trash generation within its jurisdiction no later than (one year after Order adoption date).
  - (2) Each Permittee shall ensure that all trash receptacles are cleaned out and maintained as necessary to prevent trash overflow.
- (d) Catch Basin Labels
  - (1) Each Permittee shall inspect the legibility of the catch basin stencil or label nearest each catch basin and inlet before the rainy season begins.
  - (2) Each Permittee shall record and re-stencil or re-label within 15 days of inspection, catch basins with illegible stencils.
- (e) Additional Trash Management Practices
  - (1) Each Permittee shall install trash excluders, or equivalent devices on or in catch basins or outfalls to prevent the discharge of trash to the storm drain system or receiving water no later than two years after Order adoption date in areas defined as Priority A (Provision 1a(2)) except in sites where the application of such BMP(s) alone will cause flooding. Lack of maintenance that causes flooding is not an acceptable exception to the requirement to install BMPs. Alternatively the Permittee may implement alternative or enhanced BMPs beyond the provisions of this permit (such as but not limited to increased street sweeping, adding trash cans near trash generation sites, prompt enforcement of trash accumulation, increased trash collection on public property, increased litter prevention messages or trash nets within the MS4) that provide substantially equivalent removal of trash. Permittees

T  
E  
N  
T  
A  
T  
I  
V  
E

shall demonstrate that BMPs, which substituted for trash excluders provide equivalent trash removal performance as excluders. When outfall trash capture is provided, revision of the schedule for inspection and cleanout of catch basins in task (a) may be proposed by the Permittee for approval by the Executive Officer.

(f) Storm Drain Maintenance

- (1) Each Permittee shall implement a program for Storm Drain Maintenance no later than (180 days after Order adoption date) that includes the following:
  - (A) Visual monitoring of Permittee-owned open channels and other drainage structures for debris at least annually.
  - (B) Remove trash and debris from open channel storm drains a minimum of once per year before the storm season.
  - (C) Eliminate the discharge of contaminants during MS4 maintenance and clean outs.
  - (D) Quantify the amount of materials removed using techniques appropriate for quantifying solid waste and ensure the materials are properly disposed of.

(g) Spill Response Plan

- (1) Each permittee shall implement a response plan for spills to the MS4 within their respective jurisdiction. The response Plan shall clearly identify agencies responsible and telephone numbers and e-mail address for contact and shall contain at a minimum the following:
  - (A) Investigation of all complaints received within 24 hours of the incident report.
  - (B) Response within 2 hours to spills for containment upon notification.
  - (C) Notification to appropriate public health agencies and the Office of Emergency Services (OES).

(h) Permittee Owned Treatment Control BMPs

- (1) Each permittee shall implement an inspection and maintenance program for all permittee owned treatment control BMPs, including post-construction treatment control BMPs.

T  
E  
N  
T  
A  
T  
I  
V  
E

- (2) Each permittee shall ensure proper operation of all treatment control BMPs and maintain them as necessary for proper operation, including all post-construction treatment control BMPs.
- (3) Any residual water within a treatment control BMP when being maintained shall be:
  - (A) Hauled away and legally disposed of;
  - (B) Discharged to the sanitary sewer system (with permits or authorization); or
  - (C) Treated or filtered to remove bacteria, sediments, nutrients, and meet the limitations set in Table 10 (Discharge Limitations for Dewatering Treatment BMPs) prior to discharge to the MS4.

6. Streets and Roads
  - (a) Maintenance
    - (1) Each permittee shall perform street sweeping of curbed streets in commercial areas and areas subject to high trash generation to control trash and debris at least two times per month.
  - (b) Road Construction and Reconstruction
    - (1) Each permittee shall implement the following BMPs for road reconstruction:
      - (A) Drain Inlet protection from sediments.
      - (B) Dewatering of below grade construction areas.
      - (C) Secondary containment for cold mix.
      - (D) Sheeting underneath cold mix (during storage) to prevent discharge of spray release, and
      - (E) Sheeting to cover cold mix (during storage).
      - (F) If street material is to be concrete, then provide a vehicle wash off area that is isolated from the MS4.
7. Emergency Procedures
  - (a) Each permittee may conduct repairs of essential public service systems and infrastructure in emergency situations with a self-waiver of the provisions of this Order.
    - (1) Where the self-waiver has been invoked, the permittee shall submit to the Regional Water Board Executive Officer a statement of the occurrence of the emergency, an explanation of the circumstances, and the measures that were implement to reduce the threat to water quality, no later than 30 business days after the situation of emergency has passed.
    - (2) Minor repairs of essential public service systems and infrastructure in emergency situations (can be completed in less than one day) are not subject to the notification provisions. Appropriate BMPs to reduce the threat to water quality shall be implemented.
8. Municipal Employee and Municipal Contractor Training

E

- (a) Each permittee shall, no later than (12 months after Order adoption date and annually thereafter before June 30), train all of their employees and contractors in targeted positions (whose interactions, jobs, and activities affect storm water quality) on the requirements of the overall storm water management program to:
  - (1) Promote a clear understanding of the potential for activities to pollute storm water.
  - (2) Identify opportunities to require, implement, and maintain appropriate BMPs in their line of work.
- (b) Each permittee shall, no later than (12 months after Order adoption date and annually thereafter before June 30), train all of their employees and contractors who use or have the potential to use pesticides or fertilizers (whether or not they normally apply these as part of their work). Training programs shall address:
  - (1) The potential for pesticide-related surface water toxicity.
  - (2) Proper use, application, handling, and disposal of pesticides.
  - (3) Least toxic methods of pest prevention and control, including IPM.
  - (4) Reduction of pesticide use.
- (c) Each permittee shall, no later than (12 months after Order adoption date) and annually thereafter before June 30, train all of their employees and contractors who are responsible for illicit connections and illicit/ illegal discharges. Training programs shall address:
  - (1) Identification
  - (2) Investigation
  - (3) Termination
  - (4) Cleanup
  - (5) Reporting of Incidents
  - (6) Documentation of Incidents

**H. Illicit Connections and Illicit Discharges Elimination Program**

Introduction

During dry weather, much of the discharge to storm drain systems consists of wastes and wastewater from non-storm water sources. A significant amount of such discharges may be from illicit discharges or connections, or both. Illicit discharges may occur either through direct connections, such as deliberate or mistaken piping, or through indirect connections, such as dumping, spillage, subsurface infiltration, and wash-downs.

Monitoring data from MS4 programs across the nation have shown that dry weather discharges can contribute significant pollutant loads to receiving waters. *The Illicit Discharge Detection and Elimination A Guidance Manual for Program Development and Technical Assessments* finds, if these (dry weather discharges) are ignored by only focusing on storm water runoff (wet weather discharges), little improvements in receiving water quality may occur.

The objective of a municipality's illicit connection/illicit discharge (IC/ID) elimination program should be to detect illicit connections and illicit discharges to the storm drain system, and to promptly remove such discharges and connections. Municipalities typically employ the approaches listed below to achieve this objective:

- Permitting connections to the municipal storm drain.
- Mapping the storm drain system, locations of catch basins, outfalls, permitted connections, and the names and locations of all waters of the U.S. that receive discharges from the outfalls.
- Adopting a storm water/ urban runoff ordinance to prohibit unauthorized non-storm water discharges into the MS4, and implementing appropriate enforcement procedures and actions.
- Implementing a program to detect and eliminate non-storm water discharges to the MS4, including illegal dumping.
- Educating public employees, businesses, and the general public about the dangers associated with illegal discharges and improper disposal.
- Establishing a public reporting hotline or other mechanism to report illicit discharges and illegal dumping.

T  
E  
N  
T  
A  
T  
I  
V  
E

- Establishing measurable goals to evaluate successful program implementation.

Discussion of New Requirements

- 1) The Draft Ventura MS4 Permit requires Permittees to develop and submit to the Principal Permittee, a map showing the length and location of underground pipes 18 inches and greater in diameter, and channels within their jurisdiction within a specified time frame. The intent of this provision is to enhance the Permittees ability to identify, locate, and eliminate sources of pollutants identified by monitoring results and spill/complaint notifications.
- 2) The Draft Ventura MS4 Permit requires Permittees to screen storm pipes greater than 36" in diameter, that have not been screened within 3 years of adoption of the Order, high priority areas identified during the mapping of illicit connections and discharges, that have not been screened within 3 years of adoption of the Order, and portions of the storm drain system 50 years or older in age that have not been screened within 3 years of adoption of the Order. The Illicit Discharge Detection and Elimination A Guidance Manual for Program Development and Technical Assessments states, "The average age of development in a subwatershed may predict the potential for illicit discharge problems. For example, a subwatershed where the average age of development is more than 100 years was probably constructed before sewer service was widely available, and many of the pipes and connections may have changed over the years as a result of modernization and redevelopment. Presumably, the risk of potential discharges would be higher in these older subwatersheds. By contrast, a recently developed subwatershed may have a lower discharge risk due to improved construction materials, codes and inspections. Therefore, high Illicit Discharge Potential (IDP) may be indicated when subwatershed development is more than 50 years old, with medium IDP for 20 to 50 year old development, and low IDP if fewer than 20 years old". The intent of this requirement is to identify and eliminate potential significant source of pollutants contributing to poor dry weather water quality.
- 3) The Draft Ventura MS4 Permit requires Permittees to conduct field screening of their storm drain systems in accordance with procedures described in, The Illicit Discharge Detection and Elimination A Guidance Manual for Program Development and Technical Assessments.

T  
E  
N  
T  
A  
T  
I  
V  
E

The manual was developed as part of a cooperative agreement with the USEPA, to serve as a comprehensive up to date guidance manual for illicit connection/illicit discharge elimination programs. The manual was developed from surveys of Phase 1 MS4s serving multiple population sizes with the goal of coming up with cost effective methods for screening and eliminating illicit connections/illicit discharges. The goal of specifying the manual is to provide guidance and ensure effective methods are used for screening storm drain systems. The provision is not meant to exclude Permittees from using equally effective alternative methods not listed in the manual.

- 4) The Draft Ventura MS4 Permit requires Permittees to upon discovery or upon receiving a report of a suspected illicit connection, to complete an investigation within 21 days, to determine the source of the connection, the nature and volume of discharge through the connection, and identify the responsible party for the connection. The Order requires Permittees upon confirmation of an illicit storm drain connection, to ensure the termination of the connection within 180 days of completion of the investigation, using formal enforcement authority to eliminate the illicit connection. The intent of this requirement is to ensure the timely elimination of illicit connections upon discovery and their contributions to the degradation of storm water quality.
- 5) The Draft Ventura MS4 Permit requires Permittees to maintain records of all illicit/ illegal discharge discoveries, reports of suspected illicit/ illegal discharges, their response to the illicit/ illegal discharges and suspected illicit/ illegal discharges, and the formal enforcement taken to eliminate all illicit/ illegal discharges. The intent of this documentation provision is to facilitate the recognition of trends to assist in the discovery of unidentified illicit connections and identify areas where illicit connections and discharges have a greater probability of occurring.

#### I. Reporting Program

T  
E  
N  
T  
A  
T  
I  
V  
E

The Reporting Program requires an Annual Report that is a Public Document Required under Federal Regulations

The Annual Report is composed of:

- 1) A Monitoring Report that contains the results that are to be used to refine BMPs for the reduction of pollutant loading, & for the protection & enhancement of the beneficial uses of the receiving waters within Ventura County.
- 2) A Program Report to track and oversee the progress each Permittee is making towards full compliance with the various requirements of the MS4 Permit.

## VI. MONITORING PROGRAM

### Background

Board based monitoring data collected through the Countywide Storm Water Monitoring Program provides a quantitative, statistically valid estimate of the impaired water segments within Ventura County. This water quality monitoring program has become a high priority, because of the number of water segments not supporting their beneficial uses due to constituent exceedances and therefore being placed on the State's 303(d) list of impaired waters. Monitoring has taken on a large role in determining compliance with the Total Maximum Daily Loads (TMDLs) developed within the Ventura waterbodies. Water quality issues have become more complex than in the past were monitoring focused mainly on conventional, bacteriological, and nutrient constituents. Now monitoring focuses on legacy pollutants, new and complex constituents such as synthetic organic compounds like pesticides and volatile organic compounds (VOCs) in solvents, which have been introduced into the environment and were not water quality issues in the past.

Water quality monitoring and assessments help prioritize water segments within a watershed that have the most degraded waters and to assess which stressors such as nutrients, sedimentation, and habitat disturbances are the most important in that watershed. Monitoring is a useful and cost-effective method for getting a broad picture of whether there is a problem and how big the problem is within a watershed. From this board based monitoring follows targeted monitoring that focuses on the associations between water quality conditions and the natural and human factors that contribute to the impaired conditions. Targeted monitoring establishes relations between water quality, and the natural and human factors that affect water quality. In general, a comprehensive monitoring program (board based and targeted) can supply a wealth of data that can be used in a wide range of applications for improving water quality.

#### Storm Water Monitoring History

The Ventura County Watershed Protection District has been conducting storm water monitoring within Ventura County pursuant to the 2000 Board Order No. 00-108. Over the last 8 years, the storm water monitoring program has consisted of 2 main components: water chemistry and aquatic toxicity monitoring at Mass Emission, Receiving Water (tributaries), and Land Use stations. It also has had a bioassessment monitoring component within the Ventura River. The pertinent parts of the Storm Water Monitoring Program include the following:

Mass Emission stations were designed to identify pollutant loads to the ocean, and long term trends in pollutant concentrations, and characterize surface water quality in major receiving waters. The 3 Mass Emission stations are located in the major Ventura County watersheds: Calleguas Creek (ME-CC), Ventura River (ME-VR), and Santa Clara River (ME-SCR). Stations ME-CC and ME-VR were installed and monitored for the first time during the 2000/01 monitoring season, while ME-SCR was first installed and monitored during the 2001/02 monitoring season. High flows during January and February of 2005 resulted in the relocation of the ME-VR due to landslide activity and associated safety concerns to approximately one mile downstream from the historical ME-VR site to the Ojai Valley Sanitation District's Treatment Plant above the POTW outfall. The relocated station on the Ventura River (ME-VR2) was first monitored using portable sampling equipment in May 2005; and by September 2005 a permanent station was established. Stations ME-CC, ME-SCR, and ME-VR/ ME-VR2 were required to

T  
E  
N  
T  
A  
T  
I  
V  
E

sample 6 station events per year, including a minimum of 2 dry weather samples during the permit term. The stations ME-CC and ME-VR/ ME-VR2 samples are composed of flow-based composite and toxicity grab samples, and station ME-SCR samples are composed of time-based composite samples and toxicity grab samples. All 3 Mass Emission stations collected wet and dry weather water quality samples and analyzed for chronic toxicity.

Land Use stations were designed to characterize storm water runoff (discharges to receiving waters) from 3 specific land use types: agricultural, industrial, and residential. The 3 Land Use stations are located at: Wood Road (A-1, agricultural), Ortega Street (I-2, industrial), and Swan Street (R-1, residential). Monitoring at these sites was first implemented during the 1992-93 monitoring season and was designed to capture storm water runoff from a specific type of land use. Station A-1 was required to sample a maximum of 5 storm events during the permit term, stations I-2 and R-1 were required to sample 3 storm events during the permit term. The stations' samples are composed of time-based composite samples and toxicity grab samples. All 3 Land Use stations collected wet weather water quality samples and analyzed for acute toxicity.

Receiving Water (tributaries) stations were designed to characterize the quality of receiving waters rather than discharges to receiving waters. This monitoring evaluated smaller tributaries to the main river systems. The 2 Receiving Water stations are located in the Revolon Slough watershed at: La Vista (W-3), upper Revolon Slough, and Revolon Slough (W-4), lower Revolon Slough. Monitoring at these sites was first implemented during the 1997-98 season and captures storm water runoff from the Revolon Slough sub basin. Stations W-3 and W-4 were required to sample a maximum of 5 storm events during the permit term. The stations' samples are composed of time-based composite samples and toxicity grab samples. All 2 Receiving Water stations collected wet weather water quality samples and analyzed for acute toxicity.

Biological assessment (bioassessment) monitoring of the Ventura River watershed was designed to analyze the community structure of the in-stream benthic macroinvertebrate (BMI) assemblages in urban runoff-impacted stream segments at experimental sites. In bioassessment monitoring, a set of biological measurements (metrics), each representing a different aspect of the community, was calculated for each monitoring site. A total score was then calculated for the monitoring site, as the sum of the individual metric scores. Monitoring sites were then

ranked according to their score, and then classified into groups (poor, fair, good and very good). The system of scoring and ranking sites is an Index of Biotic Integrity (IBI). The IBI used during 2001/02 though 2003/04 was the San Diego IBI; and the IBI used during 2004/05 through 2006/07 was the Southern California IBI (So CA IBI). There were fifteen BMI monitoring sites located in the Ventura River watershed, monitoring at these sites was implemented from the Fall of 2001 through 2005. A biological and physical/habitat assessment program within the Ventura River watershed was developed during the Spring of 2001.

New requirements

The new provisions of the monitoring program consist of:

- 1) Outfall monitoring (12 major outfalls)
- 2) Submittal of monitoring data electronically within 90 days from sample collection date & transmitted in standardized formats.
- 3) MS4 TMDL WLA Monitoring that incorporates the adopted storm water WLAs
- 4) Mass Emission stations' monitor storms that produce a 20% or greater increase in baseflow
- 5) Expanded toxicity testing
- 6) Special Studies
  - (a) Expanded Bio-assessment monitoring (Southern California Regional Bioassessment)
  - (b) Pyrethroid Insecticide
  - (c) Hydromodification Control
  - (d) Low Impact Development
  - (e) Beach Water Quality Monitoring

**VII. FINAL QUESTIONS AND CHANGES**

The draft permit has several changes. These changes have been proposed based on the nearly 17 years of experience of controlling municipal storm water discharges within the Regional Water Board's region.

**California Regional Water Quality Control Board, Los Angeles Region  
Ventura County Municipal Storm Water Discharge Permit  
Response to Comments on the December 27, 2006 Draft**

Section/Topic	Comment	Commenter(s) <sup>1</sup> & Page Numbers	Response	Change Made	
Permit Development Process	General	Permit development was not an inclusive process unlike the Basin Plan.	Oxnard 2, 4	This permit development process has been inclusive. The Water Board has held more than nine meetings (October 2005 through February 2009) with permittees their representatives (Larry Walker and Associates, and Somach, Simmons & Dunn), and various stakeholders (Building Industry Association of Southern California/ Greater Los Angeles Ventura Chapter (BIA/GLA/VC), California State Dept. of Health Services, Calleguas Water District, California Stormwater Quality Association (CASQA), City of Downey, City of Los Angeles-EMD, Collation for Practical Regulation (CPR), Construction Industry Coalition on Water Quality (CICWQ), County of Orange, Geosyntec Consultants, Golden State, Heal The Bay; Local Government Commission, Los Angeles City; Los Angeles County Department of Public Works, Los Angeles County-SD, Los Angeles Department of Water & Power, Metropolitan Water District, Natural Resources Defense Council (NRDC), Richard Watson Association, San Bernardino Flood Control District, Santa Monica Bay Restoration Commission, Southern California Coastal Water Research Project, University of California Sea Grant, Ventura CoastKeeper, and Charles Abbott Associate. On April 5, 2007, September 20, 2007, and July 10, 2008 the Regional Water Board conducted workshops to discuss drafts of the NPDES Order and received input from the permittees and the public regarding proposed changes.	The most recent draft reflects revisions to the permit in most major sections. The revisions are summarized in this table below.

<sup>1</sup> BILDF = Building Industry Legal Defense Foundation; Caltrans = State of California Department of Transportation; Camarillo = City of Camarillo; Carson = City of Carson; CASQA = California Stormwater Quality Association; CICWQ = Construction Industry Coalition on Water Quality; Building Industry Association of Southern California; CONTECH = CONTECH Stormwater Solutions, Inc.; Countywide Program = Ventura Countywide Stormwater Quality Management Program; CSDs of LA = County Sanitation Districts of Los Angeles County; LA County Stormwater = Stormwater Program - County of Los Angeles; Fillmore = City of Fillmore; Heal the Bay = Heal the Bay; Inglewood = City of Inglewood; LA County PW = Department of Public Works, County of Los Angeles; LGC = Local Government Commission; Long Beach = Stormwater Management Division, City of Long Beach; Moorpark = City of Moorpark; NRDC = Natural Resources Defense Council; Ojai (Carol Smith) = City of Ojai; Oxnard = City of Oxnard; Oxnard Chamber of Commerce = Oxnard Chamber of Commerce; Port Hueneme (Carrie Mattingly) = City of Port Hueneme; Port Hueneme (Maricela Morales) = City of Port Hueneme; Maricela P. Morales; Signal Hill = City of Signal Hill; Signal Hill Coalition PR = City of Signal Hill, Coalition for Practical Regulations; Simi Valley = City of Simi Valley; TECS = Environmental Compliance Services; Theresa Jordan = Theresa Jordan (citizen); Thousand Oaks = City of Thousand Oaks; Various Citizens (Alyson Austin) = Various Residents B; Various Citizens (Christine Shimane) = Various Residents D; Various Citizens (Karen Conlon) = Various Residents A; Various Citizens (Karen Zieba) = Various Residents E; Various Citizens (Odie Duggan) = Various Residents C; Ventura = City of Ventura; Ventura County PWA = County of Ventura Public Works Agency; Ventura County RCD = Ventura County Resource Conservation District; Ventura County WPD = Ventura County Watershed Protection District

Section/Topic	Comment	Commenter(s) <sup>1</sup> & Page Numbers	Response	Change Made
General	Permit developed with many prescriptive practices, few chances for flexibility.	Simi Valley 2; Ventura 3; Thousand Oaks 2; Signal Hill Coalition PR 1; Various Citizens (Karen Conlon) 1; CONTECH 1-2; Heal the Bay 2; Fillmore 1	The Permit was written in a way to allow maximum flexibility. However, we have provided direction/clarity wherever necessary to help ensure that there is no ambiguity. Also, there is a BMP substitution provision that allows the RB Executive Officer to substitute a program for one of the Permittee's request.	The most recent draft reflects revisions to the permit in most major sections. The revisions are summarized in this table below.
General	Science and studies on which the permit was based are incomplete and aren't applicable to Ventura County.	Various Citizens (Karen Zieba) 1	There have been many studies and land use studies across the country that are consistent at identifying pollutants of concern for different land uses and activities. Many requirements in the draft permit are management controls that are far less expensive to implement than it is to implement studies that will show what other studies have already shown.	The most recent draft reflects revisions to the permit in most major sections. The revisions are summarized in this table below.
Phase I vs. Phase II	No distinction between Phase I and Phase II community requirements exists.	Port Hueneme (Carrie Mattingly) 2; Moorpark 1; Countywide Program 3; Fillmore 2	There is no need for a distinction between Phase I and Phase II as all municipalities in the County of Ventura are or have been designated as Phase I in the 1994 Ventura MS4 Permit issuance. Regional Board staff are open to alternative timelines or programs but no specific request has been received. Within the Permit there is a provision for implementation of alternative programs and/or BMPs.	The most recent draft reflects revisions to the permit in most major sections. The revisions are summarized in this table below.
Consistency with Other Regulations and Requirements	Not coordinated with previous legislation and regulations, which makes it unreasonable and confusing.	Simi Valley 2; Signal Hill Coalition PR 1	This draft permit is consistent with all laws, regulations, and established waste load allocations in approved TMDLs.	The most recent draft reflects revisions to the permit in most major sections. The revisions are summarized in this table below.

Section/Topic	Comment	Commenter(s) <sup>1</sup> & Page Numbers	Response	Change Made
Consistency with Other Regulations and Requirements	Must consider balancing factors required in Porter Cologne Section 13241 when exercising discretion to achieve MEP.	BILDF 3-11	Porter –Cologne Section 13241 sets out Factors to be considered by a Regional Board in establishing water quality objectives, not when determining whether the MEP standard has been met.	No changes are required to address this comment. State Board has conducted an economic analysis of the probable costs of implementing this permit, and the analysis shows reasonable costs of implementation.
Consistency with Other Regulations and Requirements	Many provisions are more stringent than those required by federal law.	Countywide Program 10; Signal Hill 2-3	The commenter gives no specific example of inconsistency. This draft permit is consistent with federal law and regulations and is reasonable based upon a progressive regulatory approach.	Finding has been revised to address this comment.
<i>Discharge Prohibitions</i>				
General Prohibitions	Exceedances of water quality standards are already occurring (303(d)-listed waters) so provisions cannot be complied with. The permit should not prohibit discharges into the MS4.	LA County PW 4,5	When an exceedance occurs, the iterative process begins. The Permittees must make progress during the iterative process to prevent further exceedances. The purpose of the MS4 permit is to require implementation of programs that will achieve water quality standards. Federal Regulations at 40 CFR 122.26 XXXXX includes a requirement that all non storm water discharges shall be effectively prohibited. The prohibition is into the MS4.	No changes required to address this comment.
General Prohibitions	The permit should not prohibit discharges into the MS4.	BILDF 1-3		No changes required to address this comment.
Non-Storm Water Prohibitions	The Order only applies to the MS4, not to natural watercourses, so the prohibition of non-storm water discharges into watercourses should be removed.	LA County PW 5	The definition of an MS4 includes any conveyance of storm water, natural or manmade.	No changes required to address this comment.

Section/Topic	Comment	Commenter(s) <sup>1</sup> & Page Numbers	Response	Change Made
Non-Storm Water Prohibitions	Permittees should be allowed to conditionally exempt discharges that are considered a violation of local ordinances, providing additional authority to enforce and prohibit discharges considered a nuisance.	LA County PW 5	The Permittees already had this authority. However, some non-storm water discharges have been determined to either be a source of pollutants or whose existence causes flows of pollutants already in/on streets and/or the rest of the storm drainage system to flow to waters of the U.S. unabated contrary to the required effective prohibition on non storm water discharges.	No changes required to address this comment
Non-Storm Water Discharges	Recreation and Parks Dept empties pond water into the city sewer system. Is a permit required for this?	Teresa Jordan	This Order does not regulate discharges of pond water (or other waters) into the sanitary sewer system. Discharges into the sanitary sewer system are regulated by the sewer agency or by a city/county discharging into the sewer system via an industrial waste program. However, if this (pond) discharge is into the storm sewer system, the discharge is not authorized under the current draft permit. The municipality would need to find alternative means to discharge of the potentially bacteria laden water.	No changes required to address this comment
<i>Receiving Water Limitations</i> Public Role in Reporting RWL violations	The permit, in stating that the public can offer documentary evidence of a violation of RWLs, wrongly encourages members of the public to conduct their own monitoring. It also forces permittees to address potentially incorrect allegations.	LA County PW 5	The provision has been eliminated.	The provision has been eliminated.

Section/Topic	Comment	Commenter(s) <sup>1</sup> & Page Numbers	Response	Change Made
Required BMPs	Requirements for BMP substitution are unclear.	CSDs of LA 2	<p>Regional Board Staff disagree with the commenter. The requirements for BMP substitution are in fact very clear. Permittees need only identify the following:</p> <p>That the proposed alternative BMP or program will meet or exceed the objective of the original BMP or program in the reduction of storm water pollutants;</p> <p>The fiscal burden of the original BMP or program is substantially greater than the proposed alternative and does not achieve a substantially greater improvement in storm water quality; and</p> <p>The proposed alternative BMP or program will be implemented within a similar period of time.</p>	No changes required to address this comment.
<i>Development Construction Program</i> Grading Prohibitions	Eliminate or add flexibility to the wet season grading prohibition.	Thousand Oaks A9,11; Ventura County RCD 1; Countywide Program B15,B21	The wet season grading restriction is only applicable to certain sites meeting certain conditions. As an alternative to the restriction, the MS4 Permittee may issue a waiver if the developer can demonstrate that their plans will protect water quality.	The permit has been revised to include requirements for enhanced BMPs to account for increased threat to water quality from rain events and hillside construction.
Grading Prohibitions	Ensure that agricultural grading and clearing is exempt from the grading prohibition.	Ventura County RCD 1	Agriculture is exempted from the NPDES program under federal law.	No changes required to address this comment.

Section/Topic	Comment	Committer(s) & Page Numbers	Response	Change Made
Grading Prohibitions	The grading prohibition adversely affects housing construction and is onerous and inappropriate. The grading prohibition will cause construction work force to idle for months. Provision can increase cost of development and cause hardship for permittees, developers, and businesses.	LA County PW 3,4,13; Long Beach 2; Various Citizens (Christine Shimane) 1; Various Citizens (Alyson Austin) 1	The winter grading restriction requirement has been removed from the permit and replaced with a requirement for enhanced BMPs to address the areas of greatest vulnerability to erosion due to anthropogenic activities and thus, require a definitive suite of BMPs to be implemented to protect exposed soils from erosion during construction activity.	Revised to include requirements for enhanced BMPs to account for increased threat to water quality from rain events and hillside construction.
Grading Prohibitions	The cost/benefit of wet season grading restrictions is low. It is expected to benefit water quality only for 28 days, but the cost is expected to be \$62,500 to \$125,000 per acre over the 6-month wet season because of significant land carrying costs. The restriction is based on the unreasonable assumption that construction site operators do not comply with the General Construction Permit.	BILDF 55-58; CICWQ 21-22	Federal law requires compliance with water quality standards and for those sites with a State of California General Construction Storm Water Permit, compliance with BAT/BCT (Best Available Technology/Best Conventional Technology) standards. If compliance is achievable, as the commenter suggests, a variance can be requested by the permitting authority which allowed the construction, the local municipality.	Revised to include requirements for enhanced BMPs to account for increased threat to water quality from rain events and hillside construction.
Variances	Developers, not permittees, should be responsible for demonstrating conditions for variances.	LA County PW 13	Regional Board staff agree with the comment or and have changed the draft permit to reflect the change in responsibilities.	No changes are required to address this comment.
Variances	Requirements to meet numeric limits to obtain a wet season waiver go against Blue Ribbon Panel recommendations to determine baseline sediment loads in receiving waters.	BILDF 58-60	Federal law requires compliance with water quality standards and for those sites with a State of California General Construction Storm Water Permit, compliance with BAT/BCT (Best Available Technology/Best Conventional Technology) standards. If compliance is achievable, as the commenter suggests, a variance can be requested by the permitting authority which allowed the construction, the local municipality.	No changes are required to address this comment.

Section/Topic	Comment	Commenter(s) <sup>1</sup> & Page Numbers	Response	Change Made
Erosivity Factor	The erosivity factor is not defined and may not be reasonable, implementable, or enforceable.	Long Beach 2	Regional Board uses USEPA's term (erosivity factor) as defined by USDA. For more info see - Renard, K.C., G.R. Foster, G.A. Weesies, D.K. McCool, and D.C. Yoder. 1997. <i>Predicting soil erosion by water: A guide to conservation planning with the Revised Universal Soil Loss Equation (RUSLE)</i> , Agricultural Handbook 703, USDA-ARS, U.S. Government Printing Office, Washington, D.C.	A definition of erosivity factor has been added to the permit.
BMP Requirements	Minimum BMPs required for construction sites are too prescriptive, not flexible enough.	LA County PW 13-14	Minimum BMPs provide clarity and finality that these are the measures to be implemented at a given site. The Permittee is still responsible for approval of BMPs on a site specific basis. This provides for the flexibility that the commenter is requesting.	A BMP performance criterion includes flexibility for BMP implementation.
Inspection Requirements	Inspection requirements exceed federal CWA requirements.	LA County PW 14, 15	Inspection requirements are consistent with 40 CFR 122.26 (d)(2)(i)(A)-(F).	No changes are required to address this comment.
Enforcement	Enforcement requirement eliminates municipal discretion in enforcing local codes.	LA County PW 14	Lack of enforcement on the Permittee's part may be a violation of the municipal permit. The municipality always has discretion to undertake enforcement but to allow continued violations of permits, laws, or regulations cannot be allowed.	No changes are needed to address the comment.
Enforcement	Local staff cannot be compelled by the Regional Board to serve as witnesses unless subpoenaed.	LA County PW 9	Regional Board staff are available to assist municipalities in enforcement actions they pursue. Likewise, if a site operator is referred to the Regional Board staff for enforcement, there is an expectation that the referring city be cooperative with the enforcement proceeding and not require a subpoena for assistance as a witness.	No changes are needed to address the comment.
<i>Public Agency Activities Program</i> Sewage Maintenance, Overflow, and Spill Prevention	These requirements are duplicative of SWRCB's General Waste Discharge Requirements for Sanitary Sewer Systems.	Countywide Program B23; CSDs of LA 2; LA County Stormwater <sup>3</sup>	The draft has been changed to reflect the requirements of the Statewide Permit and Waste Discharge Requirements for Sanitary Sewer Systems. The new draft requirements are intended to protect water quality specific to storm water requirements.	Reflects the requirements of the Statewide Permit and Waste Discharge Requirements for Sanitary Sewer Systems.

Section/Topic	Comment	Commenter(s) <sup>1</sup> & Page Numbers	Response	Change Made
Sewage Maintenance, Overflow, and Spill Prevention	Sanitary agencies should be required to notify the MS4 owner/operator within 2 hours.	LA County PW 15	Regional Board staff agree with the comment or and have changed the draft permit to reflect the change in responsibilities.	Reflects the requirements of the Statewide Permit and Waste Discharge Requirements for Sanitary Sewer Systems.
Public Construction	CASGP coverage for regular maintenance and CIPs should not be required.	Thousand Oaks A12-13; Countywide Program B23, B24, B26; LA County PW 15; Long Beach 2	Coverage for soil disturbing activities is a federal requirement. Regional Board staff have simplified compliance by allowing several soil-disturbing activities to be covered under a single NOI, if the municipality desires.	Compliance simplified by allowing several soil-disturbing activities to be covered under a single NOI, if the municipality desires.
Vehicle Maintenance, Materials Storage, Landscaping	The phase out of pesticides associated with the integrated pest management requirement are not feasible.	Simi Valley 2; Ventura County WPD 2; Countywide Program B24	The draft Permit has been revised to encourage the reduction in use of pesticides and the increase in use of integrated pest management.	Revised to encourage the reduction in use of pesticides and the increase in use of integrated pest management.
Storm Drain Operation and Management	Maintenance schedule and requirements for cleaning, updating, and trash are too onerous.	Thousand Oaks A13; Ventura County WPD 3; Countywide Program B24, B27; LA County PW 15	Schedules for compliance have been changed to a longer period.	Schedules for compliance have been changed to a longer period.
Storm Drain Operation and Management	There are concerns with prescribed numeric discharge limits for permittee-owned treatment control BMPs. Suggest providing a BMP prioritization process that defines appropriate disposal options.	CICWQ 4-6	The only option is to meet the prescribed limits or haul the water to where there is no discharge to the MS4.	No changes are needed to address the comment.

Section/Topic	Comment	Commenter(s) <sup>1</sup> & Page Numbers	Response	Change Made
Storm Drain Operation and Management	Dewatering effluent limitations are not based on basin plan objectives or sound science.	BILDF 36-37	The Water Board has a General NPDS Dewatering Permit. Discharges of pollutants in Storm Water discharges that have not been reduced to the Maximum Extent Practicable (MEP) are prohibited.	No changes are needed to address the comment.
Storm Drain Operation and Management	Catch basin excluders pose a potential flood hazard, are cost-prohibitive, the requirement is excessive, and the 180-day time frame too short.	Simi Valley 2; Camarillo 2; Moorpark 1; Thousand Oaks A13; Carson 3; Inglewood 2-3; Signal Hill Coalition PR 3; LA County PW 15; Long Beach 2; CONTECH 7; TECS 3; Fillmore 1	Schedules for compliance have been changed to a longer period. Wherever the potential for flooding exists, the Permittee under the BMP Substitution provision of the draft permit may implement an alternative program that accomplished the same goal.	Revised to include a prioritization scheme for trash excluders, with provisions for use of other BMPs to eliminate trash.
Storm Drain Operation and Management	Requirement for trash receptacle distribution is too prescriptive, doesn't address design procurement issues, has unrealistic timelines, does not address operation and maintenance, doesn't incorporate a cost/benefit analysis, and doesn't guarantee trash reduction.	Carson 5; Inglewood 4; Long Beach 2; TECS 5	Schedules for compliance have been changed to a longer period. The requirement to install is only in areas subject to high trash generation, in commercial, industrial, and near educational institutions, except where flooding will occur. The Permittee under the BMP Substitution provision of the draft permit may implement an alternative program that accomplished the same goal.	Requirements for trash management have been revised in consideration of comments received.
Streets and Roads	CASGP coverage for road work is excessive and not cost effective.	Camarillo 1; Ventura County WPD 2; Carson 2; Inglewood 1-2; LA County PW 15; Long Beach 2; TECS 2	Coverage for soil disturbing activities is a federal requirement. Regional Board staff have simplified compliance by allowing several soil-disturbing activities to be covered under a single NOI, if the municipality desires.	Compliance simplified by allowing several soil-disturbing activities to be covered under a single NOI, if the municipality desires.
Streets and Roads	Minimum BMPs required for road repairs are too prescriptive, not flexible enough.	LA County PW 16	These BMPs are the same used by Caltrans statewide. However, a Permittee under the BMP Substitution provision of the draft permit may implement an alternative program that accomplishes the same goal.	No changes required to address this comment.

Section/Topic	Comment	Commenter(s) <sup>1</sup> & Page Numbers	Response	Change Made
Municipal Potable Water Supply System Discharges	NPDES limit on potable water discharges of 100,000 gallons/year should be removed; these discharges should remain conditionally exempt; volume limit should be based on the size of a municipality's water system and its discharge needs.	Simi Valley 2; Camarillo 2; Thousand Oaks A3, 13; Countywide Program B5, B26; LA County PW 16; Long Beach 2; TECS 8	The 100,000 gallons per year was a trigger for a separate permit not a limit. Nonetheless, the 100,000 trigger has been removed. In order to discharge from potable water systems, a separate NPDES permit must be obtained with that permit serving as authorization to discharge for that agency.	Revised to reflect the requirement for a separate NPDES permit for potable water discharges.
Emergency Procedures	Change submission date to 14 days instead of 7 days.	LA County PW 16	Regional Board staff disagree with a 14 day period and will keep the 7 day reporting period.	No changes required to address this comment.
Cost	Cost feasibility is not considered.	BILDF 3-11; Signal Hill 2-4.	Although not required under federal mandates, a cost summary has been prepared.	No changes to the permit are necessary to address this requirement. The cost analysis is included in the record for this permit.
<i>Permit Development Process</i>				
Implementation Time Frame	Most time frames are unrealistic and unreasonable.	Ventura 3; Thousand Oaks A4; Signal Hill Coalition PR 1; Long Beach 3	In response to comments received on the Permit, staff has evaluated the "Time Schedules for Permit Implementation" paper submitted by the Permittees at the June 13, 2007 meeting and have extended time schedules equitably between 6 months and 1 year.	Various places throughout Permit

Section/Topic	Comment	Committer(s) <sup>1</sup> & Page Numbers	Response	Change Made
Implementation Time Frame	Objects to the fact that requirements are allowed to be met within the 5-year permit term rather than having them be phased in.	Theresa Jordan 2	This is the third term of the Ventura County MS4 permit. The proposed permit fully incorporates the Water Boards mission "to preserve, enhance and restore the quality of California's water resources, and ensure their proper allocation and efficient use for the benefit of present and future generations." In order to meet water quality objectives the permit includes appropriate timelines to measure the progress towards those objectives.	The permit includes wasteload & load allocations, and implementation schedules from effective TMDLs in the watersheds covered by this Order.
<b>Watershed Ecological Restoration Planning</b> ERPs (Ecological Restoration Plans)	The Board does not have the authority to require ERPs.	Camarillo A1; Moorpark A1; Thousand Oaks A14; Countywide Program 15,16,B28; CSDs of LA 1	The Ecological Restoration Plan requirement has been eliminated from the Permit. The Permittees are required to participate in the Southern California Storm Water Monitoring Coalition (SMC) Southern California Regional Bioassessment Monitoring Program that is currently being developed. The Principal Permittee participates in the SMC's Southern California Regional Bioassessment Monitoring Program. This new SMC program is expected to begin monitoring within the next year.	The Ecological Restoration Plan requirement has been eliminated from the Permit.
<b>Total Maximum Daily Load Provisions</b> Incorporating TMDLs into Permits	TMDLs should not be integrated into the permit.	LA County Stormwater 2	Where a TMDL has been approved, NPDES permits must contain effluent limits and conditions consistent with the requirements and assumptions of the wasteload allocations in the TMDL, 40 CFR § 122.44(d)(1)(vii)(B). NPDES-regulated storm water discharges must be addressed by the wasteload allocation component of a TMDL (40 CFR § 130.2(h)).	No changes are required to address this comment.
Incorporating TMDLs into Permits	TMDLs should be integrated into the permit.	Heal the Bay 3-4	TMDLs that have a WLA for the point source MS4 storm water (wet weather) and non-storm water (dry weather), and an approved/ effective date within the permit term are integrated into the permit.	Part 6, Part 7 & Attachment F

Section/Topic	Comment	Commenter(s) <sup>1</sup> & Page Numbers	Response	Change Made
Current TMDL provisions	The permit should be consistent in supporting the TMDL provisions.	Simi Valley 2; Oxnard 3; Camarillo A1-A2,A6; Moorpark A1-A2,A6; Thousand Oaks 2, A16; Ventura County WPD 2; Countywide Program 15,B28	TMDL WLAs in NPDES permits have to be translated into effluent limits. "Effluent limits are not required to be expressed in a form that is identical to the form in which an available wasteload allocation for the discharge is expressed in a TMDL. Rather, permit limits need only be "consistent with the assumptions and requirements" of a TMDL's wasteload allocation. (40 CFR § 122.44(d)(1)(vii)).	No changes are required to address this comment.
Current TMDL provisions	The permit must include all required actions outlined in TMDL Implementation Plans.	Heal the Bay 4-6	U.S. EPA regulations require "Where a TMDL has been approved, NPDES permits must contain effluent limits and conditions consistent with the requirements and assumptions of the wasteload allocations in the TMDL." 40 CFR § 22.44(d)(1)(vii)(B). MS4 Permittees shall satisfy all applicable conditions stated in the TMDL including but not limited to: developing monitoring plans in receiving waters, developing workplans, writing reports, conducting and participating in studies, and developing and implementing programs (e.g., education, collection, and collection and disposal).	No changes are required to address this comment.
Dry Weather Discharge Restrictions	Limit on discharges from an MS4 during dry weather is impractical.	Oxnard 5; Camarillo A3; Moorpark A3; Countywide Program B6; LA County PW 6	TMDLs have WLAs for non-storm water (dry weather) that cause or contribute to the impairment of the beneficial uses of the receiving waters. "Effluent limits are not required to be expressed in a form that is identical to the form in which an available wasteload allocation for the discharge is expressed in a TMDL. Rather, permit limits need only be "consistent with the assumptions and requirements" of a TMDL's wasteload allocation. (40 CFR § 122.44(d)(1)(vii)).	Part 7
WLAs	Need to analyze whether efforts to attain WLAs would comply with the MEP standard.	LA County PW 2	Economic analysis is performed during TMDL development. Water Boards take into account "economic considerations", among other factors, when they establish water quality objectives (CWC § 13241). Reanalysis is not necessary.	No changes are required to address this comment.
WLAs	Incorporating WLAs into the permit is inappropriate and contrary to the Blue Ribbon Panel recommendations.	Long Beach 1	U.S. EPA regulations require "Where a TMDL has been approved, NPDES permits must contain effluent limits and conditions consistent with the requirements and assumptions of the wasteload allocations in the TMDL." 40 CFR §.122.44(d)(1)(vii)(B). State Water Resources Control Board has not yet acted on the Blue Ribbon Panel recommendations.	No changes are required to address this comment.

Section/Topic	Comment	Commenter(s) <sup>1</sup> & Page Numbers	Response	Change Made
WLA's	WLA's should be numeric effluent limits, not expressed as a suite of BMPs.	NRDC 17-18	U.S. EPA has issued a policy memorandum recommending that limitations for NPDES-regulated municipal and small construction storm water discharges effluent limits should be expressed as best management practices (BMPs) or other similar requirements, rather than as numeric effluent limits. See Interim Permitting Approach for Water Quality-Based Effluent Limitations in Storm Water Permits, 61 Fed. Reg. 43761 (Aug. 26, 1996).	Part 6 & Part 7
WLA's	The permit does not specify the BMPs necessary for the permittees to meet WLA's.	BILDF 35-37	There is no approved TMDL Implementation Plan for BMPs to be specified in this permit, in lieu of numeric limits.	No changes required to address this comment. Review C. Ck. Basin Plan Amendments
Malibu Creek Bacteria TMDL	Field screening for illicit discharges related to the Malibu Creek Bacteria TMDL will require substantial time, effort, and funds and is not part of the TMDL Implementation Plan.	Thousand Oaks A14; Countywide Program B28	The TMDL provisions in the Permit have been rewritten. There is no longer a prohibition or an illicit connections/ discharge elimination requirement for the Malibu Creek Bacteria TMDL.	TMDL provisions have been rewritten to address this comment.
WLA's	All WLA discussions should include the effective dates of the numeric interim and final limits.	Thousand Oaks A14-15; Camarillo A5	In response to comments received on the Permit, TMDL WLA's effective dates are incorporated in the Order.	TMDL WLA's effective dates are incorporated in the Order.
Malibu Creek Bacteria TMDL	The single sample marine limits are incorrect and are currently set equal to the geometric mean limits. The limits table should be corrected and clarified to state that WLA's are the number of exceedance days and the targets are the values used to determine if an exceedance day results.	Thousand Oaks A14	The TMDL provisions in the Permit have been rewritten. The Malibu Creek Bacteria TMDL has a multi-part numeric target based on bacteriological water quality objectives for marine and fresh water to protect the water contact recreation use. The WLA's incorporated into the Permit are addressed as water quality-based effluent limits expressed as numerical limits in fresh water for both storm water (wet weather) and non-storm water (dry weather).	TMDL provisions have been rewritten to address this comment.

Section/Topic	Comment	Commenter(s) <sup>1</sup> & Page Numbers	Response	Change Made
Calleguas Creek Toxicity, Chlorpyrifos and Diazinon TMDL	WLAs included in the Toxicity TMDL apply during both dry and wet weather – the dry label should be removed from the tables. Regarding Toxicity WLAs as a trigger for conducting TIEs, the trigger language should be included in the discussion of numeric limits.	Thousand Oaks A14; Camarillo A5	The TMDL provisions in the Permit have been rewritten.	TMDL provisions have been rewritten to address this comment.
Calleguas Creek Toxicity, Chlorpyrifos and Diazinon TMDL	The final limits included in the OC Pesticides TMDL should not be included in this Order because the effective date is not within the permit term.	Thousand Oaks A14- A15; Camarillo A5	The NPDES permit incorporates TMDL WLAs, clarification of the WLAs is contained in the TMDL Basin Plan amendment.	TMDL provisions have been rewritten to address this comment.
Calleguas Creek OC, PCB, and Siltation TMDL	The final limits included in the OC Pesticides TMDL should not be included in this Order because the effective date is not within the permit term.	Thousand Oaks A15; Camarillo A5	The TMDL provisions in the Permit have been rewritten. For the Organochlorine Pesticides, Polychlorinated Biphenyls, and Siltation in Calleguas Creek, its Tributaries and Mugu Lagoon TMDL, compliance for both wet and dry weather final WLAs is March 24, 2026, and the final WLAs are <u>not</u> incorporated into the Permit due to their compliance dates being beyond the term of this Permit.	TMDL provisions have been rewritten to address this comment.
Calleguas Creek OC, PCB, and Siltation TMDL	Clarify that WLAs included in the OC Pesticides TMDL are annual average limits, not dry weather allocations.	Thousand Oaks A15; Camarillo A5	The TMDL provisions in the Permit have been rewritten. The Organochlorine Pesticides, Polychlorinated Biphenyls, and Siltation in Calleguas Creek, its Tributaries and Mugu Lagoon TMDL WLAs for pollutants in the water column for Minor Point Sources are addressed as water quality-based effluent limits expressed as numerical limits in the Permit for non-storm water (dry weather) and storm water (dry weather).	TMDL provisions have been rewritten to address this comment.
Calleguas Creek OC, PCB, and Siltation TMDL	The Siltation TMDL allocation is a reduction in sediment discharges, not a limitation on the amount of sediment that can be discharged. Change limits to reflect that it is a reduction.	Thousand Oaks A15; Camarillo A5	The TMDL provisions in the Permit have been rewritten. The TMDL Siltation WLA is not incorporated in the permit due to the compliance date exceeding the term of this permit. MS4 Permittees shall satisfy all applicable conditions stated in the TMDL including, but not limited to: developing monitoring plans in receiving waters, developing workplans, writing reports, conducting and participating in studies, and developing and implementing programs (e.g., education, collection, and collection and disposal).	TMDL provisions have been rewritten to address this comment.

Section/Topic	Comment	Commenter(s) <sup>1</sup> & Page Numbers	Response	Change Made
Malibu Creek Bacteria TMDL	The Malibu TMDL provisions require that there be no discharge from the MS4s during dry weather, which is not prescribed in the TMDL nor a part of the implementation plan.	Countywide Program B28	The TMDL provisions in the Permit have been rewritten. There is no longer a prohibition or an illicit connections/ discharge elimination requirement for the Malibu Creek Bacteria TMDL.	TMDL provisions have been rewritten to address this comment.
Malibu Creek Bacteria TMDL	Malibu TMDL provisions requiring no discharge from the MS4s during dry weather are impracticable because there are contributions from outside the permit area, other permitted NPDES discharges (e.g., underground utility box dewatering, water line flushing), and natural contributions to MS4 flows.	Countywide Program B28	The TMDL provisions in the Permit have been rewritten. There is no longer a prohibition or an illicit connections/ discharge elimination requirement for the Malibu Creek Bacteria TMDL.	TMDL provisions have been rewritten to address this comment.
Malibu Creek Bacteria TMDL	Monitoring requirements under the TMDLs for bacteria and toxicity will discourage other parties in participating in collaborative watershed monitoring.	Countywide Program B28, B32	The Water Board supports collaborative watershed monitoring by multiple stakeholders. NPDES permits require point source monitoring. In order to monitor compliance with the TMDL(s) MS4 WLAs each MS4 Permittee is required to monitor major outfalls to the receiving waters. The two monitoring plans (watershed monitoring and NPDES monitoring) are complementary programs.	TMDL provisions have been rewritten to address this comment.
Malibu Creek Bacteria TMDL	The discharge prohibition, monitoring, and implementation requirements related to the Malibu Creek Bacteria TMDL are extremely burdensome and are redundant with the monitoring plan and implementation plan.	Countywide Program B32	The TMDL provisions in the Permit have been rewritten. There is no longer a prohibition or an illicit connections/ discharge elimination requirement for the Malibu Creek Bacteria TMDL.	TMDL provisions have been rewritten to address this comment.

Section/Topic	Comment	Commenter(s) <sup>1</sup> & Page Numbers	Response	Change Made
Calleguas Creek OC, PCB, and Siltation TMDL	The City of Oxnard should be listed as a responsible party (MS4 permittee) in the Calleguas Creek Toxicity, Chlorpyrifos and Diazinon TMDL.	Countywide Program B29	In response to comments received on the Permit, the City of Oxnard has been listed as a MS4 Permittee for the Toxicity, Tributaries and Diazinon in the Calleguas Creek, its Tributaries and Mugu Lagoon TMDL.	City of Oxnard listed to address this comment.
Trash excluders requirement postpone pending outcome of the Calleguas Creek Trash TMDL	A trash TMDL is currently being developed for two reaches of Calleguas Creek with expected adoption at the end of 2007, so the order requirement should be postponed pending the outcome of the TMDL.	Simi Valley 2	In response to comments received on the Permit, the trash excluder requirement has been rewritten.  "In the December 27, 2007 draft permit, staff included a provision for installation of trash excluders at all catch basin inlets in the County of Ventura to prevent trash from entering the system and being discharged. The August 28, 2007 draft permit, limits the installation of trash excluders, or equivalent devices on catch basins to prevent the discharge of trash to the storm drain system, to areas subject to high trash generation, i.e., commercial areas, industrial areas, and near educational institutions. The Permit allows for site-specific Best Management Practice (BMP) substitution if a Permittee wants to consider an alternative approach to the trash excluder (see Part 5 A.2)	Part 5 A.2 & G.5(e).
Calleguas Creek Chloride and Salts TMDLs	The finding regarding salts (Finding 12) is inaccurate and inconsistent with the effective chloride TMDLs and the work being done to develop a salts TMDL in the Calleguas Creek Watershed.	Camarillo A1	In response to comments received on the Permit, the finding regarding salts (Finding 9) has been reworded.	B.9.
<b>Monitoring Program</b> General	Monitoring requirements inadequate to determine compliance with permit.	Heal the Bay 1-2; NRDC 13	In response to comments received on the Permit, monitoring requirements have been revised. Non-storm water (dry weather) mass emission, Total Suspended Solids, and Tributary monitoring requirements have been replaced by TMDL wet and dry weather monitoring requirements of MS4 discharges.	Attachment F.
Reporting	45-day time period for electronic submission of results is too short, particularly for TIEs.	LA County PW 18	Monitoring results from each monitoring station sent electronically to the Regional Board, has been lengthened to 90 days. In response to comments received on the Permit, the electronic submission of TIE/TRE testing results has been lengthened to 90 days from sample collection date.	Attachment F & Attachment H.

Section/Topic	Comment	Commenter(s) <sup>1</sup> & Page Numbers	Response	Change Made
Mass Emissions	<p>Since mass emissions stations are monitored only 5 times per year, using non-detect status as specified (constituents not detected in more than 75% of the first 48 sampling events at a station) would take nearly 10 years to eliminate constituents from the monitoring program and does not account for parameters that are consistently below water quality standards but are detected. Recommend elimination based on a smaller sample number.</p>	CICWQ 23	<p>If a constituent is not detected at the Method Detection Limit (MDL) for its respective test method in more than 75 percent of the first 48 sampling events at a station started from the 1<sup>st</sup> permit term and has continued forward, for most stations this means they have been sampled for at least 10 years.</p>	Attachment F.
Mass Emissions	<p>The scope of pollutants to be sampled via grab sample should be expanded to include volatile substances, analytes subject to biological activity such as phenols and DO, pH, temperature, and cyanide.</p>	LA County PW 18	<p>Volatile substances such as the mentioned MTBE are not listed in Attachment "G" (Storm Water Monitoring Program's Constituents with Associated Minimum Levels (MLs)) and are not required to be sampled. In response to comments received on the Permit, conventional pollutants such as: oil and grease, total phenols, cyanide, pH, temperature, and DO can be sampled via grab sample.</p>	Attachment F.
Mass Emissions	<p>The requirement to correlate TSS monitoring with pollutants of concern should be eliminated because a previous analysis has shown a poor correlation.</p>	LA County PW 17; CICWQ 23	<p>In response to comments received on the Permit, total suspended solids (TSS) monitoring has been eliminated. Monitoring for TMDL compliance will provide MS4 data specific to assess the variability of storm water constituents and provide an accurate estimate of mass emissions.</p>	Attachment F.

Section/Topic	Comment	Commenter(s) <sup>1</sup> & Page Numbers	Response	Change Made
Aquatic Toxicity Monitoring	Taking flow-weighted samples is onerous. Suggest requiring 3 grab samples taken at appropriate times during a runoff event (rising limb, at or near peak flow, descending limb of hydrograph).	LA County PW 19	In order to collect a representative sample of a constituent during an event, flow-weighted composites are required. The flow-weighted composite sample for a storm water discharge shall be taken with a continuous sampler, or it shall be taken as a combination of a minimum of 3 sample aliquots taken in each hour of discharge for the entire discharge, or for the first 3 hours of the discharge, with each aliquot being separated by a minimum of 15 minutes, within each hour of discharge.	No changes required to address this comment.
Aquatic Toxicity Monitoring	Specify a toxicity testing methodology for each species.	LA County PW 19	Aquatic Toxicity Monitoring provisions in the Permit have been rewritten. The Permit discusses toxicity testing methodology.	Attachment F.
Aquatic Toxicity Monitoring	In lieu of acute toxicity tests, continue to require the use of EPA chronic toxicity tests to maintain data continuity.	LA County PW 19	The objective of aquatic toxicity monitoring is to evaluate if storm water (wet weather) discharges are causing or contributing to acute and/or chronic toxic impacts on aquatic life and identify the causes of toxicity. Chronic toxicity tests will continue to be required in accordance with U.S. EPA's Short Term Methods for Estimating the Chronic Toxicity of Effluents and Receiving Waters to Freshwater Organisms or to Marine and Estuarine Organisms.	Attachment F.
Aquatic Toxicity Monitoring	Specify how toxicity thresholds should be applied.	LA County PW 19	Aquatic Toxicity Monitoring provisions in the Permit have been rewritten. Aquatic Toxicity Monitoring at major outfall stations is intended to characterize runoff from a watershed into receiving waters. The Permit discusses toxicity requirements.	Attachment F.
Aquatic Toxicity Monitoring	Toxicity monitoring program requirements are arbitrary and will not provide a proper determination of whether storm water discharges are impacting wildlife.	Heal the Bay 2	Aquatic Toxicity Monitoring provisions in the Permit have been rewritten. Aquatic Toxicity Monitoring at mass emission stations has been eliminated. Aquatic Toxicity Monitoring at major outfalls is required.	Attachment F.
Aquatic Toxicity Monitoring	The most sensitive freshwater and marine species should be selected for screening.	Heal the Bay 2-3	Aquatic Toxicity Monitoring provisions in the Permit have been rewritten. A minimum of two sensitive species are required to be used to test each sample in order to address uncertainties in sample toxicant composition and test method sensitivity. It is recommended that one test species be a crustacean and the other test species include a sensitive invertebrate from a different phylum (e.g., mollusk or echinoderm).	Attachment F.

Section/Topic	Comment	Committer(s) <sup>1</sup> & Page Numbers	Response	Change Made
Tributary Monitoring	Require a dry weather sampling event in addition to wet weather sampling of tributaries.	Heal the Bay 3	In response to comments received on the Permit, monitoring requirements have been revised. Tributary Monitoring has been eliminated. With the implementation of TMDL "end-of-pipe" monitoring for both non-storm weather (dry weather) and storm water (wet weather), and Municipal Action Levels (MALs) monitoring, staff will be able to directly identify dry and wet weather MS4 discharges causing or contributing to exceedances of water quality objectives.	Attachment F.
Bioassessment	The five objectives may not be achievable even when subsequent requirements are met.	LA County PW 19	Bioassessment Monitoring performed by the MS Permittees alone has been eliminated. Instead, Permittees are required to participate in the Southern California Storm Water Monitoring Coalition (SMC) Southern California Regional Bioassessment Monitoring Program that is currently being developed and will be monitoring within this Permit term.	Part 5.B. & Attachment F.
Bioassessment	Need to clearly define which parts of the MS4 are natural streams to exclude engineered portions from needing ERPs	LA County PW 19-20	The Watershed Ecological Restoration Program requirement and its associated Watershed Ecological Restoration Plans (ERP) have been eliminated from the permit.	Part 5 - Watershed Ecological Restoration Planning.
Bioassessment	Continue to use latest available Southern California IBI for regional evaluation and to support CA DFG and SWAMP efforts.	LA County PW 20	Permittees are required to participate in the Southern California Storm Water Monitoring Coalition (SMC) Southern California Regional Bioassessment Monitoring Program, which will be using the Southern California IBI.	Part 5.B. & Attachment F.
Bioassessment	Use of the California Stream Bioassessment Procedure not appropriate. Suggest using the most recent state-approved methodology for bioassessment such as that being developed by the SWAMP.	CICWQ 22	Permittees are required to participate in the Southern California Regional Bioassessment Monitoring Program, which is an integrated regional watershed monitoring program with the Southern California Storm Water Monitoring Coalition (SMC) and the Surface Water Ambient Monitoring Program (SWAMP). The Southern California Regional Bioassessment Monitoring Program will use <i>SWAMP Bioassessment Procedures: Standard operating procedures for collecting benthic macroinvertebrate sample and associated physical and chemical data for ambient bioassessment in California.</i>	Part 5.B. & Attachment F.

Section/Topic	Comment	Commenter(s) <sup>1</sup> & Page Numbers	Response	Change Made
Bioassessment	Include bioassessment monitoring as a core program, not as a special study.	Heal the Bay 3	Bioassessment Monitoring performed solely by the MS Permittees has been eliminated. Instead, Permittees are required to participate in the Southern California Storm Water Monitoring Coalition (SMC) Southern California Regional Bioassessment Monitoring Program that is currently being developed and will be monitoring within this Permit term.	Part 5.B. & Attachment F.
Trash and Debris Study	Assessments should focus on storm water outfalls; areas of the beach where trash and debris are from nonpoint sources should be excluded.	LA County PW 20	In response to comments received on the Permit, the Trash and Debris Study has been eliminated.	Attachment F.
Trash and Debris Study	Control strategies are redundant with the trash TMDL process – monitoring should be used only to identify impairment.	LA County PW 20	In response to comments received on the Permit, the Trash and Debris Study has been eliminated.	Attachment F.
Trash and Debris Study	Objectives of the Trash and Debris Study may not be achievable; the requirement should be omitted.	LA County PW 20	In response to comments received on the Permit, the Trash and Debris Study has been eliminated.	Attachment F.
Pyrethroid Insecticides Study	Requirement is onerous, not based on sound science, and has no cost/benefit analysis.	Long Beach 2	In response to comments received on the Permit, the Pyrethroid study has been reduced in scope from monitoring three watersheds to one, the Calleguas Creek watershed. Permittees will be working with the Calleguas Creek Watershed Group on the focused Study for two years in the largest urban watershed within Ventura County. California Water Code § 13267 requires: "The burden, including costs, of these reports shall bear a reasonable relationship to the need for the reports and the benefits to be obtained from the reports." This is not merely a cost-benefit analysis. However, the cost of report generation is a consideration. Indeed even if the cost of generating the report is far greater than the financial economic benefits to be gained, that is not dispositive. It is entirely appropriate that the qualitative environmental benefits be weighed against the burdens as well. Furthermore, Cal. Water Code § 13267 does not require that an order under its provisions include written documentation of the analysis in a report. It requires only that the burdens of the order be justified by its need.	Attachment F.

Section/Topic	Comment	Commenter(s) <sup>1</sup> & Page Numbers	Response	Change Made
Pyrethroid Insecticides Study	Requirement to collect sediment at each location may not be feasible in concrete channels. Suggest providing an EPA-approved sampling approach.	LA County PW 18-19	The Pyrethroid study has been written for Ventura County urban tributaries. The Ventura County Permittees select the major and secondary tributary monitoring sites.	Attachment F.
Pyrethroid Insecticides Study	The state should conduct this study because they authorized the use of these pesticides.	LA County Stormwater 2	In California the Department of Pesticide Regulation (DPR) is responsible for pesticide regulation. The Water Boards and California Stormwater Quality Association (CASQA) have been working with DPR during the process of registration of pesticides for urban use.	Attachment F.
Hydromodification Control Study	The Hydromodification Control Study should not be required.	LA County PW 21	The Hydromodification Control Study is to avoid the adverse impacts of flow associated with new development. The provisions in the tentative permit are to develop assessment tools and mitigation strategies to prevent adverse impacts.	Attachment F.
Jurisdictional boundaries	There is no MS4 in the open space areas of the County; to impose MS4 regulations there is folly.	County of Ventura 1	Federal Regulations, 40 CFR 122.26	No changes required to address this comment.
<i>Public Information and Participation</i>				
Time Frame	The 180-day period to formulate and implement the program is too short.	Thousand Oaks A5; Countywide Program B9	The time frame for all PIPP requirements has been amended for consistency and achievability to 365 days after adoption of the Order.	Part 5- C. Public Information and Participation Program.
Outreach and Education	Requirement for 10 million impressions is too many and unnecessary.	Thousand Oaks A5; Countywide Program B9	The latest revision(s) of the Order requires 5 million impressions which is consistent with the impression per resident requirement of existing mature PIPP programs.	Part 5- C. Public Information and Participation Program.
Outreach and Education	Requirement for educational outreach to children via schools is outside of the permittees' authority.	Thousand Oaks A5; Countywide Program B9	The Order requires Permittees to provide education materials on storm water pollution and prevention necessary to educate 50% of K-12 school children. Feedback from most municipalities that have conducted this outreach has been positive. Permittees may consider conferring with environmental groups such as Tree People, Heal The Bay, Generation Earth, and others that have developed K-12 storm water educational programs for guidance on working with school districts to develop an accepted and effective program.	No changes required to address this comment.

Section/Topic	Comment	Commenter(s) <sup>1</sup> & Page Numbers	Response	Change Made
Outreach and Education	Requirements as described are vague and do not indicate the required level of effort.	LA County PW 7	Order requirements have been written to encourage flexibility and avoid being overly prescriptive.	Part 5- C. Public Information and Participation Program
Businesses Program	Small developers should be added as a separate category of small business owners to provide outreach on infill and redevelopment requirements.	LGC 3	Municipalities may conduct outreach and training for small developers through New Development provisions. Many municipalities distribute storm water educational materials through their Building and Planning departments.	No changes required to address this comment.
<i>Industrial/Commercial Facilities Program</i>				
Required BMPs	Requiring mandatory BMPs eliminates flexibility and efficiency.	Thousand Oaks A 12; Ventura County WPD 2; Countywide Program B16	The BMPs required are commonly accepted source control BMPs including good house-keeping. The intent of requiring basic, cost effective source control BMPs was to provide clarity on expected BMP implementation at commercial industrial facilities. Several municipalities have asked the Regional Board to provide such guidance in the past. Permittees can still use the BMP substitution clause if they have alternative effective strategies to mitigate runoff from these sites.	No changes required to address this comment.
Required BMPs	Requiring treatment control BMPs at critical sources that discharge to a MS4 is not reasonable.	Countywide Program B10, B11	The Order has been revised to read may require the implementation of treatment control BMPs. The intent of the revised language gives discretion to municipalities to require the implementation of treatment control BMPs as they deem necessary.	Part 5- D. Industrial/Commercial Businesses Program.
Required BMPs	BMP effectiveness and comparison data are not available.	Countywide Program B10	The ASCE database contains BMP effectiveness and comparison data. <a href="http://www.bmpdatabase.org/">http://www.bmpdatabase.org/</a>	No changes required to address this comment.
Required BMPs	Requirements for BMP substitution are unclear.	CSDs of LA 2	The requirements for BMP Substitution as written in this tentative permit have been used successfully, as written in the LA MS4 Permit since 1996.	No changes required to address this comment.
Inspections	Inspection requirements are more stringent than federal CWA regulations.	LA County PW 3	Federal CWA regulations (40CFR122.26(d)(2)(i)(c)), requires the control of the contributions of pollutants to the municipal storm sewer and the control of the quality of storm water discharged from sites of industrial activity. The Ventura MS4 draft Order includes inspection requirements which help achieve compliance with these Federal requirements.	No changes required to address this comment.

Section/Topic	Comment	Commenter(s) <sup>1</sup> & Page Numbers	Response	Change Made
Inspections	Permittees should be reimbursed \$300 per inspection based on the fact that industrial facilities are required to pay permitting fees for coverage under the GIASWP and that the fees presumably cover the cost of inspection.	Carson 8; Inglewood 6-7; Long Beach 3; TECS 8	Permittees are required to inspect facilities for compliance with their own ordinances not for compliance with the GIASWP.	No changes required to address this comment.
Enforcement	Existing local government enforcement cases should not be compromised by Regional Board involvement.	LA County PW 8-9	The intent of this section of the Order is to clarify the Permittee's and Regional Board's responsibilities. The intent of this provision was not to interfere with local enforcement of municipal ordinances.	No changes required to address this comment.
Enforcement	Local staff cannot be compelled by the Regional Board to serve as witnesses unless subpoenaed.	LA County PW 9	The intent of this provision of the Order is to improve enforcement coordination between State and local municipalities.	No changes required to address this comment.
<i>Illicit Connections and Illicit Discharges Elimination</i>				
Screening	Field screening as performed in the first permit cycle was determined to be inefficient.	Countywide Program B27; Thousand Oaks A14	The Federal MS4 ROWD application guidance document requires illicit connection screening. The Order specifies the order of screening of potential high risk portions of the storm drain system to be completed over the term of the Permit.	No changes required to address this comment.
Screening	Requirement to follow procedures set forth in the Center for Watershed Protection's manual is too prescriptive, not flexible enough	LA County PW 16	The Center for Watershed Protection manual includes standard, effective methods to conduct field screening. The intent of this provision was to provide guidance for municipalities. If Permittees have a more effective way to conduct screening it would be reasonable to use the BMP substitution clause.	No changes required to address this comment.
Enforcement	Permittees should be allowed discretion in enforcing local codes.	Countywide Program B27; Thousand Oaks A14	The intent of this provision is to clarify the Permittee's responsibility in implementing the local program. The municipality has flexibility in the manner of enforcement.	No changes required to address this comment.
Complaints Website	Hosting a Website is extraneous in light of LA County's telephone reporting hotline.	LA County PW 16	The intent of this provision was to provide complementary means of reporting illicit discharges and spills. Permittees can utilize the BMP substitution clause if they have an equally effective reporting method(s).	No changes required to address this comment.

Section/Topic	Comment	Commenter(s) <sup>1</sup> & Page Numbers	Response	Change Made
<p><i>Municipal Action Levels</i></p> <p>General</p>	<p>MALs should not be discussed in the "Receiving Water Limitations" section because MALs relate to MEP, and MEP is a technology-based standard. MEP is not expressed in terms of a water quality outcome, which is what receiving water limits reflect.</p>	<p>NRDC 14-17</p>	<p>MALs have been moved from Receiving Water Limitation section.</p>	<p>Part 2- MALs.</p>
<p>General</p>	<p>Findings and provisions related to the implications of MALs are unclear and in conflict with each other. One finding (p. 23) says exceedance of MALs will be construed as a failure to implement adequate control measures and will be considered a violation of the MEP provisions, whereas another (p. 29) states that exceedances of MALs will create a presumption that the implementation of measures to reduce pollutants in the MS4 discharged to the MEP are inadequate, requiring the permittee to augment measures to reduce the discharge of pollutants to not violate the MEP. This conflict needs to be resolved.</p>	<p>CASQA 2</p>	<p>The Order has been revised to provide greater clarity for MALs.</p>	<p>Part 2- MALs &amp; Attachment C.</p>

Section/Topic	Comment	Commenter(s) <sup>1</sup> & Page Numbers	Response	Change Made
General	The Draft Order lacks findings and rationale to support the use of MALs.	Countywide Program 11	The Order includes an additional MAL finding.	Findings section.
General	Not consistent with the State's Blue Ribbon Panel Findings. The MALs were not generated in a scientifically defensible way.	Ventura 2; Thousand Oaks A16; Countywide Program 9, 10, B30; Signal Hill Coalition PR 2; BILDF 24-25, 30-34, 59; LA County PW 1; CASQA 2-3; CICWQ 1-4; Caltrans 2	The State Board has not yet set policy based on the Blue Ribbon Panel's findings. MALs were based on actual nationwide MS4 sampling (compiled in the National Storm Water Quality Database) results of large (>36" pipes and outfalls). MALs were derived based on the sampling of over 3000 events, which included multiple land uses, multiple size drainage areas, multiple size rainfall events, and multiple intensity level rain events.	No changes required to address this comment.
General	MALs are a non-flexible, non-iterative approach.	Ventura 2; BILDF 31; CASQA, 2	MALs represent performance standards. They do not limit Permittees flexibility to implement programs to reduce pollutants to the MEP. *	No changes required to address this comment.
General	MALs have not been properly adopted as water quality objectives.	LA County PW 4	MALs are not water quality standards and have not been set to protect beneficial uses. They represent performance standards.	No changes required to address this comment.
General	MALs result in numeric effluent limitations, which EPA strongly discourages.	Thousand Oaks A2; Countywide Program 5,6; Signal Hill Coalition PR 1; BILDF 24-29, 59; LA County Stormwater 3; CASQA 2	MALs are not water quality standards and have not been set to protect beneficial uses. They represent performance standards.	No changes required to address this comment.
General	Requiring additional BMPs when MALs are not met ignores the fact that cause/effect relationship of BMPs and receiving water quality is unknown. No requirement for assessment of BMP performance relative to baselines to judge whether corrective BMPs are more effective.	LA County PW 1-2,8; CONTECH 2; Caltrans 1	Compliance with MALs is determined at large outfalls greater than 36". The receiving waters are a default for MAL compliance if Permittees choose not to conduct outfall monitoring.	No changes required to address this comment.

Section/Topic	Comment	Commenter(s) & Page Numbers	Response	Change Made
General	The permit equates violations of end-of-pipe MALs with exceedances of receiving water limitations even if receiving water data do not show a violation. Also exceedances of receiving water limitations should not be considered violations of the MS4 permit because they cannot be conclusively linked to MS4 discharges.	BILDF 22-26; CICWQ 2-3	Exceedances of MALs are expressed as non-compliance of MEP provisions. Exceedances of MAL values presume that Permittees have not complied with MEP provisions and shift the burden of proof to the Permittees to demonstrate compliance with MEP provisions.	No changes required to address this comment.
General	The inclusion of MALs in the Order will require treatment BMPs on all outfalls 36" or greater.		MALs have been developed from nationwide sampling data of outfalls 36" or greater, none of which are reported to have treatment BMPs installed at the point of discharge.	No changes required to address this comment.
Cost	Cost feasibility is not considered.	BILDF 3-11; Signal Hill 2-4	MALs have been developed from nationwide sampling data, which includes the practicability and program costs incurred by the municipalities in achieving the numbers.	No changes required to address this comment.
Consistency with Other Regulations and Requirements	Inconsistent with MEP as specified in federal CWA requirements.	Oxnard 4; Thousand Oaks A1; Countywide Program 7; BILDF 11-19, 37, 41; LA County PW 1; Long Beach 1	The Order no longer uses MALs to define MEP. MALs are used in the Order as Action Levels, consistent with Blue Ribbon Panel recommendation.	Part 2- MALs & Attachment C.
Consistency with Other Regulations and Requirements	More stringent than federal regulations.	Simi Valley 1; Camarillo 1; Countywide Program 10; BILDF 31	The Order no longer uses MALs to define MEP. MALs are used in the Order as Action Levels, consistent with Blue Ribbon Panel recommendation.	Part 2- MALs & Attachment C.
Consistency with Other Regulations and Requirements	More restrictive than the Basin Plan and TMDLs.	Simi Valley 1; Ventura 2; Camarillo 1; Countywide Program 11; LA County PW 1	MALs represent performance expectations that have been achievable based on nationwide data.	No changes required to address this comment.
Table of MALs	Determination of MALs using median values does not account for natural variability in storm water runoff.	Caltrans 2	MALs were developed using the coefficient of variation to account for the variability of storm water runoff across the nation.	Part 2- MALs & Attachment C.

Section/Topic	Comment	Commenter(s) <sup>1</sup> & Page Numbers	Response	Change Made
Table of MALs	Object to using median concentrations and CoVs derived from an outdated and regionally inappropriate data set.	CICWQ 2	The large population dataset of the National Storm Water Quality Dataset leads to statistically more valid numbers. Sampling events included in the dataset were conducted using practices and equipment that are currently used. The dataset includes sampling information specific to California.	No changes required to address this comment.
Table of MALs	It will be impossible for permittees to meet the identified CoVs because they are a characteristic of the samples and analytical methods.	LA County Stormwater 4	The coefficient of variability accounts for variability within the sampling population.	No changes required to address this comment.
Table of MALs	Delete bacteria counts and pH since MALs aren't appropriate.	LA County Stormwater 4	Bacteria has been eliminated from MALs.	Attachment C.
Table of MALs	Include MALs for additional storm water POCs (mercury and organics such as OP, halogenated pesticides, and PAHs).	Heal the Bay 6	The intent of MALs was to include common storm water pollutants which had sufficient data available to develop MAL values. MALs are used to numerically express MEP, which is applicable to the comprehensive storm water program, with the intent to reduce pollutants in storm water. The Order includes a mercury MAL value.	Part 2- MALs & Attachment C.
<i>Treatment BMP Performance</i>				
General	There is no basis for allowing BMPs to be installed that perform worse than the median value for a specific BMP.	Heal The Bay	The Order requires treatment BMPs that are installed to perform at the median value.	No changes required to address this comment.
General	Order should establish design criteria for Treatment BMPs rather than performance standards.	Countywide Program	The intent of the provision is to ensure that treatment BMPs required to be implanted appropriately address the pollutants expected to be discharged from a project. Design criteria is another important and separate component of treatment BMP implementation.	No changes required to address this comment.
General	Treatment BMP performance should be developed for BMP categories instead of BMP performance per pollutant.	Countywide Program	The Order requires treatment BMP performance for BMP categories.	No changes required to address this comment.

Section/Topic	Comment	Committer(s) <sup>1</sup> & Page Numbers	Response	Change Made
<i>Planning and Land Development Program</i> Required Parties	The requirement should be less stringent than "all new development and redevelopment projects."	Thousand Oaks A7; Ventura County PWA 2; Countywide Program B11,B13	New development and redevelopment projects have the potential to impact water quality and the intent of the provision is to be protective of water quality.	No changes required to address this comment.
Undermines Local Land Use Authority	The requirement to implement LID, hydromodification, and impervious area limitation strategies undermines local land use authority	Countywide Program 17-18	The permit provisions are intended to reduce post construction changes in hydrology and pollutant loads in a cost effective manner without infringing on local government land use authority. The CA Court of Appeal has upheld these type of controls in MS4 Permits ( <i>County of Los Angeles v. California State Water Resources Control Board (2006) Cal. App. LEXIS 1546</i> ).	No changes required to address this comment.
Size Thresholds	Clarify whether requirement in Part 4 E.III for implementation of post-construction BMPs for industrial parks and commercial strip malls with 5,000 square feet or more of surface area refers to total area or impervious area. Does this apply to both new and redevelopment? Suggest a threshold of 5,000 square feet of <u>new impervious surface</u> for <u>all types</u> of industrial and commercial projects.	CICWQ 18	The new development post-construction requirements for industrial parks and commercial strip malls apply to the disturbance of 5,000 square feet or more of total area. The redevelopment post-construction requirements apply to land disturbing activity that results in the creation, addition, or replacement of 5000 square feet or more of impervious surface area.	No changes required to address this comment.
Size Thresholds	Justify why the permit limits post-construction BMP requirements to commercial strip malls, not to other commercial development.	BILDF 62; CICWQ 18	The 5,000 square foot lower threshold for post-construction BMPs apply to certain types of commercial projects, including strip malls, which are associated with high vehicular traffic. All commercial development projects that disturb one or more acre of land are already subject to the controls.	No changes required to address this comment.
Size Thresholds	Justify the tiered numeric water quality design criteria based on 50-acre project size threshold.	Carson 6; Inglewood 5; CICWQ 18-19; TECS 6	The 50 acre tiered criterion is set to distinguish large construction projects ( $\approx$ top 10th percentile of projects in Southern California). It is also the sub-drainage area size for a major MS4 outfall as defined by the U.S. EPA.	No changes required to address this comment.

Section/Topic	Comment	Committer(s) <sup>1</sup> & Page Numbers	Response	Change Made
Size Thresholds	The 5,000 square foot requirement for BMPs for redevelopment projects is excessive.	Oxnard Chamber of Commerce 1	The redevelopment threshold criterion for redevelopment is the same as in the 2000 MS4 permit.	No changes required to address this comment.
Size Thresholds	The "catch-all" category threshold for post-construction mitigation requirements should be lowered to 5,000 square feet rather than 1 acre.	NRDC 11	The 5,000 square foot threshold for post-construction mitigation is set to address pollutants from commercial development projects which generate pollutants associated with high vehicular traffic.	No changes required to address this comment.
Impervious Area	The maximum effective impervious area requirement of less than 5% of total project area is excessive, inhibits smart growth, and discourages infill/redevelopment in favor of greenfield development. Suggest a flexible approach that sets different thresholds for different areas depending on proximity to sensitive waters, restoration goals, redevelopment districts, etc.	Ventura 2; Thousand Oaks A7; Countywide Program B12; Signal Hill Coalition PR 2; BILDF 41,49-52; LA County PW 9; LGC 2-4; Long Beach 1; Various Citizens (Odie Duggan) 1; CICWQ 6-12; CONTECH 3; County of San Bernardino	The 5% EIA requirement is set to avoid the adverse stream habitat effects associated with increases in flow volume with new and redevelopment. Alternative provisions have been incorporated to allow for infill redevelopment, and other smart growth considerations.	No changes required to address this comment.
Impervious Area	When LID techniques are required, the EIA requirement is redundant	County of San Bernardino	The LID and EIA requirements complement each other by ensuring that post development discharge of pollutants are minimized at the site scale.	No changes required to address this comment.
Impervious Area	The maximum effective impervious area requirement should be lowered from 5% to 3%.	NRDC 11	See response above.	No changes required to address this comment.
Impervious Area	Pervious areas should be required to be engineered to handle runoff from impervious areas.	NRDC 12	Text has been added to clarify that pervious areas may be engineered to infiltrate storm water.	Part 5- Planning and Land Development Program.

Section/Topic	Comment	Commenter(s) <sup>1</sup> & Page Numbers	Response	Change Made
LID	LID requirements are excessive, more costly on many projects, and technically infeasible.	Carson 5; Inglewood 4; BILDF 40; TECS 5	LID and better site design strategies are supported by the State of California and the USEPA as a cost-effective approach to land development that will protect the environment.	No changes required to address this comment.
LID	LID principles and terminology should be explicitly defined.	Countywide Program 16,B13; Signal Hill Coalition PR 2; LA County PW 10; Long Beach 2	The Water Boards and the Southern California MS4s are implementing a project to develop LID measures and training for Southern California. The LID terminology and principles are better addressed in the technical guidance.	No changes required to address this comment.
LID	The time frame for developing LID guidelines should be extended beyond 18 months to 24 months.	Ventura 2	Some LID measures and specifications are already included in the Ventura County Technical Guidance Manual for Water Quality. Eighteen months is adequate time to update the manual.	No changes required to address this comment.
LID	Time frame for developing LID guidelines should be shortened to 3 months.	NRDC 12	See response above.	No changes required to address this comment.
LID	No evidence exists that project-specific LID BMPs are necessary to avoid water quality impacts or are more effective than larger scale, regional facilities.	BILDF 39-43	LID and better site design strategies are supported by the State of California and the USEPA as a cost-effective approach to land development that will protect the environment. LID is a source control strategy that may avoid the need for regional facilities.	No changes required to address this comment.
LID	The permit should allow phasing of LID compliance according to development type and incentives offered for LID strategies.	LA County PW 9; Long Beach 2	LID is a cost-effective approach to land development that will also protect the environment. MS4 Permittee has the flexibility to decide on appropriate strategies and incentives.	No changes required to address this comment.
LID	Permittees should be able to choose their own order of preference for controls; it is unclear why the first options are better than latter options.	LA County PW 10, CICWQ 18; CONTECH 4	The order of preference of BMP selection is to promote source control, cost-effectiveness, multiple benefits, and public acceptance.	No changes required to address this comment.

LID	Smart growth considerations should be added to the integrated approach list: integrated watershed and general plans that direct growth and preservation, and subwatershed or district plans and designs to manage resources.	LGC 4	This is in the area of land planning, which is under the municipality's jurisdiction.	No changes required to address this comment.
LID	Clarify the relationship between LID requirements and post-construction storm water requirements and how they apply to different development projects.	LA County PW 10,11	The section has been reformatted to clarify the relationship between LID and post-construction storm water requirements.	Part 5- E. Planning and Land Development Program.
LID	Address potential groundwater/drinking water impacts stemming from LID infiltration requirements.	Carson 4-5; Inglewood 4; TECS 4-5; Fillmore 1	LID measures promote pre-development hydrology and soil function that allows for the percolation of water. It does not involve the construction of infiltration basins, which when inappropriately sited or designed, may potentially present risks to drinking water sources.	No changes required to address this comment.
Erosion Potential	Object to Ep=1 standard. There is no basis for the Ep=1 requirement. It does not allow for consideration of local factors affecting channel stability and it mandates that land be set aside for hydromodification control BMPs for all projects regardless of the BMPs' expected ability to mitigate adverse impacts.	BILDF 51-53; CICWQ 13-14	The Ep of one is established to ensure that post-development changes in flow do not result in excess erosion and damage to stream habitat. The text has been revised to allow for an Ep greater than 1 if local factors support a higher value while still being protective of the stream habitat.	No changes required to address this comment.
Erosion Potential	Proposed erosion potential limits would effectively halt development.	Thousand Oaks A9; Countywide Program B14, B21; BILDF 55-58	See response above.	No changes required to address this comment.

Section/Topic	Comment	Committer(s) <sup>1</sup> & Page Numbers	Response	Change Made
Hydromodification	More science is needed for determining a 2-year storm event.	Countywide Program B15	The choice of the up to the 2-year 24-hour storm is based on the literature and is considered generally protective of the adverse impacts of hydromodification based on increases in flow, frequency and duration.	No changes required to address this comment.
Hydromodification	The one-size-fits-all hydromodification approach does not consider soil, drainage, topographic, precipitation, or runoff characteristics of the region, including variability.	CICWQ 12-13	SCCWRP/ SMC Study	No changes required to address this comment.
Hydromodification	Clarify to which projects the hydromodification requirements apply.	LA County PW 11;	The requirements apply to all projects subject to the new development/ redevelopment section that drain to natural drainage systems.	No changes required to address this comment.
Hydromodification	Characterization of erosion potential for a natural stream off the project site is burdensome.	LA County PW 11	SCCWRP/ SMC Study	No changes required to address this comment.
Hydromodification	The choice of the 2-year 24-hour storm should be clarified and the storm event defined in the glossary.	LA County PW 11; Ventura Co WPD	The choice of the up to the 2-year 24-hour storm is based on the literature and is considered generally protective of the adverse impacts of hydromodification based on increases in flow, frequency and duration.	No changes required to address this comment.
Hydromodification	Permittees can't be required to participate in the SMC hydromodification Phase II study.	LA County PW 11	Southern California MS4 Programs have a cooperative agreement to work together to address regional issues such as hydromodification and find common solutions. The VCWPD already participates in the study.	No changes required to address this comment.
Hydromodification	The standard for matching the pre- and post-development hydrographs is infeasible.	Thousand Oaks A9; Countywide Program 19,B13,B14; Signal Hill Coalition PR 2; BILDF 43-49; CICWQ 16-17; CONTECH 5-6	The Order no longer requires the matching of pre- and post-development hydrographs.	Requirement eliminated in Tentative Order.

Section/Topic	Comment	Commenter(s) <sup>1</sup> & Page Numbers	Response	Change Made
Hydromodification	Hydromodification requirements should not be applied to areas adjacent to downstream sections of major rivers.	Fillmore 2	The hydromodification criteria is to protect tributaries and not downstream areas of major rivers.	No changes required to address this comment.
Hydromodification	Proposed interim criteria to maintain peak outflow at pre-development levels may result in less sediment outflow.	Countywide Program	This is possible and a desired effect in most receiving waters within the Region.	No changes required to address this comment.
Post-Construction Storm Water Mitigation Criteria	Tiered design criteria are burdensome to private and public developers.	LA County PW 12	Tiered design criteria have been selected to account for the complexity of larger projects, while providing for a simple approach for smaller projects.	No changes required to address this comment.
Post-Construction Storm Water Mitigation Criteria	The requirement to inspect before issuing a certificate of occupancy exceeds federal CWA requirements and is onerous.	LA County PW 12,13	The purpose of the inspection is to ensure that post-construction BMPs as approved have been properly installed.	No changes required to address this comment.
Post-Construction Storm Water Mitigation Criteria	Development of a GIS tracking system for BMPs is burdensome.	LA County PW 12; Long Beach 2	The purpose of a tracking system is to ensure that the location of BMPs are known, and for follow-up maintenance	No changes required to address this comment.
Post-Construction Storm Water Mitigation Criteria	Expansion of SUSMP requirements to include transportation infrastructure construction and industrial/commercial development $\geq$ 5,000 square feet is onerous and inappropriate.	Long Beach 2	The 5,000 square foot lower threshold for post-construction BMPs have been expanded to include select commercial projects, which are associated with high vehicular traffic and are known source of urban storm water pollutants.	No changes required to address this comment.

Section/Topic	Comment	Commenter(s) <sup>1</sup> & Page Numbers	Response	Change Made
Post-Construction Storm Water Mitigation Criteria	Clarify underlined terminology from the following passage from the bottom of page 55: "Each permittee shall require that post-construction treatment control BMPs incorporate, at a minimum, a volumetric and/or hydrodynamic (flow based) treatment control design standard...to mitigate <u>(infiltrate, filter or treat) storm water.</u> "	Carson 4; Inglewood 3; CICWQ 19; CONTECH 6; TECS 4	This language has been eliminated from the Order.	The provision has been eliminated.
Post-Construction Storm Water Mitigation Criteria	Specify BMP performance criteria.	CONTECH 1,5; Heal the Bay 6-7	A new table for BMP performance criteria is proposed in the tentative.	Attachment "C", Table 3 and Table 4.
Post-Construction Storm Water Mitigation Criteria	Set numeric treatment criteria for post-construction BMPs for development greater than 50 acres.	NRDC 12	New text has been added in the Order.	Part 5- E. Planning and Land Development Program.
Post-Construction Storm Water Mitigation Criteria	Requirement for developments 50 acres or more to evaluate treatment BMPs using HSPF or SWMM is infeasible because of limited expertise.	Ventura Co. WPD	The capability to do the modeling for large developments to predict and mitigate adverse water quality impacts exists and is a common practice in the State.	No changes required to address this comment.
Post-Construction Storm Water Mitigation Criteria	The 72-hour drain down requirement eliminates many effective treatment BMPs; a provision should be added to allow for BMPs with permanent pool if mosquito breeding habitat is eliminated. Emphasize the importance of pretreatment.	CONTECH 2-3	The 72 hour drain time for proprietary devices is to avoid standing water pools that may support the breeding of vectors, which is a concern for the California Department of Health.	No changes required to address this comment.

RPAMPs	Develop criteria to assess what level of additional BMPs are needed for redevelopment districts.	LGC 5	The Order Contains an Alternative Post Construction Storm Water Mitigation Programs section that species criteria and requirements for RPAMPs.	Part 5- E. Planning and Land Development Program.
RPAMPs	Provide Permittees 24 months to work with the LGC to develop RPAMP criteria	Ventura	This requirement has been eliminated. The Order Contains an Alternative Post Construction Storm Water Mitigation Programs section that species criteria and requirements for RPAMPs.	Part 5- E. Planning and Land Development Program.
RPAMPs	Consider allowing RPAMPs for <u>new</u> development projects to encourage compact growth that might have a higher impervious area threshold.	LGC 4	The intent of the RPAMP provision is to allow flexibility for redevelopment projects, which have either limited space for or can not implement onsite BMPs. Under most circumstances, appropriate site planning for new development projects allows for compliance with post construction, Hydromodification, and LID requirements due to greater flexibility in placement of onsite controls.	No changes required to address this comment.
RPAMPs	The permits alternative compliance programs are unlawfully vague.	NRDC	The Order contains an Alternative Post Construction Storm Water Mitigation Programs section that species criteria and requirements for RPAMPs.	Part 5- E. Planning and Land Development Program.
Inconsistent with CEQA	There are too many inconsistencies and incompatibility with existing CEQA legislation.	Thousand Oaks A10; Countywide Program 18,B20; BILDF 20-22	The CA Court of Appeal has ruled that the new development requirements in MS4 Permits do not conflict with CEQA ( <i>County of Los Angeles v. California State Water Resources Control Board (2006) Cal. App. LEXIS 1546</i> ,	No changes required to address this comment.

**Item Number 8**

**ITEM SUMMARY**

**Public Hearing to Receive Comments on the  
Tentative Ventura County Municipal Separate Storm Sewer System (MS4) Permit  
May 7, 2009**

**NPDES Permit No. CAS004002**

- Item:** 8
- Subject:** The Reissuance of Waste Discharge Requirements for Municipal Separate Storm Sewer System Discharges, within the Ventura County Watershed Protection District, County of Ventura and the Incorporated Cities Therein.
- Purpose:** A National Pollutant Discharge Elimination System (NPDES) permit is mandated by the Clean Water Act for discharges from MS4 systems. Permit requirements for County and Cities in Ventura County include implementation of best management practices, control of pollutants in storm water discharges to the maximum extent practicable, and compliance with receiving water objectives, and waste load allocations in effective TMDLs.
- The objective of this Board Hearing is to adopt the Tentative permit and discuss critical issues arising from the Tentative Ventura County Municipal Separate Storm Sewer System (MS4) NPDES Discharge Permit. A first draft of the MS4 Permit was issued for comment in December 2006, a second draft MS4 Permit was issued on August 28, 2007, and a third draft Tentative MS4 Permit was issued on April 29, 2008. The current Tentative MS4 Permit is based on comments received on the three previous drafts and was issued for review on February 24, 2009.
- This item is being presented for purpose of adoption of the permit after receiving comment from Permittees, interested parties, and the public.
- Background:** The Ventura County Watershed Protection District (Principal Permittee), County of Ventura, Cities of Camarillo, Fillmore, Moorpark, Ojai, Oxnard, Port Hueneme, San Buenaventura, Santa

Paula, Simi Valley and Thousand Oaks (Permittees) have formed the Ventura Countywide Storm Water Quality Management Program to discharge wastes. The Permittees discharge or contribute to discharges of pollutants in storm water from municipal separate storm sewer systems (MS4s), also called storm drain systems, from the associated Watershed Management Areas into the Ventura River, Santa Clara River, Calleguas Creek, Malibu Creek and Miscellaneous Ventura Coastal waters all within Ventura County and a small area of Los Angeles County.

**Regulatory History:** Storm water discharges from the Ventura County MS4 are presently covered under countywide waste discharge requirements contained in Order No. 00-108, adopted by the California Water Quality Control Board, Los Angeles Region (Regional Water Board) on July 27, 2000, which replaced Order No. 94-082, adopted by the Regional Water Board on August 22, 1994. Order No. 00-108 also serves as a National Pollutant Discharge Elimination System (NPDES) permit for the discharge of municipal storm water.

**Current Status:** The existing permit expired on July 27, 2005 and continues administratively to be in effect until a new permit is reissued. The Permittees filed a Report of Waste Discharge (ROWD), dated January 26, 2005. The Regional Water Board has prepared this Order so that implementation of provisions contained in this Order by Permittees will meet the requirements of the federal NPDES regulations at 40 CFR 122.26.

**Comments Received:** Forty-four comments were received from Permittees, storm water Permittees in Los Angeles County, Non Governmental Organizations (NGOs), US EPA, the Building Industry, US EPA and private citizens. Most comments were submitted electronically and some contained attachments which were technical papers and memoranda regarding Low Impact Development. There were also comments submitted after the deadline which are not included in the Board Package. Some agencies and NGOs submitted several comment letters offering alternative sets of comments and proposals for Board consideration. The background to this unusual situation of multiple comment letters from single stakeholders is described below:

In October, 2008, Regional Board staff initiated a series of meetings between Permittees and other stakeholders to discuss the comments received over the past 2 years on 3 drafts of the Permit dating back to 2007. Key stakeholders, including the NGOs were informed of and invited to these meetings. Attendees at the meeting included Ventura Cities and County staff, NGOs, BIA, the US EPA and

CASQA and the result of these discussions was the Tentative Permit that was release for public comment on February 24, 2009 with a due date for comments of April 10, 2009. The Permittees and NGOs submitted comments on the Tentative Order which are included in the Board package.

At the same time that Regional Board staff were meetings with stakeholders, the NGOs and Ventura County Permittees were in separate, confidential meetings to discuss the permit. At the time when comments were due, the NGOs and Ventura County Permittees reached agreement on several provisions of the Tentative Order developed by Regional Board staff. They had reached agreement on four sections of the permit and proposed an alternative to the staff-developed Tentative Order. The alternative proposal, hereinafter termed "Agreement" was submitted in a comment letter signed by all parties that Board staff ere attended several of the meetings. The same entities had also submitted comment letters individually on the Tentative Order. Thus, there are two sets of comments from most of the Permittees.

A summary of the key issues regarding the Tentative Order are described below, including Land Development, Monitoring, TMDL Implementation, and Construction. Staff also provides a review of the Agreement proposed by Heal the Bay, NRDC, and the Ventura County Permittees.

#### Land Development

Land Development requirements remain one of the most controversial requirements in the Tentative Permit. In brief, since the previous permit was renewed in 2000, there is a growing recognition of the effects of land development on the integrity of watersheds and water quality. In brief, land development generally increases the degree of imperviousness of the land surface which increases the volume of runoff and peak flows to the streams during storm events. Unless unabated, stormwater runoff from urban areas can increase pollutant loading, streambed destabilization, erosion, and habitat destruction. To address these impacts, there is a growing consensus that low-impact development (LID) principles can offset the storm water caused pollution.

The underlying principles of LID are reduction of pollutant load reduction and storm flow to surface waters through infiltration, capture-on-site- for reuse. LID technologies include stormwater detention and reuse, infiltration of captured stormwater, and

biofiltration. US EPA has supported the incorporation of LID principles into stormwater permit and has developed several guidance documents describing implementing technologies and relevant case studies. On a local level, Los Angeles County developed a LID ordinance in 2008.

There is little controversy regarding the merits of LID, the controversy lies in the expression of LID requirements in the permit and how compliance is attained. Staff agrees that with most stakeholders that there is an advantage to using a numeric standard for LID, and several numeric standards are available including Effective Impervious Area (EIA) and volume matching. EIA pertains to the amount of impervious area on a particular site that is contiguous with stormdrain systems or receiving waters. By limiting the EIA of a site, stormwater runoff from the site is reduced. Volume matching attempts to limit the offsite flow of stormwater from a site to the amount of runoff from the site prior to its development. Whichever standard is used in a permit, alternative compliance for sites that cannot feasibly capture or infiltrate sufficient volumes of stormwater is required.

The Tentative Order uses an EIA standard which is favored by NGOs. However, the NGOs commented that the EIA standard has been weakened from the standard that was in previous drafts of the permit. The “weakening” alleged by the NGOs primarily pertains to the alternative compliance options which is a volumetric treatment requirement for sites that cannot capture, infiltrate the volume equivalent to a fixed percentage EIA due to technical infeasibility standards.

Staff disagrees that the Tentative Order was “weakened.” The revisions from the third draft of the permit to the Tentative Order must be considered in whole. The 3<sup>rd</sup> draft of the permit lacked a volumetric sizing component to EIA, meaning that very small buffer strips could be used to “disconnect” pervious areas to adjacent waterbodies and stormdrain inlets. Staff finds that undersized BMPs would be ineffective in disconnecting pervious areas in all but the very smallest storms. The NGOs commented on this critical flaw in the 3<sup>rd</sup> draft, and staff responded by including sizing language for the EIA Standard in the Tentative Order.

The inclusion of the sizing language requires meaningful alternatives to address sites where it is infeasible to infiltrate or capture the required volume of water. In short, staff believes that the range of site conditions through Ventura County to implement the required LID components is unknown and consequently, imposing a fixed

criterion of LID on sites which can demonstrate infeasibility is inappropriate. It appears that the Permittees and the Building Industry support the alternative options for compliance in the Tentative Order, but made suggestions for clarity in the Order.

Staff has revised the Tentative Order in Land Development in light of the suggestions of the NGOs as well as suggestions for greater clarity by the Permittees and US EPA. Some of the changes in the Revised Tentative include changes to the applicability criteria (i.e. which sites are required to implement LID), adding a new finding regarding staff's rationale for using EIA as a LID criterion, requiring Regional Board Executive Officer approval for four critical reports that are required to be developed by Permittees to implement LID, and removal of flexibility for Permittees to alter the requirements for Interim Hydromodification Control because it is not needed. Staff assesses that the Revised Tentative Order for Land Development has greater clarity and oversight by the Regional Board relative to the Tentative Order.

#### Municipal Action Levels

Municipal Action Levels have been a cornerstone of the permit since the first draft. MALs address one of the fundamental concerns of stormwater management nationwide: the lack of numeric metrics for evaluating stormwater program performance. The application of MALs was precedent-setting in the First Draft of the Ventura Permit, and the inclusion of MALs in this Order has been controversial since that time. Two major concerns regarding MALs were the derivation of the numeric values for the chemical constituents, and the language expressing how they were to be used: either as enforceable permit limits or action levels to identify watersheds that require further additional BMPs. As background to these issues, the State Board convened a Blue Ribbon Panel of statewide and nationwide stormwater experts to evaluate the issue of numeric metrics for stormwater discharges. The Blue Ribbon panel concluded that:

The first draft of the permit contained MALs that were expressed as effluent limits at end of pipe monitoring. The first draft MALs were calculated based on a national dataset of stormwater data compiled by the University of Alabama under US EPA sponsorship. A statistical analysis of the data was used to derive the numeric values of 16 constituents. Permittees argued that a nationwide data set was not applicable to Mediterranean climates such as Ventura County and that it was inappropriate to set effluent limits in the absence of effluent data from the Ventura MS4 system.

The second and third drafts generally revised the statistical analysis and values of MALs so that they were less stringent, but they were still set as enforceable limits. The Permittees retained the same views on the MALs whereas the NGOs commented that the MALs were becoming less relevant because they had been “weakened.”

The Tentative Permit retained MALs but limited the number of constituents and used a subset of the National Data Set because the Ventura dataset is a relatively small data set that may not be “statistically significant.” Also, the use of industrial and agricultural chemicals in the county could potentially bias the data set to yield meaningless values. The Tentative Permit also has been revised to indicate that MALs will be used to identify areas requiring additional BMPs and the mechanism for implementing these BMPs into the stormwater programs. The Tentative Permit also clarifies that MALs are one component of evaluation of MEP and provides a mechanism to revise the numeric values by the Executive Officer as more data become available.

Most Permittees and stakeholders support MALs as being in line with the Blue Ribbon Panel, except for the NGOs. In general, the comments from NGOs are that the MALs are no longer useful and violate the standards for MEP. Specific responses to comments are provided in the response to comments, but generally staff feels that the MALs remain a cornerstone of the Tentative Order and the updated Ventura Stormwater program. First, they are one of the first metrics to be applied to effluent from MS4 systems nationwide. Second, they provide a numeric metric to drive implementation of performance based BMPs to reduce contaminant loads from the MS4. Third, they allow prioritization of BMP for best use of public resources to reduce waste loading. Fourth, and perhaps most importantly, the Tentative Order they can be revised by the Executive Officer as additional data become available so that they remain a practical indicator or areas that need attention for stormwater BMPs. For these reasons, staff has not made revisions to the MAL section of the Tentative Order that was released for public review.

### Monitoring

The focus of the existing stormwater monitoring program is on “mass emission” sites that are located in receiving waters in the three major watersheds: Ventura River, Santa Clara River, and Calleguas Creek. The data from these stations were useful in identifying contaminants of concern, but they yielded little information on the pollutant loadings from the stormwater system or the effectiveness of

the stormwater program. Although there have been several TMDLs established in Ventura County, the monitoring programs for these TMDLs is also receiving water based.

The Tentative Order requires monitoring of "representative" outfalls; one of the first permits in the state to monitor throughout the MS4 system. Permittees and Regional Board staff worked on identifying representative outfalls for each Permittee for a total of eleven outfalls throughout the county. The eleven outfalls will be monitored in both wet and dry weather to determine the pollutant loading from the MS4 from urban runoff as well as stormwater.

The tentative Permit also includes Bioassessment monitoring and beach monitoring for bacteria. Bioassessment monitoring is in accordance with a protocol developed by SCCWRP for all of southern California and includes rotating sites to characterize the greatest number of watersheds over a five year period. All southern California regional Boards are participating in the SCCWRP program. In order to also determine whether habitats are improving or deteriorating, the Tentative Permit includes a fixed site in each of the three major Ventura County watersheds.

The major comment regarding the monitoring program is from the NGOs who note that the monitoring program is insufficient number of sites and that Beach monitoring should be conducted year-round directly in front of stormdrains as in Los Angeles County. Staff notes that the current AB 411 sampling addresses monitoring during the dry season and that monitoring is currently conducted at locations determined by the County to be representative of the different beaches. Staff notes that a requirement for year round monitoring is duplicative of monitoring other programs and should only be conducted in the dry season.

Staff notes that one of the largest resource components for the stormwater program is monitoring costs, and the monitoring requirements associated with this permit are significantly greater than the costs associated with the existing permit. The new information required by the Revised Tentative Order will be able to address many of the unanswered questions regarding pollutant loading from the MS4 and its effect on water quality and stream habitat integrity.

### Total Maximum Daily Loads

Federal Regulations require that Wasteload allocations from established Total Maximum Daily Loads (TMDLs) are included in NPDES permits. Most of the TMDLs in Ventura County have compliance provisions that are part of the TMDL Implementation Plan that is established as a Basin Plan Amendment. The provisions for each established TMDL are summarized in the permit.

US EPA, NGOs, and Permittees commented on this issue. The major comment by the NGOs is that all of the relevant, established TMDLs pertaining to Ventura County need to be included in the permit. Staff agrees and has added five more TMDLs to the Revised Tentative Order.

EPA suggested additional language is needed as a prelude to the entire TMDL section of the permit. NGOs commented that the TMDLs must be implemented into the permit as enforceable, and Permittees commented that the Tentative Order expressed the TMDLs appropriately. In response to these comments, Staff has added a sentence in the TMDL section that states:

“The Permittees shall comply with the following Wasteload Allocations consistent with the assumptions and requirements of the Wasteload Allocations as documented in the Implementation Plans, including Compliance Schedules, associated with the State adoption and approval of the TMDL at compliance monitoring points established in each TMDL (40CFR122.44(d)(1)(vii)(B).”

Staff assesses this sentence provides the clarity requested by Stakeholders.

### Development Construction Program

Mitigation of impacts during construction has been a controversial issue from the First Draft through the third draft of the Permit. Those drafts sought to mitigate the significant impacts to waters from erosion during significant storm events by restricting construction during the rainy season subject to several permit restrictions. This approach was mostly interpreted as a construction ban by Permittees and the building industry that would cause significant economic harm to Ventura County and was opposed vehemently.

During the time that the draft permits were under development, the State Water Quality Control Board was developing the general construction permit. The approach taken in that permit to account for increased sediment loads during precipitation event is one of “enhanced BMPs”, including check dams and sediment basins when necessary. That approach has been included in the Tentative Permit and there have been no significant comments from stakeholders on this issue.

#### NGO-Ventura County Permittees’ Agreement

In addition to individual comment letters. Heal the Bay (“HTB”) and the Natural Resources Defense Council (“NRDC”), three cities within Ventura County and the Ventura County Department of Public Works (“Ventura County Permittees”) submitted a consensus proposal (referred to throughout this summary as the “Agreement”) to revise four sections of the Tentative Permit: Land Development, Municipal Action Levels, Monitoring, and BMP Performance. The Agreement is presented as a “package,” and as stated plainly in the document “if the Board were to eliminate or alter the approach...the signatories would no longer be bound by terms of the agreement. In that scenario, [the] individual positions on the matters ... would thus remain intact as detailed in [the] respective comment letters.”

Staff’s comments on each of the provisions of the Agreement are presented below. In addition, staff provides observations on the process under which the Agreement was developed and the policy under which the Board is being asked to consider it.

#### Tentative Order and Agreement Development Processes

The Agreement was developed in an exclusive series of meetings between the Parties who signed onto the Agreement. Staff notes that it is not clear as to which municipalities and agencies are parties to the Agreement. The Agreement states that the parties are Ventura County Stormwater Permittees, but only three of the eleven municipalities that are permittees signed the Agreement. It is unclear as to whether the Agreement represents the view of all of the Permittees. Staff notes that the process under which the Agreement was fashioned was open only to Ventura County stakeholders and HTB and NRDC. Staff requested several times to meet the HTB-NRDC technical expert and was denied this opportunity. Staff understands that other stakeholders requested to be part of the process and were also denied access.

In contrast, the Board conducted an open process and circulated three drafts on which comments were solicited, held two Board workshops at which the Board heard testimony, a 2-day roundtable with Board staff that was open to stakeholders, and a series of eight open meetings to which all key stakeholders provided input that the Board staff considered in the permit drafts. The development of the Tentative Order benefited from the meaningful input from widespread interests that was carefully considered by Staff in developing the Tentative Order. Specifically, Board Staff's process benefited from program and technical experts from all of the Ventura County cities, statewide agencies, interested stakeholder groups such as BIA, discussions with Senior Stormwater staff at other Regional Boards, the State Board, and the US EPA. They all provided input on the feasibility and effectiveness of the various requirements of the permit. The result is a permit that is reasonable, effective, and will clearly advance the quality of stormwater discharges to waterbodies through Ventura County.

#### Land Development

Although both the Agreement and the Tentative Order use a numeric metric of 5% EIA sized to an 85<sup>th</sup> percentile-24 hour storm, there is a fundamental difference in how EIA can be achieved. The Agreement mandates that EIA can only be achieved by technologies that infiltrate, store or retain stormwater on site; the Tentative Order allows biofiltration in addition to technologies that infiltrate, store or retain stormwater. Biofiltration allows some off-site release of stormwater after it is treated on site.

Both the Agreement and Tentative Order allow alternatives for complying with the EIA limit on sites where it is infeasible to attain the 5% EIA limit. The alternatives include off site mitigation and payment into a "in lieu" fund. However, on sites where it is infeasible to retain the volume of stormwater required by a 5% EIA limit, the Agreement prescribes the volume that the volume retained or infiltrated on site must meet the volume prescribed by a 30% EIA standard. The Agreement further requires off-site mitigation or payment of in lieu fees for the difference in volume between the 30% and 5 % EIA limits. The Agreement prescribes a detailed list of criteria for determining infeasibility, whereas the Tentative Order allows the Permittees to determine infeasibility.

The Agreement is focused on maximizing the retention or infiltration of stormwater onsite and limits the flow that can be released from the site, whereas the Tentative Order allows flows that mimic the predevelopment hydrology, if they are treated for water quality

before release. This difference between the Agreement and Tentative Order is that under the Agreement, more stormwater will be retained on site with a strict limitation as to the amount to be discharged into the surface waters of Ventura County. The potential environmental effects of reduced flow on impacts to aquatic and riparian habitats might be significant and have not been analyzed. California Fish and Game staff have contacted Board staff by phone inquiring about this provision of the Agreement and expressed concerns about habitat destruction from this requirement. Further, potential health and safety effects from ponded water that may accumulate on site have also not been analyzed. A further effect from eliminating biofiltration as a potential BMP is that the Agreement may increase pollutant loading to the groundwater, as biofiltration is the only technology prescribed for LID that reduces pollutant loading. By limiting BMPs to infiltration and storage, greater pollutant loads are likely to be transferred to groundwater. The Tentative Order provides important alternatives so that these reasonably potential effects can be mitigated.

Staff also have specific technical concerns regarding the Agreement's Land Development provisions: (1) the list of criteria for justifying infeasibility appears to lack the most important criteria for determining the feasibility of infiltration and retention on site: site slope and soil conductivity. Other criteria lack requisite specificity to be useful in regulating water quality. For example, the criterion "...where pollution mobilization is a documented concern" can be problematic. Oftentimes, there is significant dispute at sites with known pollution regarding whether the pollution can be mobilized. (2) the Agreement's criterion "locations where seasonal high groundwater is within 5 feet of the surface"; Staff finds the minimum requirement of 5 feet separation between groundwater and the surface may be highly inadequate to protect groundwater resources from pollutant loading by infiltrated stormwater (3) the Agreement's language for the land development portion of the Tentative Order requires that the entire Land Development section of the Tentative Order be replaced "wholly." The whole replacement of the Land Development section of the Tentative Permit would remove any requirements for hydromodification protection of creeks, streams and rivers of Ventura County that the Tentative Order provides. (4) The Agreement has not been finalized in that the provision for Timing and Reporting Requirements of Offsite Mitigation Projects contains a comment that "The NGOs and permittees did not reach consensus on this number" ...number of years that will be permitted for completing mitigation projects. (5) There is no provision for Regional Board approval of key plans that will be developed by the Permittees which effectively strips the

Regional Board of one of its important regulatory tools (plan approval) for protecting and restoring the Region's waters.

For these reasons, staff cannot recommend that Attachment A of the Agreement wholly replace the Low Impact Development (LID) – Tentative Order, Section E. III. New Development/Redevelopment Performance Criteria

#### Municipal Action Levels

The Agreement requests that the Regional Board eliminate entirely from the Tentative Order all of Part 2, Municipal Action Levels. According to the Agreement, HTB and NRDC have agreed that, given their opinion of the weaknesses of the MALs in the Tentative Order, they will not object to the removal of MALs.

MALs have been an important element of Tentative Order and the previous drafts of the Ventura MS4 Permit. With the growing nationwide controversy regarding the performance of the stormwater program, there is a growing recognition of the need for numeric metrics to evaluate the effectiveness of stormwater programs. Municipal Action Levels are numeric benchmarks which are used to evaluate the MS4 effluent quality. In the existing permit, as in most MS4 programs, evaluations of the MS4 systems are based on receiving water quality, rather than end of pipe data. It is difficult to determine the pollutant loading from the MS4 system from receiving water data.

MALs have evolved from the first draft when they were expressed as effluent limits that were to be applied to the end-of-pipe, i.e. Permittees could be fined for exceedances of the MALs. Due to a number of factors, including the variability of stormwater, the regulatory scheme of applying numeric values as effluent limits has not been promoted by US EPA or the State Board at this time. Federal regulations support a regulatory scheme that is based on BMP implementation to achieve a standard of Maximum Extent Practicable ("MEP"). It is important to note that this Board has the discretion to go beyond MEP should it find necessary to achieve water quality.

In recent years, the subject of how these numeric metrics were to be expressed in MS4 permits was the subject of an intense debate nationwide. The State Water Resources Control Board convened a panel of experts to evaluate this issue ("Blue Ribbon Panel" or "Panel"). In 2006, the Panel released its report which stated that numeric metrics were appropriate as action levels for municipal

discharges, but not as effluent limits. The key to the rationale of the Blue Ribbon Panel's recommendation is that stormwater programs have been characterized by a lack of data characterizing stormwater quality at the "end-of-pipe." This data gap did not allow the development of numeric values that could be used for enforceable effluent limits. However, the Blue Ribbon Panel stated that, used as action levels: to identify areas and drainages that require additional BMPs, MALs could be useful in the implementation of a stormwater program.

The Tentative Order incorporates MALs in accordance with the Blue Ribbon Panel Recommendations. MALs can be very useful in identifying areas that require additional BMPs. Through the extensive stakeholder meetings Board Staff conducted, MALs were developed that are contained in the Tentative Permit. Thus, from the first draft of the permit to the Tentative Order, MALs have changed from being expressed as effluent limits to being expressed as benchmarks for taking action to implement additional BMPs. HTB and NRDC have argued that MALs that are used as action levels are substantially weaker than the MALs in the previous drafts.

Staff disagrees with the HTB and NRDC position and finds that the HTB and NRDC analysis of the MALs is critically flawed. In their draft comment letter, HTB and NRDC compare the MAL values to values in the CTR values and note that the MAL values are a 10 to 100 times greater than the CTR values. What is missing from the HTB and NRDC comment letter is the fact that MALs and CTR levels are based on two different criteria; they cannot be properly compared to each other: MALs are based on the total concentration of the constituent in water whereas the CTR values are based on dissolved concentration of those constituents in water. Because many pollutants associated with stormwater appear as particulates, the total concentrations typically greatly exceed the dissolved concentrations. Staff finds that the MAL values are far more equivalent to the CTR values than the discrepancy mischaracterized by HTB and NRDC.

HTB and NRDC's flawed analysis of MALs underlies the misguided Agreement condition for removing them from the Tentative Order. Staff maintains that the MALs will provide critical information on how to best expend the resources necessary to improve water quality. Staff also notes that the Tentative Order is one of the first MS4 permits nationwide to incorporate MALs coupled with one of the first MS4 monitoring programs that includes representative end of pipe monitoring. Staff believes that MALs will add an objective

measure to the Ventura County stormwater permit implement watershed-wide and effective BMPs.

### Monitoring

The Agreement proposes to replace the current monitoring program of the Tentative Order with a different Beach Monitoring Program. The Tentative Order Program Beach Monitoring program was developed in consideration of the loss of State funding through AB 411 for monitoring beaches during the winter months. The Tentative Order requires Beach Monitoring at the 10 sites currently monitored under AB 411 during seasons when the AB 411 program is inoperative. The Tentative Order also specifies that sampling be in accordance with the procedures used in the AB 411 program. The Agreement requires year round monitoring with monitoring protocols used for Beach monitoring in Los Angeles County. The key difference in the monitoring protocol required by the Agreement is that the samples are collected directly in front of storm drains or streams at ankle depth. Conversely, the Tentative Order states that the existing AB 411 locations are maintained.

Staff finds that both protocols provide different advantages: the Tentative Order would maintain the historical record that has been established at Ventura County beaches, whereas the Agreement comports the Ventura procedures with beach monitoring in Los Angeles County. However, staff understands that AB 411 monitoring will be conducted in the summer months, so the year-round monitoring in the Agreement appears to be duplicative, and therefore a wasteful expenditure of public monies. However, staff has revised the Tentative Order to allow the Permittees to request and the Executive Officer to approve a change in the monitoring locations.

### BMP Performance

The Agreement supports the use of BMP performance criteria currently in the Tentative Order, but requires the use of a sizing standard to those criteria. This issue was submitted separately in a letter from HTB, and staff agrees with this comment: the issue is incorporated in the Revised Tentative Permit. Thus, there is little difference between the Agreement and the Revised Tentative Order before the Board.

### Staff Conclusion on NGO-Ventura County Permittees' Agreement

Staff appreciates the opportunity to provide comments on the policy implications of adopting a permit that is the result of closed meetings between the Permittees and two stakeholders. Staff respectfully believes that this is contrary to the mission of the Board, the requirements of the Porter Cologne Act under which the Board derives its authorities, and more than 50 years of water quality protection in an open and inclusive process in the Los Angeles Region. A protocol in which Permittees and stakeholders draft permits without the input of Board staff establishes a precipitous precedent.

#### **Conclusion:**

The Revised Tentative Ventura County MS4 permit fully incorporates the Water Boards mission "to preserve, enhance and restore the quality of California's water resources, and ensure their proper allocation and efficient use for the benefit of present and future generations." To restore water bodies to their highest beneficial use or potential beneficial use, the permit includes Total Maximum Daily Loads (TMDL) provisions for storm water. The Planning and Land Development Program of this permit includes Hydromodification Control and Low Impact Development (LID) provisions and the Development Construction Program includes Best Management Practices (BMPs) during the wet season that are intended to prevent water quality and habitat degradation. The permit provides clarity and certainty in compliance expectation by identifying default BMPs measures for construction and industry, and defining the maximum extent practicable" (MEP) criterion.

The MS4 monitoring program has been expanded to assess compliance with effluent limitations and water quality objectives by requiring end-of-pipe monitoring of MS4 major outfalls with aquatic toxicity monitoring. Several studies to assess the chemical, physical, and biological impacts of receiving waters resulting from storm water discharges have been incorporated into the MS4 monitoring program. These studies include: a Pyrethroid insecticide study to establish baseline data for major watersheds, development of hydromodification control tools to predict and mitigate adverse impacts, low impact development implementation to document the effectiveness of its techniques, and participation in the Southern California Bight Project to assess the ecological disturbances and conditions of regional waters.

**Alternatives:**

- I. Adopt the Revised Tentative Order as proposed by Staff
- II. Modify and adopt the Revised Tentative Order as a result of a logical outgrowth from comments the Hearing
- III. Adopt the Agreement proposed by NGOs and Ventura County Permittees
- IV. No action

**Recommendation:**

Staff proposes that the Regional Board adopt the Tentative Ventura County MS4 permit as proposed by Staff.

STATE OF CALIFORNIA  
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD  
LOS ANGELES REGION

ORDER 08-xxx  
NPDES PERMIT NO. CAS004002  
WASTE DISCHARGE REQUIREMENTS  
FOR

STORM WATER DISCHARGES FROM THE MUNICIPAL SEPARATE STORM  
SEWER SYSTEM WITHIN THE VENTURA COUNTY WATERSHED PROTECTION  
DISTRICT, COUNTY OF VENTURA AND THE INCORPORATED CITIES THEREIN

FINDINGS

The California Regional Water Quality Control Board, Los Angeles Region (hereinafter called Regional Water Board), finds that:

A. **Permit Parties and History**

1. Ventura County Watershed Protection District (Principal Permittee), County of Ventura, cities of Camarillo, Fillmore, Moorpark, Ojai, Oxnard, Port Hueneme, San Buenaventura (Ventura), Santa Paula, Simi Valley and Thousand Oaks (hereinafter referred to separately as Permittees) have joined together to form the Ventura Countywide Storm Water Quality Management Program to discharge wastes. The Permittees discharge or contribute to discharges of storm water and non-storm water from municipal separate storm sewer systems (MS4s), also called storm drain systems, into the Watershed Management Areas of Ventura River, Santa Clara River, Calleguas Creek, Malibu Creek and Miscellaneous Ventura Coastal all within Ventura County and Los Angeles County (see Attachment "A").
2. Prior to the issuance of this permit, storm water discharges from the Ventura County MS4 were covered under the countywide waste discharge requirements contained in Order No. 00-108, adopted by the Regional Water Board on July 27, 2000, which replaced Order No. 94-082, adopted by the Regional Water Board on August 22, 1994. Order No. 00-108 also served as a National Pollutant Discharge Elimination System (NPDES) permit for the discharge of municipal storm water.
3. The Ventura County Board of Supervisors approved the concept of a countywide NPDES permit program and the use of the Flood Management District (presently the Watershed Protection District) benefit assessment authority to finance it on April 14, 1992. On June 30, 1992, the Ventura County Board of Supervisors adopted a benefit assessment levy for storm water and flood management in the unincorporated areas of Ventura County and the cities within the County, to be used in part to finance the implementation of a countywide NPDES municipal storm water

permit program. The Ventura County MS4 Permittees have entered into an agreement with the Watershed Protection District to finance the activities related to the Ventura County MS4 Permit for shared and district wide expenses. The Permittees are also given the option to use the Benefit Assessment Program to finance their respective activities related to reducing the discharge of storm water pollutants under the MS4 Permit.

- 4. The Regional Water Board may require a separate NPDES permit for any entity that discharges storm water into the watersheds of Ventura County. Such an entity can be any State or Federal facility, special district or other public or private party.

**B. Nature of Discharge**

- 1. Storm water discharges consist of surface water runoff generated from various land uses in all the hydrologic drainage basins, which discharge into Waters of the State. The quality of these discharges varies and is affected by geology, land use, season, hydrology, and sequence and duration of hydrologic events. Based on the Ventura Countywide Storm Water Monitoring Program's Water Quality Monitoring Reports which were required under Order No. 00-108, the dry weather and wet weather Pollutants of Concern (POC) in urban stormwater include an anion, bacteria, conventional pollutants, metals, a nutrient, organic compounds, and pesticides. The POC are identified in Attachment "B" of this Order. Many of the POC listed are causing impairments identified on the federal Clean Water Act (CWA) § 303(d) list of impaired waterbodies.

The State Water Board submits a report (a list of water quality limited segments (§ 303[d] list)) on the State's water quality to the U.S. EPA pursuant to § 305(b) of the 1972 CWA, and Title 40, CFR 130.7, every 2 years. The Report provides water quality information to the general public and serves as the basis for the U.S. EPA's National Water Quality Inventory Report to Congress. Section 303(d) requires that all waters that are not attaining standards after the implementation of those controls required by 1977, shall be included on the list. Title 40 CFR 130.7(b)(3) defines "water quality standard applicable to such waters" as "those water quality standards established under § 303 of the Clean Water Act, including numeric criteria, narrative criteria, waterbody uses, and antidegradation requirements."

- 2. Common pollutants in urban storm water and their respective sources are: bacteria from animal droppings and illegal discharges; Polycyclic Aromatic Hydrocarbons (PAHs) from the products of internal combustion engine operation and parking lot sealants wash off; nitrates from fertilizer application; pesticides from pest mitigating applications and from plant mitigating applications; bis (2-ethylhexyl) phthalate from the break down of plastic products; mercury from atmospheric fallout and improper disposal of mercury switches; lead from fuels, paints and automotive parts; copper

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

from brake pad wear and roofing materials, zinc from tire wear and galvanized sheeting and fencing; sediment from land disturbance and erosion; trash and dioxins as products of combustion.

- 3. In general, the pollutants that are found in municipal storm water runoff can harm human health and aquatic ecosystems. In addition, the high volumes and high velocities of storm water discharged from MS4s into receiving waters can adversely impact aquatic ecosystems and stream habitat and cause stream bank erosion and physical modifications. These changes are collectively termed hydromodification. Municipal point source discharges of runoff from urbanized areas remain a leading cause of impairment of surface waters in California.
- 4. Ammonia as Nitrogen, and Nitrate plus Nitrite as Nitrogen are biostimulatory substances that can cause or contribute to eutrophic effects such as low dissolved oxygen and algae growth impairing warm freshwater and wildlife habitats. Ammonia is highly toxic to fish and other aquatic life. Excessive ammonia can cause aquatic life toxicity.
- 5. Elevated bacterial indicator densities impair the water contact recreation (REC-1) beneficial use at beaches, creeks, estuaries, lagoons, and marinas. Swimming in waters with elevated bacterial indicator densities has been associated with adverse health effects. Specifically, local and national epidemiological studies indicate that there is a causal relationship between adverse health effects and recreational water quality, as measured by bacterial indicator densities (*REFERENCE?*). Sources of elevated bacteria to marine and fresh waters may also include illegal discharges from improperly maintained standard septic systems, onsite wastewater treatment systems (OWTS) and illicit discharges from private drains.
- 6. Pesticides are substances used to prevent, destroy, repel or mitigate pests such as insects, weeds, and microorganisms. Their effects can be direct (e.g. fish die from exposure to a pesticide entering waterways, or birds do not reproduce after ingesting contaminated fish), or indirect (a hawk becomes sick from eating a mouse dying from pesticide poisoning). Pesticide categories include: Organochlorine, Organophosphorus, Organophosphate, and Pyrethroid.
- 7. Polychlorinated Biphenyls (PCBs) are a subset of the synthetic organic chemicals known as chlorinated hydrocarbons. Concern over PCBs toxicity, persistence (chemical stability) in the environment and bioconcentration in aquatic organisms has led to prohibitions on PCBs.
- 8. Rising groundwater and swimming pool water have been found to be sources of pollutants such as salts (chloride). Salts increase the salinity of otherwise freshwater systems and disrupt physiological processes. The Regional Water Board has

waterbodies listed on the CWA § 303(d) list for impairment due to salts and has adopted Basin Plan amendments to include Total Maximum Daily Loads (TMDLs) for salts. This Order includes provisions to control the discharges from these activities in order to directly or indirectly reduce or eliminate the discharge of salts to fresh water systems where salts may impair water quality and beneficial uses.

- 9. Trash and debris are pervasive pollutants which accumulate in streams, rivers, bays, and ocean beaches throughout Southern California. They pose a serious threat to our oceans and coasts, navigation, biological resources, recreation, human health and safety, aesthetics, and economies.
- 10. Municipal storm water (wet weather) and non-storm water (dry weather) discharges may contain pollutants that cause or threaten to cause an exceedance of the water quality standards, as outlined in the Los Angeles Region's Basin Plan. Wet weather and dry weather discharges from the MS4 are subject to conditions and requirements established in the Basin Plan for point source discharges. Discharges from the MS4 may not cause or contribute to exceedances of water quality standards.
- 11. Biological communities act to integrate the effects of water quality conditions in a stream by responding with changes in their population abundances and species composition over time. These populations are sensitive to multiple aspects of water and habitat quality, and provide expressions of ecological health easier to understand than the results of chemical and toxicity tests. Biological assessments and criteria address the cumulative impacts of all stressors, especially habitat degradation, and chemical contamination, which result in a loss of biological diversity. Biological information can help provide an ecologically based assessment of the status of a waterbody. Bioassessment is a cost-effective tool and protocol for assessing the biological and physical habitat conditions of streams and rivers for evaluation of the overall health of a watershed. The Principal Permittee consents to participate in the Southern California Storm Water Monitoring Coalition (SMC) Southern California Regional Bioassessment Monitoring Program.
- 12. The increased volume, increased velocity, and discharge duration of storm water runoff from developed areas has the potential to accelerate downstream erosion and impair stream habitat in natural drainages. Studies have demonstrated a direct correlation between the degree of imperviousness of an area and the degradation of its receiving waters (*Managing Runoff to Protect Natural Streams: The Latest Development on Investigation and Management of Hydromodification in California*; Stein, E. et al, December 2005; *Effect of Increase in Peak Flows and Imperviousness on the Morphology of Southern California Streams*; Coleman, D., April 2005). Significant declines in the biological integrity and physical habitat of streams and other receiving waters have been found to occur with as little as 3-10 percent conversion from natural to impervious surfaces in a subwatershed. Percentage

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

impervious cover is a one indicator and predictor of potential water quality degradation expected from a new development.

13. Studies indicate that facilities with paved surfaces subject to frequent motor vehicular traffic (such as: strip malls, parking lots, commercial business parks, and fast food restaurants), or facilities that perform vehicle repair, maintenance, or fueling (automotive service facilities) are potential sources of POC in storm water (*California Stormwater Quality Association, Stormwater Best Management Practice Handbook, Municipal, January 2003*).
14. Retail Gasoline Outlets (RGOs) are points of convergence for vehicular traffic and are similar to parking lots and urban roads. Studies indicate that storm water discharges from RGOs have high concentrations of hydrocarbons and heavy metals (*California Stormwater Quality Association, Stormwater Best Management Practice Handbook, Municipal, January 2003*).
15. The industries and businesses listed in this Order that are to be inspected by Permittees have the potential to discharge contaminated storm water into the MS4. This storm water is an environmental threat because it can adversely impact public health and safety, and the quality of receiving waters. For example, pretreatment program compliance inspections and audits performed in the Los Angeles and Ventura Counties indicate that automotive service and food service facilities sometimes discharge polluted storm water to the MS4s. The POC in such wash waters include oil and grease, toxic chemicals, and food waste. Spills from clogged sanitary sewer lines have a high likelihood to reach the receiving waters via MS4s. Overall, the most common POC identified in storm water discharge to the MS4s are: (i) heavy metals, (ii) oil and grease/ PAHs, (iii) sediments, (iv) oxygen demanding substances, (v) litter/ trash/ debris, (vi) nutrients, (vii) other toxic materials, such as pesticides. Municipal storm water monitoring data and industrial storm water monitoring data indicate that industrial and commercial sites continue to contribute significant quantities of pollutants in storm water runoff.
16. Development and urbanization increase pollutant loads, volume, and discharge velocity. First, natural vegetated pervious ground cover is converted to impervious surfaces (paved) such as highways, streets, rooftops and parking lots. Natural vegetated soil can both absorb rainwater and remove pollutants providing an effective natural purification process. In contrast, impervious surfaces (such as pavement and concrete) can neither absorb water nor remove pollutants, and thus the natural purification characteristics are lost. Second, urban development creates new pollution sources as the increased density of human population brings proportionately higher levels of vehicle emissions, vehicle maintenance wastes, municipal sewage waste, pesticides, household hazardous wastes, pet wastes, trash, and other anthropogenic pollutants. Development and urbanization especially threaten environmentally

E

sensitive areas. Such areas have a much lower capacity to withstand pollutant shocks than might be acceptable in the general circumstance. In essence, development that is ordinarily insignificant in its impact on the environment may become significant in a particularly sensitive environment. These environmentally sensitive areas (ESAs) designated by the State in the Ventura County watershed are defined in Part 7 (Definitions).

- 17. The implementation of Low Impact Development (LID) techniques across the United States and Canada has demonstrated that the proper implementation of LID techniques not only results in water quality protection benefits and in a reduction of the cost of land development and construction but also bears other positive attributes that go beyond economic benefits such as enhanced property values, improved habitat, aesthetic amenities, and improved quality of life. Reducing Stormwater Costs through Low Impact Development (LID) Strategies and Practices, USEPA Doc No. EPA 841-F-07-006, December 2007. Further, properly implemented LID techniques reduce the volume of runoff leaving a newly developed or re-developed area thereby lowering the peak rate of runoff, and thus minimizing the adverse affects of hydromodification on stream habitat. A Review of Low Impact Development Policies: Removing Institutional Barriers to Adoption, Low Impact Development Center and State of California, State Water Resources Control Board, December 2007. The requirements of this Order facilitate the implementation of LID strategies to protect water quality, reduce runoff volume, and to benefit from these additional enhancements.
- 18. The Regional Water Board adopted a Conditional Waiver of Waste Discharge Requirements for Discharges from Irrigated Lands (Order No. R4-2005-0080) on November 3, 2005. The objective of the program is to monitor runoff from irrigated agriculture facilities in the coastal watersheds of Ventura and Los Angeles Counties. The Basin Plan, which designates beneficial uses and establishes water quality objectives for the Region, recognizes that agricultural activities can generate pollutants such as sediment, pesticides, and nutrients that upon discharge to receiving water, can degrade water quality and impair beneficial uses. A category identified by the Conditional Waiver as a source of pollutants is nursery operations. This Order includes requirements for the municipal operator to confirm that nursery operators implement pollutant reduction and control measures with the objective of reducing pollutants in storm water runoff discharges.
- 19. Staff finds there is a growing acceptance by stormwater professionals to integrate LID principles into stormwater management programs and MS4 permits. However, there remains significant controversy regarding the appropriate requirements and metrics for LID. At the heart of this controversy is a dispute regarding the feasibility and effectiveness of requiring a fixed volume of stormwater to be captured and retained onsite for infiltration, reuse, and evapotranspiration, as opposed to permitting a

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

portion of the stormwater to be released off site after it is treated, when it is infeasible to retain the required stormwater on site due to site specific conditions.

Staff has reviewed extensive technical literature regarding this issue (e.g. R. Horner, *Investigation of the Feasibility and Benefits of Low-Impact Site Design Practices ("LID") for Ventura County* (February 2007); E. Strecker, A. Poresky, D. Christsen, *Memorandum: Rainwater Harvesting and Reuse Scenarios and Cost Consideration*, (April, 2009). Staff finds that there is consensus in the technical community that site conditions and the type of development can limit the feasibility of retaining, infiltrating, and reusing stormwater at sites due to a variety of site specific conditions. Factors that affect the feasibility of a fixed volume capture standard include, but are not limited to: soils infiltration capacity, subsurface pollution, and locations in urban core centers.

Regarding the effects of capturing a fixed stormwater volume on site, Staff finds the fixed volume approach may be ignoring basic hydrological principles that relate the feasible infiltration volume to the infiltration capacity of local soils. Requirements to capture a fixed volume on site could disturb the natural water balance and lead to unintended engineering and hydrologic consequences. For example, a typical hydrological condition in Ventura County is one of successive storms during the winter which may exceed the stormwater capacity that can be retained on site. This may result in ponded water on site with attendant health and safety risks, saturation of the near surface soils, and reduction of water resources in Regional waterbodies. These effects could damage site structures, increase groundwater pollution by forcing enhanced pollution spreading, or destroy aquatic habitat. Staff finds these reasonably potential effects are not well evaluated scientifically. Finally, staff cannot find that a fixed retention volume versus a standard that attempts to release surface flows at a predevelopment level would result in a greater reduction of stormwater pollution.

20. Research conducted on the contribution of aerial deposition of trace heavy metals in Los Angeles County watersheds indicates that dry indirect deposition may account for a significant load of pollutants into surface waters. Similar patterns of aerial deposition likely occur in Ventura County. Of the atmospherically deposited pollutants on the watersheds, ten to twenty percent may account for the total load for copper, zinc, nickel, lead, and chromium to the waterbodies. Land reservoirs and sequestration may account for the remaining eighty to ninety percent of the atmospherically deposited pollutants on the watersheds. Emissions of semi-volatile organics such as polycyclic aromatic hydrocarbons (PAHs) and pesticides and their subsequent deposition may contribute to the contamination of receiving waters but appear to be less significant. The remaining percentage is stored in land reservoirs and eventually shows up in receiving waters.

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

1. The essential components of the Storm Water Management Program, as required by the Code of Federal Regulations (CFR) [40 CFR122.26(d)] are:
  - (a) Adequate Legal Authority.
  - (b) Fiscal Resources.
  - (c) Storm Water Quality Management Program (SMP)
    - (1) Public Information and Participation Program
    - (2) Industrial/ Commercial Facilities Program
    - (3) Planning and Land Development Program
    - (4) Development Construction Program
    - (5) Public Agency Activities Program
    - (6) Illicit Connection and Illicit Discharges Elimination Program
  - (d) Reporting Program (Monitoring Report and Program Report)
  
2. The Ventura County SMP, dated November 2001 (revision 2) identifies seven program areas, which are listed below and were previously approved under Board Order No. 00-108. For purposes of consistency, they are titled as follows:
  - (a) Ventura County SMP.
    - (1) Program Management
    - (2) Programs for Residents
    - (3) Programs for Industrial/ Commercial Businesses
    - (4) Programs for Planning and Land Development
    - (5) Programs for Construction Sites
    - (6) Programs for Public Agency Activities
    - (7) Programs for Illicit Connections/ Illegal Discharges
  - (b) For purposes of region-wide consistency, the program titles are revised and consolidated into the six areas listed in the preceding C.1(c). All Permittee storm water documents submitted to the Regional Water Board are to follow the organization enumerated in C.1(c).
  
3. The Permittees filed a Report of Waste Discharge (ROWD), dated January 26, 2005. The Permittees applied for renewal of their waste discharge requirements for a 5-year period, which serves as an NPDES permit to discharge wastes to surface waters.
  
4. The Regional Water Board reviewed the ROWD and determined it to be partially complete under the reapplication policy for MS4s issued by the United States Environmental Protection Agency (U.S. EPA) (61 Fed. Reg. 41697). The Regional Water Board has prepared this Order so that implementation of provisions contained in this Order by Permittees will meet the requirements of the federal NPDES regulations at 40 CFR122.26.
  
5. The Permittees ROWD contained a proposed Storm Water Management Program and a Monitoring Program to be considered by the Regional Water Board for

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

incorporation into an MS4 NPDES Permit as permit conditions and to demonstrate compliance with federal law.

- 6. To-date, the monitoring program has consisted of mass emission, receiving water (tributaries), and land-use monitoring stations, toxicity testing, special studies for bioassessment of the Ventura River and hydrology, identification of ESAs, implementation of the Storm Water Quality Urban Impact Mitigation Plan (SQUIMP), and has provided support for volunteer monitoring programs. This Order requires a monitoring program consisting of mass emission, toxicity, TMDL storm water (wet weather) MS4 water quality-based effluent limits, TMDL non-storm water (dry weather) MS4 water quality-based effluent limits, Pyrethroid assessment study, continuation of the hydromodification study, low impact development study, and participation in the Southern California Regional Bioassessment Program and Southern California Bight Project (SCBP).
- 7. The Principal Permittee is a member of the Southern California Coastal Water Research Project (SCCWRP) Commission. The Principal Permittee also participates in the Regional Monitoring Programs and research partnerships, such as the Southern California Storm Water Monitoring Coalition (SMC) and the Bioassessment Working Group.

**D. Permit Coverage**

- 1. The area covered by this Order includes all areas within Ventura County boundaries and all areas within each co-permittee's boundaries (see Figure 1) that drain into the MS4.
- 2. The Permittees covered under this Order were designated on a system-wide basis under Phase I of the CWA § 402(p)(3)(B)(i). The action of covering all Ventura County municipalities under a single MS4 permit on a system-wide basis was consistent with the provisions of 40 CFR122.26(a)(3)(iv), which states that one permit application may be submitted for all or a portion of all municipal separate storm sewers within adjacent or interconnected large or medium municipal separate storm sewer systems; and the Regional Water Board may issue one system-wide permit covering all, or a portion of all municipal separate storm sewers in adjacent or interconnected large or medium municipal separate storm sewer systems.
- 3. Federal, State, Regional, or local entities within the Permittees' boundaries or in jurisdictions outside the Ventura County Watershed Protection District, and not currently named in this Order, may operate storm drain facilities and/ or discharge storm water to storm drains and receiving waters covered by this Order. The Permittees may lack legal jurisdiction over these entities under State and Federal constitutions. The Regional Water Board will coordinate with these entities to

implement programs that are consistent with the requirements of this Order. The Regional Board may consider such facilities for coverage under its NPDES permitting scheme pursuant to USEPA Phase II storm water regulations. Permittees have expressed their intention to work cooperatively to control the contribution of pollutants from one portion of the MS4 to another portion of the system. Permittees shall make good faith efforts to control the contribution of pollutants to the MS4 from non-permittee dischargers such as Caltrans, the U.S. Department of Defense, and other state and federal facilities.

- 4. TMDLs are numerical calculations of the maximum amount of a pollutant that a waterbody can receive and still meet water quality standards, and an allocation of that amount to the pollutant's sources. A TMDL is the sum of the allowable loads of a single pollutant from all contributing point sources (Waste Load Allocation (WLA) and non-point sources (Load Allocation (LA))). Discharges from the MS4s are considered point sources discharges, because the MS4 is a point source.
- 5. This Order incorporates applicable WLAs that have been adopted by the Regional Water Board and have been approved by the Office of Administrative Law and the U.S. EPA. The TMDL WLAs in the Order are expressed as water quality-based effluent limits in a manner consistent with the assumptions and requirements of the TMDL from which they are derived.
- 6. The CWA and the California Water Code contain specific provisions on how wastewater discharges from point sources are to be permitted. Stormwater discharges (both dry weather and wet weather) are considered point source discharges.
- 7. Permittees should work cooperatively to control the contribution of pollutants from one portion of the MS4 to another portion of the system through inter-agency agreements or other formal arrangements.

**E. Federal, State and Regional Regulations**

- 1. The Water Quality Act of 1987 added § 402(p) to the CWA (33U.S.C. § 1251-1387). This section requires the U.S. EPA to establish regulations setting forth NPDES requirements for storm water discharges in 2 phases.
  - (a) U.S. EPA Phase I storm water regulations were directed at MS4s serving a population of 100,000 or more, including interconnected systems and storm water discharges associated with industrial activities, including construction activities. The Phase 1 Final Rule was published on November 16, 1990 (55 Fed. Reg. 47990).
  - (b) U.S. EPA Phase II storm water regulations are directed at storm water discharges not covered in Phase I, including small MS4s (population of less than 100,000), small construction projects (less than 5 acres), municipal facilities with delayed

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

coverage under the Intermodal Surface Transportation Efficiency Act of 1991, and other discharges for which the U.S. EPA Administrator or the State determines that the storm water discharge contributes to a violation of a water quality standard, or is a significant contributor of pollutants to waters of the U.S. The Phase II Final Rule was published on December 8, 1999 (64 Fed. Reg. 68722).

2. The U.S. EPA published an 'Interpretative Policy Memorandum on Reapplication Requirements for MS4 permits on August 9, 1996 (61 Fed. Reg. 41697). This policy requires that MS4 reapplication for reissuance for a subsequent five-year permit term contain certain basic information and information for proposed changes and improvements to the storm water management program and monitoring program.
3. The U.S. EPA has entered into a Memorandum of Agreement (MOA) with the U.S. Fish and Wildlife Service, and the National Marine Fisheries Service for enhancing coordination regarding the protection of endangered and threatened species under section 7 of the Endangered Species Act, and the CWA's water quality standards and NPDES programs. Among other actions, the MOA establishes a framework for coordination of actions by the U.S. EPA, the Services, and CWA delegated States on CWA permit issuance under § 402 of the CWA [66 Fed. Reg. 11202-11217].
4. The CWA allows the U.S. EPA to authorize states with an approved environmental regulatory program to administer the NPDES program in lieu of the U.S. EPA. The State of California is a delegated State. The Porter-Cologne Water Quality Control Act (California Water Code) authorizes the State Water Resources Control Board (State Water Board), through the Regional Water Boards, to regulate and control the discharge of wastese that could affect the quality of waters of the State, including waters of the United States, and tributaries thereto.
5. Under CWA § 303(d) of the CWA, States are required to identify a list of impaired water-bodies and develop and implement TMDLs for these waterbodies (33 USC § 1313(d)(1)). The most recent 303(d) list's U.S. EPA approval date was June 28, 2007. The U.S. EPA entered into a consent decree with the Natural Resources Defense Council (NRDC), Heal the Bay, and the Santa Monica BayKeeper on March 22, 1999, under which the Regional Water Board must adopt all TMDLs for the Los Angeles Region within 13 years from that date. This Order incorporates provisions incorporating approved WLAs for municipal storm water discharges and requires amending the SMP after subsequent pollutant loads have been allocated and approved.
6. Collectively, the restrictions contained in the TMDL Provisions for Storm Water (Wet Weather) Discharges and Non-Storm Water (Dry Weather) Discharges of this Order on individual pollutants are no more stringent than required to implement the

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

provisions of the TMDL, which have been adopted and approved in a manner that is consistent with the CWA. Where a TMDL has been approved, NPDES permits must contain effluent limits and conditions consistent with the assumptions and requirements of the available WLAs in TMDLs (40 CFR122.44(d)(1)(vii)(B)).

7. This Order does not constitute an unfunded local government mandate subject to subvention under Article XIII B, Section (6) of the California Constitution for several reasons, including, but not limited to, the following. This Order implements federally mandated requirements under CWA § 402, subdivision (p)(3)(B). (33 U.S.C. § 1342(p)(3)(B)) This includes federal requirements to effectively prohibit non-storm water discharges, to reduce the discharge of pollutants to the maximum extent practicable, and to include such other provisions as the Administrator or the State determines appropriate for the control of such pollutants. Federal cases have held these provisions require the development of permits and permit provisions on a case-by-case basis to satisfy federal requirements. (Natural Resources Defense Council, Inc. v. U.S. E.P.A. (9th Cir. 1992) 966 F.2d 1292, 1308, fn. 17.) The authority exercised under this Order is not reserved state authority under the Clean Water Act's savings clause (cf. Burbank v. State Water Resources Control Bd. (2005) 35 Cal.4th 613, 627-628 [relying on 33 U.S.C. § 1370, which allows a state to develop requirements which are not "less stringent" than federal requirements]), but instead, is part of a federal mandate to develop pollutant reduction requirements for municipal separate storm sewer systems. To this extent, it is entirely federal authority that forms the legal basis to establish the permit provisions. (See, City of Rancho Cucamonga v. Regional Water Quality Control Bd.-Santa Ana Region (2006) 135 Cal.App.4th 1377, 1389; Building Industry Ass'n of San Diego County v. State Water Resources Control Bd. (2004) 124 Cal.App.4th 866, 882-883.)

Likewise, the provisions of this Order to implement TMDLs are federal mandates. The CWA requires TMDLs to be developed for waterbodies that do not meet federal water quality standards (33 U.S.C. § 1313(d)). Once the U.S. EPA or a state develops a TMDL, federal law requires that permits must contain effluent limitations consistent with the assumptions of any applicable wasteload allocation. (40 CFR122.44(d)(1)(vii)(B)).

Second, the local agency Permittees' obligations under this Order are similar to, and in many respects less stringent than, the obligations of non-governmental dischargers who are issued NPDES permits for storm water discharges. With a few inapplicable exceptions, the Clean Water Act regulates the discharge of pollutants from point sources (33 U.S.C. § 1342) and the Porter-Cologne regulates the discharge of waste (Wat. Code, § 13263), both without regard to the source of the pollutant or waste. As a result, the "costs incurred by local agencies" to protect water quality reflect an overarching regulatory scheme that places similar requirements on governmental and nongovernmental dischargers. (See *County of Los Angeles v. State of California*

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

(1987) 43 Cal.3d 46, 57-58 [finding comprehensive workers compensation scheme did not create a cost for local agencies that was subject to state subvention].)

The Clean Water Act and the Porter-Cologne Water Quality Control Act largely regulate storm water with an even hand, but to the extent there is any relaxation of this even-handed regulation, it is in favor of the local agencies. Except for municipal separate storm sewer systems, the Clean Water Act requires point source dischargers, including discharges of storm water associated with industrial or construction activity, to comply strictly with water quality standards. (33 U.S.C. § 1311(b)(1)(C), *Defenders of Wildlife v. Browner* (1999) 191 F.3d 1159, 1164-1165 [noting that industrial storm water discharges must strictly comply with water quality standards].) As discussed in prior State Water Resources Control Board decisions, in many respects this Order does not require strict compliance with water quality standards. (SWRCB Order No. WQ 2001-15, p. 7.) The Order, therefore, regulates the discharge of waste in municipal storm water more leniently than the discharge of waste from non-governmental sources.

Third, the local agency Permittees have the authority to levy service charges, fees, or assessments sufficient to pay for compliance with this Order subject to certain voting requirements contained in the California Constitution. (See California Constitution XIII D, section 6, subdivision (c); see also *Howard Jarvis Taxpayers Association v. City of Salinas* (2002) 98 Cal. App. 4<sup>th</sup> 1351, 1358-1359.). The fact sheet demonstrates that numerous activities contribute to the pollutant loading in the municipal separate storm sewer system. Local agencies can levy service charges, fees, or assessments on these activities, independent of real property ownership. (See, e.g., *Apartment Ass'n of Los Angeles County, Inc. v. City of Los Angeles* (2001) 24 Cal.4th 830, 842 [upholding inspection fees associated with renting property].) The ability of a local agency to defray the cost of a program without raising taxes indicates that a program does not entail a cost subject to subvention. (*County of Fresno v. State of California* (1991) 53 Cal.3d 482, 487-488.)

Fourth, the Permittees have requested permit coverage in lieu of compliance with the complete prohibition against the discharge of pollutants contained in federal Clean Water Act section 301, subdivision (a) (33 U.S.C. § 1311(a)) and in lieu of numeric restrictions on their discharges. (See finding 5., supra.) To the extent, the local agencies have voluntarily availed themselves of the permit, the program is not a state mandate. (Accord *County of San Diego v. State of California* (1997) 15 Cal.4th 68, 107-108.) Likewise, where MS4 Permittees are regulated under a Best Management Practices (BMP) based storm water management program rather than end-of-pipe numeric limits, there exists no compulsion of a specific regulatory scheme that would violate the 10<sup>th</sup> Amendment to the United States Constitution. (See *City of Abilene v. U.S. E.P.A.* (5th Cir. 2003) 325 F.3d 657, 662-663 [noting that municipalities can choose between a management permit or a permit with numeric limits].) The local

agencies' voluntary decision to file a report of waste discharge proposing a program-based permit is a voluntary decision not subject to subvention. (See *Environmental Defense Center v. USEPA* (9th Cir. 2003) 344 F.3d 832, 845-848.)

Fifth, the local agencies' responsibility for preventing discharges of waste that can create conditions of pollution or nuisance from conveyances that are within their ownership or control under state law predates the enactment of Article XIII B, Section (6) of the California Constitution.

8. Under § 6217(g) of the Coastal Zone Act Reauthorization Amendments of 1990 (CZARA), Coastal States with approved coastal zone management programs are required to address non-point pollution impacting or threatening coastal water quality. CZARA addresses five sources of non-point pollution: 1) agriculture; 2) silviculture; 3) urban; 4) marinas; and 5) hydromodification. This Waste Discharge Requirement addresses the management measures required for the urban category and the hydromodification category, with the exception of septic systems.
9. The Regional Water Board addresses septic systems through the administration of non-Chapter 15 regulatory programs and the implementation of Regional Water Board Order No.R4-2004-0146. Septic systems are also addressed under State Assembly Bill (AB) 885 (2000). The Regional Water Board will implement and enforce regulations issued by the State Board pursuant to AB 885. Taken together, these State and Local agency requirements when imposed on septic system operators are expected to reduce the bacterial contamination of storm water from improperly maintained septic systems.
10. The State Water Board has issued waste discharge requirements for discharges from utility vaults (CAG990002). The Regional Water Board has issued waste discharge requirements for discharges from well heads and hydrostatic pipe testing (CAG674001). These discharges to the MS4 shall be conducted under coverage of a separate NPDES permit specific to that activity.
11. On May 18, 2000, the U.S. EPA established numeric criteria for priority toxic pollutants for the State of California (California Toxics Rule (CTR) 65 Fed. Reg. 31682 (40 CFR131.38) for the protection of human health and aquatic life. These apply as ambient water quality criteria for inland surface waters, enclosed bays and estuaries.
12. The State Water Board adopted a revised Water Quality Control Plan for Ocean Waters of California (Ocean Plan) in 2005. The California Ocean Plan establishes water quality objectives for California's ocean waters and provides the basis for regulation of wastes discharged into the State's coastal waters. It applies to point and nonpoint source discharges. The Ocean Plan identifies the applicable beneficial uses

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

of marine waters that include preservation and enhancement of designated Areas of Special Biological Significance (ASBS) (now called "State Water Quality Protection Areas") and establishes a set of narrative and numerical water quality objectives designed to protect beneficial uses. The SWRCB adopted the California Ocean Plan, and both the SWRCB and the six coastal Regional Water Quality Control Boards (RWQCBs) implement and interpret the California Ocean Plan.

13. This Regional Water Board adopted a revised Water Quality Control Plan (Basin Plan) for the Los Angeles Region on June 13, 1994. The Basin Plan specifies the beneficial uses of Ventura County waterbodies and their tributary streams, and contains both narrative and numerical water quality objectives for these receiving waters. The following beneficial uses identified in the Basin Plan apply to all or portions of each watershed covered by this Order:
- (a) Municipal and domestic supply
  - (b) Agricultural supply
  - (c) Industrial service supply
  - (d) Industrial process supply
  - (e) Ground water recharge
  - (f) Freshwater replenishment
  - (g) Navigation
  - (h) Hydropower generation
  - (i) Water contact recreation
  - (j) Non-contact water recreation
  - (k) Ocean commercial and sport fishing
  - (l) Warm freshwater habitat
  - (m) Cold freshwater habitat
  - (n) Preservation of Areas of Special Biological Significance
  - (o) Saline water habitat
  - (p) Wildlife habitat
  - (q) Preservation of rare and endangered species
  - (r) Marine habitat
  - (s) Fish migration
  - (t) Fish spawning
  - (u) Shellfish harvesting
14. On March 22, 1999 the Consent Decree in Heal the Bay, Inc.; Santa Monica BayKeeper, Inc. v. Browner, Case No. 98-4825 SBA was approved. Under Establishment of TMDLs- The parties understand that California has the initial opportunity pursuant to § 303(d) of the CWA to adopt and submit to U.S. EPA for approval TMDLs to be established under this Consent Decree. TMDLs developed by Regional Water Boards are generally adopted through Basin Plan amendments. Basin plan amendments adopted by the State Board pursuant to Water Code section 13246, and the regulatory portions must be approved by the Office of Administrative Law

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

pursuant to Government Code section 11353(b). TMDLs established pursuant to CWA section 303(d)(1) must be submitted to U.S. EPA for approval pursuant to section 303(d)(2), and incorporated into the state's water quality management plan

15. The Regional Water Board has adopted amendments to the Basin Plan, to incorporate TMDLs for the following:
  - (a) The following TMDLs have been or will be incorporated into the Basin Plan within the term of the Order.
    - (1) Santa Clara River - Nitrogen Compounds
      - (A) Regional Water Board Resolution No. 2003-011
      - (B) State Water Board Resolution No. 2003-0073
      - (C) OAL file No. 04-0123-35
      - (D) U.S. EPA approval date March 18, 2004
      - (E) Final fee exemption date March 23, 2004 (effective date).
      - (F) Compliance is 1 year after effective date (March 23, 2005)
    - (2) Malibu Creek and Lagoon - Bacteria.
      - (A) Regional Water Board Resolution No. 2004-019
      - (B) State Water Board Resolution No. 2005-0072
      - (C) OAL file No. 05-1018-03 S
      - (D) U.S. EPA approval date January 10, 2006
      - (E) Final fee exemption date January 24, 2006 (effective date)
      - (F) Compliance for Summer Dry is 3 years after effective date (January 24, 2009)
      - (G) Compliance for Winter Dry is 6 years after effective date (January 24, 2012)
      - (H) Compliance for Wet Weather is 10 years after effective date (January 24, 2016), which is beyond the term of this Order
    - (3) Toxicity, Chlorpyrifos and Diazinon in the Calleguas Creek, Its Tributaries and Mugu Lagoon.
      - (A) Regional Water Board Resolution No. 2005-009
      - (B) State Water Board Resolution No. 2005-0067
      - (C) OAL file No. 05-1110-02 S
      - (D) U.S. EPA approval date March 14, 2006
      - (E) Final fee exemption date March 24, 2006 (effective date)
      - (F) Compliance for Toxicity and Interim WLA is effective date (March 24, 2006)
      - (G) Compliance for Final WLA is 2 years after effective date (March 24, 2008)
    - (4) Organochlorine (OC) Pesticides, Polychlorinated Biphenyls (PCBs), and Siltation in Calleguas Creek, Its Tributaries and Mugu Lagoon.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (A) Regional Water Board Resolution No. 2005-010

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (C) OAL file No 2007-1023-01 S
- (D) U.S. EPA approval date December 18, 2008
- (E) Final fee exemption date January 17, 2009 (effective date)

16. The Regional Water Board adopted and approved requirements for new development and significant redevelopment projects in Ventura County to control the discharge of storm water pollutants in post-construction storm water, on January 26, 2000, in Board Resolution No. R-00-02. The Regional Water Board Executive Officer issued the approved Standard Urban Storm Water Mitigation Plans (SUSMPs) on March 8, 2000 for Los Angeles County and the Cities in Los Angeles County. Since 2000, new development and redevelopment water quality criteria have been implemented by the Permittees to be consistent with SUSMP. The State Board affirmed the Regional Water Board action and SUSMPs in State Board Order No. WQ 2000-11, issued on October 5, 2000.
  - (a) A statewide policy memorandum (dated December 26, 2000), which interprets the Order to provide broad discretion to Regional Water Boards and identifies potential future areas for inclusion in SUSMPs and the types of evidence and findings necessary. Such areas include ministerial projects, projects in environmentally sensitive areas, and water quality design criteria for Retail Gasoline Outlets (RGOs, see part 7 for definition). The Regional Water Board properly justified the extensions of SUSMPs and water quality criteria to ministerial projects, projects in environmentally sensitive areas, and RGOs, during the adoption of Regional Water Board Order 01-182. The Regional Water Board's action was upheld by the County of Los Angeles Superior Court (In Re: *County of Los Angeles v. State Water Resources Control Board* (2006) 143 Cal.App.4<sup>th</sup> 985).
  - (b) The State Water Board's Chief Counsel interpreted the Order to encourage regional solutions and endorsed a mitigation fund or "bank" as alternatives for new development and significant redevelopment. The Regional Water Board has included provisions for regional solutions and the establishment of a mitigation bank in this Order.
  
17. The Regional Water Board supports Watershed Management planning to address water quality protection in the region. The objective of the Watershed Management planning is to provide a comprehensive and integrated strategy towards water resource protection, enhancement, and restoration while balancing economic and environmental impacts within a hydrologically defined drainage basin or watershed. It emphasizes cooperative relationships between regulatory agencies, the regulated community, environmental groups, and other stakeholders in the watershed to achieve the greatest environmental improvements with available resources.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- 18. To facilitate compliance with federal regulations, the State Water Board has issued the following 4 Statewide General NPDES Permits associated with storm water:
  - (a) Industrial General Permit (IASGP- Industrial Activities Storm Water General Permit), NPDES No. CAS000001, issued on November 19, 1991, reissued on September 17, 1992 and April 17, 1997, currently under review for reissuance.
  - (b) Construction General Permit (CASGP- Construction Activities Storm Water General Permit), NPDES No. CAS000002, issued on August 20, 1992, reissued August 19, 1999, currently under review for reissuance.
  - (c) Small Linear Underground/ Overhead Construction Projects General Permit (small LUPs), NPDES No. CAS000005, issued on June 18, 2003.
  - (d) Small MS4 Permit WQ Order No. 2003-0005-DWQ, NPDES No. CAS000004, adopted on April 30, 2003.
  
- 19. Facilities discharging storm water associated with industrial activities, construction projects that disturb one or more acres of soil, or construction projects that disturb less than one acre but are part of a larger common plan of development or sale that in total disturbs 1 or more acres; and construction activities associated with small linear underground/ overhead projects that result in land disturbances greater than one acre, but less than five acres (small LUPs), are all required to obtain individual NPDES permits for storm water discharges, or be covered by the statewide General Permits by completing and filing a Notice of Intent (NOI) with the State Board. The U.S. EPA guidance anticipates coordination of the state-administered programs for industrial and construction activities with the local agency program to reduce pollutants in storm water discharges to the MS4.
  
- 20. State Water Board Resolution No. 68-16 contains the state Antidegradation Policy, titled "Statement of Policy with Respect to Maintaining High Quality Waters in California" (Resolution 68-16), which applies to all waters of the state, including ground waters of the state, whose quality meets or exceeds (is better than) water quality objectives. Resolution No. 68-16 is considered to incorporate the federal Antidegradation Policy (40 CFR131.12) where the federal policy applies, (State Water Board Order WQO 86-17). Administrative policies that implement both, federal and state antidegradation policies acknowledge that an activity that results in a minor water quality lowering, even if incrementally small, can result in violation of Antidegradation Policies through cumulative effects, for example, when the waste is a cumulative, persistent, or bioaccumulative pollutant.
  - (a) Federal Antidegradation Policy (40 CFR131.12) states that the State shall develop and adopt a statewide antidegradation policy and identify the methods for implementing such policy pursuant to this subpart. The antidegradation policy and implementation methods shall, at a minimum, be consistent with the following:
    - (1) Existing instream water uses and the level of water quality necessary to protect the existing uses shall be maintained and protected.

(2) Where the quality of the waters exceed levels necessary to support propagation of fish, shellfish, and wildlife and recreation in and on the water, that quality shall be maintained and protected unless the State finds, after full satisfaction of the intergovernmental coordination and public participation provisions of the State's continuing planning process, that allowing lower water quality is necessary to accommodate important economic or social development in the area in which the waters are located. In allowing such degradation or lower water quality, the State shall assure water quality adequate to protect existing uses fully. Further, the State shall assure that there shall be achieved the highest statutory and regulatory requirements for all new and existing point sources and all cost-effective and reasonable best management practices for nonpoint source control.

(3) Where high quality waters constitute an outstanding National resource, such as waters of National and State parks and wildlife refuges and waters of exceptional recreational or ecological significance, that water quality shall be maintained and protected.

(4) In those cases where potential water quality impairment associated with a thermal discharge is involved, the antidegradation policy and implementing method shall be consistent with section 316 of the Act.

(b) State Water Board Resolution No. 68-16 establishes essentially a 2-step process for compliance with the policy.

(1) Step 1- if a discharge will degrade high quality water, the discharge may be allowed if any change in water quality:

(A) Will be consistent with maximum benefit to the people of the State.

(B) Will not unreasonably affect present and anticipated beneficial use of such water.

(C) Will not result in water quality less than that prescribed in state policies (e.g., water quality objectives in Water Quality Control Plans).

(2) Step 2- any activities that result in discharges to high quality waters are required to:

(A) Meet waste discharge requirements that will result in the best practicable treatment or control of the discharge necessary to avoid a pollution or nuisance.

(B) Maintain the highest water quality consistent with the maximum benefit to the people of the State.

21. The State Water Board on June 17, 1999, adopted Order No. WQ 99-05, which specifies standard receiving water limitation language to be included in all municipal storm water permits issued by the State and Regional Water Boards.

22. Cal. Water Code § 13263(a) requires that waste discharge requirements issued by Water Boards shall implement any relevant water quality control plans that have been adopted; shall take into consideration the beneficial uses to be protected and the water

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

quality objectives reasonably required for that purpose; other waste discharges; and the need to prevent nuisance.

23. Clean Water Act section 402(p)(3)(B)(iii) requires municipal separate storm sewer system (MS4) operators to control pollution in storm water to the “maximum extent practicable” (MEP). The MEP requirement is analogous to a technology-based requirement in that it focuses upon the feasibility of pollutant reduction measures rather than achievement of water quality standards in the receiving waters to achieve improvements in the quality of the storm water that is discharged. Compliance with the MEP requirement can range from implementation of structural and nonstructural best management practices to installation of end-of-pipe treatment systems. MEP generally provides the MS4 operators the flexibility to determine what controls should be implemented through the development of a storm water management plan, subject to the Regional Board’s approval. Nevertheless, MEP does not define the limits of pollution control measures that may be required of MS4 operators, and the requirement to implement controls that reduce pollutants to the MEP is not limited by the goal of attaining water quality standards. In some circumstances, compliance with MEP may result in controls more stringent than applicable WQS, and in others, less stringent. The Regional Board may use its discretion to impose other provisions beyond MEP, as it determines appropriate for the control of pollutants, including ensuring strict compliance with water quality standards. (*Defenders of Wildlife v. Browner* (1999) 191 F.3d 1159, 1168.)
24. The California Supreme Court has ruled that although Water Code section 13263 requires the Water Boards to consider the factors set forth in Water Code section 13241 when issuing an NPDES permit, the Water Boards may not consider the factors to justify imposing pollutant restrictions that are less stringent than the applicable federal regulations require (*City of Burbank v. State Water Resources Control Bd.* (2005) 35 Cal.4th 613). However, when the pollutant restrictions in an NPDES are more stringent than federal law requires, Water Code section 13263 requires that the Water Boards consider the factors described in section 13241 as they apply to those specific restrictions.
25. The City of Burbank case related to NPDES permits for publicly owned treatment works, not permits for municipal separate storm sewer systems (MS4s). Among other requirements, federal law requires MS4 permits to include requirements to effectively prohibit non-storm water discharges into the storm sewers, in addition to requiring controls to reduce the discharge of pollutants to the maximum extent practicable. Therefore, a 13241 analysis is not required for permit requirements that implement the effective prohibition on the discharge of non-storm water into the MS4, or for practicable controls to reduce the discharge of pollutants to the maximum extent, as those requirements are mandated by federal law.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- 26. The requirements in this Order may be more specific or detailed than those enumerated in federal regulations under 40 CFR122.26 or in U.S. EPA guidance. However, the requirements have been designed to be consistent with and within the federal statutory mandates described in CWA § 402(p)(3)(B)(ii) and (iii) and the related federal regulations. Consistent with federal law, all of the conditions in this permit could have been included in a permit adopted by U.S. EPA in the absence of the in lieu authority of California to issue NPDES permits.
- 27. The Board finds that all requirements in this order are practicable. Moreover, while commenters have alleged that the permit requirements are “beyond MEP,” no commenter has presented evidence that demonstrates that any particular permit requirement is not actually practicable.
- 28. Notwithstanding findings 23 through 27, the Regional Board has developed an economic analysis of the permit’s requirements, consistent with Water Code section 13241. That analysis is contained in the “Economic Considerations of the Proposed Storm Water (Wet Weather) and Non-Storm Water (Dry Weather) Discharges from the Municipal Separate Storm Sewer Systems within the Ventura County Watershed Protection District, County of Ventura and the Incorporated Cities Therein , June 2, 2008, which is contained in the administrative record for this Order. The Regional Board has considered all of the evidence that has been presented regarding the 13241 factors in adopting this permit, both as contained in the economic analysis and as reflected in the fact sheet and comments (and responses thereto) submitted to the many drafts of this permit. The Regional Board finds that the requirements in this Order are reasonably necessary to protect beneficial uses identified in the Basin Plan, and the economic information related to costs of compliance and other 13241 factors are not sufficient to justify failing to protect those beneficial uses. Where appropriate, additional time to implement certain measures and achieve water quality objectives can be provided through the iterative storm water management plan process.

**F. Implementation**

- 1. The California Environmental Quality Act (CEQA) (Cal. Pub. Resources Code § 2100 et seq.) requires that public agencies consider the environmental impacts of the projects they approve for development. CEQA applies to projects that are considered discretionary (a governmental agency can use its judgment in deciding whether and how to carry out or approve a project, § 15357) and does not apply to ministerial projects (the law requires a governmental agency to act on a project in a set way without allowing the agency to use its own judgment, § 15369). A ministerial project may be made discretionary by adopting local ordinance provisions

E  
N  
T  
A  
T  
I  
V  
E

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

or imposing conditions to create decision-making discretion in approving the project. In the alternative, Permittees may establish standards and objective criteria administratively for storm water mitigation for ministerial projects. For water quality purposes regardless of whether a project is discretionary or ministerial, the Regional Water Board considers that all new development and significant redevelopment activity in specified categories, that receive approval or permits from a municipality, are subject to storm water mitigation requirements in a manner that is consistent with and complies with the provisions of CEQA.

2. The objective of this Order is to ensure that discharges from the MS4 in Ventura County comply with water quality standards, including protecting the beneficial uses of receiving waters. To meet this objective, the Order requires that Best Management Practices (BMPs) will be implemented to reduce the discharge of pollutants in storm water to the maximum extent practicable (MEP), and achieve water quality objectives and standards. The U.S. EPA envisioned that municipal storm water programs would be implemented in an iterative manner and improved with each iteration by using information and experience gained during the previous permit term (*Interpretative Policy Memorandum on Reapplication Requirements for MS4 permits* - 61 Fed. Reg. 41697). Municipalities are required to evaluate what is effective and make improvements in order to protect beneficial uses of receiving waters. This Order requires implementation of an effective combination of pollution control and pollution prevention measures, education, public outreach, planning, and implementation of source control BMPs and Structural and Treatment Control BMPs. The better-tailored BMPs combined with the performance objectives outlined in this Order have the purpose of attaining water quality objectives and standards (*Interim Permitting Approach for Water Quality-Based Effluent Limitations in Storm Water Permits*- 61 Fed. Reg. 43761). Where WLAs have been adopted for storm water (wet weather) and non-storm water (dry weather) discharges from MS4s, this Order requires Permittees to implement controls to achieve the WLAs within the compliance schedule provided in the TMDLs.
3. The implementation of measures set forth in this Order are reasonably expected to reduce the discharge of pollutants conveyed in storm water discharges into receiving waters, and to meet the TMDL WLAs for discharges from MS4s that have been adopted by the Regional Water Board.
4. The U.S. EPA has recommended that all future TMDLs and TMDL amendments be expressed as daily increments consistent with a federal court ruling (*Friends of the Earth, Inc. v. EPA, et al.* No. 05-5015 (D.C. Cir. 2006)). However, this interpretation does not affect the discretionary authority of the Regional Water Board to express NPDES permit limits and conditions in non daily terms because there is no express or implied statutory limitation (CWA §502(11)) (*Establishing TMDL "Daily Loads" in Light of the Decision by the U.S. Court of Appeals for the D.C. Circuit in Friends of*

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

*the Earth, Inc. v. EPA, et al. (April 2006) and Implications for NPDES Permits*, U.S. EPA Office of Water, memorandum, Nov 15, 2006). This Order translates MS4 TMDL WLAs adopted by the Regional Water Board into forms “consistent with the assumptions and requirements of the TMDL”.

5. During the term of the Order, the Permittees shall implement all necessary control measures to reduce pollutant(s) which cause or continue to cause or contribute to water quality impairments, but for which TMDLs have not yet been developed or approved, to eliminate the water quality impairment(s). Successful efforts to reverse the wet weather impairments during the permit term for such pollutants, may avoid the need for a WLA for wet weather or the need to develop a TMDL in the future.
6. This Order promotes land development and redevelopment strategies that consider water quality and water management benefits associated with smart growth techniques. Such measures may include hydromodification mitigation requirements, minimization of effective impervious area, integrated water resources planning, and low impact development guidelines. (Reference: *Protecting Water Resources with Smart Growth*, EPA 231-R-04-002, U.S. EPA 2004; *Using Smart Growth Techniques as Storm Water Best Management Practices*, EPA 231-B-05-002, U.S. EPA 2005; *Parking Spaces/Community Places: Finding the Balance through Smart Growth Solutions*, EPA 231-K-06-001, U.S. EPA 2006; *Protecting Water Resources with Higher-Density Development*, EPA 231-R-06-001, U.S. EPA 2006.)
7. The implementation of an effective Public Information and Participation Program is a critical component of a storm water management program. While commercial and industrial facilities are traditionally subject to multiple environmental regulations and receive environmental protection guidance from multiple sources, the general public, in comparison, receives significantly less education in environmental protection. An effective Public Information and Participation Program is required because:
  - (a) Activities conducted by the public such as vehicle maintenance, improper household waste materials disposal, improper pet waste disposal and the improper application of fertilizers and pesticides have the potential to generate a significant amount of pollutants that could be discharged in storm water.
  - (b) An increase in public knowledge of storm water regulations, proper storage and disposal of household wastes, proper disposal of pet wastes and appropriate home vehicle maintenance practices can lead to a significant reduction of pollutants discharged in storm water.
8. This Order also provides flexibility for Permittees to seek authorization from the Regional Water Board Executive Officer to substitute a BMP under this Order with an alternative BMP, if they can provide information and documentation on the effectiveness of the alternative, equal to or greater than the prescribed BMP in meeting the objectives of this Order.

9. This Order contemplates that the Permittees are responsible for considering potential storm water impacts when making planning decisions in order to fulfill the Permittees' CWA requirement to reduce the discharge of pollutants in municipal storm water to the MEP and attain water quality objectives from new development and redevelopment activities. However, the Permittees retain authority to make the final land-use decisions and retain full statutory authority for deciding what land uses are appropriate at specific locations within each Permittee's jurisdiction. This Order and its requirements are not intended to restrict or control local land use decision-making authority.
  
10. The State Water Board amended the Policy for the Implementation of Toxics Standards In Inland Surface Waters, Enclosed Bays and Estuaries of California (State Implementation Policy – SIP) on February 24, 2005. The SIP does not apply directly to the stormwater discharges. However, this Order includes a Monitoring Program that incorporates Minimum Levels (MLs) established under the State Implementation Policy. The MLs represent the lowest quantifiable concentration for priority toxic pollutants that is measurable with the use of proper method-based analytical procedures and factoring out matrix interference. The SIP's MLs therefore represent the best available science for determining MLs and are appropriate for a storm water monitoring program. The use of MLs allows the detection of toxic priority pollutants at concentrations of concern using recent advances in chemical analytical methods.
  
11. This Order establishes Municipal Action Levels (MALs) for selected pollutants based on regional Phase I MS4 monitoring data for pollutants in storm water. (<http://unix.eng.ua.edu/~rpitt/Research/Research.shtml>, last visited on August 14, 2007). The MALs were computed using one of three approaches recommended by the California Water Board's Storm Water Panel in its report, 'The Feasibility of Numerical Effluent Limits Applicable to Discharges of Storm Water Associated with Municipal, Industrial and Construction Activities (June 2006). MALs are identified in Attachment "C". Permittees shall utilize the MALs to identify subwatersheds that require additional action to reduce the discharge of pollutants.
  
12. The International Storm Water Best Management Practices (BMP) Database was established in 1996 as a cooperative initiative between the U.S. EPA and the American Society of Civil Engineers (ASCE) to provide scientifically sound information to improve the design, selection and performance of storm water BMPs. The BMP database includes standardized BMP monitoring and reporting protocols, a storm water BMP database, BMP performance evaluation protocols, and BMP monitoring guidance. The storm water BMP database is updated approximately semi-annually to add new BMP studies and performance data. The International Storm Water Database is now maintained by the Water Environment Research Foundation (WERF).

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

13. This Order is not intended to prohibit the inspection for or abatement of vectors by the State Department of Public Health or local vector agencies in accordance with CA Health and Safety Code, § 116110 et seq. Certain Treatment Control BMPs if not properly designed, operated or maintained may create habitats for vectors (e.g. mosquitoes and rodents). This Order contemplates that the Permittees will closely cooperate and collaborate with local vector control agencies and the State Department of Public Health for the implementation, operation, and maintenance of Treatment Control BMPs in order to minimize the risk to public health from vector borne diseases.
14. This Order contemplates that Permittees will ensure that implemented Treatment Control BMPs will not pose a safety or health hazard to the public. This Order contemplates that Permittees will ensure that the maintenance of implemented Treatment Control BMPs will comply with all applicable health and safety regulations, such as, but not limited to requirements for worker entry into confined spaces under OSHA Safety and Training education, § 1926.21(b)(6)(i).
15. This Order incorporates presumptive BMPs to reduce pollutants in storm water discharges from construction sites to the MEP. The BMPs are identified in Table 6 (BMPs at Construction sites less than 1 acre), Table 7 (BMPs at Construction Sites 1 acre or greater but less than 5 acres), and Table 8 (BMPs at Construction sites 5 acres or greater). These BMPs include erosion control, sediment control, and construction site waste management practices. The BMPs listed in part 5.F of the Order were selected based on the Water Boards' experience of regulating such sites since 1992, and are referenced in the *California Stormwater Quality Association (CASQA) Storm Water Best Management Practice Handbook Construction (January 2003)* and from the *Stormwater Quality Handbooks, Project Planning and Design Guide, Stormwater Pollution Prevention Plan (SWPPP) and Water Pollution Control Plan (WPCP) Preparation Manual, Construction Site Best Management Practices (BMPs) Reference Manual, March 2007* (Caltrans Document Number CTSW-RT-06-171.11-1) which serve as an industry standard for California. The BMPs identified in the Tables are technically feasible, practicable, and cost-effective. Where an identified BMP may be impracticable on a particular site, this Order includes a provision to select and implement an alternative BMP, through the BMP substitution provisions in subpart 5.A.2.
16. This Order incorporates presumptive BMPs to reduce pollutants in storm water discharges from commercial and industrial sites to the MEP. The BMPs are identified in Table 2 (BMPs at Restaurants), Table 3 (BMPs at Automotive Service Facilities), Table 4 (BMPs at Retail Gasoline Outlets), and Table 5 (BMPs at Nurseries). These BMPs include the implementation of good housekeeping practices designed to control pollutants at the source, promote the use of proper waste

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

management practices, and implement control practices to keep pollutants away from any entrance to the storm drainage system. The BMPs listed in part 5.D of the Order were selected based on the Water Boards' experience of regulating such sites since 1992 and referenced in the California Stormwater Quality Association (CASQA) Storm Water Best Management Practice Handbook Commercial/Industrial Activity (January 2003) and from the Caltrans Storm Water Quality Handbook Maintenance Staff Guide May 2003 (Caltrans Document Number CTSW-RT-02-057), which serve as an industry standard for California. The BMPs identified in the Tables are technically feasible, practicable, and cost-effective. Where an identified BMP may be impracticable, this Order includes a provision to select and implement an alternative BMP, through the BMP substitution provisions in subpart 5.A.2.

- 17. This Order incorporates presumptive BMPs to reduce pollutants in storm water discharges from Public Agency Activities to the MEP. The BMPs are identified in Table 9 (BMPs at Vehicle Maintenance/ Material Storage Facilities/ Corporation Yards). These BMPs include the implementation of good housekeeping practices designed to control pollutants at the source, promote the use of proper waste management practices, implement control practices to keep pollutants away from any entrance to the storm drainage system and from being deposited or discharged directly into waters of the U.S. The BMPs listed in part 5.G of the Order were selected based on the Water Boards' experience of regulating such sites since 1990, and are referenced in the Caltrans Storm Water Quality Handbook Maintenance Staff Guide May 2003 (Caltrans Document Number CTSW-RT-02-057), which serves as a statewide standard for the California Department of Transportation (Caltrans). The BMPs identified in the Table are technically feasible, practicable, and cost-effective, and are the standard of practice for Caltrans sites statewide. Where an identified BMP may be impracticable, this Order includes a provision to select and implement an alternative BMP, through the BMP substitution provisions in subpart 5.A.2.

- 18. This Order incorporates BMPs to ensure that authorized Non-Storm Water Discharges are not a source of pollutants to the MS4, Table 1 (Required Conditions for Non-Storm Water Discharges). The BMPs included are for the purpose of dechlorination and/or for prevention of erosion and sediment loss, or to reduce other harmful pollutants during the discharge of authorized non-storm water discharges to the MS4. The BMPs listed in part 1.B of the Order were selected from the *American Water Works Association AWWA Guidelines For The Development Of Your Best Management Practices (BMP) Manual For Drinking Water System Releases Developed by the CA-NV AWWA Environmental Compliance Committee (2005)* which serves as an industry standard for California, from the results of studies directed by the Los Angeles Water Board, - *Evaluation of Non-Storm Water Discharges to California Storm Drains and Potential Policies for Effective Prohibition Methods, Final Report*, University of California, Los Angeles, Contract No. 5-104-140-0 (1997), and *Water Quality Concerns and Regulatory Controls for*

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

*Non Storm Water Discharges to Storm Drains*, Duke L.D. and M. Kihara, Journal of the American Water Resources Association, Vol. 34: 661-676, (1998), and from the Water Boards' experience of controlling authorized non-storm discharges to the MS4 since 1990. The BMPs identified in the Table are technically feasible, practicable, and cost-effective. Where an identified BMP may be impracticable, this Order includes a provision to select and implement an alternative BMP, through the BMP substitution provisions in subpart 5.A.2.

19. In accordance with Federal regulations at 40 CFR 124.8, a Fact Sheet has been prepared to explain the principal facts and the significant factual, legal, methodological, policy, and economic matters considered in preparing the Tentative Order. This Fact Sheet has been made a part of the Administrative Record.
20. The State Water Board adopted statewide General Waste Discharge Requirements for Sanitary Sewer Systems, (WQ Order No. 2006-0003) on May 2, 2006, to provide a consistent, statewide regulatory framework to address sanitary sewer overflows ("SSO Orders"). The SSO Order establishes requirements for public agencies that own or operate sanitary sewer systems to develop and implement sewer system management plans and to report SSOs. SSOs that enter MS4s have the potential to impair the recreational use of receiving waters, and to harm public health. This Order establishes coordination, response, and notification requirements for MS4 Permittees when SSOs result in a discharge to the MS4 system.
21. This Order takes into consideration the housing needs in the area under the Permittees' jurisdiction by balancing the implementation of Smart Growth and Low Impact Development techniques with the protection of the water resources of the region. Although not required, the Regional Water Board considered the need for housing and the appropriate techniques to allow for reasonable development while protecting the receiving waters from degradation.
22. This Order may have an effect on costs required for compliance with the provisions contained herein. Although not required, the Regional Water Board has considered costs in preparing this Order. Though also not required, the Regional Water Board has also considered the factors set forth in Water Code section 13241.

#### G. Public Notification

1. The issuance of waste discharge requirements pursuant to California Water Code section 13370 et seq. is exempt from the California Environmental Quality Act in accordance with California Water Code section 13389. *County of Los Angeles et al., v. California Water Boards et al.*, (2006), 143 Cal.App.4<sup>th</sup> 985.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- 2. The Regional Water Board has notified the Permittees, and interested agencies and persons of its intent to issue waste discharge requirements for this discharge, and has provided them with an opportunity to make statements and submit their comments.
- 3. The Regional Water Board staff has conducted more than 35 meetings from February 9, 2007 through December 19, 2008, with Permittees, their representatives (Larry Walker and Associates, and Somach, Simmons & Dunn), and various stakeholders (Building Industry Association of Southern California/ Greater Los Angeles Ventura Chapter (BIAGLA/ VC), California State Dept. of Health Services, Calleguas Water District, California Stormwater Quality Association (CASQA), City of Downey, City of Los Angeles-EMD, Collation for Practical Regulation (CPR), Construction Industry Coalition on Water Quality (CICWQ), County of Orange, Geosyntec Consultants, Golden State, Heal The Bay; Local Government commission, Los Angeles City; Los Angeles County Department of Public Works, Los Angeles County-SD, Los Angeles Department of Water & Power, Metropolitan Water District, Natural Resources Defense Council (NRDC), Richard Watson Association, San Bernardino Flood Control District, Santa Monica Bay Restoration Commission, Southern California Coastal Water Research Project, University of California Sea Grant, Ventura CoastKeeper). On April 5, 2007 and September 20, 2007 the Regional Water Board conducted workshops to discuss drafts of the NPDES Order and received input from the Permittees and the public regarding proposed changes.
- 4. This Order shall serve as a NPDES permit, pursuant to CWA § 402, and shall take effect 90 days from Order adoption date provided the Regional Administrator of the U.S. EPA has no objections.
- 5. Pursuant to Cal. Water Code § 13320, any aggrieved party may seek review of this Order by filing a petition with the State Board within 30 days of the date of adoption of the Order by the Regional Water Board. A petition must be sent to:  
  
State Water Resources Control Board  
Office of the Chief Counsel  
P.O. Box 100  
Sacramento, CA 95812-0100
- 6. This Order may be modified or alternatively revoked or reissued prior to its expiration date or any administrative extension thereto, in accordance with 40 CFR122.41(f) and 122.62.

**IT IS HEREBY ORDERED** that the Permittees, in order to meet the provisions contained in Division 7 of the Cal. Water Code and regulations adopted thereunder, and the provisions of the CWA and regulations adopted thereunder, shall comply with the following:

**PART 1 - DISCHARGE PROHIBITIONS****A. Prohibitions - Non-Storm Water Discharges**

1. The Permittees shall, within their respective jurisdictions, effectively prohibit non-storm discharges into the MS4 and receiving waters, except where such discharges:
  - (a) Originate from a State, Federal, or other source for which they are pre-empted from regulating by State or Federal law; or
  - (b) Are covered by a separate individual or general NPDES permit, or conditional waiver for irrigated lands; or
  - (c) Flows from fire fighting activities.
  - (d) Fall within one of the categories below, are not a source of pollutants that exceed water quality standards, and meet all conditions where specified by the Regional Water Board Executive Officer:
    - (1) Category A – Natural flows
      - (A) Stream diversions authorized by the State Water Board
      - (B) Natural springs and rising ground water
      - (C) Uncontaminated ground water infiltration [as defined by 40 CFR35.2005(20)]<sup>1</sup>
      - (D) Flows from riparian habitats or wetlands
    - (2) Category B – Flows incidental to urban activities, providing conditions listed in table below:
      - (A) Discharges from potable water sources<sup>2</sup>
      - (B) Gravity flow from foundation, footing and crawl space drains.
      - (C) Air conditioning condensate
      - (D) Reclaimed and potable landscape irrigation runoff
      - (E) Dechlorinated/ debrominated swimming pool discharges [see def. part 7]
      - (F) Non-commercial car washing by residents or non-profit organizations
      - (G) Sidewalk rinsing
      - (H) Pooled non-storm water from treatment BMPs<sup>3</sup>

Table 1 – Required Conditions for Non-Storm Water Discharges

<sup>1</sup> NPDES permit for ground water dewatering is required within the Los Angeles Region including Ventura County.

<sup>2</sup> The term applies to low volume, incidental and infrequent releases that are innocuous from a water quality perspective. Those releases for dewatering or hydro-testing or flushing of water supply and distribution mains and incidental and infrequent releases from well heads shall be allowed with the implementation of appropriate BMPs until such time as a new General Permit is adopted that addresses those types of releases. Discharges from hydrostatic pipe testing shall be subject to separate NPDES general permit coverage (CAG674001) and discharges from utility vaults shall be conducted under coverage of a separate NPDES permit specific to that activity.

<sup>3</sup> All storm water BMPs shall at a minimum be maintained at a frequency as specified by the manufacturer, and designed to drain within 72 hours of the end of a rain. Storm water treatment BMPs may be drained to the MS4 under this Order if the discharge is not a source of pollutants. Sediments shall be disposed of properly, in compliance with all applicable local, state, and federal policies, acts, laws, regulations, ordinances, and statutes.

Type of Discharges:	Conditions under which allowed:	Required conditions for discharge to occur:
Stream diversions permitted by the State Board;	Authorization by the State Water Board	Permittees shall comply with all conditions in the authorization.
Natural springs and rising ground water	1. Ground water dewatering requires a separate NPDES permit. 2. Segregate flow to prevent introduction of pollutants.	Permittees shall comply with all conditions in the authorization.
Uncontaminated ground water infiltration [as defined by 40 CFR 35.2005(20)] (Utility vault dewatering requires a separate NPDES permit.)	NPDES permit for ground water dewatering is required within the Los Angeles Region including Ventura County	Permittees shall comply with all conditions in the authorization.
Flows from riparian habitats or wetlands	Provided that all necessary permits or authorizations are received prior to diverting the stream flow.	Permittees shall comply with all conditions in the authorization.
Discharges from potable water sources <sup>1</sup>	See Footnote #1.  Provided discharges from water lines and potable water sources shall be dechlorinated, pH adjusted if necessary, reoxygenated, and volumetrically and velocity controlled to prevent resuspension of sediments.	See Footnote #2. To be discharged, this type of water shall be dechlorinated using aeration and/ or sodium thiosulfate and/ or other appropriate means and/or be allowed to infiltrate to the ground. BMPs such as sand bags or gravel bags, or other appropriate means shall be utilized to prevent sediment transport. All sediments shall be collected and disposed of in a legal and appropriate manner.
Drains for foundation, footing and crawl drains	Dewatering requires a separate NPDES permit.	Permittees shall comply with all conditions in the authorization.
Air conditioning condensate	Segregation of flow to prevent introduction of pollutants. Percolation whenever possible.	Permittees shall comply with all conditions in the authorization.
Water from crawl space pumps	Dewatering requires a separate NPDES permit within the Los Angeles Region including Ventura County	Permittees shall comply with all conditions in the authorization.

Type of Discharges:	Conditions under which allowed:	Required conditions for discharge to occur:
Pooled storm water from treatment BMPs <sup>1</sup>	<p>glossary under "Sidewalk Rinsing".</p> <p>All storm water BMPs shall at a minimum be maintained at a frequency as specified by the manufacturer. All storm water BMPs shall be designed to drain within 72 hours of the end of the rain event to avoid the breeding of vectors. Storm water treatment BMPs may be drained to the MS4 under this Order if the discharge is not a source of pollutants. The discharge shall cease before the discharge has become a source of a pollutant(s), (bottom sediment included). Sediments shall be disposed of properly, in compliance with all applicable local, state, and federal policies, acts, laws, regulations, ordinances, and statutes.</p>	

2. If the Regional Water Board Executive Officer determines that any of the preceding categories of non-storm water discharges are a source of pollutants that exceed water quality standards, the Permittee(s) shall either:
  - (a) Prohibit the discharge from entering the MS4; or
  - (b) Authorize the discharge category and require implementation of appropriate or additional BMPs to ensure that the discharge will not be a source of pollutants; or
  - (c) Require or obtain coverage under a separate RWQCB or SWRCB permit for discharge into the MS4.

**PART 2 – MUNICIPAL ACTION LEVELS**

1. This Order establishes Municipal Action Levels (MALs) to identify subwatersheds requiring additional Best Management Practices (BMPs) to reduce pollutant loads and prioritize implementation of additional BMPs. MALs for selected pollutants based on a Climate Zone 6 subset of nationwide Phase I MS4 monitoring data for pollutants in storm water. (<http://unix.eng.ua.edu/~rpitt/Research/Research.shtml>, last visited on August 14, 2007). The MALs were obtained by computing the 80<sup>th</sup> percentile for selected pollutants. MALs are identified in Attachment "C".
2. Under this Order, the Municipal Action Levels (MALs) shall be utilized by Permittees to identify subwatersheds discharging pollutants at levels in excess of the MALs. Within

<sup>1</sup> All storm water BMPs shall at a minimum be maintained at a frequency as specified by the manufacturer, and designed to drain within 72 hours of the end of a rain. Storm water treatment BMPs may be drained to the MS4 under this Order if the discharge is not a source of pollutants. Sediments shall be disposed of properly, in compliance with all applicable local, state, and federal policies, acts, laws, regulations, ordinances, and statutes.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

those subwatersheds where pollutant levels in the discharge are in excess of the MALs, Permittees shall implement controls and measures necessary to reduce the discharge of pollutants.

3. In order to determine if MS4 discharges are in excess of the MALs, Permittees shall conduct outfall monitoring as required in the Monitoring and Reporting Program (MRP). A MAL Assessment Report shall be submitted to the Executive Officer as part of the Annual Report. The Report shall present the monitoring data in comparison to the applicable MALs, and identify those subwatersheds with a running average of twenty percent or greater of exceedances of the MALs listed in Attachment "C" in discharges of storm water from the MS4 to waters of the U.S..
4. At the beginning of Year 3 after Order adoption date, each Permittee shall submit a MAL Action Plan with the Annual Report (first MAL Action Plan due with 2011/2012 Annual Report) to the Executive Officer, for those subwatersheds with a running average of twenty percent or greater of exceedances of the MALs in any discharge of storm water from the MS4 to waters of the U.S.. The plan is to include an assessment of the sources responsible for the MAL exceedances, the existing stormwater programs and BMPs that address those sources, an assessment of potential program enhancements, alternative BMPs and actions the Permittee shall implement to reduce discharges to a level that is equivalent to or below the MALs, and an implementation schedule for such actions for Executive Officer approval. The MAL Action Plan shall provide the technical rationale to demonstrate the proposed measures and controls will attain the MALs. If the MAL Action Plan is not approved within 90 days of the due date, the Executive Officer may establish an appropriate plan with at least 90 day notification and consultation to the Permittees.
5. Within 90 days of the plan approval by the Regional Board Executive Officer, the Permittee shall initiate the BMPs and actions proposed in the MAL Action Plan, together with any other practicable BMPs or actions that the Executive Officer determines to be necessary to meet the MALs. The Permittee shall complete the proposed actions in accordance with the approved implementation schedule.
6. Upon completion of the actions specified in the approved MAL Action Plan, the Permittee shall re-monitor the subject subwatershed in accordance with the MRP, and submit a Post-Project MAL Assessment Report to the Executive Officer. Upon Executive Officer approval, Permittees may coordinate MAL Action Plans and TMDL Implementation Plans, subject to the compliance timeline of the earliest date.
7. As additional data become available through the MRP or from the Regional Subset of the National Dataset, MALs may be revised annually by the Executive Officer in accordance with an equivalent statistical method as that used to establish the MALs in Attachment C of this order with at least 90 day notification and consultation to the Permittees.

**PART 3 – RECEIVING WATER LIMITATIONS**

1. Discharges from the MS4 that cause or contribute to a violation of water quality standards are prohibited.
2. Discharges from the MS4 of storm water, or non-storm water, for which a Permittee is responsible, shall not cause or contribute to a condition of nuisance.
3. The Permittee shall comply with Receiving Water Limitations 1 and 2 through timely implementation of control measures and other actions to reduce pollutants in the storm water discharges in accordance with the requirements of this Order including any modifications. The Permittees' Program shall be designed to achieve compliance with Receiving Water Limitations 1 and 2. If exceedance(s) of water quality objectives or water quality standards (collectively WQS) persist, notwithstanding implementation of this permit, the Permittees shall ensure compliance with Receiving Water Limitations 1 and 2 by complying with the following procedure:
  - (a) Upon determination by either the Permittees or the Regional Water Board that discharges are causing or contributing to an exceedance of an applicable WQS, the Permittee(s) upstream of the point of discharge shall promptly notify and thereafter submit a report to the Regional Water Board Executive Officer that describes BMPs that are currently being implemented and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedance of WQSs. The report may be included with the Annual Report, unless the Regional Water Board Executive Officer directs an earlier submittal. The Regional Water Board Executive Officer may require modifications to the report.
  - (b) Submit any modifications to the report required by the Regional Water Board Executive Officer within 30 days of notification.
  - (c) Within 30 days following approval of the Report described above by the Regional Water Board Executive Officer, the Permittees shall revise their Program and monitoring program to incorporate the approved modified BMPs that have been and will be implemented, the implementation schedule, and any additional monitoring required.
  - (d) Implement the revised Program and monitoring program according to the approved schedule.
4. Permittees shall annually report the effectiveness of BMPs in reducing exceedances of receiving water limitations. The Regional Board Executive Officer may direct implementation of additional BMPs if there are continuing or recurring exceedances of the same receiving water limitation.

**PART 4 - STORM WATER QUALITY MANAGEMENT PROGRAM**  
**IMPLEMENTATION**

**A. General Requirements**

1. Each Permittee shall, at a minimum, adopt and implement applicable terms of this Order within its jurisdictional boundary. The Principal Permittee shall be responsible for program coordination as described in this Order as well as compliance with applicable portions of the permit within its jurisdiction. This Order shall be implemented no later than (90 days after Order adoption date), unless a later date has been specified for a particular provision in this Order and provided the Regional Administrator of the U.S. EPA has no objections.
2. Each Permittee shall comply with the requirements of 40 CFR122.26(d)(2) and implement programs and control measures so as to reduce the discharges of pollutants in storm water to the MEP and achieve water quality standards.
3. Each Permittee shall require that treatment control BMPs being implemented under the provisions of this Order shall be designed, at a minimum, to achieve the BMP performance criteria for storm water pollutants likely to be discharged as identified in Attachment "C", Table 3 for an 85th percentile 24-hour runoff event determined as the maximized capture storm water volume for the area using a 48 to 72-hour draw down time, from the formula recommended in Urban Runoff Quality Management, WEF Manual of Practice No. 23/ASCE Manual of Practice No. 87, (1998). Expected BMP pollutant removal performance for effluent quality was developed from the WERF-ASCE/ U.S. EPA International BMP Database. Permittees shall select Treatment BMPs based on the primary class of pollutants likely to be discharged from the site/facility (e.g. metals from an auto repair shop). Permittees may develop guidance for appropriate Treatment BMPs for project type based on Attachment "C". For the treatment of pollutants causing impairments within the drainage of the impaired waterbody, permittees shall select BMPs from the top three performing BMP categories or alternative BMPs that are designed to meet or exceed the performance of the highest performing BMP for the pollutant causing impairment.
4. Each Permittee shall implement programs and measures to comply with the TMDLs' WLAs for the MS4 as specified in Part 6.
5. If TMDL requirements, including Implementation Plans and Reports, address substantially similar requirements as the MS4 permit, the Executive Officer may approve the applicable reports, plans, data or submittals under the applicable TMDL as fulfilling requirements under the MS4.

**B. Legal Authority**

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

1. Permittees shall possess the necessary legal authority to prohibit, including, but not limited to:
  - (a) Illicit connections and illicit discharges, and to remove illicit connections.
  - (b) The discharge of non-storm water to the MS4 from:
    - (1) Washing or cleaning of gas stations, auto repair garages, or other types of automotive service facilities
    - (2) Mobile auto washing, carpet cleaning, steam cleaning, sandblasting and other such mobile commercial and industrial operations
    - (3) Areas where repair of machinery and equipment which are visibly leaking oil, fluid or antifreeze, is undertaken
    - (4) Storage areas for materials containing grease, oil, or other hazardous substances, and uncovered receptacles containing hazardous materials
    - (5) Swimming pools<sup>1</sup> that have a concentration greater than:
      - (A) Chlorine/ bromine- 0.1mg/L
      - (B) Chloride- 250mg/L
    - (6) Swimming pool filter backwash
    - (7) Decorative fountains and ponds
    - (8) Industrial/ Commercial areas, including restaurant mats
    - (9) Concrete truck cement, pumps, tools, and equipment washout
    - (10) Spills, dumping, or disposal of materials other, such as:
      - (A) Litter, landscape and construction debris, garbage, food, animal waste, fuel or chemical wastes, batteries, and any other materials which have the potential to adversely impact water quality; and
      - (B) Any pesticide, fungicide or herbicide
    - (11) Stationary and mobile pet grooming facilities
    - (12) Trash container leachate
2. The Permittees shall possess adequate legal authority to:
  - (a) Control through interagency agreement, the contribution of pollutants from one portion of the MS4 to another portion of the MS4.
  - (b) Require persons within their jurisdiction to comply with conditions in the Permittees' ordinances, permits, contracts, model programs, or orders (i.e. hold dischargers to its MS4 accountable for their contributions of pollutants and flows).
  - (c) Utilize enforcement measures (e.g., stop work orders, notice of violations, fines, referral to City, County, and/ or District Attorneys, referral to strikeforces, etc.) by ordinances, permits, contracts, orders, administrative authority, and civil and criminal prosecution.<sup>2</sup>

<sup>1</sup> MS4s discharging directly to the ocean are not subject to this prohibition.

<sup>2</sup>In the case of private responsible parties such as, HOAs, the Permittee must retain enforcement authority.

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (d) Control pollutants, including potential contribution<sup>1</sup> in discharges of storm water runoff associated with industrial activities, including construction activities to its MS4, and control the quality of storm water runoff from industrial sites, including construction sites.
  - (e) Carry out all inspections, surveillance and monitoring procedures necessary to determine compliance and non-compliance with permit conditions including the prohibition on illicit discharges to the MS4.
  - (f) Require the use of control measures to prevent or reduce the discharge of pollutants to achieve water quality objectives.
  - (g) Require that Treatment Control BMPs be properly operated and maintained.
3. Each Permittee has adopted a Storm Water Quality Ordinance based upon a countywide model. Each Permittee shall ensure, no later than (two years after Order adoption date), that its Storm Water Quality Ordinance authorizes the Permittee to enforce all requirements of this Order.
  4. Each Permittee shall submit no later than two years after Order adoption date, a statement by its legal counsel that the Permittee has obtained and possesses all necessary legal authority to comply with this Order through adoption of ordinances and/ or municipal code modifications.

**C. Fiscal Resources**

1. The Permittees shall implement the activities required to comply with the provisions of this Order.<sup>2</sup> Each Permittee shall:
  - (a) Submit an Annual Budget Summary that shall include:
    - (1) Budgets for the upcoming report year (estimated expenditure) for the following specific categories (estimated percentages and written explanations where necessary):
      - (A) Program Management Activities.
        - (i) Overall Administrative costs
      - (B) Program Implementation Activities (permit related activities only).  
Provide figures breakdown of expenditures for the categories below:
        - (i) Illicit connection/ illicit discharge program.
        - (ii) Development planning and approval
        - (iii) Construction program including inspection activities
        - (iv) Industrial/ Commercial program including inspection activities
        - (v) Public Agency Activities
      - (I) Maintenance and inspection of Treatment Control BMPs

<sup>1</sup> "Potential contributions" and "potential to discharge," means adequate legal authority to prevent an actual discharge of pollutants to the municipal separate storm sewer system.

<sup>2</sup> The sources of funding may be the general funds, and/or Benefit Assessment, plan review fees, permit fees, industrial/ commercial user fee, revenue bonds, grants or other similar funding mechanism.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (II) Municipal Street Sweeping
- (III) Municipal Drainage Maintenance including catch basin clean-outs
- (IV) Other costs associated with storm water management (describe)
- (vi) Public Information and Participation.
- (vii) Monitoring Program
- (viii) Miscellaneous Expenditures (describe)

**D. Modifications/ Revisions**

- 1. No later than two years after the Order adoption date, each Permittee shall modify its storm water management programs, protocols, practices, and municipal codes to make them consistent with the requirements herein.

**E. Designation and Responsibilities of the Principal Permittee**

- 1. The Ventura County Watershed Protection District is hereby designated as the Principal Permittee. The Principal Permittee shall:
  - (a) Participate in the County Environmental Crimes Task Force
  - (b) Coordinate and facilitate activities necessary to comply with the requirements of this Order, but the Principal Permittee is not responsible for ensuring compliance of any other individual Permittee
  - (c) Coordinate permit activities among Permittees and act as liaison between the Permittees and the Regional Water Board on permitting issues
  - (d) Provide technical and administrative support for committees that will be organized to implement this Order and its requirements
  - (e) Evaluate, assess, and synthesize the results of the monitoring program and the effectiveness of the implementation of BMPs
  - (f) Convene the Committee Meetings constituted pursuant to subpart 4.F.1., below, upon designation of representatives
  - (g) Implement the Countywide Monitoring Program required under the Order and evaluate, assess and synthesize the results of the monitoring program
  - (h) Provide personnel and fiscal resources for the collection, processing and submittal to the Regional Water Board of monitoring and annual reports, and summaries of other reports required under this Order

**F. Responsibilities of the Permittees**

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- 1. Each Permittee is required to comply with the requirements of this Order applicable to discharges within its boundaries (see Findings- Permit Coverage D.1 and D.2). Permittees are not responsible for the implementation of the provisions applicable to the Principal Permittee or other Permittees. Each Permittee shall:
  - (a) Comply with the requirements of this Order and any modifications thereto
  - (b) Coordinate among its internal departments and agencies, as necessary, to facilitate the implementation of the requirements of this Order applicable to such Permittees in an efficient and cost-effective manner
  - (c) Participate in intra-agency coordination (e.g., Planning Department, Fire Department, Building and Safety, Code Enforcement, Public Health, Parks and Recreation, and others) necessary to successfully implement the provisions of this Order
  - (d) Report, in addition to the Budget Summary, any supplemental dedicated budgets for the same categories
  - (e) Participate in Committee Meetings, as necessary

**PART 5 - SPECIAL PROVISIONS (BASELINE)**

**A. General Requirements**

- 1. This Order and the provisions herein, are intended to develop, achieve, and implement a timely, comprehensive, cost-effective storm water pollution control program to reduce the discharge of pollutants in storm water to the MEP and not cause or contribute to exceedances of water quality standards for the permitted areas in the County of Ventura.
- 2. Best Management Practice Substitution
  - (a) The Regional Water Board Executive Officer may approve any site-specific BMP substitution upon written request by a Permittee(s) and after public notice, if the Permittee can document that:
    - (1) The proposed alternative BMP or program will meet or exceed the objective of the original BMP or program in the reduction of storm water pollutants.
    - (2) The fiscal burden of the original BMP or program is greater than the proposed alternative and does not achieve a greater improvement in storm water quality.
    - (3) The proposed alternative BMP or program will be implemented within a similar period of time.

- (4) BMP substitution will be in accordance with the public review provisions of the Order (Part 8C.1 and Part 8C.2).

**B. Watershed Initiative Participation**

- 1. The Principal Permittee shall participate in water quality meetings for watershed management and planning, including but not limited to the following:
  - (a) Southern California Stormwater Monitoring Coalition (SMC)
  - (b) Other Watershed planning groups as appropriate
- 2. The Principal Permittee shall participate in the following regional water quality programs, and projects for watershed management and planning:
  - (a) SMC Regional Monitoring Programs
    - (1) Southern California Regional Bioassessment
      - (A) Level of effort per watershed
        - (i) Probabilistic sites per watershed
          - (I) Ventura River - Six
          - (II) Santa Clara River - Three
          - (III) Calleguas Creek - Six
        - (ii) Integrator sites per watershed
          - (I) Ventura River - One
          - (II) Santa Clara River - One
          - (III) Calleguas Creek - One
        - (iii) Fixed bioassessment sites
          - (I) The Permittees shall perform bioassessment at one fixed urban site in each major watershed. Site selection shall be determined by the results of the first year SMC results, as approved by the Executive Officer.
    - (b) Southern California Bight Projects
      - (1) Regional Monitoring Survey – 2008, and successive years.

**C. Public Information and Participation Program (PIPP)**

- 1. The Principal Permittee shall implement a Public Information and Participation Program (PIPP) that includes, but is not limited to, the requirements listed in this part. The Principal Permittee shall coordinate with Permittees to implement specific PIPP requirements. The objectives of the PIPP are as follows:
  - (a) To increase the knowledge of the target audience about the MS4, the adverse impacts of storm water pollution on receiving waters and potential solutions to mitigate the impacts
  - (b) To change the waste disposal and storm water pollution generation behavior of target audiences by encouraging implementation of appropriate solutions

- (c) To involve and engage communities in Ventura County to participate in mitigating the impacts of storm water pollution

2. Residential Program

(a) "No Dumping" Message

Each Permittee shall label all storm drain inlets that they own with a legible "no dumping" message. In addition, signs with prohibitive language discouraging illegal dumping shall be posted at designated public access points to creeks, other relevant waterbodies, and channels. Signage and storm drain messages shall be legible and maintained.

(b) Public Reporting

Each Permittee shall identify staff who will serve as the contact person(s) for reporting clogged catch basin inlets and illicit discharges/dumping, faded or missing catch basin labels, and general storm water management information. Permittees shall include this information, updated by July 1 of each year, in public information media such as the government pages of the telephone book, and internet web sites. The Principal Permittee shall compile a list of the general public reporting contacts submitted by all Permittees and make this information available on the web site (<http://www.vcstormwater.org/contact.htm>) and upon request. Each Permittee is responsible for providing current, updated information to the Principal Permittee.

(c) Outreach and Education

(1) Collaboratively, the Permittees shall implement the following activities:

- (A) Conduct a Storm Water pollution prevention advertising campaign.
- (B) Conduct Storm Water pollution prevention public service announcements.
- (C) Distribute storm water pollution prevention public education materials within 365 days to:
  - (i) Automotive parts stores
  - (ii) Home improvement centers/ lumber yards/ hardware stores
  - (iii) Pet shops/ feed stores
- (D) Public education materials shall include, but are not limited to information on the proper disposal, storage, and use of:
  - (i) Vehicle waste fluids
  - (ii) Household waste materials
  - (iii) Construction waste materials
  - (iv) Pesticides and fertilizers (including integrated pest management practices-IPM)
  - (v) Green waste (including lawn clippings and leaves)
  - (vi) Animal wastes
- (E) Work with existing local watershed groups or organize watershed Citizen Advisory Groups/ Committees to develop effective methods to

- educate the public about storm water pollution no later than (365 days after Order adoption date).
- (F) Organize events targeted to residents and population subgroups; and
- (G) Maintain the Countywide storm water website ([www.vcstormwater.org](http://www.vcstormwater.org)), which shall include educational material listed in the preceding subpart C.1(c)(1)(C).
- (2) The Principal Permittee shall develop a strategy to educate ethnic communities through culturally effective methods. Details of this strategy should be incorporated into the PIPP, and implemented, no later than (365 days after Order adoption date).
- (3) Each Permittee shall continue the existing outreach program to residents on the proper disposal of litter, green waste, pet waste, proper vehicle maintenance, lawn care and water conservation practices.
- (4) Each Permittee shall conduct educational activities within its jurisdiction and participate in countywide events.
- (5) The Permittees shall make a minimum of 5 million impressions per year to the general public related to storm water quality, with a minimum of 2.5 million impressions via newspaper, local TV access, local radio and/ or internet access.
- (6) The Principal Permittee, in cooperation with the Permittees, shall provide schools within each School District in the County with materials, including, but not limited to, videos, live presentations, and other information necessary to educate a minimum of 50 percent of all school children (K-12) every 2 years on storm water pollution. Alternatively, a Permittee may submit a plan to the Regional Water Board Executive Officer for consideration no later than (90 days after adoption of the Order), to provide outreach in lieu of the school curriculum. Pursuant to Water Code section 13383.6, the Permittees, in lieu of providing educational materials/ funding to School Districts in the County, may opt to provide an equivalent amount of funds or fraction thereof to the Environmental Education Account established within the State Treasury.
- (7) Each Permittee shall provide the contact information for their appropriate staff responsible for storm water public education activities to the Principal Permittee and contact information changes no later than 30 days after a change occurs.
- (8) The Permittees shall develop and implement a behavioral change assessment strategy no later than (365 days after Order adoption date), in order to determine whether the PIPP is demonstrably effective in changing the behavior of the public. The strategy shall be developed based on current sociological data and studies.
- (d) Pollutant-Specific Outreach  
The Principal Permittee, in cooperation with the Permittees, shall coordinate to develop outreach programs that focus on metals, urban pesticides, bacteria and

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

nutrients as the pollutants of concern no later than (365 days after Order adoption date). Metals may be appropriately addressed through the Industrial/ Commercial Facilities Program (e.g. the distribution of educational materials on appropriate BMPs for metal fabrication and recycling facilities that have been identified as a potential source). Region-wide pollutants may be included in the Principal Permittee's mass media outreach program.

3. Businesses Program

(a) Corporate Outreach

(1) The Permittees shall work with other regional or statewide agencies and, associations such as the California Storm Water Quality Association (CASQA), to develop and implement a Corporate Outreach program to educate and inform corporate franchise operators and/or local facility managers about storm water regulations and BMPs. Once developed, the program shall target a minimum of four Retail Gasoline Outlets (RGO) franchisers and cover a minimum of 80% of RGO franchisees in the county, four retail automotive parts franchisers, two home improvement center franchisers and six restaurant franchisers. Corporate outreach for all target facilities shall be conducted not less than twice during the term of this Order, with the first outreach contact to begin no later than two years after Order adoption date. At a minimum, this program shall include:

- (A) Confer with franchise operators and/or local facility managers to explain storm water regulations.
- (B) Distribution and discussion of educational material regarding storm water pollution and BMPs, and provide managers with recommendations to facilitate employee and facility compliance with storm water regulations.

(b) Business Assistance Program

(1) The Permittees shall implement a Business Assistance Program to provide technical information to small businesses to facilitate their efforts to reduce the discharge of pollutants in storm water. The Program shall include:

- (A) On-site, telephone or e-mail consultation regarding the responsibilities of businesses to reduce the discharge of pollutants, procedural requirements, and available guidance documents.
- (B) Distribution of storm water pollution prevention education materials to operators of auto repair shops, car wash facilities (including mobile car detailing), mobile carpet cleaning services, commercial pesticide applicator services and restaurants.

**D. Industrial/ Commercial Facilities Program**

Each Permittee shall require implementation of pollutant reduction and control measures, unless precluded by local ordinances, at industrial and commercial facilities, with the objective of

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

reducing pollutants in storm water. Except where specified otherwise in this Order, pollutant reduction and control measures may be used alone or in combination, and may include Treatment Control, Source Control BMPs, and operation and maintenance procedures, which may be applied before, during, and/ or after pollutant generating activities. At a minimum, the Industrial/ Commercial Facilities Control Program shall include requirements to:

- (a) Track
  - (b) Inspect
  - (c) Ensure compliance with municipal ordinances at industrial and commercial facilities that are critical sources of pollutants in storm water
1. Inventory of Critical Sources
    - (a) Each Permittee shall maintain a watershed-based inventory or database of all facilities within its jurisdiction that are critical sources of storm water pollution. Critical Sources to be tracked are summarized below, and specified in Attachment "D":
      - (1) Commercial Facilities
        - (A) Restaurants
        - (B) Automotive service facilities
        - (C) RGOs and automotive dealerships
        - (D) Nurseries and nursery centers
      - (2) U.S. EPA Phase I, II Facilities
      - (3) Other Federally-mandated Facilities [as specified in 40 CFR122.26(d)(2)(iv)(C)]
        - (A) Municipal landfills
        - (B) Hazardous waste treatment, disposal, and recovery facilities
        - (C) Facilities subject to SARA Title III (also known as the Emergency Planning and Community Right-to-Know Act (EPCRA))
    - (b) Each Permittee shall include the following minimum fields of information for each critical source industrial and commercial facility
      - (1) Name of facility and name of owner/ operator.
      - (2) Address of facility
      - (3) Coverage under the IASGP or other individual or general NPDES permits or any applicable waiver issued by the Regional or State Board pertaining to runoff discharges.
      - (4) A narrative description including Standard Industrial Classification (SIC) System/ North American Industry Classification System (NAICS) codes that best describe the industrial activities performed and principal products used at each facility and status of exposure to storm water.
    - (c) The Regional Water Board recommends that Permittees include additional fields of information, such as material usage and/ or industrial output, and discrepancies between SIC System/ NAICS Code designations (as reported by facility operators) and identify the actual type of industrial activity that has the potential to pollute storm water. In addition, the Regional Water Board recommends the

E

use of an automated database system, such as a Geographical Information System (GIS) or Internet-based system.

- (d) Each Permittee shall update its inventory of critical sources at least annually. The update may be accomplished through collection of new information obtained through field activities or through other readily available inter and intra-agency informational databases (e.g. business licenses, pretreatment permits, sanitary sewer hook-up permits, and similar information).

2. Inspect Critical Sources

(a) Commercial Facilities

Permittee shall inspect all facilities identified in subpart 5.D.1. twice during the 5-year term of the Order, provided that the first inspection occurs no later than (2 years after Order adoption date). A minimum interval of 6 months between the first and the second mandatory compliance inspection is required. In addition, each Permittee shall implement the activities outlined in the following subparts. At each facility, inspectors shall verify that the operator is implementing the source control BMPs. The Permittees may require implementation of additional BMPs where storm water flows from the MS4 discharge to an environmentally sensitive area (ESA, see part 7 for definition) or a CWA § 303(d) listed waterbody (see subpart 3(b) below).

(1) Restaurants-

Level of inspections: Each Permittee shall inspect all restaurants within its jurisdiction to confirm that storm water BMPs are being effectively implemented in compliance with State law, County and municipal ordinances. BMPs in Table 2 (BMPs at Restaurants) shall be implemented, unless the pollutant generating activity does not occur.

Table 2 - BMPs at Restaurants

Pollutant-Generating Activity	BMP Narrative Description	2003 California Stormwater BMP Handbook Industrial and Commercial BMP Identification #
Waste/ Hazardous Materials Storage, Handling and Disposal	Implementation of effective storage, handling and disposal procedures for hazardous materials.	By Municipality
Unauthorized Non-Storm Water Discharges	Effective elimination of non-storm water discharges.	SC-10
Accidental Spills/ Leaks	Implementation of effective spills/ leaks prevention and response procedures.	SC-11
Outdoor Storage of Raw Materials	Implementation of effective source control practices and structural devices.	SC-33

Storm Water Conveyance System Maintenance	Implementation of proper conveyance system operation and maintenance protocols.	SC-44

(2) Automotive Service Facilities-

Level of Inspection: Each Permittee shall confirm that BMPs are being effectively implemented at each facility within its jurisdiction, in compliance with County and municipal ordinances. The inspections shall verify that BMPs in Table 3 (BMPs at Automotive Service Facilities) are being implemented, unless the pollutant generating activity does not occur.

Table 3 - BMPs at Automotive Service Facilities

(3) Retail Gasoline Outlets and Automotive Dealerships-

Level of Inspections: Each Permittee shall confirm that BMPs are being effectively implemented at each facility within its jurisdiction, in compliance with County and municipal ordinances. The inspections shall verify that BMPs in Table 4 (BMPs at Retail Gasoline Outlets) are being implemented, unless the pollutant generating activity does not occur.

T  
E  
N  
T  
A  
T  
I  
V  
E
- (A) Each Permittee shall perform an initial inspection at all industrial facilities identified by the U.S. EPA in 40 CFR122.26(c) no later than 2 years after Order adoption date. After the initial inspection, all facilities determined as having exposure of industrial activities to storm water are subject to a second mandatory compliance inspection. A minimum interval of 6 months between the first and the second compliance inspection is required.
  - (B) Following the first mandatory compliance inspection, a Permittee shall perform a second mandatory compliance inspection yearly at a minimum of 20% of the facilities determined not to have exposure of industrial activities to storm water. The purpose of this inspection is to verify the continuity of the no exposure status. Facilities determined as having exposure will be notified that they must obtain coverage under the IASGP. A facility need not be inspected more than twice during the term of the Order unless subject to an enforcement action. A minimum interval of 6 months in between the first and the second compliance inspection is required.
  - (C) Applicable to all facilities: A Permittee need not inspect facilities that have been inspected by the Regional Water Board within the previous 24 month interval. However, if the Regional Water Board performed only one inspection, the Permittee shall conduct the second required mandatory compliance inspection.
- (2) **Level of Inspection:** Each Permittee shall confirm that each operator:
- (A) Has a current Waste Discharge Identification (WDID) number for facilities discharging storm water associated with industrial activity, and that a Storm Water Pollution Prevention Plan (SWPPP) is available on-site.
  - (B) Is effectively implementing BMPs in compliance with County and municipal ordinances. Facilities must implement the source control BMPs identified in subpart 5.D.3. and Appendix D, *California Stormwater Industrial and Commercial BMP Handbook (2003)*; or *\*keep this?\**
  - (C) Has applied and has a current No Exposure Certification (and WDID number) for facilities subject to this requirement.
3. Ensure Compliance of Critical Sources
- (a) **BMP Implementation:** Facilities must implement the source control BMPs identified in Part 5. D. 2. and, as applicable, Appendix D, *California Stormwater Industrial and Commercial BMP Handbook (2003)*. In the event that a Permittee determines that a BMP is infeasible at any site, the Permittee shall require implementation of similar BMPs that will achieve the equivalent reduction of pollutants in the storm water discharges. Likewise, for those BMPs that are not

T  
E  
N  
T  
A  
T  
I  
V  
E

protective of water quality standards, Permittees may require additional site-specific controls.

(b) **Environmentally Sensitive Areas (ESAs) and Impaired Waters:** For critical sources that discharge to MS4s that directly discharge to ESAs or to CWA § 303(d) listed impaired waterbodies, the Permittees shall require operators to implement additional pollutant specific controls to reduce pollutants in storm water runoff that are causing or contributing to exceedances of water quality objectives. A Regional Board approved TMDL Implementation Plan for the receiving water will substitute for this requirement.

(c) **Progressive Enforcement:** Each Permittee shall implement a progressive enforcement policy to ensure that facilities are brought into compliance with all storm water requirements within a reasonable time period as specified below.

(1) In the event that a Permittee determines, based on an inspection conducted, that an operator has failed to adequately implement all necessary BMPs, that Permittee shall take progressive enforcement actions which, at a minimum, shall include a follow-up inspection within 4 weeks from the date of the initial inspection.

(2) In the event that a Permittee determines that an operator has failed to adequately implement BMPs after a follow-up inspection, that Permittee shall take enforcement action as established through authority in its municipal code and ordinances or through the judicial system.

(3) Each Permittee shall maintain records and make them available on request to the Regional Water Board, including inspection reports, warning letters, notices of violations, and other enforcement records, demonstrating a good faith effort to bring facilities into compliance.

4. Interagency Coordination

(a) **Referral of Violations of the Municipal Storm Water Ordinances and California Water Code § 13260:** A Permittee may refer a violation(s) of § 13260 by Industrial and Commercial facilities to the Regional Water Board provided that under its municipal storm water ordinance the Permittee has made a good faith effort of progressive enforcement. At a minimum, a Permittee's good faith effort must be documented with:

- (1) Two follow-up inspections
- (2) Two warning letters or notices of violation

(b) **Referral of Violations of the Industrial Activities Storm Water General Permit (IASGP), including Requirements to File a Notice of Intent or No Exposure Certification:** For those facilities in violation of the municipal storm water ordinance and subject to the IASGP, Permittees may escalate referral of such violations to the Regional Water Board (electronically on a quarterly basis to the Regional Water Board's Storm Water Site at

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

V  
E

MS4stormwaterrb4@waterboards.ca.gov) after one inspection and one written notice (copied to the Regional Water Board) to the operator regarding the violation. In making such referrals, Permittees shall include, at a minimum, the following documentation:

- (1) Name of the facility
- (2) Operator of the facility
- (3) Owner of the facility
- (4) WDID Number (if applicable)
- (5) Industrial activity being conducted at the facility that is subject to the IASGP
- (6) Records of communication with the facility operator regarding the violation, which shall include at least an inspection report
- (7) The written notice of the violation copied to the Regional Water Board
- (c) **Investigation of Complaints Regarding Facilities – Transmitted by the Regional Water Board Staff:** Each Permittee shall initiate, within one business day,<sup>1</sup> investigation of complaints (other than non-storm water discharges) to the MS4 from facilities within its jurisdiction. The initial investigation shall include, at a minimum, a limited inspection of the facility to confirm the complaint to determine if the facility is effectively complying with the municipal storm water urban runoff ordinances, and, if necessary, to oversee corrective action.
- (d) **Assistance of Regional Water Board Enforcement Actions:** As directed by the Regional Water Board Executive Officer, Permittees shall assist Regional Water Board enforcement actions by: helping in identification of current owners, operators, and lessees of facilities; providing staff, when available, for joint inspections with Regional Water Board inspectors; appearing as witnesses in Regional Water Board enforcement hearings; and providing copies of inspection reports and other progressive enforcement documentation.
- (e) **Participation in a Task Force:** The Permittees shall participate with the Regional Water Board, and other public agencies on an enforcement task force such as the Storm Water Task Force, to communicate concerns regarding special cases of storm water violations by industrial and commercial facilities and to develop a coordinated approach to enforcement action.

**E. Planning and Land Development Program**

**I. Purpose**

- 1. The Permittees shall implement a Planning and Land Development Program pursuant to part 5.E. for all New Development and Redevelopment projects subject to this Order to:

---

<sup>1</sup> Permittees may comply with the Permit by taking initial steps (such as logging, prioritizing, and tasking) to “initiate” the investigation within that one business day. However, the Regional Water Board would expect that the initial investigation, including a site visit, to occur within four business days.

- (a) Lessen the water quality impacts of development by using smart growth practices such as compact development, directing development towards existing communities via infill or redevelopment, safeguarding of environmentally sensitive areas, mixing of land uses (e.g., homes, offices, and shops), transit accessibility, and better pedestrian and bicycle amenities.
- (b) Minimize the adverse impacts from storm water runoff on the biological integrity of Natural Drainage Systems and the beneficial uses of waterbodies in accordance with requirements under CEQA (Cal. Pub. Resources Code § 21100).
- (c) Minimize the percentage of effective impervious surfaces on land developments to mimic predevelopment water balance through infiltration, evapotranspiration and reuse.
- (d) Minimize pollutant loadings from impervious surfaces such as roof-tops, parking lots, and roadways through the use of properly designed, technically appropriate BMPs (including Source Control BMPs such as good housekeeping practices), Low Impact Development Strategies, and Treatment Control BMPs.
- (e) Properly select, design and maintain Treatment Control BMPs and Hydromodification Control BMPs to address pollutants that are likely to be generated, assure long-term function, and to avoid the breeding of vectors.<sup>1</sup>
- (f) Prioritize the selection of BMPs suites to remove storm water pollutants, reduce storm water runoff volume, and beneficially reuse storm water to support an integrated approach to protecting water quality and managing water resources in the following order of preference:
- (1) Infiltration BMPs
  - (2) BMPs that store and reuse storm water runoff.
  - (3) BMPs that incorporate vegetation to promote pollutant removal and runoff volume reduction and integrate multiple uses
  - (4) BMPs which percolate runoff through engineered soil and allow it to discharge downstream slowly
  - (5) Approved modular/ proprietary treatment control BMPs that are based on LID concepts and that meet pollution removal goals

## II. Applicability

### 1. New Development Projects.

- (a) Development projects subject to Permittee conditioning and approval for the design and implementation of post-construction controls to mitigate storm water pollution, prior to completion of the project(s), are:
- (1) All development projects equal to 1 acre or greater of disturbed area and adding more than 10,000 square feet of impervious surface area
  - (2) Industrial park 10,000 square feet or more of surface area

<sup>1</sup> Treatment BMPs when designed to drain within 72 hours of the end of rainfall minimize the potential for the breeding of vectors.

- (3) Commercial strip mall 10,000 square feet or more of impervious surface area
- (4) Retail gasoline outlet 5,000 square feet or more of surface area
- (5) Restaurant (SIC 5812) 5,000 square feet or more of surface area
- (6) Parking lot 5,000 square feet or more of impervious surface area, or with 25 or more parking spaces
- (7) Streets, roads, highways, and freeway construction of 10,000 square feet or more of impervious surface area shall incorporate USEPA guidance regarding Managing Wet Weather with Green Infrastructure: Green Streets to the maximum extent practicable.
- (8) Automotive service facilities (SIC 5013, 5014, 5511, 5541, 7532-7534 and 7536-7539) [5,000 square feet or more of surface area]
- (9) Redevelopment projects in subject categories that meet Redevelopment thresholds (identified in subpart E.II.2 below)
- (10) Projects located in or directly adjacent to, or discharging directly to an Environmentally Sensitive Area (ESA), where the development will:
  - (A) Discharge storm water runoff that is likely to impact a sensitive biological species or habitat; and
  - (B) Create 2,500 square feet or more of impervious surface area
- (11) Single-family hillside homes. To the extent that a Permittee may lawfully impose conditions, mitigation measures or other requirements on the development or construction of a single-family home in a hillside area as defined in the applicable Permittee's Code and Ordinances, each Permittee shall require that during the construction of a single-family hillside home, the following measures to be implemented:
  - (A) Conserve natural areas
  - (B) Protect slopes and channels
  - (C) Provide storm drain system stenciling and signage
  - (D) Divert roof runoff to vegetated areas before discharge unless the diversion would result in slope instability
  - (E) Direct surface flow to vegetated areas before discharge unless the diversion would result in slope instability

2. Redevelopment Projects

- (a) Redevelopment projects subject to Permittee conditioning and approval for the design and implementation of post-construction controls to mitigate storm water pollution, prior to completion of the project(s), are:
  - (1) Land-disturbing activity that results in the creation or addition or replacement of 5,000 square feet or more of impervious surface area on an already developed site on development categories identified in subpart 5.E.II.1.
  - (2) Where Redevelopment results in an alteration to more than fifty percent of impervious surfaces of a previously existing development, and the existing

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

development was not subject to post development storm water quality control requirements, the entire project must be mitigated.

- (3) Where Redevelopment results in an alteration to less than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post development storm water quality control requirements, only the alteration must be mitigated, and not the entire development.

- (b) Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of facility or emergency redevelopment activity required to protect public health and safety. Impervious surface replacement, such as the reconstruction of parking lots and roadways which does not disturb additional area and maintains the original grade and alignment, is considered a routine maintenance activity. Redevelopment does not include the repaving of existing roads to maintain original line and grade.

- (c) Existing single-family dwelling and accessory structures are exempt from the Redevelopment requirements unless such projects create, add, or replace 10,000 square feet of impervious surface area.

- 3. Effective Date –The New Development and Redevelopment requirements contained in Section E of the Order shall begin 90 calendar days after Regional Board Executive Officer approval of the changes to the Technical Guidance Manual needed to comply with this permit. After that date all discretionary permit projects or project phases that have not been deemed complete for processing, or discretionary permit projects without vesting tentative maps that have not requested and received an extension of previously granted approvals must comply with the requirements in Section E. Projects that have been deemed complete prior to the update of the technical design manual are not subject to this section. For Permittee’s projects the effective date shall be the date the governing body or their designee approves initiation of the project design.

**III. New Development/ Redevelopment Performance Criteria**

- 1. Integrated Water Quality/ Flow Reduction/ Resources Management Criterion
  - (a) Permittees shall establish standards for all New Development and Redevelopment projects identified in subpart 5.E.II to control pollutants, pollutant loads, and runoff volume emanating from impervious surfaces through percolation, infiltration, storage, or evapo-transpiration, by reducing the percentage of Effective Impervious Area (EIA). The standards shall be based on the type of development, site conditions (including soils and groundwater), community constraints, and shall consider USEPA’s “Managing Wet Weather with Green Infrastructure, Action Strategy, 2008”.

- (b) The goal of the New Development and Redevelopment standards shall be to minimize pollutant loads and runoff volume from impervious surfaces by reducing the effective impervious area of new and redevelopment projects. This goal may be implemented through use of site features, a Redevelopment Project Area Master Plan (RPAMP), or payment of an in-lieu fee as described in this section. For projects in undeveloped areas, the project shall comply with the goal of 5% or less of effective impervious area (EIA). For development and redevelopment projects which can be demonstrated that the 5% EIA goal is infeasible, the project shall comply with the surface discharge requirements of 5.E.III.3. Permittees shall submit the criteria for determining infeasibility to the Regional Board within 180 days of permit adoption. The infeasibility criteria shall become effective for determining feasibility upon Executive Officer approval.
- (c) Impervious surfaces may be rendered "ineffective" if the storm water runoff is:
  - (1) Collected and stored for beneficial use such as irrigation, or other reuse purpose; or
  - (2) Infiltrated; or,
  - (3) Evapotranspired; or
  - (4) Biofiltrate.
- (d) All features and structures implemented to render impervious surfaces "ineffective" to attain the EIA requirement as described in provision (b), above, shall be properly sized to infiltrate, store for beneficial reuse, evapotranspire, or biofiltrate at least the volume of water that meets the criteria in subpart 5.E.III.3.
- (e) Any surface discharge of the storm water runoff from projects that cannot attain the 5% EIA goal shall be mitigated in accordance with subpart 5.E.III.3

2. Hydromodification (Flow/ Volume/ Duration) Control Criteria

- (a) Each Permittee shall require all New Development and Redevelopment projects identified in subpart 5.E.II to implement hydrologic control measures, to prevent accelerated downstream erosion and to protect stream habitat in natural drainage systems. The purpose of the hydrologic controls is to minimize changes in post-development hydrologic storm water runoff discharge rates, velocities, and duration. This shall be achieved by maintaining the project's pre-project storm water runoff flow rates and durations.
  - (1) Description
    - (A) Hydromodification control in natural drainage systems shall be achieved by maintaining the Erosion Potential ( $E_p$ ) in streams at a value of 1, unless an alternative value can be shown to be protective of the natural drainage systems from erosion, incision, and sedimentation that can occur as a result of flow increases from impervious surfaces and damage stream habitat (see Attachment "E" - Determination of Erosion Potential)

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (B) Hydromodification control may include one, or a combination of on-site, regional subregional hydromodification control BMPs, LID strategies, or stream restoration measures, with preference given to LID strategies and hydromodification control BMPs. Any in-stream restoration measure shall not adversely affect the beneficial uses of the natural drainage systems
  - (C) Natural drainage systems, which include unlined or unimproved (not engineered) creeks, streams, rivers and their tributaries, are located in the following watersheds:
    - (i) Ventura River
    - (ii) Santa Clara River
    - (iii) Calleguas Creek
    - (iv) Miscellaneous Ventura Coastal
  - (D) The Southern California Storm Water Monitoring Coalition (SMC) is developing a regional methodology to eliminate or mitigate the adverse impacts of hydromodification as a result of urbanization, including hydromodification assessment and management tools.
    - (i) The SMC has identified the following objectives for the Hydromodification Control Study (HCS):
      - (I) Establishment of a stream classification for Southern California streams
      - (II) Development of a deterministic or predictive relationship between changes in watershed impervious cover and stream-bed/ stream bank enlargement
      - (III) Development of a numeric model to predict stream-bed/ stream bank enlargement and evaluate the effectiveness of mitigation strategies
  - (E) The Permittees shall participate in the SMC HCS to develop:
    - (i) A regional stream classification system
    - (ii) A numerical model to predict the hydrological changes resulting from new development
    - (iii) A numerical model to identify effective mitigation strategies
  - (F) Until the completion of the SMC HCS, Permittees shall implement the Interim Hydromodification Control Criteria, described in subpart 5.E.III.3(a)(3)(A) below, to control the potential adverse impacts of changes in hydrology that may result from new development and redevelopment projects identified in subpart 5.E.II
  - (G) Existing single-family structures are exempt from the Hydromodification control requirements unless such projects disturb one acre or more of land or create, add, or replace 10,000 square feet or more of impervious surface area
- (2) Exemptions to Hydromodification Controls. Permittees may exempt the following New Development and Redevelopment projects from

implementation of Hydromodification controls where assessments of downstream channel conditions and proposed discharge hydrology indicate that adverse Hydromodification effects to present and future beneficial uses of Natural Drainage Systems are unlikely:

- (A) All projects that disturb less than one acre.
- (B) Projects that are replacement, maintenance or repair of a Permittee's existing flood control facility, storm drain, or transportation network.
- (C) Redevelopment Projects in the Urban Core that do not increase the effective impervious area or decrease the infiltration capacity of pervious areas compared to the pre-project conditions.
- (D) Projects that have any increased discharge go directly or via a storm drain to a sump, lake, area under tidal influence, into a waterway that has a 100-year peak flow (Q100) of 25,000 cfs or more, or other receiving water that is not susceptible to Hydromodification impacts;
- (E) Projects that discharge directly or via a storm drain into concrete or improved (not natural) channels (e.g., rip rap, sackcrete, etc.), which, in turn, discharge into receiving water that is not susceptible to Hydromodification impacts (as in D above).

(3) Interim Hydromodification Control Criteria

(A) The Interim Hydromodification Control Criteria to protect natural drainage systems until Permittees complete Hydromodification Control Plans (HCPs), described in subpart 5.E.III.3(a)(4) below, are as follows:

- (i) **Projects disturbing land area of less than fifty acres** will be subject to LID and/or source or treatment BMPs as addressed in this permit. The combined effects of LID and the treatment BMPs are considered adequate for Hydromodification control for projects that disturb less than 50 acres.
- (ii) **Projects disturbing land areas of fifty acres or greater** Projects in this category shall develop and implement a Hydromodification Analysis Study (HAS) that demonstrates that post development conditions are expected to approximate the pre-project erosive effect of sediment transporting flows in receiving waters. The HAS must lead to the incorporation into the project design features intended to approximate, to the extent feasible, an Erosion Potential value of 1 or any alternative value

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

that can be shown to be protective of the natural drainage systems from erosion, incision, and sedimentation that can occur as a result of flow increases from impervious surfaces and damage stream habitat in natural drainage systems, or

- (iii) Alternatively, project proponents in this category may elect to develop, in partnership with Permittees, an equivalent implementation method based on flow duration control in the form of nomographs relating planned impervious area and local soil type (infiltration rates) to determine hydromodification control BMP volume and land area requirements for the proposed project. The nomographs shall be derived from continuous simulation modeling using Ventura County specific rain gauge records and soil types, and calibrated using data from a local undeveloped watershed with similar conditions; or

(4) Final Criteria

- (A) The Permittees shall develop and implement watershed specific HCPs no later than 180 days after the completion of the SMC HCS.

- (i) The HCP shall identify:
  - (I) Stream classifications
  - (II) Flow rate and duration control methods
  - (III) Sub-watershed mitigation strategies
  - (IV) Stream restoration measures, which will maintain the stream and tributary Erosion Potential at 1 unless an alternative value can be shown to be protective of the natural drainage systems from erosion, incision, and sedimentation that can occur as a result of flow increases from impervious surfaces and damage stream habitat in natural drainage system tributaries

- (B) The HCP shall contain the following elements:

- (i) Hydromodification Management Standards
- (ii) Natural Drainage Areas and Hydromodification Management Control Areas
- (iii) New Development and Redevelopment Projects subject to the HCP
- (iv) Description of authorized Hydromodification Management Control BMPs
- (v) Hydromodification Management Control BMP Design Criteria.
- (vi) For flow duration control methods, the range of flows to control for, and goodness of fit criteria
- (vii) Allowable low critical flow,  $Q_c$ , which initiates sediment transport
- (viii) Description of the approved Hydromodification Model.

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (ix) Any alternate Hydromodification Management Model and Design
- (x) Stream Restoration Measures Design Criteria
- (xi) Monitoring and Effectiveness Assessment
- (xii) Record Keeping

The HCP shall be deemed in effect upon Executive Officer approval.

3. Water Quality Mitigation Criteria

- (a) Each Permittee shall require all New Development and Redevelopment projects identified in subpart 5.E.II to implement post-construction storm water treatment BMPs and control measures to mitigate storm water pollution as follows:
  - (1) Projects disturbing land areas less than 50 acres
    - (A) Volumetric Treatment Control BMP
      - (i) The 85th percentile 24-hour runoff event determined as the maximized capture storm water volume for the area using a 48 to 72-hour draw down time, from the formula recommended in *Urban Runoff Quality Management, WEF Manual of Practice No. 23/ASCE Manual of Practice No. 87, (1998)*; or
      - (ii) The volume of annual runoff based on unit basin storage water quality volume, to achieve 80 percent or more volume treatment by the method recommended in the Ventura County Technical Guidance Manual for Storm Water Quality Control Measures (July 2002 and its revisions); or
      - (iii) The volume of runoff produced from a 0.75 inch storm event, prior to its discharge to a storm water conveyance system;<sup>1</sup> and/ or
    - (B) Flow Based Treatment Control BMP
      - (i) The flow of runoff produced from a rain event equal to at least 0.2 inches per hour intensity; or
      - (ii) The flow of runoff produced from a rain event equal to at least 2 times the 85th percentile hourly rainfall intensity as determined from local rainfall records; or
      - (iii) Eight percent of the 50-year storm design flow rate as determined from the method recommended in the Ventura County Technical Guidance Manual for Storm Water Quality Control Measures (July 2002 and its revisions)
  - (2) Projects disturbing land area of 50 acres or greater
    - (A) Eighty percent of the average runoff volume using an appropriate public domain continuous flow model (such as Storm Water Management Model (SWMM) or Hydrologic Engineering Center – Hydrologic Simulation Program – Fortran (HEC-HSPF), using the local rainfall record and relevant BMP Performance data.

<sup>1</sup> This option is available only for construction projects that disturb land area less than 5 acres.

**IV. Implementation**

1. Maintenance Agreement and Transfer
  - (a) Prior to issuing approval for final occupancy each Permittee shall require that all new development and redevelopment projects subject to post-construction BMP requirements provide an operation and maintenance plan and verification of ongoing maintenance provisions for LID practices, Treatment Control BMPs, and Hydromodification Control BMPs including but not limited to: final map conditions, legal agreements, covenants, conditions or restrictions, CEQA mitigation requirements, conditional use permits, and/ or other legally binding maintenance agreements.
    - (1) Verification at a minimum shall include the developer's signed statement accepting responsibility for maintenance until the responsibility is legally transferred; and either
      - (A) A signed statement from the public entity assuming responsibility for BMP maintenance; or
      - (B) Written conditions in the sales or lease agreement, which require the property owner or tenant to assume responsibility for BMP maintenance and conduct a maintenance inspection at least once a year; or
      - (C) Written text in project covenants, conditions, and restrictions (CCRs) for residential properties assigning BMP maintenance responsibilities to the Home Owners Association (HOA); or
      - (D) Any other legally enforceable agreement or mechanism that assigns responsibility for the maintenance of BMPs.
    - (b) Each Permittee shall require all development projects subject to post-construction BMP requirements to provide a plan for the operation and maintenance of all structural and treatment controls. The Operation and Maintenance plan shall follow the Technical Guidance Manual Appendix D "Maintenance Plan Guidance" (or subsequent guidance manual) for each BMP component. The plan shall be submitted for examination of relevance to keeping the BMPs in proper working order. Where BMPs are transferred to Permittee for ownership and maintenance, the plan shall also include all relevant costs for upkeep of BMPs in the transfer. Operation and Maintenance plans for private BMPs shall be kept on site for periodic review by Permittee inspectors.
  2. Tracking, Inspection, and Enforcement of Post-Construction BMPs
    - (a) Each Permittee shall implement a tracking system, and an inspection and enforcement program for new development and redevelopment post-construction storm water BMPs as set fort in part 5.E no later than (365 days after Order adoption date).

- (1) Implement a GIS or other electronic system for tracking projects that have been conditioned for post-construction BMPs. The electronic system, at a minimum, should contain the following information:
    - (A) Municipal Project ID
    - (B) State WDID No
    - (C) Project Acreage
    - (D) BMP Type and Description
    - (E) BMP Location (coordinates)
    - (F) Date of Acceptance
    - (G) Date of Maintenance Agreement
    - (H) Maintenance Records
    - (I) Inspection Date and Summary
    - (J) Corrective Action
    - (K) Date Certificate of Occupancy Issued
    - (L) Replacement or Repair Date
  - (b) Inspect all development sites upon completion of construction and prior to the issuance of occupancy certificates to ensure proper installation of LID measures, structural BMPs, treatment control BMPs and Hydromodification control BMPs. The inspection may be combined with other inspections provided it is conducted by trained personnel.
  - (c) Verify proper maintenance and operation of post-construction BMPs previously approved for new development and redevelopment and operated by the Permittees. The post construction BMP maintenance inspection program shall incorporate the following elements:
    - (1) Post-construction BMP Maintenance Inspection checklist.
    - (2) Inspection at least once every 2 years, beginning (365 days after Order adoption date), of post-construction BMPs to assess operation conditions with particular attention to:
    - (3) Criteria and procedures for post construction Treatment Control and Hydromodification Control BMP repair, replacement, or re-vegetation.
  - (d) For post construction BMPs operated and maintained by parties other than the Permittees the Permittees shall require annual reports by the other parties demonstrating proper maintenance and operations.
  - (e) Undertake enforcement as appropriate based on the results of the inspection.
3. Alternative Post Construction Storm Water Mitigation Programs
- (a) A Permittee or a coalition of Permittees may apply to the Regional Water Board for approval of a Redevelopment Project Area Master Plan (RPAMP) for redevelopment projects within the Redevelopment Project Areas, in consideration of exceptional site constraints that inhibit site-by-site or project-by-project implementation of post-construction requirements.

- (b) Upon review and a determination by the Regional Water Board Executive Officer that the proposal is technically valid and appropriate, the Regional Water Board may consider for approval such a program if its implementation will:
  - (1) Result in equivalent or superior reduction of storm water pollutant loads in comparison to individual projects regulated by this permit.
  - (2) Satisfy, on a Redevelopment Project Area-wide basis, the hydromodification criteria of this section.
  - (3) Reduce the percentage of Effective Impervious Area (EIA) to a target of 5 percent or less of the Redevelopment Project Area, using properly sized storm water treatment/collection features, as described in this Section.
  - (4) Be fiscally sustainable and have secure funding; and
  - (5) Be completed in four years of the adoption date of this permit.
- (c) The RPAMP should prioritize the implementation of LID storm water mitigation measures, as described in this section.
- (d) A Permittee or a coalition of Permittees may apply to the Regional Water Board for approval of a Redevelopment Project Area Master Plan (RPAMP) that takes into consideration the balancing of water quality protection with the needs for adequate housing, population growth, public transportation and management, land recycling, and urban revitalization.
- (e) For the RPAMP to be considered, a technical panel of the Local Government Commission or an equivalent state or regional planning agency must have reviewed and approved the proposed RPAMP, prior to its submittal to the Regional Water Board. The Regional Water Board Executive Officer may then consider the RPAMP for approval, or elect to submit it to the Regional Water Board for consideration.
- (f) The RPAMP, on approval, may substitute in part or wholly for post-construction requirements.
- (g) Redevelopment Project Areas include the following:
  - (1) City Center areas
  - (2) Historic District areas
  - (3) Brownfield areas
  - (4) Infill Development areas
  - (5) Urban Transit Villages
  - (6) Any other redevelopment area so designated by the Regional Water Board
- (h) Nothing in these provisions shall be construed as to delay the implementation of post-construction control requirements, as approved in this Order.

4. Mitigation Funding

- (a) The Principal Permittee or a coalition of Permittees shall create a Mitigation Funding Plan to fund regional or subregional solutions to storm water pollution, where any of the following situations occur:
  - (1) A waiver for impracticability is granted
  - (2) Funds become available

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (3) Off-site mitigation is required because of loss of environmental habitat; or
- (4) An approved watershed management plan, or an integrated water resources management plan, or a regional storm water mitigation plan, or a wetlands recovery plan exists that incorporates an equivalent or improved strategy for storm water pollution mitigation
- (5) When a Permittee determines that a project is infeasible in accordance with 5.(E).III.(1)(c), the project application shall provide sufficient funds to the Permittee for a public project that will retain or mitigate a volume of stormwater equivalent to the onsite retention volume that was not retained on site.

The Permittees shall submit the Mitigation Funding Plan to the Executive Officer for approval 445 days after Permit adoption. The Mitigation Funding Plan shall be deemed in effect upon Executive Officer approval.

5. Developer Technical Guidance and Information

- (a) The Permittees shall update the Ventura County Technical Guidance Manual for Storm Water Quality Control Measures to include, at a minimum, the following:
  - (1) Hydromodification Control criteria described in this Order, including numerical criteria.
  - (2) Expected BMP pollutant removal performance including effluent quality (ASCE/ U.S. EPA International BMP Database, CASQA New Development BMP Handbook, technical reports, local data on BMP performance, and the scientific literature appropriate for southern California geography and climate).
  - (3) Selection of appropriate BMPs for storm water pollutants of concern.
  - (4) Data on Observed Local Effectiveness and performance of implemented BMPs.
  - (5) BMP Maintenance and Cost Considerations.
  - (6) Guiding principles to facilitate integrated water resources planning and management in the selection of BMPs, including water conservation, groundwater recharge, public recreation, multipurpose parks, open space preservation, and redevelopment retrofits.
  - (7) LID principles and specifications, including the objectives and specifications for integration of LID strategies in the areas of:
    - (A) Site Assessment.
    - (B) Site Planning and Layout.
    - (C) Vegetative Protection, Revegetation, and Maintenance.
    - (D) Techniques to Minimize Land Disturbance.
    - (E) Techniques to Implement LID Measures at Various Scales
    - (F) Integrated Water Resources Management Practices.
    - (G) LID Design and Flow Modeling Guidance.
    - (H) Hydrologic Analysis.
    - (I) LID Credits.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (b) Permittees shall update the Technical Guidance Manual within 365 days of the adoption of this Order.
- (c) The Permittees shall facilitate implementation of LID by providing key industry, regulatory, and other stakeholders with information regarding LID objectives and specifications contained in the LID Technical Guidance Section through a training program. The LID training program will include the following:
  - (1) LID targeted sessions and materials for builders, design professionals, regulators, resource agencies, and stakeholders
  - (2) A combination of awareness on national efforts and local experience gained through LID pilot projects and demonstration projects
  - (3) Materials and data from LID pilot projects and demonstration projects including case studies
  - (4) Guidance on how to integrate LID requirements into the local regulatory program(s) and requirements
  - (5) Availability of the LID Technical Guidance regarding integration of LID measures at various project scales
  - (6) Guidance on the relationship among LID strategies, Source Control BMPs, Treatment Control BMPs, and Hydromodification Control requirements

The Permittees shall submit revisions to the Ventura County Technical Guidance Manual to the Regional Board for Executive Officer approval.

6. Project Coordination

- (a) Each Permittee shall facilitate a process for effective approval of post-construction storm water control measures. The process shall include:
  - (1) Detailed BMP review including BMP sizing calculations, BMP pollutant removal performance, and municipal approval; and
  - (2) An established structure for communication and delineated authority between and among municipal departments that have jurisdiction over project review, plan approval, and project construction through memoranda of understanding (MOU) or an equivalent agreement.

V. State Statute Conformity

1. California Environmental Quality Act (CEQA) Document Update

- (a) Each Permittee shall incorporate into its CEQA process no later than (6 months from Order adoption date), those additional procedures necessary for considering potential storm water quality impacts and providing for appropriate mitigation when preparing and reviewing CEQA documents.
  - (1) The procedures shall require consideration of the following:
    - (A) Potential impact of project construction on storm water runoff.
    - (B) Potential impact of project post-construction activity on storm water runoff.

- (C) Potential for discharge of storm water from areas from material storage, vehicle or equipment fueling, vehicle or equipment maintenance (including washing), waste handling, hazardous materials handling or storage, delivery areas or loading docks, or other outdoor work areas.
- (D) Potential for discharge of storm water to impair the beneficial uses of the receiving waters.
- (E) Potential for the discharge of storm water to cause significant harm on the biological integrity of the waterways and waterbodies.
- (F) Potential for significant changes in the flow velocity or volume of storm water runoff to cause harm to or impair the beneficial uses of natural drainage systems.
- (G) Potential for significant increases in erosion at the project site or surrounding areas.

2. General Plan Update

- (a) Each Permittee shall amend, revise or update its General Plan to include watershed and storm water quality and quantity management considerations and policies when any of the following General Plan elements are updated or amended:
  - (1) Land Use
  - (2) Housing
  - (3) Conservation
  - (4) Open Space
- (b) Each Permittee shall provide the Regional Water Board with the draft amendment or revision when a listed General Plan element or General Plan is noticed for comment in accordance with Cal. Govt. Code § 65350 *et seq.*

**F. Development Construction Program**

- I. Each Permittee shall implement a construction program that prevents illicit construction-related discharges of pollutants into the MS4, implements and maintains structural and non-structural BMPs to reduce pollutants in stormwater runoff from construction sites, reduces construction site discharges of pollutants from the MS4 to the MEP, and prevents construction site discharges from the MS4 from causing or contributing to a violation of water quality standards.
  - 1. BMP Implementation - Construction Sites Less Than One Acre

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (a) Each Permittee shall require the implementation of an effective combination of erosion and sediment control BMPs from Table 6 to prevent erosion and sediment loss, and the discharge of construction wastes.<sup>1</sup>

3. BMP Implementation - Construction Sites 5 acres and Greater

- (a) Each Permittee shall require the implementation of an effective combination of the following BMPs in Table 8 (BMPs at Construction sites 5 acres or greater) in addition to the ones identified in Table 6 (BMPs at Construction sites less than 1 acre) and Table 7 (BMPs at Construction sites 1 acre or greater but less than 5 acres) at all construction sites 5 acres and greater to prevent erosion and sediment loss, and the discharge of construction wastes. Erosion control BMPs shall be preferred to sediment control BMPs.

Table 8 - BMPs at Construction sites 5 acres or greater

BMPs	CASQA Handbook	Caltrans Handbook
<b>Sediment Controls</b>		
Sediment Basin	SE-2	SC-2
Check Dam	SE-4	SC-4
<b>Tracking Control BMPs</b>		
Stabilized Construction Entrance/ Exit	TR-1	TC-1
<b>Non-Storm Water Management</b>		
Vehicle and Equipment Maintenance	NS-10	NS-10
<b>Waste Management</b>		
Material Delivery and Storage	WM-1	WM-1
Spill Prevention and Control	WM-4	WM-4
Concrete Waste Management	WM-8	WM-8
Sanitary/ Septic Waste Management	WM-9	WM-9

4. Enhanced Construction BMP Implementation.

- (a) Each Permittee shall implement, or require implementation of, enhanced practices that preclude impacts to water quality posed by all construction sites on hillsides as defined in this Order and construction sites that directly discharge to a waterbody listed on the CWA § 303 (d) list for siltation or sediment, or that occur within or directly adjacent to an Environmentally Sensitive Area (ESAs).

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

Construction sites located on hillsides, adjacent to CWA 303(d) listed waters for siltation or sediment, and directly adjacent to ESAs are termed "High risk sites."

- (b) Each Permittee shall require implementation of enhanced practices for high risk sites which shall include increased BMP inspection and maintenance requirements.
  - (1) Each Permittee shall require that high risk sites shall be inspected by the project proponent's Qualified SWPPP Developer or Qualified SWPPP Practitioner or personnel or consultants who are Certified Professionals in Erosion and Sediment Control (CPESC) at the time of BMP installation, at least weekly during the wet season, and at least once each 24 hour period during a storm event that generates runoff from the site, to identify BMPs that need maintenance to operate effectively, that have failed or could fail to operate as intended.
  - (2) During the wet season, the area of disturbance shall be limited to the area that can be controlled with an effective combination of erosion and sediment control BMPs. Enhanced sediment controls should be used in combination with erosion controls and should target portions of the site that cannot be effectively controlled by standard erosion controls described above. Effective sediment and erosion control BMPs proposed by the proponent shall include the BMPs listed in Table 9 below. The project proponents are responsible to implement the BMPs below unless shown unnecessary. The Permittee shall require that the project proponent retain records of the inspection and a determination and rationale of the BMPs selected to control runoff.

**Table 9** Enhanced Construction BMP Implementation.

5. Local Agency Requirements

(a) Each Permittee shall require for all construction sites 1 acre or greater, compliance with all conditions identified in the preceding subparts F.1 - F.4, and the following requirements:

(1) Local Storm Water Pollution Prevention Plan (Local SWPPP),

(A) Each Permittee shall require the preparation and submittal of a Local SWPPP, for the Permittee's review and written approval prior to issuance of a grading or construction permit for construction or demolition projects. The Permittees' approval signature shall be contained within the first pages of the Local SWPPP

(i) The Permittee shall not approve any Local SWPPP unless it contains appropriate site-specific construction site BMPs, specific locations, and maintenance schedules.

(ii) The Local SWPPP must include the rationale used for selecting or rejecting BMPs for various construction phases and weather conditions. The project architect, or engineer of record, or

<sup>1</sup> If appropriate given natural background stormwater runoff and receiving water quality conditions.

authorized qualified designee, must sign a statement on the Local SWPPP to the effect:

(I) *“As the architect/ engineer of record, I have selected appropriate BMPs to effectively minimize the negative impacts of this project’s construction activities on storm water quality. The project owner and contractor are aware that the selected BMPs must be installed, monitored, and maintained to ensure their effectiveness. The BMPs not selected for implementation are redundant or deemed not applicable to the proposed construction activity.”*

(2) Certification Statement

(A) Each Permittee shall require that each landowner or the landowner’s agent sign a statement on the Local SWPPP to the effect:

(i) *“I certify that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, to the best of my knowledge and belief, the information submitted is true, accurate, and complete. I am aware that submitting false and/ or inaccurate information, failing to update the Local SWPPP to reflect current conditions, or failing to properly and/ or adequately implement the Local SWPPP may result in revocation of grading and/ or other permits or other sanctions provided by law.”*

(ii) The Local SWPPP certification shall be signed by the property owner or owner’s representative/designee. If the Local SWPPP or SWPPP is being prepared by the local agency then the appropriate authority of the local agency shall sign the document.

6. Roadway Paving or Repaving Operations (For Private or Public Projects)

(a) Each Permittee shall require that for any project that includes roadbed or street paving, repaving, patching, digouts, or resurfacing roadbed surfaces, that the following BMPs be implemented for each project:

- (1) Restrict paving and repaving activity to exclude periods of rainfall or predicted rainfall unless required by emergency conditions
- (2) Install sand bags or gravel bags and filter fabric at all susceptible storm drain inlets and at manholes to prevent spills of paving products and tack coat
- (3) Prevent the discharge of release agents including soybean oil, other oils, or diesel to the storm water drainage system or receiving waters.
- (4) Minimize non storm water runoff from water use for the roller and for evaporative cooling of the asphalt

- (5) Clean equipment over absorbent pads, drip pans, plastic sheeting or other material to capture all spillage and dispose of properly
- (6) Collect liquid waste in a container, with a secure lid, for transport to a maintenance facility to be reused, recycled or disposed of properly
- (7) Collect solid waste by vacuuming or sweeping and securing in an appropriate container for transport to a maintenance facility to be reused, recycled or disposed of properly
- (8) Cover the "cold-mix" asphalt (i.e., pre-mixed aggregate and asphalt binder) with protective sheeting during a rainstorm
- (9) Cover loads with tarp before haul-off to a storage site, and do not overload trucks
- (10) Minimize airborne dust by using water spray during grinding
- (11) Avoid stockpiling soil, sand, sediment, asphalt material and asphalt grindings materials or rubble in or near storm water drainage system or receiving waters
- (12) Protect stockpiles with a cover or sediment barriers during a rain

7. Electronic Site Tracking System

- (a) Each Permittee shall use an electronic system to track grading permits, encroachment permits, demolition permits, building permits, or construction permits (and any other municipal authorization to move soil and/ or construct or destruct that involves land disturbance) issued by each Permittee. To satisfy this requirement, the use of a database or GIS system is encouraged, but not required.

8. Inspections

- (a) Each Permittee shall inspect all construction sites for the implementation of storm water quality controls a minimum of once during the wet season. Concurrently, each Permittee shall ensure that:
  - (1) The Local SWPPP is reviewed for compliance with local codes, ordinances, and permits.
  - (2) A follow-up inspection takes place within two weeks for inspected sites that have not adequately implemented their Local SWPPP.
- (b) Each Permittee shall take additional enforcement actions to achieve compliance as specified in municipal codes, if compliance with municipal codes, ordinances, or permits has not been attained.
- (c) Each Permittee can refer sites to the Regional Water Board for joint enforcement actions for violation of municipal storm water ordinances and the Construction Activities Storm Water General Permit (CASGP), or Small Linear Underground/ Overhead Construction Projects General Permit (small LUPs), after conducting a minimum of 2 site inspections and issuing a minimum of 2 written notices to the operator regarding the violation (copied to the Regional Water Board). In making

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

such referrals, Permittees shall include, at a minimum, the following documentation:

- (1) Name of the site
  - (2) WDID number
  - (3) Site developer
  - (4) Site owner
  - (5) Records of communication with the site operator regarding the violation(s), which shall include at least an inspection report
  - (6) Written notice of the violation copied to the Regional Water
- (d) Prior to approving and/ or signing off for occupancy and issuing the Certificate of Occupancy for all construction projects subject to post-construction controls, each Permittee shall inspect the constructed site design, source control and treatment control BMPs to verify that they have been constructed in compliance with all specifications, plans, permits, ordinances, and this Order. The initial/ acceptance BMP verification inspection does not constitute a maintenance and operation inspection, as required in the preceding subpart E.IV.2(c).

## 9. State Conformity Requirements

- (a) Each Permittee shall ensure that no grading permit, encroachment permit, demolition permit, building permit, electrical permit, or construction permit (or any other municipal authorization to move soil and/ or construct or destruct that involves land disturbance) is issued for any project requiring coverage under the CASGP or Small LUP General Permit<sup>1</sup> unless:
- (1) Proof of filing a Notice of Intent for coverage under a State NPDES permit is demonstrated).
  - (2) Demonstration or Certification that a SWPPP has been prepared by the project developer.
  - (3) Proof of Change of Information form (COI) and a copy of the modified SWPPP(s) at any time a transfer of ownership takes place for the entire development or portions of the common plan of development where construction activities are still on-going.

## 10. Interagency Coordination

## (a) Referral of Violations:

A Permittee may refer a violator of the municipal storm water ordinance and CWC § 13260 to the Regional Water Board provided that the Permittee has made a good faith effort at progressive enforcement consistent with the preceding subpart F.8(c). At a minimum, the Permittee's good faith effort shall be documented with:

<sup>1</sup> NPDES Permit No. CAS000005, Waste Discharge Requirements For Discharges of Storm Water Runoff Associated with Small Linear Underground/ Overhead Construction Projects (Small LUP General Permit) for any linear land disturbing activity or activities (cumulatively) that will cause one acre or more of land disturbance but not more than 5 acres.

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (1) A minimum of 2 follow-up inspection reports (inspections completed within 3 months).
  - (2) A minimum of two warning letters or NOV's.
- (b) **Referral of Non-filers under the CASGP or the Small LUP General Permit:**  
Each Permittee shall refer non-filers (i.e., those projects which cannot demonstrate that they have a WDID number) under the CASGP or Small LUP General Permit, to the Regional Water Board, no later than 15 days after making a determination of failure to file. In making such referrals, Permittees shall include, at a minimum, the following documentation:
- (1) Project location address
  - (2) Project description
  - (3) Developer or owners name with complete mailing address
  - (4) Project size
  - (5) Records of communication with the developer or owner regarding filing requirements
- (c) **Investigation of Complaints Regarding Facilities – Transmitted by the Regional Water Board Staff:**
- (1) Each Permittee shall initiate, within one business day,<sup>1</sup> an initial investigation of complaint(s) (other than non-storm water discharges) on the construction site(s) within its jurisdiction.
    - (A) The initial investigation shall include, at a minimum, an inspection on the facility and its perimeter to confirm the complaint and to determine if the site operator is effectively complying with the municipal storm water/ urban runoff ordinances, and to oversee corrective action.
- (d) **Support of Regional Water Board Enforcement Actions – As directed by the Regional Water Board Executive Officer:**
- (1) Each Permittee shall support Regional Water Board enforcement actions by:
    - (A) Assisting in identification of current owners, operators, and lessees of properties and sites.
    - (B) Providing staff, when available, for joint inspections with Regional Water Board inspectors.
    - (C) Appearing to testify as witnesses in Regional Water Board enforcement hearings.
    - (D) Providing copies of inspection reports and other progressive enforcement documentation.

**G. Public Agency Activities Program**

<sup>1</sup> Permittees may comply with the Permit by taking initial steps (such as logging, prioritizing, and tasking) to "initiate" the investigation within that one business day. However, the Regional Water Board would expect that the initial investigation, including a site visit, to occur within four business days.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- I. Each Permittee shall implement a Public Agency Activities Program to minimize storm water pollution impacts from public agency activities. Public Agency requirements consist of:
  - i. Public Construction Activities Management.
  - ii. Vehicle Maintenance/ Material Storage Facilities/ Corporation Yards Management/ Municipal Operations.
  - iii. Vehicle and Equipment Wash Areas
  - iv. Landscape and Recreational Facilities Management
  - v. Storm Drain Operation and Management
  - vi. Streets and Roads Maintenance
  - vii. Public Industrial Activities Management
  - viii. Emergency Procedures
  - ix. Employee Training
  - x. Infrastructure Maintenance
  
- 1. Public Construction Activities Management
  - (a) Each Permittee shall implement and comply with the Planning and Land Development Program requirements in part 5.E. of this Order at Permittee owned or operated public construction projects for project types identified in part 5.E of this Order.
  - (b) Each Permittee shall implement and comply with the appropriate Development Construction Program requirements in part 5.F. of this Order at Permittee owned or operated construction projects as applicable.
  - (c) For public projects including those under a Capital Improvement Project Plan that disturb less than one acre of soil the Permittees shall require the development and implementation of a Storm Water Pollution Control Plan. The SWPCP shall include BMPs as identified in Tables 5, 9 and 10.
  
- 2. Vehicle Maintenance/ Material Storage Facilities/ Corporation Yards Management/ Long Term Maintenance Programs
  - (a) Each Permittee shall implement the activity specific BMPs<sup>1</sup> listed in Table 10 when such activities occur at Permittee owned/leased facilities and job sites including but not limited to vehicle/ equipment maintenance facilities, material storage facilities, and corporation yards, and at any area that includes the activities as described in the following Tables. Additionally, for any activity or area described in the footnote below,<sup>2</sup> each Permittee shall also implement the BMPs in the Caltrans Storm Water Quality Handbook Maintenance Staff Guide described as B-4 in Table 10 (BMPs at Vehicle Maintenance/ Material Storage Facilities/ Corporation Yards).

<sup>1</sup> These BMPs are identified in Appendix B of the *Caltrans Storm Water Quality Handbook Maintenance Staff Guide, May 2003*, and its addenda. Other BMPs may be substituted upon approval by the Executive Officer.

<sup>2</sup> Scheduling and Planning; Spill Prevention and Control; Sanitary/ Septic Waste Management; Material Use; Safer Alternative Products; Vehicle/ Equipment Cleaning, Fueling, and Maintenance; Illicit Connections Detection, Reporting and Removal; Illegal Spill / Discharge Control and Maintenance Facility Housekeeping Practices.

3. Vehicle and Equipment Wash Areas
  - (a) Each Permittee shall eliminate discharges of wash waters from vehicle and equipment washing no later than (365 days after Order adoption date) by implementing any of the following measures at existing facilities with vehicle or equipment wash areas:
    - (1) Self-contain, and haul off for disposal
    - (2) Equip with a clarifier
    - (3) Equip with an alternative pre-treatment device; or
    - (4) Plumb to the sanitary sewer
  - (b) Each Permittee shall ensure that any municipal facilities constructed, redeveloped, or replaced has all vehicle and equipment wash areas plumbed to the sanitary

sewer or be self contained and all wastewater/ washwater hauled for legal disposal.

4. Landscape, Park, and Recreational Facilities Management

(a) Integrated Pest Management (IPM)

IPM is an ecosystem-based strategy that focuses on long-term prevention of pests or their damage through a combination of techniques such as biological control, habitat manipulation, modification of cultural practices, and use of resistant varieties. Each Permittee shall implement an IPM program within 365 days that includes the following:

- (1) Pesticides are used only if monitoring indicates they are needed according to established guidelines.
- (2) Treatments are made with the goal of removing only the target organism.
- (3) Pest controls are selected and applied in a manner that minimizes risks to human health, beneficial, non-target organisms, and the environment.
- (4) Its use of pesticides, including Organophosphates and Pyrethroids do not threaten water quality.
- (5) Partner with other agencies and organizations to encourage the use of IPM.
- (6) Adopt and verifiably implement policies, procedures, and/ or ordinances requiring the minimization of pesticide use and encouraging the use of IPM techniques (including beneficial insects) in the Permittees' overall operations and on municipal property.
- (7) Policies, procedures, and ordinances shall include commitments and timelines to reduce the use of pesticides that cause impairment of surface waters by implementing the following procedures:
  - (A) Quantify pesticide use by its staff and hired contractors.
  - (B) Prepare and annually update an inventory of pesticides used by all internal departments, divisions, and other operational units.
  - (C) Demonstrate reductions in pesticide use.

(b) Each Permittee shall implement the following requirements no later than (180 days after Order adoption date):

- (1) Use a standardized protocol for the routine and non-routine application of pesticides (including pre-emergents), and fertilizers.
- (2) Ensure no application of pesticides or fertilizers are applied to an area immediately prior to, during, or immediately after a rain event, or when water is flowing off the area.
- (3) Ensure that no banned or unregistered pesticides are stored or applied.
- (4) Ensure that all staff applying pesticides are certified in the appropriate category by the California Department of Pesticide Regulation, or are under the direct supervision of a pesticide applicator certified in the appropriate category.
- (5) Implement procedures to encourage the retention and planting of native vegetation to reduce water, pesticide and fertilizer needs; and

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (6) Store pesticides and fertilizers indoors or under cover on paved surfaces or use secondary containment.
  - (A) Reduce the use, storage, and handling of hazardous materials to reduce the potential for spills.
  - (B) Regularly inspect storage areas.
- (7) Comply with the provisions and the monitoring requirements for application of aquatic pesticides to surface waters (WQ Order No. 2004-0008-DWQ).

5. Storm Drain Operation and Management

(a) Catch Basin Cleaning

- (1) Each Permittee shall designate catch basin inlets within its jurisdiction as one of the following:
  - Priority A: Catch basins that are designated as consistently generating the highest volumes of trash.
  - Priority B: Catch basins that are designated as consistently generating moderate volumes of trash.
  - Priority C: Catch basins that are designated as generating low volumes of trash.

Within one year of Order adoption, Permittees shall submit a map or list of Catch Basins with their GPS coordinates and their designations. The map or list shall contain the rationale or data to support designations.

- (2) Each Permittee shall inspect catch basins according to the following schedule:
  - Priority A: A minimum of 3 times during the wet season and once during the dry season every year.
  - Priority B: A minimum of once during the wet season and once during the dry season every year.
  - Priority C: A minimum of once per year.

Catch basins shall be cleaned as necessary on the basis of inspections. Permittees shall maintain inspection records for Regional Board review.

- (3) In addition to the preceding schedule, Permittees shall ensure that any catch basin that is determined to be at least 25% full of trash shall be cleaned out.

(b) Trash Management at Public Events

- (1) Each Permittee shall require for any event in the public right of way or wherever it is foreseeable that substantial quantities of trash and litter may be generated, the following measures:
  - (A) Proper management of trash and litter generated; and
  - (B) Arrangement for temporary screens to be placed on catch basins; or
  - (C) Provide clean out of catch basins, trash receptacles, and grounds in the event area within 24 hours subsequent to the event.

(c) Trash Receptacles

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (1) Each Permittee shall install trash receptacles, or equivalent trash capturing devices in areas subject to high trash generation within its jurisdiction no later than (one year after Order adoption date).
- (2) Each Permittee shall ensure that all trash receptacles are cleaned out and maintained as necessary to prevent trash overflow.
- (d) Catch Basin Labels
- (1) Each Permittee shall inspect the legibility of the catch basin stencil or label nearest each catch basin and inlet before the wet season begins.
- (2) Each Permittee shall record and re-stencil or re-label within 15 days of inspection, catch basins with illegible stencils.
- (e) Additional Trash Management Practices
- (1) Each Permittee shall install trash excluders, or equivalent devices on or in catch basins or outfalls to prevent the discharge of trash to the storm drain system or receiving water no later than two years after Order adoption date in areas defined as Priority A (Provision 1a(2)) except in sites where the application of such BMP(s) alone will cause flooding. Lack of maintenance that causes flooding is not an acceptable exception to the requirement to install BMPs. Alternatively the Permittee may implement alternative or enhanced BMPs beyond the provisions of this permit (such as but not limited to increased street sweeping, adding trash cans near trash generation sites, prompt enforcement of trash accumulation, increased trash collection on public property, increased litter prevention messages or trash nets within the MS4) that provide substantially equivalent removal of trash. Permittees shall demonstrate that BMPs, which substituted for trash excluders provide equivalent trash removal performance as excluders. When outfall trash capture is provided, revision of the schedule for inspection and cleanout of catch basins in task (a) may be proposed by the Permittee for approval by the Executive Officer.
- (f) Storm Drain Maintenance
- (1) Each Permittee shall implement a program for Storm Drain Maintenance no later than (180 days after Order adoption date) that includes the following:
- (A) Visual monitoring of Permittee-owned open channels and other drainage structures for debris at least annually.
- (B) Remove trash and debris from open channel storm drains a minimum of once per year before the wet season.
- (C) Eliminate the discharge of contaminants during MS4 maintenance and clean outs.
- (D) Quantify the amount of materials removed using techniques appropriate for quantifying solid waste and ensure the materials are properly disposed of.
- (g) Spill Response Plan
- (1) Each Permittee shall implement a response plan for spills to the MS4 within their respective jurisdiction. The response Plan shall clearly identify

agencies responsible and telephone numbers and e-mail address for contact and shall contain at a minimum the following:

- (A) Investigation of all complaints received within 24 hours of the incident report.
  - (B) Response within 2 hours to spills for containment upon notification, except where such overflows occur on private property, in which case the response should be within 2 hours of gaining legal access to the property.
  - (C) Notification to appropriate public health agencies and the Office of Emergency Services (OES).
- (h) Permittee Owned Treatment Control BMPs
- (1) Each Permittee shall implement an inspection and maintenance program for all Permittee owned treatment control BMPs, including post-construction treatment control BMPs.
  - (2) Each Permittee shall ensure proper operation of all treatment control BMPs and maintain them as necessary for proper operation, including all post-construction treatment control BMPs.
  - (3) Any residual water produced by a treatment control BMP and not being internal to the BMP performance when being maintained shall be:
    - (A) Hauled away and legally disposed of; or
    - (B) Applied to the land without runoff; or
    - (C) Discharged to the sanitary sewer system (with permits or authorization); or
    - (D) Treated or filtered to remove bacteria, sediments, nutrients, and meet the limitations set in Table 11 (Discharge Limitations for Dewatering Treatment BMPs) prior to discharge to the MS4.

Table 11 - Discharge Limitations for Dewatering Treatment BMPs<sup>1</sup>

Parameter	Units	Limitation
Total Suspended Solids	mg/L	100
Turbidity	NTU	50
Oil and Grease	mg/L	10

6. Streets and Roads Maintenance

(a) Maintenance

- (1) Each Permittee shall perform street sweeping of curbed streets in commercial areas and areas subject to high trash generation to control trash and debris at least two times per month.

(b) Road Reconstruction

<sup>1</sup> Technology based effluent limits.

- (1) Each Permittee shall require that for any project that includes roadbed or street paving, repaving, patching, digouts, or resurfacing roadbed surfaces, that the following BMPs be implemented for each project.
  - (A) Restrict paving and repaving activity to exclude periods of rainfall or predicted rainfall<sup>1</sup> unless required by emergency conditions.
  - (B) Install sand bags or gravel bags and filter fabric at all susceptible storm drain inlets and at manholes to prevent spills of paving products and tack coat;
  - (C) Prevent the discharge of release agents including soybean oil, other oils, or diesel to the storm water drainage system or receiving waters.
  - (D) Minimize non storm water runoff from water use for the roller and for evaporative cooling of the asphalt.
  - (E) Clean equipment over absorbent pads, drip pans, plastic sheeting or other material to capture all spillage and dispose of properly.
  - (F) Collect liquid waste in a container, with a secure lid, for transport to a maintenance facility to be reused, recycled or disposed of properly.
  - (G) Collect solid waste by vacuuming or sweeping and securing in an appropriate container for transport to a maintenance facility to be reused, recycled or disposed of properly.
  - (H) Cover the "cold-mix" asphalt (i.e., pre-mixed aggregate and asphalt binder) with protective sheeting during a rainstorm.
  - (I) Cover loads with tarp before haul-off to a storage site, and do not overload trucks.
  - (J) Minimize airborne dust by using water spray during grinding.
  - (K) Avoid stockpiling soil, sand, sediment, asphalt material and asphalt grindings materials or rubble in or near storm water drainage system or receiving waters.
  - (L) Protect stockpiles with a cover or sediment barriers during a rain.

7. Emergency Procedures

- (a) Each Permittee may conduct repairs of essential public service systems and infrastructure in emergency situations with a self-waiver of the provisions of this Order.
  - (1) Where the self-waiver has been invoked, the Permittee shall submit to the Regional Water Board Executive Officer a statement of the occurrence of the emergency, an explanation of the circumstances, and the measures that were implemented to reduce the threat to water quality, no later than 30 business days after the situation of emergency has passed.
  - (2) Minor repairs of essential public service systems and infrastructure in emergency situations (can be completed in less than one day) are not subject to the notification provisions. Appropriate BMPs to reduce the threat to water quality shall be implemented.

<sup>1</sup> A probability of precipitation (POP) of 50% is required.

8. **Municipal Employee and Municipal Contractor Training**
- (a) Each Permittee shall, no later than (12 months after Order adoption date and annually thereafter before June 30), train all of their employees and contractors in targeted positions (whose interactions, jobs, and activities affect storm water quality) on the requirements of the overall storm water management program to:
- (1) Promote a clear understanding of the potential for activities to pollute storm water.
  - (2) Identify opportunities to require, implement, and maintain appropriate BMPs in their line of work.
- (b) Each Permittee shall, no later than (12 months after Order adoption date and annually thereafter before June 30), train all of their employees and contractors who use or have the potential to use pesticides or fertilizers (whether or not they normally apply these as part of their work). Training programs shall address:
- (1) The potential for pesticide-related surface water toxicity.
  - (2) Proper use, handling, and disposal of pesticides.
  - (3) Least toxic methods of pest prevention and control, including IPM.
  - (4) Reduction of pesticide use.
- (c) Each Permittee shall, no later than (12 months after Order adoption date) and annually thereafter before June 30, train all of their employees and contractors who are responsible for illicit connections and illicit/ illegal discharges. Training programs shall address:
- (1) Identification
  - (2) Investigation
  - (3) Termination
  - (4) Cleanup
  - (5) Reporting of Incidents
  - (6) Documentation of Incidents

#### **H. Illicit Connections and Illicit Discharges Elimination Program**

- I. Each Permittee shall implement an Illicit Connections and Illicit Discharges (IC/ IDs) program to eliminate IC/IDs to the storm drain system, and shall document, track, and report all such cases in accordance with the elements and performance measures specified in the following subsections.
1. General
    - (a) Implementation - Each Permittee shall implement an IC/ ID Program. The IC/ ID procedures shall be documented and made available for public review.
    - (b) Tracking - All Permittees shall, no later than (3 years after Order adoption date), map at a scale and in a format specified by the Principal Permittee all known connections to their storm drain system. All Permittees shall map at a scale and in a format specified by the Principal Permittee incidents of illicit connections and discharges since January 2009 on their baseline maps, and shall transmit this

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

information to the Principal Permittee no later than (3 years after Order adoption date). Permittees shall use this information to identify priority areas for further investigation and elimination of IC/ ID.

## 2. Public Reporting

- (a) Permittees shall establish and maintain a phone hotline and internet site to receive all reports of IC/ ID complaints.
- (b) Permittees shall document the location of the reported IC/ ID and the actions undertaken in response to all IC/ ID complaints.

## 3. Illicit Connections

(a) Screening for Illicit Connections

- (1) Each Permittee shall submit to the Principal Permittee:

- (A) A map at a scale and in a format specified by the Principal Permittee showing the location and length of underground pipes 18 inches and greater in diameter, and channels within their permitted area and operated by the Permittee in accordance with the following schedule:

- (i) All channeled portions of the storm drain system no later than (365 days after Order adoption date).
- (ii) All portions of the storm drain system consisting of storm drain pipes 36 inches in diameter or greater, (no later than 3 years after Order adoption date). This provision is not meant to exclude Permittees from using equally effective alternative methods not listed in the manual.
- (iii) All portions of the storm drain system consisting of storm drain pipes 18 inches in diameter or greater, (no later than 5 years after Order adoption date).

- (B) The status of suspected, confirmed, and terminated illicit connections.

- (2) Permittees shall conduct field screening of their storm drain systems in accordance with screening procedures described in the *Illicit Discharge Detection and Elimination, A Guidance Manual for Program Development and Technical Assessments (2004)*<sup>1</sup>. Permittees shall conduct field screening of their storm drain system that has not been previously screened and reported to the Regional Board, for illicit connections in accordance with the following schedule:

- (A) All portions of the storm drain system consisting of storm drain pipes 36 inches in diameter or greater, no later than (3 years after Order adoption date).
- (B) High priority areas identified during the mapping of illicit connections and discharges, no later than (3 years after Order adoption date).

<sup>1</sup> *Illicit Discharge Detection and Elimination, A Guidance Manual for Program Development and Technical Assessments*. The Center for Watershed Protection, Pitt R., October 2004. Chapter 13, 13.1, 13.2, 13.3, 13.4

(C) All portions of storm drain systems 50 years or older in age, no later than (3 years after Order adoption date).

(3) Each Permittee shall maintain a list containing all connections under investigation for possible illicit connection and their status.

(b) Response to Illicit Connections

(1) Investigation -

Each Permittee, upon discovery or upon receiving a report of a suspected illicit connection, shall complete an investigation within 21 days, to determine the following:

(A) Source of the connection.

(B) Nature and volume of discharge through the connection.

(C) Responsible party for the connection.

(2) Termination -

Each Permittee, upon confirmation of an illicit storm drain connection, shall ensure the following:

(A) Termination of the connection within 180 days of completion of the investigation, using formal enforcement authority to eliminate the illicit connection.

(3) Documentation -

Each Permittee shall keep records of all illicit connection investigations and the formal enforcement taken to eliminate all illicit connections.

4. Illicit Discharges

(a) Investigation -

Each Permittee shall investigate an illicit/ illegal discharge during or immediately following containment and cleanup activities, and shall take appropriate enforcement action to eliminate the illegal discharge.

(b) Abatement and Cleanup -

Each Permittee shall respond, within 1 business day of discovery or a report of a suspected illicit/ illegal discharge, with actions to abate, contain, and/or clean up all illegal discharges, including hazardous waste.

(c) Documentation -

Each Permittee shall maintain records of all illicit/ illegal discharge discoveries, reports of suspected illicit/ illegal discharges, their response to the illicit/ illegal discharges and suspected illicit/ illegal discharges, and the formal enforcement taken to eliminate all illicit/ illegal discharges.

I. REPORTING PROGRAM

1. The Principal Permittee in consultation with the Permittees and Regional Water Board staff shall convene an adhoc working group to develop an Electronic Reporting Program, the basis of which shall be the requirements in this Order. The Committee

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

shall no later than (12 months after Order adoption date) submit the electronic reporting form in each subsequent year.

- 2. Each Permittee shall submit information required in the Reporting Program in a method as appropriate to the format approved by the Regional Water Board Executive Officer.
- 3. The Principal Permittee shall submit by December 15<sup>th</sup> of each year, an Annual Report to the Regional Water Board Executive Officer in the form one hard copy and three compact disk (CD) copies (or an electronic equivalent).
- 4. The Annual Report shall document the status of the Municipal Storm Water Program, an integrated summary of the results of analyses from:
  - (a) The monitoring program described under Part 1- Monitoring Report.
  - (b) The requirements described under Part 2- Program Report.
- 5. Plans shall be submitted to the Regional Water Board Executive Officer in the form of one hard copy and three compact disk (CD) copies (or an electronic equivalent).
- 6. Study Reports shall be submitted to the Regional Water Board Executive Officer in the form of one hard copy and three compact disk (CD) copies (or an electronic equivalent).
- 7. Progress Reports shall be submitted to the Regional Water Board Executive Officer in the form of one hard copy and three compact disk (CD) copies (or an electronic equivalent).

**PART 6 - TOTAL MAXIMUM DAILY LOAD PROVISIONS**

- I. Part 6 of this Order incorporates provisions to assure that Ventura County MS4 Permittees comply with WLAs and other requirements of TMDLs covering impaired waters impacted by the Permittees' discharges.
- II. Each Permittee shall attain the storm water WLAs incorporated into this Order by implementing BMPs in accordance with the TMDL Technical Reports, Implementation Plans, or as identified as a result of TMDL special studies specified in the Basin Plan Amendment.
- III. The Permittees shall comply with the following Wasteload Allocations, consistent with the assumptions and requirements of the Wasteload Allocations documented in the Implementation Plans, including compliance schedules, associated with the State adoption

and approval of the TMDL at compliance monitoring points established in each TMDL (40CFR122.44(d)(1)(vii)(B).

- IV. TMDLs in effect and covered in this Order are the following:
  - 1. TMDL for Nutrients for Malibu Creek Watershed (Effective date: March 21, 2003)
  - 2. TMDL for Nitrogen Compounds and Related Effects in Calleguas Creek (Effective date: July 16, 2003)
  - 3. TMDL for Nitrogen Compounds for the Santa Clara River (Effective date: March 23, 2004).
  - 4. TMDL for Chloride in Santa Clara River, Reach 3 (Effective date: June 18, 2003)
  - 5. TMDL for Chloride in Upper Santa Clara River (Effective date: May 4, 2005)
  - 6. TMDL for Toxicity, Chlorpyrifos and Diazinon in the Calleguas Creek, its Tributaries and Mugu Lagoon - (Effective date: March 24, 2006).
  - 7. TMDL for Organochlorine Pesticides, Polychlorinated Biphenyls, and Siltation in Calleguas Creek, its Tributaries and Mugu Lagoon (Effective date: March 24, 2006).
  - 8. TMDL for Bacteria in Malibu Creek and Lagoon (Effective date: January 24, 2006).
  - 9. TMDL for Metals and Selenium in the Calleguas Creek, its Tributaries and Mugu Lagoon (Effective date: March 26, 2007)
  - 10. TMDL for Trash in Revolon Slough and Beardsley Wash (Effective date: March 6, 2008).
  - 11. TMDL for Boron, Chloride, Sulfate, and TDS in Calleguas Creek Watershed (Effective date: December 2, 2008)
  - 12. TMDL for Trash in the Ventura River Estuary (Effective date: March 6, 2008).
  - 13. TMDL for Bacteria in Harbor Beaches of Ventura County (Effective date: September 23, 2008).
  
- IV. TMDL Interim WLAs incorporated into this Order due to compliance dates which exceed the term of this Order are the following:
  - 1. Final Wet Weather Bacteria WLAs for Malibu Creek and Lagoon – (Compliance date: January 24, 2016).
  - 2. Final Chloride WLAs for Upper Santa Clara River – (Compliance date: May 4, 2016)
  - 3. Final Organochlorine Pesticides, Polychlorinated Biphenyls, and Siltation WLAs for Calleguas Creek, its Tributaries and Mugu Lagoon – (Compliance date: March 24, 2026).
  - 4. Final Metals and Selenium WLAs for Calleguas Creek, its Tributaries and Mugu Lagoon (Compliance date: March 26, 2022)
  - 5. Final Boron, Chloride, Sulfate, and TDS WLAs for Calleguas Creek watershed (Compliance date: December 2, 2023)
  
- V. TMDL WLAs and Other TMDL Provisions Incorporated into this Order are as follows:

1. TMDL for Nutrients for Malibu Creek Watershed

(a) Summer Load Allocations

	Nitrogen (lbs/day)	Phosphorus (lbs/day)
- Runoff from developed areas	26	2.6
- Golf Course Fertilization	37	6.6
- Dry Weather Urban Runoff	52	4.6
- Other	56	4.1

(b) Winter concentration-based Load Allocations

	Nitrogen (Nitrate-N + Nitrite-N) (mg/L)
- Runoff from Developed Areas	8
- Golf Course Fertilization	8
- Dry Weather Urban Runoff	8
- Other	8

(c) Compliance Monitoring:

This TMDL was established and approved by U.S. EPA and did not include an implementation plan.

(d) Actions and Special Studies required for Malibu Creek MS4 permittees

(1) Extent of algal impairment. EPA recommends studies to investigate the current extent of impairment due to excessive algal growth in the creek by surveying algal biomass and species composition at multiple sites within the creek.

(2) Limiting factor analysis. EPA recommends further study to assess whether total nitrogen or total phosphorus or other parameters such as flow and light limit algal growth in the Malibu Creek watershed.

(3) Fate of nutrients in Malibu Lagoon. EPA recommends this special study to determine if the expected upstream reductions in nutrient loadings would result in desired improvements in water quality in the lagoon.

2. TMDL for Nitrogen Compounds and Related Effects in Calleguas Creek Watershed

The stormwater permitted discharges were considered minor sources of nitrogen to the Calleguas Creek. Therefore, WLAs are not assigned to storm water permitted discharges. The monitoring program of this TMDL includes data collection to quantify loadings and associated WLAs from these sources.

3. TMDL for Nitrogen Compounds in the Santa Clara River

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

(a) Waste Load Allocations:

(1) The Ventura County MS4 permittees discharging to the Santa Clara River (the cities of Fillmore and Santa Paula) ("Santa Clara MS4 permittees") shall implement BMPs to achieve the following MS4 wasteload allocations applicable to River Reach 3:

Ammonia nitrogen 30-day average	2.0 mg/L
Ammonia nitrogen 1-hour average	4.2 mg/L
Nitrate + Nitrite nitrogen 30-day average	8.1 mg/L

(b) Compliance Monitoring:

- (1) Compliance with the WLAs is to be determined through receiving water monitoring conducted in accordance with the Santa Clara River Nitrogen TMDL Monitoring Program approved by the Executive Officer.
- (2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for enforcement action.

(c) Actions and Special Studies required of Santa Clara MS4 permittees:

- (1) Annual Progress Reports. Santa Clara River MS4 permittees, either independently or in conjunction with other stakeholders, shall submit an annual progress report with respect to achievement of the WLAs.

4. TMDL for Chloride in Santa Clara River, Reach 3

(a) Waste Load Allocation:

MS4 permittees discharging to Santa Clara River, Reach 3 shall implement BMPs to achieve the following MS4 WLAs:

Chloride (mg/L)	80
-----------------	----

(b) Compliance Monitoring: This TMDL was established and approved by U.S. EPA and did not include an implementation plan.

(c) Actions and Special Studies required of Santa Clara MS4 permittees:

- (1) Annual Progress Reports. Santa Clara River MS4 permittees, either independently or in conjunction with other stakeholders, shall submit an annual progress report with respect to achievement of the WLAs.

5. TMDL for Chloride in Upper Santa Clara River

(a) Waste Load Allocation:

MS4 permittees discharging to Upper Santa Clara River shall implement BMPs to achieve the following WLAs

Chloride (mg/L)	100
-----------------	-----

(b) Compliance monitoring:

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (1) Compliance with the WLAs is to be determined through receiving water monitoring conducted in accordance with the Santa Clara River Nitrogen TMDL Monitoring Program approved by the Executive Officer.
- (2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports and Implementation Plans. Following these actions, Regional Water Board staff will evaluate the need for enforcement action.
- (c) Actions and Special Studies required of Santa Clara MS4 permittees:
  - (1) Annual Progress Reports. Santa Clara River MS4 permittees, either independently or in conjunction with other stakeholders, shall submit an annual progress report with respect to achievement of the WLAs.

6. TMDL for Toxicity, Chlorpyrifos, and Diazinon in the Calleguas Creek, its Tributaries and Mugu Lagoon.

(a) Waste Load Allocations:

- (1) MS4 permittees discharging to Calleguas Creek, its tributaries and Mugu Lagoon (Ventura County Watershed Protection District, County of Ventura and the cities of Camarillo, Moorpark, Oxnard, Simi Valley and Thousand Oaks) ("Calleguas MS4 permittees") shall implement BMPs to achieve the following MS4 WLAs:

Toxicity WLA	1.0 TUc
Chlorpyrifos WLA	0.014 ug/L
Diazinon WLA	0.10 ug/L

- (2) Pursuant to the TMDL, the final storm water WLAs for Toxicity, Chlorpyrifos and Diazinon, listed above, are receiving water concentrations measured in-stream at the base of each subwatershed within the Calleguas Creek watershed.

(b) Compliance Monitoring:

- (1) Compliance with the WLAs is to be determined through the measurement of in-stream water quality at the base of each of the Calleguas Creek subwatersheds, in accordance with the Calleguas Creek Watershed TMDL Monitoring Program approved by the Executive Officer.
- (2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for enforcement action.
- (3) If as a result of compliance monitoring and subsequent investigations it is determined that a Calleguas MS4 permittee is responsible for exceedance of the in-stream Toxicity WLA, that permittee shall initiate the TRE/TIE process as outlined in U.S. EPA's "Understanding and Accounting for Method Variability in Whole Effluent Toxicity Applications Under the

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

National Pollutant Discharge Elimination System Program” (2000) or the approved Toxicity TMDL monitoring plan, and take appropriate action to eliminate the identified source of the toxicity.

(c) Actions and Special Studies required of Calleguas MS4 permittees:

- (1) Special Study #1. Together with Calleguas POTW permittees, investigate the pesticides that will replace diazinon and chlorpyrifos in the urban environment, their potential impact on receiving waters and potential control measures. Special Study #1 was completed by March 24, 2008.
- (2) Special Study #2. Together with Calleguas Agricultural Dischargers, consider results of monitoring of sediment concentrations by source/land use type through the special study required in the Calleguas OC Pesticide, PCB and Siltation TMDL Implementation Plan. Complete within 6 months of completion of the OCs TMDL special study #1.
- (3) Pesticide Collection Program. Together with Calleguas POTW permittees, develop and implement a collection program for diazinon and chlorpyrifos and an educational program. Collection and education could occur through existing programs such as household hazardous waste collection events. The Pesticide Collection Program is to be implemented by March 24, 2009.
- (4) Special Study #3. Together with Calleguas Agricultural Dischargers, consider the findings of transport rates developed through the OC Pesticide, PCB and Siltation TMDL Implementation Plan. Complete within 6 months of completion of the OCs TMDL special study #1.

7. TMDL for Organochlorine (OC) Pesticides, Polychlorinated Biphenyls (PCBs) and Siltation in the Calleguas Creek, its Tributaries and Mugu Lagoon.

(a) Waste Load Allocations:

- (1) MS4 permittees discharging to Calleguas Creek, its tributaries or Mugu Lagoon (Ventura County Watershed Protection District, County of Ventura and the cities of Camarillo, Moorpark, and Simi Valley) (“Calleguas MS4 permittees”) shall implement BMPs to achieve the interim WLAs listed in Table 12.

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (2) Pursuant to the TMDL, the interim storm water WLAs for OC Pesticides, PCBs and Siltation, listed above, are annual average, sediment-based concentrations measured in surface waters at the base of each subwatershed within the Calleguas Creek watershed.
- (b) Compliance Monitoring:
- (1) Compliance with the WLAs is to be determined through the measurement of in-stream water quality at the base of each of the Calleguas Creek subwatersheds, in accordance with the Calleguas Creek Watershed TMDL Monitoring Program approved by the Executive Officer.
- (2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for enforcement action.
- (c) Actions and Special Studies required of Calleguas MS4 permittees:
- (1) Pesticide Collection Program. Together with Calleguas POTW permittees, implement a collection program and source control measures pursuant to a work plan approved by the Executive Officer. The Pesticide Collection Program is to be implemented by March 24, 2011.
- (2) Special Study #1. Together with Calleguas POTW permittees, Calleguas Agricultural Dischargers, and the Point Mugu Naval Base, submit a work plan to quantify sedimentation in the Calleguas Creek Watershed, evaluate management methods to control siltation and contaminated sediment transport to Calleguas Creek, identify appropriate BMPs to reduce sediment loadings and evaluate the effect of sediment on habitat preservation in Mugu Lagoon for approval by the Executive Officer. This special study is also to evaluate the concentration of OC pesticides and PCBs in sediments from various sources/land use types. Special Study #1 is to be completed by March 24, 2014.
- (3) Special Study #2. Together with Calleguas Agricultural Dischargers, identify areas of high OC concentrations and evaluate the effects of watershed protection and land use practices on water quality. Such practices include but are not limited to management of sediment reduction practices and structures, streambank stabilization, and other projects related to stormwater conveyance and flood control improvements in the Calleguas Creek watershed. Special Study #2 is to be completed based on the schedule provided in the workplan, submitted in March, 2007
- (4) Special Study #3 – Together with Calleguas POTW permittees, Calleguas Agricultural Dischargers, and the Point Mugu Naval Base, evaluate natural attenuation rates and evaluate methods to accelerate organochlorine pesticide and polychlorinated biphenyl attenuation and examine the

attainability of wasteload and load allocations in the Calleguas Creek Watershed. Special Study #3 is to be completed by March 24, 2016.

8. TMDL for Metals and Selenium in the Calleguas Creek, its Tributaries and Mugu Lagoon.

(a) Waste Load Allocations:

- (1) MS4 permittees discharging to Calleguas Creek, its tributaries or Mugu Lagoon (Ventura County Watershed Protection District, County of Ventura and the cities of Camarillo, Moorpark, Oxnard, Simi Valley and Thousand Oaks) ("Calleguas MS4 permittees") shall implement BMPs to achieve the interim WLAs listed in Table 13 and Table 14.

Table 13. Interim WLAs for Copper, Nickel and Selenium (ug/L)

Constituent	Calleguas and Conejo Creek (a)			Revolon Slough		
	Dry Daily Maximum (ug/L)	Dry Monthly Average (ug/L)	Daily Maximum (ug/L)	Dry Daily Maximum (ug/L)	Dry Monthly Average (ug/L)	Daily Maximum (ug/L)
Copper	23	19	204	23	19	204
Nickel	15	13	(a)	15	13	(a)
Selenium	(b)	(b)	(b)	14(c)	13(c)	(a)

- (A) The current loads do not exceed the TMDL under wet conditions, interim limits are not required
  - (B) Selenium allocations have not been developed for this reach as it is not on the 303(d) list
  - (C) Attainment of interim limits will be evaluated in consideration of background loading data, if available
- (2) Pursuant to the TMDL, the interim storm water WLAs for copper, nickel, and selenium are receiving water concentrations measured in-stream at the base of Calleguas Creek and Revolon Slough and in Mugu Lagoon.

Table 14. Mass-based WLAs for copper, nickel and selenium

Annual Cumulative Flow (million gallons per year)	Calleguas Creek (lbs/yr)	Revolon Slough (lbs/yr)
0-15,000	3.3	1.7
15,000-25,000	10.5	4
Above 25,000	64.6	10.2

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (3) Pursuant to the TMDL, the interim storm water WLAs for mercury are suspended sediment loads measured in-stream at the base of Calleguas Creek and Revolon Slough and in Mugu Lagoon.
- (4) Determination of the applicable interim WLA will be determined by calculating the total annual flow (October 1-September 30) in the Calleguas Creek watershed as measured by the flow gage at CSUCI.
- (b) Compliance Monitoring:
- (1) Compliance with the WLAs is to be determined through the measurement of in-stream water quality and total suspended solids (TSS) at the base of Calleguas Creek, Revolon Slough and in Mugu Lagoon, in accordance with the Calleguas Creek Watershed TMDL Monitoring Program approved by the Executive Officer.
- (2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for enforcement action.
- (c) Actions and Special Studies required of Calleguas MS4 permittees:
- (1) Conduct a source control study, develop and submit an Urban Water Quality Management Program (UWQMP) for copper, mercury, nickel, and selenium. Complete by March 26, 2009.
- (2) Implement the UWQMP within one year of approval by Executive Officer.
- (3) In cooperation with agricultural dischargers, evaluate the results of the OCs TMDL special study on sediment transport rates for applicability to the metals and selenium TMDL. Complete within 6 months of completion of the OCs TMDL special study #1.
- (4) In cooperation with agricultural dischargers, include monitoring for copper, mercury, nickel and selenium in the OC pesticides TMDL special study – Monitoring of Sediment by Source and Land Use Type. The special study is to be completed by March 26, 2014.
- (5) Evaluate the results of the OC Pesticides TMDL Special Study – Effects of BMPs on Sediment and Siltation, to determine the impacts on metals and selenium. Complete within 6 months of completion of the OC Pesticides special study #1.
- (6) Evaluate the effectiveness of BMPs implemented under the UWQMP in controlling metals and selenium discharges. This is to be completed by March 26, 2013.
- (7) Re-evaluate agricultural and urban waste load allocations for copper, mercury, nickel and selenium based on the evaluation of BMP effectiveness. By March 26, 2012, urban dischargers will have a required 25% reduction in the difference between the loadings at the time of the TMDL preparation and the final WLAs effective in 2022.

- (8) In cooperation with POTW permittees and agricultural dischargers, conduct a study to identify selenium contaminated groundwater sources. Special Study is to be completed within one year of the approval of the workplan.
- (9) In cooperation with agricultural dischargers, conduct a study to investigate metals "hot spots" and natural soils concentrations. This special study is to be completed within 2 years of the approval of the workplan.

9. TMDL for Bacteria in Malibu Creek and Lagoon

(a) Waste Load Allocations:

- (1) MS4 permittees discharging to Malibu Creek or its tributaries (Ventura County Watershed Protection District, County of Ventura and the cities of Thousand Oaks and Simi Valley) ("Malibu MS4 permittees") shall achieve the WLAs identified in Resolution 2004-19. . These WLAs are expressed as the number of daily or weekly sample days that may exceed the single sample limits or 30-day geometric mean bacteria targets in Resolution 2004-19.

Table 15 - Bacteria Targets

Parameters	Unit	Fresh Water Targets	
		Geometric Mean	Single Sample
E. coli	mg	126/ 100	235/ 100
Fecal coliform	mg	200/ 100	400/ 100

- (2) The wasteload allocations are to be achieved no later than January 26, 2012.

(b) Compliance Monitoring:

- (1) Achievement of the WLAs is to be determined through receiving water monitoring conducted in accordance with the Santa Monica Bacteria TMDL Compliance Monitoring Program approved by the Executive Officer.
- (2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for enforcement action.

(c) Actions and Special Studies required of Malibu MS4 permittees:

- (1) If TMDL compliance monitoring indicates that the Malibu MS4 permittees are causing or contributing to an exceedance of the WLAs in the receiving waters, the permittees shall conduct a source identification study and implement additional controls sufficient to achieve the WLAs in the receiving waters.

10. TMDL for Trash in Revolon Slough and Beardsley Wash

(a) Wasteload Allocations

- (1) MS4 permittees discharging to Revolon Slough and Beardsley Wash (Ventura County Watershed Protection District, County of Ventura and the

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

V  
E

cities of Camarillo and Oxnard) shall implement BMPs to achieve the WLAs of zero trash.

(b) Compliance Monitoring

- (1) Responsible jurisdictions will develop a TMRP for Executive Officer approval that describes the methodologies that will be used to assess and monitor trash in Revolon Slough and Beardsley Wash and/or within responsible jurisdiction land areas. The TMRP shall include a plan to establish the trash Baseline WLAs.
- (2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for enforcement action.

(c) Actions and Special Studies required of Revolon Slough and Beardsley Wash MS4 permittees

- (1) Per the adopted Basin Plan Amendment, compliance with the TMDL may be either through a progressive implementation schedule of full capture devices or implementation of other measures to attain the required trash reduction.

11. TMDL for Trash in the Ventura River Estuary

(a) Wasteload Allocations

- (1) MS4 permittees discharging to the Ventura River Estuary (Ventura County Watershed Protection District, County of Ventura and the City of Ventura) shall implement BMPs to achieve the WLAs of zero trash.

(b) Compliance Monitoring

- (1) Responsible jurisdictions will develop a TMRP for Executive Officer approval that describes the methodologies that will be used to assess and monitor trash in the Ventura River Estuary and/or within responsible jurisdiction land areas. The TMRP shall include a plan to establish the trash Baseline WLAs.
- (2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for enforcement action.

(c) Actions and Special Studies required of Revolon Slough and Beardsley Wash MS4 permittees

- (1) Per the adopted Basin Plan Amendment, compliance with the TMDL may be either through a progressive implementation schedule of full capture devices or implementation of other measures to attain the required trash reduction.

## 12. TMDL for Boron, Chloride, Sulfate and TDS in Calleguas Creek Watershed

## (a) Waste Load Allocation

Table 16. Interim Dry Weather WLAs for Permitted Stormwater Dischargers

Constituent	Interim Limit 30-day average (mg/L)
Boron Total	1.3
Chloride Total	230
Sulfate Total	1289
TDS Total	1720

Table 17. Final Dry Weather WLAs for Permitted Stormwater Dischargers

Subwatershed	Critical Condition Flow Rate (mgd)	Chloride Allocation (lb/day)	TDS Allocation (lb/day)	Sulfate Allocation (lb/day)	Boron Allocation (lb/day)
Simi	1.39	1,738	9,849	2,897	12
Las Posas	0.13	157	887	261	N/A
Conejo	1.26	1,576	8,931	2,627	N/A
Camarillo	0.06	72	406	119	N/A
Pleasant Valley (Calleguas)	0.12	150	850	250	N/A
Pleasant Valley (Revolon)	0.25	314	1,778	523	2

## (b) Compliance Monitoring

- (1) A monitoring plan will be submitted to the RWQCB for Executive Officer approval on June 2, 2009. Monitoring will begin one year after Executive Officer approval of the monitoring plan to allow time for the installation of automated monitoring equipment.
- (2) Compliance with the WLAs is to be determined through the measurement of in-stream water quality at the base of each of the Calleguas Creek subwatersheds, in accordance with the Calleguas Creek Watershed TMDL Monitoring Program approved by the Executive Officer.
- (3) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for enforcement action.

(c) Actions and Special Studies required of Calleguas Creek Watershed MS4 permittees

Responsible jurisdictions including MS4 permittees shall submit compliance monitoring plan to the Los Angeles Regional Board for Executive Officer approval on June 2, 2009. Monitoring shall begin monitoring as outlined in the approved monitoring plan six months after approval of the work plan.

Responsible jurisdictions including MS4 permittees shall demonstrate that implementation actions have reduced the boron, sulfate, TDS, and chloride imbalance by 20%, 40%, 70% by December 2 of 2011, 2015, and 2018 respectively. Stormwater dischargers shall achieve WLAs, which shall be expressed as NPDES mass-based limits specified in accordance with federal regulations and state policy on water quality control by December 2, 2023.

13. TMDL for Bacteria in Harbor Beaches of Ventura County

(a) Waste Load Allocations

(1) MS4 permittees discharging to the Channel Islands Harbor Beaches (the County of Ventura, the Ventura County Watershed Protection District (VCWPD) and associated Municipal Separate Storm Sewer System (MS4) permittees in the Channel Islands Harbor subwatershed, and the City of Oxnard shall implement BMPs to achieve the interim WLAs listed in Table 15. All WLAs for summer dry-weather single sample bacteria densities at the Harbor Beaches of Ventura County are zero (0) days of allowable exceedances; winter dry weather and wet weather final WLAs are listed in Table 17 below.

The Basin Plan objectives that serve as the numeric targets for this TMDL are (single sample limits):

- a. Total coliform density shall not exceed 10,000/100 ml.
- b. Fecal coliform density shall not exceed 400/100 ml.
- c. Enterococcus density shall not exceed 104/100 ml.
- d. Total coliform density shall not exceed 1,000/100ml, if the ratio of fecal-to-total coliform exceeds 0.1.

Kiddie Beach	0	0	3	1	17	3

(2) Pursuant to the TMDL, the interim storm water WLAs for bacteria are from samples taken at existing monitoring sites in ankle to knee- high depths.

(b) Compliance Monitoring

(1) Compliance and monitoring for Harbor Beaches of Ventura County is based on existing monitoring protocols and locations. Monitoring shall continue at sampling locations (VCEHD 36000 and VCEHD37000) and at the current weekly monitoring frequency, consistent with AB411 compliance monitoring. Monitoring shall be conducted on a year-round basis at the current monitoring locations including the summer months (i.e., April to October) and winter months (i.e., November to March). Bacteria sampling shall be conducted in ankle- to knee-high water, consistent with AB411. However, if additional monitoring stations are added or if changes are made to the sampling frequencies or existing monitoring locations, then submittal of a monitoring plan is required for Executive Officer approval.

(2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for enforcement action.

(c) Actions and Special Studies required of Harbor Beaches of Ventura County MS4 permittees

(1) Per the adopted Basin Plan Amendment, compliance with the TMDL may be either through structural and non-structural BMPs or implementation of other measures to attain the required source control.

(2) Special studies are not required for implementation of the TMDL though conducting special studies is within the discretion of the responsible parties.

**PART 7 - DEFINITIONS**

The following are definitions for terms in this Order:

**Adverse Impact** - means a detrimental effect upon water quality or beneficial uses caused by a discharge or loading of a pollutant or pollutants.

**Agriculture** - means the science, art, and business of cultivating the soil, producing crops, and raising livestock.

**Antidegradation Policies** - means policies which protect surface and ground waters from degradation, and federal policies, which protect high quality surface waters. In particular, this policy protects waterbodies where existing quality is higher than that necessary for the protection of beneficial uses including the protection of fish and wildlife propagation and recreation on and in the water (*Statement of Policy with Respect to Maintaining High Quality Water in California*, State Board Resolution No. 68-16; 40 CRF 131.12).

**Applicable Standards and Limitations** - means all State, interstate, and Federal standards and limitations to which a "discharge" or a related activity is subject under the CWA, including effluent limitations, water quality standards, standards of performance, toxic effluent standards or prohibitions, best management practices, and pretreatment standards under § 301, § 302, § 303, § 304, § 306, § 307, § 308, § 403, and § 404 of CWA.

**Areas of Special Biological Significance (ASBS)** - means all those areas of this state listed as ASBS, listed specifically within the California Ocean Plan or so designated by the State Board which, among other areas, includes the area from Mugu Lagoon to Latigo Point: Oceanwater within a line originating from Laguna Point at 34° 5' 40" north, 119° 6'30" west, thence southeasterly following the mean high tideline to a point at Latigo Point defined by the intersection of the mean high tide line and a line extending due south of Benchmark 24; thence due south to a distance of 1000 feet offshore or to the 100 foot isobath, whichever distance is greater; thence northwesterly following the 100 foot isobath or maintaining a 1,000-foot distance from shore, whichever maintains the greater distance from shore, to a point lying due south of Laguna Point, thence due north to Laguna Point.

**Authorized Discharge** - means any discharge that is authorized pursuant to an NPDES permit, waste discharge requirement, conditional waiver from waste discharge requirements, or meets the conditions set forth in this Order.

**Automotive Repair Shop** - means a facility that is categorized in any one of the following Standard Industrial Classification (SIC) codes: 5013, 5014, 5541, 7532-7534, or 7536-7539.

**Automotive Service Facilities** - means a facility that is categorized in any one of the following

Standard Industrial Classification (SIC) and North American Industry Classification System (NAICS) codes. For inspection purposes, Permittees need not inspect facilities with SIC codes 5013, 5014, 5541, 5511, provided that these facilities have no outside activities or materials that may be exposed to storm water.

SIC Code	Corresponding NAICS Code
5013	425120, 441310, 425110, & 423120
5014	425120, 425110, 423130, & 441320
5511	441110
5541	447110, & 447190
7532	811121
7533	811112
7534	326212, & 811198
7536	811122
7537	811113
7538	811111
7539	811198, & 811118

**Bacteria Total Maximum Daily Load (TMDL) Dry Weather** - defined in the Bacteria TMDLs as those days with less than 0.1 inch of rainfall and those days occurring more than 3 days after a rain.

**Bacteria Total Maximum Daily Load (TMDL) Wet Weather** - defined in the Bacteria TMDLs as a day with 0.1 inch or more of rain and 3 days following the rain event.

**Basin Plan** - means the Water Quality Control Plan, Los Angeles Region, Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties, adopted by the Regional Water Board on June 13, 1994 and subsequent amendments.

**Beneficial Uses** - means the existing or potential uses of receiving waters in the permit area as designated by the Regional Water Board in the Basin Plan.

**Best Management Practices (BMPs)** - means methods, measures, or practices designed and selected to reduce or eliminate the discharge of pollutants to surface waters from point and nonpoint source discharges including storm water. BMPs include structural and nonstructural controls, and operation and maintenance procedures, which can be applied before, during, and/or after pollution producing activities.

**California Environmental Quality Act (CEQA)** - means a California statute that requires state and local agencies to identify significant environmental impacts of their actions and to avoid or mitigate those impacts, if feasible (Reference: California Public Resources Code § 21000 et seq.)

**Channel** - means an open conduit either naturally or artificially created which periodically or continuously contains moving water, or which forms a connecting link between two waterbodies.

E

**Chronic Toxicity** - means a measurement of a sublethal effect (e.g., reduced growth, reproduction) to experimental test organisms exposed to an effluent or ambient waters compared to that of the control organisms.

**Commercial Area(s)** - means any geographic area of the Permittees' jurisdiction that is not heavy industrial or residential. A commercial area includes, but is not limited to areas surrounding: commercial activity, hospitals, laboratories and other medical facilities, educational institutions, recreational facilities, plant nurseries, car wash facilities, mini-malls and other business complexes, shopping malls, hotels, office buildings, public warehouses and other light industrial complexes.

**Commercial Development** - means any development on private land that is not heavy industrial or residential. The category includes, but is not limited to: hospitals, laboratories and other medical facilities, educational institutions, recreational facilities, plant nurseries, car wash facilities, mini-malls and other business complexes, shopping malls, hotels, office buildings, public warehouses and other light industrial complexes.

**Construction** - Construction activity includes any construction or demolition activity, clearing, grading, grubbing, or excavation or any other activity that results in a land disturbance. Construction does not include emergency construction activities required to immediately protect public health and safety or routine maintenance activities required to maintain the integrity of structures by performing minor repair and restoration work, maintain original line and grade, hydraulic capacity, or original purpose of the facility. See "Routine Maintenance" definition for further explanation. Where clearing, grading or excavating of underlying soil takes place during a repaving operation, State General Construction Permit coverage is required if more than one acre is disturbed or the activities are part of a larger plan.

**Construction Activities Storm Water General Permit (CASGP)** - means the general NPDES permit adopted by the State Board, which authorizes the discharge of storm water from construction activities under certain conditions.

**Control** - means to minimize, reduce, eliminate, or prohibit by technological, legal, contractual or other means, the discharge of pollutants from an activity or activities.

**Critical Sources** - means commercial facilities and businesses that have a potential to contribute pollutants to stormwater runoff if effective BMPs are not implemented. Attachment "D" specifies the commercial facilities and businesses that have been identified as Critical Sources.

**Dechlorinated/ Debrominated Swimming Pool Discharge** - means any swimming pool discharge with a residual chlorine or bromine level of 0.1mg/L or less; and does not contain any detergents, wastes, algacides, or cyanuric acid in excess of 50 ppm, or any other chemicals

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

including salts from pools commonly referred to as "salt water pools". The term does not include swimming pool filter backwash or swimming pool water containing bacteria.

**Development** - means any construction, rehabilitation, redevelopment or reconstruction of any public or private residential project (whether single-family, multi-unit or planned unit development); industrial, commercial, retail and any other non-residential projects, including public agency projects; or mass grading for future construction.

**Directly Adjacent** - means situated within 200 feet of the contiguous zone required for the continued maintenance, function, and structural stability of the environmentally sensitive area.

**Directly Discharging** - means outflow from a drainage conveyance system that is composed entirely or predominately of flows from the subject, property, development, subdivision, or industrial facility and not commingled with the flows from adjacent lands.

**Discharge** - means when used without qualification the "discharge of a pollutant."

**Discharging Directly** - means outflow from a drainage conveyance system that is composed entirely or predominantly of flows from the subject, property, development, subdivision, or industrial facility, and not commingled with the flows from adjacent lands.

**Discharge of a Pollutant** - means any addition of any "pollutant" or combination of pollutants to "waters of the United States" from any "point source" or, any addition of any pollutant or combination of pollutants to the waters of the "contiguous zone" or the ocean from any point source other than a vessel or other floating craft, which is being used as a means of transportation. The term discharge includes additions of pollutants into waters of the United States from: surface runoff which is collected or channeled by man; discharges through pipes, sewers, or other conveyances owned by a State, municipality, or other person which do not lead to a treatment works; and discharges through pipes, sewers, or other conveyances, leading into privately owned treatment works.

**Disturbed Area** - means any area that is altered as a result of land disturbance. Examples include but are not limited to: clearing, grading, grubbing, stockpiling and/ or excavation, etc...

**Dry Day** - means a non-wet day for Malibu Creek and Lagoon Bacteria TMDL WLA. A wet day is defined as a day with a 0.1 inch or more of rain and 3 days following the rain event is a non-wet day for Bacteria TMDL WLA.

**Effect Concentration (EC)** is a point estimate of the toxicant concentration that would cause an observable adverse effect (e.g., death, immobilization, or serious incapacitation) in a given percent of the test organisms, calculated from a continuous model (e.g., Probit Model). EC<sub>25</sub> is a point estimate of the toxicant concentration that would cause an observable adverse effect in 25 percent of the test organisms.

**Effective Impervious Surface** - means that portion of the surface area that is hydrologically connected via sheet flow over a hardened conveyance or impervious surface without any intervening medium to mitigate flow volume.

**Effluent limitation** - means any restriction imposed by the Permitting Authority (PA) on quantities, discharge rates, concentrations, and/ or mass loadings of "pollutants" which are "discharged" from "point sources" into "waters of the United States," the waters of the "contiguous zone," or the ocean.

**Emergency** - means a sudden, unexpected occurrence, involving a clear and imminent danger, demanding immediate action to prevent or mitigate loss of, or damage to, life, health, property, or essential public services. "Emergency" includes such occurrences as fire, flood, earthquake, or other soil or geologic movements, as well as such occurrences as riot, accident, or sabotage. (Reference: California Public Resources Code § 21060.3. Emergency).

**End-of-Pipe** - means the end of the major outfall as defined in 40 CFR122.26 (b)(5) and 40 CFR122.26 (b)(6).

**Endpoint** - means a biological measurement used to quantify the results obtained from analytical methods such as whole effluent toxicity testing [e.g., lethal concentration (LC<sub>50</sub>); inhibition concentration (IC<sub>25</sub>); and no observed effect concentration (NOEC)]. Such endpoints are quantitative measurements of the responses of test organisms (e.g., survival, growth, mobility, reproduction, and weight gain or loss) in response to exposure to a serial dilution of effluent.

**Environment** - means the physical conditions, which exist within the area and which will be affected by a proposed project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historical or aesthetic significance. The area involved shall be the area in which significant effects would occur either directly or indirectly as a result of the project. The "environment" includes both natural and man-made conditions.

**Environmentally Sensitive Area (ESA)** - means an area "in which plant or animal life or their habitats are either rare or especially valuable because of their special nature or role in an ecosystem and which would be easily disturbed or degraded by human activities and developments" (Reference: California Public Resources Code § 30107.5). ESAs will include Clean Water Act 303d Listed Water Bodies in all reaches that are unimproved, all California Coastal Commission's Environmentally Sensitive Habitat Areas as delineated on maps in Local Coastal Plans and Regional Water Quality Control Board's Basin Plan Rare, Threatened or Endangered Species (RARE) and Preservation of Biological Habitats (BIOL) designated waterbodies. The California Department of Fish and Game's Significant Natural Areas map will be considered for inclusion as the department field verifies the designated locations. Watershed restoration projects will be considered for inclusion as the department field verifies the designated locations.

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

**Erosivity Factor** - The Erosivity Factor is a criterion that to assess the risk of erosion on disturbed land. It is described in "Predicting soil erosion by water: A guide to conservation planning with the Revised Universal Soil Loss Equation (RUSLE), Agricultural Handbook 703, USDA-ARS, U.S. Government Printing Office, Washington, D.C., 1997 by Renard, K.C., G.R. Foster, G.A. Weesies, D.K. McCool, and D.C. Yoder.

**Federal Clean Water Act (CWA)** - means (formerly referred to as the Federal Water Pollution Control Act or Federal Water Pollution Control Act Amendments of 1972) Public Law 92—500, as amended by Public Law 95—217, Public Law 95—576, Public Law 96—483 and Public Law 77—117, codified at 33 U.S.C. 1251 et seq.

**First Storm Event** - means the first storm event of the wet season that produces at least 0.25 inches of rain.

**Forest Land** - means land at least 10 percent stocked with live trees, or land that had this minimum tree stocking in the past and is not currently developed for nonforest use. The minimum area recognized is 1 acre.

**Groundwater Dewatering** - means the active practice of removing standing water from soil excavations using a pump(s) or other means.

**Hillside** - means property located in an area with known erosive soil conditions, where the development will result in grading on any slope that is 20% or greater or an area designated by the Municipality under a General Plan or ordinance as a "hillside area".

**Horse Stables** - means a property where at least one horse is stabled at least part of the year.

**Hydromodification** - means the alteration away from a natural state of stream flows or the beds or banks of rivers, streams, or creeks, including ephemeral washes, which results in hydrogeomorphic changes.

**Illegal Discharge** - means any discharge to the municipal separate storm sewer (storm drain system) that is prohibited under local, state, or federal statutes, ordinances, codes, or regulations. The term illegal discharge includes all non-storm water discharges not composed entirely of storm water except discharges pursuant to an NPDES permit, discharges that are identified in part 1, "Discharge Prohibitions" of this order, or discharges authorized by the Regional Water Board Executive Officer.

**Illicit Connection** - means any engineered conveyance that is connected to the storm drain system without a permit or municipal authorization. It also means any engineered conveyance through which discharges of pollutants to the separate storm drainage systems, which are not composed entirely of storm water or are not authorized by an NPDES permit, may occur.

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

**Illicit Discharge** - means any discharge to a municipal separate storm sewer (storm drain system) that is prohibited under local, state, or federal statutes, ordinances, codes, or regulations. The term illicit discharge includes all non-storm water discharges not composed entirely of storm water except discharges pursuant to a NPDES permit (other than the NPDES permit for discharges from the municipal separate storm sewer) and discharges that are identified in part 1, "Discharge Prohibitions" of this order, or authorized by the Regional Water Board Executive Officer.

**Illicit Disposal** - means any disposal, either intentionally or unintentionally, of material(s) or waste(s) that can pollute storm water.

**Industrial/ Commercial Facility** - means any facility involved and/ or used in the production, manufacture, storage, transportation, distribution, exchange or sale of goods and/ or commodities, and any facility involved and/ or used in providing professional and non-professional services. This category of facilities includes, but is not limited to, any facility defined by either the Standard Industrial Classifications (SIC) or the North American Industry Classification System (NAICS). Facility ownership (federal, state, municipal, private) and profit motive of the facility are not factors in this definition.

**Industrial Activities Storm Water General Permit (IASGP)** - means the general NPDES permit adopted by the State Board, which authorizes the discharge of storm water from certain industrial activities under certain conditions.

**Industrial Park** - means a land development that is set aside for industrial development. Industrial parks are usually located close to transport facilities, especially where more than one transport modalities coincide: highways, railroads, airports, and navigable rivers. It includes office parks, which have offices and light industry.

**Inhibition Concentration (IC)** - means a point estimate of the toxicant concentration that would cause a given percent reduction in a non-lethal biological measurement (e.g., reproduction or growth), calculated from a continuous model (i.e., Interpolation Method). IC25 is a point estimate of the toxic concentration that would cause a 25-percent reduction in a non-lethal biological measurement.

**Inspection** - means entry and the conduct of an on-site review of a facility and its operations, at reasonable times, to determine compliance with specific municipal or other legal requirements. The steps involved in performing an inspection, include, but are not limited to:

1. Pre-inspection documentation research
2. Request for entry
3. Interview of facility personnel
4. Facility walk-through
5. Visual observation of the condition of facility premises

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

6. Examination and copying of records as required
7. Sample collection (if necessary or required)
8. Exit conference (to discuss preliminary evaluation)
9. Report preparation, and if appropriate, recommendations for coming into compliance

**Integrated Pest Management (IPM)** - means a sustainable approach to managing pests by combining biological, cultural, physical and chemical tools in a way that minimizes economic, health, and environmental risks.

**Large Municipal Separate Storm Sewer System (MS4)** - means all MS4s that serve a population greater than 250,000 (1990 Census) as defined in 40 CFR122.26 (b)(4). The Regional Water Board designated Ventura County as a large MS4 in 1990, based on: (i) the U.S. Census Bureau 1990 population count of 669,016 thousand, and (ii) the interconnectivity of the MS4s in the incorporated and unincorporated areas within the County.

**Local SWPPP** - means the Local Storm Water Pollution Prevention Plan (LSWPPP) required by the local agency for a project that disturbs one or more acres of land. Shall mean a plan identifying potential pollutant sources from a construction site and describing proposed design, placement and implementation of BMPs, to effectively prevent non-storm water discharges and reduce pollutants in storm water discharges to the storm drain system, during construction activities. Also referred as a Storm Water Pollution Control Plan (SWPCP).

**Low Impact Development (LID)** – means a design strategy with the goal of maintaining or replicating the pre-development hydrologic regime through the use of design techniques to create a functionally equivalent hydrologic site design. Hydrologic functions of storage, infiltration and ground water recharge, as well as the volume and frequency of discharges are maintained through the use of integrated and distributed micro-scale storm water retention and detention areas, reduction of impervious surfaces, and the lengthening of runoff flow paths and flow time. Other strategies include the preservation/protection of environmentally sensitive site features such as riparian buffers, wetlands, steep slopes, valuable (mature) trees, flood plains, woodlands, and highly permeable soils.

**Major Municipal Separate Storm Sewer Outfall (“or major outfall”)** - means a major municipal separate storm sewer outfall that discharges from a single pipe with an inside diameter of 36 inches or more or its equivalent (discharge from a single conveyance other than circular pipe which is associated with a drainage area of more than 50 acres); or for municipal separate storm sewers that receive storm water from lands zoned for industrial activity (based on comprehensive zoning plans or the equivalent), an outfall that discharges from a single pipe with an inside diameter of 12 inches or more or from its equivalent (discharge from other than a circular pipe associated with a drainage area of 2 acres or more), as defined in 40 CFR122.26 (b)(5).

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

**Major Outfall** - means a major municipal separate storm sewer outfall, as defined in 40 CFR122.26 (b)(6).

**Maximum Extent Practicable (MEP)** – The technology-based permit requirement established by Congress in CWA section 402(p)(3)(B)(iii) that municipal dischargers of storm water must meet. Technology-based requirements, including MEP, establish a level of pollutant control that is derived from available technology or other controls. MEP requires municipal dischargers to perform at maximum level that is practicable. Compliance with MEP may be achieved by emphasizing pollution prevention and source control BMPs in combination with structural and treatment methods where appropriate. The MEP approach is an ever evolving and advancing concept, which considers technical and economic feasibility.

**Method Detection Limit (MDL)** - means the minimum concentration of a substance that can be measured and reported with 99 percent confidence that the analyte concentration is greater than zero, as defined in 40 CFR136, Appendix "G" of this Order.

**Minimum Level (ML)** - means the concentration at which the entire analytical system must give a recognizable signal and acceptable calibration point. The ML is the concentration in a sample that is equivalent to the concentration of the lowest calibration standard analyzed by a specific analytical procedure, assuming that all the method specified sample weights, volumes, and processing steps have been followed. The ML value represents the lowest quantifiable concentration in a sample based on the proper application of all method-based analytical procedures and the absence of any matrix interferences. Assuming that all method-specific analytical steps are followed, the ML value will also represent, after the appropriate application of method-specific factors, the lowest standard in the calibration curve for that specific analytical technique.

**Minimum Significant Difference (MSD)** - means a measure of test sensitivity that establishes the minimum difference required between a control and a test treatment in order for that difference to be considered statistically significant.

**Municipal Action Levels (MALs)** – means an action level that is derived from a statistical analysis of relevant data that is utilized to identify areas and subwatersheds that require additional or improved BMPs to reduce the discharge of pollutants to the maximum extent practicable. MALs may be revised as additional data are obtained so that MALs can continue to be used to effectively prioritize BMP implementation as the storm water program progresses. MALs are one measure of the effectiveness of the storm water program. MALs are not effluent limitations as defined by this Order, and/or as defined by Water code section 13385.1(c).

**Municipal Separate Storm Sewer System (MS4)** - means a conveyance or system of conveyances (including roads w/ drainage systems, municipal streets, catch basins, curbs, gutters, ditches, manmade channels, or storm drains), as defined in 40 CFR122.26(b)(8):

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

1. Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under § 208 of the Federal Clean Water Act (CWA) that discharges into waters of the United States
2. Designed or used for collecting or conveying storm water
3. Which is not a combined sewer
4. Which is not part of a Publicly Owned Treatment Works (POTW), as defined in 40 CFR122.2

**NAICS** - means North American Industry Classification System.

**National Pollutant Discharge Elimination System (NPDES)** - means the national program for issuing, modifying, revoking and reissuing, terminating, monitoring and enforcing permits, and imposing and enforcing pretreatment requirements, under CWA § 307, 402, 318, and 405.

**Natural Drainage Systems** - means unlined or unimproved (not engineered) creeks, streams, rivers or similar waterways.

**New Development** - means land disturbing activities; structural development, including construction or installation of a building or structure, creation and replacement of impervious surfaces; and land subdivision.

**Non-Storm Water Discharge** - means any discharge to a storm drain that is not composed entirely of storm water.

**No Observed Effect Concentration (NOEC)** - means the highest tested concentration of an effluent or toxicant that causes no observable adverse effect on the test organisms (i.e., the highest concentration of toxicant at which the values for the observed responses are not statistically different from the controls).

**Nuisance** - means anything that meets all of the following requirements: (1) is injurious to health, or is indecent or offensive to the senses, or an obstruction to the free use of property, so as to interfere with the comfortable enjoyment of life or property; (2) affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal.; (3) occurs during, or as a result of, the treatment or disposal of wastes.

**Nursery** - means NAICS classification to describe nursery operations and determine the type of operations covered under this Order and those covered under the Conditional Waiver of Waste Discharge Requirements for Discharges from Irrigated Lands (Conditional Waiver).

1. There are 3 broad NAICS sectors available to classify nurseries:

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (1) 111xxx - Crop Production - Agriculture
- (a) 424xxx - Merchant Wholesalers, Nondurable Goods
- (b) 44xxxx - Retail Trade
  - (1) **Nursery (Agricultural Facilities - Crop Production)** - means Nursery and Floriculture Production under NAICS Code 11142x. These operations are subject to the **Conditional Waiver**. This industry comprises establishments primarily engaged in (1) growing nursery and floriculture products (e.g., nursery stock, shrubbery, cut flowers, flower seeds, foliage plants, sod) under cover or in open fields and/ or (2) growing short rotation woody trees with a growing and harvesting cycle of 10 years or less for pulp or tree stock (e.g., cut Christmas trees, cottonwoods).
  - (2) **Nursery (Commercial Facilities - Merchant Wholesalers, Nondurable Goods, and Retail Trade)** - means industries Flower, Nursery Stock, and Florists' Supplies Merchant Wholesalers under NAICS Code 424930; and Nursery, Garden Center, and Farm Supply Stores under NAICS Code 444220. This Order covers these types of operations. The industry in NAICS Code 424930 comprises establishments primarily engaged in the merchant wholesale distribution of flowers, florists' supplies, and/ or nursery stock (except plant seeds and plant bulbs). The industry in NAICS Code 444220 comprises establishments primarily engaged in retailing nursery and garden products, such as trees, shrubs, plants, seeds, bulbs, floriculture products and sod, which are predominantly grown elsewhere. These establishments may sell a limited amount of a product they grow themselves.

**Open Channel** - means a storm drainage channel that is not a natural water course.

**Parking Lot** - means land area or facility for the parking or storage of motor vehicles used for businesses, commerce, industry, or personal use.

**Percent Minimum Significant Difference (PMSD)** - means the minimum significant difference divided by the control mean, expressed as a percent (see minimum significant difference).

**Permit** - means an authorization, license, or equivalent control document issued by U.S. EPA or an "approved State" to implement the requirements of 40 CFR Parts 122, 123, and 124. "Permit" includes an NPDES "general permit" (§ 122.28). Permit does not include any permit, which has not yet been the subject of final agency action, such as a "draft permit" or a "proposed permit."

**Permittee(s)** - means co-permittee(s) and any agency named in this Order as being responsible for permit conditions within its jurisdiction, as defined by Federal Regulation. Permittees to this Order include the Ventura Water Protection District, Ventura County, and the cities of Camarillo, Fillmore, Moorpark, Ojai, Oxnard, Port Hueneme, San Buenaventura, Santa Paula, Simi Valley and Thousand Oaks.

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

**Point Source** - means any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged. This term does not include agricultural storm water discharges and return flows from irrigated agriculture.

**Point Zero** - means in the context of the TMDLs, the point at which water from the storm drain or creek initially mixes with water. Point zero has been selected as the compliance point for the TMDL numeric target because access to these drains is, on the whole, not restricted.

**Pollutants** - means those "pollutants" defined in CWA § 502(6) (33.U.S.C. § 1362(6)), and incorporated by reference into California Water Code § 13373.

**Pollutants of Concern** - means constituents that have exceeded Basin Plan Objectives, and CTR- Chronic or Acute Objectives during monitoring at Mass Emission, Receiving Water, and Land Use stations.

**Potable Water Sources** - means the potable water system for the treatment, distribution, and provision of water for residential, commercial, industrial, or institutional use that meets all California safe drinking water regulatory standards for human consumption.

**Pre-Developed Condition** - means native vegetation and soils that existed at a site prior to first development. The pre-developed condition may be assumed to be an area with the typical vegetation, soil, and storm water runoff characteristics of open space areas in coastal Southern California unless reasonable historic information is provided that the area was atypical.

**Priority Pollutants** - means those constituents referred to in 40 CFR401.15 and listed in the U.S. EPA NPDES Application Form 2C, pp. V-3 through V-9.

**Project** - means all development, redevelopment, and land disturbing activities. The term is not limited to "Project" as defined under CEQA (Reference: California Public Resources Code § 21065).

**Qualified SWPPP Developer or Qualified SWPPP Practitioner** – refer to State of California General Construction Stormwater Permit for definition.

**Rare, Threatened, or Endangered Species (RARE)** - means a beneficial use for waterbodies in the Los Angeles Region, as designated in the Basin Plan (Table 2-1), that supports habitats necessary, at least in part, for the survival and successful maintenance of plant or animal species established under state or federal law as rare, threatened, or endangered.

**Redevelopment** - means land-disturbing activity that results in the creation, addition, or

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

replacement of 5,000 square feet or more of impervious surface area on an already developed site. Redevelopment includes, but is not limited to: the expansion of a building footprint; addition or replacement of a structure; replacement of impervious surface area that is not part of a routine maintenance activity; and land disturbing activities related to structural or impervious surfaces. It does not include routine maintenance to maintain original line and grade, hydraulic capacity, or original purpose of facility, nor does it include emergency construction activities required to immediately protect public health and safety.

**Regional Administrator** - means the Regional Administrator of the Regional Office of the U.S. EPA or the authorized representative of the Regional Administrator.

**Report of Waste Discharge (ROWD)** - means an application for renewal of the NPDES Permit for Waste Discharge Requirements for Municipal Separate Storm Sewer Discharges Within the Ventura County Watershed Protection District, County of Ventura and the Incorporated Cities Therein.

**Restaurant** - means a facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (SIC Code 5812).

**Restoration** - means the reestablishment of predisturbance aquatic functions and related physical, chemical and biological characteristics (Reference: National Research Council. 1992. Restoration of Aquatic Ecosystems: Science, Technology and Public Policy. National Academy Press, Washington, D.C.).

**Retail Gasoline Outlet (RGO)** - means any facility engaged in selling gasoline and lubricating oils- SIC 5541 and NAICS 447110 & 447190.

1. RGOs: 447190 Other Gasoline Stations:

This industry comprises establishments known as gasoline stations (except those with convenience stores) primarily engaged in one of the following: (1) retailing automotive fuels (e.g., diesel fuel, gasohol, gasoline) or (2) retailing these fuels in combination with activities, such as providing repair services; selling automotive oils, replacement parts, and accessories; and/ or providing food services.

2. RGOs: 447110 Gasoline Stations with Convenience Stores:

Retailing automotive fuels in combination with a convenience store or food mart.

**Routine Maintenance** - Routine maintenance projects include, but are not limited to projects conducted to:

1. Maintain the original line and grade, hydraulic capacity, or original purpose of the facility.
2. Perform as needed restoration work to preserve the original design grade, integrity and hydraulic capacity of flood control facilities.
3. Includes road shoulder work, regrading dirt or gravel roadways and shoulders and performing ditch cleanouts.

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

4. Update existing lines\* and facilities to comply with applicable codes, standards, and regulations regardless if such projects result in increased capacity.

5. Repair leaks

Routine maintenance does not include construction of new\*\* lines or facilities resulting from compliance with applicable codes, standards and regulations.

\* Update existing lines includes replacing existing lines with new materials or pipes.

\*\* New lines are those that are not associated with existing facilities and are not part of a project to update or replace existing lines.

**Screening** - means using proactive methods to identify illicit connections through a continuously narrowing process. The methods may include: performing baseline monitoring of open channels, conducting special investigations using a prioritization approach, analyzing maintenance records for catch basin and storm drain cleaning and operation, and verifying all permitted connections into the storm drains. Special investigation techniques may include: dye testing, visual inspection, smoke testing, flow monitoring, infrared, aerial and thermal photography, and remote control camera operation.

**Sidewalk Rinsing** - means only sidewalk rinsing using high pressure and low volume of water with no additives and at an average usage of 0.006 gallons per square foot of surface area to be rinsed. Any waste generated from the activity must be collected and properly and legally disposed of. It does not mean hosing of any sidewalk or street with a garden hose with a pressure nozzle.

**Site** - means the land or water area where any "facility or activity" is physically located or conducted, including adjacent land used in connection with the facility or activity.

**Small Construction** - means any soil disturbing activities less than 5 acres.

**Smart Growth**- development in or near cities intended to lessen or reverse suburban sprawl, decrease the use of automobiles, and shorten daily travel. It uses compact building design to cluster together residential, shopping, and work areas and encourages walk and public transportation. Smart Growth is considered a stormwater BMP in the 2005 publication *Using Smart Growth Techniques as Stormwater Best Management Practices*, EPA 231-B-05-002.

**Source Control BMP** - means any schedules of activities, prohibitions of practices, maintenance procedures, managerial practices or operational practices that aim to prevent storm water pollution by reducing the potential for contamination at the source of pollution.

**Southern California Stormwater Monitoring Coalition (SMC)** - means the Stormwater Monitoring Coalition, which is a collaborative research/ monitoring partnership of the Southern California Water Boards, Municipal Storm Water Agencies, and municipalities to develop the methodologies and assessment tools to more effectively understand urban storm water and non-storm water (anthropogenic) impacts to receiving waters and to conduct research/

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

monitoring through Subsequent Research Implementation Agreements. The first original cooperative agreement was entered into on February 8, 2001.

**Stream** - means a body of flowing water; natural water course containing water at least part of the year. In hydrology, it is generally applied to the water flowing in a natural channel as distinct from a canal (Reference: US Geological Survey).

**Strip Mall** - means a commercial development that is a shopping center where the stores are arranged in a row, with a sidewalk in front. Strip malls are typically developed as a unit and have large parking lots in front. They face major traffic arterials and tend to be self-contained with few pedestrian connections to surrounding neighborhoods. It is also called a plaza.

**Storm Event Monitoring**- means a rainfall event that produces more than 0.25 inch of precipitation and is separated from the previous storm event by at least 1 week of dry weather, for the purpose of monitoring.

**Storm Water** - means storm water runoff, snow melt runoff, and surface runoff and drainage, as defined in 40 CFR122.26(b)(13).

**Storm Water Discharge Associated with Industrial Activity** - means industrial discharge, as defined in 40 CFR122.26(b)(14).

**Storm Water Quality Management Program** - means the Ventura Countywide Storm Water Quality Management Plan, which includes descriptions of programs, collectively developed by the Permittees in accordance with provisions of the NPDES Permit, to comply with applicable federal and state law, as the same is amended from time to time.

**Structural BMP** - means any structural facility designed and constructed to mitigate the adverse impacts of storm water runoff pollution (e.g. canopy, structural enclosure). The category may include both Treatment Control BMPs and Source Control BMPs.

**Summer Dry Weather** - means dry weather days occurring from April 1 through October 31 of each year.

**t-Test** (formally Student's t-test) - means a statistical analysis comparing two sets of replicate observations, in the case of WET, only two test concentrations (e.g., a control and 100% effluent). The purpose of this test is to determine if the means of the two sets of observations are different [e.g., if the 100% effluent concentration differs from the control (i.e., the test pass or fails)].

**Targeted Employees** - means management and staff who perform or direct activities that directly or indirectly have an effect of storm water quality. The employees generally are employed in the following areas: department of public works, engineering, sanitation, storm

water maintenance, drainage and flood control, transportation, streets and roads, parks and recreation, public landscaping and corporation yards, planning or community development, code enforcement, building and safety, harbor or port departments, airports, or general services and fleet services.

**Total Maximum Daily Load (TMDL)** - means the sum of the individual waste load allocations for point sources and load allocations for nonpoint sources and natural background.

**Toxicity Identification Evaluation (TIE)** - means a set of procedures to identify the specific chemical(s) responsible for toxicity through a process of chemical/ physical manipulations of samples followed by toxicity tests. These procedures are performed in 3 phases (Phase I- Toxicity Characterization Procedure, Phase II- Toxicity Identification Procedure, and Phase III- Toxicity Confirmation Procedure) using aquatic organism toxicity tests.

**Toxicity Reduction Evaluation (TRE)** - means a study conducted in a step-wise process to identify the causative agents of effluent or ambient toxicity, isolate the sources of toxicity, evaluate the effectiveness of toxicity control options, and then confirm the reduction in toxicity.

**Toxicity Test** - means a procedure using living organisms to determine whether a chemical or an effluent is toxic. A toxicity test measures the degree of the effect of a specific chemical or effluent on exposed test organisms.

**Toxic Unit (TU)** - means a measure of toxicity in an effluent as determined by the acute toxicity units (TUa) or chronic toxicity units (TUc) measured. The larger the TU, the greater the toxicity.

**Toxic Unit - Chronic (TUc)** - means 100 times the reciprocal of the effluent concentration that causes no observable effect on the test organisms in a chronic toxicity test ( $TUc = 100/NOEC$  or  $100/EC25$ ) (see NOEC).

**Treatment** - means the application of engineered systems that use physical, chemical, or biological processes to remove pollutants. Such processes include, but are not limited to, filtration, gravity settling, media absorption, biodegradation, biological uptake, chemical oxidation and UV radiation.

**Treatment Control BMP** - means any engineered system designed to remove pollutants by simple gravity settling of particulate pollutants, filtration, biological uptake, media absorption or any other physical, biological, or chemical process.

**Urbanization** - means the process of changing of land use and land patterns from rural characteristics to urban (city-like) characteristics. These changes include (i) the replacement of pervious surfaces with impervious surfaces such as rooftops and buildings, and impervious materials such as asphalt and concrete; and (ii) the conversion of rural land to house new residents, support new businesses, and facilitate vehicular traffic flow.

**U.S. EPA Phase I Facilities** - means facilities in specified industrial categories that are required to obtain an NPDES permit for storm water discharges, as required by 40 CFR122.26(c).

These categories include:

1. Facilities subject to storm water effluent limitation guidelines, new source performance standards, or toxic pollutant effluent standards (40 CFR N)
2. Manufacturing facilities
3. Oil and gas/ mining facilities
4. Hazardous waste treatment, storage, or disposal facilities
5. Landfills, land application sites, and open dumps
6. Recycling facilities
7. Steam electric power generating facilities
8. Transportation facilities
9. Sewage of wastewater treatment works
10. Light manufacturing facilities

**Vehicle Maintenance/ Material Storage Facilities/ Corporation Yards** - means any Permittee owned or operated facility or portion thereof that:

1. Conducts industrial activity, operates or stores equipment or materials, and provides services similar to Federal Phase I facilities;
2. Performs fleet vehicle service/ maintenance including repair, maintenance, washing, or fueling;
3. Performs maintenance and/ or repair of machinery/ equipment; or
4. Stores chemicals, raw materials, or waste materials.

**Waste Load Allocations (WLAs)** - means a portion of a receiving water's Total Maximum Daily Pollutant Load (TMDL) that is allocated to one of its existing or future point sources of pollution (Reference: 40 CFR130.2(h)).

**Water Quality Objectives** - means water quality criteria contained in the Basin Plan, the California Ocean Plan, the National Toxics Rule, the California Toxics Rule, and other state or federally approved surface water quality plans. Such plans are used by the Regional Water Board to regulate all discharges, including storm water discharges.

**Water Quality Standards** - means the State Water Quality Standards, which are comprised of beneficial uses, water quality objectives and the State's Antidegradation Policy.

**Waters of the State** - means any surface water or groundwater, including saline waters, within boundaries of the state (Reference: California Water Code § 13050).

**Waters of the United States or Waters of the US** - means:

1. All waters that are currently used, were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- ebb and flow of the tide;
- 2. All interstate waters, including interstate "wetlands";
- 3. All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, "wetlands," sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds where the use, degradation, or destruction of which would affect or could affect interstate or foreign commerce including any such waters:
  - a. Which are or could be used by interstate or foreign travelers for recreational or other purposes
  - b. From which fish or shellfish are or could be taken and sold in interstate or foreign commerce; or
  - c. Which are used or could be used for industrial purposes by industries in interstate commerce
- 4. All impoundment's of waters otherwise defined as waters of the United States under this definition;
- 5. Tributaries of waters identified in the preceding paragraph (1) through (4) of this definition;
- 6. The territorial sea; and
- 7. "Wetlands" adjacent to waters (other than waters that are themselves wetlands) identified in the preceding paragraph (1) through (6) of this definition.  
(Reference: 33 CFR328)

**Watercourse** - means any natural or artificial channel for passage of water, including the VCFCD jurisdictional channels included in the List of Channels within the Comprehensive Plan of the VCFCD, as approved by the Board of Supervisors of the VCFCD on October 4, 1993, and any amendments thereto.

**Watershed Management** - means approach for water resources protection. It is a strategy for integrating and managing resources, both human and fiscal that focuses on regulation of point sources, to a more regional approach that acknowledges environmental impacts from other activities.

**Watershed Management Areas (WMA)** - means the geographically-defined watershed areas where the Regional Water Board will implement the watershed approach. These generally involve a single large watershed within which exists smaller subwatersheds but in some cases may be an area that does not meet the strict hydrologic definition of a watershed e.g., several small Ventura coastal waterbodies in the region are grouped together into one WMA.

**Wet Season** - means the calendar period beginning October 1 through April 15.

**Winter Dry Weather** - means dry weather days occurring from November 1 - March 31 of each year.

**Whole Effluent Toxicity** - means the aggregate toxic effect of an effluent measured directly by a toxicity test.

**PART 8 - STANDARD PROVISIONS**

**A. General Requirements**

- 1. The Permittee shall comply with all provisions and requirements of this Order.
- 2. Should the Permittee discover that it failed to submit any relevant facts or that it submitted incorrect information in a report it shall promptly submit the missing or correct information.
- 3. The Permittee shall report all instances of non-compliance not otherwise reported at the time monitoring reports are submitted.
- 4. This Order includes Attachment "H", the Reporting Program, which is a part of this Order and must be complied with.

**B. Regional Water Board Review**

- 1. The Regional Water Board may review any formal determinate or approval made by the Regional Water Board Executive Officer pursuant to the provisions of this Order.
  - (a) Permittee(s) or a member of the public may request such review upon petition within 30 day of the effective date of the notification of such decision to the Permittee(s) and interested parties on file at the Regional Water Board.

**C. Public Review**

- 1. All documents submitted to the Regional Water Board in compliance with the terms and conditions of this Order shall be made available to members of the public pursuant to the Freedom of Information Act (5 U.S.C. § 552), as amended, and the Public Records Act (California Government Code § 6250 et seq.).
- 2. All documents submitted to the Regional Water Board Executive Officer for approval shall be made available to the public for a 30-day period to allow for public comment.

**D. Duty to Comply [40 CFR122.41(a)]**

- 1. Each Permittee must comply with all of the terms, requirements, and conditions of this Order. Any violation of this order constitutes a violation of the Clean Water Act, its regulations and the California Water Code, and is grounds for enforcement action, Order termination, Order revocation and reissuance, denial of an application for

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- reissuance, or a combination thereof [40 CFR122.41(a), CAL. WATER CODE § 13261, 13263, 13265, 13268, 13300, 13301, 13304, 13340, 13350].
2. A copy of these waste discharge specifications shall be maintained by each Permittee so as to be available during normal business hours to Permittee employees and members of the public.
  3. Any discharge of wastes at any point(s) other than specifically described in this Order is prohibited, and constitutes a violation of the Order.

**E. Duty to Mitigate [40 CFR122.41 (d)]**

1. Each Permittee shall take all reasonable steps to minimize or prevent any discharge that has a reasonable likelihood of adversely affecting human health or the environment.

**F. Inspection and Entry; Investigations; Responsibilities [40 CFR122.41(i), Cal. Water Code § 13225 and § 13267]**

1. The Regional Water Board, U.S. EPA, and other authorized representatives shall be allowed:
  - (a) Entry upon premises where a regulated facility is located or conducted, or where records are kept under conditions of this Order;
  - (b) Access to copy any records, at reasonable times that are kept under the conditions of this Order;
  - (c) To inspect at reasonable times any facility, equipment (including monitoring and control equipment), practices, or operations regulated or required under this Order;
  - (d) To photograph, sample, and monitor at reasonable times for the purpose of assuring compliance with this Order, or as otherwise authorized by the CWA and the CAL. WATER CODE;
  - (e) To review any water quality control plan or waste discharge requirements, or in connection with any action relating to any plan or requirement to investigate the quality of any waters of the state within its region; and,
  - (f) To require as necessary any state or local agency to investigate and report on any technical factors involved in water quality control or to obtain and submit analyses of water.

**G. Proper Operation and Maintenance [40 CFR122.41 (e), Cal. Water Code § 13263(f)]**

1. The Permittees shall at all times properly operate and maintain all facilities and systems of treatment (and related appurtenances) that are installed or used by the Permittees to achieve compliance with this Order. Proper operation and maintenance includes:

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (a) adequate laboratory controls; and
  - (b) appropriate quality assurance procedures.
2. This provision requires the operation of backup or auxiliary facilities or similar system that are installed by a Permittee only when necessary to achieve compliance with the conditions of this Order.

**H. Signatory Requirements [40 CFR122.41(k) & 122.22]**

1. Except as otherwise provided in this Order, all applications, reports, or information submitted to the Regional Water Board shall be signed by the City Manager or Mayor, or authorized designee and certified as set forth in 40 CFR122.22.

**I. Reopener and Modification [40 CFR122.41(f) & 122.62]**

1. This Order may only be modified, revoked, or reissued, prior to the expiration date, by the Regional Water Board, in accordance with the procedural requirements of the CAL. WATER CODE and CCR Title 23 for the issuance of waste discharge requirements, 40 CFR122.62, and upon prior notice and hearing, to:
- (a) Address changed conditions identified in the required reports or other sources deemed significant by the Regional Water Board;
  - (b) Incorporate applicable requirements or statewide water quality control plans adopted by the State Board or amendments to the Basin Plan, including TMDLs;
  - (c) Comply with any applicable requirements, guidelines, and/ or regulations issued or approved pursuant to CWA § 402(p); and/ or,
  - (d) Consider any other federal, or state laws or regulations that became effective after adoption of this Order.
2. After notice and opportunity for a hearing, this Order may be terminated or modified for cause, including, but not limited to:
- (a) Violation of any term or condition contained in this Order;
  - (b) Obtaining this Order by misrepresentation, or failure to disclose all relevant facts;  
or,
  - (c) A change in any condition that requires either a temporary or permanent reduction or elimination of the authorized discharge.
3. The filing of a request by the Principal Permittee or Permittees for a modification, revocation and re-issuance, or termination, or a notification of planned changes or anticipated noncompliance does not stay any condition of this Order.
4. This Order may be modified to make corrections or allowances for changes in the permitted activity listed in this section, following the procedures at 40 CFR122.63, if processed as a minor modification. Minor modifications may only:
- (a) Correct typographical errors; or

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

(b) Require more frequent monitoring or reporting by the Permittee.

**J. Severability**

1. The provisions of this Order are severable; and if any provision of this Order or the application of any provision of this Order to any circumstance is held invalid, the application of such provision to other circumstances and the remainder of this Order shall not be affected.

**K. Duty to Provide Information [40 CFR122.41(h)]**

1. The Permittees shall furnish, within a reasonable time, any information the Regional Water Board or U.S. EPA may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this Order.
2. The Permittees shall also furnish to the Regional Water Board, upon request, copies of records required to be kept by this Order.

**L. Twenty-Four Hour Reporting [40 CFR122.41(l)(6)]<sup>1</sup>**

1. The Permittees shall report to the Regional Water Board any noncompliance that may endanger health or the environment. Any information shall be provided orally within 24 hours from the time any Permittee becomes aware of the circumstances. A written submission shall also be provided within 5 days of the time the Permittee becomes aware of the circumstances. The written submission shall contain a description of the noncompliance and its cause; the period of noncompliance, including exact dates and times and, if the noncompliance has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent reoccurrence of the noncompliance.
2. The Regional Water Board may waive the required written report on a case-by-case basis.

**M. Bypass [40 CFR122.41(m)]<sup>2</sup>**

1. Bypass (the intentional diversion of waste streams from any portion of a treatment facility) is prohibited. The Regional Water Board may take enforcement action against Permittees for bypass unless:

<sup>1</sup> This provision applies to incidents where effluent limitations (numerical or narrative) as provided in this Order or in the Ventura County SMP are exceeded, and which endanger public health or the environment.

<sup>2</sup> This provision applies to the operation and maintenance of storm water controls and BMPs as provided in this Order or in the Ventura County SMP.

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (a) Bypass was unavoidable to prevent loss of life, personal injury or severe property damage. (Severe property damage means substantial physical damage to property, damage to the treatment facilities that causes them to become inoperable, or substantial and permanent loss of natural resources that can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production.);
- (b) There were no feasible alternatives to bypass, such as the use of auxiliary treatment facilities, retention of untreated waste, or maintenance during normal periods of equipment down time. This condition is not satisfied if adequate back-up equipment should have been installed in the exercise of reasonable engineering judgment to prevent a bypass that could occur during normal periods of equipment downtime or preventive maintenance;
- (c) The Permittee submitted a notice at least ten days in advance of the need for a bypass to the Regional Water Board; or,
- (d) Permittees may allow a bypass to occur that does not cause effluent limitations to be exceeded, but only if it is for essential maintenance to assure efficient operation. In such a case, the above bypass conditions are not applicable. The Permittee shall submit notice of an unanticipated bypass as required.

**N. Upset [40 CFR122.41(n)]<sup>1</sup>**

1. Upset means an exceptional incident in which there is unintentional and temporary noncompliance with technology based permit effluent limitations because of factors beyond the reasonable control of the Permittee. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation.
2. A Permittee that wishes to establish the affirmative defense of an upset in an action brought for non compliance shall demonstrate, through properly signed, contemporaneous operating logs, or other relevant evidence that:
  - (a) An upset occurred and that the Permittee can identify the cause(s) of the upset;
  - (b) The permitted facility was being properly operated by the time of the upset;
  - (c) The Permittee submitted notice of the upset as required; and,
  - (d) The Permittee complied with any remedial measures required.
3. No determination made before an action for noncompliance, such as during administrative review of claims that non-compliance was caused by an upset, is final administrative action subject to judicial review.
4. In any enforcement proceeding, the Permittee seeking to establish the occurrence of an upset has the burden of proof.

<sup>1</sup> This provision applies to incidents where effluent limitations (numerical or narrative) as provided in this Order or in the Ventura County SMP are exceeded, and which endanger public health or the environment.

**O. Property Rights [40 CFR122.41(g)]**

- 1. This Order does not convey any property rights of any sort, or any exclusive privilege.

**P. Enforcement**

- 1. Violation of any of the provisions of the NPDES permit or any of the provisions of this Order may subject the violator to any of the penalties described herein, or any combination thereof, at the discretion of the prosecuting authority; except that only one kind of penalties may be applied for each kind of violation. The CWA provides the following:

(a) Criminal Penalties for:

- (1) Negligent Violations [CWA 309 (c)(1)(B)]:

The CWA provides that any person who negligently violates permit conditions implementing CWA § 301, 302, 306, 307, 308, 318, or 405 is subject to a fine of not less than \$2,500 nor more than \$25,000 per day for each violation, or by imprisonment for not more than 1 year, or both.

- (2) Knowing Violations [CWA 309 (c)(2)(B)]:

The CWA provides that any person who knowingly violates permit conditions implementing CWA § 301, 302, 306, 307, 308, 318, or 405 is subject to a fine of not less than \$5,000 nor more than \$50,000 per day of violation, or by imprisonment for not more than 3 years, or both.

- (3) Knowing Endangerment [CWA 309 (c)(3)(A)]:

The CWA provides that any person who knowingly violates permit conditions implementing CWA § 301, 302, 307, 308, 318, or 405 and who knows at that time that he is placing another person in imminent danger of death or serious bodily injury is subject to a fine of not more than \$250,000, or by imprisonment for not more than 15 years, or both.

- (4) False Statement [CWA 309 (c)(4)]:

The CWA provides that any person who knowingly makes any false material statement, representation, or certification in any application, record, report, plan, or other document filed or required to be maintained under the Act or who knowingly falsifies, tampers with, or renders inaccurate, any monitoring device or method required to be maintained under the Act, shall upon conviction, be punished by a fine of not more than \$10,000 or by imprisonment for not more than two years, or by both. If a conviction is for a violation committed after a first conviction of such person under this paragraph, punishment shall be by a fine of not more than \$20,000 per day of violation, or by imprisonment of not more than four years, or by both.

- (b) Civil Penalties [[CWA 309 (d)]

The CWA provides that any person who violates a permit condition implementing

CWA § 301, 302, 306, 307, 308, 318, or 405 is subject to a civil penalty not to exceed \$27,500 per day for each violation.

2. Violation of any of the provisions of the NPDES permit or any of the provisions of this Order may subject the violator to any of the penalties described herein, or any combination thereof, at the discretion of the prosecuting authority; except that only one kind of penalties may be applied for each kind of violation. The Cal Water Code § 13885 provides the following:
  - (a) Any person who violates any of the following shall be liable civilly in accordance with this section:
    - (1) Section 13375 or 13376.
    - (2) Any waste discharge requirements or dredged or fillmaterial permit issued pursuant to this chapter or any water quality certification issued pursuant to Section 13160.
    - (3) Any requirements established pursuant to Section 13383.
    - (4) Any order or prohibition issued pursuant to Section 13243 or Article 1 (commencing with Section 13300) of Chapter 5, if the activity subject to the order or prohibition is subject to regulation under this chapter.
    - (5) Any requirements of Section 301, 302, 306, 307, 308, 318, 401, or 405 of the Clean Water Act, as amended.
    - (6) Any requirement imposed in a pretreatment program approved pursuant to waste discharge requirements issued under Section 13377 or approved pursuant to a permit issued by the administrator.

**Q. Need to Halt or Reduce Activity not a Defense [40 CFR122.41(c)]**

1. It shall not be a defense for a Permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this Order.

**R. Termination of Board Order**

1. Regional Water Board Order No. 00-108 is hereby terminated.

**S. Board Order Expiration Date**

1. This Order expires on May 7, 2014. The Permittees must submit a Report of Waste Discharge (ROWD) and a proposed Storm Water Quality Management Program in accordance with CCR Title 23 as application for reissuance of waste discharge requirements no later than 180 days in advance of such date.

**T. MS4 Annual Reporting Program [40 CFR122.42(c)]**

1. The Annual Program Reporting shall include the following information:

(a) *Municipal separate storm sewer systems.*

The operator of a large or medium municipal separate storm sewer system or a municipal separate storm sewer that has been designated by the Director under 40 CFR122.26(a)(1)(v) of this part must submit an annual report by the anniversary of the date of the issuance of the permit for such system. The report shall include:

- (1) The status of implementing the components of the storm water management program that are established as permit conditions;
- (2) Proposed changes to the storm water management programs that are established as permit condition. Such proposed changes shall be consistent with 40 CFR122.26(d)(2)(iii) of this part;
- (3) Revisions, if necessary, to the assessment of controls and the fiscal analysis reported in the permit application under 40 CFR122.26(d)(2)(iv) and (d)(2)(v) of this part;
- (4) A summary of data, including monitoring data that is accumulated throughout the reporting year;
- (5) Annual expenditures and budget for year following each annual report;
- (6) A summary describing the number and nature of enforcement actions, inspections, and public education programs; and
- (7) Identification of water quality improvements or degradation.

I, Tracy J. Egoscue, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of an order adopted by the California Regional Water Quality Control Board, Los Angeles Region, on mm dd, 2009.

**ATTACHMENT E**  
Determination of Erosion Potential

$E_p$  is determined as follows- The *total effective work* done on the channel boundary is derived and used as a metric to predict the likelihood of channel adjustment given watershed and stream hydrologic and geomorphic variables. The index under urbanized conditions is compared to the index under pre-urban conditions expressed as a ratio ( $E_p$ ). The effective work index ( $W$ ) is computed as the excess shear stress that exceeds a critical value for streambed mobility or bank material erosion integrated over time and represents the total work done on the channel boundary:

$$W = \sum_{i=1}^n (\tau_i - \tau_c)^{1.5} \cdot V \cdot \Delta t_i \quad (1)$$

Where  $\tau_c$  = critical shear stress that initiates bed mobility or erodes the weakest bank layer,  $\tau_i$  = applied hydraulic shear stress,  $\Delta t$  = duration of flows (in hours), and  $n$  = length of flow record. The effective work index for presumed stable stream channels under pre-urban conditions is compared to stable and unstable channels under current urbanized conditions. The comparison, expressed as a ratio, is defined as the Erosion Potential ( $E_p$ )<sup>1</sup> (McRae (1992, 1996).

$$E_p = \frac{W_{post}}{W_{pre}} \quad (2)$$

where:

$W_{post}$  = work index estimated for the post-urban condition

$W_{pre}$  = work index estimated for the pre-urban condition

**MONITORING PROGRAM**

1. The primary objectives of the Monitoring Program include, but are not limited to:
  - (a) Assessing the chemical, physical, and biological impacts of municipal storm water sewer system discharges on receiving waters.
  - (b) Assessing the overall health and evaluating long-term trends in receiving water quality.
  - (c) Assessing compliance with TMDL targets and water quality objectives.
  - (d) Characterization of the quality of storm water discharges.
  - (e) Identifying sources of pollutants.
  - (f) Measuring and improving the effectiveness of measures implemented under this Order.
  
2. The results of the monitoring requirements outlined below shall be used to refine BMPs for the reduction of pollutant loading and the protection and enhancement of the beneficial uses of the receiving waters in Ventura County.
  
3. The Permittees shall implement the Monitoring Program as follows:

**CORE MONITORING**

**A. Mass Emissions**

- I. The Principal Permittee shall monitor mass emissions to accomplish the following objectives:
  - i. Estimate the mass emissions from the MS4 to the watershed.
  - ii. Assess trends in the mass emissions over time.
  - iii. Determine if the MS4 is contributing to exceedances of water quality objectives by comparing results to applicable water quality objectives in the Water Quality Control Plan Los Angeles Region (Basin Plan) and the California Toxics Rule (CTR).
  
1. The Principal Permittee shall monitor mass emissions from the following 3 mass emission stations:
  - (a) ME-VR2 for Ventura River
  - (b) ME-SCR for Santa Clara River
  - (c) ME-CC for Calleguas Creek

E

2. The Principal Permittee shall monitor the 3 mass emission stations on an annual basis as per A.3. below.
3. The Principal Permittee shall monitor each mass emission station each year as follows:
  - (a) The first storm event of the wet season that produces a 20% or greater increase in base stream flow, and 2 additional storm events; all storm events shall be separated by 7 days of dry weather (less than 0.1 inch of rainfall) from the previously measurable storm event (0.25 inches of rain).
  - (b) A total of 4 monitoring events (3 wet-weather storm events, 1 dry-weather) per mass emission station.
4. Samples for mass emission monitoring may be taken with the same type of automatic sampler used under Order 00-108. . Sampling shall be in accordance with USEPA "NPDES Storm Water Sampling Guidance Document, EPA 833-8-92-001, July 1992" or other protocol approved by the Executive Officer.
5. Samplers shall be set to monitor storms that produce a 20% or greater increase in base stream flow.
6. Samples shall be flow-weighted composites, collected during the first 24 hours or for the duration of the storm if it is less than 24 hours.
7. Samples shall be collected from the discharge resulting from a storm event that is 0.25 inches or greater, samples may be analyzed if a predicted storm event produces between 0.15 and 0.24 inches of rain.
8. The flow-weighted composite sample for a storm water discharge shall be taken with a continuous sampler, or it shall be taken as a combination of a minimum of 3 sample aliquots, taken in each hour of discharge for the first 24 hours of the discharge or for the entire discharge if the storm event is less than 24 hours, with each aliquot being separated by a minimum of 15 minutes within each hour of discharge, unless the Regional Water Board Executive Officer approves an alternate protocol.
9. Flow may be estimated using U.S. EPA methods at sites where flow measurement devices are not in place.
10. Grab samples shall be taken only for pathogen indicators, hardness (as mg/L CaCO<sub>3</sub>), pH, temperature, and DO.
11. Each mass emission shall analyze for all of the Pollutants of Concern (POC) in its specific watershed listed in Attachment "B" (Calleguas Creek Watershed,

May 7, 2009

Santa Clara River Watershed, and Ventura River Watershed Pollutants of Concern).

12. Each mass emission station shall screen for all constituents listed in Attachment "G" (Storm Water Monitoring Program's Constituents with Associated Minimum Levels), during the first storm event of the wet season for each year sampled. If a constituent is not detected at the Method Detection Limit (MDL) for its respective test method it need not be further analyzed unless the observed occurrence shows concentrations greater than the state water quality objective, and/ or the California Toxics Rule (CTR) for chronic criteria. If a constituent is detected exceeding a Basin Plan objective, and/ or CTR criteria then the constituent shall be analyzed for the remainder of the Order, at the mass emission station where it was detected.
13. At a minimum, a sufficient sample volume must be collected to perform all of the required biological and chemical tests.
14. When monitoring can not be performed to comply with the requirements of this Order due to circumstances beyond the Permittee's control, then within two working days the following shall be submitted to the Regional Water Board Executive Officer:
  - (a) Statement of situation.
  - (b) Explanation of circumstance(s) with documentation.
  - (c) Statement of corrective action for the future.
15. Monitoring results submitted to the Regional Water Board shall include:
  - (a) Rain totals and hydrographs for monitoring events in both narrative and graphic formats.
  - (b) A narrative description of the date and duration of the storm event(s) sampled, rainfall estimates of the storm event which generated the sampled discharge and the duration between the storm event sampled and the end of the previous measurable storm event.
  - (c) All applicable Standard Monitoring Provisions listed in part "K".
16. Results of monitoring from each mass emission station conducted in accordance with the Standard Operating Procedure submitted under Standard Provision 14 of this Attachment shall be sent electronically to the Regional Water Board's Storm Water site at [MS4stormwaterRB4@waterboards.ca.gov](mailto:MS4stormwaterRB4@waterboards.ca.gov), no later than 90 days from sample collection date, highlighting exceedances (Pollutants of Concern, POC) to the Basin Plan objectives for all test results, and the CTR for acute criteria with corresponding sampling dates per mass emission station. The sample data transmitted shall be in the most recent update of the Southern California Municipal Storm Water Monitoring Coalition's (SMC) Standardized Data Transfer Formats (SDTFs).

- 17. A summary of the annual mass emission monitoring results highlighting exceedances (POC) of the Basin Plan objectives and the CTR for acute criteria, with corresponding sampling dates per mass emission station, shall be included with the Annual Storm Water Report.

**B. Major Outfalls**

- I. The Principal Permittee shall monitor major storm drain outfalls to accomplish the following objectives:
  - i. Estimate the annual pollutant load of the cumulative discharges to waters of the State.
  - ii. Estimate the event mean concentration of the cumulative discharges to waters of the State.
  - iii. Assess trends in the major outfalls over time.
  - iv. Estimate the annual pollutant load of discharges to Waters of the U.S.
  - v. Estimate the event mean concentration of discharges to Waters of the U.S.
  - vi. Assess trends in the major outfalls over time.
  - vii. Determine if the MS4 is contributing to exceedances of MALs, and water quality objectives in the Water Quality Control Plan Los Angeles Region (Basin Plan), and the California Toxics Rule (CTR).
  
- 1. The Principal Permittee shall monitor:
  - (a) End-of-pipe of major outfalls, identified in Attachment I, transporting representative discharges from each Permittee's Municipal drainage area to:
    - (1) Major outfalls listed in Attachment "I" (Storm Water Monitoring Program's Major Outfall Stations).
  - (b) The first storm event of the wet season that produces at least 0.25 inches of rain, and 2 additional storm events per year, all storm events shall be separated by 7 days of dry weather (less than 0.1 inch) from the previously measurable storm event (0.25 inches).
  - (c) A total of 4 monitoring events (3 wet-weather storm events, 1 dry-weather) shall be sampled per identified major outfall.
  - (d) In the first year after permit adoption, 4 major outfall stations shall be monitored. Thereafter, all major outfall stations listed in Attachment "I" are to be monitored annually according to the schedule above.
  
- 2. If an identified monitoring site is found to be unworkable due to immitigable factors the sampling location may be relocated upon Executive Officer's approval of another location. Best professional judgment shall be used to balance the site selection rationale and criteria to determine the most appropriate site. Due to limited potential locations of urban outfalls to be monitored, there may be no sites that satisfy all criteria and rationale. Sites will be selected to satisfy the following criteria:

- (a) Maximize urban runoff contribution;
  - (b) Greater than 60% of catchment shall be Permittee's MS4;
  - (c) Attempt shall be made to avoid outfalls that contain discharge from extra-jurisdictional areas (e.g. agriculture land and other NPDES discharges).
  - (d) Drainage area should contain representative land uses in a ratio of use as similar as reasonably possible to that found in the Permittee's jurisdiction.
  - (e) Drainage areas with a higher percentage of the Permittee's MS4 are preferred;
  - (f) Ability to accurately measure flow
  - (g) Safety of monitoring personnel is the highest priority. Specific location of sampling collection may be upstream of the actual outfall if field safety or accurate flow measurement require it.
3. Samples shall be collected from the discharge resulting from a storm event that is 0.25 inches or greater, samples may be analyzed if a predicted storm event produces between 0.15 inches and 0.24 inches of rain.
  4. Samples shall be collected during the first 24 hours of storm water discharge or for the entire storm water discharge if it is less than 24 hours.
  5. Samples shall be flow-weighted composites and can be collected automatically or manually (see subparts A.7 and A.8) in accordance with U.S. EPA protocol or other procedure approved by the Executive Officer.
  6. Grab samples shall be taken only for pathogen indicators, hardness (as mg/L CaCO<sub>3</sub>) and pH, temperature, and DO.
  7. Major outfall samples taken within a subwatershed shall be analyzed for the biological and chemical parameters listed in the preceding subpart B.6, and for all of the constituents in Attachment "C" (Municipal Action Levels), Table 1 as listed below:
    - (a) TSS
    - (b) Nitrate & Nitrite- Total
    - (c) Cu- Total
    - (d) Pb- Total
    - (e) Zn- Total
  8. Each major outfall station shall screen for all constituents listed in Attachment "G" (Storm Water Monitoring Program's Constituents with Associated Minimum Levels) twice per wet season, per year, (1<sup>st</sup> storm event of the wet season and one other storm event of the wet season). If a constituent is not detected at the Method Detection Limit (MDL) for its respective test method it need not be further analyzed unless the observed occurrence shows concentrations greater than the state water quality objective, and/ or the

May 7, 2009

California Toxics Rule (CTR) acute criteria. If a constituent is detected exceeding a Basin Plan objective, and/or chronic CTR criteria then the constituent shall be sampled for the remainder of the Order at the major outfall station where it was detected.

9. At a minimum, a sufficient sample volume must be collected to perform all of the required biological and chemical tests. Sampling shall be in accordance with USEPA "NPDES Storm Water Sampling Guidance Document, EPA 833-8-92-001, July 1992" or other protocol approved by the Executive Officer.
10. When monitoring can not be performed to comply with the requirements of this Order due to circumstances beyond the Permittee's control, then within 2 working days the following shall be submitted to the Regional Water Board Executive Officer:
  - (a) Statement of situation
  - (b) Explanation of circumstance(s) with documentation
  - (c) Statement of corrective action for the future
11. Monitoring results submitted to the Regional Water Board shall include:
  - (a) Rain totals and hydrographs for monitoring events in both narrative and graphic formats.
  - (b) A narrative description of the date and duration of the storm event(s) sampled, rainfall estimates of the storm event which generated the sampled discharge and the duration between the storm event sampled and the end of the previous measurable storm event.
  - (c) All applicable Standard Monitoring Provisions listed in part "K".
12. Results of monitoring from each major outfall station conducted in accordance with the Standard Operating Procedure submitted under Standard Provision 14 of this Attachment shall be sent electronically to the Regional Water Board's Storm Water Site at [MS4stormwaterRB4@waterboards.ca.gov](mailto:MS4stormwaterRB4@waterboards.ca.gov), no later than 90 days from sample collection date, highlighting exceedances to the MALs, the Basin Plan objectives for all test results, and the CTR for acute criteria with corresponding sampling dates per major outfall station. The sample data transmitted shall be in the most recent update of the Southern California Municipal Storm Water Monitoring Coalition's (SMC) Standardized Data Transfer Formats (SDTFs).
13. A summary of the annual major outfall monitoring results, highlighting exceedances (pollutants of concern POC) to the MALs, the Basin Plan objectives, and the CTR for acute criteria with corresponding sampling dates per major outfall station, shall be included with the Annual Storm Water Report.

**C. Dry Weather Analytical Monitoring**

- 1. The Principal Permittee shall develop and implement a monitoring program to characterize pollutant discharges from representative MS4 outfalls in each municipality and in the unincorporated County area during dry weather. This monitoring program shall be implemented within each jurisdiction and shall begin within the 2010-2011 monitoring year.
- 1. Dry weather analytical monitoring shall include:
  - (a) Analytical monitoring, field measurements and observations at selected stations.
  - (b) Reports of analytical data in a SWAMP comparable format.
- 2. Selection of Dry Weather Analytical Monitoring stations: Based upon a review program data, the storm drain system and land uses, the Co-Permittees shall select dry weather analytical monitoring stations within their jurisdiction. At least 5 dry weather analytical monitoring stations need to be identified per Co-Permittee. The dry weather analytical monitoring stations shall be established using the following guidelines and criteria:
  - (a) Stations should be located downstream of municipal land uses where illegal or illicit activity may occur;
  - (b) Stations shall be located at accessible downstream locations within the storm drain system of each municipality or at major outfalls;
  - (c) Hydrological conditions, total drainage area of the site, traffic density, age of the structures or buildings in the area, history of the area, and land use types shall be considered in locating stations;
  - (d) Each Co-Permittee shall determine a primary station and at least 4 alternate stations to be sampled in case primary stations do not have flow in dry weather. The dry weather monitoring may utilize the same outfalls as those used for wet weather monitoring, if such outfalls are found to discharge during dry weather.
  - (e) Fact sheets of general information such as site descriptions (i.e., conveyance type, dominant watershed land uses) shall be created.
- 3. The Principal and Co-Permittees shall develop and/or update written procedures for dry weather analytical monitoring (these procedures must be consistent with 40 CFR part 136), including field observations, monitoring, and analyses to be conducted. At a minimum, the procedures must meet the following guidelines and criteria:
  - (a) Dry weather analytical monitoring shall be conducted at each identified station at least once between May 1st and September 30th of each year.

May 7, 2009

- (b) If flow or ponded runoff is observed at a dry weather analytical monitoring station and there has been at least seventy-two (72) hours of dry weather, make observations and collect at least one (1) grab sample.
- (c) Record general information such as site descriptions (i.e., conveyance type, dominant watershed land uses), flow estimation (i.e., width of water surface, approximate depth of water, approximate flow velocity, flow rate), and visual observations (i.e., odor, color, clarity, floatables, deposits/stains, vegetation condition, structural condition, and biology).
4. At a minimum, collect samples for analytical laboratory analysis of the following constituents:
- Total Hardness
  - Total Organic Carbon or Oil and Grease
  - Lead (Dissolved)
  - Zinc (Dissolved)
  - Copper (Dissolved)
  - Total Coliform bacteria
  - E. Coli bacteria
5. Other required field observations include:
- Flow Estimation
  - Temperature
  - pH
  - Odor
  - Color
  - Turbidity
  - Floatables (foam, oil sheen)
  - Staining
  - Algal growth
6. If the station is dry (no flowing or ponded runoff), make and record all applicable observations and select another station from the list of alternate stations for monitoring.
7. Visually assess the presence of trash in receiving waters and urban runoff. Assessments of trash shall provide information on the spatial extent and amount of trash present, as well as the nature of the types of trash present.
8. Develop and/or update procedures for source identification follow up investigations in the event elevated levels are found. These procedures shall be consistent with procedures required in IC/ID section.

#### D. Aquatic Toxicity Monitoring

May 7, 2009

- I. The objective of aquatic toxicity monitoring is to evaluate if storm water (wet weather) discharges are causing or contributing to chronic toxic impacts on aquatic life by the following:
  - i. Toxicity testing at mass emission and major outfall stations to assess impacts on the marine and freshwater environments.
  
1. The Principal Permittee shall collect and analyze mass emission and major outfall samples for toxicity to evaluate the extent and causes of toxicity in receiving waters. Permittees shall utilize documents such as: Ventura County's Technical Guidance Manual for Storm Water Quality Control Measures and U.S. EPA's National Management Measures to Control Nonpoint Source Pollution from Urban Areas to implement measures to eliminate or reduce sources of toxicity in storm water.
2. Toxicity samples may be flow-weighted composite samples or grab samples for both wet and dry event sampling (see subparts A.7 and A.8).
3. Volume of sample shall be determined by specific test methods to be used. At a minimum it is suggested to collect 5 gallons for baseline testing, and an additional 5 gallons for TIE studies. Sufficient sample volume shall be collected to perform the required toxicity tests.
4. All toxicity tests shall be conducted as soon as possible following sample collection. The 36-hour sample holding time for test initiation shall be targeted. However, no more than 72 hours shall elapse before initial use of a sample.
5. When toxicity tests can not be performed to comply with the requirements of this Order due to circumstances beyond the Permittee's control, then the following shall be submitted to the Regional Water Board Executive Officer within 2 working days:
  - (a) Statement of situation
  - (b) Explanation of circumstance(s) with documentation
  - (c) Statement of corrective action for the future
6. The Principal Permittee shall conduct critical life stage chronic toxicity tests on undiluted samples in accordance with:
  - (a) U.S. EPA's Short Term Methods for Estimating the Chronic Toxicity of Effluents and Receiving Waters to *West Coast* Marine and Estuarine Organisms, (EPA/600/R-95/136, 1995) for all mass emission stations, and for major outfalls discharging to marine and estuarine environments, or
  - (b) U.S. EPA's Short Term Methods for Estimating the Chronic Toxicity of Effluents and Receiving Waters to Freshwater Organisms, October 2002 (EPA/821/R-02/013, 2002) or current version for major outfalls discharging to freshwater environments.

May 7, 2009

7. The Principal Permittee shall analyze samples for chronic toxicity according to the schedule below:
- (a) During the first year of the Order, 2 storm events shall be monitored at each mass emission and major outfall station. The first storm event of the wet season that produces at least 0.25 inches of rain, and 1 additional storm event. All storm events shall be separated by 7 days of dry weather (less than 0.1 inch of rain) from the previously measurable storm event.
    - (1) During the first year of the Order, all 3 test species shall be used for their respective chronic toxicity test method for the 2 storm events monitored, to determine the most sensitive test species for each monitoring station (see subparts D.8 and D.9 below).
  - (b) During the next 4 years of the Order, the first storm event of the wet season that produces at least 0.25 inches of rain shall be monitored for each mass emission and major outfall station.
    - (1) During the next 4 years of the Order, the most sensitive test species determined from the first year of testing at each mass emission and major outfall station shall be used for its respective chronic toxicity test method (see subpart D.6).
8. Marine and Estuarine Species and Test Methods.
- (a) Marine and estuarine species and short-term test methods for estimating the chronic toxicity of NPDES effluents shall be used and are found in the first edition of *Short-term Methods for Estimating the Chronic Toxicity of Effluents and Receiving Waters to West Coast Marine and Estuarine Organisms* (EPA/600/R-95/136, 1995) and applicable water quality standards; also see 40 CFR Parts 122.41(j)(4) and 122.44(d)(1)(iv).
    - (1) The Permittee shall conduct:
      - (A) A static renewal toxicity test with the topsmelt, *Atherinops affinis* (Larval Survival and Growth Test Method 1006.01)
      - (B) A static non-renewal toxicity test with the giant kelp *Macrocystis pyrifera* (Germination and Growth Test Method 1009.0); and
      - (C) A static non-renewal toxicity test with the purple sea urchin, *Strongylocentrotus purpuratus*, (Fertilization Test Method 1008.0)
    - (b) In no case shall the preceding toxicity test species be substituted with another organism unless written authorization from the Regional Water Board Executive Officer is received.
9. Freshwater Species and Test Methods.
- (a) Species and short-term test methods for estimating the chronic toxicity of NPDES effluent shall be used and are found in the fourth edition of *Short-term Methods for Estimating the Chronic Toxicity of Effluents and*

May 7, 2009

*Receiving Waters to Freshwater Organisms* (EPA/821/R-02/013, 2002; Table IA, 40 CFR Part 136).

- (1) The Permittee shall conduct
    - (A) A static renewal toxicity test with the fathead minnow, *Pimephales promelas* (Larval Survival and Growth Test Method 1000.0<sup>1</sup>)
    - (B) A static renewal toxicity test with the daphnid, *Ceriodaphnia dubia* (Survival and Reproduction Test Method 1002.0<sup>1</sup>); and
    - (C) A static renewal toxicity test with the green alga, *Selenastrum capricornutum* (also named *Raphidocelis subcapitata*) (Growth Test Method 1003.0)
  - (b) In no case shall the preceding toxicity test species be substituted with another organism unless written authorization from the Regional Water Board Executive Officer is received.
10. The test endpoint data is analyzed using a standard t-test approach. Statistical analysis methods shall be consistent with U.S. EPA test method manuals.
  11. If significant toxicity is found then according to paragraph 10.2.6.2 of the U.S. EPA freshwater test methods manual, all chronic toxicity test results from the multi-concentration tests required by this Order must be reviewed and reported according to U.S. EPA guidance on the evaluation of concentration-response relationships found in *Method Guidance and Recommendations for Whole Effluent Toxicity (WET) Testing (40 CFR 136)* (EPA/821/B-00-004, 2000).
  12. Toxic samples shall be immediately subjected to Toxicity Identification Evaluation (TIE) procedures to identify the toxic chemical(s) if toxicity is demonstrated by the standard t-test.
  13. A TIE is to be performed to identify the causes of toxicity using the same species and test method and, as guidance, U.S. EPA test method manuals: *Toxicity Identification Evaluation: Characterization of Chronically Toxic Effluents, Phase I* (EPA/600/6-91/005F, 1992); *Methods for Aquatic Toxicity Identification Evaluations, Phase II Toxicity Identification Procedures for Samples Exhibiting Acute and Chronic Toxicity* (EPA/600/R-92/080, 1993); *Methods for Aquatic Toxicity Identification Evaluations, Phase III Toxicity Confirmation Procedures for Samples Exhibiting Acute and Chronic Toxicity* (EPA/600/R-92/081, 1993); and *Marine Toxicity Identification Evaluation (TIE): Phase I Guidance Document* (EPA/600/R-96-054, 1996).

<sup>1</sup> Daily observations for mortality make it possible to calculate acute toxicity for desired exposure periods (i.e., 7-day LC50, 96-hour LC50, etc.).

May 7, 2009

14. The Principal Permittee shall complete chronic Phase I (Toxicity Characterization Procedures) TIEs for all sites showing significant toxicity. For the purpose of triggering TIE (Toxicity Characterization Procedures), significant toxicity is defined as at least 50% mortality. The 50% mortality threshold is consistent with the approach recommended in guidance published by USEPA for conducting TIEs (USEPA, 1996), which recommends a minimum threshold of 50% mortality because the probability of completing a successful TIE decreases rapidly for samples with less than this level of toxicity.
- (a) The TIE shall be conducted on test species, demonstrating the most sensitive toxicity response at a sampling station. However, a TIE(s) may be conducted on an additional test species with the caveat that once the toxicant(s) has been identified then the most sensitive test species triggering the TIE event needs to be tested additionally to verify that the toxicant has been identified and addressed.
15. A TIE Prioritization Metric may be utilized to rank sites for TIEs.<sup>2</sup>
16. Toxicity Reduction Evaluation (TRE) when toxicity is identified
- (a) When the same pollutant or class of pollutants is identified through 2 consecutive TIE evaluations, a TRE shall be performed for that identified toxic pollutant.
- (b) The TRE development shall be performed by a neutral third party (retained by the Permittees), in consultation with the Regional Water Board staff.
- (c) The TRE shall include all reasonable steps to identify the source(s) of toxicity and discuss appropriate BMPs to eliminate the causes of toxicity. No later than 30 days after the source of toxicity and appropriate BMPs are identified, the Permittees shall submit the TRE Corrective Action Plan to the Regional Water Board Executive Officer for approval. At a minimum, the Plan shall include a discussion of the following items:
- (1) The potential sources of pollutant(s) causing toxicity.
  - (2) A list of municipalities and agencies that may have jurisdiction over sources of pollutant(s) causing toxicity.
  - (3) Recommended BMPs to reduce the pollutant(s) causing toxicity.
  - (4) Proposed post construction control measures to reduce the pollutant(s) causing toxicity.
  - (5) Follow-up monitoring to demonstrate that toxicity has been removed.
- (d) The TRE process shall be coordinated with TMDL development and implementation (i.e., If a TMDL for 4,4'-DDD is being implemented when a TRE for 4,4'-DDD is required, the efforts shall be coordinated to avoid overlap).

<sup>2</sup> Appendix 5. SMC Model Monitoring Program.  
May 7, 2009

- 17. Results of Toxicity monitoring conducted in accordance with the Standard Operating Procedure under Standard Provision 14 of this Attachment shall be sent to the Regional Board's Storm Water Site at MS4stormwaterRB4@waterboards.ca.gov, no later than 90 days from sample collection date for the initial toxicity test and no more than 30 days from completion of each aspect of the analysis for TIEs/TREs. The sample data transmitted shall be in the most recent update of the Southern California Municipal Storm Water Monitoring Coalition's (SMC) Standardized Data Transfer Formats (SDTFs).
- 18. The Annual Storm Water Report shall include:
  - (a) A full laboratory report for all toxicity testing.
  - (b) A summary of the years' mass emission and major outfall monitoring station's toxicity test results reported according to the test methods manual chapter on report preparation and test review.
  - (c) The dates of sample collection and initiation of each toxicity test.
  - (d) All results for effluent parameters monitored concurrently with the toxicity test(s).
  - (e) TIE Phase testing (Phase I, Phase II, and Phase III) that has been or is in the process of being conducted per monitoring station.
  - (f) The development, implementation, and results for each TRE Corrective Action Plan in the Annual Storm Water Report, beginning the year following the identification of each pollutant or pollutant class causing toxicity.
- 19. When the SMC Standardized Toxicity Testing Guidance is completed, the Regional Water Board Executive Officer may direct Permittees to replace the current toxicity program with the standardized guidance procedure.

**SPECIAL STUDIES**

**E. Pyrethroid Insecticides Study**

- I. The Principal Permittee shall perform a Pyrethroid Insecticides study to accomplish the following objectives:
  - i. Establish baseline data for major watersheds
  - ii. Evaluate whether Pyrethroid Insecticide concentrations are at or approaching levels known to be toxic to sediment-dwelling aquatic organisms.
  - iii. Determine if Pyrethroids discovered are from urban sources.
  - iv. Assess any trends over the permit term.

1. The Permittees shall incorporate monitoring for Pyrethroid Insecticides within the Calleguas Creek, Santa Clara River and Ventura River Watersheds according to the following:
  - (a) No later than the second year of this Order, monitoring shall begin.
  - (b) Quality Assurance Project Plan (QAPP) to be submitted to the Regional Board for approval 12 months prior to beginning monitoring.
  - (c) In selecting sites to conduct monitoring for Pyrethroid Insecticides, Permittees shall review existing monitoring programs in the watersheds by other public and private entities, watershed coalitions, and citizen volunteers, so as to complement and not duplicate efforts.
  - (d) Establish at least 2 stations along the mainstems of each major watershed river that are influenced by urban discharges.
  - (e) The study shall be repeated every third year following the year monitoring begins.
  
2. The Principal Permittee shall monitor Pyrethroid Insecticides stations according to the following:
  - (a) The Principal Permittee shall monitor 1 sampling event per station per monitoring year.
    - (1) Monitoring shall occur after sediment has settled within the waterbody, and safe access can be assured.
  - (b) Sufficient sediment is to be collected at each station in a pre-cleaned glass jar by skimming the upper 1 cm of the sediment column with a steel scoop, and held on ice until returned to the laboratory.
  - (c) Sediment shall be homogenized in the laboratory by hand mixing, then held at 4 °C (toxicity samples) or -20 °C (chemistry samples).
  - (d) All samples taken shall be analyzed for the following Pyrethroids:
    - (1) bifenthrin
    - (2) cyfluthrin
    - (3) cypermethrin
    - (4) deltamethrin
    - (5) esfenvalerate
    - (6) lambda-cyhalothrin
    - (7) permethrin
    - (8) tralomethrin (if laboratory is capable of analyzing for it)
  - (e) Detection limits for all Pyrethroids shall be as close to 1ng/g (dry weight) as reasonably achievable.
  - (f) Each sediment sample is to measure the following:
    - (1) total organic carbon (TOC).

May 7, 2009

3. All samples shall be tested for toxicity to 7 to 10 day old *Hyaella azteca* according to standard U.S. EPA testing methods.<sup>3</sup>
  - (a) Use of the approach described in *Aquatic Toxicity Due to Residential Use of Pyrethroid Insecticides*<sup>4</sup> for toxicity testing shall be used.
4. Analysis by a laboratory that has performed sediment toxicity testing for Pyrethroid Insecticides is preferred.
5. Monitoring results from each station shall be sent electronically to the Regional Board's Storm Water Site at MS4stormwaterRB4@waterboards.ca.gov, no later than 90 days from sample collection date. The sample data transmitted shall be in the most recent update of the Southern California Municipal Storm Water Monitoring Coalition's (SMC) Standardized Data Transfer Formats (SDTFs).
6. If toxicity is attributed to Pyrethroids then consultation with staff at U.S. EPA, the California Department of Pesticide Regulations and the California Stormwater Quality Association's (CASQA) pesticides committee (UP3 Project web site), shall be required to obtain relevant information to use in developing the recommendations to mitigate Pyrethroids in the Final Report.
7. Final Report for the Pyrethroid Insecticides study shall contain the following:
  - (a) Executive summary
  - (b) Methods
  - (c) Results (including map depicting monitoring stations)
  - (d) Discussion
  - (e) Recommendations to mitigate Pyrethroids
8. The Final Report shall be completed and submitted to the Executive Officer of the Regional Water Board no later than 8 months after completion of the study.

The Pyrethroid Insecticides Study requirement may be satisfied by another tributary monitoring program within the Watershed performing a sediment Pyrethroid Insecticides Study that is monitoring to assess pyrethroid concentrations and sediment toxicity, so as to complement other ongoing programs.

#### F. Hydromodification Control Study

1. The Principal Permittee shall conduct or participate in special studies to develop tools to predict and mitigate the adverse impacts of Hydromodification, and to comply with hydromodification control criteria. This can be achieved by the following:
  - (a) Develop a mapping and classification system for streams based on their susceptibility to the effects of hydromodification.
  - (b) Establish protocols for ongoing monitoring to assess the effects of hydromodification.
  - (c) Develop dynamic models to assess the effects of hydromodification on stream condition.
  - (d) Develop a series of tools that managers can easily apply to make recommendations or set requirements relative to hydromodification for new development and redevelopment.
2. The Principal Permittee may satisfy this requirement by participating in the 'Development of Tools for Hydromodification Assessment and Management' Project undertaken by the SMC and coordinated by the SCCWRP.
3. The Principal Permittee shall continue to partner with the SMC and collect data or sponsor its collection for the Ventura County sites to reduce statistical uncertainty and/ or improve model predictability.
4. The Principal Permittee shall submit a letter to the Regional Water Board Executive Officer stating how they will satisfy this requirement, no later than (2 months after Order adoption date).

**G. Low Impact Development**

1. The Principal Permittee shall conduct or participate in a special study to assess the effectiveness of low impact development techniques in semi-arid climate regimes such as in Southern California.
2. The Principal Permittee may satisfy this requirement by participating in the SMC project titled "Quantifying the Effectiveness of Site Design/ Low Impact Development Best Management Practice in Southern California".
3. The Principal Permittee shall submit a letter to the Regional Water Board Executive Officer stating how they are satisfying this requirement, no later than 2 months after deciding to either conduct or participate in special study.

**H. Southern California Bight Project**

May 7, 2009

1. The Principal Permittee and Permittees shall participate with other government organizations regulating discharges in southern California in the collaboration to conduct a regional monitoring survey (Southern California Bight Project (SCBP)), which was started in 2008 and to be continued in successive years. The survey's primary objective is to assess the spatial extent and magnitude of ecological disturbances on the mainland continental shelf of the SCB and to describe relative conditions among different regions of the SCBP.
2. The Principal Permittee shall participate on the Steering Committee for the bight-wide monitoring project, and assist with the estuary and nearshore sampling effort requirement of the proposed monitoring project for Ventura County as defined in the SCBP plan.

#### I. Bioassessment

1. The Principal Permittee consents to participate in the following regional water quality program for watershed management and planning:
  - (a) SMC Regional Monitoring Program
    - (1) Southern California Regional Bioassessment
      - (A) Level of effort per watershed per year
        - (i) Probabilistic sites per watershed
          - (I) Ventura River - Six
          - (II) Santa Clara River - Three
          - (III) Calleguas Creek - Six
        - (ii) Integrator sites per watershed
          - (A) Ventura River - One
          - (B) Santa Clara River - One
          - (C) Calleguas Creek - One
    - (b) Ventura County Bioassessment: Permittees shall conduct bioassessment at one fixed site in each of the watersheds above on an annual basis. Southern California Regional Bioassessment protocols shall be used to conduct the Ventura County Bioassessment program.

#### J. Volunteer Monitoring Programs

1. The Permittees shall provide limited assistance if requested in the development and implementation of volunteer monitoring programs in the Ventura watersheds. These include, but are not limited to the following:
  - (a) Ventura River - (Ventura Stream Team).
  - (b) Santa Clara River - (Santa Clara River Stream Team).
  - (c) Calleguas Creek - (Calleguas Creek Watershed Quality Monitoring Program).
  - (d) Malibu Creek - (Malibu Creek Watershed Quality Monitoring Program).

#### K. Standard Monitoring Provisions

May 7, 2009

- I. All monitoring activities shall meet the following requirements.
1. Monitoring and Records [40 CFR 122.41(j)(1)]
    - (a) Samples and measurements taken for the purpose of monitoring shall be representative of the monitored activity.
  2. Monitoring and Records [40 CFR 122.41(j)(2)] [CWC §13383(a)]
    - (a) The Principal Permittee and Permittees shall retain records of all monitoring information, including all calibration and maintenance of monitoring instrumentation, copies of all reports required by this Order, and records of all data used to complete the Report of Waste Discharge (ROWD) and application for this Order, for a period of at least five (5) years from the date of the sample, measurement, report, or application. This period may be extended by request of the Regional Water Board or U.S. EPA at any time and shall be extended during the course of any unresolved litigation regarding this discharge.
  3. Monitoring and Records [40 CFR 122.21(j)(3)]
    - (a) Records of monitoring information shall include:
      - (1) The date, time of sampling or measurements; exact place, weather conditions, and rain fall amount.
      - (2) The individual(s) who performed the sampling or measurements.
      - (3) The date(s) analyses were performed.
      - (4) The individual(s) who performed the analyses.
      - (5) The analytical techniques or methods used.
      - (6) The results of such analyses.
      - (7) The data sheets showing toxicity test results.
  4. Monitoring and Records [40 CFR 122.21(j)(4)]
    - (a) All sampling, sample preservation, and analyses must be conducted according to test procedures under 40 CFR Part 136, unless other test procedures have been specified in this Order. If a particular Minimum Level (ML) is not attainable in accordance with procedures set forth in 40 CFR 136, the lowest quantifiable concentration of the lowest calibration standard analyzed by a specific analytical procedure may be used instead.
  5. Monitoring and Records [40 CFR 122.21(j)(5)]
    - (a) The CWA provides that any person who falsifies, tampers with, or knowingly renders inaccurate any monitoring device or method required to be maintained under this Order shall, upon conviction, be punished by a fine of not more than \$10,000, or by imprisonment for not more than 2 years, or both. If a conviction of a person is for a violation committed after a first conviction of such person under this paragraph, punishment is a fine of not more than \$20,000 per day of violation, or by imprisonment of not more than four years, or both.

6. All chemical, bacteriological, and toxicity analyses shall be conducted at a laboratory:
    - (a) Certified for such analyses by an appropriate governmental regulatory agency.
    - (b) Participated in 'Intercalibration Studies' for storm water pollutant analysis conducted by the SMC.<sup>5</sup>
    - (c) Which performs laboratory analyses consistent with the storm water monitoring guidelines as specified in, the *Stormwater Monitoring Coalition Laboratory Guidance Document*, 2nd Edition R. Gossett and K. Schiff (2007), and its revisions.
  
  7. For priority toxic pollutants that are identified in the CTR (65 Fed. Reg. 31682), the MLs published in Appendix 4 of the *Policy for Implementation of Toxics Standards for Inland Surface Waters, Enclosed Bays and Estuaries of California* (SIP) shall be used for all analyses, unless otherwise specified. The MLs from the SIP are incorporated into Attachment "G".
  
  8. The Monitoring Report shall specify the analytical method used, the Method Detection Level (MDL) and the ML for each pollutant. For the purpose of reporting compliance with numerical limitations, performance goals, and receiving water limitations, analytical data shall be reported with 1 of the following methods, as appropriate:
    - (a) An actual numerical value for sample results greater than or equal to the ML.
    - (b) "Not-detected (ND)" for sample results less than the laboratory's MDL with the MDL indicated for the analytical method used.
    - (c) "Detected, but Not Quantified (DNQ)" if results are greater than or equal to the laboratory's MDL but less than the ML. The estimated chemical concentration of the sample shall also be reported. This is the concentration that results from the confirmed detection of the substance by the analytical method below the ML value.
  
  9. For priority toxic pollutants, if the Permittee can demonstrate that a particular ML is not attainable, in accordance with procedures set forth in 40 CFR 136, the lowest quantifiable concentration of the lowest calibration standard analyzed by a specific analytical procedure (assuming that all the method specified sample weights, volumes, and processing steps have been followed) may be used instead of the ML listed in Appendix 4 of the SIP. The Principal Permittee must

<sup>5</sup> The 'Intercalibration Studies' are conducted periodically by the SMC to establish a consensus based approach for achieving minimal levels of comparability among different testing laboratories for storm water samples to minimize analytical procedure bias. Stormwater Monitoring Coalition Laboratory Document, Technical Report 420 (2004) and subsequent revisions and augmentations.

submit documentation from the laboratory to the Regional Water Board Executive Officer for approval prior to raising the ML for any constituent.

10. Monitoring Reports [40 CFR 122.41(I)(4)(ii)]
  - (a) If the Principal Permittee monitors any pollutant more frequently than required by the Order using test procedures approved under 40 CFR part 136, unless otherwise specified in the Order, the results of this monitoring shall be included in the calculation and reporting of the data submitted in the Annual Monitoring Reports.
11. Monitoring Reports [40 CFR 122.41(I)(4)(iii)]
  - (a) Calculations for all limitations, which require averaging of measurements, shall utilize an arithmetic mean unless otherwise specified in this Order.
12. If no flow occurred during the reporting period, then the Monitoring Report shall, so state.
13. The Regional Water Board Executive Officer or the Regional Board, consistent with 40 CFR 122.41, may approve changes to the Monitoring Program, after providing the opportunity for public comment, either:
  - (a) By petition of the Principal Permittee or by petition of interested parties after submittal of the Monitoring Report. Such petition shall be filed not later than 60 days after the Monitoring Report submittal date, or
  - (b) As deemed necessary by the Regional Water Board Executive Officer following notice to the Principal Permittee.
14. The Principal Permittee must provide a copy of the Standard Operation Procedures (SOPs) for the Monitoring Program No. CI 7388 to the Regional Water Board upon request. The SOP will consist of five elements: Title page, Table of Contents, Procedures, Quality Assurance/ Quality Control (QA/ QC), and References. Briefly describe the purpose of the work or process, including any regulatory information or standards that are appropriate to the SOP process, and the scope to indicate what is covered. Denote what sequential procedures should be followed, divided into significant sections; e.g., possible interferences, equipment needed personnel qualifications, and safety considerations. Describe QA/ QC activities, and list any cited or significant references.

**L. Total Maximum Daily Load (TMDL) Monitoring**

1. TMDL monitoring is to determine compliance with the TMDL Waste Load Allocations (WLAs) and numeric targets for the MS4 Permittees that have been adopted by the Regional Water Board and have been approved by the Office of Administrative Law and the U.S. EPA.

- 2. TMDL monitoring is in accordance with approved TMDLs as discussed in part 6 of the permit. TMDL monitoring for specific watersheds is in accordance with the agreed upon monitoring plans submitted by stakeholders, including MS4 Permittees.

**M. Beach Water Quality Monitoring**

If funding from state and federal sources is not available for beach water quality monitoring during the winter season (October 15 – April 15) the Principal Permittee within thirty days of notice shall conduct beach water quality sampling and analysis at a maximum of ten sites in accordance with the procedures and locations used in AB 411 monitoring and listed below:

- 1. Rincon Beach – 25 yards south of the creek mouth\*
  - 2. Oil Piers Beach – south of the drain, bottom of the wood staircase
  - 3. Faria County Park – south of the drain at the north end of the park\*
  - 4. Solimar Beach – south (end of east gate access road)\*
  - 5. Emma Wood State Beach – 50 yards south of first drain
  - 6. Oxnard Beach – at J Street drain
  - 7. Surfer’s Point at Seaside – end of the access path via wooden gate
  - 8. Promenade Park – Figueroa Street
  - 9. Surfer’s Knoll – beach adjacent to the parking lot\*
  - 10. San Buenaventura Beach – south of drain at San Jon Road
- \* Not associated with MS4 discharges.

## Reporting Program Requirements

The Principal Permittee shall submit by December 15<sup>th</sup> of each year, beginning the year of 2007, an Annual Report to the Regional Water Board Executive Officer in the form of one hard copy and three compact disks (CD) (or equivalent electronic format).

1. The Annual Report shall document the status of the General Storm Water Program, an integrated summary of the results of analyses from:
  - (a) The monitoring program described under Part 1-Monitoring Report; and
  - (b) The requirements described under Part 2- Program Report.
2. Plans shall be submitted to the Regional Water Board Executive Officer in the form of a hard copy and on a compact disk (CD), submit 1 hard copy and 3 CD copies.
3. Study Reports shall be submitted to the Regional Water Board Executive Officer in the form of a hard copy and on a CD, submit 1 hard copy and 3 CD copies.
4. Progress Reports shall be submitted to the Regional Water Board Executive Officer in the form of a hard copy and on a CD, submit 1 hard copy and 3 CD copies.

## PART 1 - MONITORING REPORT

### A. The following shall be included in the Annual Report:

1. Mass Emissions
  - (a) Assess the variability of storm water constituents from the results of all monitored storms events.
  - (b) Rain totals and hydrographs for monitoring events in both narrative and graphic formats.
  - (c) A summary of the mass emission station annual monitoring results highlighting exceedences (POC) with corresponding sampling.
2. Major Outfalls
  - (a) Assess the variability of storm water constituents from the results of all monitored storms events.
  - (b) Rain totals and hydrographs for monitoring events in both narrative and graphic formats.
  - (c) A summary of the major outfalls station annual monitoring results highlighting exceedences (POC) with corresponding sampling dates.
  - (d) Outfall(s) name and ID number (if applicable).

- 3. Aquatic Toxicity Monitoring
  - (a) An analysis of the mass emission station and major outfall station samples for aquatic toxicity.
  - (b) A report on the development, implementation, and results for each TRE Corrective Action Plan in the Annual Report, beginning the year following the identification of each pollutant or pollutant class causing toxicity.
  - (c) Report on the development, implementation, and results for each TRE Corrective Action Plan, beginning the year following the identification of each pollutant or pollutant class causing toxicity.
  - (d) All constituents (POCs) that caused toxicity or exceeded any applicable water quality objectives at the associated mass emission and/ or major outfall station the previous year shall be listed.
  - (e) A summary of the mass emission station and major outfall station annual monitoring results with corresponding sampling dates and Tox output.
- 4. TMDL Compliance Monitoring
  - (a) A summary of the annual monitoring results for each TMDL.
    - (1) Corresponding sampling dates and Tox output (if applicable).
- 5. Bioassessment
  - (a) Assess the effects of MS4 discharges on the biological integrity of the waterbody.
  - (b) Permittees shall conduct bioassessment, [using Southern California Regional Bioassessment protocol], at one fixed site in each of the watersheds below on an annual basis:
    - (1) Ventura River
    - (2) Santa Clara River
    - (3) Calleguas Creek

**B. The following shall be submitted to the Regional Water Board Executive Officer:**

- 1. Aquatic Toxicity Monitoring
  - (a) A TRE Corrective Action Plan within 30 days after the source of toxicity and appropriate BMPs are identified.
- 2. Pyrethroid Insecticides Study
  - (a) Pyrethroid insecticides study final report, no later than 8 months after completion of the study.
- 3. Hydromodification Control Study
  - (a) Letter stating how the Principal Permittee is satisfying this requirement, no later than 2 months after deciding to either conduct or participate in special studies.
- 4. Non-Compliance

- (a) When monitoring can not be performed to comply with the requirements of this Order due to circumstances beyond the Permittees' control, then within 48 hours the following shall be submitted:
- (1) Statement of situation.
  - (2) Explanation of circumstance(s) with documentation.
  - (3) Statement of corrective action for the future.
5. Low Impact Development
- (a) Letter stating how the Principal Permittee is satisfying this requirement, no later than 2 months after deciding to either conduct or participate in special studies.
6. Volunteer Monitoring Program
- (a) Results as obtained by volunteer monitoring programs in the Ventura watersheds including, but not limited to, the following:
- (1) Ventura River - (Ventura Stream Team)
  - (2) Santa Clara River - (Santa Clara River Stream Team)
  - (3) Calleguas Creek - (Calleguas Creek Watershed Quality Monitoring Program)
  - (4) Malibu Creek - (Malibu Creek Watershed Quality Monitoring Program)

**C. Submitted electronically to the Regional Water Board, the following shall be:**

1. Mass Emissions
  - (a) Monitoring results no later than 45 days from sample collection date.
2. Major Outfalls
  - (a) Monitoring results no later than 45 days from sample collection date.
3. Aquatic Toxicity Monitoring
  - (a) Monitoring results no later than 45 days from sample collection date.
3. TMDL Compliance Monitoring
  - (a) Monitoring results no later than 45 days from sample collection date.
4. Non-Compliance
  - (a) When the Order 's monitoring requirements can not be performed due to circumstances beyond the Permittees' control, then within 48 hours the following shall be submitted to the Regional Water Board Executive Officer:
    - (1) Statement of situation.
    - (2) Explanation of circumstance(s) with documentation.
    - (3) Statement of corrective action for the future.

5. Data transmitted shall be in the SMCs Standardized Data Transfer Formats (SDTFs) and all updates are to be adhered to.<sup>1</sup>
- (a) Regional Water Board's Storm Water E-mail Address:  
MS4stormwaterrb4@waterboards.ca.gov
6. Beach Water Monitoring
- (a) Assess bacteriological levels at various beaches in Ventura County, ensuring compliance with beach water quality standards.
- (b) Reports of beach monitoring shall be submitted to the Regional Board electronically within one business day of completion of analysis..

## PART 2 - PROGRAM REPORT

On an annual basis the Permittees shall complete an Annual Monitoring Program Report that responds adequately to the evaluative questions below which correspond to the Order.

### DISCHARGE PROHIBITIONS

- (a) Have you effectively prohibited all non-storm discharges into the MS4 and watercourses?
- (b) If there are any exceptions in the municipal code, list the exceptions to the municipal code. In other words, which non-storm water discharges does your municipality allow? Under what conditions are they allowed (with BMPs)? List which BMPs are required prior to discharge.
- (c) Do you have a procedure to assure that any project within your jurisdiction which may undertake ground water dewatering obtain a permit from the Regional Water Board?
- (d) How many projects are permitted to dewater in your jurisdiction?
- (e) How many are permanent dewatering to continue after construction is completed?
- (f) Do you have a permitting/ permission system for the discharge of dechlorinated/ debrominated swimming pool discharges? Explain it.
- (g) If yes, how many swimming pools are drained with the agency's permit/ permission?
- (h) How do you ensure that discharge limits for chlorine, bromine, etc are not exceeded?
- (i) Do you allow the discharge of "salt water" swimming pool discharges? If yes
- (j) Do you have a permitting/ permission system for the discharge of "salt water" swimming pool discharges? Explain it.

<sup>1</sup> The SMC developed a SDTFs for use by member agencies for electronic recording and transfer of storm water monitoring data. Southern California Coastal Water Research Project, Technical Report 421 (August, 2004).

**RECEIVING WATER LIMITATIONS**

1. At any time, has the discharge from the MS4 caused or contributed to the violation of water quality objectives or water quality standards?
2. At any time, has the discharge from the MS4 for which a Permittee is at least partially responsible, caused or contributed to a condition of nuisance?
3. At any time, has the discharge of pollutant(s) from the MS4 exceeded the MS4 Waste Load Allocation(s) for Wet Weather Discharges?
4. For pollutant(s) which continue to cause or contribute to water quality impairments, but for which TMDLs have not yet been developed or approved, what has the Permittee implemented to eliminate future water quality impairments?

**PART 3 - STORM WATER QUALITY MANAGEMENT PROGRAM  
IMPLEMENTATION****A. General Requirements****B. Legal Authority**

1. Does your municipal agency possess all the necessary legal authority to implement and enforce each requirement of this Order?
2. If the answer is no, explain why not.
3. By what date certain will the municipal agency have all the necessary legal authority?
4. Attach a copy of the new or updated statement by its legal counsel that the Permittee has obtained all necessary legal authority to comply with this Order through adoption of ordinances and/ or municipal code modifications.
5. After submitting the Statement from your legal counsel, was your city's municipal code (or other legal authority) changed (Any section that applies to or affects storm water permitting or requirements)? On what date(s) was it changed? Provide the changes.

**C. Fiscal Resources**

1. Provide a detailed Annual Budget Summary of the Permittee's allocation of funds expended to implement the activities required to comply with the conditions of this Order.
2. Indicate the source(s) of funding (whether general funds; and/ or Benefit Assessment Program funds; plan review fees; permit fees; industrial/ commercial user fee; revenue bonds; grants; or other funding mechanism. Each Permittee's Annual Budget Summary shall separately include:
3. Annual Budget Summary of expenditures applied to the storm water management program and also identify the storm water budget for the following year, using

estimated percentages and written explanations where necessary, for the specific categories noted below:

(a) Program Overall Management Activities;

(1) Administrative costs

(b) Program Required Activities Implementation;

Provide an estimated percent breakdown of expenditures for the categories below:

(1) Illicit connection/ illicit discharge

(2) Development planning

(3) Development construction

(4) Construction inspection activities

(5) Industrial/ Commercial inspection activities

(6) Public Agency Activities

(7) Maintenance of Structural BMPs and Treatment Control BMPs

(A) Municipal Street Sweeping for Commercial/ Industrial landuse only;

(B) Catch basin clean-outs (including dumping fees);

(C) Storm drain clean-outs (including dumping fees); and

(D) Other costs (describe).

(8) Public Information and Participation;

(9) Monitoring Program; and

(10) Miscellaneous Expenditures (describe).

**D. Designation and Responsibilities of the Principal Permittee**

The Principal Permittee shall submit within the Annual Program Report information on the implementation of the following:

1. Coordination and facilitation of activities to comply with the requirements of this Order;
2. Evaluation, assessment, and summary of the results of the monitoring program and the effectiveness of the implementation of BMPs and any recommended change.

**E. Responsibilities of the Permittees**

Each Permittee shall include within the Annual Program Report information on the implementation of the following:

1. A statement under penalty of perjury that the Permittee is or is not in compliance with the requirements of this Order and any subsequent modifications thereto.
2. A summary of how coordination occurs among its internal departments and agencies to ensure the implementation of the requirements of this Order.
3. Description of the intra-agency coordination by Agency departments (e.g. Community Development (Planning), Public Works, Sanitation, Engineering, Fire Department, Building and Safety, Code Enforcement, Public Health, Water and/ or Power Department, etc.) to ensure the successful implementation of the provisions of this Order.

- 4. In addition to the Budget Summary, identify any supplemental dedicated budgets for the storm water categories listed.
- 5. Identify the staff which participated at all committee or subcommittee meetings and when.

**PART 4 - SPECIAL PROVISIONS**

**A. General Requirements**

- 1. Best Management Practice Substitution
  - (a) Did the Regional Water Board Executive Officer approve any site-specific BMP substitution for your agency?
  - (b) If so, describe implementation of that/ those BMP(s).

**B. Watershed Initiative Participation**

- 1. Describe your participation (Principal Permittee) and present data results in the following:
  - (a) Southern California Stormwater Monitoring Coalitions' (SMC) Regional Monitoring program for the Southern California Regional Bioassessment.

**C. Public Information and Participation Program (PIPP)**

- 1. Describe the Permittee successes in:
  - Measurably increasing the knowledge of the target audiences regarding the MS4, the impacts of storm water pollution on receiving waters and potential solutions to mitigate the problems caused;
  - Measurably changing the waste disposal and runoff pollution generation behavior of target audiences by encouraging implementation of appropriate solutions;
  - Involving and engaging communities in Ventura County to participate in mitigating the impacts of storm water pollution.
- 2. Residential Program
  - (a) Did the Permittee label each storm drain inlet that they own with a legible "no dumping" message.
  - (b) How many inlets were labeled this year?
  - (c) How many inlets were labeled cumulatively?
  - (d) Did the Permittee install signs with prohibitive language discouraging illegal dumping at designated public access points to creeks, other relevant water bodies, and channels?
  - (e) How many?

- (a) Identify the staff person(s) who will serve as the contact person(s) for reporting clogged catch basin inlets and illicit discharges/ dumping, faded or lack of catch basin stencils, and general storm water management information.
- (b) Did the Permittee update this information by July 1 of this year?
- (c) The Principal Permittee shall compile a list of the general public reporting contacts from all Permittees and make this information available on the web site (<http://www.vcstormwater.org/contact.htm>) and upon request.

#### Outreach and Education

- (1) Provide documentation to show that the Permittees implemented the following activities:
- Storm Water pollution prevention advertising campaign.
  - Storm Water pollution prevention public service announcements.
  - Distribution of storm water pollution prevention public education materials to auto parts stores, home improvement centers and pet shops/ feed stores in regards to information on the proper storage and disposal of household waste materials, construction waste materials and vehicle waste fluids, the proper use of fertilizers and pesticides and the proper disposal of animal wastes.
  - Organization of watershed Citizen Advisory Groups/ Committees to develop/ implement effective methods to educate the public about storm water pollution.
  - Organization of events for residents and population subgroups.
  - Maintenance of the Countywide storm water website ([www.vcstormwater.org](http://www.vcstormwater.org)), including educational materials.
- (2) Provide documentation to show that the Principal Permittee implemented the strategy to educate ethnic communities through culturally acceptable and effective methods.
- (3) Did each Permittee implement outreach efforts to residents and school children related to the proper disposal of litter, green waste, pet waste, proper vehicle maintenance, lawn care and water conservation practices?
- (4) Did the Permittees make demonstrable positive effects on the general public related to storm water quality?
- (5) On 4 above, explain how so.
- (6) Did the Principal Permittee, in cooperation with the Permittees, provide schools within each School District in the County with materials, including, but not limited to, videos, live presentations, and other information necessary to educate a minimum of 50 percent of all school children (K-12) every 2 years on storm water pollution?
- (8) Provide the contact information for their appropriate staff responsible for storm water public education activities to the Principal Permittee and changes to contact information no later than 30 days after a change occurs.

- (9) Provide the assessment of the strategy to measure the effectiveness of in-school educational programs.

Businesses Program

- (a) Corporate Outreach
- (b) Provide a progress update on the Corporate Outreach program.

**D. Industrial/ Commercial Facilities Program**

Each Permittee shall require implementation of pollutant reduction and control measures at industrial and commercial facilities, with the objective of reducing pollutants in storm water runoff. Except as specified in other sections of this Order, pollutant reduction and control measures may be used alone or in combination, and may include Structural Treatment Control, Source Control BMPs, and operation and maintenance procedures, which may be applied before, during, and/ or after pollution generating activities. At a minimum, the Industrial/ Commercial Facilities Control Program Report shall include requirements to: (1) track, (2) inspect, and (3) ensure compliance with municipal ordinances at industrial and commercial facilities that are critical sources of pollutants in storm water runoff.

- 1. Inventory of Critical Sources
  - (a) Describe how the critical sources are inventoried. (whether via a watershed-based inventory or database or GIS. Provide a sample.
  - (b) Each Permittee shall include the following minimum fields of information for each critical sources industrial and commercial facility.
    - (1) Name of facility and owner/ operator.
    - (2) Address of facility.
    - (3) Coverage under the ISWGP or other individual or general NPDES permits or any applicable waiver issued by the Regional or State Board pertaining to runoff discharges.
    - (4) A narrative description including SIC (NAICS) codes that best describe the industrial activities performed and principal products used at each facility and status of exposure to storm water.
  - (c) Did each Permittee update its inventory of critical sources annually?
  - (d) Critical Source Inventory Database

Did you (individually or jointly) update the Database for Critical Sources Inventory?	Yes <input type="checkbox"/>
	No <input type="checkbox"/>

Comments/ Explanation/ Conclusion:

2. Inspection Program

(a) The Permittee shall verify the following for each inspection:

- (1) The facility has a current Waste Discharge Identification (WDID) number or a current No Exposure Certification for discharging storm water associated with industrial activity?
- (2) A Storm Water Pollution Prevention Plan available on-site?
- (3) The facility is effectively implementing BMPs in compliance with County and municipal ordinances including the source control BMPs outlined in Part 4.D. of this Order
- (4) The facility needs to implement additional treatment control BMPs where the storm water from the MS4 discharges to a CWA §303(d) listed water body?

Order No. 08-xxx

APDES No. CAS004002  
 Tentative Ventura County Municipal Separate Storm Water Permit  
 Attachment H - Reporting Program No. CI 7388

Provide the reporting data as suggested in the following table.

Category	Initial Number of Facilities at the start of cycle proposed for inspection by categories (after the initial year, the updated number based on the new data)	Number of facilities inspected in the current reporting year	% Completed at the time of this report for present cycle (from the initial value, and from the updated value after first cycle)	Total number since permit adoption
Landfills				
TSDF				
Comments/ Explanation/ Conclusion:				

- Did each Permittee perform an initial inspection at all facilities in the categories listed no later than (two years after the adoption of the Order)?
- All facilities determined as having exposure of industrial activities to storm water are subject to a second compliance inspection. Were all inspections completed?
- Was there a minimum interval of six months between the first and the second compliance inspection per site as required?

R E V I S E D T E N T A T I V E

BMPs Implementation

Provide the reporting data as suggested in the following table.

Category	Number of facilities inspected by category this reporting year	Number of facilities identified as adequately implementing BMPs as specified in this reporting year	Percent adequately implementing out of total in this reporting year	Number of facilities required to implement or upgrade in this reporting year	Number of facilities inspected by category in this reporting cycle	Number of facilities identified as adequately implementing BMPs as specified in this reporting cycle	Percent adequately implementing in this reporting cycle	Number of facilities required to implement or upgrade in this reporting cycle	Total Number during this permit adequately implementing	Total Number during this permit required to implement or upgrade
Landfills										
etc...										

Comments/ Explanation/ Conclusion:

Tentative Ventura County Municipal Separate Storm Sewer System Permit  
Attachment H - Reporting Program No. CI 7388

Enforcement Activities

Provide the reporting data as suggested in the following tables.

Enforcement Actions by categories (e.g. Warning letter, NOV, referral to D.A., etc.)	Number of facilities issued enforcement actions in the current reporting year	Number of facilities (re)inspected due to enforcement actions in current reporting year	Number of facilities (re)inspected to enforcement actions in current reporting cycle	Number of facilities brought into compliance in the current reporting year	Number of facilities brought into compliance in current reporting cycle	Total number of enforcement actions since permit adoption (by category)
NOVs						
Etc...						

Facilities by category	Number of Warning letters	Number of NOV's	Number of Referrals	Number of Other(Explain)
Landfill				
Etc...				
Comments/ Explanation/ Conclusion:				

Nurseries and nursery centers

- (a) At nurseries subject to the agricultural waiver issued by the Regional Water Board, provide a spreadsheet with the following information:
  - How many operators have enrolled under the waiver?
  - What is their identification number?
  - How many nonfilers did you notify to apply under the agricultural waiver?
- (b) Did you submit electronically semiannually to the Regional Water Board a list with the names of facilities notified to apply for the waiver?

Ensuring Compliance of Critical Sources

- (a) On how many sites did you determine that a BMP is infeasible, and require implementation of other BMPs that will achieve the equivalent reduction of pollutants in the storm water discharges?
- (b) For critical sources that discharge to ESAs or that are tributary to CWA § 303(d) impaired water bodies, does the Permittee require operators to implement additional controls to reduce pollutants in storm water runoff that are causing or contributing to exceedences of Water Quality Standards?

Investigation of Complaints Regarding Facilities – Transmitted by the RB Staff

- (a) How many investigations were conducted as a result of USEPA or Regional Water Board staff referrals of violators to the Permittee?
- (b) Was the investigation initiated within one business day of being contacted?
- (c) What were the results of each investigation?

**E. Planning and Land Development Program**

1. Low Impact Development

- (a) Did all new development and redevelopment projects integrate Low Impact Development (LID) principles into project design?
- (b) How many did?
- (c) How many did not?
- (d) If not, Why not?

Numeric Hydromodification Mitigation Criteria

1. Hydrologic (Flow/ Volume/ Duration) Control

- (a) Did the Permittees require all new developments and redevelopment projects to implement hydrologic control measures, to prevent accelerated downstream erosion and to protect stream habitat in natural drainage systems?
- (b) How many did?
- (c) How many did not?
- (d) Why not?

- (a) For each project, did each Permittee require that during the construction of a single-family hillside home, actions be taken to:
    - (1) Conserve natural areas?
    - (2) Protect slopes and channels?
    - (3) Provide storm drain system stenciling and signage?
    - (4) Divert roof runoff to vegetated areas before discharge unless the diversion would result in slope instability? and
    - (5) Direct surface flow to vegetated areas before discharge unless the diversion would result in slope instability?
  - (b) Did each Permittee require that all development projects equal to 1 acre or greater be subject to conditioning and approval of post-construction BMPs as approved by the Regional Water Board in Board Resolution No. R 00-02?
  - (c) Did each Permittee require that the following development projects be subject to conditioning and approval of post-construction BMPs?
    - (1) Retail gasoline outlets 5,000 square feet or more of surface area; How many sites?
    - (2) Restaurants (SIC 5812) 5,000 square feet or more of surface area; How many sites?
    - (3) Parking lots 5,000 square feet or more of surface area or with 25 or more parking spaces; How many sites?
    - (4) Automotive service facilities (SIC 5013,5014,5541,7532-7534 and 7536-7539) [5,000 square feet or more of surface area]; How many sites? and
    - (5) Redevelopment projects in subject categories that meet Redevelopment thresholds. How many sites?
  - (d) Did each Permittee require that post construction BMPs be subject to conditioning and approval for development projects located in or directly adjacent to or discharging directly to an Environmentally Sensitive Area (ESA), where the development will:
    - (1) Discharge storm water and urban runoff that is likely to impact a sensitive biological species or habitat.
    - (2) Create 2,500 square feet or more of impervious surface area.
3. Numeric Water Quality Design Criteria

**Projects disturbing land areas less than 50 acres**

- (a) How many did the Permittee require that post-construction Treatment Control BMPs incorporate, at a minimum, a volumetric and/ or hydrologic (flow based) treatment control design standard, as identified below to mitigate (infiltrate, filter or treat) storm water runoff as specified below?
- (b) How many sites were exempted from the requirement?
- (c) Why were they exempted?

**Projects disturbing land area of 50 acres or greater**

For sites 50 acres or greater how many did the Permittee require that post-construction Treatment Control BMPs be,

- (a) Designed using an appropriate public domain hydrodynamic model (such as Storm Water Management Model (SWMM) 5 or Hydrologic Engineering Center – Hydrologic Simulation Program – Fortran (HEC-HSPF); and incorporate
- (b) Rainfall intensity based on hourly rainfall records;
- (c) An adjustment factor for within hour rainfall variability; and
- (d) Hydraulics of BMP Performance.
- (e) How many projects did this apply to?
- (f) Were there any sites that were exempted from the requirement?
- (g) How many sites were exempted?
- (h) Why were they exempted?

4. Applicability of Numerical Criteria

Did the Permittee require all projects equal to 1 acre or greater and the following additional projects to design and implement post-construction treatment controls to mitigate storm water pollution for the following?:

- (a) Automotive service facilities (SIC 5013, 5014, 5541, 7532-7534 and 7536-7539) [5,000 square feet or more of surface area].
- (b) Retail gasoline outlets [5,000 square feet or more of impervious surface area and with projected Average Daily Traffic (ADT) of 100 or more vehicles]. Subsurface Treatment Control BMPs which may endanger public safety (i.e., create an explosive environment) are considered not appropriate.
- (c) Restaurants (SIC 5812) [5,000 square feet or more of surface area].
- (d) Parking lots 5,000 square feet or more of surface area or with 25 or more parking spaces.
- (e) Projects located in, adjacent to or discharging directly to an ESA that meet threshold conditions identified above in 2(d).
- (f) Redevelopment projects in subject categories that meet Redevelopment thresholds.
- (g) How many projects did this apply to?
- (h) Were there any sites that were exempted from the requirement?
- (i) How many sites were exempted?
- (j) Why were they exempted?

5. Site Specific Mitigation

- (a) List how many sites did each Permittee require the implementation of a site-specific plan to mitigate post-development storm water for new development and redevelopment not identified in Section XX but which may potentially have

adverse impacts on post-development storm water quality, with one or more of the following project characteristics:

- (1) Vehicle or equipment fueling areas. How many?
- (2) Vehicle or equipment maintenance areas, including washing
- (3) and repair. How many?
- (4) Commercial or industrial waste handling or storage. How many?
- (5) Outdoor handling or storage of hazardous materials. How many?
- (6) Outdoor manufacturing areas. How many?
- (7) Outdoor food handling or processing. How many?
- (8) Outdoor animal care, confinement, or slaughter. How many?
- (9) Outdoor horticulture activities. How many?

- (b) Were there any sites that were exempted from the requirement?
- (c) How many sites were exempted?
- (d) Why were they exempted?

6. Redevelopment Projects

- (a) Did the Permittees apply the post construction BMP requirements, or site specific requirements including post-construction storm water mitigation to all projects that undergo significant Redevelopment in their respective categories?
- (b) How many?
- (c) Were there any sites that were exempted from the requirement?
- (d) How many sites were exempted?
- (e) Why were they exempted?

7. Maintenance Agreement and Transfer

- (a) How many developments subject to post construction BMP requirements and site specific plan requirements actually provided verification of maintenance provisions for Structural and Treatment Control BMPs, including but not limited to legal agreements, covenants, CEQA mitigation requirements, and or conditional use permits?
- (b) How many of each verification were received?
- (c) The developer's signed statement accepting responsibility for maintenance until the responsibility is legally transferred?
- (d) A signed statement from the public entity assuming responsibility for Structural or Treatment Control BMP maintenance and that it meets all local agency design standards?
- (e) Written conditions in the sales or lease agreement, which requires the recipient to assume responsibility for maintenance and conduct a maintenance inspection at least once a year?
- (f) Written text in project conditions, covenants and restrictions (CCRs) for residential properties assigning maintenance responsibilities to the Home Owners Association for maintenance of the Structural and Treatment Control BMPs?

- (g) Written conditions in the sales or lease agreement, which requires the recipient to assume responsibility for maintenance and conduct a maintenance inspection at least once a year?
- (h) Another type of legally enforceable agreement that assigns responsibility for the maintenance of post-construction Structural or Treatment Control BMPs?
8. Development Planning Coordination and Enforcement
- (a) Did you inspect each new development and redevelopment project for post construction controls prior to approving and signing off for occupancy?
- (b) How many?
- (c) Were there any sites that were exempted from the requirement?
- (d) How many sites were exempted?
- (e) Why were they exempted?
9. Regional Storm Water Mitigation Program
- (a) Have you applied to the Regional Water Board for approval of a regional or sub-regional storm water mitigation program to substitute in part or wholly for on-site post-construction requirements?
10. Inspection and Tracking System for Post Construction Treatment BMPs
- (a) Did you implement the required Geographic Information System (GIS) or other electronic system for tracking projects conditioned for post construction treatment control BMPs?
- (b) Does include the following information? (Answer each separately)
- (1) Municipal Project ID?
  - (2) State WDID No.?
  - (3) Project Acreage?
  - (4) BMP Type and Description?
  - (5) BMP Location (GPS coordinates)?
  - (6) Date of Acceptance?
  - (7) Date of O&M Certification?
  - (8) Maintenance Records
  - (9) Inspection Date and Summary?
  - (10) Corrective Action?
  - (11) Replacement or Repair Dates?
- (c) Did you inspect all facilities to verify proper maintenance and operation of Treatment BMPs previously approved?
- (d) Did you accomplish the following?
- (e) BMP acceptance inspection to ensure proper installation?
- (1) Inspection once every two years of high priority post-construction BMPs to ensure treatment effectiveness, hydraulic function, and vector risk minimization?

## 11. Developer Technical Guidance and Information

- (a) List dates as to when the Ventura County Technical Guidance Manual for Stormwater Quality Control Measures was last updated to include the following:
- (1) Hydrologic (Peak Flow) Control criteria for volume control described herein and the interim criteria based on hydrograph matching?
  - (2) Expected BMP pollutant removal performance including consistent effluent quality and removal efficiency ranges (International BMP Database, technical reports and the scientific literature?
  - (3) Improved Correlation of BMPs with storm water POC?
  - (4) Data on Observed Local Effectiveness and performance of implemented BMPs?
  - (5) BMP Maintenance and Cost considerations?
  - (6) Criteria to facilitate integrated water resources planning and management in the selection of BMPs, including water conservation, groundwater recharge, public recreation, multipurpose parks, open space preservation, and redevelopment retrofits?

## 12. Project Review and Inter Department Coordination

- (a) Did you ensure that a detailed BMP review was performed including BMP sizing calculations, BMP pollutant removal appropriateness, for each plan submitted with a signed certification?
- (b) How many?
- (c) Were there any sites that were exempted from the requirement?
- (d) How many sites were exempted?
- (e) Why were they exempted?
- (f) Did you ensure that a clear structure for communication and delineated authority are established between and among municipal departments which have jurisdiction over project review, plan approval, project construction, and site maintenance?
- (g) Explain how?

## 13. California Environmental Quality Act (CEQA) Document Update

Did you incorporate into the CEQA process procedures for considering potential storm water quality impacts and providing for appropriate mitigation when preparing and reviewing CEQA documents? (Answer each below separately.)

- (a) Potential impact of project construction on storm water runoff?
- (b) Potential impact of project post-construction activity on Storm Water runoff?
- (c) Potential for discharge of storm water from areas from material storage, vehicle or equipment fueling, vehicle or equipment maintenance (including washing), waste handling, hazardous materials handling or storage, delivery areas or loading docks, or other outdoor work areas?
- (d) Potential for discharge of storm water to impair the beneficial uses of the receiving waters or areas that provide water quality benefit?

- (e) Potential for the discharge of storm water to cause significant harm on the biological integrity of the waterways and water bodies?
- (f) Potential for significant changes in the flow velocity or volume of Storm Water runoff that can cause environmental harm?
- (g) Potential for significant increases in erosion of the project site or surrounding areas?

15. General Plan Update

- (a) Was your General Plan amended, revised or updated to include watershed and storm water quality and quantity management considerations and policies when any of the following General Plan elements are updated or amended?

(Answer each separately)

- (1) Land Use?
- (2) Housing?
- (3) Conservation?
- (4) Open Space?

- (b) Did you provide the Regional Water Board with the draft amendment or revision when a listed General Plan element or the General Plan was noticed for comment in accordance with Cal. Govt. Code § 65350 *et seq*?

- (c) When?

**F. Development Construction Program**

- 1. Did you implement a program to control runoff from construction activity at all construction sites within your jurisdiction to ensure that the following requirements are effectively implemented? (Answer each separately)

- (a) For construction projects within or adjacent to an environmentally sensitive area (ESAs), did you prohibit grading between October 1 and April 15?
- (b) For construction projects, which include grading on slopes greater than 5:1, that no grading shall occur between October 1 and April 15?
- (c) All construction projects, which directly discharge into a sedimentation/ siltation impaired water body and is listed on the CWA §303 (d) list. No grading shall be occurring between October 1 and April 15?
- (d) If grading operations were not completed before the rainy season began, was grading halted and erosion control measures put in place to minimize erosion until grading resumes after April 15?

- 2. Did you require construction site operators to seek separate coverage from the Regional Water Board wherever ground water dewatering may be necessary, is anticipated, or likely?

- (a) Small Construction Sites

E

- (1) For each construction site did you require and inspect to ensure that at each construction site, the minimum set of BMPs were implemented to minimize erosion and sediment loss, and prevent pollution from construction waste?
3. For each construction site 1 acre and greater:
- (a) Did you review and approve a Local Storm Water Pollution Prevention Plan (Local SWPPP), for approval prior to issuance of a grading permit for construction projects?
  - (b) Did you inspect all construction sites for storm water quality requirements during routine inspections a minimum of once during the wet season?
  - (c) Was the Local SWPPP reviewed for compliance with local codes, ordinances, and permits?
  - (d) For inspected sites that have not adequately implemented their Local SWPPP, a follow-up inspection to ensure compliance shall take place within 2 weeks?
  - (e) If compliance had not been attained, did the Permittee take additional actions to achieve compliance (as specified in municipal codes)?
  - (f) How many?
  - (g) For small construction sites one acre and greater (or part of a larger plan of development or sale), did you require, prior to issuing any grading permit, demolition permit, building permit, or construction permit [or any other municipal authorization to move soil and/ or construct or destruct that involves soil disturbance], for all projects requiring coverage under the state general permit, proof of a Waste Discharger Identification (WDID) Number for filing a Notice of Intent (NOI) for coverage under the CASGP and a certification that a SWPPP has been prepared by the project developer?
  - (h) Does your agency accept a Local SWPPP as a substitute for the State SWPPP?
  - (i) Is the Local SWPPP at least as inclusive in controls and BMPs as the State SWPPP?
  - (j) Do you require proof of an NOI and a copy of the SWPPP at any time a transfer of ownership takes place for the entire development or portions of the common plan of development where construction activities are still on-going?
  - (k) What system do you use to track grading permits issued by your agency?
4. Linear Construction
- (a) Do require for any linear construction project or projects (cumulatively) that will cause one acre or more of soil disturbance but not more than 5 acres that coverage be obtained under the Small Linear Underground/ Overhead Construction Projects General Permit?
  - (b) Do you require proof of a Waste Discharger Identification Number (WDID) for filing a Notice of Intent (NOI) for coverage under the and a certification that a SWPPP has been prepared by the project developer, prior to issuing a grading permit, demolition permit building permit, or construction permit (or other authorization to move soil and/ or construct or destruct that involves soil disturbance)?

5. CASGP Violation Referrals

- (a) Did you make any referral of violations of the new development and redevelopment post construction requirements and municipal storm water ordinances to the Regional Water Board?
- (b) Did you make any referral for suspected violations of the CASGP or Linear Permit coverage requirements

E

V

I

G. Public Agency Activities Program

1. Sewage System Maintenance, Overflow, and Spill Prevention

- (a) Did you implement a response plan for overflows of the sanitary sewer system within their respective jurisdiction that clearly identifies agencies responsible and telephone numbers and email for any contact?
- (b) How many overflows did you have? \*
- (c) How many did you respond to?
- (d) Do you own and/ or operate a sanitary sewer system?
- (e) If so, did you also Identify, repair, and remediate sanitary sewer blockages, exfiltration, overflow, and wet weather overflows from sanitary sewers to the MS4?
- (f) Did you implement procedures and maintenance schedules to prevent sewage spills or leaks from sewage facilities from entering the MS4?
- (g) If you are a Permittee with septic systems in your jurisdiction, how many do you have?
- (h) Did you implement the following for flows of septic leachate to surface waters within their respective jurisdiction, which shall consist at a minimum of the following:
  - (1) Investigation of any complaints received?
  - (2) Immediately respond to overflows for containment, upon notification?
  - (3) Notification to appropriate agencies and public health agencies when a septic system fails and flows to the MS4?

2. Public Construction Activities Management

- (a) Did you comply with all the Development Planning Program requirements in at public construction projects?
- (b) Did you comply with all the Development Construction Program requirements at Permittee owned or operated construction sites?
- (c) Did you obtain coverage under the CSWGP for all construction activities for (non linear) capital improvement project(s), or contracts, that individually or cumulatively equals or surpass the 1 acre land disturbance threshold?
- (d) Did you obtain coverage under the Statewide General Permit for Storm water Discharges Associated with Construction Activity from Small Linear Underground/ Overhead Projects (Small LUP General Permit) for Small Linear

T

I

V

F

Underground/ Overhead Projects disturbing at least 1 acre, but less than 5 acres  
(including trenching and staging areas)?

3. Vehicle Maintenance/ Material Storage Facilities/ Corporation Yards Management.

- (a) Did you implement the required BMPs for each maintenance yard and activity specified in the tables Permittee shall implement the following BMPs at all Permittee owned, leased facilities including but not limited to vehicle/ equipment maintenance facilities, material storage facilities, and corporation yards, and at any area that includes the activities as described in the tables below. Answer each separately.

- (b) Are all of your existing facilities that are not plumbed to the sanitary sewer with vehicle and equipment washing areas:
- (1) Self-contained? How many?
  - (2) Equipped with a clarifier? How many?
  - (3) Equipped with an alternative pre-treatment device? How many?
  - (4) To be plumbed to the sanitary sewer? How many? When?
    - (A) Are all new facilities, or during redevelopment of existing facilities (including fire stations), all vehicle and equipment wash areas to be plumbed to the sanitary sewer and be equipped with a pre-treatment device in accordance with requirements of the sewer agency? If not state why.

4. Landscape and Recreational Facilities Management

Control Program for Registered Pesticides

- (a) Did you adopt and implement policies, procedures, and/ or ordinances requiring the minimization of pesticide use and the use of integrated pest management (IPM) techniques in your operations and on municipal property?
- (b) What was your previous year's pesticide use? Answer in gallons or pounds for each type used.
- (c) Using estimated projections, what is your expected use this coming fiscal year? Answer in gallons or pounds for each type used.
- (d) Do you have commitments to reduce or phase-out, and ultimately eliminate use of pesticides that cause impairment of surface waters? State for each, by when.
- (e) Describe your Integrated Pesticide Management (IPM) program.
- (f) Attach the program elements.
- (g) Did you comply with the following requirements?:
  - (1) Use a standardized protocol for the routine and non-routine application of pesticides, herbicides (including pre-emergents), and fertilizers?
  - (2) Ensure no application of pesticides or fertilizers immediately before, during, or immediately after a rain event or when water is flowing off the area to be applied?
  - (3) Ensure that no banned or unregistered pesticides are stored or applied?
  - (4) Ensure that all staff applying pesticides are certified by the California Department of Food and Agriculture, or are under the direct supervision of a certified pesticide applicator?
  - (5) Implement procedures to encourage retention and planting of native vegetation and to reduce water, fertilizer, and pesticide needs?
  - (6) Store fertilizers and pesticides indoors or under cover on paved surfaces or use secondary containment?
    - (A) Reduce the use, storage, and handling of hazardous materials to reduce the potential for spills?
    - (B) Regularly inspect storage areas to ensure no environmental harm?

5. Storm Drain Operation and Management

Catch Basin Cleaning

- (a) How many catch basins did you designate as one of the following:
- Priority A: Catch basins that are designated as consistently generating the highest volumes of trash and/ or debris?
  - Priority B: Catch basins that are designated as consistently generating moderate volumes of trash and/ or debris?
  - Priority C: Catch basins that are designated as generating low volumes of trash and/ or debris?
- (b) Did you clean all catch basins according to the following schedule?:
- Priority A: A minimum of three times during the wet season and once during the dry season every year? How many?
  - Priority B: A minimum of once during the wet season and once during the dry season every year? How many?
  - Priority C: A minimum of once per year? How many?
- (c) Did you ensure that any catch basin that is at least 25% full of trash and/ or debris was cleaned out? How many?

For each type of catch basin (A, B, or C) state how much trash and debris was collected and state the units (wet tons, dry pounds, etc...)

- (1) Did you require for any special event that they arrange for temporary screens to be placed on catch basins or for catch basins in that area to be cleaned out subsequent to the event and prior to any rain event? How many events did this apply to?
- (2) How much trash and debris was collected? (wet tons, dry pounds, etc...)

Trash Controls

- (a) Did you install trash receptacles at transit stops as required?
- (b) How many?
- (c) How much trash and debris was collected? (wet tons, dry pounds, etc...)
- (d) Did you install trash excluders, or similar devices upon catch basins to prevent the discharge of trash to the storm drain system?
- (e) How many?
- (f) How much trash and debris was collected? (wet tons, dry pounds, etc...)

Catch Basin Labels

- (a) Did you inspect the legibility of the catch basin label by all inlets?
- (b) How many?
- (c) Were catch basins with illegible stencils shall be recorded and re-stenciled or re-labeled within 180 days of inspection?
- (d) How many were recorded?
- (e) How many were relabeled?

Storm Drain Maintenance

- (a) Did you inspect all Permittee-owned open channels and other drainage structures for debris and identify and prioritize problem areas of illicit discharge for regular inspection?
- (b) Do your maintenance activities assure that appropriate storm water BMPs are being utilized to protect water quality?
- (c) Did you remove trash and debris from open channel storm drains before the storm season?
- (d) Did you minimize the discharge of contaminants during MS4 maintenance and clean outs?
- (e) How?
- (f) Did you properly dispose of material removed?
- (g) How much trash and debris was collected? (wet tons, dry pounds, etc...)
- (h) Have you obtained coverage under the CASGP for Long-term maintenance programs for flood control channels (such as vegetation removal) if one or more acres of soil are disturbed by grading, clearing or excavation activities for an individual project or as part of several projects part of the Permittee's long-term maintenance plan?
- (i) How many projects?
- (j) Which projects?
- (k) Were all municipally owned treatment control BMPs as maintained as necessary to ensure optimal pollutant reduction?
- (l) Was any pooled water shall be discharged to the sanitary sewer system?
- (m) Was any of the pooled water treated to remove pollutants and discharged to the storm drain?
- (n) Was every discharge monitored to ensure compliance?

6. Streets and Roads Maintenance

- (a) Did you conduct street sweeping of curbed streets in commercial areas to control trash and debris at least 2 times per month?
- (b) How much trash and debris was collected? (wet tons, dry pounds, etc...)
- (c) Did you obtain coverage under the CASGP for long-term maintenance programs for roadside maintenance (such as: vegetation removal ) if 1 or more acres of soil are disturbed including: grading, clearing or excavation activities that disturb 1 or more acres of land either for an individual project or as part of a long-term maintenance plan?

7. Parking Facilities Management

- (a) Were all Permittee-owned parking lots exposed to storm water cleaned to be kept clear of debris and excessive oil buildup and cleaned no less that 2 times per month?
- (b) How much trash and debris was collected? (wet tons, dry pounds, etc...)

8. Public Industrial Activities Management
- (a) Did you obtain separate coverage under the IASGP for any municipal activity subject to it for the discharge of storm water associated with industrial activity?
  - (b) For how many facilities?
  - (c) Which facilities?
9. Municipal Drinking Water System Discharges
- (a) From your municipal drinking system did you maintain the system by flushing hydrants or other fixtures?
  - (b) How many gallons total were discharged in the year?
  - (c) If the discharges in an annual period were less than 100,000 gallons for the entire city did you implement a BMP or suite of BMPs to ensure that the chlorine level of the discharge is 0.1mg/L or less?
  - (d) Did you sample or take a test every time to ensure dechlorination of the water to 0.1mg/L or less?
  - (e) Did you ensure that the BMP or suite of BMPs were implemented so that no erosion is caused by the discharge of the potable water?
  - (f) What BMPs were implemented?
10. Emergency Procedures
- (a) Were there any emergencies that caused the Permittee to invoke this section? Explain the situation.
11. Municipal Employee (and municipal contractor) Training
- (a) Did you train all of your employees in targeted positions regarding the requirements of the overall storm water management program?
  - (b) Did you promote a clear understanding of the potential for activities to pollute storm water?
  - (c) Did they learn to identify opportunities to require, implement, and maintain appropriate BMPs in their work?
  - (d) Did they learn the appropriate ways of identification, investigation, termination, cleanup, and reporting of illicit connections and discharges?
  - (e) Will they ensure that the requirements of this Order are met?
  - (f) For those employees or contractors who use or have the potential to use pesticides (whether or not they normally apply pesticides as part of their work), which includes pesticides available over the counter, did you address the potential for pesticide-related surface water toxicity?
  - (g) Proper use, handling, and disposal of pesticides?
  - (h) Least toxic methods of pest prevention and control?
  - (i) Encourage the use of IPM?
  - (j) Require the quantifiable reduction of pesticide use?
  - (k) Training - All Permittees shall train all targeted employees who are responsible for on an annual basis. In public agency?

**H. Illicit Connections/ Illegal Discharge Program**

1. IC/ ID Program
  - (a) Did you implement an IC/ ID Program?
  - (b) The IC/ ID Program must be documented and available for review.
  - (c) Did you map all permitted connections to the storm drain system?
  - (d) Did you map all illicit connections and discharges on baseline maps?
  - (e) Did you transmit this information to the Principal Permittee?
  - (f) Did you use this mapping information to identify priority areas for further investigation?
  - (g) Did you eliminate all known illicit connections and illicit discharges?
  
2. Public Reporting
  - (a) Did you establish and maintain a phone hotline to receive illicit discharge/ connection complaints?
  - (b) Did you establish and maintain an internet homepage to receive illicit discharge/connection complaints?
  - (c) For all complaints received, did you document the location of the illicit discharge/ connection?
  - (d) Have you documented the actions undertaken in response to all illicit discharge/ connection complaints?
  
3. Illicit Connections

Screening for Illicit Connections

  - (a) Did you conduct field screening of your storm drain system for illicit connections?
  - (b) For those portions of the storm drain system consisting of storm drain pipes 36 inches in diameter or greater, how many miles did you field screen this year?
  - (c) Out of how many miles total?
  - (d) Did you conduct field screening for high priority areas identified during the mapping of illicit connections and discharges?
  - (e) How many miles were completed this year?
  - (f) Out of how many miles total?
  - (g) How much of the storm drain system that is 50 years or older in age did you field screen?
  - (h) Out of how many miles total?
  - (i) Did you submit to the Principal Permittee a GIS layer showing the location and length of underground pipes greater than 18" in diameter and channels within their jurisdiction?
  - (j) Did you also include the status of suspected, confirmed, and terminated illicit connections?
  - (k) Did you maintain a list containing all connections under investigation for possible illicit connection and their status?

- (l) Did you attach that list to this Annual Report?

Response to Illicit Connections

- (a) Did you complete an investigation within 21 days of notice of a suspected illicit connection?
- (b) Did you determine the Source of each connection?
- (c) Did you determine the nature and volume of discharge through the connection?
- (d) Did you identify the responsible party of the connection?
- (e) How many suspected illicit connections were there this year?
- (f) Upon confirmation of the illicit nature of a storm drain connection did you terminate the connection within 180 days of completion of the investigation?
- (g) Did you document all illicit connection discoveries and your response to each?

4. Illicit Discharges

(a) Abatement and Cleanup

- (1) Did you respond and cleanup within 1 business day of discovery or of receiving a report of a suspected illicit discharge?
- (2) Did you keep records of all illicit discharge discoveries, reports of suspected illicit discharges and their response to the illicit discharges and suspected illicit discharges?
- (3) How many did you receive?
- (4) How many did you respond to?

(b) Investigation

- (1) Did you investigate illicit discharges during or immediately following containment and cleanup activities, and take enforcement action as appropriate?

STATE OF CALIFORNIA  
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD  
LOS ANGELES REGION

ORDER 08-xxx  
NPDES PERMIT NO. CAS004002  
WASTE DISCHARGE REQUIREMENTS  
FOR

STORM WATER DISCHARGES FROM THE MUNICIPAL SEPARATE STORM  
SEWER SYSTEM WITHIN THE VENTURA COUNTY WATERSHED PROTECTION  
DISTRICT, COUNTY OF VENTURA AND THE INCORPORATED CITIES THEREIN

FINDINGS

The California Regional Water Quality Control Board, Los Angeles Region (hereinafter called Regional Water Board), finds that:

A. **Permit Parties and History**

1. Ventura County Watershed Protection District (Principal Permittee), County of Ventura, cities of Camarillo, Fillmore, Moorpark, Ojai, Oxnard, Port Hueneme, San Buenaventura (Ventura), Santa Paula, Simi Valley and Thousand Oaks (hereinafter referred to separately as Permittees) have joined together to form the Ventura Countywide Storm Water Quality Management Program to discharge wastes. The Permittees discharge or contribute to discharges of storm water and non-storm water from municipal separate storm sewer systems (MS4s), also called storm drain systems, into the Watershed Management Areas of Ventura River, Santa Clara River, Calleguas Creek, Malibu Creek and Miscellaneous Ventura Coastal all within Ventura County and Los Angeles County (see Attachment "A").
2. Prior to the issuance of this permit, storm water discharges from the Ventura County MS4 were covered under the countywide waste discharge requirements contained in Order No. 00-108, adopted by the Regional Water Board on July 27, 2000, which replaced Order No. 94-082, adopted by the Regional Water Board on August 22, 1994. Order No. 00-108 also served as a National Pollutant Discharge Elimination System (NPDES) permit for the discharge of municipal storm water.
3. The Ventura County Board of Supervisors approved the concept of a countywide NPDES permit program and the use of the Flood Management District (presently the Watershed Protection District) benefit assessment authority to finance it on April 14, 1992. On June 30, 1992, the Ventura County Board of Supervisors adopted a benefit assessment levy for storm water and flood management in the unincorporated areas of Ventura County and the cities within the County, to be used in part to finance the implementation of a countywide NPDES municipal storm water

permit program. The Ventura County MS4 Permittees have entered into an agreement with the Watershed Protection District to finance the activities related to the Ventura County MS4 Permit for shared and district wide expenses. The Permittees are also given the option to use the Benefit Assessment Program to finance their respective activities related to reducing the discharge of storm water pollutants under the MS4 Permit.

- 4. The Regional Water Board may require a separate NPDES permit for any entity that discharges storm water into the watersheds of Ventura County. Such an entity can be any State or Federal facility, special district or other public or private party.

**B. Nature of Discharge**

- 1. Storm water discharges consist of surface water runoff generated from various land uses in all the hydrologic drainage basins, which discharge into Waters of the State. The quality of these discharges varies and is affected by geology, land use, season, hydrology, and sequence and duration of hydrologic events. Based on the Ventura Countywide Storm Water Monitoring Program's Water Quality Monitoring Reports which were required under Order No. 00-108, the dry weather and wet weather Pollutants of Concern (POC) in urban stormwater include an anion, bacteria, conventional pollutants, metals, a nutrient, organic compounds, and pesticides. The POC are identified in Attachment "B" of this Order. Many of the POC listed are causing impairments identified on the federal Clean Water Act (CWA) § 303(d) list of impaired waterbodies.

The State Water Board submits a report (a list of water quality limited segments (§ 303[d] list)) on the State's water quality to the U.S. EPA pursuant to § 305(b) of the 1972 CWA, and Title 40, CFR 130.7, every 2 years. The Report provides water quality information to the general public and serves as the basis for the U.S. EPA's National Water Quality Inventory Report to Congress. Section 303(d) requires that all waters that are not attaining standards after the implementation of those controls required by 1977, shall be included on the list. Title 40 CFR 130.7(b)(3) defines "water quality standard applicable to such waters" as "those water quality standards established under § 303 of the Clean Water Act, including numeric criteria, narrative criteria, waterbody uses, and antidegradation requirements."

- 2. Common pollutants in urban storm water and their respective sources are: bacteria from animal droppings and illegal discharges; Polycyclic Aromatic Hydrocarbons (PAHs) from the products of internal combustion engine operation and parking lot sealants wash off; nitrates from fertilizer application; pesticides from pest mitigating applications and from plant mitigating applications; bis (2-ethylhexyl) phthalate from the break down of plastic products; mercury from atmospheric fallout and improper disposal of mercury switches; lead from fuels, paints and automotive parts; copper

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

from brake pad wear and roofing materials, zinc from tire wear and galvanized sheeting and fencing; sediment from land disturbance and erosion; trash and dioxins as products of combustion.

3. In general, the pollutants that are found in municipal storm water runoff can harm human health and aquatic ecosystems. In addition, the high volumes and high velocities of storm water discharged from MS4s into ~~natural watercourses~~ receiving waters can adversely impact aquatic ecosystems and stream habitat and cause stream bank erosion and physical modifications. These changes are collectively termed hydromodification. Municipal point source discharges of runoff from urbanized areas remain a leading cause of impairment of surface waters in California.
4. Ammonia as Nitrogen, and Nitrate plus Nitrite as Nitrogen are biostimulatory substances that can cause or contribute to eutrophic effects such as low dissolved oxygen and algae growth impairing warm freshwater and wildlife habitats. Ammonia is highly toxic to fish and other aquatic life. Excessive ammonia can cause aquatic life toxicity.
5. Elevated bacterial indicator densities impair the water contact recreation (REC-1) beneficial use at beaches, creeks, estuaries, lagoons, and marinas. Swimming in waters with elevated bacterial indicator densities has been associated with adverse health effects. Specifically, local and national epidemiological studies indicate that there is a causal relationship between adverse health effects and recreational water quality, as measured by bacterial indicator densities (REFERENCE?). Sources of elevated bacteria to marine and fresh waters may also include illegal discharges from improperly maintained standard septic systems, onsite wastewater treatment systems (OWTS) and illicit discharges from private drains.
6. Pesticides are substances used to prevent, destroy, repel or mitigate pests such as insects, weeds, and microorganisms. Their effects can be direct (e.g. fish die from exposure to a pesticide entering waterways, or birds do not reproduce after ingesting contaminated fish), or indirect (a hawk becomes sick from eating a mouse dying from pesticide poisoning). Pesticide categories include: Organochlorine, Organophosphorus, Organophosphate, and Pyrethroid.
7. Polychlorinated Biphenyls (PCBs) are a subset of the synthetic organic chemicals known as chlorinated hydrocarbons. Concern over PCBs toxicity, persistence (chemical stability) in the environment and bioconcentration in aquatic organisms has led to prohibitions on PCBs.
8. Rising groundwater and swimming pool water have been found to be sources of pollutants such as salts (chloride). Salts increase the salinity of otherwise freshwater systems and disrupt physiological processes. The Regional Water Board has

waterbodies listed on the CWA § 303(d) list for impairment due to salts and has adopted Basin Plan amendments to include Total Maximum Daily Loads (TMDLs) for salts. This Order includes provisions to control the discharges from these activities in order to directly or indirectly reduce or eliminate the discharge of salts to fresh water systems where salts may impair water quality and beneficial uses.

- 9. Trash and debris are pervasive pollutants which accumulate in streams, rivers, bays, and ocean beaches throughout Southern California. They pose a serious threat to our oceans and coasts, navigation, biological resources, recreation, human health and safety, aesthetics, and economies.
- 10. Municipal storm water (wet weather) and non-storm water (dry weather) discharges may contain pollutants that cause or threaten to cause an exceedance of the water quality standards, as outlined in the Los Angeles Region's Basin Plan. Wet weather and dry weather discharges from the MS4 are subject to conditions and requirements established in the Basin Plan for point source discharges. Discharges from the MS4 may not cause or contribute to exceedances of water quality standards.
- 11. Biological communities act to integrate the effects of water quality conditions in a stream by responding with changes in their population abundances and species composition over time. These populations are sensitive to multiple aspects of water and habitat quality, and provide expressions of ecological health easier to understand than the results of chemical and toxicity tests. Biological assessments and criteria address the cumulative impacts of all stressors, especially habitat degradation, and chemical contamination, which result in a loss of biological diversity. Biological information can help provide an ecologically based assessment of the status of a waterbody. Bioassessment is a cost-effective tool and protocol for assessing the biological and physical habitat conditions of streams and rivers for evaluation of the overall health of a watershed. The Principal Permittee consents to participate in the Southern California Storm Water Monitoring Coalition (SMC) Southern California Regional Bioassessment Monitoring Program.
- 12. The increased volume, increased velocity, and discharge duration of storm water runoff from developed areas has the potential to greatly accelerate downstream erosion and impair stream habitat in natural drainages. Studies have demonstrated a direct correlation between the degree of imperviousness of an area and the degradation of its receiving waters (Managing Runoff to Protect Natural Streams *L. The Lates Development on Investigation and Management of Hydromorfication in California: Stein, E. et al. December 2005; Effect of Increase in Peak Flows and Imperviousness on the Morphology of Southern California Streams; Coleman, D., April 2005*). Significant declines in the biological integrity and physical habitat of streams and other receiving waters have been found to occur with as little as 3-10 percent conversion from natural to impervious surfaces in a subwatershed.

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

Percentage impervious cover is a one ~~reliable~~ indicator and predictor of potential water quality degradation expected from new development.

13. Studies indicate that facilities with paved surfaces subject to frequent motor vehicular traffic (such as: strip malls, parking lots, commercial business parks, and fast food restaurants), or facilities that perform vehicle repair, maintenance, or fueling (automotive service facilities) are potential sources of POC in storm water (California Stormwater Quality Association, Stormwater Best Management Practice Handbook, Municipal, January 2003).

14. Retail Gasoline Outlets (RGOs) are points of convergence for vehicular traffic and are similar to parking lots and urban roads. Studies indicate that storm water discharges from RGOs have high concentrations of hydrocarbons and heavy metals (California Stormwater Quality Association, Stormwater Best Management Practice Handbook, Municipal, January 2003).

15. The industries and businesses listed in this Order that are to be inspected by Permittees have the potential to discharge contaminated storm water into the MS4. This storm water is an environmental threat because it can adversely impact public health and safety, and the quality of receiving waters. For example, pretreatment program compliance inspections and audits performed in the Los Angeles and Ventura Counties indicate that automotive service and food service facilities sometimes discharge polluted storm water to the MS4s. The POC in such wash waters include oil and grease, toxic chemicals, and food waste. Spills from clogged sanitary sewer lines have a high likelihood to reach the receiving waters via MS4s. Overall, the most common POC identified in storm water discharge to the MS4s are: (i) heavy metals, (ii) oil and grease/ PAHs, (iii) sediments, (iv) oxygen demanding substances, (v) litter/ trash/ debris, (vi) nutrients, (vii) other toxic materials, such as pesticides. Municipal storm water monitoring data and industrial storm water monitoring data indicate that industrial and commercial sites continue to contribute significant quantities of pollutants in storm water runoff.

15.

- ~~16. Development and urbanization increase pollutant loads, volume, and discharge velocity. First, natural vegetated pervious ground cover is converted to impervious surfaces (paved) such as highways, streets, rooftops and parking lots. Natural vegetated soil can both absorb rainwater and remove pollutants providing an effective natural purification process. In contrast, impervious surfaces (such as pavement and concrete) can neither absorb water nor remove pollutants, and thus the natural purification characteristics are lost. Second, urban development creates new pollution sources as the increased density of human population brings proportionately higher levels of vehicle emissions, vehicle maintenance wastes, municipal sewage waste, pesticides, household hazardous wastes, pet wastes, trash, and other anthropogenic pollutants. Development and urbanization especially threaten environmentally~~

~~sensitive areas. Such areas have a much lower capacity to withstand pollutant shocks than might be acceptable in the general circumstance. In essence, development that is ordinarily insignificant in its impact on the environment may become significant in a particularly sensitive environment. These environmentally sensitive areas (ESAs) designated by the State in the Ventura County watershed include:~~

- ~~(a) Drainages to waters identified in the Basin Plan as supporting the "Rare, Threatened, or Endangered Species (RARE)" Beneficial Use; and~~
- ~~(b) California Coastal Commission's Environmentally Sensitive Habitat Areas as delineated on maps in Local Coastal Plans (LCPs).~~
- ~~(c) Additional ESAs that may be identified by California Department of Fish and Game.~~

16. Development and urbanization increase pollutant loads, volume, and discharge velocity. First, natural vegetated pervious ground cover is converted to impervious surfaces (paved) such as highways, streets, rooftops and parking lots. Natural vegetated soil can both absorb rainwater and remove pollutants providing an effective natural purification process. In contrast, impervious surfaces (such as pavement and concrete) can neither absorb water nor remove pollutants, and thus the natural purification characteristics are lost. Second, urban development creates new pollution sources as the increased density of human population brings proportionately higher levels of vehicle emissions, vehicle maintenance wastes, municipal sewage waste, pesticides, household hazardous wastes, pet wastes, trash, and other anthropogenic pollutants. Development and urbanization especially threaten environmentally sensitive areas. Such areas have a much lower capacity to withstand pollutant shocks than might be acceptable in the general circumstance. In essence, development that is ordinarily insignificant in its impact on the environment may become significant in a particularly sensitive environment. These environmentally sensitive areas (ESAs) designated by the State in the Ventura County watershed are defined in Part 7 (Definitions).

17. ~~The implementation of Low Impact Development (LID) techniques across the United States and Canada has demonstrated that the proper implementation of LID techniques not only results in water quality protection benefits and in a reduction of the cost of land development and construction but also bears other positive attributes that go beyond economic benefits such as enhanced property values, improved habitat, aesthetic amenities, and improved quality of life. *Reducing Stormwater Costs through Low Impact Development (LID) Strategies and Practices, USEPA Doc No. EPA 841-F-07-006, December 2007.* Further, properly implemented LID techniques reduce the volume of runoff leaving a newly developed or re-developed area thereby lowering the peak rate of runoff, and thus minimizing the adverse affects of hydromodification on stream habitat. *A Review of Low Impact Development Policies: Removing Institutional Barriers to Adoption, Low Impact Development Center and State of California, State Water Resources Control Board, December 2007.* The requirements of this Order facilitate the implementation of LID strategies to protect~~

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

~~water quality, reduce runoff volume, and to benefit from these additional enhancements.~~

17. The implementation of Low Impact Development (LID) techniques across the United States and Canada has demonstrated that the proper implementation of LID techniques not only results in water quality protection benefits and in a reduction of the cost of land development and construction but also bears other positive attributes that go beyond economic benefits such as enhanced property values, improved habitat, aesthetic amenities, and improved quality of life. Reducing Stormwater Costs through Low Impact Development (LID) Strategies and Practices, USEPA Doc No. EPA 841-F-07-006, December 2007. Further, properly implemented LID techniques reduce the volume of runoff leaving a newly developed or re-developed area thereby lowering the peak rate of runoff, and thus minimizing the adverse affects of hydromodification on stream habitat. A Review of Low Impact Development Policies: Removing Institutional Barriers to Adoption, Low Impact Development Center and State of California, State Water Resources Control Board, December 2007. The requirements of this Order facilitate the implementation of LID strategies to protect water quality, reduce runoff volume, and to benefit from these additional enhancements.
18. The Regional Water Board adopted a Conditional Waiver of Waste Discharge Requirements for Discharges from Irrigated Lands (Order No. R4-2005-0080) on November 3, 2005. The objective of the program is to monitor runoff from irrigated agriculture facilities in the coastal watersheds of Ventura and Los Angeles Counties. The Basin Plan, which designates beneficial uses and establishes water quality objectives for the Region, recognizes that agricultural activities can generate pollutants such as sediment, pesticides, and nutrients that upon discharge to receiving water, can degrade water quality and impair beneficial uses. A category identified by the Conditional Waiver as a source of pollutants is nursery operations. This Order includes requirements for the municipal operator to confirm that nursery operators implement pollutant reduction and control measures with the objective of reducing pollutants in storm water runoff discharges.
19. Staff finds there is a growing acceptance by stormwater professionals to integrate LID principles into stormwater management programs and MS4 permits. However, there remains significant controversy regarding the appropriate requirements and metrics for LID. At the heart of this controversy is a dispute regarding the feasibility and effectiveness of requiring a fixed volume of stormwater to be captured and retained onsite for infiltration, reuse, and evapotranspiration, as opposed to permitting a portion of the stormwater to be released off site after it is treated, when it is infeasible to retain the required stormwater on site due to site specific conditions.

Staff has reviewed extensive technical literature regarding this issue (e.g. R. Horner, *Investigation of the Feasibility and Benefits of Low-Impact Site Design Practices*

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

("LID") for Ventura County (February 2007): E. Strecker, A. Poresky, D. Christsen, Memorandum: Rainwater Harvesting and Reuse Scenarios and Cost Consideration, (April, 2009). Staff finds that there is consensus in the technical community that site conditions and the type of development can limit the feasibility of retaining, infiltrating, and reusing stormwater at sites due to a variety of site specific conditions. Factors that affect the feasibility of a fixed volume capture standard include, but are not limited to: soils infiltration capacity, subsurface pollution, and locations in urban core centers.

Regarding the effects of capturing a fixed stormwater volume on site, Staff finds the fixed volume approach may be ignoring basic hydrological principles that relate the feasible infiltration volume to the infiltration capacity of local soils. Requirements to capture a fixed volume on site could disturb the natural water balance and lead to unintended engineering and hydrologic consequences. For example, a typical hydrological condition in Ventura County is one of successive storms during the winter which may exceed the stormwater capacity that can be retained on site. This may result in ponded water on site with attendant health and safety risks, saturation of the near surface soils, and reduction of water resources in Regional waterbodies. These effects could damage site structures, increase groundwater pollution by forcing enhanced pollution spreading, or destroy aquatic habitat. Staff finds these reasonably potential effects are not well evaluated scientifically. Finally, staff cannot find that a fixed retention volume versus a standard that attempts to release surface flows at a predevelopment level would result in a greater reduction of stormwater pollution.

19-20. Research conducted on the contribution of aerial deposition of trace heavy metals in Los Angeles County watersheds indicates that dry indirect deposition may account for a significant load of pollutants into surface waters. Similar patterns of aerial deposition likely occur in Ventura County. Of the atmospherically deposited pollutants on the watersheds, ten to twenty percent may account for the total load for copper, zinc, nickel, lead, and chromium to the waterbodies. Land reservoirs and sequestration may account for the remaining eighty to ninety percent of the atmospherically deposited pollutants on the watersheds. Emissions of semi-volatile organics such as polycyclic aromatic hydrocarbons (PAHs) and pesticides and their subsequent deposition may contribute to the contamination of receiving waters but appear to be less significant. The remaining percentage is stored in land reservoirs and eventually shows up in receiving waters.

### C. Permit Background

1. The essential components of the Storm Water Management Program, as required by the Code of Federal Regulations (CFR) [40 CFR122.26(d)] are:
  - (a) Adequate Legal Authority.
  - (b) Fiscal Resources.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (c) Storm Water Quality Management Program (SMP)
    - (1) Public Information and Participation Program
    - (2) Industrial/ Commercial Facilities Program
    - (3) Planning and Land Development Program
    - (4) Development Construction Program
    - (5) Public Agency Activities Program
    - (6) Illicit Connection and Illicit Discharges Elimination Program
  - (d) Reporting Program (Monitoring Report and Program Report)
2. The Ventura County SMP, dated November 2001 (revision 2) identifies seven program areas, which are listed below and were previously approved under Board Order No. 00-108. For purposes of consistency, they are titled as follows:
    - (a) Ventura County SMP.
      - (1) Program Management
      - (2) Programs for Residents
      - (3) Programs for Industrial/ Commercial Businesses
      - (4) Programs for Planning and Land Development
      - (5) Programs for Construction Sites
      - (6) Programs for Public Agency Activities
      - (7) Programs for Illicit Connections/ Illegal Discharges
    - (b) For purposes of region-wide consistency, the program titles are revised and consolidated into the six areas listed in the preceding C.1(c). All Permittee storm water documents submitted to the Regional Water Board are to follow the organization enumerated in C.1(c).
  3. The Permittees filed a Report of Waste Discharge (ROWD), dated January 26, 2005. The Permittees applied for renewal of their waste discharge requirements for a 5-year period, which serves as an NPDES permit to discharge wastes to surface waters.
  4. The Regional Water Board reviewed the ROWD and determined it to be partially complete under the reapplication policy for MS4s issued by the United States Environmental Protection Agency (U.S. EPA) (61 Fed. Reg. 41697). The Regional Water Board has prepared this Order so that implementation of provisions contained in this Order by Permittees will meet the requirements of the federal NPDES regulations at 40 CFR122.26.
  5. The Permittees ROWD contained a proposed Storm Water Management Program and a Monitoring Program to be considered by the Regional Water Board for incorporation into an MS4 NPDES Permit as permit conditions and to demonstrate compliance with federal law.
  6. To-date, the monitoring program has consisted of mass emission, receiving water (tributaries), and land-use monitoring stations, toxicity testing, special studies for

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

bioassessment of the Ventura River and hydrology, identification of ESAs, implementation of the Storm Water Quality Urban Impact Mitigation Plan (SQUIMP), and has provided support for volunteer monitoring programs. This Order requires a monitoring program consisting of mass emission, toxicity, TMDL storm water (wet weather) MS4 water quality-based effluent limits, TMDL non-storm water (dry weather) MS4 water quality-based effluent limits, ~~trash and debris study~~, Pyrethroid assessment study, continuation of the hydromodification study, low impact development study, and participation in the Southern California Regional Bioassessment Program and Southern California Bight Project (SCBP).

- 7. The Principal Permittee is a member of the Southern California Coastal Water Research Project (SCCWRP) Commission. The Principal Permittee also participates in the Regional Monitoring Programs and research partnerships, such as the Southern California Storm Water Monitoring Coalition (SMC) and the Bioassessment Working Group.

**D. Permit Coverage**

- 1. The area covered by this Order includes all areas within Ventura County boundaries and all areas within each co-permittee's boundaries (see Figure 1) that drain into the MS4.
- 2. The Permittees covered under this Order were designated on a system-wide basis under Phase I of the CWA § 402(p)(3)(B)(i). The action of covering all Ventura County municipalities under a single MS4 permit on a system-wide basis was consistent with the provisions of 40 CFR122.26(a)(3)(iv), which states that one permit application may be submitted for all or a portion of all municipal separate storm sewers within adjacent or interconnected large or medium municipal separate storm sewer systems; and the Regional Water Board may issue one system-wide permit covering all, or a portion of all municipal separate storm sewers in adjacent or interconnected large or medium municipal separate storm sewer systems.
- 3. Federal, State, Regional, or local entities within the Permittees' boundaries or in jurisdictions outside the Ventura County Watershed Protection District, and not currently named in this Order, may operate storm drain facilities and/ or discharge storm water to storm drains and receiving waters ~~watereourses~~ covered by this Order. The Permittees may lack legal jurisdiction over these entities under State and Federal constitutions. The Regional Water Board will coordinate with these entities to implement programs that are consistent with the requirements of this Order. The Regional Board may consider such facilities for coverage under its NPDES permitting scheme pursuant to USEPA Phase II storm water regulations. Permittees have expressed their intention to work cooperatively to control the contribution of pollutants from one portion of the MS4 to another portion of the

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

system. Permittees shall make good faith efforts to control the contribution of pollutants to the MS4 from non-permittee dischargers such as Caltrans, the U.S. Department of Defense, and other state and federal facilities.

4. TMDLs are numerical calculations of the maximum amount of a pollutant that a waterbody can receive and still meet water quality standards, and an allocation of that amount to the pollutant's sources. A TMDL is the sum of the allowable loads of a single pollutant from all contributing point sources (Waste Load Allocation (WLA) and non-point sources (Load Allocation (LA))). Discharges from the MS4s are considered point sources discharges, because the MS4 is a point source.
5. This Order incorporates applicable WLAs that have been adopted by the Regional Water Board and have been approved by the Office of Administrative Law and the U.S. EPA. The TMDL WLAs in the Order are expressed as water quality-based effluent limits in a manner consistent with the assumptions and requirements of the TMDL from which they are derived.
6. ~~The CWA and the California Water Code contain specific provisions on how wastewater discharges from point sources are to be permitted. Stormwater discharges (both Urban non-storm water (dry weather and wet weather) are considered point source discharges.) discharge is not considered a storm water (wet weather) discharge.~~
7. Permittees should work cooperatively to control the contribution of pollutants from one portion of the MS4 to another portion of the system through inter-agency agreements or other formal arrangements.

#### E. Federal, State and Regional Regulations

1. The Water Quality Act of 1987 added § 402(p) to the CWA (33U.S.C. § 1251-1387). This section requires the U.S. EPA to establish regulations setting forth NPDES requirements for storm water discharges in 2 phases.
  - (a) U.S. EPA Phase I storm water regulations were directed at MS4s serving a population of 100,000 or more, including interconnected systems and storm water discharges associated with industrial activities, including construction activities. The Phase 1 Final Rule was published on November 16, 1990 (55 Fed. Reg. 47990).
  - (b) U.S. EPA Phase II storm water regulations are directed at storm water discharges not covered in Phase I, including small MS4s (population of less than 100,000), small construction projects (less than 5 acres), municipal facilities with delayed coverage under the Intermodal Surface Transportation Efficiency Act of 1991, and other discharges for which the U.S. EPA Administrator or the State determines that the storm water discharge contributes to a violation of a water

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

quality standard, or is a significant contributor of pollutants to waters of the U.S. The Phase II Final Rule was published on December 8, 1999 (64 Fed. Reg. 68722).

- 2. The U.S. EPA published an 'Interpretative Policy Memorandum on Reapplication Requirements for MS4 permits on August 9, 1996 (61 Fed. Reg. 41697). This policy requires that MS4 reapplication for reissuance for a subsequent five-year permit term contain certain basic information and information for proposed changes and improvements to the storm water management program and monitoring program.
- 3. The U.S. EPA has entered into a Memorandum of Agreement (MOA) with the U.S. Fish and Wildlife Service, and the National Marine Fisheries Service for enhancing coordination regarding the protection of endangered and threatened species under section 7 of the Endangered Species Act, and the CWA's water quality standards and NPDES programs. Among other actions, the MOA establishes a framework for coordination of actions by the U.S. EPA, the Services, and CWA delegated States on CWA permit issuance under § 402 of the CWA [66 Fed. Reg. 11202-11217].
- 4. The CWA allows the U.S. EPA to authorize states with an approved environmental regulatory program to administer the NPDES program in lieu of the U.S. EPA. The State of California is a delegated State. The Porter-Cologne Water Quality Control Act (California Water Code) authorizes the State Water Resources Control Board (State Water Board), through the Regional Water Boards, to regulate and control the discharge of ~~wastese that could affect the quality of pollutants into all~~ waters of the State, including waters of the United States, and tributaries thereto.
- 5. Under CWA § 303(d) of the CWA, States are required to identify a list of impaired water-bodies and develop and implement TMDLs for these waterbodies (33 USC § 1313(d)(1)). The most recent 303(d) list's U.S. EPA approval date was June 28, 2007. The U.S. EPA entered into a consent decree with the Natural Resources Defense Council (NRDC), Heal the Bay, and the Santa Monica BayKeeper on March 22, 1999, under which the Regional Water Board must adopt all TMDLs for the Los Angeles Region within 13 years from that date. This Order incorporates provisions incorporating approved WLAs for municipal storm water discharges and requires amending the SMP after subsequent pollutant loads have been allocated and approved.
- 6. Collectively, the restrictions contained in the TMDL Provisions for Storm Water (Wet Weather) Discharges and Non-Storm Water (Dry Weather) Discharges of this Order on individual pollutants are no more stringent than required to implement the provisions of the TMDL, which have been adopted and approved in a manner that is consistent with the CWA. Where a TMDL has been approved, NPDES permits must

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

contain effluent limits and conditions consistent with the assumptions and requirements of the available WLAs in TMDLs (40 CFR122.44(d)(1)(vii)(B)).

7. This Order does not constitute an unfunded local government mandate subject to subvention under Article XIIB, Section (6) of the California Constitution for several reasons, including, but not limited to, the following. This Order implements federally mandated requirements under CWA § 402, subdivision (p)(3)(B). (33 U.S.C. § 1342(p)(3)(B)) This includes federal requirements to effectively prohibit non-storm water discharges, to reduce the discharge of pollutants to the maximum extent practicable, and to include such other provisions as the Administrator or the State determines appropriate for the control of such pollutants. Federal cases have held these provisions require the development of permits and permit provisions on a case-by-case basis to satisfy federal requirements. (Natural Resources Defense Council, Inc. v. U.S. E.P.A. (9th Cir. 1992) 966 F.2d 1292, 1308, fn. 17.) The authority exercised under this Order is not reserved state authority under the Clean Water Act's savings clause (cf. Burbank v. State Water Resources Control Bd. (2005) 35 Cal.4th 613, 627-628 [relying on 33 U.S.C. § 1370, which allows a state to develop requirements which are not "less stringent" than federal requirements]), but instead, is part of a federal mandate to develop pollutant reduction requirements for municipal separate storm sewer systems. To this extent, it is entirely federal authority that forms the legal basis to establish the permit provisions. (See, City of Rancho Cucamonga v. Regional Water Quality Control Bd.-Santa Ana Region (2006) 135 Cal.App.4th 1377, 1389; Building Industry Ass'n of San Diego County v. State Water Resources Control Bd. (2004) 124 Cal.App.4th 866, 882-883.)

Likewise, the provisions of this Order to implement TMDLs are federal mandates. The CWA requires TMDLs to be developed for waterbodies that do not meet federal water quality standards (33 U.S.C. § 1313(d)). Once the U.S. EPA or a state develops a TMDL, federal law requires that permits must contain effluent limitations consistent with the assumptions of any applicable wasteload allocation. (40 CFR122.44(d)(1)(vii)(B)).

Second, the local agency Permittees' obligations under this Order are similar to, and in many respects less stringent than, the obligations of non-governmental dischargers who are issued NPDES permits for storm water discharges. With a few inapplicable exceptions, the Clean Water Act regulates the discharge of pollutants from point sources (33 U.S.C. § 1342) and the Porter-Cologne regulates the discharge of waste (Wat. Code, § 13263), both without regard to the source of the pollutant or waste. As a result, the "costs incurred by local agencies" to protect water quality reflect an overarching regulatory scheme that places similar requirements on governmental and nongovernmental dischargers. (See *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 57-58 [finding comprehensive workers compensation scheme did not create a cost for local agencies that was subject to state subvention].)

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

The Clean Water Act and the Porter-Cologne Water Quality Control Act largely regulate storm water with an even hand, but to the extent there is any relaxation of this even-handed regulation, it is in favor of the local agencies. Except for municipal separate storm sewer systems, the Clean Water Act requires point source dischargers, including discharges of storm water associated with industrial or construction activity, to comply strictly with water quality standards. (33 U.S.C. § 1311(b)(1)(C), *Defenders of Wildlife v. Browner* (1999) 191 F.3d 1159, 1164-1165 [noting that industrial storm water discharges must strictly comply with water quality standards].) As discussed in prior State Water Resources Control Board decisions, in many respects this Order does not require strict compliance with water quality standards. (SWRCB Order No. WQ 2001-15, p. 7.) The Order, therefore, regulates the discharge of waste in municipal storm water more leniently than the discharge of waste from non-governmental sources.

Third, the local agency Permittees have the authority to levy service charges, fees, or assessments sufficient to pay for compliance with this Order subject to certain voting requirements contained in the California Constitution. (See California Constitution XIII D, section 6, subdivision (c); see also *Howard Jarvis Taxpayers Association v. City of Salinas* (2002) 98 Cal. App. 4<sup>th</sup> 1351, 1358-1359.) The fact sheet demonstrates that numerous activities contribute to the pollutant loading in the municipal separate storm sewer system. Local agencies can levy service charges, fees, or assessments on these activities, independent of real property ownership. (See, e.g., *Apartment Ass'n of Los Angeles County, Inc. v. City of Los Angeles* (2001) 24 Cal.4th 830, 842 [upholding inspection fees associated with renting property].) The ability of a local agency to defray the cost of a program without raising taxes indicates that a program does not entail a cost subject to subvention. (*County of Fresno v. State of California* (1991) 53 Cal.3d 482, 487-488.)

Fourth, the Permittees have requested permit coverage in lieu of compliance with the complete prohibition against the discharge of pollutants contained in federal Clean Water Act section 301, subdivision (a) (33 U.S.C. § 1311(a)) and in lieu of numeric restrictions on their discharges. (See finding 5., supra.) To the extent, the local agencies have voluntarily availed themselves of the permit, the program is not a state mandate. (Accord *County of San Diego v. State of California* (1997) 15 Cal.4th 68, 107-108.) Likewise, where MS4 Permittees are regulated under a Best Management Practices (BMP) based storm water management program rather than end-of-pipe numeric limits, there exists no compulsion of a specific regulatory scheme that would violate the 10<sup>th</sup> Amendment to the United States Constitution. (See *City of Abilene v. U.S. E.P.A.* (5th Cir. 2003) 325 F.3d 657, 662-663 [noting that municipalities can choose between a management permit or a permit with numeric limits].) The local agencies' voluntary decision to file a report of waste discharge proposing a program-

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

based permit is a voluntary decision not subject to subvention. (See *Environmental Defense Center v. USEPA* (9th Cir. 2003) 344 F.3d 832, 845-848.)

Fifth, the local agencies' responsibility for preventing discharges of waste that can create conditions of pollution or nuisance from conveyances that are within their ownership or control under state law predates the enactment of Article XIII B, Section (6) of the California Constitution.

8. Under § 6217(g) of the Coastal Zone Act Reauthorization Amendments of 1990 (CZARA), Coastal States with approved coastal zone management programs are required to address non-point pollution impacting or threatening coastal water quality. CZARA addresses five sources of non-point pollution: 1) agriculture; 2) silviculture; 3) urban; 4) marinas; and 5) hydromodification. This Waste Discharge Requirement addresses the management measures required for the urban category and the hydromodification category, with the exception of septic systems.
9. The Regional Water Board addresses septic systems through the administration of non-Chapter 15 regulatory programs and the implementation of Regional Water Board Order No.R4-2004-0146. Septic systems are also addressed under State Assembly Bill (AB) 885 (2000). The Regional Water Board will implement and enforce regulations issued by the State Board pursuant to AB 885. Taken together, these State and Local agency requirements when imposed on septic system operators are expected to reduce the bacterial contamination of storm water from improperly maintained septic systems.
10. The State Water Board has issued waste discharge requirements for discharges from utility vaults (CAG990002). The Regional Water Board has issued waste discharge requirements for discharges from well heads and hydrostatic pipe testing (CAG674001). These discharges to the MS4 shall be conducted under coverage of a separate NPDES permit specific to that activity.
11. On May 18, 2000, the U.S. EPA established numeric criteria for priority toxic pollutants for the State of California (California Toxics Rule (CTR) 65 Fed. Reg. 31682 (40 CFR131.38) for the protection of human health and aquatic life. These apply as ambient water quality criteria for inland surface waters, enclosed bays and estuaries.
12. The State Water Board adopted a revised Water Quality Control Plan for Ocean Waters of California (Ocean Plan) in 2005. The California Ocean Plan establishes water quality objectives for California's ocean waters and provides the basis for regulation of wastes discharged into the State's coastal waters. It applies to point and nonpoint source discharges. The Ocean Plan identifies the applicable beneficial uses of marine waters that include preservation and enhancement of designated Areas of

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

Special Biological Significance (ASBS) (now called "State Water Quality Protection Areas") and establishes a set of narrative and numerical water quality objectives designed to protect beneficial uses. The SWRCB adopted the California Ocean Plan, and both the SWRCB and the six coastal Regional Water Quality Control Boards (RWQCBs) implement and interpret the California Ocean Plan.

13. This Regional Water Board adopted a revised Water Quality Control Plan (Basin Plan) for the Los Angeles Region on June 13, 1994. The Basin Plan specifies the beneficial uses of Ventura County waterbodies and their tributary streams, and contains both narrative and numerical water quality objectives for these receiving waters. The following beneficial uses identified in the Basin Plan apply to all or portions of each watershed covered by this Order:
- (a) Municipal and domestic supply
  - (b) Agricultural supply
  - (c) Industrial service supply
  - (d) Industrial process supply
  - (e) Ground water recharge
  - (f) Freshwater replenishment
  - (g) Navigation
  - (h) Hydropower generation
  - (i) Water contact recreation
  - (j) Non-contact water recreation
  - (k) Ocean commercial and sport fishing
  - (l) Warm freshwater habitat
  - (m) Cold freshwater habitat
  - (n) Preservation of Areas of Special Biological Significance
  - (o) Saline water habitat
  - (p) Wildlife habitat
  - (q) Preservation of rare and endangered species
  - (r) Marine habitat
  - (s) Fish migration
  - (t) Fish spawning
  - (u) Shellfish harvesting
14. On March 22, 1999 the Consent Decree in Heal the Bay, Inc.; Santa Monica BayKeeper, Inc. v. Browner, Case No. 98-4825 SBA was approved. Under Establishment of TMDLs- The parties understand that California has the initial opportunity pursuant to § 303(d) of the CWA to adopt and submit to U.S. EPA for approval TMDLs to be established under this Consent Decree. TMDLs developed by Regional Water Boards are generally adopted through Basin Plan amendments. Basin plan amendments adopted by the State Board pursuant to Water Code section 13246, and the regulatory portions must be approved by the Office of Administrative Law pursuant to Government Code section 11353(b). TMDLs established pursuant to

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

CWA section 303(d)(1) must be submitted to U.S. EPA for approval pursuant to section 303(d)(2), and incorporated into the state's water quality management plan.

15. The Regional Water Board has adopted amendments to the Basin Plan, to incorporate TMDLs for the following:
- (a) The following TMDLs have been or will be incorporated into the Basin Plan within the term of the Order.
- (1) Santa Clara River - Nitrogen Compounds
    - (A) Regional Water Board Resolution No. 2003-011
    - (B) State Water Board Resolution No. 2003-0073
    - (C) OAL file No. 04-0123-35
    - (D) U.S. EPA approval date March 18, 2004
    - (E) Final fee exemption date March 23, 2004 (effective date).
    - (F) Compliance is 1 year after effective date (March 23, 2005)
  - (2) Malibu Creek and Lagoon - Bacteria.
    - (A) Regional Water Board Resolution No. 2004-019
    - (B) State Water Board Resolution No. 2005-0072
    - (C) OAL file No. 05-1018-03 S
    - (D) U.S. EPA approval date January 10, 2006
    - (E) Final fee exemption date January 24, 2006 (effective date)
    - (F) Compliance for Summer Dry is 3 years after effective date (January 24, 2009)
    - (G) Compliance for Winter Dry is 6 years after effective date (January 24, 2012)
    - (H) Compliance for Wet Weather is 10 years after effective date (January 24, 2016), which is beyond the term of this Order
  - (3) Toxicity, Chlorpyrifos and Diazinon in the Calleguas Creek, Its Tributaries and Mugu Lagoon.
    - (A) Regional Water Board Resolution No. 2005-009
    - (B) State Water Board Resolution No. 2005-0067
    - (C) OAL file No. 05-1110-02 S
    - (D) U.S. EPA approval date March 14, 2006
    - (E) Final fee exemption date March 24, 2006 (effective date)
    - (F) Compliance for Toxicity and Interim WLA is effective date (March 24, 2006)
    - (G) Compliance for Final WLA is 2 years after effective date (March 24, 2008)
  - (4) Organochlorine (OC) Pesticides, Polychlorinated Biphenyls (PCBs), and Siltation in Calleguas Creek, Its Tributaries and Mugu Lagoon.
    - (A) Regional Water Board Resolution No. 2005-010

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (D) U.S. EPA approval date December 18, 2008  
 (E) Final fee exemption date January 17, 2009 (effective date)

16. The Regional Water Board adopted and approved requirements for new development and significant redevelopment projects in Ventura County to control the discharge of storm water pollutants in post-construction storm water, on January 26, 2000, in Board Resolution No. R-00-02. The Regional Water Board Executive Officer issued the approved Standard Urban Storm Water Mitigation Plans (SUSMPs) on March 8, 2000 for Los Angeles County and the Cities in Los Angeles County. Since 2000, new development and redevelopment water quality criteria have been implemented by the Permittees to be consistent with SUSMP. The State Board affirmed the Regional Water Board action and SUSMPs in State Board Order No. WQ 2000-11, issued on October 5, 2000.

- (a) A statewide policy memorandum (dated December 26, 2000), which interprets the Order to provide broad discretion to Regional Water Boards and identifies the potential future areas for inclusion in SUSMPs and the types of evidence and findings necessary. Such areas include ministerial projects, projects in environmentally sensitive areas, and water quality design criteria for Retail Gasoline Outlets (RGOs, see part 7 for definition). The Regional Water Board properly justified the extensions of SUSMPs and water quality criteria to ministerial projects, projects in environmentally sensitive areas, and RGOs, during the adoption of Regional Water Board Order 01-182. The Regional Water Board's action was upheld by the County of Los Angeles Superior Court (In Re: *County of Los Angeles v. State Water Resources Control Board* (2006) 143 Cal.App.4<sup>th</sup> 985).
- (b) The State Water Board's Chief Counsel interpreted the Order to encourage regional solutions and endorsed a mitigation fund or "bank" as alternatives for new development and significant redevelopment. The Regional Water Board has included provisions for regional solutions and the establishment of a mitigation bank in this Order.

17. The Regional Water Board supports Watershed Management planning to address water quality protection in the region. The objective of the Watershed Management planning is to provide a comprehensive and integrated strategy towards water resource protection, enhancement, and restoration while balancing economic and environmental impacts within a hydrologically defined drainage basin or watershed. It emphasizes cooperative relationships between regulatory agencies, the regulated community, environmental groups, and other stakeholders in the watershed to achieve the greatest environmental improvements with available resources.

18. To facilitate compliance with federal regulations, the State Water Board has issued the following 4 Statewide General NPDES Permits associated with storm water:

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (a) Industrial General Permit (IASGP- Industrial Activities Storm Water General Permit), NPDES No. CAS000001, issued on November 19, 1991, reissued on September 17, 1992 and April 17, 1997, currently under review for reissuance.
- (b) Construction General Permit (CASGP- Construction Activities Storm Water General Permit), NPDES No. CAS000002, issued on August 20, 1992, reissued August 19, 1999, currently under review for reissuance.
- (c) Small Linear Underground/ Overhead Construction Projects General Permit (small LUPs), NPDES No. CAS000005, issued on June 18, 2003.
- (d) Small MS4 Permit WQ Order No. 2003-0005-DWQ, NPDES No. CAS000004, adopted on April 30, 2003.
19. Facilities discharging storm water associated with industrial activities, construction projects that disturb one or more acres of soil, or construction projects that disturb less than one acre but are part of a larger common plan of development or sale that in total disturbs 1 or more acres, and construction activities associated with small linear underground/ overhead projects that result in land disturbances greater than one acre, but less than five acres (small LUPs), are all required to obtain individual NPDES permits for storm water discharges, or be covered by the statewide General Permits by completing and filing a Notice of Intent (NOI) with the State Board. The U.S. EPA guidance anticipates coordination of the state-administered programs for industrial and construction activities with the local agency program to reduce pollutants in storm water discharges to the MS4.
20. State Water Board Resolution No. 68-16 contains the state Antidegradation Policy, titled "Statement of Policy with Respect to Maintaining High Quality Waters in California" (Resolution 68-16), which applies to all waters of the state, including ground waters of the state, whose quality meets or exceeds (is better than) water quality objectives. Resolution No. 68-16 is considered to incorporate the federal Antidegradation Policy (40 CFR131.12) where the federal policy applies, (State Water Board Order WQO 86-17). Administrative policies that implement both, federal and state antidegradation policies acknowledge that an activity that results in a minor water quality lowering, even if incrementally small, can result in violation of Antidegradation Policies through cumulative effects, for example, when the waste is a cumulative, persistent, or bioaccumulative pollutant.
- (a) Federal Antidegradation Policy (40 CFR131.12) states that the State shall develop and adopt a statewide antidegradation policy and identify the methods for implementing such policy pursuant to this subpart. The antidegradation policy and implementation methods shall, at a minimum, be consistent with the following:
- (1) Existing instream water uses and the level of water quality necessary to protect the existing uses shall be maintained and protected.
- (2) Where the quality of the waters exceed levels necessary to support propagation of fish, shellfish, and wildlife and recreation in and on the water, that

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

quality shall be maintained and protected unless the State finds, after full satisfaction of the intergovernmental coordination and public participation provisions of the State's continuing planning process, that allowing lower water quality is necessary to accommodate important economic or social development in the area in which the waters are located. In allowing such degradation or lower water quality, the State shall assure water quality adequate to protect existing uses fully. Further, the State shall assure that there shall be achieved the highest statutory and regulatory requirements for all new and existing point sources and all cost-effective and reasonable best management practices for nonpoint source control.

(3) Where high quality waters constitute an outstanding National resource, such as waters of National and State parks and wildlife refuges and waters of exceptional recreational or ecological significance, that water quality shall be maintained and protected.

(4) In those cases where potential water quality impairment associated with a thermal discharge is involved, the antidegradation policy and implementing method shall be consistent with section 316 of the Act.

(b) State Water Board Resolution No. 68-16 establishes essentially a 2-step process for compliance with the policy.

(1) Step 1- if a discharge will degrade high quality water, the discharge may be allowed if any change in water quality:

(A) Will be consistent with maximum benefit to the people of the State.

(B) Will not unreasonably affect present and anticipated beneficial use of such water.

(C) Will not result in water quality less than that prescribed in state policies (e.g., water quality objectives in Water Quality Control Plans).

(2) Step 2- any activities that result in discharges to high quality waters are required to:

(A) Meet waste discharge requirements that will result in the best practicable treatment or control of the discharge necessary to avoid a pollution or nuisance.

(B) Maintain the highest water quality consistent with the maximum benefit to the people of the State.

21. The State Water Board on June 17, 1999, adopted Order No. WQ 99-05, which specifies standard receiving water limitation language to be included in all municipal storm water permits issued by the State and Regional Water Boards.

22. Cal. Water Code § 13263(a) requires that waste discharge requirements issued by Water Boards shall implement any relevant water quality control plans that have been adopted; shall take into consideration the beneficial uses to be protected and the water quality objectives reasonably required for that purpose; other waste discharges; and the need to prevent nuisance.

23. Clean Water Act section 402(p)(3)(B)(iii) requires municipal separate storm sewer system (MS4) operators to control pollution in storm water to the “maximum extent practicable” (MEP). The MEP requirement is analogous to a technology-based requirement in that it focuses upon the feasibility of pollutant reduction measures rather than achievement of water quality standards in the receiving waters to achieve improvements in the quality of the storm water that is discharged. Compliance with the MEP requirement can range from implementation of structural and nonstructural best management practices to installation of end-of-pipe treatment systems. MEP generally provides the MS4 operators the flexibility to determine what controls should be implemented through the development of a storm water management plan, subject to the Regional Board’s approval. Nevertheless, MEP does not define the limits of pollution control measures that may be required of MS4 operators, and the requirement to implement controls that reduce pollutants to the MEP is not limited by the goal of attaining water quality standards. In some circumstances, compliance with MEP may result in controls more stringent than applicable WQS, and in others, less stringent. The Regional Board may use its discretion to impose other provisions beyond MEP, as it determines appropriate for the control of pollutants, including ensuring strict compliance with water quality standards. (*Defenders of Wildlife v. Browner* (1999) 191 F.3d 1159, 1168.)
24. The California Supreme Court has ruled that although Water Code section 13263 requires the Water Boards to consider the factors set forth in Water Code section 13241 when issuing an NPDES permit, the Water Boards may not consider the factors to justify imposing pollutant restrictions that are less stringent than the applicable federal regulations require (*City of Burbank v. State Water Resources Control Bd.* (2005) 35 Cal.4th 613). However, when the pollutant restrictions in an NPDES are more stringent than federal law requires, Water Code section 13263 requires that the Water Boards consider the factors described in section 13241 as they apply to those specific restrictions.
25. The City of Burbank case related to NPDES permits for publicly owned treatment works, not permits for municipal separate storm sewer systems (MS4s). Among other requirements, federal law requires MS4 permits to include requirements to effectively prohibit non-storm water discharges into the storm sewers, in addition to requiring controls to reduce the discharge of pollutants to the maximum extent practicable. Therefore, a 13241 analysis is not required for permit requirements that implement the effective prohibition on the discharge of non-storm water into the MS4, or for practicable controls to reduce the discharge of pollutants to the maximum extent, as those requirements are mandated by federal law.
26. The requirements in this Order may be more specific or detailed than those enumerated in federal regulations under 40 CFR122.26 or in U.S. EPA guidance.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

However, the requirements have been designed to be consistent with and within the federal statutory mandates described in CWA § 402(p)(3)(B)(ii) and (iii) and the related federal regulations. Consistent with federal law, all of the conditions in this permit could have been included in a permit adopted by U.S. EPA in the absence of the in lieu authority of California to issue NPDES permits.

- 27. The Board finds that all requirements in this order are practicable. Moreover, while commenters have alleged that the permit requirements are “beyond MEP,” no commenter has presented evidence that demonstrates that any particular permit requirement that is not dedicated to the effective prohibition on non-storm water discharges into the MS4, is not actually practicable.
- 28. Notwithstanding findings 23 through 27, the Regional Board has developed an economic analysis of the permit’s requirements, consistent with Water Code section 13241. That analysis is contained in the “Economic Considerations of the Proposed Storm Water (Wet Weather) and Non-Storm Water (Dry Weather) Discharges from the Municipal Separate Storm Sewer Systems within the Ventura County Watershed Protection District, County of Ventura and the Incorporated Cities Therein , June 2, 2008, which is contained in the administrative record for this Order. The Regional Board has considered all of the evidence that has been presented regarding the 13241 factors in adopting this permit, both as contained in the economic analysis and as reflected in the fact sheet and comments (and responses thereto) submitted to the many drafts of this permit. The Regional Board finds that the requirements in this Order are reasonably necessary to protect beneficial uses identified in the Basin Plan, and the economic information related to costs of compliance and other 13241 factors are not sufficient to justify failing to protect those beneficial uses. Where appropriate, additional time to implement certain measures and achieve water quality objectives can be provided through the iterative storm water management plan process.

**F. Implementation**

- 1. The California Environmental Quality Act (CEQA) (Cal. Pub. Resources Code § 2100 et seq.) requires that public agencies consider the environmental impacts of the projects they approve for development. CEQA applies to projects that are considered discretionary (a governmental agency can use its judgment in deciding whether and how to carry out or approve a project, § 15357) and does not apply to ministerial projects (the law requires a governmental agency to act on a project in a set way without allowing the agency to use its own judgment, § 15369). A ministerial project may be made discretionary by adopting local ordinance provisions or imposing conditions to create decision-making discretion in approving the project.

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

In the alternative, Permittees may establish standards and objective criteria administratively for storm water mitigation for ministerial projects. For water quality purposes regardless of whether a project is discretionary or ministerial, the Regional Water Board considers that all new development and significant redevelopment activity in specified categories, that receive approval or permits from a municipality, are subject to storm water mitigation requirements in a manner that is consistent with and complies with the provisions of CEQA.

2. The objective of this Order is to ensure that discharges from the MS4 in Ventura County comply with water quality standards, including protecting the beneficial uses of receiving waters. To meet this objective, the Order requires that Best Management Practices (BMPs) will be implemented to reduce the discharge of pollutants in storm water to the maximum extent practicable (MEP), and achieve water quality objectives and standards. The U.S. EPA envisioned that municipal storm water programs would be implemented in an iterative manner and improved with each iteration by using information and experience gained during the previous permit term (*Interpretative Policy Memorandum on Reapplication Requirements for MS4 permits* - 61 Fed. Reg. 41697). Municipalities are required to evaluate what is effective and make improvements in order to protect beneficial uses of receiving waters. This Order requires implementation of an effective combination of pollution control and pollution prevention measures, education, public outreach, planning, and implementation of source control BMPs and Structural and Treatment Control BMPs. The better-tailored BMPs combined with the performance objectives outlined in this Order have the purpose of attaining water quality objectives and standards (*Interim Permitting Approach for Water Quality-Based Effluent Limitations in Storm Water Permits*- 61 Fed. Reg. 43761). Where WLAs have been adopted for storm water (wet weather) and non-storm water (dry weather) discharges from MS4s, this Order requires Permittees to implement controls to achieve the WLAs within the compliance schedule provided in the TMDLs.
3. The implementation of measures set forth in this Order are reasonably expected to reduce the discharge of pollutants conveyed in storm water discharges into receiving waters, and to meet the TMDL WLAs for discharges from MS4s that have been adopted by the Regional Water Board.
4. The U.S. EPA has recommended that all future TMDLs and TMDL amendments be expressed as daily increments consistent with a federal court ruling (*Friends of the Earth, Inc. v. EPA, et al.* No. 05-5015 (D.C. Cir. 2006)). However, this interpretation does not affect the discretionary authority of the Regional Water Board to express NPDES permit limits and conditions in non daily terms because there is no express or implied statutory limitation (CWA §502(11)) (*Establishing TMDL "Daily Loads" in Light of the Decision by the U.S. Court of Appeals for the D.C. Circuit in Friends of the Earth, Inc. v. EPA, et al. (April 2006) and Implications for NPDES Permits, U.S.*

ative Order Ventura County Municipal Separate Storm Sewer System Permit

EPA Office of Water, memorandum, Nov 15, 2006). This Order translates MS4 TMDL WLAs adopted by the Regional Water Board into forms "consistent with the assumptions and requirements of the TMDL".

- 5. During the term of the Order, the Permittees shall implement all necessary control measures to reduce pollutant(s) which cause or continue to cause or contribute to water quality impairments, but for which TMDLs have not yet been developed or approved, to eliminate the water quality impairment(s). Successful efforts to reverse the wet weather impairments during the permit term for such pollutants, may avoid the need for a WLA for wet weather or the need to develop a TMDL in the future.
- 6. This Order promotes land development and redevelopment strategies that consider water quality and water management benefits associated with smart growth techniques. Such measures may include hydromodification mitigation requirements, minimization of effective impervious areasurfaees, integrated water resources planning, and low impact development guidelines. (Reference: *Protecting Water Resources with Smart Growth*, EPA 231-R- 04-002, U.S. EPA 2004; *Using Smart Growth Techniques as Storm Water Best Management Practices*, EPA 231-B-05-002, U.S. EPA 2005; *Parking Spaces/Community Places: Finding the Balance through Smart Growth Solutions*, EPA 231-K-06-001, U.S. EPA 2006; *Protecting Water Resources with Higher-Density Development*, EPA 231-R-06-001, U.S. EPA 2006.)
- 7. The implementation of an effective Public Information and Participation Program is a critical component of a storm water management program. While commercial and industrial facilities are traditionally subject to multiple environmental regulations and receive environmental protection guidance from multiple sources, the general public, in comparison, receives significantly less education in environmental protection. An effective Public Information and Participation Program is required because:
  - (a) Activities conducted by the public such as vehicle maintenance, improper household waste materials disposal, improper pet waste disposal and the improper application of fertilizers and pesticides have the potential to generate a significant amount of pollutants that could be discharged in storm water.
  - (b) An increase in public knowledge of storm water regulations, proper storage and disposal of household wastes, proper disposal of pet wastes and appropriate home vehicle maintenance practices can lead to a significant reduction of pollutants discharged in storm water.
- 8. This Order also provides flexibility for Permittees to seek authorization from the Regional Water Board Executive Officer to substitute a BMP under this Order with an alternative BMP, if they can provide information and documentation on the effectiveness of the alternative, equal to or greater than the prescribed BMP in meeting the objectives of this Order.

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

9. This Order contemplates that the Permittees are responsible for considering potential storm water impacts when making planning decisions in order to fulfill the Permittees' CWA requirement to reduce the discharge of pollutants in municipal storm water to the MEP and attain water quality objectives from new development and redevelopment activities. However, the Permittees retain authority to make the final land-use decisions and retain full statutory authority for deciding what land uses are appropriate at specific locations within each Permittee's jurisdiction. This Order and its requirements are not intended to restrict or control local land use decision-making authority.
10. The State Water Board amended the Policy for the Implementation of Toxics Standards In Inland Surface Waters, Enclosed Bays and Estuaries of California (State Implementation Policy – SIP) on February 24, 2005. The SIP does not apply directly to the stormwater discharges. However, this Order includes a Monitoring Program that incorporates Minimum Levels (MLs) established under the State Implementation Policy. The MLs represent the lowest quantifiable concentration for priority toxic pollutants that is measurable with the use of proper method-based analytical procedures and factoring out matrix interference. The SIP's MLs therefore represent the best available science for determining MLs and are appropriate for a storm water monitoring program. The use of MLs allows the detection of toxic priority pollutants at concentrations of concern using recent advances in chemical analytical methods.
11. This Order establishes Municipal Action Levels (MALs) for selected pollutants based on regional Phase I MS4 monitoring data for pollutants in storm water. (<http://unix.eng.ua.edu/~rpitt/Research/Research.shtml>, last visited on August 14, 2007). The MALs were computed using one of three approaches recommended by the California Water Board's Storm Water Panel in its report, 'The Feasibility of Numerical Effluent Limits Applicable to Discharges of Storm Water Associated with Municipal, Industrial and Construction Activities (June 2006). MALs are identified in Attachment "C". Permittees shall utilize the MALs to identify subwatersheds that require additional action to reduce the discharge of pollutants.
12. The International Storm Water Best Management Practices (BMP) Database was established in 1996 as a cooperative initiative between the U.S. EPA and the American Society of Civil Engineers (ASCE) to provide scientifically sound information to improve the design, selection and performance of storm water BMPs. The BMP database includes standardized BMP monitoring and reporting protocols, a storm water BMP database, BMP performance evaluation protocols, and BMP monitoring guidance. The storm water BMP database is updated approximately semi-annually to add new BMP studies and performance data. The International Storm Water Database is now maintained by the Water Environment Research Foundation (WERF).

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

13. This Order is not intended to prohibit the inspection for or abatement of vectors by the State Department of Public Health or local vector agencies in accordance with CA Health and Safety Code, § 116110 et seq. Certain Treatment Control BMPs if not properly designed, operated or maintained may create habitats for vectors (e.g. mosquitoes and rodents). This Order contemplates that the Permittees will closely cooperate and collaborate with local vector control agencies and the State Department of Public Health for the implementation, operation, and maintenance of Treatment Control BMPs in order to minimize the risk to public health from vector borne diseases.
14. This Order contemplates that Permittees will ensure that implemented Treatment Control BMPs will not pose a safety or health hazard to the public. This Order contemplates that Permittees will ensure that the maintenance of implemented Treatment Control BMPs will comply with all applicable health and safety regulations, such as, but not limited to requirements for worker entry into confined spaces under OSHA Safety and Training education, § 1926.21(b)(6)(i).
15. This Order incorporates presumptive BMPs to reduce pollutants in storm water discharges from construction sites to the MEP. The BMPs are identified in Table 6 (BMPs at Construction sites less than 1 acre), Table 7 (BMPs at Construction Sites 1 acre or greater but less than 5 acres), and Table 8 (BMPs at Construction sites 5 acres or greater). These BMPs include erosion control, sediment control, and construction site waste management practices. The BMPs listed in part 5.F of the Order were selected based on the Water Boards' experience of regulating such sites since 1992, and are referenced in the *California Stormwater Quality Association (CASQA) Storm Water Best Management Practice Handbook Construction (January 2003)* and from the *Stormwater Quality Handbooks, Project Planning and Design Guide, Stormwater Pollution Prevention Plan (SWPPP) and Water Pollution Control Plan (WPCP) Preparation Manual, Construction Site Best Management Practices (BMPs) Reference Manual, March 2007* (Caltrans Document Number CTSW-RT-06-171.11-1) which serve as an industry standard for California. The BMPs identified in the Tables are technically feasible, practicable, and cost-effective. Where an identified BMP may be impracticable on a particular site, this Order includes a provision to select and implement an alternative BMP, through the BMP substitution provisions in subpart 5.A.2.
16. This Order incorporates presumptive BMPs to reduce pollutants in storm water discharges from commercial and industrial sites to the MEP. The BMPs are identified in Table 2 (BMPs at Restaurants), Table 3 (BMPs at Automotive Service Facilities), Table 4 (BMPs at Retail Gasoline Outlets), and Table 5 (BMPs at Nurseries). These BMPs include the implementation of good housekeeping practices designed to control pollutants at the source, promote the use of proper waste management practices, and implement control practices to keep pollutants away from

any entrance to the storm drainage system. The BMPs listed in part 5.D of the Order were selected based on the Water Boards' experience of regulating such sites since 1992 and referenced in the California Stormwater Quality Association (CASQA) Storm Water Best Management Practice Handbook Commercial/Industrial Activity (January 2003) and from the Caltrans Storm Water Quality Handbook Maintenance Staff Guide May 2003 (Caltrans Document Number CTSW-RT-02-057), which serve as an industry standard for California. The BMPs identified in the Tables are technically feasible, practicable, and cost-effective. Where an identified BMP may be impracticable, this Order includes a provision to select and implement an alternative BMP, through the BMP substitution provisions in subpart 5.A.2.

17. This Order incorporates presumptive BMPs to reduce pollutants in storm water discharges from Public Agency Activities to the MEP. The BMPs are identified in Table 9 (BMPs at Vehicle Maintenance/ Material Storage Facilities/ Corporation Yards). These BMPs include the implementation of good housekeeping practices designed to control pollutants at the source, promote the use of proper waste management practices, implement control practices to keep pollutants away from any entrance to the storm drainage system and from being deposited or discharged directly into waters of the U.S. The BMPs listed in part 5.G of the Order were selected based on the Water Boards' experience of regulating such sites since 1990, and are referenced in the Caltrans Storm Water Quality Handbook Maintenance Staff Guide May 2003 (Caltrans Document Number CTSW-RT-02-057), which serves as a statewide standard for the California Department of Transportation (Caltrans). The BMPs identified in the Table are technically feasible, practicable, and cost-effective, and are the standard of practice for Caltrans sites statewide. Where an identified BMP may be impracticable, this Order includes a provision to select and implement an alternative BMP, through the BMP substitution provisions in subpart 5.A.2.
  
18. This Order incorporates BMPs to ensure that authorized Non-Storm Water Discharges are not a source of pollutants to the MS4, Table 1 (Required Conditions for Non-Storm Water Discharges). The BMPs included are for the purpose of dechlorination and/or for prevention of erosion and sediment loss, or to reduce other harmful pollutants during the discharge of authorized non-storm water discharges to the MS4. The BMPs listed in part 1.B of the Order were selected from the *American Water Works Association AWWA Guidelines For The Development Of Your Best Management Practices (BMP) Manual For Drinking Water System Releases Developed by the CA-NV AWWA Environmental Compliance Committee (2005)* which serves as an industry standard for California, from the results of studies directed by the Los Angeles Water Board, - *Evaluation of Non-Storm Water Discharges to California Storm Drains and Potential Policies for Effective Prohibition Methods, Final Report*, University of California, Los Angeles, Contract No. 5-104-140-0 (1997), and *Water Quality Concerns and Regulatory Controls for Non Storm Water Discharges to Storm Drains*, Duke L.D. and M. Kihara, Journal of

the American Water Resources Association, Vol. 34: 661-676, (1998), and from the Water Boards' experience of controlling authorized non-storm discharges to the MS4 since 1990. The BMPs identified in the Table are technically feasible, practicable, and cost-effective. Where an identified BMP may be impracticable, this Order includes a provision to select and implement an alternative BMP, through the BMP substitution provisions in subpart 5.A.2.

- 19. In accordance with Federal regulations at 40 CFR 124.8, a Fact Sheet has been prepared to explain the principal facts and the significant factual, legal, methodological, policy, and economic matters considered in preparing the Tentative Order. ~~Also included are the analyses of factors required under Cal. Water Code 13241.~~ This Fact Sheet has been made a part of the Administrative Record.
- 20. The State Water Board adopted statewide General Waste Discharge Requirements for Sanitary Sewer Systems, (WQ Order No. 2006-0003) on May 2, 2006, to provide a consistent, statewide regulatory framework to address sanitary sewer overflows ("SSO Orders"). The SSO Order establishes requirements for public agencies that own or operate sanitary sewer systems to develop and implement sewer system management plans and to report SSOs. SSOs that enter MS4s have the potential to impair the recreational use of receiving waters, and to harm public health. This Order establishes coordination, response, and notification requirements for MS4 Permittees when SSOs result in a discharge to the MS4 system.
- 21. This Order takes into consideration the housing needs in the area under the Permittees' jurisdiction by balancing the implementation of Smart Growth and Low Impact Development techniques with the protection of the water resources of the region. Although not required, the Regional Water Board considered the need for housing and the appropriate techniques to allow for reasonable development while protecting the receiving waters from degradation.
- 22. This Order may have an effect on costs required for compliance with the provisions contained herein. Although not required, the Regional Water Board has considered costs in preparing this Order. Though also not required, the Regional Water Board has also considered the factors set forth in Water Code section 13241.

**G. Public Notification**

- 1. The issuance of waste discharge requirements pursuant to California Water Code section 13370 et seq. is exempt from the California Environmental Quality Act in accordance with California Water Code section 13389. *County of Los Angeles et al., v. California Water Boards et al.*, (2006), 143 Cal.App.4<sup>th</sup> 985.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- 2. The Regional Water Board has notified the Permittees, and interested agencies and persons of its intent to issue waste discharge requirements for this discharge, and has provided them with an opportunity to make statements and submit their comments.
- 3. The Regional Water Board staff has conducted more than 35 meetings from February 9, 2007 through December 19, 2008, with Permittees, their representatives (Larry Walker and Associates, and Somach, Simmons & Dunn), and various stakeholders (Building Industry Association of Southern California/ Greater Los Angeles Ventura Chapter (BIAGLA/ VC), California State Dept. of Health Services, Calleguas Water District, California Stormwater Quality Association (CASQA), City of Downey, City of Los Angeles-EMD, Collation for Practical Regulation (CPR), Construction Industry Coalition on Water Quality (CICWQ), County of Orange, Geosyntec Consultants, Golden State, Heal The Bay; Local Government commission, Los Angeles City; Los Angeles County Department of Public Works, Los Angeles County-SD, Los Angeles Department of Water & Power, Metropolitan Water District, Natural Resources Defense Council (NRDC), Richard Watson Association, San Bernardino Flood Control District, Santa Monica Bay Restoration Commission, Southern California Coastal Water Research Project, University of California Sea Grant, Ventura CoastKeeper). On April 5, 2007 and September 20, 2007 the Regional Water Board conducted workshops to discuss drafts of the NPDES Order and received input from the Permittees and the public regarding proposed changes.
- 4. This Order shall serve as a NPDES permit, pursuant to CWA § 402, and shall take effect 90 days from Order adoption date provided the Regional Administrator of the U.S. EPA has no objections.
- 5. Pursuant to Cal. Water Code § 13320, any aggrieved party may seek review of this Order by filing a petition with the State Board within 30 days of the date of adoption of the Order by the Regional Water Board. A petition must be sent to:  
  
State Water Resources Control Board  
Office of the Chief Counsel  
P.O. Box 100  
Sacramento, CA 95812-0100
- 6. This Order may be modified or alternatively revoked or reissued prior to its expiration date or any administrative extension thereto, in accordance with 40 CFR122.41(f) and 122.62.

**IT IS HEREBY ORDERED** that the Permittees, in order to meet the provisions contained in Division 7 of the Cal. Water Code and regulations adopted thereunder, and the provisions of the CWA and regulations adopted thereunder, shall comply with the following:

**PART 1 - DISCHARGE PROHIBITIONS**

**A. Prohibitions - Non-Storm Water Discharges**

1. The Permittees shall, within their respective jurisdictions, effectively prohibit non-storm discharges into the MS4 and ~~water~~courses~~receiving waters~~, except where such discharges:

- (a) Originate from a State, Federal, or other source for which they are pre-empted from regulating by State or Federal law; or
- (b) Are covered by a separate individual or general NPDES permit, or conditional waiver for irrigated lands; or
- (c) Flows from fire fighting activities.

~~(e)~~(d) Fall within one of the categories below, are not a source of pollutants that exceed water quality standards, and meet all conditions where specified by the Regional Water Board Executive Officer:

- (1) Category A – Natural flows
  - (A) Stream diversions authorized by the State Water Board
  - (B) Natural springs and rising ground water
  - (C) Uncontaminated ground water infiltration [as defined by 40 CFR35.2005(20)]<sup>1</sup>
  - ~~(D)~~Flows from riparian habitats or wetlands
- ~~(2)~~(D) – ~~Category B – Flows from emergency fire fighting activities.~~
- ~~(3)~~(2) Category BC – Flows incidental to urban activities, providing conditions listed in table below:
  - ~~(A)~~Flows from non-emergency fire fighting activities
  - ~~(B)~~(A) Discharges from potable water sources<sup>2</sup>
  - ~~(C)~~(B) Gravity flow from foundation, footing and crawl space drains.
  - ~~(D)~~(C) Air conditioning condensate
  - ~~(E)~~(D) Reclaimed and potable landscape irrigation runoff
  - ~~(F)~~(E) Dechlorinated/ debrominated swimming pool discharges [see def. part 7]
  - ~~(G)~~(F) Non-commercial car washing by residents or non-profit organizations
  - ~~(H)~~(G) Sidewalk rinsing
  - ~~(I)~~(H) Pooled non-storm water from treatment BMPs<sup>3</sup>

<sup>1</sup> NPDES permit for ground water dewatering is required within the Los Angeles Region including Ventura County.

<sup>2</sup> The term applies to low volume, incidental and infrequent releases that are innocuous from a water quality perspective. Those releases for dewatering or hydro-testing or flushing of water supply and distribution mains and incidental and infrequent releases from well heads shall be allowed with the implementation of appropriate BMPs until such time as a new General Permit is adopted that addresses those types of releases. Discharges from hydrostatic pipe testing shall be subject to separate NPDES general permit coverage (CAG674001) and discharges from utility vaults shall be conducted under coverage of a separate NPDES permit specific to that activity.

<sup>3</sup> All storm water BMPs shall at a minimum be maintained at a frequency as specified by the manufacturer, and designed to drain within 72 hours of the end of a rain. Storm water treatment BMPs may be drained to the MS4

Table 1 – Required Conditions for Non-Storm Water Discharges

Type of Discharges:	Conditions under which allowed:	Required conditions for discharge to occur:
Stream diversions permitted by the State Board;	Authorization by the State Water Board	Permittees shall comply with all conditions in the authorization.
Natural springs and rising ground water	1. Ground water dewatering requires a separate NPDES permit. 2. Segregate flow to prevent introduction of pollutants.	Permittees shall comply with all conditions in the authorization.
Uncontaminated ground water infiltration [as defined by 40 CFR 35.2005(20)] (Utility vault dewatering requires a separate NPDES permit.)	NPDES permit for ground water dewatering is required within the Los Angeles Region including Ventura County	Permittees shall comply with all conditions in the authorization.
Flows from riparian habitats or wetlands	Provided that all necessary permits or authorizations are received prior to diverting the stream flow.	Permittees shall comply with all conditions in the authorization.
Flows from emergency fire fighting activity	Pooled water after fire must be controlled.	
Discharges from potable water sources <sup>1</sup>	See Footnote #1.  Provided discharges from water lines and potable water sources shall be dechlorinated, pH adjusted if necessary, reoxygenated, and volumetrically and velocity controlled to prevent resuspension of sediments.	See Footnote #2. To be discharged, this type of water shall be dechlorinated using aeration and/ or sodium thiosulfate and/ or other appropriate means and/or be allowed to infiltrate to the ground. BMPs such as sand bags or gravel bags, or other appropriate means shall be utilized to prevent sediment transport. All sediments shall be collected and disposed of in a legal and appropriate manner.

<sup>1</sup> The term applies to low volume, incidental and infrequent releases that are innocuous from a water quality perspective. Those releases for dewatering or hydro testing or flushing of water supply and distribution mains and incidental and infrequent releases from well heads shall be allowed with the implementation of appropriate BMPs until such time as a new General Permit is adopted that addresses those types of releases. Discharges from hydrostatic pipe testing shall be subject to separate NPDES general permit coverage (CAG674001) and discharges from utility vaults shall be conducted under coverage of a separate NPDES permit specific to that activity.

Type of Discharges:	Conditions under which allowed:	Required conditions for discharge to occur:
Drains for foundation, footing and crawl drains	Dewatering requires a separate NPDES permit.	Permittees shall comply with all conditions in the authorization.
Air conditioning condensate	Segregation of flow to prevent introduction of pollutants. Percolation whenever possible.	Permittees shall comply with all conditions in the authorization.
Water from crawl space pumps	Dewatering requires a separate NPDES permit within the Los Angeles Region including Ventura County	Permittees shall comply with all conditions in the authorization.
Reclaimed and potable landscape irrigation runoff	Segregation of flow to prevent introduction of pollutants.	Implement conservation programs to minimize this type of discharge by using less water.
Dechlorinated/debrominated swimming pool discharges [see definition Part 8]	<p>Where the discharge is not excepted by the sanitary sewer operator. Swimming pool discharges are to be dechlorinated, pH adjusted if necessary, aerated to remove chlorine if necessary, and volumetrically and velocity controlled to prevent resuspension of sediments.</p> <p>Cleaning waste water and filter back wash shall not be discharged to municipal separate storm sewers.</p> <p>No discharges are allowed containing salts in excess of Water Quality Standards.</p> <p>Chlorine residual in discharge shall not exceed 0.1mg/L.</p>	Pool water may be dechlorinated using time, aeration, and/ or sodium thiosulfate.
Non-commercial car washing by residents or non-profit organizations	Preferably at a commercial carwash or designated area where wash water can percolate. Pumps or vacuums may be used to direct water to pervious areas.	Permittees shall comply with all conditions in the authorization.
Sidewalk rinsing	This may be undertaken only if high pressure low volume is used as described in the glossary under "Sidewalk Rinsing".	
Pooled storm water from treatment BMPs <sup>1</sup>	All storm water BMPs shall at a minimum be maintained at a frequency as specified by the manufacturer. All storm water BMPs shall be

Type of Discharges:	Conditions under which allowed:	Required conditions for discharge to occur:
	designed to drain within 72 hours of the end of the rain event to avoid the breeding of vectors. Storm water treatment BMPs may be drained to the MS4 under this Order if the discharge is not a source of pollutants. The discharge shall cease before the discharge has become a source of a pollutant(s), (bottom sediment included). Sediments shall be disposed of properly, in compliance with all applicable local, state, and federal policies, acts, laws, regulations, ordinances, and statutes.	

2. If the Regional Water Board Executive Officer determines that any of the preceding categories of non-storm water discharges are a source of pollutants that exceed water quality standards, the Permittee(s) shall either:
  - (a) Prohibit the discharge from entering the MS4; or
  - (b) Authorize the discharge category and require implementation of appropriate or additional BMPs to ensure that the discharge will not be a source of pollutants; or
  - (c) Require or obtain coverage under a separate RWQCB or SWRCB permit for discharge into the MS4.

3. ~~The following BMPs for non-stormwater discharges are required pursuant to this Order:~~
  - ~~(a) Flows from non-emergency fire fighting activity: Implement a program to reduce pollutants from non-emergency activities such as controlled or practice blazes and maintenance activities identified to be significant sources of pollutants.~~
  - ~~(b) Discharges from potable water system releases: Water shall be dechlorinated using aeration and/or sodium thiosulfate and/or other appropriate means and/or be allowed to infiltrate to the ground. BMPs such as sand bags or gravel bags shall be utilized to prevent sediment transport. All sediments shall be collected and disposed of in a legal and appropriate manner.~~
  - ~~(c) Swimming pool discharges: Swimming pool discharges are to be dechlorinated, pH adjusted if necessary, aerated to remove chlorine if necessary, and volumetrically and velocity controlled to prevent resuspension of sediments.~~
  - ~~(d) Sidewalk rinsing: Sidewalk rinsing in commercial areas may be undertaken only if high pressure low volume is used as described in the glossary under "sidewalk rinsing."~~

**PART 2 – MUNICIPAL ACTION LEVELS**

under this Order if the discharge is not a source of pollutants. Sediments shall be disposed of properly, in compliance with all applicable local, state, and federal policies, acts, laws, regulations, ordinances, and statutes.

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

1. This Order establishes Municipal Action Levels (MALs) to identify subwatersheds requiring additional Best Management Practices (BMPs) to reduce pollutant loads and prioritize implementation of additional BMPs. MALs for selected pollutants based on a Climate Zone 6 subset of nationwide Phase I MS4 monitoring data for pollutants in storm water. (<http://unix.eng.ua.edu/~rpitt/Research/Research.shtml>, last visited on August 14, 2007). The MALs were obtained by computing the 80<sup>th</sup> percentile for selected pollutants. MALs are identified in Attachment "C".
2. Under this Order, the Municipal Action Levels (MALs) shall be utilized by Permittees to identify subwatersheds discharging pollutants at levels in excess of the MALs. Within those subwatersheds where pollutant levels in the discharge are in excess of the MALs, Permittees shall implement controls and measures necessary to reduce the discharge of pollutants.
3. In order to determine if MS4 discharges are in excess of the MALs, Permittees shall conduct outfall monitoring as required in the Monitoring and Reporting Program (MRP). A MAL Assessment Report shall be submitted to the Executive Officer as part of the Annual Report. The Report shall present the monitoring data in comparison to the applicable MALs, and identify those subwatersheds with a running average of twenty percent or greater of exceedances of the MALs listed in Attachment "C" in discharges of storm water from the MS4 to waters of the U.S..
4. At the beginning of Year 3 after Order adoption date, each Permittee shall submit a MAL Action Plan with the Annual Report (first MAL Action Plan due with ~~Dec. 15,~~ 2011/2012 Annual Report) to the Executive Officer, for those subwatersheds with a running average of twenty percent or greater of exceedances of the MALs in any discharge of storm water from the MS4 to waters of the U.S.. The plan is to include an assessment of the sources responsible for the MAL exceedances, the existing stormwater programs and BMPs that address those sources, an assessment of potential program enhancements, alternative BMPs and actions the Permittee shall implement to reduce discharges to a level that is equivalent to or below the MALs, and an implementation schedule for such actions for Executive Officer approval. The MAL Action Plan shall provide the technical rationale to demonstrate the proposed measures and controls will attain the MALs. If the MAL Action Plan is not approved within 90 days of the due date, the Executive Officer may establish an appropriate plan with at least 90 day notification and consultation to the Permittees.
5. Within 90 days of the plan approval by the Regional Board Executive Officer, the Permittee shall initiate the BMPs and actions proposed in the MAL Action Plan, together with any other practicable BMPs or actions that the Executive Officer determines to be necessary to meet the MALs. The Permittee shall complete the proposed actions in accordance with the approved implementation schedule.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- 6. Upon completion of the actions specified in the approved MAL Action Plan, the Permittee shall re-monitor the subject subwatershed in accordance with the MRP, and submit a Post-Project MAL Assessment Report to the Executive Officer. Upon Executive Officer approval, Permittees may coordinate MAL Action Plans and TMDL Implementation Plans, subject to the compliance timeline of the earliest date.
- 7. As additional data become available through the MRP or from the Regional Subset of the National Dataset, MALs may be revised annually by the Executive Officer in accordance with an equivalent statistical method as that used to establish the MALs in Attachment C of this order with at least 90 day notification and consultation to the Permittees.

**PART 3 – RECEIVING WATER LIMITATIONS**

- 1. Discharges from the MS4 that cause or contribute to a violation of water quality standards are prohibited.
- 2. Discharges from the MS4 of storm water, or non-storm water, for which a Permittee is responsible, shall not cause or contribute to a condition of nuisance.
- 3. The Permittee shall comply with Receiving Water Limitations 1 and 2 through timely implementation of control measures and other actions to reduce pollutants in the storm water discharges in accordance with the requirements of this Order including any modifications. The Permittees' Program shall be designed to achieve compliance with Receiving Water Limitations 1 and 2. If exceedance(s) of water quality objectives or water quality standards (collectively WQS) persist, notwithstanding implementation of this permit, the Permittees shall ensure compliance with Receiving Water Limitations 1 and 2 by complying with the following procedure:
  - (a) Upon determination by either the Permittees or the Regional Water Board that discharges are causing or contributing to an exceedance of an applicable WQS, the Permittee(s) upstream of the point of discharge shall promptly notify and thereafter submit a report to the Regional Water Board Executive Officer that describes BMPs that are currently being implemented and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedance of WQSS. The report may be included with the Annual Report, unless the Regional Water Board Executive Officer directs an earlier submittal. The Regional Water Board Executive Officer may require modifications to the report.
  - (b) Submit any modifications to the report required by the Regional Water Board Executive Officer within 30 days of notification.
  - (c) Within 30 days following approval of the Report described above by the Regional Water Board Executive Officer, the Permittees shall revise their Program and monitoring program to incorporate the approved modified BMPs that have been

and will be implemented, the implementation schedule, and any additional monitoring required.

(d) Implement the revised Program and monitoring program according to the approved schedule.

- 4. Permittees shall annually report the effectiveness of BMPs in reducing exceedances of receiving water limitations. The Regional Board Executive Officer may direct implementation of additional BMPs if there are continuing or recurring exceedances of the same receiving water limitation.

**PART 4 - STORM WATER QUALITY MANAGEMENT PROGRAM IMPLEMENTATION**

**A. General Requirements**

- 1. Each Permittee shall, at a minimum, adopt and implement applicable terms of this Order within its jurisdictional boundary. The Principal Permittee shall be responsible for program coordination as described in this Order as well as compliance with applicable portions of the permit within its jurisdiction. This Order shall be implemented no later than (90 days after Order adoption date), unless a later date has been specified for a particular provision in this Order and provided the Regional Administrator of the U.S. EPA has no objections.
- 2. Each Permittee shall comply with the requirements of 40 CFR122.26(d)(2) and implement programs and control measures so as to reduce the discharges of pollutants in storm water to the MEP and achieve water quality standards.
- 3. Each Permittee shall require that treatment control BMPs being implemented under the provisions of this Order shall be designed, at a minimum, to achieve the BMP performance criteria for storm water pollutants likely to be discharged as identified in Attachment "C", Table 3, for an 85th percentile 24-hour runoff event determined as the maximized capture storm water volume for the area using a 48 to 72-hour draw down time, from the formula recommended in Urban Runoff Quality Management, WEF Manual of Practice No. 23/ASCE Manual of Practice No. 87. (1998). E Expected BMP pollutant removal performance for effluent quality was developed from the WERF-ASCE/ U.S. EPA International BMP Database. Permittees shall select Treatment BMPs based on the primary class of pollutants likely to be discharged from the site/facility (e.g. metals from an auto repair shop). Permittees may develop guidance for appropriate Treatment BMPs for project type based on Attachment "C". For the treatment of pollutants causing impairments within the drainage of the impaired waterbody, permittees shall select BMPs from the top three performing BMP categories or alternative BMPs that are designed to meet or exceed the performance of the highest performing BMP for the pollutant causing impairment.

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

4. Each Permittee shall implement programs and measures to comply with the TMDLs' WLAs for the MS4 as specified in Part 6.
5. If TMDL requirements, including Implementation Plans and Reports, address substantially similar requirements as the MS4 permit, the Executive Officer may approve the applicable reports, plans, data or submittals under the applicable TMDL as fulfilling requirements under the MS4.

**B. Legal Authority**

1. Permittees shall possess the necessary legal authority to prohibit, including, but not limited to:
  - (a) Illicit connections and illicit discharges, and to remove illicit connections.
  - (b) The discharge of non-storm water to the MS4 from:
    - (1) Washing or cleaning of gas stations, auto repair garages, or other types of automotive service facilities
    - (2) Mobile auto washing, carpet cleaning, steam cleaning, sandblasting and other such mobile commercial and industrial operations
    - (3) Areas where repair of machinery and equipment which are visibly leaking oil, fluid or antifreeze, is undertaken
    - (4) Storage areas for materials containing grease, oil, or other hazardous substances, and uncovered receptacles containing hazardous materials
    - (5) Swimming pools<sup>1</sup> that have a concentration greater than:
      - (A) Chlorine/ bromine- 0.1mg/L
      - (B) Chloride- 250mg/L
    - (6) Swimming pool filter backwash
    - (7) Decorative fountains and ponds
    - (8) Industrial/ Commercial areas, including restaurant mats
    - (9) Concrete truck cement, pumps, tools, and equipment washout
    - (10) Spills, dumping, or disposal of materials other, such as:
      - (A) Litter, landscape and construction debris, garbage, food, animal waste, fuel or chemical wastes, batteries, and any other materials which have the potential to adversely impact water quality; and
      - (B) Any pesticide, fungicide or herbicide
    - (11) Stationary and mobile pet grooming facilities
    - (12) Trash container leachate
2. The Permittees shall possess adequate legal authority to:
  - (a) Control through interagency agreement, the contribution of pollutants from one portion of the MS4 to another portion of the MS4.

<sup>1</sup> MS4s discharging directly to the ocean are not subject to this prohibition.

- (b) Require persons within their jurisdiction to comply with conditions in the Permittees' ordinances, permits, contracts, model programs, or orders (i.e. hold dischargers to its MS4 accountable for their contributions of pollutants and flows).
  - (c) Utilize enforcement measures (e.g., stop work orders, notice of violations, fines, referral to City, County, and/ or District Attorneys, referral to strikeforces, etc.) by ordinances, permits, contracts, orders, administrative authority, and civil and criminal prosecution.<sup>1</sup>
  - (d) Control pollutants, including potential contribution<sup>2</sup> in discharges of storm water runoff associated with industrial activities, including construction activities to its MS4, and control the quality of storm water runoff from industrial sites, including construction sites.
  - (e) Carry out all inspections, surveillance and monitoring procedures necessary to determine compliance and non-compliance with permit conditions including the prohibition on illicit discharges to the MS4.
  - (f) Require the use of control measures to prevent or reduce the discharge of pollutants to achieve water quality objectives.
  - (g) Require that Treatment Control BMPs be properly operated and maintained.
3. Each Permittee has adopted a Storm Water Quality Ordinance based upon a countywide model. Each Permittee shall ensure, no later than (~~two~~ years after Order adoption date), that its Storm Water Quality Ordinance authorizes the Permittee to enforce all requirements of this Order.
  4. Each Permittee shall submit no later than two years after Order adoption date, a statement by its legal counsel that the Permittee has obtained and possesses all necessary legal authority to comply with this Order through adoption of ordinances and/ or municipal code modifications.

**C. Fiscal Resources**

1. The Permittees shall implement the activities required to comply with the provisions of this Order.<sup>3</sup> Each Permittee shall:
  - (a) Submit an Annual Budget Summary that shall include:
    - (1) Budgets for the upcoming report year (estimated expenditure) for the following specific categories (estimated percentages and written explanations where necessary):
      - (A) Program Management Activities.

<sup>1</sup>In the case of private responsible parties such as, HOAs, the Permittee must retain enforcement authority.

<sup>2</sup>“Potential contributions” and “potential to discharge,” means adequate legal authority to prevent an actual discharge of pollutants to the municipal separate storm sewer system.

<sup>3</sup> The sources of funding may be the general funds, and/or Benefit Assessment, plan review fees, permit fees, industrial/ commercial user fee, revenue bonds, grants or other similar funding mechanism.

- (i) Overall Administrative costs
- (B) Program Implementation Activities (~~permitted storm water~~ related activities only). Provide figures breakdown of expenditures for the categories below:
  - (i) Illicit connection/ illicit discharge program.
  - (ii) Development planning and approval
  - (iii) Construction program including inspection activities
  - (iv) Industrial/ Commercial program including inspection activities
  - (v) Public Agency Activities
    - (I) Maintenance and inspection of Treatment Control BMPs
    - (II) Municipal Street Sweeping
    - (III) Municipal Drainage Maintenance including catch basin clean-outs
    - (IV) Other costs associated with storm water management (describe)
  - (vi) Public Information and Participation.
  - (vii) Monitoring Program
  - (viii) Miscellaneous Expenditures (describe)

**D. Modifications/ Revisions**

1. No later than two years after the Order adoption date, each Permittee shall modify its storm water management programs, protocols, practices, and municipal codes to make them consistent with the requirements herein.

**E. Designation and Responsibilities of the Principal Permittee**

1. The Ventura County Watershed Protection District is hereby designated as the Principal Permittee. The Principal Permittee shall:
  - (a) Participate in the County Environmental Crimes Task Force
  - (b) Coordinate and facilitate activities necessary to comply with the requirements of this Order, but the Principal Permittee is not responsible for ensuring compliance of any other individual Permittee
  - (c) Coordinate permit activities among Permittees and act as liaison between the Permittees and the Regional Water Board on permitting issues
  - (d) Provide technical and administrative support for committees that will be organized to implement this Order and its requirements
  - (e) Evaluate, assess, and synthesize the results of the monitoring program and the effectiveness of the implementation of BMPs

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (f) Convene the Committee Meetings constituted pursuant to subpart 4.F.1., below, upon designation of representatives
- (g) Implement the Countywide Monitoring Program required under the Order and evaluate, assess and synthesize the results of the monitoring program
- (h) Provide personnel and fiscal resources for the collection, processing and submittal to the Regional Water Board of monitoring and annual reports, and summaries of other reports required under this Order
- (i) ~~Comply with the "Responsibilities of the Permittees" in part 4.F. below~~

**F. Responsibilities of the Permittees**

1. Each Permittee is required to comply with the requirements of this Order applicable to discharges within its boundaries (see Findings- Permit Coverage D.1 and D.2). Permittees are not responsible for the implementation of the provisions applicable to the Principal Permittee or other Permittees. Each Permittee shall:
  - (a) Comply with the requirements of this Order and any modifications thereto
  - (b) Coordinate among its internal departments and agencies, as necessary, to facilitate the implementation of the requirements of this Order applicable to such Permittees in an efficient and cost-effective manner
  - (c) Participate in intra-agency coordination (e.g., Planning Department, Fire Department, Building and Safety, Code Enforcement, Public Health, Parks and Recreation, and others) necessary to successfully implement the provisions of this Order
  - (d) Report, in addition to the Budget Summary, any supplemental dedicated budgets for the same categories
  - (e) Participate in Committee Meetings, as necessary

**PART 5 - SPECIAL PROVISIONS (BASELINE)**

**A. General Requirements**

1. This Order and the provisions herein, are intended to develop, achieve, and implement a timely, comprehensive, cost-effective storm water pollution control program to reduce the discharge of pollutants in storm water to the MEP and not cause or contribute to exceedances of water quality standards for the permitted areas in the County of Ventura.
2. Best Management Practice Substitution

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (a) The Regional Water Board Executive Officer may approve any site-specific BMP substitution upon written request by a Permittee(s) and after public notice, if the Permittee can document that:
  - (1) The proposed alternative BMP or program will meet or exceed the objective of the original BMP or program in the reduction of storm water pollutants.
  - (2) The fiscal burden of the original BMP or program is greater than the proposed alternative and does not achieve a greater improvement in storm water quality.
  - (3) The proposed alternative BMP or program will be implemented within a similar period of time.
  - (4) BMP substitution will be in accordance with the public review provisions of the Order (Part 8C.1 and Part 8C.2).

**B. Watershed Initiative Participation**

- 1. The Principal Permittee shall participate in water quality meetings for watershed management and planning, including but not limited to the following:
  - (a) Southern California Stormwater Monitoring Coalition (SMC)
  - (b) Other Watershed planning groups as appropriate
- 2. The Principal Permittee shall participate in the following regional water quality programs, and projects for watershed management and planning:
  - (a) SMC Regional Monitoring Programs
    - (1) Southern California Regional Bioassessment
      - (A) Level of effort per watershed
        - (i) Probabilistic sites per watershed
          - (I) Ventura River - Six
          - (II) Santa Clara River - Three
          - (III) Calleguas Creek - Six
        - (ii) Integrator sites per watershed
          - (I) Ventura River - One
          - (II) Santa Clara River - One
          - (III) Calleguas Creek - One
        - (iii) Fixed bioassessment sites
          - (I) The Permittees shall perform bioassessment at one fixed urban site in each major watershed. Site selection shall be determined by the results of the first year SMC results, as approved by the Executive Officer.
    - (b) Southern California Bight Projects
      - (1) Regional Monitoring Survey - 2008, and successive years.

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

1. The Principal Permittee shall implement a Public Information and Participation Program (PIPP) that includes, but is not limited to, the requirements listed in this part. The Principal Permittee shall coordinate with Permittees to implement specific PIPP requirements. The objectives of the PIPP are as follows:
- (a) To increase the knowledge of the target audience about the MS4, the adverse impacts of storm water pollution on receiving waters and potential solutions to mitigate the impacts
  - (b) To change the waste disposal and storm water pollution generation behavior of target audiences by encouraging implementation of appropriate solutions
  - (c) To involve and engage communities in Ventura County to participate in mitigating the impacts of storm water pollution
2. Residential Program
- (a) "No Dumping" Message  
Each Permittee shall label all storm drain inlets that they own with a legible "no dumping" message. In addition, signs with prohibitive language discouraging illegal dumping shall be posted at designated public access points to creeks, other relevant waterbodies, and channels. Signage and storm drain messages shall be legible and maintained.
  - (b) Public Reporting  
Each Permittee shall identify staff who will serve as the contact person(s) for reporting clogged catch basin inlets and illicit discharges/dumping, faded or missing catch basin labels, and general storm water management information. Permittees shall include this information, updated by July 1 of each year, in public information media such as the government pages of the telephone book, and internet web sites. The Principal Permittee shall compile a list of the general public reporting contacts submitted by all Permittees and make this information available on the web site (<http://www.vcstormwater.org/contact.htm>) and upon request. Each Permittee is responsible for providing current, updated information to the Principal Permittee.
  - (c) Outreach and Education
    - (1) Collaboratively, the Permittees shall implement the following activities:
      - (A) Conduct a Storm Water pollution prevention advertising campaign.
      - (B) Conduct Storm Water pollution prevention public service announcements.
      - (C) Distribute storm water pollution prevention public education materials within 365 days to:
        - (i) Automotive parts stores
        - (ii) Home improvement centers/ lumber yards/ hardware stores
        - (iii) Pet shops/ feed stores
      - (D) Public education materials shall include, but are not limited to information on the proper disposal, storage, and use of:

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (i) Vehicle waste fluids
  - (ii) Household waste materials
  - (iii) Construction waste materials
  - (iv) Pesticides and fertilizers (including integrated pest management practices-IPM)
  - (v) Green waste (including lawn clippings and leaves)
  - (vi) Animal wastes
  - (E) Work with existing local watershed groups or organize watershed Citizen Advisory Groups/ Committees to develop effective methods to educate the public about storm water pollution no later than (365 days after Order adoption date).
  - (F) Organize events targeted to residents and population subgroups; and
  - (G) Maintain the Countywide storm water website ([www.vcstormwater.org](http://www.vcstormwater.org)), which shall include educational material listed in the preceding subpart C.1(c)(1)(C).
- (2) The Principal Permittee shall develop a strategy to educate ethnic communities through culturally effective methods. Details of this strategy should be incorporated into the PIPP, and implemented, no later than (365 days after Order adoption date).
  - (3) Each Permittee shall continue the existing outreach program to residents on the proper disposal of litter, green waste, pet waste, proper vehicle maintenance, lawn care and water conservation practices.
  - (4) Each Permittee shall conduct educational activities within its jurisdiction and participate in countywide events.
  - (5) The Permittees shall make a minimum of 5 million impressions per year to the general public related to storm water quality, with a minimum of 2.5 million impressions via newspaper, local TV access, local radio and/ or internet access.
  - (6) The Principal Permittee, in cooperation with the Permittees, shall provide schools within each School District in the County with materials, including, but not limited to, videos, live presentations, and other information necessary to educate a minimum of 50 percent of all school children (K-12) every 2 years on storm water pollution. Alternatively, a Permittee may submit a plan to the Regional Water Board Executive Officer for consideration no later than (90 days after adoption of the Order), to provide outreach in lieu of the school curriculum. Pursuant to Water Code section 13383.6, the Permittees, in lieu of providing educational materials/ funding to School Districts in the County, may opt to provide an equivalent amount of funds or fraction thereof to the Environmental Education Account established within the State Treasury.
  - (7) Each Permittee shall provide the contact information for their appropriate staff responsible for storm water public education activities to the Principal

Permittee and contact information changes no later than 30 days after a change occurs.

- (8) The Permittees shall develop and implement a behavioral change assessment strategy no later than (365 days after Order adoption date), in order to determine whether the PIPP is demonstrably effective in changing the behavior of the public. The strategy shall be developed based on current sociological data and studies.

(d) Pollutant-Specific Outreach

The Principal Permittee, in cooperation with the Permittees, shall coordinate to develop outreach programs that focus on metals, urban pesticides, bacteria and nutrients as the pollutants of concern no later than (365 days after Order adoption date). Metals may be appropriately addressed through the Industrial/ Commercial Facilities Program (e.g. the distribution of educational materials on appropriate BMPs for metal fabrication and recycling facilities that have been identified as a potential source). Region-wide pollutants may be included in the Principal Permittee's mass media outreach program.

3. Businesses Program

(a) Corporate Outreach

- (1) The Permittees shall work with other regional or statewide agencies and, associations such as the California Storm Water Quality Association (CASQA), to develop and implement a Corporate Outreach program to educate and inform corporate franchise operators and/or local facility managers about storm water regulations and BMPs. Once developed, the program shall target a minimum of four Retail Gasoline Outlets (RGO) franchisers and cover a minimum of 80% of RGO franchisees in the county, four retail automotive parts franchisers, two home improvement center franchisers and six restaurant franchisers. Corporate outreach for all target facilities shall be conducted not less than twice during the term of this Order, with the first outreach contact to begin no later than two years after Order adoption date. At a minimum, this program shall include:

- (A) Confer with franchise operators and/or local facility managers to explain storm water regulations.
- (B) Distribution and discussion of educational material regarding storm water pollution and BMPs, and provide managers with recommendations to facilitate employee and facility compliance with storm water regulations.

(b) Business Assistance Program

- (1) The Permittees shall implement a Business Assistance Program to provide technical information to small businesses to facilitate their efforts to reduce the discharge of pollutants in storm water. The Program shall include:

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (A) On-site, telephone or e-mail consultation regarding the responsibilities of businesses to reduce the discharge of pollutants, procedural requirements, and available guidance documents.
- (B) Distribution of storm water pollution prevention education materials to operators of auto repair shops, car wash facilities (including mobile car detailing), mobile carpet cleaning services, commercial pesticide applicator services and restaurants.

**D. Industrial/ Commercial Facilities Program**

Each Permittee shall require implementation of pollutant reduction and control measures, unless precluded by local ordinances, at industrial and commercial facilities, with the objective of reducing pollutants in storm water. Except where specified otherwise in this Order, pollutant reduction and control measures may be used alone or in combination, and may include Treatment Control, Source Control BMPs, and operation and maintenance procedures, which may be applied before, during, and/ or after pollutant generating activities. At a minimum, the Industrial/ Commercial Facilities Control Program shall include requirements to:

- (a) Track
  - (b) Inspect
  - (c) Ensure compliance with municipal ordinances at industrial and commercial facilities that are critical sources of pollutants in storm water
1. Inventory of Critical Sources
- (a) Each Permittee shall maintain a watershed-based inventory or database of all facilities within its jurisdiction that are critical sources of storm water pollution. Critical Sources to be tracked are summarized below, and specified in Attachment "D":
    - (1) Commercial Facilities
      - (A) Restaurants
      - (B) Automotive service facilities
      - (C) RGOs and automotive dealerships
      - (D) Nurseries and nursery centers
    - (2) U.S. EPA Phase I, II Facilities
    - (3) Other Federally-mandated Facilities [as specified in 40 CFR122.26(d)(2)(iv)(C)]
      - (A) Municipal landfills
      - (B) Hazardous waste treatment, disposal, and recovery facilities
      - (C) Facilities subject to SARA Title III (also known as the Emergency Planning and Community Right-to-Know Act (EPCRA))
  - (b) Each Permittee shall include the following minimum fields of information for each critical source industrial and commercial facility
    - (1) Name of facility and name of owner/ operator.
    - (2) Address of facility

- (3) Coverage under the IASGP or other individual or general NPDES permits or any applicable waiver issued by the Regional or State Board pertaining to runoff discharges.
  - (4) A narrative description including Standard Industrial Classification (SIC) System/ North American Industry Classification System (NAICS) codes that best describe the industrial activities performed and principal products used at each facility and status of exposure to storm water.
  - (c) The Regional Water Board recommends that Permittees include additional fields of information, such as material usage and/ or industrial output, and discrepancies between SIC System/ NAICS Code designations (as reported by facility operators) and identify the actual type of industrial activity that has the potential to pollute storm water. In addition, the Regional Water Board recommends the use of an automated database system, such as a Geographical Information System (GIS) or Internet-based system.
  - (d) Each Permittee shall update its inventory of critical sources at least annually. The update may be accomplished through collection of new information obtained through field activities or through other readily available inter and intra-agency informational databases (e.g. business licenses, pretreatment permits, sanitary sewer hook-up permits, and similar information).
2. Inspect Critical Sources
- (a) Commercial Facilities
 

Permittee shall inspect all facilities identified in subpart 5.D.12. twice during the 5-year term of the Order, provided that the first inspection occurs no later than (2 years after Order adoption date). A minimum interval of 6 months between the first and the second mandatory compliance inspection is required. In addition, each Permittee shall implement the activities outlined in the following subparts. At each facility, inspectors shall verify that the operator is implementing the source control BMPs. The Permittees may require implementation of additional BMPs where storm water flows from the MS4 discharge to an environmentally sensitive area (ESA, see part 7 for definition) or a CWA § 303(d) listed waterbody (see subpart 3(b) below).

    - (1) Restaurants-
 

Level of inspections: Each Permittee, ~~in cooperation with its appropriate department (such as health or public works),~~ shall inspect all restaurants within its jurisdiction to confirm that storm water BMPs are being effectively implemented in compliance with State law, County and municipal ordinances. BMPs in Table 2 (BMPs at Restaurants) shall be implemented, unless the pollutant generating activity does not occur.

Table 2 - BMPs at Restaurants

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

<b>Pollutant-Generating Activity</b>	<b>BMP Narrative Description</b>	<b>2003 California Stormwater BMP Handbook Industrial and Commercial BMP Identification #</b>
Waste/ Hazardous Materials Storage, Handling and Disposal	Implementation of effective storage, handling and disposal procedures for hazardous materials.	By Municipality
Unauthorized Non-Storm Water Discharges	Effective elimination of non-storm water discharges.	SC-10
Accidental Spills/ Leaks	Implementation of effective spills/ leaks prevention and response procedures.	SC-11
Outdoor Storage of Raw Materials	Implementation of effective source control practices and structural devices.	SC-33
Storage and Handling of Solid Waste	Implementation of effective solid waste storage/ handling practices and appropriate control measures	SC-34
Parking/ Storage Area Maintenance	Implementation of effective parking/ storage area designs and housekeeping/ maintenance practices	SC-43
Storm Water Conveyance System Maintenance	Implementation of proper conveyance system operation and maintenance protocols.	SC-44

## (2) Automotive Service Facilities-

Level of Inspection: Each Permittee shall confirm that BMPs are being effectively implemented at each facility within its jurisdiction, in compliance with County and municipal ordinances. The inspections shall verify that BMPs in Table 3 (BMPs at Automotive Service Facilities) are being implemented, unless the pollutant generating activity does not occur.

Table 3 - BMPs at Automotive Service Facilities

(b) Industrial Facilities

Each Permittee shall conduct compliance inspections as specified below.

(1) **Frequency of Inspection**

- (A) Each Permittee shall perform an initial inspection at all industrial facilities identified by the U.S. EPA in 40 CFR122.26(c) no later than 2 years after Order adoption date. After the initial inspection, all facilities determined as having exposure of industrial activities to storm water are subject to a second mandatory compliance inspection. A minimum interval of 6 months between the first and the second compliance inspection is required.
- (B) Following the first mandatory compliance inspection, a Permittee shall perform a second mandatory compliance inspection yearly at a minimum of 20% of the facilities determined not to have exposure of industrial activities to storm water. The purpose of this inspection is to verify the continuity of the no exposure status. Facilities determined as having exposure will be notified that they must obtain coverage under the IASGP. A facility need not be inspected more than twice during the term of the Order unless subject to an enforcement action. A minimum interval of 6 months in between the first and the second compliance inspection is required.
- (C) Applicable to all facilities: A Permittee need not inspect facilities that have been inspected by the Regional Water Board within the previous 24 month interval. However, if the Regional Water Board performed only one inspection, the Permittee shall conduct the second required mandatory compliance inspection.

(2) **Level of Inspection:** Each Permittee shall confirm that each operator:

- (A) Has a current Waste Discharge Identification (WDID) number for facilities discharging storm water associated with industrial activity,

V  
E

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

and that a Storm Water Pollution Prevention Plan (SWPPP) is available on-site.

- (B) Is effectively implementing BMPs in compliance with County and municipal ordinances. Facilities must implement the source control BMPs identified in subpart 5.D.3. and Appendix D, *California Stormwater Industrial and Commercial BMP Handbook (2003)*; ~~The Permittees shall require implementation of additional BMPs where the storm water from the MS4 discharges to a CWA § 303(d) listed waterbody; or \*keep this?\*~~
- (C) Has applied and has a current No Exposure Certification (and WDID number) for facilities subject to this requirement.

3. Ensure Compliance of Critical Sources

- (a) **BMP Implementation:** Facilities must implement the source control BMPs identified in Part 5. D. 23. and, as applicable, Appendix D, *California Stormwater Industrial and Commercial BMP Handbook (2003)*. In the event that a Permittee determines that a BMP is infeasible at any site, the Permittee shall require implementation of similar BMPs that will achieve the equivalent reduction of pollutants in the storm water discharges. Likewise, for those BMPs that are not protective of water quality standards, Permittees may require additional site-specific controls.
- (b) **Environmentally Sensitive Areas (ESAs) and Impaired Waters:** For critical sources that discharge to MS4s that directly discharge to ESAs or to CWA § 303(d) listed impaired waterbodies, the Permittees shall require operators to implement additional pollutant specific controls to reduce pollutants in storm water runoff that are causing or contributing to exceedances of water quality objectives. A Regional Board approved TMDL Implementation Plan for the receiving water will substitute for this requirement.
- (c) **Progressive Enforcement:** Each Permittee shall implement a progressive enforcement policy to ensure that facilities are brought into compliance with all storm water requirements within a reasonable time period as specified below.
- (1) In the event that a Permittee determines, based on an inspection conducted, that an operator has failed to adequately implement all necessary BMPs, that Permittee shall take progressive enforcement actions which, at a minimum, shall include a follow-up inspection within 4 weeks from the date of the initial inspection.
  - (2) In the event that a Permittee determines that an operator has failed to adequately implement BMPs after a follow-up inspection, that Permittee shall take further enforcement action as established through authority in its municipal code and ordinances or through the judicial system.
  - (3) Each Permittee shall maintain records and make them available on request to the Regional Water Board, including inspection reports, warning letters,

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

notices of violations, and other enforcement records, demonstrating a good faith effort to bring facilities into compliance.

4. Interagency Coordination

- (a) **Referral of Violations of the Municipal Storm Water Ordinances and California Water Code § 13260:** A Permittee may refer a violation(s) of § 13260 by Industrial and Commercial facilities to the Regional Water Board provided that under its municipal storm water ordinance the Permittee has made a good faith effort of progressive enforcement. At a minimum, a Permittee's good faith effort must be documented with:
- (1) Two follow-up inspections
  - (2) Two warning letters or notices of violation
- (b) **Referral of Violations of the Industrial Activities Storm Water General Permit (IASGP), including Requirements to File a Notice of Intent or No Exposure Certification:** For those facilities in violation of the municipal storm water ordinance and subject to the IASGP, Permittees may escalate referral of such violations to the Regional Water Board (electronically on a quarterly basis to the Regional Water Board's Storm Water Site at [MS4stormwaterrb4@waterboards.ca.gov](mailto:MS4stormwaterrb4@waterboards.ca.gov)) after one inspection and one written notice (copied to the Regional Water Board) to the operator regarding the violation. In making such referrals, Permittees shall include, at a minimum, the following documentation:
- (1) Name of the facility
  - (2) Operator of the facility
  - (3) Owner of the facility
  - (4) WDID Number (if applicable)
  - (5) Industrial activity being conducted at the facility that is subject to the IASGP
  - (6) Records of communication with the facility operator regarding the violation, which shall include at least an inspection report
  - (7) The written notice of the violation copied to the Regional Water Board
- (c) **Investigation of Complaints Regarding Facilities – Transmitted by the Regional Water Board Staff:** Each Permittee shall initiate, within one business day,<sup>1</sup> investigation of complaints (~~other than~~ non-storm water discharges) to the MS4 from facilities within its jurisdiction (~~other than non-storm water discharges~~). The initial investigation shall include, at a minimum, a limited inspection of the facility to confirm the complaint to determine if the facility is effectively complying with the municipal storm water urban runoff ordinances, and, if necessary, to oversee corrective action.

<sup>1</sup> Permittees may comply with the Permit by taking initial steps (such as logging, prioritizing, and tasking) to "initiate" the investigation within that one business day. However, the Regional Water Board would expect that the initial investigation, including a site visit, to occur within four business days.

- (d) **Assistance of Regional Water Board Enforcement Actions:** As directed by the Regional Water Board Executive Officer, Permittees shall assist Regional Water Board enforcement actions by: helping in identification of current owners, operators, and lessees of facilities; providing staff, when available, for joint inspections with Regional Water Board inspectors; appearing as witnesses in Regional Water Board enforcement hearings; and providing copies of inspection reports and other progressive enforcement documentation.
- (e) **Participation in a Task Force:** The Permittees shall participate with the Regional Water Board, and other public agencies on an enforcement task force such as the Storm Water Task Force, to communicate concerns regarding special cases of storm water violations by industrial and commercial facilities and to develop a coordinated approach to enforcement action.

**E. Planning and Land Development Program**

**I. Purpose**

- 1. The Permittees shall implement a Planning and Land Development Program pursuant to part 5.E. for all New Development and Redevelopment projects subject to this Order to:

- (a) Lessen the water quality impacts of development by using smart growth practices such as compact development, directing development towards existing communities via infill or redevelopment, safeguarding of environmentally sensitive areas, mixing of land uses (e.g., homes, offices, and shops), transit accessibility, and better pedestrian and bicycle amenities.
- (b) Minimize the adverse impacts from storm water runoff on the biological integrity of Natural Drainage Systems and the beneficial uses of waterbodies in accordance with requirements under CEQA (Cal. Pub. Resources Code § 21100).
- ~~(b)~~(c) Minimize the percentage of effective impervious surfaces on land developments to mimic predevelopment water balance through infiltration, evapotranspiration and reuse.
- ~~(e)~~(d) Minimize pollutant loadings from impervious surfaces such as roof-tops, parking lots, and roadways through the use of properly designed, technically appropriate BMPs (including Source Control BMPs such as good housekeeping practices), Low Impact Development Strategies, and Treatment Control BMPs.
- ~~(d)~~(e) Properly select, design and maintain Treatment Control BMPs and Hydromodification Control BMPs to address pollutants that are likely to be generated, assure long-term function, and to avoid the breeding of vectors.<sup>1</sup>
- ~~(e)~~(f) Prioritize the selection of BMPs suites to remove storm water pollutants, reduce storm water runoff volume, and beneficially reuse storm water to support

<sup>1</sup> Treatment BMPs when designed to drain within 7248 hours of the end of rainfall minimize the potential for the breeding of vectors.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

an integrated approach to protecting water quality and managing water resources in the following order of preference:

- (1) Infiltration BMPs
- (2) BMPs that store and reuse storm water runoff.
- (3) BMPs that incorporate vegetation to promote pollutant removal and runoff volume reduction and integrate multiple uses
- (4) BMPs which percolate runoff through engineered soil and allow it to discharge downstream slowly
- (5) Approved modular/ proprietary treatment control BMPs that are based on LID concepts and that meet pollution removal goals

**II. Applicability**

1. New Development Projects.

(a) Development projects subject to Permittee conditioning and approval for the design and implementation of post-construction controls to mitigate storm water pollution, prior to completion of the project(s), are:

- (1) All development projects equal to 1 acre or greater of disturbed area and adding more than 10,000 square feet of impervious surface area
- (2) Industrial park 10,000 square feet or more of impervious surface area
- (3) Commercial strip mall 10,000 square feet or more of impervious surface area
- (4) Retail gasoline outlet 5,000 square feet or more of impervious surface area
- (5) Restaurant (SIC 5812) 5,000 square feet or more of impervious surface area
- (6) Parking lot 5,000 square feet or more of impervious surface area, or with 25 or more parking spaces
- (7) Streets, roads, highways, and freeway construction of 10,000 square feet or more of impervious surface area shall incorporate USEPA guidance regarding Managing Wet Weather with Green Infrastructure: Green Streets to the maximum extent practicable.
- (8) Automotive service facilities (SIC 5013, 5014, 5511, 5541, 7532-7534 and 7536-7539) [5,000 square feet or more of impervious surface area]
- (9) Redevelopment projects in subject categories that meet Redevelopment thresholds (identified in subpart E.II.2 below)
- (10) Projects located in or directly adjacent to, or discharging directly to an Environmentally Sensitive Area (ESA), where the development will:
  - (A) Discharge storm water runoff that is likely to impact a sensitive biological species or habitat; and
  - (B) Create 2,500 square feet or more of impervious surface area
- (11) Single-family hillside homes. To the extent that a Permittee may lawfully impose conditions, mitigation measures or other requirements on the development or construction of a single-family home in a hillside area as defined in the applicable Permittee's Code and Ordinances, each Permittee

shall require that during the construction of a single-family hillside home, the following measures to be implemented:

- (A) Conserve natural areas
- (B) Protect slopes and channels
- (C) Provide storm drain system stenciling and signage
- (D) Divert roof runoff to vegetated areas before discharge unless the diversion would result in slope instability
- (E) Direct surface flow to vegetated areas before discharge unless the diversion would result in slope instability

2. Redevelopment Projects

(a) Redevelopment projects subject to Permittee conditioning and approval for the design and implementation of post-construction controls to mitigate storm water pollution, prior to completion of the project(s), are:

- (1) Land-disturbing activity that results in the creation or addition or replacement of 5,000 square feet or more of impervious surface area on an already developed site on development categories identified in subpart 5.E.II.1.
- (2) Where Redevelopment results in an alteration to more than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post development storm water quality control requirements, the entire project must be mitigated.
- (3) Where Redevelopment results in an alteration to less than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post development storm water quality control requirements, only the alteration must be mitigated, and not the entire development.

(b) Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of facility or emergency redevelopment activity required to protect public health and safety. Impervious surface replacement, such as the reconstruction of parking lots and roadways which does not disturb additional area and maintains the original grade and alignment, is considered a routine maintenance activity. Redevelopment does not include the repaving of existing roads to maintain original line and grade.

(c) Existing single-family dwelling and accessory structures are exempt from the Redevelopment requirements unless such projects create, add, or replace 10,000 square feet of impervious surface area.

3. Effective Date –The New Development and Redevelopment requirements contained in Section E of the Order shall begin 90 calendar days after Regional Board Executive Officer approval of the changes to the Technical Guidance Manual needed to comply with this permit. After that date all discretionary permit projects or project phases that have not been deemed complete for processing, or discretionary permit projects

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

without vesting tentative maps that have not requested and received an extension of previously granted approvals must comply with the requirements in Section E. Projects that have been deemed complete prior to the update of the technical design manual are not subject to this section. For Permittee's projects the effective date shall be the date the governing body ~~approves authorization to advertise to bid the project~~ or their designee approves initiation of the project design.

### III. New Development/ Redevelopment Performance Criteria

1. Integrated Water Quality/ Flow Reduction/ Resources Management Criterion
  - (a) Permittees shall establish standards for all New Development and Redevelopment projects identified in subpart 5.E.II to control pollutants, pollutant loads, and runoff volume emanating from impervious surfaces through percolation, infiltration, storage, or evapo-transpiration, by reducing the percentage of Effective Impervious Area (EIA). The standards shall be based on the type of development, site conditions (including soils and groundwater), community constraints, and shall consider USEPA's "Managing Wet Weather with Green Infrastructure, Action Strategy, 2008".
  - (b) The goal of the New Development and Redevelopment standards shall be to minimize pollutant loads and runoff volume from impervious surfaces by reducing the effective impervious area of new and redevelopment projects. This goal may be implemented through use of site features, a Redevelopment Project Area Master Plan (RPAMP), or payment of an in-lieu fee as described in this section. For projects in undeveloped areas, the project shall comply with the goal of 5% or less of effective impervious area (EIA). For development and redevelopment projects which can be demonstrated that the 5% EIA goal is infeasible, the project shall comply with the surface discharge requirements of 5.E.III.3. Permittees shall submit the criteria for determining infeasibility to the Regional Board within 180 days of permit adoption. The infeasibility criteria shall become effective for determining feasibility upon Executive Officer approval.
  - (c) Impervious surfaces may be rendered "ineffective" if the storm water runoff is:
    - (1) Collected and stored for beneficial use such as irrigation, or other reuse purpose; or
    - (2) Infiltrated; or,
    - (3) Evapotranspired; or
    - (4) Biofiltrate.
  - (d) All features and structures implemented to render impervious surfaces "ineffective" to attain the EIA requirement as described in provision (b), above, shall be properly sized to infiltrate, store for beneficial reuse, evapotranspire, or biofiltrate at least the volume of water that meets the criteria in subpart 5.E.III.3.

- ~~(e) Any surface discharge of the storm water runoff from projects that cannot attain the 5% EIA goal shall be mitigated in accordance with subpart 5.E.III.3~~
- ~~(b) The goal of the New Development and Redevelopment standards shall be to reduce the effective impervious area (EIA) to 5% or less. This goal may be implemented through use of site features, a Redevelopment Project Area Master Plan (RPAMP), payment of an in-lieu fee, or use of stormwater mitigation credits as described in this section. For development projects in undeveloped areas, the project shall comply with the goal of 5% EIA or less. For redevelopment projects, or development projects that can be demonstrated that the 5% EIA goal is infeasible, the project shall comply with the surface discharge requirements of 5.E.III.4~~
- ~~(c) All features structured constructed to render impervious surfaces "ineffective" as described in provision (b), above, shall be properly sized to impervious surfaces may be rendered "ineffective" if the storm water runoff is:~~
  - ~~(1) Drained into a vegetated cell, over a vegetated surface, or through a vegetated swale, having soil characteristics either as native material or amended medium using approved soil engineering techniques; or~~
  - ~~(2) Collected and stored for beneficial use such as irrigation, or other reuse purpose; or~~
  - ~~(3) Discharged into an infiltration trench~~
- ~~(e) Any excess surface discharge of the storm water runoff shall be mitigated in accordance with subpart 5.E.III.3~~

2. Hydromodification (Flow/ Volume/ Duration) Control Criteria

- (a) Each Permittee shall require all New Development and Redevelopment projects identified in subpart 5.E.II to implement hydrologic control measures, to prevent accelerated downstream erosion and to protect stream habitat in natural drainage systems. The purpose of the hydrologic controls is to minimize changes in post-development hydrologic storm water runoff discharge rates, velocities, and duration. This shall be achieved by maintaining the project's pre-project storm water runoff flow rates and durations.
  - (1) Description
    - (A) Hydromodification control in natural drainage systems shall be achieved by maintaining the Erosion Potential ( $E_p$ ) in streams at a value of 1, unless an alternative value can be shown to be protective of the natural drainage systems from erosion, incision, and sedimentation that can occur as a result of flow increases from impervious surfaces and damage stream habitat (see Attachment "E" - Determination of Erosion Potential)
    - (B) Hydromodification control may include one, or a combination of on-site, regional subregional hydromodification control BMPs, LID strategies, or stream restoration measures, with preference given to LID strategies and hydromodification control BMPs. Any in-stream

restoration measure shall not adversely affect the beneficial uses of the natural drainage systems

- (C) Natural drainage systems, which include unlined or unimproved (not engineered) creeks, streams, rivers and their tributaries, are located in the following watersheds:
    - (i) Ventura River
    - (ii) Santa Clara River
    - (iii) Calleguas Creek
    - (iv) Miscellaneous Ventura Coastal
  - (D) The Southern California Storm Water Monitoring Coalition (SMC) is developing a regional methodology to eliminate or mitigate the adverse impacts of hydromodification as a result of urbanization, including hydromodification assessment and management tools.
    - (i) The SMC has identified the following objectives for the Hydromodification Control Study (HCS):
      - (I) Establishment of a stream classification for Southern California streams
      - (II) Development of a deterministic or predictive relationship between changes in watershed impervious cover and stream-bed/ stream bank enlargement
      - (III) Development of a numeric model to predict stream-bed/ stream bank enlargement and evaluate the effectiveness of mitigation strategies
  - (E) The Permittees shall participate in the SMC HCS to develop:
    - (i) A regional stream classification system
    - (ii) A numerical model to predict the hydrological changes resulting from new development
    - (iii) A numerical model to identify effective mitigation strategies
  - (F) Until the completion of the SMC HCS, Permittees shall implement the Interim Hydromodification Control Criteria, described in subpart 5.E.III.3(a)(32)(A) below, to control the potential adverse impacts of changes in hydrology that may result from new development and redevelopment projects identified in subpart 5.E.II
  - (G) Existing single-family structures are exempt from the Hydromodification control requirements unless such projects disturb one acre or more of land or create, add, or replace 10,000 square feet or more of impervious surface area
- (2) Exemptions to Hydromodification Controls. Permittees may exempt the following New Development and Redevelopment projects from implementation of Hydromodification controls where assessments of downstream channel conditions and proposed discharge hydrology indicate that adverse Hydromodification effects to present and future beneficial uses of Natural Drainage Systems are unlikely:

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (A) All projects that disturb less than one acre.
- (B) Projects that are replacement, maintenance or repair of a Permittee's existing flood control facility, storm drain, or transportation network.
- (C) Redevelopment Projects in the Urban Core that do not increase the effective impervious area or decrease the infiltration capacity of pervious areas compared to the pre-project conditions.
- (D) Projects that have any increased discharge go directly or via a storm drain to a sump, lake, area under tidal influence, into a waterway that has a 100-year peak flow (Q100) of 25,000 cfs or more, or other receiving water that is not susceptible to Hydromodification impacts;
- (E) Projects that discharge directly or via a storm drain into concrete or improved (not natural) channels (e.g., rip rap, sackcrete, etc.), which, in turn, discharge into receiving water that is not susceptible to Hydromodification impacts (as in D above).
- (3) Interim Hydromodification Control Criteria
- (A) The Interim Hydromodification Control Criteria to protect natural drainage systems until Permittees complete Hydromodification Control Plans (HCPs), described in subpart 5.E.III.3(a)(43) below, are as follows:
- (i) **Projects disturbing land area of less than fifty acres** will be subject to LID and/or source or treatment BMPs as addressed in this permit. The combined effects of LID and the treatment BMPs are considered adequate for Hydromodification control for projects that disturb less than 50 acres.
- (ii) **Projects disturbing land areas of fifty acres or greater** Projects in this category shall develop and implement a Hydromodification Analysis Study (HAS) that demonstrates that post development conditions are expected to approximate the pre-project erosive effect of sediment transporting flows in receiving waters. The HAS must lead to the incorporation into the project design features intended to approximate, to the extent feasible, an Erosion Potential value of 1 or any alternative value that can be shown to be protective of the natural drainage systems from erosion, incision, and sedimentation that can occur as a result of flow increases from impervious surfaces and damage stream habitat in natural drainage systems, or

(iii)

(4) Alternatively, project proponents in this category may elect to develop, in partnership with Permittees, an equivalent implementation method based on flow duration control in the form of nomographs relating planned impervious area and local soil type (infiltration rates) to determine hydromodification control BMP volume and land area requirements for the proposed project. The nomographs shall be derived from continuous simulation modeling using Ventura County specific rain gauge records and soil types, and calibrated using data from a local undeveloped watershed with similar conditions; or

~~(5) Alternatively, the Co-Permittees may revise the Ventura County Technical Guidance Manual for Stormwater Quality Control Measures to address projects that disturb more than 50 acres.~~

## (4) Final Criteria

(A) The Permittees shall develop and implement watershed specific HCPs no later than 180 days after the completion of the SMC HCS.

(i) The HCP shall identify:

- (I) Stream classifications
- (II) Flow rate and duration control methods
- (III) Sub-watershed mitigation strategies
- (IV) Stream restoration measures, which will maintain the stream and tributary Erosion Potential at 1 unless an alternative value can be shown to be protective of the natural drainage systems from erosion, incision, and sedimentation that can occur as a result of flow increases from impervious surfaces and damage stream habitat in natural drainage system tributaries

(B) The HCP shall contain the following elements:

- (i) Hydromodification Management Standards
- (ii) Natural Drainage Areas and Hydromodification Management Control Areas
- (iii) New Development and Redevelopment Projects subject to the HCP
- (iv) Description of authorized Hydromodification Management Control BMPs
- (v) Hydromodification Management Control BMP Design Criteria.
- (vi) For flow duration control methods, the range of flows to control for, and goodness of fit criteria
- (vii) Allowable low critical flow,  $Q_c$ , which initiates sediment transport
- (viii) Description of the approved Hydromodification Model.

- (ix) Any alternate Hydromodification Management Model and Design
- (x) Stream Restoration Measures Design Criteria
- (xi) Monitoring and Effectiveness Assessment
- (xii) Record Keeping

The HCP shall be deemed in effect upon Executive Officer approval.

## 3. Water Quality Mitigation Criteria

(a) Each Permittee shall require all New Development and Redevelopment projects identified in subpart 5.E.II to implement post-construction storm water treatment BMPs and control measures to mitigate storm water pollution as follows:

- (1) Projects disturbing land areas less than 50 acres
  - (A) Volumetric Treatment Control BMP
    - (i) The 85th percentile 24-hour runoff event determined as the maximized capture storm water volume for the area using a 48 to 72-hour draw down time, from the formula recommended in *Urban Runoff Quality Management, WEF Manual of Practice No. 23/ASCE Manual of Practice No. 87, (1998)*; or
    - (ii) The volume of annual runoff based on unit basin storage water quality volume, to achieve 80 percent or more volume treatment by the method recommended in the Ventura County Technical Guidance Manual for Storm Water Quality Control Measures (July 2002 and its revisions); or
    - (iii) The volume of runoff produced from a 0.75 inch storm event, prior to its discharge to a storm water conveyance system;<sup>1</sup> and/ or
  - (B) Flow Based Treatment Control BMP
    - (i) The flow of runoff produced from a rain event equal to at least 0.2 inches per hour intensity; or
    - (ii) The flow of runoff produced from a rain event equal to at least 2 times the 85th percentile hourly rainfall intensity as determined from local rainfall records; or
    - (iii) Eight percent of the 50-year storm design flow rate as determined from the method recommended in the Ventura County Technical Guidance Manual for Storm Water Quality Control Measures (July 2002 and its revisions)
- (2) Projects disturbing land area of 50 acres or greater
  - (A) Eighty percent of the average runoff volume using an appropriate public domain continuous flow model (such as Storm Water Management Model (SWMM) or Hydrologic Engineering Center – Hydrologic Simulation Program – Fortran (HEC-HSPF), using the local rainfall record and relevant BMP Performance data.

<sup>1</sup> This option is available only for construction projects that disturb land area less than 5 acres.

**IV. Implementation**

1. Maintenance Agreement and Transfer

(a) Prior to issuing approval for final occupancy each Permittee shall require that all new development and redevelopment projects subject to post-construction BMP requirements provide an operation and maintenance plan and verification of ongoing maintenance provisions for LID practices, Treatment Control BMPs, and Hydromodification Control BMPs including but not limited to: final map conditions, legal agreements, covenants, conditions or restrictions, CEQA mitigation requirements, conditional use permits, and/ or other legally binding maintenance agreements.

(1) Verification at a minimum shall include the developer's signed statement accepting responsibility for maintenance until the responsibility is legally transferred; and either

(A) A signed statement from the public entity assuming responsibility for BMP maintenance; or

(B) Written conditions in the sales or lease agreement, which require the property owner or tenant to assume responsibility for BMP maintenance and conduct a maintenance inspection at least once a year; or

(C) Written text in project covenants, conditions, and restrictions (CCRs) for residential properties assigning BMP maintenance responsibilities to the Home Owners Association (HOA); or

(D) Any other legally enforceable agreement or mechanism that assigns responsibility for the maintenance of BMPs.

(b) Each Permittee shall require all development projects subject to post-construction BMP requirements to provide a plan for the operation and maintenance of all structural and treatment controls. The Operation and Maintenance plan shall follow the Technical Guidance Manual Appendix D "Maintenance Plan Guidance" (or subsequent guidance manual) for each BMP component. The plan shall be submitted for examination of relevance to keeping the BMPs in proper working order. Where BMPs are transferred to Permittee for ownership and maintenance, the plan shall also include all relevant costs for upkeep of BMPs in the transfer. Operation and Maintenance plans for private BMPs shall be kept on site for periodic review by Permittee inspectors.

2. Tracking, Inspection, and Enforcement of Post-Construction BMPs

(a) Each Permittee shall implement a tracking system, and an inspection and enforcement program for new development and redevelopment post-construction storm water BMPs as set fort in part 5.E no later than (365 days after Order adoption date).

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (1) Implement a GIS or other electronic system for tracking projects that have been conditioned for post-construction BMPs. The electronic system, at a minimum, should contain the following information:
    - (A) Municipal Project ID
    - (B) State WDID No
    - (C) Project Acreage
    - (D) BMP Type and Description
    - (E) BMP Location (coordinates)
    - (F) Date of Acceptance
    - (G) Date of Maintenance Agreement
    - (H) Maintenance Records
    - (I) Inspection Date and Summary
    - (J) Corrective Action
    - (K) Date Certificate of Occupancy Issued
    - (L) Replacement or Repair Date
  - (b) Inspect all development sites upon completion of construction and prior to the issuance of occupancy certificates to ensure proper installation of LID measures, structural BMPs, treatment control BMPs and Hydromodification control BMPs. The inspection may be combined with other inspections provided it is conducted by trained personnel.
  - (c) Verify proper maintenance and operation of post-construction BMPs previously approved for new development and redevelopment and operated by the Permittees. The post construction BMP maintenance inspection program shall incorporate the following elements:
    - (1) Post-construction BMP Maintenance Inspection checklist.
    - (2) Inspection at least once every 2 years, beginning (365 days after Order adoption date), of post-construction BMPs to assess operation conditions with particular attention to:
    - (3) Criteria and procedures for post construction Treatment Control and Hydromodification Control BMP repair, replacement, or re-vegetation.
  - (d) For post construction BMPs operated and maintained by parties other than the Permittees the Permittees shall require annual reports by the other parties demonstrating proper maintenance and operations.
  - (e) Undertake enforcement as appropriate based on the results of the inspection.
3. Alternative Post Construction Storm Water Mitigation Programs
- (a) A Permittee or a coalition of Permittees may apply to the Regional Water Board for approval of a Redevelopment Project Area Master Plan (RPAMP) for redevelopment projects within the Redevelopment Project Areas, in consideration of exceptional site constraints that inhibit site-by-site or project-by-project implementation of post-construction requirements.

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (b) Upon review and a determination by the Regional Water Board Executive Officer that the proposal is technically valid and appropriate, the Regional Water Board may consider for approval such a program if its implementation will:
- (1) Result in equivalent or superior reduction of storm water pollutant loads in comparison to individual projects regulated by this permit.
  - (2) Satisfy, on a Redevelopment Project Area-wide basis, the hydromodification criteria of this section.
  - (3) Reduce the percentage of Effective Impervious Area (EIA) to a target of less than 5 percent or less of the Redevelopment Project Area, using properly sized storm water treatment/collection features, as described in this Section.
  - (4) Be fiscally sustainable and have secure funding; and
  - (5) Be completed in four years of the adoption date of this permit.
- (c) The RPAMP should prioritize the implementation of LID storm water mitigation measures, as described in this section.
- (d) A Permittee or a coalition of Permittees may apply to the Regional Water Board for approval of a Redevelopment Project Area Master Plan (RPAMP) that takes into consideration the balancing of water quality protection with the needs for adequate housing, population growth, public transportation and management, land recycling, and urban revitalization.
- (e) For the RPAMP to be considered, a technical panel of the Local Government Commission or an equivalent state or regional planning agency must have reviewed and approved the proposed RPAMP, prior to its submittal to the Regional Water Board. The Regional Water Board Executive Officer may then consider the RPAMP for approval, or elect to submit it to the Regional Water Board for consideration.
- (f) The RPAMP, on approval, may substitute in part or wholly for post-construction requirements.
- (g) Redevelopment Project Areas include the following:
- (1) City Center areas
  - (2) Historic District areas
  - (3) Brownfield areas
  - (4) Infill Development areas
  - (5) Urban Transit Villages
  - (6) Any other redevelopment area so designated by the Regional Water Board
- (h) Nothing in these provisions shall be construed as to delay the implementation of post-construction control requirements, as approved in this Order.

## 4. Mitigation Funding

- (a) The Principal Permittee or a coalition of Permittees shall create a Mitigation Funding Plan ~~management framework~~ to fund regional or subregional solutions to storm water pollution, where any of the following situations occur:
- (1) A waiver for impracticability is granted
  - (2) Funds become available

- (3) Off-site mitigation is required because of loss of environmental habitat; or
- (4) An approved watershed management plan, or an integrated water resources management plan, or a regional storm water mitigation plan, or a wetlands recovery plan exists that incorporates an equivalent or improved strategy for storm water pollution mitigation
- (5) When a Permittee determines that a project is infeasible in accordance with 5.(E).III.(1)(c), the project application shall provide sufficient funds to the Permittee for a public project that will retain or mitigate a volume of stormwater equivalent to the onsite retention volume that was not retained on site.

The Permittees shall submit the Mitigation Funding Plan to the Executive Officer for approval 445 days after Permit adoption. The Mitigation Funding Plan shall be deemed in effect upon Executive Officer approval.

## 5. Developer Technical Guidance and Information

- (a) The Permittees shall update the Ventura County Technical Guidance Manual for Storm Water Quality Control Measures to include, at a minimum, the following:
  - (1) Hydromodification Control criteria described in this Order, including numerical criteria.
  - (2) Expected BMP pollutant removal performance including effluent quality (ASCE/ U.S. EPA International BMP Database, CASQA New Development BMP Handbook, technical reports, local data on BMP performance, and the scientific literature appropriate for southern California geography and climate).
  - (3) Selection of appropriate BMPs for storm water pollutants of concern.
  - (4) Data on Observed Local Effectiveness and performance of implemented BMPs.
  - (5) BMP Maintenance and Cost Considerations.
  - (6) Guiding principles to facilitate integrated water resources planning and management in the selection of BMPs, including water conservation, groundwater recharge, public recreation, multipurpose parks, open space preservation, and redevelopment retrofits.
  - (7) LID principles and specifications, including the objectives and specifications for integration of LID strategies in the areas of:
    - (A) Site Assessment.
    - (B) Site Planning and Layout.
    - (C) Vegetative Protection, Revegetation, and Maintenance.
    - (D) Techniques to Minimize Land Disturbance.
    - (E) Techniques to Implement LID Measures at Various Scales
    - (F) Integrated Water Resources Management Practices.
    - (G) LID Design and Flow Modeling Guidance.
    - (H) Hydrologic Analysis.
    - (I) LID Credits.

- (b) Permittees shall update the Technical Guidance Manual within 365 days of the adoption of this Order.
- (c) The Permittees shall facilitate implementation of LID by providing key industry, regulatory, and other stakeholders with information regarding LID objectives and specifications contained in the LID Technical Guidance Section through a training program. The LID training program will include the following:
  - (1) LID targeted sessions and materials for builders, design professionals, regulators, resource agencies, and stakeholders
  - (2) A combination of awareness on national efforts and local experience gained through LID pilot projects and demonstration projects
  - (3) Materials and data from LID pilot projects and demonstration projects including case studies
  - (4) Guidance on how to integrate LID requirements into the local regulatory program(s) and requirements
  - (5) Availability of the LID Technical Guidance regarding integration of LID measures at various project scales
  - (6) Guidance on the relationship among LID strategies, Source Control BMPs, Treatment Control BMPs, and Hydromodification Control requirements

The Permittees shall submit revisions to the Ventura County Technical Guidance Manual to the Regional Board for Executive Officer approval.

6. Project Coordination

- (a) Each Permittee shall facilitate a process for effective approval of post-construction storm water control measures. The process shall include:
  - (1) Detailed BMP review including BMP sizing calculations, BMP pollutant removal performance, and municipal approval; and
  - (2) An established structure for communication and delineated authority between and among municipal departments that have jurisdiction over project review, plan approval, and project construction through memoranda of understanding (MOU) or an equivalent agreement.

V. State Statute Conformity

1. California Environmental Quality Act (CEQA) Document Update

- (a) Each Permittee shall incorporate into its CEQA process no later than (6 months from Order adoption date), those additional procedures necessary for considering potential storm water quality impacts and providing for appropriate mitigation when preparing and reviewing CEQA documents.
  - (1) The procedures shall require consideration of the following:
    - (A) Potential impact of project construction on storm water runoff.
    - (B) Potential impact of project post-construction activity on storm water runoff.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (C) Potential for discharge of storm water from areas from material storage, vehicle or equipment fueling, vehicle or equipment maintenance (including washing), waste handling, hazardous materials handling or storage, delivery areas or loading docks, or other outdoor work areas.
- (D) Potential for discharge of storm water to impair the beneficial uses of the receiving waters.
- (E) Potential for the discharge of storm water to cause significant harm on the biological integrity of the waterways and waterbodies.
- (F) Potential for significant changes in the flow velocity or volume of storm water runoff to cause harm to or impair the beneficial uses of natural drainage systems.
- (G) Potential for significant increases in erosion at the project site or surrounding areas.

2. General Plan Update

(a) Each Permittee shall amend, revise or update its General Plan to include watershed and storm water quality and quantity management considerations and policies when any of the following General Plan elements are updated or amended:

- (1) Land Use
- (2) Housing
- (3) Conservation
- (4) Open Space

(b) Each Permittee shall provide the Regional Water Board with the draft amendment or revision when a listed General Plan element or General Plan is noticed for comment in accordance with Cal. Govt. Code § 65350 *et seq.*

**F. Development Construction Program**

I. Each Permittee shall implement a construction program that prevents illicit construction-related discharges of pollutants into the MS4, implements and maintains structural and non-structural BMPs to reduce pollutants in stormwater runoff from construction sites, reduces construction site discharges of pollutants from the MS4 to the MEP, and prevents construction site discharges from the MS4 from causing or contributing to a violation of water quality standards.

3. BMP Implementation - Construction Sites 5 acres and Greater

- (a) Each Permittee shall require the implementation of an effective combination of the following BMPs in Table 8 (BMPs at Construction sites 5 acres or greater) in addition to the ones identified in Table 6 (BMPs at Construction sites less than 1 acre) and Table 7 (BMPs at Construction sites 1 acre or greater but less than 5 acres) at all construction sites 5 acres and greater to prevent erosion and sediment loss, and the discharge of construction wastes. Erosion control BMPs shall be preferred to sediment control BMPs.

Table 8 - BMPs at Construction sites 5 acres or greater

4. Enhanced Construction BMP Implementation.

- (a) Each Permittee shall implement, or require implementation of, enhanced practices that preclude impacts to water quality posed by all construction sites on hillsides as defined in this Order and construction sites that directly discharge to a waterbody listed on the CWA § 303 (d) list for siltation or sediment, or that occur within or directly adjacent to an Environmentally Sensitive Area (ESAs).

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

Construction sites located on hillsides, adjacent to CWA 303(d) listed waters for siltation or sediment, and directly adjacent to ESAs are termed "High risk sites."

- (b) Each Permittee shall require implementation of enhanced practices for high risk sites which shall include increased BMP inspection and maintenance requirements.
  - (1) Each Permittee shall require that high risk sites shall be inspected by the project proponent's Qualified SWPPP Developer or Qualified SWPPP Practitioner or personnel or consultants who are Certified Professionals in Erosion and Sediment Control (CPESC) at the time of BMP installation, at least weekly during the wet season, and at least once each 24 hour period during a storm event that generates runoff from the site, to identify BMPs that need maintenance to operate effectively, that have failed or could fail to operate as intended.
  - (2) During the wet season, the area of disturbance shall be limited to the area that can be controlled with an effective combination of erosion and sediment control BMPs. Enhanced sediment controls should be used in combination with erosion controls and should target portions of the site that cannot be effectively controlled by standard erosion controls described above. Effective sediment and erosion control BMPs proposed by the proponent shall include the BMPs listed in Table 9 below. The project proponents are responsible to implement the BMPs below unless shown unnecessary. The Permittee shall require that the project proponent retain records of the inspection and a determination and rationale of the BMPs selected to control runoff.

**Table 9-9** Enhanced Construction BMP Implementation.

~~(c) The Permittees shall require the project proponent to collect representative samples during wet weather events in accordance with the SWRCB general construction permit or equivalent monitoring program as developed by the Permittees on approval by the Executive Officer.~~

5. Local Agency Requirements

(a) Each Permittee shall require for all construction sites 1 acre or greater, compliance with all conditions identified in the preceding subparts F.1- F.45, and the following requirements:

(1) Local Storm Water Pollution Prevention Plan (Local SWPPP),

(A) Each Permittee shall require the preparation and submittal of a Local SWPPP, for the Permittee's review and written approval prior to issuance of a grading or construction permit for construction or

<sup>1</sup> If appropriate given natural background stormwater runoff and receiving water quality conditions.

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

demolition projects. The Permittees' approval signature shall be contained within the first pages of the Local SWPPP

- (i) The Permittee shall not approve any Local SWPPP unless it contains appropriate site-specific construction site BMPs, specific locations, and maintenance schedules.
- (ii) The Local SWPPP must include the rationale used for selecting or rejecting BMPs for various construction phases and weather conditions. The project architect, or engineer of record, or authorized qualified designee, must sign a statement on the Local SWPPP to the effect:

(I) *"As the architect/ engineer of record, I have selected appropriate BMPs to effectively minimize the negative impacts of this project's construction activities on storm water quality. The project owner and contractor are aware that the selected BMPs must be installed, monitored, and maintained to ensure their effectiveness. The BMPs not selected for implementation are redundant or deemed not applicable to the proposed construction activity."*

(2) Certification Statement

(A) Each Permittee shall require that each landowner or the landowner's agent sign a statement on the Local SWPPP to the effect:

- (i) *"I certify that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, to the best of my knowledge and belief, the information submitted is true, accurate, and complete. I am aware that submitting false and/ or inaccurate information, failing to update the Local SWPPP to reflect current conditions, or failing to properly and/ or adequately implement the Local SWPPP may result in revocation of grading and/ or other permits or other sanctions provided by law."*

- (ii) The Local SWPPP certification shall be signed by the property owner or owner's representative/designee. If the Local SWPPP or SWPPP is being prepared by the local agency then the appropriate authority of the local agency shall sign the document.

6. Roadway Paving or Repaving Operations (For Private or Public Projects)

- (a) Each Permittee shall require that for any project that includes roadbed or street paving, repaving, patching, digouts, or resurfacing roadbed surfaces, that the following BMPs be implemented for each project:-

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

D

I  
V  
E

- (b)(1) Restrict paving and repaving activity to exclude periods of rainfall or predicted rainfall unless required by emergency conditions
- (2) Install sand bags or gravel bags and filter fabric at all susceptible storm drain inlets and at manholes to prevent spills of paving products and tack coat
- (3) Prevent the discharge of release agents including soybean oil, other oils, or diesel to the storm water drainage system or receiving waters.
- (4) Minimize non storm water runoff from water use for the roller and for evaporative cooling of the asphalt
- (5) Clean equipment over absorbent pads, drip pans, plastic sheeting or other material to capture all spillage and dispose of properly
- (6) Collect liquid waste in a container, with a secure lid, for transport to a maintenance facility to be reused, recycled or disposed of properly
- (7) Collect solid waste by vacuuming or sweeping and securing in an appropriate container for transport to a maintenance facility to be reused, recycled or disposed of properly
- (8) Cover the "cold-mix" asphalt (i.e., pre-mixed aggregate and asphalt binder) with protective sheeting during a rainstorm
- (9) Cover loads with tarp before haul-off to a storage site, and do not overload trucks
- (10) Minimize airborne dust by using water spray during grinding
- (11) Avoid stockpiling soil, sand, sediment, asphalt material and asphalt grindings materials or rubble in or near storm water drainage system or receiving waters
- (12) Protect stockpiles with a cover or sediment barriers during a rain

- (c) ~~Install sand bags or gravel bags and filter fabric at all susceptible storm drain inlets and at manholes to prevent spills of paving products and tack coat~~
- (d) ~~Prevent the discharge of release agents including soybean oil, other oils, or diesel to the storm water drainage system or watercourses~~
- (e) ~~Minimize non storm water runoff from water use for the roller and for evaporative cooling of the asphalt~~
- (f) ~~Clean equipment over absorbent pads, drip pans, plastic sheeting or other material to capture all spillage and dispose of properly~~
- (g) ~~Collect liquid waste in a container, with a secure lid, for transport to a maintenance facility to be reused, recycled or disposed of properly~~
- (h) ~~Collect solid waste by vacuuming or sweeping and securing in an appropriate container for transport to a maintenance facility to be reused, recycled or disposed of properly~~
- (i) ~~Cover the "cold-mix" asphalt (i.e., pre-mixed aggregate and asphalt binder) with protective sheeting during a rainstorm~~
- (j) ~~Cover loads with tarp before haul-off to a storage site, and do not overload trucks~~
- (k) ~~Minimize airborne dust by using water spray during grinding~~
  - (b) ~~Avoid stockpiling soil, sand, sediment, asphalt material and asphalt grindings materials or rubble in or near storm water drainage system or watercourses~~

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

~~(m) Protect stockpiles with a cover or sediment barriers during a rain~~

## 7. Electronic Site Tracking System

- (a) Each Permittee shall use an electronic system to track grading permits, encroachment permits, demolition permits, building permits, or construction permits (and any other municipal authorization to move soil and/ or construct or destruct that involves land disturbance) issued by each Permittee. To satisfy this requirement, the use of a database or GIS system is encouraged, but not required.

## 8. Inspections

- (a) Each Permittee shall inspect all construction sites for the implementation of storm water quality controls a minimum of once during the wet season. Concurrently, each Permittee shall ensure that:
- (1) The Local SWPPP is reviewed for compliance with local codes, ordinances, and permits.
  - (2) A follow-up inspection takes place within two weeks for inspected sites that have not adequately implemented their Local SWPPP.
- (b) Each Permittee shall take additional enforcement actions to achieve compliance as specified in municipal codes, if compliance with municipal codes, ordinances, or permits has not been attained.
- (c) Each Permittee can refer sites to the Regional Water Board for ~~further~~ joint enforcement actions for violation of municipal storm water ordinances and the Construction Activities Storm Water General Permit (CASGP), or Small Linear Underground/ Overhead Construction Projects General Permit (small LUPs), after conducting a minimum of 2 site inspections and issuing a minimum of 2 written notices to the operator regarding the violation (copied to the Regional Water Board). In making such referrals, Permittees shall include, at a minimum, the following documentation:
- (1) Name of the site
  - (2) WDID number
  - (3) Site developer
  - (4) Site owner
  - (5) Records of communication with the site operator regarding the violation(s), which shall include at least an inspection report
  - (6) Written notice of the violation copied to the Regional Water
- (d) Prior to approving and/ or signing off for occupancy and issuing the Certificate of Occupancy for all construction projects subject to post-construction controls, each Permittee shall inspect the constructed site design, source control and treatment control BMPs to verify that they have been constructed in compliance with all specifications, plans, permits, ordinances, and this Order. The initial/ acceptance BMP verification inspection does not constitute a maintenance and operation inspection, as required in the preceding subpart E.IV.2(c).

9. State Conformity Requirements

(a) Each Permittee shall ensure that no grading permit, encroachment permit, demolition permit, building permit, electrical permit, or construction permit (or any other municipal authorization to move soil and/ or construct or destruct that involves land disturbance) is issued for any project requiring coverage under the CASGP or Small LUP General Permit<sup>1</sup> unless:

- (1) Proof of filing a Notice of Intent for coverage under a State NPDES permit is demonstrated).
- (2) Demonstration or Certification that a SWPPP has been prepared by the project developer.
- (3) Proof of Change of Information form (COI) and a copy of the modified SWPPP(s) at any time a transfer of ownership takes place for the entire development or portions of the common plan of development where construction activities are still on-going.

10. Interagency Coordination

(a) Referral of Violations:

A Permittee may refer a violator of the municipal storm water ordinance and CWC § 13260 to the Regional Water Board provided that the Permittee has made a good faith effort at progressive enforcement consistent with the preceding subpart F.8(c). At a minimum, the Permittee's good faith effort shall be documented with:

- (1) A minimum of 2 follow-up inspection reports (inspections completed within 3 months).
- (2) A minimum of two warning letters or NOVs.

(b) Referral of Non-filers under the CASGP or the Small LUP General Permit:

Each Permittee shall refer non-filers (i.e., those projects which cannot demonstrate that they have a WDID number) under the CASGP or Small LUP General Permit, to the Regional Water Board, no later than 15 days after making a determination of failure to file. In making such referrals, Permittees shall include, at a minimum, the following documentation:

- (1) Project location address
- (2) Project description
- (3) Developer or owners name with complete mailing address
- (4) Project size
- (5) Records of communication with the developer or owner regarding filing requirements

(c) Investigation of Complaints Regarding Facilities – Transmitted by the Regional Water Board Staff:

<sup>1</sup> NPDES Permit No. CAS000005, Waste Discharge Requirements For Discharges of Storm Water Runoff Associated with Small Linear Underground/ Overhead Construction Projects (Small LUP General Permit) for any linear land disturbing activity or activities (cumulatively) that will cause one acre or more of land disturbance but not more than 5 acres.

E

(1) Each Permittee shall initiate, within one business day,<sup>1</sup> an initial investigation of complaint(s) (other than non-storm water discharges) on the construction site(s) within its jurisdiction.

(A) The initial investigation shall include, at a minimum, an inspection on the facility and its perimeter to confirm the complaint and to determine if the site operator is effectively complying with the municipal storm water/ urban runoff ordinances, and to oversee corrective action.

**(d) Support of Regional Water Board Enforcement Actions – As directed by the Regional Water Board Executive Officer:**

(1) Each Permittee shall support Regional Water Board enforcement actions by:

(A) Assisting in identification of current owners, operators, and lessees of properties and sites.

(B) Providing staff, when available, for joint inspections with Regional Water Board inspectors.

(C) Appearing to testify as witnesses in Regional Water Board enforcement hearings.

(D) Providing copies of inspection reports and other progressive enforcement documentation.

**G. Public Agency Activities Program**

I. Each Permittee shall implement a Public Agency Activities Program to minimize storm water pollution impacts from public agency activities. Public Agency requirements consist of:

- i. Public Construction Activities Management.
- ii. Vehicle Maintenance/ Material Storage Facilities/ Corporation Yards Management/ Municipal Operations.
- iii. Vehicle and Equipment Wash Areas
- iv. Landscape and Recreational Facilities Management
- v. Storm Drain Operation and Management
- vi. Streets and Roads Maintenance
- vii. Public Industrial Activities Management
- viii. Emergency Procedures
- ix. Employee Training
- x. Infrastructure Maintenance

1. Public Construction Activities Management

<sup>1</sup> Permittees may comply with the Permit by taking initial steps (such as logging, prioritizing, and tasking) to “initiate” the investigation within that one business day. However, the Regional Water Board would expect that the initial investigation, including a site visit, to occur within four business days.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (a) Each Permittee shall implement and comply with the Planning and Land Development Program requirements in part 5.E. of this Order at Permittee owned or operated public construction projects for project types identified in part 5.E of this Order.
  - (b) Each Permittee shall implement and comply with the appropriate Development Construction Program requirements in part 5.F. of this Order at Permittee owned or operated construction projects as applicable.
  - (c) For public projects including those under a Capital Improvement Project Plan that disturb less than one acre of soil the Permittees shall require the development and implementation of a Storm Water Pollution Control Plan. The SWPCP shall include BMPs as identified in Tables 5, 9 and 10.
2. Vehicle Maintenance/ Material Storage Facilities/ Corporation Yards Management/ Long Term Maintenance Programs
- (a) Each Permittee shall implement the activity specific BMPs<sup>1</sup> listed in Table 10<sup>9</sup> when such activities occur at Permittee owned/leased facilities and job sites including but not limited to vehicle/ equipment maintenance facilities, material storage facilities, and corporation yards, and at any area that includes the activities as described in the following Tables. Additionally, for any activity or area described in the footnote below,<sup>2</sup> each Permittee shall also implement the BMPs in the Caltrans Storm Water Quality Handbook Maintenance Staff Guide described as B-4 in Table 10 (BMPs at Vehicle Maintenance/ Material Storage Facilities/ Corporation Yards).

Table 10 - BMPs at Vehicle Maintenance/ Material Storage Facilities/ Corporation Yards

3. Vehicle and Equipment Wash Areas
  - (a) Each Permittee shall eliminate discharges of wash waters from vehicle and equipment washing no later than (365 days after Order adoption date) by implementing any of the following measures at existing facilities with vehicle or equipment wash areas:
    - (1) Self-contain, and haul off for disposal
    - (2) Equip with a clarifier
    - (3) Equip with an alternative pre-treatment device; or
    - (4) Plumb to the sanitary sewer
  - (b) Each Permittee shall ensure that any municipal facilities constructed, redeveloped, or replaced has all vehicle and equipment wash areas plumbed to the sanitary sewer or be self contained and all wastewater/ washwater hauled for legal disposal.
  
4. Landscape, Park, and Recreational Facilities Management
  - (a) Integrated Pest Management (IPM)
 

IPM is an ecosystem-based strategy that focuses on long-term prevention of pests or their damage through a combination of techniques such as biological control, habitat manipulation, modification of cultural practices, and use of resistant varieties. Each Permittee shall implement an IPM program within 365 days that includes the following:

    - (1) Pesticides are used only if, ~~after~~ monitoring indicates they are needed according to established guidelines.
    - (2) Treatments are made with the goal of removing only the target organism.
    - (3) Pest controls are selected and applied in a manner that minimizes risks to human health, beneficial, non-target organisms, and the environment.

- (4) Its use of pesticides, including Organophosphates and Pyrethroids do not threaten water quality.
- (5) Partner with other agencies and organizations to encourage the use of IPM.
- (6) Adopt and verifiably implement policies, procedures, and/ or ordinances requiring the minimization of pesticide use and encouraging the use of IPM techniques (including beneficial insects) in the Permittees' overall operations and on municipal property.
- (7) Policies, procedures, and ordinances shall include commitments and timelines to reduce the use of pesticides that cause impairment of surface waters by implementing the following procedures:
  - (A) Quantify pesticide use by its staff and hired contractors.
  - (B) Prepare and annually update an inventory of pesticides used by all internal departments, divisions, and other operational units.
  - (C) Demonstrate reductions in pesticide use.
- (b) Each Permittee shall implement the following requirements no later than (180 days after Order adoption date):
  - (1) Use a standardized protocol for the routine and non-routine application of pesticides (including pre-emergents), and fertilizers.
  - (2) Ensure no application of pesticides or fertilizers are applied to an area immediately prior to, during, or immediately after a rain event, or when water is flowing off the area.
  - (3) Ensure that no banned or unregistered pesticides are stored or applied.
  - (4) Ensure that all staff applying pesticides are certified in the appropriate category by the California Department of Pesticide Regulation, or are under the direct supervision of a pesticide applicator certified in the appropriate category.
  - (5) Implement procedures to encourage the retention and planting of native vegetation to reduce water, pesticide and fertilizer needs; and
  - (6) Store pesticides and fertilizers indoors or under cover on paved surfaces or use secondary containment.
    - (A) Reduce the use, storage, and handling of hazardous materials to reduce the potential for spills.
    - (B) Regularly inspect storage areas.
  - (7) Comply with the provisions and the monitoring requirements for application of aquatic pesticides to surface waters (WQ Order No. 2004-0008-DWQ).

5. Storm Drain Operation and Management

(a) Catch Basin Cleaning

- (1) Each Permittee shall designate catch basin inlets within its jurisdiction as one of the following:
  - Priority A: Catch basins that are designated as consistently generating the highest volumes of trash.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

Priority B: Catch basins that are designated as consistently generating moderate volumes of trash.

Priority C: Catch basins that are designated as generating low volumes of trash.

Within one year of Order adoption, Permittees shall submit a map or list of Catch Basins with their GPS coordinates and their designations. The map or list shall contain the rationale or data to support designations.

(2) Each Permittee shall inspect catch basins according to the following schedule:

Priority A: A minimum of 3 times during the wet season and once during the dry season every year.

Priority B: A minimum of once during the wet season and once during the dry season every year.

Priority C: A minimum of once per year.

Catch basins shall be cleaned as necessary on the basis of inspections.

Permittees shall maintain inspection records for Regional Board review.

(3) In addition to the preceding schedule, Permittees shall ensure that any catch basin that is determined to be at least 25% full of trash shall be cleaned out.

(b) Trash Management at Public Events

(1) Each Permittee shall require for any event in the public right of way or wherever it is foreseeable that substantial quantities of trash and litter may be generated, the following measures:

(A) Proper management of trash and litter generated; and

(B) Arrangement for temporary screens to be placed on catch basins; or

(C) Provide clean out of catch basins, trash receptacles, and grounds in the event area within 24 hours subsequent to the event.

(c) Trash Receptacles

(1) Each Permittee shall install trash receptacles, or equivalent trash capturing devices in areas subject to high trash generation within its jurisdiction no later than (one year after Order adoption date).

(2) Each Permittee shall ensure that all trash receptacles are cleaned out and maintained as necessary to prevent trash overflow.

(d) Catch Basin Labels

(1) Each Permittee shall inspect the legibility of the catch basin stencil or label nearest each catch basin and inlet before the wetrainy season begins.

(2) Each Permittee shall record and re-stencil or re-label within 15 days of inspection, catch basins with illegible stencils.

(e) Additional Trash Management Practices

(1) Each Permittee shall install trash excluders, or equivalent devices on or in catch basins or outfalls to prevent the discharge of trash to the storm drain system or receiving water no later than two years after Order adoption date in areas defined as Priority A (Provision 1a(2)) except in sites where the application of such BMP(s) alone will cause flooding. Lack of maintenance

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

that causes flooding is not an acceptable exception to the requirement to install BMPs. Alternatively the Permittee may implement alternative or enhanced BMPs beyond the provisions of this permit (such as but not limited to increased street sweeping, adding trash cans near trash generation sites, prompt enforcement of trash accumulation, increased trash collection on public property, increased litter prevention messages or trash nets within the MS4) that provide substantially equivalent removal of trash. Permittees shall demonstrate that BMPs, which substituted for trash excluders provide equivalent trash removal performance as excluders. When outfall trash capture is provided, revision of the schedule for inspection and cleanout of catch basins in task (a) may be proposed by the Permittee for approval by the Executive Officer.

## (f) Storm Drain Maintenance

- (1) Each Permittee shall implement a program for Storm Drain Maintenance no later than (180 days after Order adoption date) that includes the following:
  - (A) Visual monitoring of Permittee-owned open channels and other drainage structures for debris at least annually.
  - (B) Remove trash and debris from open channel storm drains a minimum of once per year before the ~~wet~~ season.
  - (C) Eliminate the discharge of contaminants during MS4 maintenance and clean outs.
  - (D) Quantify the amount of materials removed using techniques appropriate for quantifying solid waste and ensure the materials are properly disposed of.

## (g) Spill Response Plan

- (1) Each Permittee shall implement a response plan for spills to the MS4 within their respective jurisdiction. The response Plan shall clearly identify agencies responsible and telephone numbers and e-mail address for contact and shall contain at a minimum the following:
  - (A) Investigation of all complaints received within 24 hours of the incident report.
  - (B) Response within 2 hours to spills for containment upon notification, except where such overflows occur on private property, in which case the response should be within 2 hours of gaining legal access to the property.
  - (C) Notification to appropriate public health agencies and the Office of Emergency Services (OES).

## (h) Permittee Owned Treatment Control BMPs

- (1) Each Permittee shall implement an inspection and maintenance program for all Permittee owned treatment control BMPs, including post-construction treatment control BMPs.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (2) Each Permittee shall ensure proper operation of all treatment control BMPs and maintain them as necessary for proper operation, including all post-construction treatment control BMPs.
- (3) Any residual water produced by a treatment control BMP and not being internal to the BMP performance when being maintained shall be:
  - (A) Hauled away and legally disposed of; or
  - (B) Applied to the land without runoff; or
  - (C) Discharged to the sanitary sewer system (with permits or authorization); or
  - (D) Treated or filtered to remove bacteria, sediments, nutrients, and meet the limitations set in Table 11 (Discharge Limitations for Dewatering Treatment BMPs) prior to discharge to the MS4.

Table 11 - Discharge Limitations for Dewatering Treatment BMPs<sup>1</sup>

Parameter	Units	Limitation
Total Suspended Solids	mg/L	100
Turbidity	NTU	50
Oil and Grease	mg/L	10

6. Streets and Roads Maintenance

(a) Maintenance

- (1) Each Permittee shall perform street sweeping of curbed streets in commercial areas and areas subject to high trash generation to control trash and debris at least two times per month.

(b) Road Reconstruction

- (1) Each Permittee shall require that for any project that includes roadbed or street paving, repaving, patching, digouts, or resurfacing roadbed surfaces, that the following BMPs be implemented for each project.
  - (A) Restrict paving and repaving activity to exclude periods of rainfall or predicted rainfall<sup>2</sup> unless required by emergency conditions.
  - (B) Install sand bags or gravel bags and filter fabric at all susceptible storm drain inlets and at manholes to prevent spills of paving products and tack coat;
  - (C) Prevent the discharge of release agents including soybean oil, other oils, or diesel to the storm water drainage system or receiving waters/watereourses.
  - (D) Minimize non storm water runoff from water use for the roller and for evaporative cooling of the asphalt.
  - (E) Clean equipment over absorbent pads, drip pans, plastic sheeting or other material to capture all spillage and dispose of properly.

<sup>1</sup> Technology based effluent limits.

<sup>2</sup> A probability of precipitation (POP) of 50% is required.

- (F) Collect liquid waste in a container, with a secure lid, for transport to a maintenance facility to be reused, recycled or disposed of properly.
- (G) Collect solid waste by vacuuming or sweeping and securing in an appropriate container for transport to a maintenance facility to be reused, recycled or disposed of properly.
- (H) Cover the "cold-mix" asphalt (i.e., pre-mixed aggregate and asphalt binder) with protective sheeting during a rainstorm.
- (I) Cover loads with tarp before haul-off to a storage site, and do not overload trucks.
- (J) Minimize airborne dust by using water spray during grinding.
- (K) Avoid stockpiling soil, sand, sediment, asphalt material and asphalt grindings materials or rubble in or near storm water drainage system or receiving waters ~~watereourses~~.
- (L) Protect stockpiles with a cover or sediment barriers during a rain.

7. Emergency Procedures

- (a) Each Permittee may conduct repairs of essential public service systems and infrastructure in emergency situations with a self-waiver of the provisions of this Order.
  - (1) Where the self-waiver has been invoked, the Permittee shall submit to the Regional Water Board Executive Officer a statement of the occurrence of the emergency, an explanation of the circumstances, and the measures that were implemented to reduce the threat to water quality, no later than 30 business days after the situation of emergency has passed.
  - (2) Minor repairs of essential public service systems and infrastructure in emergency situations (can be completed in less than one day) are not subject to the notification provisions. Appropriate BMPs to reduce the threat to water quality shall be implemented.

8. Municipal Employee and Municipal Contractor Training

- (a) Each Permittee shall, no later than (12 months after Order adoption date and annually thereafter before June 30), train all of their employees and contractors in targeted positions (whose interactions, jobs, and activities affect storm water quality) on the requirements of the overall storm water management program to:
  - (1) Promote a clear understanding of the potential for activities to pollute storm water.
  - (2) Identify opportunities to require, implement, and maintain appropriate BMPs in their line of work.
- (b) Each Permittee shall, no later than (12 months after Order adoption date and annually thereafter before June 30), train all of their employees and contractors who use or have the potential to use pesticides or fertilizers (whether or not they normally apply these as part of their work). Training programs shall address:
  - (1) The potential for pesticide-related surface water toxicity.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (2) Proper use, handling, and disposal of pesticides.
- (3) Least toxic methods of pest prevention and control, including IPM.
- (4) Reduction of pesticide use.
- (c) Each Permittee shall, no later than (12 months after Order adoption date) and annually thereafter before June 30, train all of their employees and contractors who are responsible for illicit connections and illicit/ illegal discharges. Training programs shall address:
  - (1) Identification
  - (2) Investigation
  - (3) Termination
  - (4) Cleanup
  - (5) Reporting of Incidents
  - (6) Documentation of Incidents

**H. Illicit Connections and Illicit Discharges Elimination Program**

- I. Each Permittee shall implement an Illicit Connections and Illicit Discharges (IC/ IDs) program to eliminate IC/IDs to the storm drain system, and shall document, track, and report all such cases in accordance with the elements and performance measures specified in the following subsections.
  - 1. General
    - (a) Implementation - Each Permittee shall implement an IC/ ID Program. The IC/ ID procedures shall be documented and made available for public review.
    - (b) Tracking - All Permittees shall, no later than (3 years after Order adoption date), map at a scale and in a format specified by the Principal Permittee all known connections to their storm drain system. All Permittees shall map at a scale and in a format specified by the Principal Permittee incidents of illicit connections and discharges since January 2009 on their baseline maps, and shall transmit this information to the Principal Permittee no later than (3 years after Order adoption date). Permittees shall use this information to identify priority areas for further investigation and elimination of IC/ ID.
  - 2. Public Reporting
    - (a) Permittees shall establish and maintain a phone hotline and internet site to receive all reports of IC/ ID complaints.
    - (b) Permittees shall document the location of the reported IC/ ID and the actions undertaken in response to all IC/ ID complaints.
  - 3. Illicit Connections
    - (a) Screening for Illicit Connections
      - (1) Each Permittee shall submit to the Principal Permittee:
        - (A) A map at a scale and in a format specified by the Principal Permittee showing the location and length of underground pipes 18 inches and

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- greater in diameter, and channels within their permitted area and operated by the Permittee in accordance with the following schedule:
- (i) All channeled portions of the storm drain system no later than (365 days after Order adoption date).
  - (ii) All portions of the storm drain system consisting of storm drain pipes 36 inches in diameter or greater, (no later than 3 years after Order adoption date). This provision is not meant to exclude Permittees from using equally effective alternative methods not listed in the manual.
  - (iii) All portions of the storm drain system consisting of storm drain pipes 18 inches in diameter or greater, (no later than 5 years after Order adoption date).
- (B) The status of suspected, confirmed, and terminated illicit connections.
- (2) Permittees shall conduct field screening of their storm drain systems in accordance with screening procedures described in the Illicit Discharge Detection and Elimination, A Guidance Manual for Program Development and Technical Assessments (2004)<sup>1</sup>. Permittees shall conduct field screening of their storm drain system that has not been previously screened and reported to the Regional Board, for illicit connections in accordance with the following schedule:
- (A) All portions of the storm drain system consisting of storm drain pipes 36 inches in diameter or greater, no later than (3 years after Order adoption date).
  - (B) High priority areas identified during the mapping of illicit connections and discharges, no later than (3 years after Order adoption date).
  - (C) All portions of storm drain systems 50 years or older in age, no later than (3 years after Order adoption date).
- (3) Each Permittee shall maintain a list containing all connections under investigation for possible illicit connection and their status.
- (b) Response to Illicit Connections
- (1) Investigation -  
Each Permittee, upon discovery or upon receiving a report of a suspected illicit connection, shall complete an investigation within 21 days, to determine the following:
    - (A) Source of the connection.
    - (B) Nature and volume of discharge through the connection.
    - (C) Responsible party for the connection.
  - (2) Termination -  
Each Permittee, upon confirmation of an illicit storm drain connection, shall ensure the following:

<sup>1</sup> *Illicit Discharge Detection and Elimination, A Guidance Manual for Program Development and Technical Assessments*. The Center for Watershed Protection, Pitt R., October 2004. Chapter 13, 13.1, 13.2, 13.3, 13.4

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

(A) Termination of the connection within 180 days of completion of the investigation, using formal enforcement authority to eliminate the illicit connection.

(3) Documentation -

Each Permittee shall keep records of all illicit connection investigations and the formal enforcement taken to eliminate all illicit connections.

4. Illicit Discharges

(a) Investigation -

Each Permittee shall investigate an illicit/ illegal discharge during or immediately following containment and cleanup activities, and shall take appropriate enforcement action to eliminate the illegal discharge.

(b) Abatement and Cleanup -

Each Permittee shall respond, within 1 business day of discovery or a report of a suspected illicit/ illegal discharge, with actions to abate, contain, and/or clean up all illegal discharges, including hazardous waste.

(c) Documentation -

Each Permittee shall maintain records of all illicit/ illegal discharge discoveries, reports of suspected illicit/ illegal discharges, their response to the illicit/ illegal discharges and suspected illicit/ illegal discharges, and the formal enforcement taken to eliminate all illicit/ illegal discharges.

**I. REPORTING PROGRAM**

1. The Principal Permittee in consultation with the Permittees and Regional Water Board staff shall convene an adhoc working group to develop an Electronic Reporting Program, the basis of which shall be the requirements in this Order. The Committee shall no later than (12 months after Order adoption date) submit the electronic reporting form in each subsequent year.
2. Each Permittee shall submit information required in the Reporting Program in a method as appropriate to the format approved by the Regional Water Board Executive Officer.
3. The Principal Permittee shall submit by December 15<sup>th</sup> of each year, an Annual Report to the Regional Water Board Executive Officer in the form one hard copy and three compact disk (CD) copies (or an electronic equivalent).
4. The Annual Report shall document the status of the Municipal Storm Water Program, an integrated summary of the results of analyses from:
  - (a) The monitoring program described under Part 1- Monitoring Report.
  - (b) The requirements described under Part 2- Program Report.

5. Plans shall be submitted to the Regional Water Board Executive Officer in the form of one hard copy and three compact disk (CD) copies (or an electronic equivalent).
6. Study Reports shall be submitted to the Regional Water Board Executive Officer in the form of one hard copy and three compact disk (CD) copies (or an electronic equivalent).
7. Progress Reports shall be submitted to the Regional Water Board Executive Officer in the form of one hard copy and three compact disk (CD) copies (or an electronic equivalent).

**PART 6 - TOTAL MAXIMUM DAILY LOAD PROVISIONS**

I. Part 6 of this Order incorporates provisions to assure that Ventura County MS4 Permittees comply with WLAs and other requirements of TMDLs covering impaired waters impacted by the Permittees' discharges.

II. H. — Each Permittee shall attain the storm water WLAs incorporated into this Order by implementing BMPs in accordance with the TMDL Technical Reports, Implementation Plans, or as identified as a result of TMDL special studies specified in the Basin Plan Amendment.

III. The Permittees shall comply with the following Wasteload Allocations, consistent with the assumptions and requirements of the Wasteload Allocations documented in the Implementation Plans, including compliance schedules, associated with the State adoption and approval of the TMDL at compliance monitoring points established in each TMDL (40CFR122.44(d)(1)(vii)(B), MS4 effluent quality workplan and source identification approved by the Executive Officer.

IV. TMDLs in effect and covered in this Order are the following:

1. TMDL for Nutrients for Malibu Creek Watershed (Effective date: March 21, 2003)
2. TMDL for Nitrogen Compounds and Related Effects in Calleguas Creek (Effective date: July 16, 2003)
3. TMDL for Nitrogen Compounds for the Santa Clara River (Effective date: March 23, 2004).
4. TMDL for Chloride in Santa Clara River, Reach 3 (Effective date: June 18, 2003)
5. TMDL for Chloride in Upper Santa Clara River (Effective date: May 4, 2005)
6. TMDL for Toxicity, Chlorpyrifos and Diazinon in the Calleguas Creek, its Tributaries and Mugu Lagoon - (Effective date: March 24, 2006).
7. TMDL for Organochlorine Pesticides, Polychlorinated Biphenyls, and Siltation in Calleguas Creek, its Tributaries and Mugu Lagoon (Effective date: March 24, 2006).
8. TMDL for Bacteria in Malibu Creek and Lagoon (Effective date: January 24, 2006).

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- 9. TMDL for Metals and Selenium in the Calleguas Creek, its Tributaries and Mugu Lagoon (Effective date: March 26, 2007)
- 10. TMDL for Trash in Revolon Slough and Beardsley Wash (Effective date: March 6, 2008).
- 11. TMDL for Boron, Chloride, Sulfate, and TDS in Calleguas Creek Watershed (Effective date: December 2, 2008)
- 12. TMDL for Trash in the Ventura River Estuary (Effective date: March 6, 2008).
- 13. TMDL for Bacteria in Harbor Beaches of Ventura County (Effective date: September 23, 2008).

IV. TMDL Interim WLAs incorporated into this Order due to compliance dates which exceed the term of this Order are the following:

- 1. Final Wet Weather Bacteria WLAs for Malibu Creek and Lagoon – (Compliance date: January 24, 2016).
- 2. Final Chloride WLAs for Upper Santa Clara River – (Compliance date: May 4, 2016)
- 3. Final Organochlorine Pesticides, Polychlorinated Biphenyls, and Siltation WLAs for Calleguas Creek, its Tributaries and Mugu Lagoon – (Compliance date: March 24, 2026).
- 4. Final Metals and Selenium WLAs for Calleguas Creek, its Tributaries and Mugu Lagoon (Compliance date: March 26, 2022)
- 5. Final Boron, Chloride, Sulfate, and TDS WLAs for Calleguas Creek watershed (Compliance date: December 2, 2023)

V. TMDL WLAs and Other TMDL Provisions Incorporated into this Order are as follows:

1. TMDL for Nutrients for Malibu Creek Watershed

(a) Summer Load Allocations

	Nitrogen (lbs/day)	Phosphorus (lbs/day)
- Runoff from developed areas	26	2.6
- Golf Course Fertilization	37	6.6
- Dry Weather Urban Runoff	52	4.6
- Other	56	4.1

(b) Winter concentration-based Load Allocations

	Nitrogen (Nitrate-N + Nitrite-N) (mg/L)
- Runoff from Developed Areas	8
- Golf Course Fertilization	8
- Dry Weather Urban Runoff	8

- Other 8

(c) Compliance Monitoring:

This TMDL was established and approved by U.S. EPA and did not include an implementation plan.

(d) Actions and Special Studies required for Malibu Creek MS4 permittees

(1) Extent of algal impairment. EPA recommends studies to investigate the current extent of impairment due to excessive algal growth in the creek by surveying algal biomass and species composition at multiple sites within the creek.

(2) Limiting factor analysis. EPA recommends further study to assess whether total nitrogen or total phosphorus or other parameters such as flow and light limit algal growth in the Malibu Creek watershed.

(3) Fate of nutrients in Malibu Lagoon. EPA recommends this special study to determine if the expected upstream reductions in nutrient loadings would result in desired improvements in water quality in the lagoon.

2. TMDL for Nitrogen Compounds and Related Effects in Calleguas Creek Watershed

The stormwater permitted discharges were considered minor sources of nitrogen to the Calleguas Creek. Therefore, WLAs are not assigned to storm water permitted discharges. The monitoring program of this TMDL includes data collection to quantify loadings and associated WLAs from these sources.

3. TMDL for Nitrogen Compounds in the Santa Clara River

(a) Waste Load Allocations:

(1) The Ventura County MS4 permittees discharging to the Santa Clara River (the cities of Fillmore and Santa Paula) ("Santa Clara MS4 permittees") shall implement BMPs to achieve the following MS4 wasteload allocations applicable to River Reach 3:

<u>Ammonia nitrogen 30-day average</u>	<u>2.0 mg/L</u>
<u>Ammonia nitrogen 1-hour average</u>	<u>4.2 mg/L</u>
<u>Nitrate + Nitrite nitrogen 30-day average</u>	<u>8.1 mg/L</u>

(b) Compliance Monitoring:

(1) Compliance with the WLAs is to be determined through receiving water monitoring conducted in accordance with the Santa Clara River Nitrogen TMDL Monitoring Program approved by the Executive Officer.

(2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for enforcement action.

(c) Actions and Special Studies required of Santa Clara MS4 permittees:

- (1) Annual Progress Reports. Santa Clara River MS4 permittees, either independently or in conjunction with other stakeholders, shall submit an annual progress report with respect to achievement of the WLAs.

4. TMDL for Chloride in Santa Clara River, Reach 3

(a) Waste Load Allocation:

MS4 permittees discharging to Santa Clara River, Reach 3 shall implement BMPs to achieve the following MS4 WLAs:

Chloride (mg/L) 80

(b) Compliance Monitoring: This TMDL was established and approved by U.S. EPA and did not include an implementation plan.

(c) Actions and Special Studies required of Santa Clara MS4 permittees:

- (1) Annual Progress Reports. Santa Clara River MS4 permittees, either independently or in conjunction with other stakeholders, shall submit an annual progress report with respect to achievement of the WLAs.

5. TMDL for Chloride in Upper Santa Clara River

(a) Waste Load Allocation:

MS4 permittees discharging to Upper Santa Clara River shall implement BMPs to achieve the following WLAs

Chloride (mg/L) 100

(b) Compliance monitoring:

(1) Compliance with the WLAs is to be determined through receiving water monitoring conducted in accordance with the Santa Clara River Nitrogen TMDL Monitoring Program approved by the Executive Officer.

(2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports and Implementation Plans. Following these actions, Regional Water Board staff will evaluate the need for enforcement action.

(c) Actions and Special Studies required of Santa Clara MS4 permittees:

- (1) Annual Progress Reports. Santa Clara River MS4 permittees, either independently or in conjunction with other stakeholders, shall submit an annual progress report with respect to achievement of the WLAs.

6. TMDL for Toxicity, Chlorpyrifos, and Diazinon in the Calleguas Creek, its Tributaries and Mugu Lagoon.

(a) Waste Load Allocations:

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (1) MS4 permittees discharging to Calleguas Creek, its tributaries and Mugu Lagoon (Ventura County Watershed Protection District, County of Ventura and the cities of Camarillo, Moorpark, Oxnard, Simi Valley and Thousand Oaks) ("Calleguas MS4 permittees") shall implement BMPs to achieve the following MS4 WLAs:

<u>Toxicity WLA</u>	<u>1.0 TUc</u>
<u>Chlorpyrifos WLA</u>	<u>0.014 ug/L</u>
<u>Diazinon WLA</u>	<u>0.10 ug/L</u>

- (2) Pursuant to the TMDL, the final storm water WLAs for Toxicity, Chlorpyrifos and Diazinon, listed above, are receiving water concentrations measured in-stream at the base of each subwatershed within the Calleguas Creek watershed.

(b) Compliance Monitoring:

- (1) Compliance with the WLAs is to be determined through the measurement of in-stream water quality at the base of each of the Calleguas Creek subwatersheds, in accordance with the Calleguas Creek Watershed TMDL Monitoring Program approved by the Executive Officer.
- (2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for enforcement action.
- (3) If as a result of compliance monitoring and subsequent investigations it is determined that a Calleguas MS4 permittee is responsible for exceedance of the in-stream Toxicity WLA, that permittee shall initiate the TRE/TIE process as outlined in U.S. EPA's "Understanding and Accounting for Method Variability in Whole Effluent Toxicity Applications Under the National Pollutant Discharge Elimination System Program" (2000) or the approved Toxicity TMDL monitoring plan, and take appropriate action to eliminate the identified source of the toxicity.

(c) Actions and Special Studies required of Calleguas MS4 permittees:

- (1) Special Study #1. Together with Calleguas POTW permittees, investigate the pesticides that will replace diazinon and chlorpyrifos in the urban environment, their potential impact on receiving waters and potential control measures. Special Study #1 was completed by March 24, 2008.
- (2) Special Study #2. Together with Calleguas Agricultural Dischargers, consider results of monitoring of sediment concentrations by source/land use type through the special study required in the Calleguas OC Pesticide, PCB, and Siltation TMDL Implementation Plan. Complete within 6 months of completion of the OCs TMDL special study #1.
- (3) Pesticide Collection Program. Together with Calleguas POTW permittees, develop and implement a collection program for diazinon and chlorpyrifos and an educational program. Collection and education could occur through

existing programs such as household hazardous waste collection events. The Pesticide Collection Program is to be implemented by March 24, 2009.

- (4) Special Study #3. Together with Calleguas Agricultural Dischargers, consider the findings of transport rates developed through the OC Pesticide, PCB and Siltation TMDL Implementation Plan. Complete within 6 months of completion of the OCs TMDL special study #1.

7. TMDL for Organochlorine (OC) Pesticides, Polychlorinated Biphenyls (PCBs) and Siltation in the Calleguas Creek, its Tributaries and Mugu Lagoon.

(a) Waste Load Allocations:

- (1) MS4 permittees discharging to Calleguas Creek, its tributaries or Mugu Lagoon (Ventura County Watershed Protection District, County of Ventura and the cities of Camarillo, Moorpark, and Simi Valley) ("Calleguas MS4 permittees") shall implement BMPs to achieve the interim WLAs listed in Table 14.2.

Table 12. Interim Sediment Concentration WLAs (ng/g)

Constituent	Subwatershed					
	Mugu Lagoon	Calleguas Creek	Revolon Slough	Arroyo Las Posas	Arroyo Simi	Conejo Creek
Chlordane	25	17	48	3.3	3.3	3.4
4,4-DDD	69	66	400	290	140	5.3
4,4-DDE	300	470	1600	950	170	20
4,4-DDT	39	110	690	670	25	2
Dieldrin	19	3	5.7	1.1	1.1	3
PCBs	180	3800	7600	25700	25700	3800
Toxaphene	22900	260	790	230	230	260

- (2) Pursuant to the TMDL, the interim storm water WLAs for OC Pesticides, PCBs and Siltation, listed above, are annual average, sediment-based concentrations measured in surface waters at the base of each subwatershed within the Calleguas Creek watershed.

(b) Compliance Monitoring:

- (1) Compliance with the WLAs is to be determined through the measurement of in-stream water quality at the base of each of the Calleguas Creek subwatersheds, in accordance with the Calleguas Creek Watershed TMDL Monitoring Program approved by the Executive Officer.
- (2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for enforcement action.

(c) Actions and Special Studies required of Calleguas MS4 permittees:

- (1) Pesticide Collection Program. Together with Calleguas POTW permittees, implement a collection program and source control measures pursuant to a work plan approved by the Executive Officer. The Pesticide Collection Program is to be implemented by March 24, 2011.
- (2) Special Study #1. Together with Calleguas POTW permittees, Calleguas Agricultural Dischargers, and the Point Mugu Naval Base, submit a work plan to quantify sedimentation in the Calleguas Creek Watershed, evaluate management methods to control siltation and contaminated sediment transport to Calleguas Creek, identify appropriate BMPs to reduce sediment loadings and evaluate the effect of sediment on habitat preservation in Mugu Lagoon for approval by the Executive Officer. This special study is also to evaluate the concentration of OC pesticides and PCBs in sediments from various sources/land use types. Special Study #1 is to be completed by March 24, 2014.
- (3) Special Study #2. Together with Calleguas Agricultural Dischargers, identify areas of high OC concentrations and evaluate the effects of watershed protection and land use practices on water quality. Such practices include but are not limited to management of sediment reduction practices and structures, streambank stabilization, and other projects related to stormwater conveyance and flood control improvements in the Calleguas Creek watershed. Special Study #2 is to be completed based on the schedule provided in the workplan, submitted in March, 2007
- (4) Special Study #3 – Together with Calleguas POTW permittees, Calleguas Agricultural Dischargers, and the Point Mugu Naval Base, evaluate natural attenuation rates and evaluate methods to accelerate organochlorine pesticide and polychlorinated biphenyl attenuation and examine the attainability of wasteload and load allocations in the Calleguas Creek Watershed. Special Study #3 is to be completed by March 24, 2016.

8. TMDL for Metals and Selenium in the Calleguas Creek, its Tributaries and Mugu Lagoon.

(a) Waste Load Allocations:

- (1) MS4 permittees discharging to Calleguas Creek, its tributaries or Mugu Lagoon (Ventura County Watershed Protection District, County of Ventura and the cities of Camarillo, Moorpark, Oxnard, Simi Valley and Thousand Oaks) (“Calleguas MS4 permittees”) shall implement BMPs to achieve the interim WLAs listed in Table 123 and Table 134.

Table 13. Interim WLAs for Copper, Nickel and Selenium (ug/L)

	(ug/L)	Average (ug/L)	(ug/L)	(ug/L)	Average (ug/L)	(ug/L)
Copper	23	19	204	23	19	204
Nickel	15	13	(a)	15	13	(a)
Selenium	(b)	(b)	(b)	14(c)	13(c)	(a)

- (A) The current loads do not exceed the TMDL under wet conditions, interim limits are not required
- (B) Selenium allocations have not been developed for this reach as it is not on the 303(d) list
- (C) Attainment of interim limits will be evaluated in consideration of background loading data, if available

(2) Pursuant to the TMDL, the interim storm water WLAs for copper, nickel, and selenium are receiving water concentrations measured in-stream at the base of Calleguas Creek and Revolon Slough and in Mugu Lagoon.

Table 14. Mass-based WLAs for copper, nickel and selenium

<u>Annual Cumulative Flow (million gallons per year)</u>	<u>Calleguas Creek (lbs/yr)</u>	<u>Revolon Slough (lbs/yr)</u>
0-15,000	3.3	1.7
15,000-25,000	10.5	4
Above 25,000	64.6	10.2

- (3) Pursuant to the TMDL, the interim storm water WLAs for mercury are suspended sediment loads measured in-stream at the base of Calleguas Creek and Revolon Slough and in Mugu Lagoon.
- (4) Determination of the applicable interim WLA will be determined by calculating the total annual flow (October 1-September 30) in the Calleguas Creek watershed as measured by the flow gage at CSUCI.

(b) Compliance Monitoring:

- (1) Compliance with the WLAs is to be determined through the measurement of in-stream water quality and total suspended solids (TSS) at the base of Calleguas Creek, Revolon Slough and in Mugu Lagoon, in accordance with the Calleguas Creek Watershed TMDL Monitoring Program approved by the Executive Officer.
- (2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for enforcement action.

(c) Actions and Special Studies required of Calleguas MS4 permittees:

- (1) Conduct a source control study, develop and submit an Urban Water Quality Management Program (UWQMP) for copper, mercury, nickel, and selenium. Complete by March 26, 2009.
- (2) Implement the UWQMP within one year of approval by Executive Officer.
- (3) In cooperation with agricultural dischargers, evaluate the results of the OCs TMDL special study on sediment transport rates for applicability to the metals and selenium TMDL. Complete within 6 months of completion of the OCs TMDL special study #1.
- (4) In cooperation with agricultural dischargers, include monitoring for copper, mercury, nickel and selenium in the OC pesticides TMDL special study – Monitoring of Sediment by Source and Land Use Type. The special study is to be completed by March 26, 2014.
- (5) Evaluate the results of the OC Pesticides TMDL Special Study – Effects of BMPs on Sediment and Siltation, to determine the impacts on metals and selenium. Complete within 6 months of completion of the OC Pesticides special study #1.
- (6) Evaluate the effectiveness of BMPs implemented under the UWQMP in controlling metals and selenium discharges. This is to be completed by March 26, 2013.
- (7) Re-evaluate agricultural and urban waste load allocations for copper, mercury, nickel and selenium based on the evaluation of BMP effectiveness. By March 26, 2012, urban dischargers will have a required 25% reduction in the difference between the loadings at the time of the TMDL preparation and the final WLAs effective in 2022.
- (8) In cooperation with POTW permittees and agricultural dischargers, conduct a study to identify selenium contaminated groundwater sources. Special Study is to be completed within one year of the approval of the workplan.
- (9) In cooperation with agricultural dischargers, conduct a study to investigate metals “hot spots” and natural soils concentrations. This special study is to be completed within 2 years of the approval of the workplan.

9. TMDL for Bacteria in Malibu Creek and Lagoon

(a) Waste Load Allocations:

- (1) MS4 permittees discharging to Malibu Creek or its tributaries (Ventura County Watershed Protection District, County of Ventura and the cities of Thousand Oaks and Simi Valley) (“Malibu MS4 permittees”) shall achieve the WLAs identified in Resolution 2004-19. . These WLAs are expressed as the number of daily or weekly sample days that may exceed the single sample limits or 30-day geometric mean bacteria targets in Resolution 2004-19.

Table 15 - Bacteria Targets

Parameters	Unit	Fresh Water Targets	
		Geometric Mean	Single Sample

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

E. coli	mg	126/ 100	235/ 100
Fecal coliform	mg	200/ 100	400/ 100

(2) The wasteload allocations are to be achieved no later than January 26, 2012.

(b) Compliance Monitoring:

(1) Achievement of the WLAs is to be determined through receiving water monitoring conducted in accordance with the Santa Monica Bacteria TMDL Compliance Monitoring Program approved by the Executive Officer.

(2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for enforcement action.

(c) Actions and Special Studies required of Malibu MS4 permittees:

(1) If TMDL compliance monitoring indicates that the Malibu MS4 permittees are causing or contributing to an exceedance of the WLAs in the receiving waters, the permittees shall conduct a source identification study and implement additional controls sufficient to achieve the WLAs in the receiving waters.

10. TMDL for Trash in Revolon Slough and Beardsley Wash

(a) Wasteload Allocations

(1) MS4 permittees discharging to Revolon Slough and Beardsley Wash (Ventura County Watershed Protection District, County of Ventura and the cities of Camarillo and Oxnard) shall implement BMPs to achieve the WLAs of zero trash.

(b) Compliance Monitoring

(1) Responsible jurisdictions will develop a TMRP for Executive Officer approval that describes the methodologies that will be used to assess and monitor trash in Revolon Slough and Beardsley Wash and/or within responsible jurisdiction land areas. The TMRP shall include a plan to establish the trash Baseline WLAs.

(2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for enforcement action.

(c) Actions and Special Studies required of Revolon Slough and Beardsley Wash MS4 permittees

(1) Per the adopted Basin Plan Amendment, compliance with the TMDL may be either through a progressive implementation schedule of full capture devices or implementation of other measures to attain the required trash reduction.

11. TMDL for Trash in the Ventura River Estuary

(a) Wasteload Allocations

(1) MS4 permittees discharging to the Ventura River Estuary (Ventura County Watershed Protection District, County of Ventura and the City of Ventura) shall implement BMPs to achieve the WLAs of zero trash.

(b) Compliance Monitoring

(1) Responsible jurisdictions will develop a TMRP for Executive Officer approval that describes the methodologies that will be used to assess and monitor trash in the Ventura River Estuary and/or within responsible jurisdiction land areas. The TMRP shall include a plan to establish the trash Baseline WLAs.

(2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for enforcement action.

(c) Actions and Special Studies required of Revolon Slough and Beardsley Wash MS4 permittees

(1) Per the adopted Basin Plan Amendment, compliance with the TMDL may be either through a progressive implementation schedule of full capture devices or implementation of other measures to attain the required trash reduction.

12. TMDL for Boron, Chloride, Sulfate and TDS in Calleguas Creek Watershed

(a) Waste Load Allocation

(b) Compliance Monitoring

(1) A monitoring plan will be submitted to the RWQCB for Executive Officer approval on June 2, 2009. Monitoring will begin one year after Executive Officer approval of the monitoring plan to allow time for the installation of automated monitoring equipment.

(2) Compliance with the WLAs is to be determined through the measurement of in-stream water quality at the base of each of the Calleguas Creek subwatersheds, in accordance with the Calleguas Creek Watershed TMDL Monitoring Program approved by the Executive Officer.

(3) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for enforcement action.

(c) Actions and Special Studies required of Calleguas Creek Watershed MS4 permittees

Responsible jurisdictions including MS4 permittees shall submit compliance monitoring plan to the Los Angeles Regional Board for Executive Officer approval on June 2, 2009. Monitoring shall begin monitoring as outlined in the approved monitoring plan six months after approval of the work plan.

Responsible jurisdictions including MS4 permittees shall demonstrate that implementation actions have reduced the boron, sulfate, TDS, and chloride imbalance by 20%, 40%, 70% by December 2 of 2011, 2015, and 2018 respectively. Stormwater dischargers shall achieve WLAs, which shall be expressed as NPDES mass-based limits specified in accordance with federal regulations and state policy on water quality control by December 2, 2023.

13. TMDL for Bacteria in Harbor Beaches of Ventura County

(a) Waste Load Allocations

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

(VCWPD) and associated Municipal Separate Storm Sewer System (MS4) permittees in the Channel Islands Harbor subwatershed, and the City of Oxnard shall implement BMPs to achieve the interim WLAs listed in Table 15. All WLAs for summer dry-weather single sample bacteria densities at the Harbor Beaches of Ventura County are zero (0) days of allowable exceedances; winter dry weather and wet weather final WLAs are listed in Table 17 below.

The Basin Plan objectives that serve as the numeric targets for this TMDL are (single sample limits):

- a. Total coliform density shall not exceed 10,000/100 ml.
- b. Fecal coliform density shall not exceed 400/100 ml.
- c. Enterococcus density shall not exceed 104/100 ml.
- d. Total coliform density shall not exceed 1,000/100ml, if the ratio of fecal-to-total coliform exceeds 0.1.

Table 18-16. Interim WLAs for Single Sample Exceedance Days

Location	Summer Dry Weather		Winter Dry Weather		Wet Weather

	Daily Sampling	Weekly Sampling	Daily Sampling	Weekly Sampling	Daily Sampling	Weekly Sampling
Hobie Beach	0	0	3	1	17	3
Kiddie Beach	0	0	3	1	17	3

(2) Pursuant to the TMDL, the interim storm water WLAs for bacteria are from samples taken at existing monitoring sites in ankle to knee- high depths.

(b) Compliance Monitoring

(1) Compliance and monitoring for Harbor Beaches of Ventura County is based on existing monitoring protocols and locations. Monitoring shall continue at sampling locations (VCEHD 36000 and VCEHD37000) and at the current weekly monitoring frequency, consistent with AB411 compliance monitoring. Monitoring shall be conducted on a year-round basis at the

current monitoring locations including the summer months (i.e., April to October) and winter months (i.e., November to March). Bacteria sampling shall be conducted in ankle- to knee-high water, consistent with AB411. However, if additional monitoring stations are added or if changes are made to the sampling frequencies or existing monitoring locations, then submittal of a monitoring plan is required for Executive Officer approval.

- (2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for enforcement action.

(c) Actions and Special Studies required of Harbor Beaches of Ventura County MS4 permittees

- (1) Per the adopted Basin Plan Amendment, compliance with the TMDL may be either through structural and non-structural BMPs or implementation of other measures to attain the required source control.
- (2) Special studies are not required for implementation of the TMDL though conducting special studies is within the discretion of the responsible parties.

~~III. TMDLs in effect and covered in this Order are the following:~~

- ~~1. TMDL for Nitrogen Compounds for the Santa Clara River (Effective date: March 23, 2004).~~
- ~~2. TMDL for Toxicity, Chlorpyrifos and Diazinon in the Calleguas Creek, its Tributaries and Mugu Lagoon (Effective date: March 24, 2006).~~
- ~~3. TMDL for Organochlorine Pesticides, Polychlorinated Biphenyls, and Siltation in Calleguas Creek, its Tributaries and Mugu Lagoon (Effective date: March 24, 2006).~~
- ~~4. TMDL for Bacteria in Malibu Creek and Lagoon (Effective date: January 24, 2006).~~
- ~~5. TMDL for Metals and Selenium in the Calleguas Creek, its Tributaries and Mugu Lagoon (Effective date: March 26, 2007)~~
- ~~6. TMDL for Trash in Revolon Slough and Beardsley Wash (Effective date: March 6, 2008).~~
- ~~7. TMDL for Trash in the Ventura River Estuary (Effective date: March 6, 2008).~~
- ~~8. TMDL for Bacteria in Harbor Beaches of Ventura County (Effective date: September 23, 2008).~~

~~IV. TMDL Interim WLAs incorporated into this Order due to compliance dates which exceed the term of this Order are the following:~~

- ~~1. Final Wet Weather Bacteria WLAs for Malibu Creek and Lagoon (Compliance date: January 24, 2016).~~

~~2. Final Organochlorine Pesticides, Polychlorinated Biphenyls, and Siltation WLAs for Calleguas Creek, its Tributaries and Mugu Lagoon (Compliance date: March 24, 2026).~~

~~3. Final Metals and Selenium WLAs for Calleguas Creek, its Tributaries and Mugu Lagoon (Compliance date: March 26, 2022)~~

~~V. TMDL WLAs and Other TMDL Provisions Incorporated into this Order are as follows:~~

~~1. TMDL for Nitrogen Compounds in the Santa Clara River~~

~~(a) Waste Load Allocations:~~

~~(1) The Ventura County MS4 permittees discharging to the Santa Clara River (the cities of Fillmore and Santa Paula) ("Santa Clara MS4 permittees") shall implement BMPs to achieve the following MS4 wasteload allocations applicable to River Reach 3:~~

Ammonia nitrogen 30 day average	_____	2.0 mg/L
Ammonia nitrogen 1 hour average	_____	4.2 mg/L
Nitrate + Nitrite nitrogen 30 day average	_____	8.1 mg/L

~~(b) Compliance Monitoring:~~

~~(1) Compliance with the WLAs is to be determined through receiving water monitoring conducted in accordance with the Santa Clara River Nitrogen TMDL Monitoring Program approved by the Executive Officer.~~

~~(2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for further enforcement action.~~

~~(c) Actions and Special Studies required of Santa Clara MS4 permittees:~~

~~(1) Annual Progress Reports. Santa Clara River MS4 permittees, either independently or in conjunction with other stakeholders, shall submit an annual progress report with respect to achievement of the WLAs.~~

~~2. TMDL for Toxicity, Chlorpyrifos, and Diazinon in the Calleguas Creek, its Tributaries and Mugu Lagoon.~~

~~(a) Waste Load Allocations:~~

~~(1) MS4 permittees discharging to Calleguas Creek, its tributaries and Mugu Lagoon (Ventura County Watershed Protection District, County of Ventura and the cities of Camarillo, Moorpark, Oxnard, Simi Valley and Thousand Oaks) ("Calleguas MS4 permittees") shall implement BMPs to achieve the following MS4 WLAs:~~

Toxicity WLA	_____	1.0 TUe
Chlorpyrifos WLA	_____	0.014 ug/L
Diazinon WLA	_____	0.10 ug/L

~~(2) Pursuant to the TMDL, the final storm water WLAs for Toxicity, Chlorpyrifos and Diazinon, listed above, are receiving water concentrations~~

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

~~measured in-stream at the base of each subwatershed within the Calleguas Creek watershed.~~

~~(b) Compliance Monitoring:~~

- ~~(1) Compliance with the WLAs is to be determined through the measurement of in-stream water quality at the base of each of the Calleguas Creek subwatersheds, in accordance with the Calleguas Creek Watershed TMDL Monitoring Program approved by the Executive Officer.~~
- ~~(2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for further enforcement action.~~
- ~~(3) If as a result of compliance monitoring and subsequent investigations it is determined that a Calleguas MS4 permittee is responsible for exceedance of the in-stream Toxicity WLA, that permittee shall initiate the TRE/TIE process as outlined in U.S. EPA's "Understanding and Accounting for Method Variability in Whole Effluent Toxicity Applications Under the National Pollutant Discharge Elimination System Program" (2000) or the approved Toxicity TMDL monitoring plan, and take appropriate action to eliminate the identified source of the toxicity.~~

~~(c) Actions and Special Studies required of Calleguas MS4 permittees:~~

- ~~(1) Special Study #1. Together with Calleguas POTW permittees, investigate the pesticides that will replace diazinon and chlorpyrifos in the urban environment, their potential impact on receiving waters and potential control measures. Special Study #1 was completed by March 24, 2008.~~
- ~~(2) Special Study #2. Together with Calleguas Agricultural Dischargers, consider results of monitoring of sediment concentrations by source/land use type through the special study required in the Calleguas OC Pesticide, PCB and Siltation TMDL Implementation Plan. Complete within 6 months of completion of the OCs TMDL special study #1.~~
- ~~(3) Pesticide Collection Program. Together with Calleguas POTW permittees, develop and implement a collection program for diazinon and chlorpyrifos and an educational program. Collection and education could occur through existing programs such as household hazardous waste collection events. The Pesticide Collection Program is to be implemented by March 24, 2009.~~
- ~~(4) Special Study #3. Together with Calleguas Agricultural Dischargers, consider the findings of transport rates developed through the OC Pesticide, PCB and Siltation TMDL Implementation Plan. Complete within 6 months of completion of the OCs TMDL special study #1.~~

~~3. TMDL for Organochlorine (OC) Pesticides, Polychlorinated Biphenyls (PCBs) and Siltation in the Calleguas Creek, its Tributaries and Mugu Lagoon.~~

~~Lagoon for approval by the Executive Officer. This special study is also to evaluate the concentration of OC pesticides and PCBs in sediments from various sources/land use types. Special Study #1 is to be completed by March 24, 2014.~~

- ~~(3) Special Study #2. Together with Calleguas Agricultural Dischargers, identify areas of high OC concentrations and evaluate the effects of watershed protection and land use practices on water quality. Such practices include but are not limited to management of sediment reduction practices and structures, streambank stabilization, and other projects related to stormwater conveyance and flood control improvements in the Calleguas Creek watershed. Special Study #2 is to be completed based on the schedule provided in the workplan, submitted in March, 2007~~
- ~~(4) Special Study #3. Together with Calleguas POTW permittees, Calleguas Agricultural Dischargers, and the Point Mugu Naval Base, evaluate natural attenuation rates and evaluate methods to accelerate organochlorine pesticide and polychlorinated biphenyl attenuation and examine the attainability of wasteload and load allocations in the Calleguas Creek Watershed. Special Study #3 is to be completed by March 24, 2016.~~

4. ~~TMDL for Metals and Selenium in the Calleguas Creek, its Tributaries and Mugu Lagoon:~~

~~(a) Waste Load Allocations:~~

- ~~(1) MS4 permittees discharging to Calleguas Creek, its tributaries or Mugu Lagoon (Ventura County Watershed Protection District, County of Ventura and the cities of Camarillo, Moorpark, Oxnard, Simi Valley and Thousand Oaks) ("Calleguas MS4 permittees") shall implement BMPs to achieve the interim WLAs listed in Table 12 and Table 13.~~

~~Table 13. Interim WLAs for Copper, Nickel and Selenium (ug/L)~~

Selenium	(b)	(b)	(b)	14(e)	13(e)	(a)

~~(A) The current loads do not exceed the TMDL under wet conditions; interim limits are not required~~

~~(B) Selenium allocations have not been developed for this reach as it is not on the 303(d) list~~

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

~~(C) Attainment of interim limits will be evaluated in consideration of background loading data, if available~~

- ~~(2) Pursuant to the TMDL, the interim storm water WLAs for copper, nickel, and selenium are receiving water concentrations measured in stream at the base of Calleguas Creek and Revolon Slough and in Mugu Lagoon.~~

Table 14. Mass-based WLAs for copper, nickel and selenium

Annual Cumulative Flow (million gallons per year)	Calleguas Creek (lbs/yr)	Revolon Slough (lbs/yr)
0-15,000	3.3	1.7
15,000-25,000	10.5	4
Above 25,000	64.6	10.2

- ~~(3) Pursuant to the TMDL, the interim storm water WLAs for mercury are suspended sediment loads measured in stream at the base of Calleguas Creek and Revolon Slough and in Mugu Lagoon.~~
- ~~(4) Determination of the applicable interim WLA will be determined by calculating the total annual flow (October 1-September 30) in the Calleguas Creek watershed as measured by the flow gage at CSUCI.~~

~~(b) Compliance Monitoring:~~

- ~~(1) Compliance with the WLAs is to be determined through the measurement of in-stream water quality and total suspended solids (TSS) at the base of Calleguas Creek, Revolon Slough and in Mugu Lagoon, in accordance with the Calleguas Creek Watershed TMDL Monitoring Program approved by the Executive Officer.~~
- ~~(2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for further enforcement action.~~

~~(c) Actions and Special Studies required of Calleguas MS4 permittees:~~

- ~~(1) Conduct a source control study, develop and submit an Urban Water Quality Management Program (UWQMP) for copper, mercury, nickel, and selenium. Complete by March 26, 2009.~~
- ~~(2) Implement the UWQMP within one year of approval by Executive Officer.~~
- ~~(3) In cooperation with agricultural dischargers, evaluate the results of the OCs TMDL special study on sediment transport rates for applicability to the metals and selenium TMDL. Complete within 6 months of completion of the OCs TMDL special study #1.~~
- ~~(4) In cooperation with agricultural dischargers, include monitoring for copper, mercury, nickel and selenium in the OC pesticides TMDL special study—Monitoring of Sediment by Source and Land Use Type. The special study is to be completed by March 26, 2014.~~

- (5) Evaluate the results of the OC Pesticides TMDL Special Study—Effects of BMPs on Sediment and Siltation, to determine the impacts on metals and selenium. Complete within 6 months of completion of the OC Pesticides special study #1.
- (6) Evaluate the effectiveness of BMPs implemented under the UWQMP in controlling metals and selenium discharges. This is to be completed by March 26, 2013.
- (7) Re-evaluate agricultural and urban waste load allocations for copper, mercury, nickel and selenium based on the evaluation of BMP effectiveness. By March 26, 2012, urban dischargers will have a required 25% reduction in the difference between the loadings at the time of the TMDL preparation and the final WLAs effective in 2022.
- (8) In cooperation with POTW permittees and agricultural dischargers, conduct a study to identify selenium contaminated groundwater sources. Special Study is to be completed within one year of the approval of the workplan.
- (9) In cooperation with agricultural dischargers, conduct a study to investigate metals “hot spots” and natural soils concentrations. This special study is to be completed within 2 years of the approval of the workplan.

5. TMDL for Bacteria in Malibu Creek and Lagoon

(a) Waste Load Allocations:

- (1) MS4 permittees discharging to Malibu Creek or its tributaries (Ventura County Watershed Protection District, County of Ventura and the cities of Thousand Oaks and Simi Valley) (“Malibu MS4 permittees”) shall achieve the WLAs identified in Resolution 2004-19. These WLAs are expressed as the number of daily or weekly sample days that may exceed the single sample limits or 30-day geometric mean bacteria targets in Resolution 2004-19.

Table 15 – Bacteria Targets

Parameters	Unit	Fresh Water Targets	
		Geometric Mean	Single Sample
E. coli	mg	126/100	235/100
Fecal coliform	mg	200/100	400/100

- (2) The wasteload allocations are to be achieved no later than January 26, 2012.

(b) Compliance Monitoring:

- (1) Achievement of the WLAs is to be determined through receiving water monitoring conducted in accordance with the Santa Monica Bacteria TMDL Compliance Monitoring Program approved by the Executive Officer.
- (2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies

~~identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for further enforcement action.~~

~~(e) Actions and Special Studies required of Malibu MS4 permittees:~~

- ~~(1) If TMDL compliance monitoring indicates that the Malibu MS4 permittees are causing or contributing to an exceedance of the WLAs in the receiving waters, the permittees shall conduct a source identification study and implement additional controls sufficient to achieve the WLAs in the receiving waters.~~

~~6. TMDL for Trash in Revolon Slough and Beardsley Wash~~

~~(a) Wasteload Allocations~~

- ~~(1) MS4 permittees discharging to Revolon Slough and Beardsley Wash (Ventura County Watershed Protection District, County of Ventura and the cities of Camarillo and Oxnard) shall implement BMPs to achieve the WLAs of zero trash.~~

~~(b) Compliance Monitoring~~

- ~~(1) Responsible jurisdictions will develop a TMRP for Executive Officer approval that describes the methodologies that will be used to assess and monitor trash in Revolon Slough and Beardsley Wash and/or within responsible jurisdiction land areas. The TMRP shall include a plan to establish the trash Baseline WLAs.~~

- ~~(2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for further enforcement action.~~

~~(e) Actions and Special Studies required of Revolon Slough and Beardsley Wash MS4 permittees~~

- ~~(1) Per the adopted Basin Plan Amendment, compliance with the TMDL may be either through a progressive implementation schedule of full capture devices or implementation of other measures to attain the required trash reduction.~~

~~7. TMDL for Trash in the Ventura River Estuary~~

~~(a) Wasteload Allocations~~

- ~~(1) MS4 permittees discharging to the Ventura River Estuary (Ventura County Watershed Protection District, County of Ventura and the City of Ventura) shall implement BMPs to achieve the WLAs of zero trash.~~

~~(b) Compliance Monitoring~~

- ~~(1) Responsible jurisdictions will develop a TMRP for Executive Officer approval that describes the methodologies that will be used to assess and monitor trash in the Ventura River Estuary and/or within responsible jurisdiction~~

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

~~land areas. The TMRP shall include a plan to establish the trash Baseline WLAs.~~

~~(2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for further enforcement action.~~

~~(e) Actions and Special Studies required of Revolon Slough and Beardsley Wash MS4 permittees~~

~~(1) Per the adopted Basin Plan Amendment, compliance with the TMDL may be either through a progressive implementation schedule of full capture devices or implementation of other measures to attain the required trash reduction.~~

8. TMDL for Bacteria in Harbor Beaches of Ventura County

(a) Waste Load Allocations

(1) MS4 permittees discharging to the Channel Islands Harbor Beaches (the County of Ventura, the Ventura County Watershed Protection District (VCWPD) and associated Municipal Separate Storm Sewer System (MS4) permittees in the Channel Islands Harbor subwatershed, and the City of Oxnard shall implement BMPs to achieve the interim WLAs listed in Table 15. All WLAs for summer dry weather single sample bacteria densities at the Harbor Beaches of Ventura County are zero (0) days of allowable exceedances; winter dry weather and wet weather final WLAs are listed in Table 17 below.

The Basin Plan objectives that serve as the numeric targets for this TMDL are (single sample limits):

- a. Total coliform density shall not exceed 10,000/100 ml.
- b. Fecal coliform density shall not exceed 400/100 ml.
- c. Enterococcus density shall not exceed 104/100 ml.
- d. Total coliform density shall not exceed 1,000/100ml, — if the ratio of fecal to total coliform exceeds 0.1.

Table 16. Interim WLAs for Single Sample Exceedance Days

Kiddie Beach	0	0	3	1	17	3

(2) Pursuant to the TMDL, the interim storm water WLAs for bacteria are from samples taken at existing monitoring sites in ankle to knee high depths.

(b) Compliance Monitoring

(1) Compliance and monitoring for Harbor Beaches of Ventura County is based on existing monitoring protocols and locations. Monitoring shall continue at sampling locations (VCEHD 36000 and VCEHD37000) and at the current weekly monitoring frequency, consistent with AB411 compliance monitoring. Monitoring shall be conducted on a year round basis at the current monitoring locations including the summer months (i.e., April to October) and winter months (i.e., November to March). Bacteria sampling shall be conducted in ankle to knee high water, consistent with AB411. However, if additional monitoring stations are added or if changes are made to the sampling frequencies or existing monitoring locations, then submittal of a monitoring plan is required for Executive Officer approval.

(2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for further enforcement action.

(c) Actions and Special Studies required of Harbor Beaches of Ventura County MS4 permittees

(1) Per the adopted Basin Plan Amendment, compliance with the TMDL may be either through structural and non-structural BMPs or implementation of other measures to attain the required source control.

(2) Special studies are not required for implementation of the TMDL though conducting special studies is within the discretion of the responsible parties.

**PART 7 - DEFINITIONS**

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

The following are definitions for terms in this Order:

**Adverse Impact** - means a detrimental effect upon water quality or beneficial uses caused by a discharge or loading of a pollutant or pollutants.

**Agriculture** - means the science, art, and business of cultivating the soil, producing crops, and raising livestock.

**Antidegradation Policies** - means policies which protect surface and ground waters from degradation, and federal policies, which protect high quality surface waters. In particular, this policy protects waterbodies where existing quality is higher than that necessary for the protection of beneficial uses including the protection of fish and wildlife propagation and recreation on and in the water (*Statement of Policy with Respect to Maintaining High Quality Water in California*, State Board Resolution No. 68-16; 40 CRF 131.12).

**Applicable Standards and Limitations** - means all State, interstate, and Federal standards and limitations to which a "discharge" or a related activity is subject under the CWA, including effluent limitations, water quality standards, standards of performance, toxic effluent standards or prohibitions, best management practices, and pretreatment standards under § 301, § 302, § 303, § 304, § 306, § 307, § 308, § 403, and § 404 of CWA.

**Areas of Special Biological Significance (ASBS)** - means all those areas of this state listed as ASBS, listed specifically within the California Ocean Plan or so designated by the State Board which, among other areas, includes the area from Mugu Lagoon to Latigo Point: Oceanwater within a line originating from Laguna Point at 34° 5' 40" north, 119° 6'30" west, thence southeasterly following the mean high tideline to a point at Latigo Point defined by the intersection of the mean high tide line and a line extending due south of Benchmark 24; thence due south to a distance of 1000 feet offshore or to the 100 foot isobath, whichever distance is greater; thence northwesterly following the 100 foot isobath or maintaining a 1,000-foot distance from shore, whichever maintains the greater distance from shore, to a point lying due south of Laguna Point, thence due north to Laguna Point.

**Authorized Discharge** - means any discharge that is authorized pursuant to an NPDES permit, waste discharge requirement, conditional waiver from waste discharge requirements, or meets the conditions set forth in this Order.

**Automotive Repair Shop** - means a facility that is categorized in any one of the following Standard Industrial Classification (SIC) codes: 5013, 5014, 5541, 7532-7534, or 7536-7539.

**Automotive Service Facilities** - means a facility that is categorized in any one of the following Standard Industrial Classification (SIC) and North American Industry Classification System (NAICS) codes. For inspection purposes, Permittees need not inspect facilities with SIC codes

7538	811111
7539	811198, & 811118

**Bacteria Total Maximum Daily Load (TMDL) Dry Weather** - defined in the Bacteria TMDLs as those days with less than 0.1 inch of rainfall and those days occurring more than 3 days after a rain.

**Bacteria Total Maximum Daily Load (TMDL) Wet Weather** - defined in the Bacteria TMDLs as a day with 0.1 inch or more of rain and 3 days following the rain event.

**Basin Plan** - means the Water Quality Control Plan, Los Angeles Region, Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties, adopted by the Regional Water Board on June 13, 1994 and subsequent amendments.

**Beneficial Uses** - means the existing or potential uses of receiving waters in the permit area as designated by the Regional Water Board in the Basin Plan.

**Best Management Practices (BMPs)** - means methods, measures, or practices designed and selected to reduce or eliminate the discharge of pollutants to surface waters from point and nonpoint source discharges including storm water. BMPs include structural and nonstructural controls, and operation and maintenance procedures, which can be applied before, during, and/or after pollution producing activities.

**California Environmental Quality Act (CEQA)** - means a California statute that requires state and local agencies to identify significant environmental impacts of their actions and to avoid or mitigate those impacts, if feasible (Reference: California Public Resources Code § 21000 et seq.)

**Channel** - means an open conduit either naturally or artificially created which periodically or continuously contains moving water, or which forms a connecting link between two waterbodies.

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

**Chronic Toxicity** - means a measurement of a sublethal effect (e.g., reduced growth, reproduction) to experimental test organisms exposed to an effluent or ambient waters compared to that of the control organisms.

**Commercial Area(s)** - means any geographic area of the Permittees' jurisdiction that is not heavy industrial or residential. A commercial area includes, but is not limited to areas surrounding: commercial activity, hospitals, laboratories and other medical facilities, educational institutions, recreational facilities, plant nurseries, car wash facilities, mini-malls and other business complexes, shopping malls, hotels, office buildings, public warehouses and other light industrial complexes.

**Commercial Development** - means any development on private land that is not heavy industrial or residential. The category includes, but is not limited to: hospitals, laboratories and other medical facilities, educational institutions, recreational facilities, plant nurseries, car wash facilities, mini-malls and other business complexes, shopping malls, hotels, office buildings, public warehouses and other light industrial complexes.

**Construction** - Construction activity includes any construction or demolition activity, clearing, grading, grubbing, or excavation or any other activity that results in a land disturbance. Construction does not include emergency construction activities required to immediately protect public health and safety or routine maintenance activities required to maintain the integrity of structures by performing minor repair and restoration work, maintain original line and grade, hydraulic capacity, or original purpose of the facility. See "Routine Maintenance" definition for further explanation. Where clearing, grading or excavating of underlying soil takes place during a repaving operation, State General Construction Permit coverage is required if more than one acre is disturbed or the activities are part of a larger plan.

**Construction Activities Storm Water General Permit (CASGP)** - means the general NPDES permit adopted by the State Board, which authorizes the discharge of storm water from construction activities under certain conditions.

**Control** - means to minimize, reduce, eliminate, or prohibit by technological, legal, contractual or other means, the discharge of pollutants from an activity or activities.

**Critical Sources** - means commercial facilities and businesses that have a potential to contribute pollutants to stormwater runoff if effective BMPs are not implemented. Attachment "D" specifies the commercial facilities and businesses that have been identified as Critical Sources.

**Dechlorinated/ Debrominated Swimming Pool Discharge** - means any swimming pool discharge with a residual chlorine or bromine level of 0.1mg/L or less; and does not contain any detergents, wastes, algacides, or cyanuric acid in excess of 50 ppm, or any other chemicals

including salts from pools commonly referred to as "salt water pools". The term does not include swimming pool filter backwash or swimming pool water containing bacteria.

**Development** - means any construction, rehabilitation, redevelopment or reconstruction of any public or private residential project (whether single-family, multi-unit or planned unit development); industrial, commercial, retail and any other non-residential projects, including public agency projects; or mass grading for future construction.

**Directly Adjacent** - means situated within 200 feet of the contiguous zone required for the continued maintenance, function, and structural stability of the environmentally sensitive area.

**Directly Discharging** - means outflow from a drainage conveyance system that is composed entirely or predominately of flows from the subject, property, development, subdivision, or industrial facility and not commingled with the flows from adjacent lands.

**Discharge** - means when used without qualification the "discharge of a pollutant."

**Discharging Directly** - means outflow from a drainage conveyance system that is composed entirely or predominantly of flows from the subject, property, development, subdivision, or industrial facility, and not commingled with the flows from adjacent lands.

**Discharge of a Pollutant** - means any addition of any "pollutant" or combination of pollutants to "waters of the United States" from any "point source" or, any addition of any pollutant or combination of pollutants to the waters of the "contiguous zone" or the ocean from any point source other than a vessel or other floating craft, which is being used as a means of transportation. The term discharge includes additions of pollutants into waters of the United States from: surface runoff which is collected or channeled by man; discharges through pipes, sewers, or other conveyances owned by a State, municipality, or other person which do not lead to a treatment works; and discharges through pipes, sewers, or other conveyances, leading into privately owned treatment works.

**Disturbed Area** - means any area that is altered as a result of land disturbance. Examples include but are not limited to: clearing, grading, grubbing, stockpiling and/ or excavation, etc...

**Dry Day** - means a non-wet day for Malibu Creek and Lagoon Bacteria TMDL WLA. A wet day is defined as a day with a 0.1 inch or more of rain and 3 days following the rain event is a non-wet day for Bacteria TMDL WLA.

**Effect Concentration (EC)** is a point estimate of the toxicant concentration that would cause an observable adverse effect (e.g., death, immobilization, or serious incapacitation) in a given percent of the test organisms, calculated from a continuous model (e.g., Probit Model). EC<sub>25</sub> is a point estimate of the toxicant concentration that would cause an observable adverse effect in 25 percent of the test organisms.

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

**Effective Impervious Surface** - means that portion of the surface area that is hydrologically connected via sheet flow over a hardened conveyance or impervious surface without any intervening medium to mitigate flow volume.

**Effluent limitation** - means any restriction imposed by the Permitting Authority (PA) on quantities, discharge rates, concentrations, and/ or mass loadings of "pollutants" which are "discharged" from "point sources" into "waters of the United States," the waters of the "contiguous zone," or the ocean.

**Emergency** - means a sudden, unexpected occurrence, involving a clear and imminent danger, demanding immediate action to prevent or mitigate loss of, or damage to, life, health, property, or essential public services. "Emergency" includes such occurrences as fire, flood, earthquake, or other soil or geologic movements, as well as such occurrences as riot, accident, or sabotage. (Reference: California Public Resources Code § 21060.3. Emergency).

**End-of-Pipe** - means the end of the major outfall as defined in 40 CFR122.26 (b)(5) and 40 CFR122.26 (b)(6).

**Endpoint** - means a biological measurement used to quantify the results obtained from analytical methods such as whole effluent toxicity testing [e.g., lethal concentration (LC<sub>50</sub>); inhibition concentration (IC<sub>25</sub>); and no observed effect concentration (NOEC)]. Such endpoints are quantitative measurements of the responses of test organisms (e.g., survival, growth, mobility, reproduction, and weight gain or loss) in response to exposure to a serial dilution of effluent.

**Environment** - means the physical conditions, which exist within the area and which will be affected by a proposed project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historical or aesthetic significance. The area involved shall be the area in which significant effects would occur either directly or indirectly as a result of the project. The "environment" includes both natural and man-made conditions.

**Environmentally Sensitive Area (ESA)** - means an area "in which plant or animal life or their habitats are either rare or especially valuable because of their special nature or role in an ecosystem and which would be easily disturbed or degraded by human activities and developments" (Reference: California Public Resources Code § 30107.5). ESAs will include Clean Water Act 303d Listed Water Bodies in all reaches that are unimproved, all California Coastal Commission's Environmentally Sensitive Habitat Areas as delineated on maps in Local Coastal Plans and Regional Water Quality Control Board's Basin Plan Rare, Threatened or Endangered Species (RARE) and Preservation of Biological Habitats (BIOL) designated waterbodies. The California Department of Fish and Game's Significant Natural Areas map will be considered for inclusion as the department field verifies the designated locations. Watershed restoration projects will be considered for inclusion as the department field verifies the designated locations.

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

**Erosivity Factor** - The Erosivity Factor is a criterion that to assess the risk of erosion on disturbed land. It is described in "Predicting soil erosion by water: A guide to conservation planning with the Revised Universal Soil Loss Equation (RUSLE), Agricultural Handbook 703, USDA-ARS, U.S. Government Printing Office, Washington, D.C., 1997 by Renard, K.C., G.R. Foster, G.A. Weesies, D.K. McCool, and D.C. Yoder.

**Federal Clean Water Act (CWA)** - means (formerly referred to as the Federal Water Pollution Control Act or Federal Water Pollution Control Act Amendments of 1972) Public Law 92—500, as amended by Public Law 95—217, Public Law 95—576, Public Law 96—483 and Public Law 77—117, codified at 33 U.S.C. 1251 et seq.

**First Storm Event** - means the first storm event of the wet season that produces at least 0.25 inches of rain.

**Forest Land** - means land at least 10 percent stocked with live trees, or land that had this minimum tree stocking in the past and is not currently developed for nonforest use. The minimum area recognized is 1 acre.

**Groundwater Dewatering** - means the active practice of removing standing water from soil excavations using a pump(s) or other means.

**Hillside** - means property located in an area with known erosive soil conditions, where the development will result in grading on any slope that is 20% or greater or an area designated by the Municipality under a General Plan or ordinance as a "hillside area".

**Horse Stables** - means a property where at least one horse is stabled at least part of the year.

**Hydromodification** - means the alteration away from a natural state of stream flows or the beds or banks of rivers, streams, or creeks, including ephemeral washes, which results in hydrogeomorphic changes.

**Illegal Discharge** - means any discharge to the municipal separate storm sewer (storm drain system) that is prohibited under local, state, or federal statutes, ordinances, codes, or regulations. The term illegal discharge includes all non-storm water discharges not composed entirely of storm water except discharges pursuant to an NPDES permit, discharges that are identified in part 1, "Discharge Prohibitions" of this order, or discharges authorized by the Regional Water Board Executive Officer.

**Illicit Connection** - means any engineered conveyance that is connected to the storm drain system without a permit or municipal authorization. It also means any engineered conveyance through which discharges of pollutants to the separate storm drainage systems, which are not composed entirely of storm water or are not authorized by an NPDES permit, may occur.

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

**Illicit Discharge** - means any discharge to a municipal separate storm sewer (storm drain system) that is prohibited under local, state, or federal statutes, ordinances, codes, or regulations. The term illicit discharge includes all non-storm water discharges not composed entirely of storm water except discharges pursuant to a NPDES permit (other than the NPDES permit for discharges from the municipal separate storm sewer) and discharges that are identified in part 1, "Discharge Prohibitions" of this order, or authorized by the Regional Water Board Executive Officer.

**Illicit Disposal** - means any disposal, either intentionally or unintentionally, of material(s) or waste(s) that can pollute storm water.

**Industrial/ Commercial Facility** - means any facility involved and/ or used in the production, manufacture, storage, transportation, distribution, exchange or sale of goods and/ or commodities, and any facility involved and/ or used in providing professional and non-professional services. This category of facilities includes, but is not limited to, any facility defined by either the Standard Industrial Classifications (SIC) or the North American Industry Classification System (NAICS). Facility ownership (federal, state, municipal, private) and profit motive of the facility are not factors in this definition.

**Industrial Activities Storm Water General Permit (IASGP)** - means the general NPDES permit adopted by the State Board, which authorizes the discharge of storm water from certain industrial activities under certain conditions.

**Industrial Park** - means a land development that is set aside for industrial development. Industrial parks are usually located close to transport facilities, especially where more than one transport modalities coincide: highways, railroads, airports, and navigable rivers. It includes office parks, which have offices and light industry.

**Inhibition Concentration (IC)** - means a point estimate of the toxicant concentration that would cause a given percent reduction in a non-lethal biological measurement (e.g., reproduction or growth), calculated from a continuous model (i.e., Interpolation Method). IC25 is a point estimate of the toxic concentration that would cause a 25-percent reduction in a non-lethal biological measurement.

**Inspection** - means entry and the conduct of an on-site review of a facility and its operations, at reasonable times, to determine compliance with specific municipal or other legal requirements. The steps involved in performing an inspection, include, but are not limited to:

1. Pre-inspection documentation research
2. Request for entry
3. Interview of facility personnel
4. Facility walk-through
5. Visual observation of the condition of facility premises

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- 6. Examination and copying of records as required
- 7. Sample collection (if necessary or required)
- 8. Exit conference (to discuss preliminary evaluation)
- 9. Report preparation, and if appropriate, recommendations for coming into compliance

**Integrated Pest Management (IPM)** - means a sustainable approach to managing pests by combining biological, cultural, physical and chemical tools in a way that minimizes economic, health, and environmental risks.

**Large Municipal Separate Storm Sewer System (MS4)** - means all MS4s that serve a population greater than 250,000 (1990 Census) as defined in 40 CFR122.26 (b)(4). The Regional Water Board designated Ventura County as a large MS4 in 1990, based on: (i) the U.S. Census Bureau 1990 population count of 669,016 thousand, and (ii) the interconnectivity of the MS4s in the incorporated and unincorporated areas within the County.

**Local SWPPP** - means the Local Storm Water Pollution Prevention Plan (LSWPPP) required by the local agency for a project that disturbs one or more acres of land. Shall mean a plan identifying potential pollutant sources from a construction site and describing proposed design, placement and implementation of BMPs, to effectively prevent non-storm water discharges and reduce pollutants in storm water discharges to the storm drain system, during construction activities. Also referred as a Storm Water Pollution Control Plan (SWPCP).

**Low Impact Development (LID)** – means a design strategy with the goal of maintaining or replicating the pre-development hydrologic regime through the use of design techniques to create a functionally equivalent hydrologic site design. Hydrologic functions of storage, infiltration and ground water recharge, as well as the volume and frequency of discharges are maintained through the use of integrated and distributed micro-scale storm water retention and detention areas, reduction of impervious surfaces, and the lengthening of runoff flow paths and flow time. Other strategies include the preservation/protection of environmentally sensitive site features such as riparian buffers, wetlands, steep slopes, valuable (mature) trees, flood plains, woodlands, and highly permeable soils.

**Major Municipal Separate Storm Sewer Outfall (“or major outfall”)** - means a major municipal separate storm sewer outfall that discharges from a single pipe with an inside diameter of 36 inches or more or its equivalent (discharge from a single conveyance other than circular pipe which is associated with a drainage area of more than 50 acres); or for municipal separate storm sewers that receive storm water from lands zoned for industrial activity (based on comprehensive zoning plans or the equivalent), an outfall that discharges from a single pipe with an inside diameter of 12 inches or more or from its equivalent (discharge from other than a circular pipe associated with a drainage area of 2 acres or more), as defined in 40 CFR122.26 (b)(5).

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

**Major Outfall** - means a major municipal separate storm sewer outfall, as defined in 40 CFR122.26 (b)(6).

**Maximum Extent Practicable (MEP)** – The technology-based permit requirement established by Congress in CWA section 402(p)(3)(B)(iii) that municipal dischargers of storm water must meet. Technology-based requirements, including MEP, establish a level of pollutant control that is derived from available technology or other controls. MEP requires municipal dischargers to perform at maximum level that is practicable. Compliance with MEP may be achieved by emphasizing pollution prevention and source control BMPs in combination with structural and treatment methods where appropriate. The MEP approach is an ever evolving and advancing concept, which considers technical and economic feasibility.

**Method Detection Limit (MDL)** - means the minimum concentration of a substance that can be measured and reported with 99 percent confidence that the analyte concentration is greater than zero, as defined in 40 CFR136, Appendix "G" of this Order.

**Minimum Level (ML)** - means the concentration at which the entire analytical system must give a recognizable signal and acceptable calibration point. The ML is the concentration in a sample that is equivalent to the concentration of the lowest calibration standard analyzed by a specific analytical procedure, assuming that all the method specified sample weights, volumes, and processing steps have been followed. The ML value represents the lowest quantifiable concentration in a sample based on the proper application of all method-based analytical procedures and the absence of any matrix interferences. Assuming that all method-specific analytical steps are followed, the ML value will also represent, after the appropriate application of method-specific factors, the lowest standard in the calibration curve for that specific analytical technique.

**Minimum Significant Difference (MSD)** - means a measure of test sensitivity that establishes the minimum difference required between a control and a test treatment in order for that difference to be considered statistically significant.

**Municipal Action Levels (MALs)** – means an action level that is derived from a statistical analysis of relevant data that is utilized to identify areas and subwatersheds that require additional or improved BMPs to reduce the discharge of pollutants to the maximum extent practicable. MALs may be revised as additional data are obtained so that MALs can continue to be used to effectively prioritize BMP implementation as the storm water program progresses. MALs are one measure of the effectiveness of the storm water program. MALs are not effluent limitations as defined by this Order, and/or as defined by Water code section 13385.1(c).

**Municipal Separate Storm Sewer System (MS4)** - means a conveyance or system of conveyances (including roads w/ drainage systems, municipal streets, catch basins, curbs, gutters, ditches, manmade channels, or storm drains), as defined in 40 CFR122.26(b)(8):

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

1. Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under § 208 of the Federal Clean Water Act (CWA) that discharges into waters of the United States
2. Designed or used for collecting or conveying storm water
3. Which is not a combined sewer
4. Which is not part of a Publicly Owned Treatment Works (POTW), as defined in 40 CFR122.2

**NAICS** - means North American Industry Classification System.

**National Pollutant Discharge Elimination System (NPDES)** - means the national program for issuing, modifying, revoking and reissuing, terminating, monitoring and enforcing permits, and imposing and enforcing pretreatment requirements, under CWA § 307, 402, 318, and 405.

**Natural Drainage Systems** - means unlined or unimproved (not engineered) creeks, streams, rivers or similar waterways.

**New Development** - means land disturbing activities; structural development, including construction or installation of a building or structure, creation and replacement of impervious surfaces; and land subdivision.

**Non-Storm Water Discharge** - means any discharge to a storm drain that is not composed entirely of storm water.

**No Observed Effect Concentration (NOEC)** - means the highest tested concentration of an effluent or toxicant that causes no observable adverse effect on the test organisms (i.e., the highest concentration of toxicant at which the values for the observed responses are not statistically different from the controls).

**Nuisance** - means anything that meets all of the following requirements: (1) is injurious to health, or is indecent or offensive to the senses, or an obstruction to the free use of property, so as to interfere with the comfortable enjoyment of life or property; (2) affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal.; (3) occurs during, or as a result of, the treatment or disposal of wastes.

**Nursery** - means NAICS classification to describe nursery operations and determine the type of operations covered under this Order and those covered under the Conditional Waiver of Waste Discharge Requirements for Discharges from Irrigated Lands (Conditional Waiver).

1. There are 3 broad NAICS sectors available to classify nurseries:

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (1) 111xxx - Crop Production - Agriculture
- (a) 424xxx - Merchant Wholesalers, Nondurable Goods
- (b) 44xxxx - Retail Trade
- (1) **Nursery (Agricultural Facilities - Crop Production)** - means Nursery and Floriculture Production under NAICS Code 11142x. These operations are subject to the **Conditional Waiver**. This industry comprises establishments primarily engaged in (1) growing nursery and floriculture products (e.g., nursery stock, shrubbery, cut flowers, flower seeds, foliage plants, sod) under cover or in open fields and/ or (2) growing short rotation woody trees with a growing and harvesting cycle of 10 years or less for pulp or tree stock (e.g., cut Christmas trees, cottonwoods).
- (2) **Nursery (Commercial Facilities - Merchant Wholesalers, Nondurable Goods, and Retail Trade)** - means industries Flower, Nursery Stock, and Florists' Supplies Merchant Wholesalers under NAICS Code 424930; and Nursery, Garden Center, and Farm Supply Stores under NAICS Code 444220. This Order covers these types of operations. The industry in NAICS Code 424930 comprises establishments primarily engaged in the merchant wholesale distribution of flowers, florists' supplies, and/ or nursery stock (except plant seeds and plant bulbs). The industry in NAICS Code 444220 comprises establishments primarily engaged in retailing nursery and garden products, such as trees, shrubs, plants, seeds, bulbs, floriculture products and sod, which are predominantly grown elsewhere. These establishments may sell a limited amount of a product they grow themselves.

**Open Channel** - means a storm drainage channel that is not a natural water course.

**Parking Lot** - means land area or facility for the parking or storage of motor vehicles used for businesses, commerce, industry, or personal use.

**Percent Minimum Significant Difference (PMSD)** - means the minimum significant difference divided by the control mean, expressed as a percent (see minimum significant difference).

**Permit** - means an authorization, license, or equivalent control document issued by U.S. EPA or an "approved State" to implement the requirements of 40 CFR Parts 122, 123, and 124.

"Permit" includes an NPDES "general permit" (§ 122.28). Permit does not include any permit, which has not yet been the subject of final agency action, such as a "draft permit" or a "proposed permit."

**Permittee(s)** - means co-permittee(s) and any agency named in this Order as being responsible for permit conditions within its jurisdiction, as defined by Federal Regulation. Permittees to this Order include the Ventura Water Protection District, Ventura County, and the cities of Camarillo, Fillmore, Moorpark, Ojai, Oxnard, Port Hueneme, San Buenaventura, Santa Paula, Simi Valley and Thousand Oaks.

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

**Point Source** - means any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged. This term does not include agricultural storm water discharges and return flows from irrigated agriculture.

**Point Zero** - means in the context of the TMDLs, the point at which water from the storm drain or creek initially mixes with water. Point zero has been selected as the compliance point for the TMDL numeric target because access to these drains is, on the whole, not restricted.

**Pollutants** - means those "pollutants" defined in CWA § 502(6) (33.U.S.C. § 1362(6)), and incorporated by reference into California Water Code § 13373.

**Pollutants of Concern** - means constituents that have exceeded Basin Plan Objectives, and CTR- Chronic or Acute Objectives during monitoring at Mass Emission, Receiving Water, and Land Use stations.

**Potable Water Sources** - means the potable water system for the treatment, distribution, and provision of water for residential, commercial, industrial, or institutional use that meets all California safe drinking water regulatory standards for human consumption.

**Pre-Developed Condition** - means native vegetation and soils that existed at a site prior to first development. The pre-developed condition may be assumed to be an area with the typical vegetation, soil, and storm water runoff characteristics of open space areas in coastal Southern California unless reasonable historic information is provided that the area was atypical.

**Priority Pollutants** - means those constituents referred to in 40 CFR401.15 and listed in the U.S. EPA NPDES Application Form 2C, pp. V-3 through V-9.

**Project** - means all development, redevelopment, and land disturbing activities. The term is not limited to "Project" as defined under CEQA (Reference: California Public Resources Code § 21065).

**Qualified SWPPP Developer or Qualified SWPPP Practitioner** – refer to State of California General Construction Stormwater Permit for definition.

**Rare, Threatened, or Endangered Species (RARE)** - means a beneficial use for waterbodies in the Los Angeles Region, as designated in the Basin Plan (Table 2-1), that supports habitats necessary, at least in part, for the survival and successful maintenance of plant or animal species established under state or federal law as rare, threatened, or endangered.

**Redevelopment** - means land-disturbing activity that results in the creation, addition, or

replacement of 5,000 square feet or more of impervious surface area on an already developed site. Redevelopment includes, but is not limited to: the expansion of a building footprint; addition or replacement of a structure; replacement of impervious surface area that is not part of a routine maintenance activity; and land disturbing activities related to structural or impervious surfaces. It does not include routine maintenance to maintain original line and grade, hydraulic capacity, or original purpose of facility, nor does it include emergency construction activities required to immediately protect public health and safety.

**Regional Administrator** - means the Regional Administrator of the Regional Office of the U.S. EPA or the authorized representative of the Regional Administrator.

**Report of Waste Discharge (ROWD)** - means an application for renewal of the NPDES Permit for Waste Discharge Requirements for Municipal Separate Storm Sewer Discharges Within the Ventura County Watershed Protection District, County of Ventura and the Incorporated Cities Therein.

**Restaurant** - means a facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (SIC Code 5812).

**Restoration** - means the reestablishment of predisturbance aquatic functions and related physical, chemical and biological characteristics (Reference: National Research Council. 1992. Restoration of Aquatic Ecosystems: Science, Technology and Public Policy. National Academy Press, Washington, D.C.).

**Retail Gasoline Outlet (RGO)** - means any facility engaged in selling gasoline and lubricating oils- SIC 5541 and NAICS 447110 & 447190.

1. RGOs: 447190 Other Gasoline Stations:

This industry comprises establishments known as gasoline stations (except those with convenience stores) primarily engaged in one of the following: (1) retailing automotive fuels (e.g., diesel fuel, gasohol, gasoline) or (2) retailing these fuels in combination with activities, such as providing repair services; selling automotive oils, replacement parts, and accessories; and/ or providing food services.

2. RGOs: 447110 Gasoline Stations with Convenience Stores:

Retailing automotive fuels in combination with a convenience store or food mart.

**Routine Maintenance** –Routine maintenance projects include, but are not limited to projects conducted to:

1. Maintain the original line and grade, hydraulic capacity, or original purpose of the facility.
2. Perform as needed restoration work to preserve the original design grade, integrity and hydraulic capacity of flood control facilities.
3. Includes road shoulder work, regrading dirt or gravel roadways and shoulders and performing ditch cleanouts.

- 4. Update existing lines\* and facilities to comply with applicable codes, standards, and regulations regardless if such projects result in increased capacity.
- 5. Repair leaks

Routine maintenance does not include construction of new\*\* lines or facilities resulting from compliance with applicable codes, standards and regulations.

\* Update existing lines includes replacing existing lines with new materials or pipes.

\*\* New lines are those that are not associated with existing facilities and are not part of a project to update or replace existing lines.

**Screening** - means using proactive methods to identify illicit connections through a continuously narrowing process. The methods may include: performing baseline monitoring of open channels, conducting special investigations using a prioritization approach, analyzing maintenance records for catch basin and storm drain cleaning and operation, and verifying all permitted connections into the storm drains. Special investigation techniques may include: dye testing, visual inspection, smoke testing, flow monitoring, infrared, aerial and thermal photography, and remote control camera operation.

**Sidewalk Rinsing** - means only sidewalk rinsing using high pressure and low volume of water with no additives and at an average usage of 0.006 gallons per square foot of surface area to be rinsed. Any waste generated from the activity must be collected and properly and legally disposed of. It does not mean hosing of any sidewalk or street with a garden hose with a pressure nozzle.

**Site** - means the land or water area where any "facility or activity" is physically located or conducted, including adjacent land used in connection with the facility or activity.

**Small Construction** - means any soil disturbing activities less than 5 acres.

**Smart Growth**- development in or near cities intended to lessen or reverse suburban sprawl, decrease the use of automobiles, and shorten daily travel. It uses compact building design to cluster together residential, shopping, and work areas and encourages walkind and public transportation. Smart Growth is considered a stormwater BMP in the 2005 publication *Using Smart Growth Techniques as Stormwater Best Management Practices*, EPA 231-B-05-002.

**Source Control BMP** - means any schedules of activities, prohibitions of practices, maintenance procedures, managerial practices or operational practices that aim to prevent storm water pollution by reducing the potential for contamination at the source of pollution.

**Southern California Stormwater Monitoring Coalition (SMC)** - means the Stormwater Monitoring Coalition, which is a collaborative research/ monitoring partnership of the Southern California Water Boards, Municipal Storm Water Agencies, and municipalities to develop the methodologies and assessment tools to more effectively understand urban storm water and non-storm water (anthropogenic) impacts to receiving waters and to conduct research/

monitoring through Subsequent Research Implementation Agreements. The first original cooperative agreement was entered into on February 8, 2001.

**Stream** - means a body of flowing water; natural water course containing water at least part of the year. In hydrology, it is generally applied to the water flowing in a natural channel as distinct from a canal (Reference: US Geological Survey).

**Strip Mall** - means a commercial development that is a shopping center where the stores are arranged in a row, with a sidewalk in front. Strip malls are typically developed as a unit and have large parking lots in front. They face major traffic arterials and tend to be self-contained with few pedestrian connections to surrounding neighborhoods. It is also called a plaza.

**Storm Event Monitoring**- means a rainfall event that produces more than 0.25 inch of precipitation and is separated from the previous storm event by at least 1 week of dry weather, for the purpose of monitoring.

**Storm Water** - means storm water runoff, snow melt runoff, and surface runoff and drainage, as defined in 40 CFR122.26(b)(13).

**Storm Water Discharge Associated with Industrial Activity** - means industrial discharge, as defined in 40 CFR122.26(b)(14).

**Storm Water Quality Management Program** - means the Ventura Countywide Storm Water Quality Management Plan, which includes descriptions of programs, collectively developed by the Permittees in accordance with provisions of the NPDES Permit, to comply with applicable federal and state law, as the same is amended from time to time.

**Structural BMP** - means any structural facility designed and constructed to mitigate the adverse impacts of storm water runoff pollution (e.g. canopy, structural enclosure). The category may include both Treatment Control BMPs and Source Control BMPs.

**Summer Dry Weather** - means dry weather days occurring from April 1 through October 31 of each year.

**t-Test** (formally Student's t-test) - means a statistical analysis comparing two sets of replicate observations, in the case of WET, only two test concentrations (e.g., a control and 100% effluent). The purpose of this test is to determine if the means of the two sets of observations are different [e.g., if the 100% effluent concentration differs from the control (i.e., the test pass or fails)].

**Targeted Employees** - means management and staff who perform or direct activities that directly or indirectly have an effect of storm water quality. The employees generally are employed in the following areas: department of public works, engineering, sanitation, storm

water maintenance, drainage and flood control, transportation, streets and roads, parks and recreation, public landscaping and corporation yards, planning or community development, code enforcement, building and safety, harbor or port departments, airports, or general services and fleet services.

**Total Maximum Daily Load (TMDL)** - means the sum of the individual waste load allocations for point sources and load allocations for nonpoint sources and natural background.

**Toxicity Identification Evaluation (TIE)** - means a set of procedures to identify the specific chemical(s) responsible for toxicity through a process of chemical/ physical manipulations of samples followed by toxicity tests. These procedures are performed in 3 phases (Phase I- Toxicity Characterization Procedure, Phase II- Toxicity Identification Procedure, and Phase III- Toxicity Confirmation Procedure) using aquatic organism toxicity tests.

**Toxicity Reduction Evaluation (TRE)** - means a study conducted in a step-wise process to identify the causative agents of effluent or ambient toxicity, isolate the sources of toxicity, evaluate the effectiveness of toxicity control options, and then confirm the reduction in toxicity.

**Toxicity Test** - means a procedure using living organisms to determine whether a chemical or an effluent is toxic. A toxicity test measures the degree of the effect of a specific chemical or effluent on exposed test organisms.

**Toxic Unit (TU)** - means a measure of toxicity in an effluent as determined by the acute toxicity units (TUa) or chronic toxicity units (TUc) measured. The larger the TU, the greater the toxicity.

**Toxic Unit - Chronic (TUc)** - means 100 times the reciprocal of the effluent concentration that causes no observable effect on the test organisms in a chronic toxicity test ( $TUc = 100/NOEC$  or  $100/EC25$ ) (see NOEC).

**Treatment** - means the application of engineered systems that use physical, chemical, or biological processes to remove pollutants. Such processes include, but are not limited to, filtration, gravity settling, media absorption, biodegradation, biological uptake, chemical oxidation and UV radiation.

**Treatment Control BMP** - means any engineered system designed to remove pollutants by simple gravity settling of particulate pollutants, filtration, biological uptake, media absorption or any other physical, biological, or chemical process.

**Urbanization** - means the process of changing of land use and land patterns from rural characteristics to urban (city-like) characteristics. These changes include (i) the replacement of pervious surfaces with impervious surfaces such as rooftops and buildings, and impervious materials such as asphalt and concrete; and (ii) the conversion of rural land to house new residents, support new businesses, and facilitate vehicular traffic flow.

**U.S. EPA Phase I Facilities** - means facilities in specified industrial categories that are required to obtain an NPDES permit for storm water discharges, as required by 40 CFR122.26(c).

These categories include:

1. Facilities subject to storm water effluent limitation guidelines, new source performance standards, or toxic pollutant effluent standards (40 CFR N)
2. Manufacturing facilities
3. Oil and gas/ mining facilities
4. Hazardous waste treatment, storage, or disposal facilities
5. Landfills, land application sites, and open dumps
6. Recycling facilities
7. Steam electric power generating facilities
8. Transportation facilities
9. Sewage of wastewater treatment works
10. Light manufacturing facilities

**Vehicle Maintenance/ Material Storage Facilities/ Corporation Yards** - means any Permittee owned or operated facility or portion thereof that:

1. Conducts industrial activity, operates or stores equipment or materials, and provides services similar to Federal Phase I facilities;
2. Performs fleet vehicle service/ maintenance including repair, maintenance, washing, or fueling;
3. Performs maintenance and/ or repair of machinery/ equipment; or
4. Stores chemicals, raw materials, or waste materials.

**Waste Load Allocations (WLAs)** - means a portion of a receiving water's Total Maximum Daily Pollutant Load (TMDL) that is allocated to one of its existing or future point sources of pollution (Reference: 40 CFR130.2(h)).

**Water Quality Objectives** - means water quality criteria contained in the Basin Plan, the California Ocean Plan, the National Toxics Rule, the California Toxics Rule, and other state or federally approved surface water quality plans. Such plans are used by the Regional Water Board to regulate all discharges, including storm water discharges.

**Water Quality Standards** - means the State Water Quality Standards, which are comprised of beneficial uses, water quality objectives and the State's Antidegradation Policy.

**Waters of the State** - means any surface water or groundwater, including saline waters, within boundaries of the state (Reference: California Water Code § 13050).

**Waters of the United States or Waters of the US** - means:

1. All waters that are currently used, were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

ebb and flow of the tide;

- 2. All interstate waters, including interstate "wetlands";
- 3. All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, "wetlands," sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds where the use, degradation, or destruction of which would affect or could affect interstate or foreign commerce including any such waters:
  - a. Which are or could be used by interstate or foreign travelers for recreational or other purposes
  - b. From which fish or shellfish are or could be taken and sold in interstate or foreign commerce; or
  - c. Which are used or could be used for industrial purposes by industries in interstate commerce
- 4. All impoundment's of waters otherwise defined as waters of the United States under this definition;
- 5. Tributaries of waters identified in the preceding paragraph (1) through (4) of this definition;
- 6. The territorial sea; and
- 7. "Wetlands" adjacent to waters (other than waters that are themselves wetlands) identified in the preceding paragraph (1) through (6) of this definition.  
(Reference: 33 CFR328)

**Watercourse** - means any natural or artificial channel for passage of water, including the VCFCD jurisdictional channels included in the List of Channels within the Comprehensive Plan of the VCFCD, as approved by the Board of Supervisors of the VCFCD on October 4, 1993, and any amendments thereto.

**Watershed Management** - means approach for water resources protection. It is a strategy for integrating and managing resources, both human and fiscal that focuses on regulation of point sources, to a more regional approach that acknowledges environmental impacts from other activities.

**Watershed Management Areas (WMA)** - means the geographically-defined watershed areas where the Regional Water Board will implement the watershed approach. These generally involve a single large watershed within which exists smaller subwatersheds but in some cases may be an area that does not meet the strict hydrologic definition of a watershed e.g., several small Ventura coastal waterbodies in the region are grouped together into one WMA.

**Wet Season** - means the calendar period beginning October 1 through April 15.

**Winter Dry Weather** - means dry weather days occurring from November 1 - March 31 of each year.

**Whole Effluent Toxicity** - means the aggregate toxic effect of an effluent measured directly by a toxicity test.

**PART 8 - STANDARD PROVISIONS**

**A. General Requirements**

- 1. The Permittee shall comply with all provisions and requirements of this Order.
- 2. Should the Permittee discover that it failed to submit any relevant facts or that it submitted incorrect information in a report it shall promptly submit the missing or correct information.
- 3. The Permittee shall report all instances of non-compliance not otherwise reported at the time monitoring reports are submitted.
- 4. This Order includes Attachment "H", the Reporting Program, which is a part of this Order and must be complied with.

**B. Regional Water Board Review**

- 1. The Regional Water Board may review any formal determinate or approval made by the Regional Water Board Executive Officer pursuant to the provisions of this Order.
  - (a) Permittee(s) or a member of the public may request such review upon petition within 30 day of the effective date of the notification of such decision to the Permittee(s) and interested parties on file at the Regional Water Board.

**C. Public Review**

- 1. All documents submitted to the Regional Water Board in compliance with the terms and conditions of this Order shall be made available to members of the public pursuant to the Freedom of Information Act (5 U.S.C. § 552), as amended, and the Public Records Act (California Government Code § 6250 et seq.).
- 2. All documents submitted to the Regional Water Board Executive Officer for approval shall be made available to the public for a 30-day period to allow for public comment.

**D. Duty to Comply [40 CFR122.41(a)]**

- 1. Each Permittee must comply with all of the terms, requirements, and conditions of this Order. Any violation of this order constitutes a violation of the Clean Water Act, its regulations and the California Water Code, and is grounds for enforcement action, Order termination, Order revocation and reissuance, denial of an application for

reissuance, or a combination thereof [40 CFR122.41(a), CAL. WATER CODE § 13261, 13263, 13265, 13268, 13300, 13301, 13304, 13340, 13350].

- 2. A copy of these waste discharge specifications shall be maintained by each Permittee so as to be available during normal business hours to Permittee employees and members of the public.
- 3. Any discharge of wastes at any point(s) other than specifically described in this Order is prohibited, and constitutes a violation of the Order.

**E. Duty to Mitigate [40 CFR122.41 (d)]**

- 1. Each Permittee shall take all reasonable steps to minimize or prevent any discharge that has a reasonable likelihood of adversely affecting human health or the environment.

**F. Inspection and Entry; Investigations; Responsibilities [40 CFR122.41(i), Cal. Water Code § 13225 and § 13267]**

- 1. The Regional Water Board, U.S. EPA, and other authorized representatives shall be allowed:
  - (a) Entry upon premises where a regulated facility is located or conducted, or where records are kept under conditions of this Order;
  - (b) Access to copy any records, at reasonable times that are kept under the conditions of this Order;
  - (c) To inspect at reasonable times any facility, equipment (including monitoring and control equipment), practices, or operations regulated or required under this Order;
  - (d) To photograph, sample, and monitor at reasonable times for the purpose of assuring compliance with this Order, or as otherwise authorized by the CWA and the CAL. WATER CODE;
  - (e) To review any water quality control plan or waste discharge requirements, or in connection with any action relating to any plan or requirement to investigate the quality of any waters of the state within its region; and,
  - (f) To require as necessary any state or local agency to investigate and report on any technical factors involved in water quality control or to obtain and submit analyses of water.

**G. Proper Operation and Maintenance [40 CFR122.41 (e), Cal. Water Code § 13263(f)]**

- 1. The Permittees shall at all times properly operate and maintain all facilities and systems of treatment (and related appurtenances) that are installed or used by the Permittees to achieve compliance with this Order. Proper operation and maintenance includes:

- (a) adequate laboratory controls; and
- (b) appropriate quality assurance procedures.
- 2. This provision requires the operation of backup or auxiliary facilities or similar system that are installed by a Permittee only when necessary to achieve compliance with the conditions of this Order.

**H. Signatory Requirements [40 CFR122.41(k) & 122.22]**

- 1. Except as otherwise provided in this Order, all applications, reports, or information submitted to the Regional Water Board shall be signed by the City Manager or Mayor, or authorized designee and certified as set forth in 40 CFR122.22.

**I. Reopener and Modification [40 CFR122.41(f) & 122.62]**

- 1. This Order may only be modified, revoked, or reissued, prior to the expiration date, by the Regional Water Board, in accordance with the procedural requirements of the CAL. WATER CODE and CCR Title 23 for the issuance of waste discharge requirements, 40 CFR122.62, and upon prior notice and hearing, to:
  - (a) Address changed conditions identified in the required reports or other sources deemed significant by the Regional Water Board;
  - (b) Incorporate applicable requirements or statewide water quality control plans adopted by the State Board or amendments to the Basin Plan, including TMDLs;
  - (c) Comply with any applicable requirements, guidelines, and/ or regulations issued or approved pursuant to CWA § 402(p); and/ or,
  - (d) Consider any other federal, or state laws or regulations that became effective after adoption of this Order.
- 2. After notice and opportunity for a hearing, this Order may be terminated or modified for cause, including, but not limited to:
  - (a) Violation of any term or condition contained in this Order;
  - (b) Obtaining this Order by misrepresentation, or failure to disclose all relevant facts; or,
  - (c) A change in any condition that requires either a temporary or permanent reduction or elimination of the authorized discharge.
- 3. The filing of a request by the Principal Permittee or Permittees for a modification, revocation and re-issuance, or termination, or a notification of planned changes or anticipated noncompliance does not stay any condition of this Order.
- 4. This Order may be modified to make corrections or allowances for changes in the permitted activity listed in this section, following the procedures at 40 CFR122.63, if processed as a minor modification. Minor modifications may only:
  - (a) Correct typographical errors; or

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

(b) Require more frequent monitoring or reporting by the Permittee.

**J. Severability**

1. The provisions of this Order are severable; and if any provision of this Order or the application of any provision of this Order to any circumstance is held invalid, the application of such provision to other circumstances and the remainder of this Order shall not be affected.

**K. Duty to Provide Information [40 CFR122.41(h)]**

1. The Permittees shall furnish, within a reasonable time, any information the Regional Water Board or U.S. EPA may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this Order.
2. The Permittees shall also furnish to the Regional Water Board, upon request, copies of records required to be kept by this Order.

**L. Twenty-Four Hour Reporting [40 CFR122.41(l)(6)]<sup>1</sup>**

1. The Permittees shall report to the Regional Water Board any noncompliance that may endanger health or the environment. Any information shall be provided orally within 24 hours from the time any Permittee becomes aware of the circumstances. A written submission shall also be provided within 5 days of the time the Permittee becomes aware of the circumstances. The written submission shall contain a description of the noncompliance and its cause; the period of noncompliance, including exact dates and times and, if the noncompliance has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent reoccurrence of the noncompliance.
2. The Regional Water Board may waive the required written report on a case-by-case basis.

**M. Bypass [40 CFR122.41(m)]<sup>2</sup>**

1. Bypass (the intentional diversion of waste streams from any portion of a treatment facility) is prohibited. The Regional Water Board may take enforcement action against Permittees for bypass unless:

<sup>1</sup> This provision applies to incidents where effluent limitations (numerical or narrative) as provided in this Order or in the Ventura County SMP are exceeded, and which endanger public health or the environment.

<sup>2</sup> This provision applies to the operation and maintenance of storm water controls and BMPs as provided in this Order or in the Ventura County SMP.

## Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

- (a) Bypass was unavoidable to prevent loss of life, personal injury or severe property damage. (Severe property damage means substantial physical damage to property, damage to the treatment facilities that causes them to become inoperable, or substantial and permanent loss of natural resources that can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production.);
- (b) There were no feasible alternatives to bypass, such as the use of auxiliary treatment facilities, retention of untreated waste, or maintenance during normal periods of equipment down time. This condition is not satisfied if adequate back-up equipment should have been installed in the exercise of reasonable engineering judgment to prevent a bypass that could occur during normal periods of equipment downtime or preventive maintenance;
- (c) The Permittee submitted a notice at least ten days in advance of the need for a bypass to the Regional Water Board; or,
- (d) Permittees may allow a bypass to occur that does not cause effluent limitations to be exceeded, but only if it is for essential maintenance to assure efficient operation. In such a case, the above bypass conditions are not applicable. The Permittee shall submit notice of an unanticipated bypass as required.

**N. Upset [40 CFR122.41(n)]<sup>1</sup>**

1. Upset means an exceptional incident in which there is unintentional and temporary noncompliance with technology based permit effluent limitations because of factors beyond the reasonable control of the Permittee. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation.
2. A Permittee that wishes to establish the affirmative defense of an upset in an action brought for non compliance shall demonstrate, through properly signed, contemporaneous operating logs, or other relevant evidence that:
  - (a) An upset occurred and that the Permittee can identify the cause(s) of the upset;
  - (b) The permitted facility was being properly operated by the time of the upset;
  - (c) The Permittee submitted notice of the upset as required; and,
  - (d) The Permittee complied with any remedial measures required.
3. No determination made before an action for noncompliance, such as during administrative review of claims that non-compliance was caused by an upset, is final administrative action subject to judicial review.
4. In any enforcement proceeding, the Permittee seeking to establish the occurrence of an upset has the burden of proof.

<sup>1</sup> This provision applies to incidents where effluent limitations (numerical or narrative) as provided in this Order or in the Ventura County SMP are exceeded, and which endanger public health or the environment.

**O. Property Rights [40 CFR122.41(g)]**

1. This Order does not convey any property rights of any sort, or any exclusive privilege.

**P. Enforcement**

1. Violation of any of the provisions of the NPDES permit or any of the provisions of this Order may subject the violator to any of the penalties described herein, or any combination thereof, at the discretion of the prosecuting authority; except that only one kind of penalties may be applied for each kind of violation. The CWA provides the following:
  - (a) Criminal Penalties for:
    - (1) Negligent Violations [CWA 309 (c)(1)(B)]:  
The CWA provides that any person who negligently violates permit conditions implementing CWA § 301, 302, 306, 307, 308, 318, or 405 is subject to a fine of not less than \$2,500 nor more than \$25,000 per day for each violation, or by imprisonment for not more than 1 year, or both.
    - (2) Knowing Violations [CWA 309 (c)(2)(B)]:  
The CWA provides that any person who knowingly violates permit conditions implementing CWA § 301, 302, 306, 307, 308, 318, or 405 is subject to a fine of not less than \$5,000 nor more than \$50,000 per day of violation, or by imprisonment for not more than 3 years, or both.
    - (3) Knowing Endangerment [CWA 309 (c)(3)(A)]:  
The CWA provides that any person who knowingly violates permit conditions implementing CWA § 301, 302, 307, 308, 318, or 405 and who knows at that time that he is placing another person in imminent danger of death or serious bodily injury is subject to a fine of not more than \$250,000, or by imprisonment for not more than 15 years, or both.
    - (4) False Statement [CWA 309 (c)(4)]:  
The CWA provides that any person who knowingly makes any false material statement, representation, or certification in any application, record, report, plan, or other document filed or required to be maintained under the Act or who knowingly falsifies, tampers with, or renders inaccurate, any monitoring device or method required to be maintained under the Act, shall upon conviction, be punished by a fine of not more than \$10,000 or by imprisonment for not more than two years, or by both. If a conviction is for a violation committed after a first conviction of such person under this paragraph, punishment shall be by a fine of not more than \$20,000 per day of violation, or by imprisonment of not more than four years, or by both.
  - (b) Civil Penalties [[CWA 309 (d)]  
The CWA provides that any person who violates a permit condition implementing

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

CWA § 301, 302, 306, 307, 308, 318, or 405 is subject to a civil penalty not to exceed \$27,500 per day for each violation.

- 2. Violation of any of the provisions of the NPDES permit or any of the provisions of this Order may subject the violator to any of the penalties described herein, or any combination thereof, at the discretion of the prosecuting authority; except that only one kind of penalties may be applied for each kind of violation. The Cal Water Code § 13885 provides the following:
  - (a) Any person who violates any of the following shall be liable civilly in accordance with this section:
    - (1) Section 13375 or 13376.
    - (2) Any waste discharge requirements or dredged or fill material permit issued pursuant to this chapter or any water quality certification issued pursuant to Section 13160.
    - (3) Any requirements established pursuant to Section 13383.
    - (4) Any order or prohibition issued pursuant to Section 13243 or Article 1 (commencing with Section 13300) of Chapter 5, if the activity subject to the order or prohibition is subject to regulation under this chapter.
    - (5) Any requirements of Section 301, 302, 306, 307, 308, 318, 401, or 405 of the Clean Water Act, as amended.
    - (6) Any requirement imposed in a pretreatment program approved pursuant to waste discharge requirements issued under Section 13377 or approved pursuant to a permit issued by the administrator.

**Q. Need to Halt or Reduce Activity not a Defense [40 CFR122.41(c)]**

- 1. It shall not be a defense for a Permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this Order.

**R. Termination~~Rescission~~ of Board Order**

- 1. Regional Water Board Order No. 00-108 is hereby terminated~~rescinded~~.

**S. Board Order Expiration Date**

- 1. This Order expires on ~~XX~~May 7-, 2014. The Permittees must submit a Report of Waste Discharge (ROWD) and a proposed Storm Water Quality Management

Tentative Order Ventura County Municipal Separate Storm Sewer System Permit

Program in accordance with CCR Title 23 as application for reissuance of waste discharge requirements no later than 180 days in advance of such date.

**T. MS4 Annual Reporting Program [40 CFR122.42(c)]**

1. The Annual Program Reporting shall include the following information:

(a) *Municipal separate storm sewer systems.*

The operator of a large or medium municipal separate storm sewer system or a municipal separate storm sewer that has been designated by the Director under 40 CFR122.26(a)(1)(v) of this part must submit an annual report by the anniversary of the date of the issuance of the permit for such system. The report shall include:

- (1) The status of implementing the components of the storm water management program that are established as permit conditions;
- (2) Proposed changes to the storm water management programs that are established as permit condition. Such proposed changes shall be consistent with 40 CFR122.26(d)(2)(iii) of this part;
- (3) Revisions, if necessary, to the assessment of controls and the fiscal analysis reported in the permit application under 40 CFR122.26(d)(2)(iv) and (d)(2)(v) of this part;
- (4) A summary of data, including monitoring data that is accumulated throughout the reporting year;
- (5) Annual expenditures and budget for year following each annual report;
- (6) A summary describing the number and nature of enforcement actions, inspections, and public education programs; and
- (7) Identification of water quality improvements or degradation.

I, Tracy J. Egoscue, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of an order adopted by the California Regional Water Quality Control Board, Los Angeles Region, on mm dd, 2009.

Determination of Erosion Potential

$E_p$  is determined as follows- The *total effective work* done on the channel boundary is derived and used as a metric to predict the likelihood of channel adjustment given watershed and stream hydrologic and geomorphic variables. The index under urbanized conditions is compared to the index under pre-urban conditions expressed as a ratio ( $E_p$ ). The effective work index ( $W$ ) is computed as the excess shear stress that exceeds a critical value for streambed mobility or bank material erosion integrated over time and represents the total work done on the channel boundary:

$$W = \sum_{i=1}^n (\tau_i - \tau_c)^{1.5} \cdot V \cdot \Delta t_i \quad (1)$$

Where  $\tau_c$  = critical shear stress that initiates bed mobility or erodes the weakest bank layer,  $\tau_i$  = applied hydraulic shear stress,  $\Delta t$  = duration of flows (in hours), and  $n$  = length of flow record. The effective work index for presumed stable stream channels under pre-urban conditions is compared to stable and unstable channels under current urbanized conditions. The comparison, expressed as a ratio, is defined as the Erosion Potential ( $E_p$ )<sup>1</sup> (McRae (1992, 1996).

$$E_p = \frac{W_{post}}{W_{pre}} \quad (2)$$

where:

$W_{post}$  = work index estimated for the post-urban condition

$W_{pre}$  = work index estimated for the pre-urban condition

**MONITORING PROGRAM**

1. The primary objectives of the Monitoring Program include, but are not limited to:
  - (a) Assessing the chemical, physical, and biological impacts of municipal storm water sewer system discharges on receiving waters.
  - (b) Assessing the overall health and evaluating long-term trends in receiving water quality.
  - (c) Assessing compliance with TMDL targets and water quality objectives.
  - (d) Characterization of the quality of storm water discharges.
  - (e) Identifying sources of pollutants.
  - (f) Measuring and improving the effectiveness of measures implemented under this Order.
2. The results of the monitoring requirements outlined below shall be used to refine BMPs for the reduction of pollutant loading and the protection and enhancement of the beneficial uses of the receiving waters in Ventura County.
3. The Permittees shall implement the Monitoring Program as follows:

**CORE MONITORING****A. Mass Emissions**

- I. The Principal Permittee shall monitor mass emissions to accomplish the following objectives:
  - i. Estimate the mass emissions from the MS4 to the watershed.
  - ii. Assess trends in the mass emissions over time.
  - iii. Determine if the MS4 is contributing to exceedances of water quality objectives by comparing results to applicable water quality objectives in the Water Quality Control Plan Los Angeles Region (Basin Plan) and the California Toxics Rule (CTR).
1. The Principal Permittee shall monitor mass emissions from the following 3 mass emission stations:
  - (a) ME-VR2 for Ventura River
  - (b) ME-SCR for Santa Clara River
  - (c) ME-CC for Calleguas Creek

2. The Principal Permittee shall monitor the 3 mass emission stations on an annual basis as per A.3. below.
3. The Principal Permittee shall monitor each mass emission station each year as follows:
  - (a) The first storm event of the wet season that produces a 20% or greater increase in base stream flow, and 2 additional storm events; all storm events shall be separated by 7 days of dry weather (less than 0.1 inch of rainfall) from the previously measurable storm event (0.25 inches of rain).
  - (b) A total of 4 monitoring events (3 wet-weather storm events, 1 dry-weather) per mass emission station.
4. Samples for mass emission monitoring may be taken with the same type of automatic sampler used under Order 00-108. . Sampling shall be in accordance with USEPA "NPDES Storm Water Sampling Guidance Document, EPA 833-8-92-001, July 1992" or other protocol approved by the Executive Officer.
5. Samplers shall be set to monitor storms that produce a 20% or greater increase in base stream flow.
6. Samples shall be flow-weighted composites, collected during the first 24 hours or for the duration of the storm if it is less than 24 hours.
7. Samples shall be collected from the discharge resulting from a storm event that is 0.25 inches or greater, samples may be analyzed if a predicted storm event produces between 0.15 and 0.24 inches of rain.
8. The flow-weighted composite sample for a storm water discharge shall be taken with a continuous sampler, or it shall be taken as a combination of a minimum of 3 sample aliquots, taken in each hour of discharge for the first 24 hours of the discharge or for the entire discharge if the storm event is less than 24 hours, with each aliquot being separated by a minimum of 15 minutes within each hour of discharge, unless the Regional Water Board Executive Officer approves an alternate protocol.
9. Flow may be estimated using U.S. EPA methods at sites where flow measurement devices are not in place.
10. Grab samples shall be taken only for pathogen indicators, hardness (as mg/L CaCO<sub>3</sub>), pH, temperature, and DO.
11. Each mass emission shall analyze for all of the Pollutants of Concern (POC) in its specific watershed listed in Attachment "B" (Calleguas Creek Watershed,

May 7, 2009

Santa Clara River Watershed, and Ventura River Watershed Pollutants of Concern).

12. Each mass emission station shall screen for all constituents listed in Attachment "G" (Storm Water Monitoring Program's Constituents with Associated Minimum Levels), during the first storm event of the wet season for each year sampled. If a constituent is not detected at the Method Detection Limit (MDL) for its respective test method it need not be further analyzed unless the observed occurrence shows concentrations greater than the state water quality objective, and/ or the California Toxics Rule (CTR) for chronic criteria. If a constituent is detected exceeding a Basin Plan objective, and/ or CTR criteria then the constituent shall be analyzed for the remainder of the Order, at the mass emission station where it was detected.
13. At a minimum, a sufficient sample volume must be collected to perform all of the required biological and chemical tests.
14. When monitoring can not be performed to comply with the requirements of this Order due to circumstances beyond the Permittee's control, then within two working days the following shall be submitted to the Regional Water Board Executive Officer:
  - (a) Statement of situation.
  - (b) Explanation of circumstance(s) with documentation.
  - (c) Statement of corrective action for the future.
15. Monitoring results submitted to the Regional Water Board shall include:
  - (a) Rain totals and hydrographs for monitoring events in both narrative and graphic formats.
  - (b) A narrative description of the date and duration of the storm event(s) sampled, rainfall estimates of the storm event which generated the sampled discharge and the duration between the storm event sampled and the end of the previous measurable storm event.
  - (c) All applicable Standard Monitoring Provisions listed in part "K".
16. Results of monitoring from each mass emission station conducted in accordance with the Standard Operating Procedure submitted under Standard Provision 14 of this Attachment shall be sent electronically to the Regional Water Board's Storm Water site at MS4stormwaterRB4@waterboards.ca.gov, no later than 90 days from sample collection date, highlighting exceedances (Pollutants of Concern, POC) to the Basin Plan objectives for all test results, and the CTR for acute criteria with corresponding sampling dates per mass emission station. The sample data transmitted shall be in the most recent update of the Southern California Municipal Storm Water Monitoring Coalition's (SMC) Standardized Data Transfer Formats (SDTFs).

17. A summary of the annual mass emission monitoring results highlighting exceedances (POC) of the Basin Plan objectives and the CTR for acute criteria, with corresponding sampling dates per mass emission station, shall be included with the Annual Storm Water Report.

**B. Major Outfalls**

- I. The Principal Permittee shall monitor major storm drain outfalls to accomplish the following objectives:
  - i. Estimate the annual pollutant load of the cumulative discharges to waters of the State.
  - ii. Estimate the event mean concentration of the cumulative discharges to waters of the State.
  - iii. Assess trends in the major outfalls over time.
  - iv. Estimate the annual pollutant load of discharges to Waters of the U.S.
  - v. Estimate the event mean concentration of discharges to Waters of the U.S.
  - vi. Assess trends in the major outfalls over time.
  - vii. Determine if the MS4 is contributing to exceedences of MALs, and water quality objectives in the Water Quality Control Plan Los Angeles Region (Basin Plan), and the California Toxics Rule (CTR).
  
1. The Principal Permittee shall monitor:
  - (a) End-of-pipe of major outfalls, identified in Attachment I, transporting representative discharges from each Permittee's Municipal drainage area to:
    - (1) Major outfalls listed in Attachment "I" (Storm Water Monitoring Program's Major Outfall Stations).
    - (b) The first storm event of the wet season that produces at least 0.25 inches of rain, and 2 additional storm events per year, all storm events shall be separated by 7 days of dry weather (less than 0.1 inch) from the previously measurable storm event (0.25 inches).
    - (c) A total of 4 monitoring events (3 wet-weather storm events, 1 dry-weather) shall be sampled per identified major outfall.
    - (d) In the first year after permit adoption, 4 major outfall stations shall be monitored. Thereafter, all major outfall stations listed in Attachment "I" are to be monitored annually according to the schedule above.
  
2. If an identified monitoring site is found to be unworkable due to immitigable factors the sampling location may be relocated upon Executive Officer's approval of another location. Best professional judgment shall be used to balance the site selection rationale and criteria to determine the most appropriate site. Due to limited potential locations of urban outfalls to be monitored, there may be no sites that satisfy all criteria and rationale. Sites will be selected to satisfy the following criteria:

May 7, 2009

- (a) Maximize urban runoff contribution;
  - (b) Greater than 60% of catchment shall be Permittee's MS4;
  - (c) Attempt shall be made to avoid outfalls that contain discharge from extra-jurisdictional areas (e.g. agriculture land and other NPDES discharges).
  - (d) Drainage area should contain representative land uses in a ratio of use as similar as reasonably possible to that found in the Permittee's jurisdiction.
  - (e) Drainage areas with a higher percentage of the Permittee's MS4 are preferred;
  - (f) Ability to accurately measure flow
  - (g) Safety of monitoring personnel is the highest priority. Specific location of sampling collection may be upstream of the actual outfall if field safety or accurate flow measurement require it.
3. Samples shall be collected from the discharge resulting from a storm event that is 0.25 inches or greater, samples may be analyzed if a predicted storm event produces between 0.15 inches and 0.24 inches of rain.
  4. Samples shall be collected during the first 24 hours of storm water discharge or for the entire storm water discharge if it is less than 24 hours.
  5. Samples shall be flow-weighted composites and can be collected automatically or manually (see subparts A.7 and A.8) in accordance with U.S. EPA protocol or other procedure approved by the Executive Officer.
  6. Grab samples shall be taken only for pathogen indicators, hardness (as mg/L CaCO<sub>3</sub>) and pH, temperature, and DO.
  7. Major outfall samples taken within a subwatershed shall be analyzed for the biological and chemical parameters listed in the preceding subpart B.6, and for all of the constituents in Attachment "C" (Municipal Action Levels), Table 1 as listed below:
    - (a) TSS
    - (b) Nitrate & Nitrite- Total
    - (c) Cu- Total
    - (d) Pb- Total
    - (e) Zn- Total
  8. Each major outfall station shall screen for all constituents listed in Attachment "G" (Storm Water Monitoring Program's Constituents with Associated Minimum Levels) twice per wet season, per year, (1<sup>st</sup> storm event of the wet season and one other storm event of the wet season). If a constituent is not detected at the Method Detection Limit (MDL) for its respective test method it need not be further analyzed unless the observed occurrence shows concentrations greater than the state water quality objective, and/ or the

May 7, 2009

California Toxics Rule (CTR) acute criteria. If a constituent is detected exceeding a Basin Plan objective, and/or chronic CTR criteria then the constituent shall be sampled for the remainder of the Order, at the major outfall station where it was detected.

- 9. At a minimum, a sufficient sample volume must be collected to perform all of the required biological and chemical tests. Sampling shall be in accordance with USEPA "NPDES Storm Water Sampling Guidance Document, EPA 833-8-92-001, July 1992" or other protocol approved by the Executive Officer.
- 10. When monitoring can not be performed to comply with the requirements of this Order due to circumstances beyond the Permittee's control, then within 2 working days the following shall be submitted to the Regional Water Board Executive Officer:
  - (a) Statement of situation
  - (b) Explanation of circumstance(s) with documentation
  - (c) Statement of corrective action for the future
- 11. Monitoring results submitted to the Regional Water Board shall include:
  - (a) Rain totals and hydrographs for monitoring events in both narrative and graphic formats.
  - (b) A narrative description of the date and duration of the storm event(s) sampled, rainfall estimates of the storm event which generated the sampled discharge and the duration between the storm event sampled and the end of the previous measurable storm event.
  - (c) All applicable Standard Monitoring Provisions listed in part "K".
- 12. Results of monitoring from each major outfall station conducted in accordance with the Standard Operating Procedure submitted under Standard Provision 14 of this Attachment shall be sent electronically to the Regional Water Board's Storm Water Site at MS4stormwaterRB4@waterboards.ca.gov, no later than 90 days from sample collection date, highlighting exceedances to the MALs, the Basin Plan objectives for all test results, and the CTR for acute criteria with corresponding sampling dates per major outfall station. The sample data transmitted shall be in the most recent update of the Southern California Municipal Storm Water Monitoring Coalition's (SMC) Standardized Data Transfer Formats (SDTFs).
- 13. A summary of the annual major outfall monitoring results, highlighting exceedances (pollutants of concern POC) to the MALs, the Basin Plan objectives, and the CTR for acute criteria with corresponding sampling dates per major outfall station, shall be included with the Annual Storm Water Report.

E**C. Dry Weather Analytical Monitoring**

- I. The Principal Permittee shall develop and implement a monitoring program to characterize pollutant discharges from representative MS4 outfalls in each municipality and in the unincorporated County area during dry weather. This monitoring program shall be implemented within each jurisdiction and shall begin within the 2010-2011 monitoring year.
  1. Dry weather analytical monitoring shall include:
    - (a) Analytical monitoring, field measurements and observations at selected stations.
    - (b) Reports of analytical data in a SWAMP comparable format.
  2. Selection of Dry Weather Analytical Monitoring stations: Based upon a review program data, the storm drain system and land uses, the Co-Permittees shall select dry weather analytical monitoring stations within their jurisdiction. At least 5 dry weather analytical monitoring stations need to be identified per Co-Permittee. The dry weather analytical monitoring stations shall be established using the following guidelines and criteria:
    - (a) Stations should be located downstream of municipal land uses where illegal or illicit activity may occur;
    - (b) Stations shall be located at accessible downstream locations within the storm drain system of each municipality or at major outfalls;
    - (c) Hydrological conditions, total drainage area of the site, traffic density, age of the structures or buildings in the area, history of the area, and land use types shall be considered in locating stations;
    - (d) Each Co-Permittee shall determine a primary station and at least 4 alternate stations to be sampled in case primary stations do not have flow in dry weather. The dry weather monitoring may utilize the same outfalls as those used for wet weather monitoring, if such outfalls are found to discharge during dry weather.
    - (e) Fact sheets of general information such as site descriptions (i.e., conveyance type, dominant watershed land uses) shall be created.
  3. The Principal and Co-Permittees shall develop and/or update written procedures for dry weather analytical monitoring (these procedures must be consistent with 40 CFR part 136), including field observations, monitoring, and analyses to be conducted. At a minimum, the procedures must meet the following guidelines and criteria:
    - (a) Dry weather analytical monitoring shall be conducted at each identified station at least once between May 1st and September 30th of each year.

May 7, 2009

- (b) If flow or ponded runoff is observed at a dry weather analytical monitoring station and there has been at least seventy-two (72) hours of dry weather, make observations and collect at least one (1) grab sample.
  - (c) Record general information such as site descriptions (i.e., conveyance type, dominant watershed land uses), flow estimation (i.e., width of water surface, approximate depth of water, approximate flow velocity, flow rate), and visual observations (i.e., odor, color, clarity, floatables, deposits/stains, vegetation condition, structural condition, and biology).
4. At a minimum, collect samples for analytical laboratory analysis of the following constituents:
    - (a) Total Hardness
    - (b) Total Organic Carbon or Oil and Grease
    - (c) Lead (Dissolved)
    - (d) Zinc (Dissolved)
    - (e) Copper (Dissolved)
    - (f) Total Coliform bacteria
    - (g) E. Coli bacteria
  5. Other required field observations include:
    - (a) Flow Estimation
    - (b) Temperature
    - (c) pH
    - (d) Odor
    - (e) Color
    - (f) Turbidity
    - (g) Floatables (foam, oil sheen)
    - (h) Staining
    - (i) Algal growth
  6. If the station is dry (no flowing or ponded runoff), make and record all applicable observations and select another station from the list of alternate stations for monitoring.
  7. Visually assess the presence of trash in receiving waters and urban runoff. Assessments of trash shall provide information on the spatial extent and amount of trash present, as well as the nature of the types of trash present.
  8. Develop and/or update procedures for source identification follow up investigations in the event elevated levels are found. These procedures shall be consistent with procedures required in IC/ID section.

**D. Aquatic Toxicity Monitoring**

- I. The objective of aquatic toxicity monitoring is to evaluate if storm water (wet weather) discharges are causing or contributing to chronic toxic impacts on aquatic life by the following:
  - i. Toxicity testing at mass emission and major outfall stations to assess impacts on the marine and freshwater environments.
  
- 1. The Principal Permittee shall collect and analyze mass emission and major outfall samples for toxicity to evaluate the extent and causes of toxicity in receiving waters. Permittees shall utilize documents such as: Ventura County's Technical Guidance Manual for Storm Water Quality Control Measures and U.S. EPA's National Management Measures to Control Nonpoint Source Pollution from Urban Areas to implement measures to eliminate or reduce sources of toxicity in storm water.
- 2. Toxicity samples may be flow-weighted composite samples or grab samples for both wet and dry event sampling (see subparts A.7 and A.8).
- 3. Volume of sample shall be determined by specific test methods to be used. At a minimum it is suggested to collect 5 gallons for baseline testing, and an additional 5 gallons for TIE studies. Sufficient sample volume shall be collected to perform the required toxicity tests.
- 4. All toxicity tests shall be conducted as soon as possible following sample collection. The 36-hour sample holding time for test initiation shall be targeted. However, no more than 72 hours shall elapse before initial use of a sample.
- 5. When toxicity tests can not be performed to comply with the requirements of this Order due to circumstances beyond the Permittee's control, then the following shall be submitted to the Regional Water Board Executive Officer within 2 working days:
  - (a) Statement of situation
  - (b) Explanation of circumstance(s) with documentation
  - (c) Statement of corrective action for the future
- 6. The Principal Permittee shall conduct critical life stage chronic toxicity tests on undiluted samples in accordance with:
  - (a) U.S. EPA's Short Term Methods for Estimating the Chronic Toxicity of Effluents and Receiving Waters to *West Coast* Marine and Estuarine Organisms, (EPA/600/R-95/136, 1995) for all mass emission stations, and for major outfalls discharging to marine and estuarine environments, or
  - (b) U.S. EPA's Short Term Methods for Estimating the Chronic Toxicity of Effluents and Receiving Waters to Freshwater Organisms, October 2002 (EPA/821/R-02/013, 2002) or current version for major outfalls discharging to freshwater environments.

May 7, 2009

7. The Principal Permittee shall analyze samples for chronic toxicity according to the schedule below:
- (a) During the first year of the Order, 2 storm events shall be monitored at each mass emission and major outfall station. The first storm event of the wet season that produces at least 0.25 inches of rain, and 1 additional storm event. All storm events shall be separated by 7 days of dry weather (less than 0.1 inch of rain) from the previously measurable storm event.
    - (1) During the first year of the Order, all 3 test species shall be used for their respective chronic toxicity test method for the 2 storm events monitored, to determine the most sensitive test species for each monitoring station (see subparts D.8 and D.9 below).
  - (b) During the next 4 years of the Order, the first storm event of the wet season that produces at least 0.25 inches of rain shall be monitored for each mass emission and major outfall station.
    - (1) During the next 4 years of the Order, the most sensitive test species determined from the first year of testing at each mass emission and major outfall station shall be used for its respective chronic toxicity test method (see subpart D.6).
8. Marine and Estuarine Species and Test Methods.
- (a) Marine and estuarine species and short-term test methods for estimating the chronic toxicity of NPDES effluents shall be used and are found in the first edition of *Short-term Methods for Estimating the Chronic Toxicity of Effluents and Receiving Waters to West Coast Marine and Estuarine Organisms* (EPA/600/R-95/136, 1995) and applicable water quality standards; also see 40 CFR Parts 122.41(j)(4) and 122.44(d)(1)(iv).
    - (1) The Permittee shall conduct:
      - (A) A static renewal toxicity test with the topsmelt, *Atherinops affinis* (Larval Survival and Growth Test Method 1006.01)
      - (B) A static non-renewal toxicity test with the giant kelp *Macrocystis pyrifera* (Germination and Growth Test Method 1009.0); and
      - (C) A static non-renewal toxicity test with the purple sea urchin, *Strongylocentrotus purpuratus*, (Fertilization Test Method 1008.0)
    - (b) In no case shall the preceding toxicity test species be substituted with another organism unless written authorization from the Regional Water Board Executive Officer is received.
9. Freshwater Species and Test Methods.
- (a) Species and short-term test methods for estimating the chronic toxicity of NPDES effluent shall be used and are found in the fourth edition of *Short-term Methods for Estimating the Chronic Toxicity of Effluents and*

May 7, 2009

*Receiving Waters to Freshwater Organisms* (EPA/821/R-02/013, 2002; Table IA, 40 CFR Part 136).

- (1) The Permittee shall conduct
    - (A) A static renewal toxicity test with the fathead minnow, *Pimephales promelas* (Larval Survival and Growth Test Method 1000.0<sup>1</sup>)
    - (B) A static renewal toxicity test with the daphnid, *Ceriodaphnia dubia* (Survival and Reproduction Test Method 1002.0<sup>1</sup>); and
    - (C) A static renewal toxicity test with the green alga, *Selenastrum capricornutum* (also named *Raphidocelis subcapitata*) (Growth Test Method 1003.0)
  - (b) In no case shall the preceding toxicity test species be substituted with another organism unless written authorization from the Regional Water Board Executive Officer is received.
10. The test endpoint data is analyzed using a standard t-test approach. Statistical analysis methods shall be consistent with U.S. EPA test method manuals.
  11. If significant toxicity is found then according to paragraph 10.2.6.2 of the U.S. EPA freshwater test methods manual, all chronic toxicity test results from the multi-concentration tests required by this Order must be reviewed and reported according to U.S. EPA guidance on the evaluation of concentration-response relationships found in *Method Guidance and Recommendations for Whole Effluent Toxicity (WET) Testing (40 CFR 136)* (EPA/821/B-00-004, 2000).
  12. Toxic samples shall be immediately subjected to Toxicity Identification Evaluation (TIE) procedures to identify the toxic chemical(s) if toxicity is demonstrated by the standard t-test.
  13. A TIE is to be performed to identify the causes of toxicity using the same species and test method and, as guidance, U.S. EPA test method manuals: *Toxicity Identification Evaluation: Characterization of Chronically Toxic Effluents, Phase I* (EPA/600/6-91/005F, 1992); *Methods for Aquatic Toxicity Identification Evaluations, Phase II Toxicity Identification Procedures for Samples Exhibiting Acute and Chronic Toxicity* (EPA/600/R-92/080, 1993); *Methods for Aquatic Toxicity Identification Evaluations, Phase III Toxicity Confirmation Procedures for Samples Exhibiting Acute and Chronic Toxicity* (EPA/600/R-92/081, 1993); and *Marine Toxicity Identification Evaluation (TIE): Phase I Guidance Document* (EPA/600/R-96-054, 1996).

<sup>1</sup> Daily observations for mortality make it possible to calculate acute toxicity for desired exposure periods (i.e., 7-day LC50, 96-hour LC50, etc.).

May 7, 2009

14. The Principal Permittee shall complete chronic Phase I (Toxicity Characterization Procedures) TIEs for all sites showing significant toxicity. For the purpose of triggering TIE (Toxicity Characterization Procedures), significant toxicity is defined as at least 50% mortality. The 50% mortality threshold is consistent with the approach recommended in guidance published by USEPA for conducting TIEs (USEPA, 1996), which recommends a minimum threshold of 50% mortality because the probability of completing a successful TIE decreases rapidly for samples with less than this level of toxicity.
- (a) The TIE shall be conducted on test species, demonstrating the most sensitive toxicity response at a sampling station. However, a TIE(s) may be conducted on an additional test species with the caveat that once the toxicant(s) has been identified then the most sensitive test species triggering the TIE event needs to be tested additionally to verify that the toxicant has been identified and addressed.
15. A TIE Prioritization Metric may be utilized to rank sites for TIEs.<sup>2</sup>
16. Toxicity Reduction Evaluation (TRE) when toxicity is identified
- (a) When the same pollutant or class of pollutants is identified through 2 consecutive TIE evaluations, a TRE shall be performed for that identified toxic pollutant.
- (b) The TRE development shall be performed by a neutral third party (retained by the Permittees), in consultation with the Regional Water Board staff.
- (c) The TRE shall include all reasonable steps to identify the source(s) of toxicity and discuss appropriate BMPs to eliminate the causes of toxicity. No later than 30 days after the source of toxicity and appropriate BMPs are identified, the Permittees shall submit the TRE Corrective Action Plan to the Regional Water Board Executive Officer for approval. At a minimum, the Plan shall include a discussion of the following items:
- (1) The potential sources of pollutant(s) causing toxicity.
  - (2) A list of municipalities and agencies that may have jurisdiction over sources of pollutant(s) causing toxicity.
  - (3) Recommended BMPs to reduce the pollutant(s) causing toxicity.
  - (4) Proposed post construction control measures to reduce the pollutant(s) causing toxicity.
  - (5) Follow-up monitoring to demonstrate that toxicity has been removed.
- (d) The TRE process shall be coordinated with TMDL development and implementation (i.e., If a TMDL for 4,4'-DDD is being implemented when a TRE for 4,4'-DDD is required, the efforts shall be coordinated to avoid overlap).

<sup>2</sup> Appendix 5. SMC Model Monitoring Program.

May 7, 2009

- 17. Results of Toxicity monitoring conducted in accordance with the Standard Operating Procedure under Standard Provision 14 of this Attachment shall be sent to the Regional Board's Storm Water Site at MS4stormwaterRB4@waterboards.ca.gov, no later than 90 days from sample collection date for the initial toxicity test and no more than 30 days from completion of each aspect of the analysis for TIEs/TREs. The sample data transmitted shall be in the most recent update of the Southern California Municipal Storm Water Monitoring Coalition's (SMC) Standardized Data Transfer Formats (SDTFs).
- 18. The Annual Storm Water Report shall include:
  - (a) A full laboratory report for all toxicity testing.
  - (b) A summary of the years' mass emission and major outfall monitoring station's toxicity test results reported according to the test methods manual chapter on report preparation and test review.
  - (c) The dates of sample collection and initiation of each toxicity test.
  - (d) All results for effluent parameters monitored concurrently with the toxicity test(s).
  - (e) TIE Phase testing (Phase I, Phase II, and Phase III) that has been or is in the process of being conducted per monitoring station.
  - (f) The development, implementation, and results for each TRE Corrective Action Plan in the Annual Storm Water Report, beginning the year following the identification of each pollutant or pollutant class causing toxicity.
- 19. When the SMC Standardized Toxicity Testing Guidance is completed, the Regional Water Board Executive Officer may direct Permittees to replace the current toxicity program with the standardized guidance procedure.

**SPECIAL STUDIES**

**E. Pyrethroid Insecticides Study**

- I. The Principal Permittee shall perform a Pyrethroid Insecticides study to accomplish the following objectives:
  - i. Establish baseline data for major watersheds
  - ii. Evaluate whether Pyrethroid Insecticide concentrations are at or approaching levels known to be toxic to sediment-dwelling aquatic organisms.
  - iii. Determine if Pyrethroids discovered are from urban sources.
  - iv. Assess any trends over the permit term.

1. The Permittees shall incorporate monitoring for Pyrethroid Insecticides within the Calleguas Creek, Santa Clara River and Ventura River Watersheds according to the following:
  - (a) No later than the second year of this Order, monitoring shall begin.
  - (b) Quality Assurance Project Plan (QAPP) to be submitted to the Regional Board for approval 12 months prior to beginning monitoring.
  - (c) In selecting sites to conduct monitoring for Pyrethroid Insecticides, Permittees shall review existing monitoring programs in the watersheds by other public and private entities, watershed coalitions, and citizen volunteers, so as to complement and not duplicate efforts.
  - (d) Establish at least 2 stations along the mainstems of each major watershed river that are influenced by urban discharges.
  - (e) The study shall be repeated every third year following the year monitoring begins.
  
2. The Principal Permittee shall monitor Pyrethroid Insecticides stations according to the following:
  - (a) The Principal Permittee shall monitor 1 sampling event per station per monitoring year.
    - (1) Monitoring shall occur after sediment has settled within the waterbody, and safe access can be assured.
  - (b) Sufficient sediment is to be collected at each station in a pre-cleaned glass jar by skimming the upper 1 cm of the sediment column with a steel scoop, and held on ice until returned to the laboratory.
  - (c) Sediment shall be homogenized in the laboratory by hand mixing, then held at 4 °C (toxicity samples) or -20 °C (chemistry samples).
  - (d) All samples taken shall be analyzed for the following Pyrethroids:
    - (1) bifenthrin
    - (2) cyfluthrin
    - (3) cypermethrin
    - (4) deltamethrin
    - (5) esfenvalerate
    - (6) lambda-cyhalothrin
    - (7) permethrin
    - (8) tralomethrin (if laboratory is capable of analyzing for it)
  - (e) Detection limits for all Pyrethroids shall be as close to 1ng/g (dry weight) as reasonably achievable.
  - (f) Each sediment sample is to measure the following:
    - (1) total organic carbon (TOC).

May 7, 2009

3. All samples shall be tested for toxicity to 7 to 10 day old *Hyaella azteca* according to standard U.S. EPA testing methods.<sup>3</sup>
  - (a) Use of the approach described in *Aquatic Toxicity Due to Residential Use of Pyrethroid Insecticides*<sup>4</sup> for toxicity testing shall be used.
4. Analysis by a laboratory that has performed sediment toxicity testing for Pyrethroid Insecticides is preferred.
5. Monitoring results from each station shall be sent electronically to the Regional Board's Storm Water Site at MS4stormwaterRB4@waterboards.ca.gov, no later than 90 days from sample collection date. The sample data transmitted shall be in the most recent update of the Southern California Municipal Storm Water Monitoring Coalition's (SMC) Standardized Data Transfer Formats (SDTFs).
6. If toxicity is attributed to Pyrethroids then consultation with staff at U.S. EPA, the California Department of Pesticide Regulations and the California Stormwater Quality Association's (CASQA) pesticides committee (UP3 Project web site), shall be required to obtain relevant information to use in developing the recommendations to mitigate Pyrethroids in the Final Report.
7. Final Report for the Pyrethroid Insecticides study shall contain the following:
  - (a) Executive summary
  - (b) Methods
  - (c) Results (including map depicting monitoring stations)
  - (d) Discussion
  - (e) Recommendations to mitigate Pyrethroids
8. The Final Report shall be completed and submitted to the Executive Officer of the Regional Water Board no later than 8 months after completion of the study.

The Pyrethroid Insecticides Study requirement may be satisfied by another tributary monitoring program within the Watershed performing a sediment Pyrethroid Insecticides Study that is monitoring to assess pyrethroid concentrations and sediment toxicity, so as to complement other ongoing programs.

#### F. Hydromodification Control Study

1. The Principal Permittee shall conduct or participate in special studies to develop tools to predict and mitigate the adverse impacts of Hydromodification, and to comply with hydromodification control criteria. This can be achieved by the following:
  - (a) Develop a mapping and classification system for streams based on their susceptibility to the effects of hydromodification.
  - (b) Establish protocols for ongoing monitoring to assess the effects of hydromodification.
  - (c) Develop dynamic models to assess the effects of hydromodification on stream condition.
  - (d) Develop a series of tools that managers can easily apply to make recommendations or set requirements relative to hydromodification for new development and redevelopment.
2. The Principal Permittee may satisfy this requirement by participating in the 'Development of Tools for Hydromodification Assessment and Management' Project undertaken by the SMC and coordinated by the SCCWRP.
3. The Principal Permittee shall continue to partner with the SMC and collect data or sponsor its collection for the Ventura County sites to reduce statistical uncertainty and/ or improve model predictability.
4. The Principal Permittee shall submit a letter to the Regional Water Board Executive Officer stating how they will satisfy this requirement, no later than (2 months after Order adoption date).

**G. Low Impact Development**

1. The Principal Permittee shall conduct or participate in a special study to assess the effectiveness of low impact development techniques in semi-arid climate regimes such as in Southern California.
2. The Principal Permittee may satisfy this requirement by participating in the SMC project titled "Quantifying the Effectiveness of Site Design/ Low Impact Development Best Management Practice in Southern California".
3. The Principal Permittee shall submit a letter to the Regional Water Board Executive Officer stating how they are satisfying this requirement, no later than 2 months after deciding to either conduct or participate in special study.

**H. Southern California Bight Project**

May 7, 2009

1. The Principal Permittee and Permittees shall participate with other government organizations regulating discharges in southern California in the collaboration to conduct a regional monitoring survey (Southern California Bight Project (SCBP)), which was started in 2008 and to be continued in successive years. The survey's primary objective is to assess the spatial extent and magnitude of ecological disturbances on the mainland continental shelf of the SCB and to describe relative conditions among different regions of the SCBP.
2. The Principal Permittee shall participate on the Steering Committee for the bight-wide monitoring project, and assist with the estuary and nearshore sampling effort requirement of the proposed monitoring project for Ventura County as defined in the SCBP plan.

#### I. Bioassessment

1. The Principal Permittee consents to participate in the following regional water quality program for watershed management and planning:
  - (a) SMC Regional Monitoring Program
    - (1) Southern California Regional Bioassessment
      - (A) Level of effort per watershed per year
        - (i) Probabilistic sites per watershed
          - (I) Ventura River - Six
          - (II) Santa Clara River - Three
          - (III) Calleguas Creek - Six
        - (ii) Integrator sites per watershed
          - (A) Ventura River - One
          - (B) Santa Clara River - One
          - (C) Calleguas Creek - One
    - (b) Ventura County Bioassessment: Permittees shall conduct bioassessment at one fixed site in each of the watersheds above on an annual basis. Southern California Regional Bioassessment protocols shall be used to conduct the Ventura County Bioassessment program.

#### J. Volunteer Monitoring Programs

1. The Permittees shall provide limited assistance if requested in the development and implementation of volunteer monitoring programs in the Ventura watersheds. These include, but are not limited to the following:
  - (a) Ventura River - (Ventura Stream Team).
  - (b) Santa Clara River - (Santa Clara River Stream Team).
  - (c) Calleguas Creek - (Calleguas Creek Watershed Quality Monitoring Program).
  - (d) Malibu Creek - (Malibu Creek Watershed Quality Monitoring Program).

#### K. Standard Monitoring Provisions

May 7, 2009

- I. All monitoring activities shall meet the following requirements.
  - 1. Monitoring and Records [40 CFR 122.41(j)(1)]
    - (a) Samples and measurements taken for the purpose of monitoring shall be representative of the monitored activity.
  - 2. Monitoring and Records [40 CFR 122.41(j)(2)] [CWC §13383(a)]
    - (a) The Principal Permittee and Permittees shall retain records of all monitoring information, including all calibration and maintenance of monitoring instrumentation, copies of all reports required by this Order, and records of all data used to complete the Report of Waste Discharge (ROWD) and application for this Order, for a period of at least five (5) years from the date of the sample, measurement, report, or application. This period may be extended by request of the Regional Water Board or U.S. EPA at any time and shall be extended during the course of any unresolved litigation regarding this discharge.
  - 3. Monitoring and Records [40 CFR 122.21(j)(3)]
    - (a) Records of monitoring information shall include:
      - (1) The date, time of sampling or measurements; exact place, weather conditions, and rain fall amount.
      - (2) The individual(s) who performed the sampling or measurements.
      - (3) The date(s) analyses were performed.
      - (4) The individual(s) who performed the analyses.
      - (5) The analytical techniques or methods used.
      - (6) The results of such analyses.
      - (7) The data sheets showing toxicity test results.
  - 4. Monitoring and Records [40 CFR 122.21(j)(4)]
    - (a) All sampling, sample preservation, and analyses must be conducted according to test procedures under 40 CFR Part 136, unless other test procedures have been specified in this Order. If a particular Minimum Level (ML) is not attainable in accordance with procedures set forth in 40 CFR 136, the lowest quantifiable concentration of the lowest calibration standard analyzed by a specific analytical procedure may be used instead.
  - 5. Monitoring and Records [40 CFR 122.21(j)(5)]
    - (a) The CWA provides that any person who falsifies, tampers with, or knowingly renders inaccurate any monitoring device or method required to be maintained under this Order shall, upon conviction, be punished by a fine of not more than \$10,000, or by imprisonment for not more than 2 years, or both. If a conviction of a person is for a violation committed after a first conviction of such person under this paragraph, punishment is a fine of not more than \$20,000 per day of violation, or by imprisonment of not more than four years, or both.

6. All chemical, bacteriological, and toxicity analyses shall be conducted at a laboratory:
    - (a) Certified for such analyses by an appropriate governmental regulatory agency.
    - (b) Participated in 'Intercalibration Studies' for storm water pollutant analysis conducted by the SMC.<sup>5</sup>
    - (c) Which performs laboratory analyses consistent with the storm water monitoring guidelines as specified in, the *Stormwater Monitoring Coalition Laboratory Guidance Document*, 2nd Edition R. Gossett and K. Schiff (2007), and its revisions.
  
  7. For priority toxic pollutants that are identified in the CTR (65 Fed. Reg. 31682), the MLs published in Appendix 4 of the *Policy for Implementation of Toxics Standards for Inland Surface Waters, Enclosed Bays and Estuaries of California* (SIP) shall be used for all analyses, unless otherwise specified. The MLs from the SIP are incorporated into Attachment "G".
  
  8. The Monitoring Report shall specify the analytical method used, the Method Detection Level (MDL) and the ML for each pollutant. For the purpose of reporting compliance with numerical limitations, performance goals, and receiving water limitations, analytical data shall be reported with 1 of the following methods, as appropriate:
    - (a) An actual numerical value for sample results greater than or equal to the ML.
    - (b) "Not-detected (ND)" for sample results less than the laboratory's MDL with the MDL indicated for the analytical method used.
    - (c) "Detected, but Not Quantified (DNQ)" if results are greater than or equal to the laboratory's MDL but less than the ML. The estimated chemical concentration of the sample shall also be reported. This is the concentration that results from the confirmed detection of the substance by the analytical method below the ML value.
  
  9. For priority toxic pollutants, if the Permittee can demonstrate that a particular ML is not attainable, in accordance with procedures set forth in 40 CFR 136, the lowest quantifiable concentration of the lowest calibration standard analyzed by a specific analytical procedure (assuming that all the method specified sample weights, volumes, and processing steps have been followed) may be used instead of the ML listed in Appendix 4 of the SIP. The Principal Permittee must

<sup>5</sup> The 'Intercalibration Studies' are conducted periodically by the SMC to establish a consensus based approach for achieving minimal levels of comparability among different testing laboratories for storm water samples to minimize analytical procedure bias. Stormwater Monitoring Coalition Laboratory Document, Technical Report 420 (2004) and subsequent revisions and augmentations.

May 7, 2009

submit documentation from the laboratory to the Regional Water Board Executive Officer for approval prior to raising the ML for any constituent.

- 10. Monitoring Reports [40 CFR 122.41(I)(4)(ii)]
  - (a) If the Principal Permittee monitors any pollutant more frequently than required by the Order using test procedures approved under 40 CFR part 136, unless otherwise specified in the Order, the results of this monitoring shall be included in the calculation and reporting of the data submitted in the Annual Monitoring Reports.
- 11. Monitoring Reports [40 CFR 122.41(I)(4)(iii)]
  - (a) Calculations for all limitations, which require averaging of measurements, shall utilize an arithmetic mean unless otherwise specified in this Order.
- 12. If no flow occurred during the reporting period, then the Monitoring Report shall, so state.
- 13. The Regional Water Board Executive Officer or the Regional Board, consistent with 40 CFR 122.41, may approve changes to the Monitoring Program, after providing the opportunity for public comment, either:
  - (a) By petition of the Principal Permittee or by petition of interested parties after submittal of the Monitoring Report. Such petition shall be filed not later than 60 days after the Monitoring Report submittal date, or
  - (b) As deemed necessary by the Regional Water Board Executive Officer following notice to the Principal Permittee.
- 14. The Principal Permittee must provide a copy of the Standard Operation Procedures (SOPs) for the Monitoring Program No. CI 7388 to the Regional Water Board upon request. The SOP will consist of five elements: Title page, Table of Contents, Procedures, Quality Assurance/ Quality Control (QA/ QC), and References. Briefly describe the purpose of the work or process, including any regulatory information or standards that are appropriate to the SOP process, and the scope to indicate what is covered. Denote what sequential procedures should be followed, divided into significant sections; e.g., possible interferences, equipment needed personnel qualifications, and safety considerations. Describe QA/ QC activities, and list any cited or significant references.

**L. Total Maximum Daily Load (TMDL) Monitoring**

- 1. TMDL monitoring is to determine compliance with the TMDL Waste Load Allocations (WLAs) and numeric targets for the MS4 Permittees that have been adopted by the Regional Water Board and have been approved by the Office of Administrative Law and the U.S. EPA.

- 2. TMDL monitoring is in accordance with approved TMDLs as discussed in part 6 of the permit. TMDL monitoring for specific watersheds is in accordance with the agreed upon monitoring plans submitted by stakeholders, including MS4 Permittees.

**M. Beach Water Quality Monitoring**

If funding from state and federal sources is not available for beach water quality monitoring during the winter season (October 15 – April 15) the Principal Permittee within thirty days of notice shall conduct beach water quality sampling and analysis at a maximum of ten sites in accordance with the procedures and locations used in AB 411 monitoring and listed below:

- 1. Rincon Beach – 25 yards south of the creek mouth\*
- 2. Oil Piers Beach – south of the drain, bottom of the wood staircase
- 3. Faria County Park – south of the drain at the north end of the park\*
- 4. Solimar Beach – south (end of east gate access road)\*
- 5. Emma Wood State Beach – 50 yards south of first drain
- 6. Oxnard Beach – at J Street drain
- 7. Surfer’s Point at Seaside – end of the access path via wooden gate
- 8. Promenade Park – Figueroa Street
- 9. Surfer’s Knoll – beach adjacent to the parking lot\*
- 10. San Buenaventura Beach – south of drain at San Jon Road

\* Not associated with MS4 discharges.

### Reporting Program Requirements

The Principal Permittee shall submit by December 15<sup>th</sup> of each year, beginning the year of 2007, an Annual Report to the Regional Water Board Executive Officer in the form of one hard copy and three compact disks (CD) (or equivalent electronic format).

1. The Annual Report shall document the status of the General Storm Water Program, an integrated summary of the results of analyses from:
  - (a) The monitoring program described under Part 1-Monitoring Report; and
  - (b) The requirements described under Part 2- Program Report.
2. Plans shall be submitted to the Regional Water Board Executive Officer in the form of a hard copy and on a compact disk (CD), submit 1 hard copy and 3 CD copies.
3. Study Reports shall be submitted to the Regional Water Board Executive Officer in the form of a hard copy and on a CD, submit 1 hard copy and 3 CD copies.
4. Progress Reports shall be submitted to the Regional Water Board Executive Officer in the form of a hard copy and on a CD, submit 1 hard copy and 3 CD copies.

### PART 1 - MONITORING REPORT

#### A. The following shall be included in the Annual Report:

1. Mass Emissions
  - (a) Assess the variability of storm water constituents from the results of all monitored storms events.
  - (b) Rain totals and hydrographs for monitoring events in both narrative and graphic formats.
  - (c) A summary of the mass emission station annual monitoring results highlighting exceedences (POC) with corresponding sampling.
2. Major Outfalls
  - (a) Assess the variability of storm water constituents from the results of all monitored storms events.
  - (b) Rain totals and hydrographs for monitoring events in both narrative and graphic formats.
  - (c) A summary of the major outfalls station annual monitoring results highlighting exceedences (POC) with corresponding sampling dates.
  - (d) Outfall(s) name and ID number (if applicable).

- 3. Aquatic Toxicity Monitoring
  - (a) An analysis of the mass emission station and major outfall station samples for aquatic toxicity.
  - (b) A report on the development, implementation, and results for each TRE Corrective Action Plan in the Annual Report, beginning the year following the identification of each pollutant or pollutant class causing toxicity.
  - (c) Report on the development, implementation, and results for each TRE Corrective Action Plan, beginning the year following the identification of each pollutant or pollutant class causing toxicity.
  - (d) All constituents (POCs) that caused toxicity or exceeded any applicable water quality objectives at the associated mass emission and/ or major outfall station the previous year shall be listed.
  - (e) A summary of the mass emission station and major outfall station annual monitoring results with corresponding sampling dates and Tox output.
- 4. TMDL Compliance Monitoring
  - (a) A summary of the annual monitoring results for each TMDL.
    - (1) Corresponding sampling dates and Tox output (if applicable).
- 5. Bioassessment
  - (a) Assess the effects of MS4 discharges on the biological integrity of the waterbody.
  - (b) Permittees shall conduct bioassessment, [using Southern California Regional Bioassessment protocol], at one fixed site in each of the watersheds below on an annual basis:
    - (1) Ventura River
    - (2) Santa Clara River
    - (3) Calleguas Creek

**B. The following shall be submitted to the Regional Water Board Executive Officer:**

- 1. Aquatic Toxicity Monitoring
  - (a) A TRE Corrective Action Plan within 30 days after the source of toxicity and appropriate BMPs are identified.
- 2. Pyrethroid Insecticides Study
  - (a) Pyrethroid insecticides study final report, no later than 8 months after completion of the study.
- 3. Hydromodification Control Study
  - (a) Letter stating how the Principal Permittee is satisfying this requirement, no later than 2 months after deciding to either conduct or participate in special studies.
- 4. Non-Compliance

- (a) When monitoring can not be performed to comply with the requirements of this Order due to circumstances beyond the Permittees' control, then within 48 hours the following shall be submitted:
  - (1) Statement of situation.
  - (2) Explanation of circumstance(s) with documentation.
  - (3) Statement of corrective action for the future.
- 5. Low Impact Development
  - (a) Letter stating how the Principal Permittee is satisfying this requirement, no later than 2 months after deciding to either conduct or participate in special studies.
- 6. Volunteer Monitoring Program
  - (a) Results as obtained by volunteer monitoring programs in the Ventura watersheds including, but not limited to, the following:
    - (1) Ventura River - (Ventura Stream Team)
    - (2) Santa Clara River - (Santa Clara River Stream Team)
    - (3) Calleguas Creek - (Calleguas Creek Watershed Quality Monitoring Program)
    - (4) Malibu Creek - (Malibu Creek Watershed Quality Monitoring Program)

**C. Submitted electronically to the Regional Water Board, the following shall be:**

- 1. Mass Emissions
  - (a) Monitoring results no later than 45 days from sample collection date.
- 2. Major Outfalls
  - (a) Monitoring results no later than 45 days from sample collection date.
- 3. Aquatic Toxicity Monitoring
  - (a) Monitoring results no later than 45 days from sample collection date.
- 3. TMDL Compliance Monitoring
  - (a) Monitoring results no later than 45 days from sample collection date.
- 4. Non-Compliance
  - (a) When the Order 's monitoring requirements can not be performed due to circumstances beyond the Permittees' control, then within 48 hours the following shall be submitted to the Regional Water Board Executive Officer:
    - (1) Statement of situation.
    - (2) Explanation of circumstance(s) with documentation.
    - (3) Statement of corrective action for the future.

5. Data transmitted shall be in the SMCs Standardized Data Transfer Formats (SDTFs) and all updates are to be adhered to.<sup>1</sup>
- (a) Regional Water Board's Storm Water E-mail Address:  
[MS4stormwaterrb4@waterboards.ca.gov](mailto:MS4stormwaterrb4@waterboards.ca.gov)
6. Beach Water Monitoring
- (a) Assess bacteriological levels at various beaches in Ventura County, ensuring compliance with beach water quality standards.
- (b) Reports of beach monitoring shall be submitted to the Regional Board electronically within one business day of completion of analysis..

## PART 2 - PROGRAM REPORT

On an annual basis the Permittees shall complete an Annual Monitoring Program Report that responds adequately to the evaluative questions below which correspond to the Order.

### DISCHARGE PROHIBITIONS

- (a) Have you effectively prohibited all non-storm discharges into the MS4 and watercourses?
- (b) If there are any exceptions in the municipal code, list the exceptions to the municipal code. In other words, which non-storm water discharges does your municipality allow? Under what conditions are they allowed (with BMPs)? List which BMPs are required prior to discharge.
- (c) Do you have a procedure to assure that any project within your jurisdiction which may undertake ground water dewatering obtain a permit from the Regional Water Board?
- (d) How many projects are permitted to dewater in your jurisdiction?
- (e) How many are permanent dewatering to continue after construction is completed?
- (f) Do you have a permitting/ permission system for the discharge of dechlorinated/ debrominated swimming pool discharges? Explain it.
- (g) If yes, how many swimming pools are drained with the agency's permit/ permission?
- (h) How do you ensure that discharge limits for chlorine, bromine, etc are not exceeded?
- (i) Do you allow the discharge of "salt water" swimming pool discharges? If yes
- (j) Do you have a permitting/ permission system for the discharge of "salt water" swimming pool discharges? Explain it.

<sup>1</sup> The SMC developed a SDTFs for use by member agencies for electronic recording and transfer of storm water monitoring data. Southern California Coastal Water Research Project, Technical Report 421 (August, 2004).

**RECEIVING WATER LIMITATIONS**

1. At any time, has the discharge from the MS4 caused or contributed to the violation of water quality objectives or water quality standards?
2. At any time, has the discharge from the MS4 for which a Permittee is at least partially responsible, caused or contributed to a condition of nuisance?
3. At any time, has the discharge of pollutant(s) from the MS4 exceeded the MS4 Waste Load Allocation(s) for Wet Weather Discharges?
4. For pollutant(s) which continue to cause or contribute to water quality impairments, but for which TMDLs have not yet been developed or approved, what has the Permittee implemented to eliminate future water quality impairments?

**PART 3 - STORM WATER QUALITY MANAGEMENT PROGRAM  
IMPLEMENTATION**

**A. General Requirements**

**B. Legal Authority**

1. Does your municipal agency possess all the necessary legal authority to implement and enforce each requirement of this Order?
2. If the answer is no, explain why not.
3. By what date certain will the municipal agency have all the necessary legal authority?
4. Attach a copy of the new or updated statement by its legal counsel that the Permittee has obtained all necessary legal authority to comply with this Order through adoption of ordinances and/ or municipal code modifications.
5. After submitting the Statement from your legal counsel, was your city's municipal code (or other legal authority) changed (Any section that applies to or affects storm water permitting or requirements)? On what date(s) was it changed? Provide the changes.

**C. Fiscal Resources**

1. Provide a detailed Annual Budget Summary of the Permittee's allocation of funds expended to implement the activities required to comply with the conditions of this Order.
2. Indicate the source(s) of funding (whether general funds; and/ or Benefit Assessment Program funds; plan review fees; permit fees; industrial/ commercial user fee; revenue bonds; grants; or other funding mechanism. Each Permittee's Annual Budget Summary shall separately include:
3. Annual Budget Summary of expenditures applied to the storm water management program and also identify the storm water budget for the following year, using

estimated percentages and written explanations where necessary, for the specific categories noted below:

(a) Program Overall Management Activities;

(1) Administrative costs

(b) Program Required Activities Implementation;

Provide an estimated percent breakdown of expenditures for the categories below:

(1) Illicit connection/ illicit discharge

(2) Development planning

(3) Development construction

(4) Construction inspection activities

(5) Industrial/ Commercial inspection activities

(6) Public Agency Activities

(7) Maintenance of Structural BMPs and Treatment Control BMPs

(A) Municipal Street Sweeping for Commercial/ Industrial landuse only;

(B) Catch basin clean-outs (including dumping fees);

(C) Storm drain clean-outs (including dumping fees); and

(D) Other costs (describe).

(8) Public Information and Participation;

(9) Monitoring Program; and

(10) Miscellaneous Expenditures (describe).

**D. Designation and Responsibilities of the Principal Permittee**

The Principal Permittee shall submit within the Annual Program Report information on the implementation of the following:

1. Coordination and facilitation of activities to comply with the requirements of this Order;
2. Evaluation, assessment, and summary of the results of the monitoring program and the effectiveness of the implementation of BMPs and any recommended change.

**E. Responsibilities of the Permittees**

Each Permittee shall include within the Annual Program Report information on the implementation of the following:

1. A statement under penalty of perjury that the Permittee is or is not in compliance with the requirements of this Order and any subsequent modifications thereto.
2. A summary of how coordination occurs among its internal departments and agencies to ensure the implementation of the requirements of this Order.
3. Description of the intra-agency coordination by Agency departments (e.g. Community Development (Planning), Public Works, Sanitation, Engineering, Fire Department, Building and Safety, Code Enforcement, Public Health, Water and/ or Power Department, etc.) to ensure the successful implementation of the provisions of this Order.

- 4. In addition to the Budget Summary, identify any supplemental dedicated budgets for the storm water categories listed.
- 5. Identify the staff which participated at all committee or subcommittee meetings and when.

**PART 4 - SPECIAL PROVISIONS**

**A. General Requirements**

- 1. Best Management Practice Substitution
  - (a) Did the Regional Water Board Executive Officer approve any site-specific BMP substitution for your agency?
  - (b) If so, describe implementation of that/ those BMP(s).

**B. Watershed Initiative Participation**

- 1. Describe your participation (Principal Permittee) and present data results in the following:
  - (a) Southern California Stormwater Monitoring Coalitions' (SMC) Regional Monitoring program for the Southern California Regional Bioassessment.

**C. Public Information and Participation Program (PIPP)**

- 1. Describe the Permittee successes in:
  - Measurably increasing the knowledge of the target audiences regarding the MS4, the impacts of storm water pollution on receiving waters and potential solutions to mitigate the problems caused;
  - Measurably changing the waste disposal and runoff pollution generation behavior of target audiences by encouraging implementation of appropriate solutions;
  - Involving and engaging communities in Ventura County to participate in mitigating the impacts of storm water pollution.
- 2. Residential Program
  - (a) Did the Permittee label each storm drain inlet that they own with a legible "no dumping" message.
  - (b) How many inlets were labeled this year?
  - (c) How many inlets were labeled cumulatively?
  - (d) Did the Permittee install signs with prohibitive language discouraging illegal dumping at designated public access points to creeks, other relevant water bodies, and channels?
  - (e) How many?

- (a) Identify the staff person(s) who will serve as the contact person(s) for reporting clogged catch basin inlets and illicit discharges/ dumping, faded or lack of catch basin stencils, and general storm water management information.
- (b) Did the Permittee update this information by July 1 of this year?
- (c) The Principal Permittee shall compile a list of the general public reporting contacts from all Permittees and make this information available on the web site (<http://www.vcstormwater.org/contact.htm>) and upon request.

#### Outreach and Education

- (1) Provide documentation to show that the Permittees implemented the following activities:
- Storm Water pollution prevention advertising campaign.
  - Storm Water pollution prevention public service announcements.
  - Distribution of storm water pollution prevention public education materials to auto parts stores, home improvement centers and pet shops/ feed stores in regards to information on the proper storage and disposal of household waste materials, construction waste materials and vehicle waste fluids, the proper use of fertilizers and pesticides and the proper disposal of animal wastes.
  - Organization of watershed Citizen Advisory Groups/ Committees to develop/ implement effective methods to educate the public about storm water pollution.
  - Organization of events for residents and population subgroups.
  - Maintenance of the Countywide storm water website ([www.vcstormwater.org](http://www.vcstormwater.org)), including educational materials.
- (2) Provide documentation to show that the Principal Permittee implemented the strategy to educate ethnic communities through culturally acceptable and effective methods.
- (3) Did each Permittee implement outreach efforts to residents and school children related to the proper disposal of litter, green waste, pet waste, proper vehicle maintenance, lawn care and water conservation practices?
- (4) Did the Permittees make demonstrable positive effects on the general public related to storm water quality?
- (5) On 4 above, explain how so.
- (6) Did the Principal Permittee, in cooperation with the Permittees, provide schools within each School District in the County with materials, including, but not limited to, videos, live presentations, and other information necessary to educate a minimum of 50 percent of all school children (K-12) every 2 years on storm water pollution?
- (8) Provide the contact information for their appropriate staff responsible for storm water public education activities to the Principal Permittee and changes to contact information no later than 30 days after a change occurs.

- (9) Provide the assessment of the strategy to measure the effectiveness of in-school educational programs.

Businesses Program

- (a) Corporate Outreach
- (b) Provide a progress update on the Corporate Outreach program.

**D. Industrial/ Commercial Facilities Program**

Each Permittee shall require implementation of pollutant reduction and control measures at industrial and commercial facilities, with the objective of reducing pollutants in storm water runoff. Except as specified in other sections of this Order, pollutant reduction and control measures may be used alone or in combination, and may include Structural Treatment Control, Source Control BMPs, and operation and maintenance procedures, which may be applied before, during, and/ or after pollution generating activities. At a minimum, the Industrial/ Commercial Facilities Control Program Report shall include requirements to: (1) track, (2) inspect, and (3) ensure compliance with municipal ordinances at industrial and commercial facilities that are critical sources of pollutants in storm water runoff.

1. Inventory of Critical Sources

- (a) Describe how the critical sources are inventoried. (whether via a watershed-based inventory or database or GIS. Provide a sample.
- (b) Each Permittee shall include the following minimum fields of information for each critical sources industrial and commercial facility.
  - (1) Name of facility and owner/ operator.
  - (2) Address of facility.
  - (3) Coverage under the ISWGP or other individual or general NPDES permits or any applicable waiver issued by the Regional or State Board pertaining to runoff discharges.
  - (4) A narrative description including SIC (NAICS) codes that best describe the industrial activities performed and principal products used at each facility and status of exposure to storm water.
- (c) Did each Permittee update its inventory of critical sources annually?
- (d) Critical Source Inventory Database

Did you (individually or jointly) update the Database for Critical Sources Inventory?	Yes <input type="checkbox"/>
	No <input type="checkbox"/>

2. Inspection Program

(a) The Permittee shall verify the following for each inspection:

- (1) The facility has a current Waste Discharge Identification (WDID) number or a current No Exposure Certification for discharging storm water associated with industrial activity?
- (2) A Storm Water Pollution Prevention Plan available on-site?
- (3) The facility is effectively implementing BMPs in compliance with County and municipal ordinances including the source control BMPs outlined in Part 4.D. of this Order
- (4) The facility needs to implement additional treatment control BMPs where the storm water from the MS4 discharges to a CWA §303(d) listed water body?

Enforcement Actions by categories (e.g. Warning letter, NOV, referral to D.A., etc.)	Number of facilities issued enforcement actions in the current reporting year	Number of facilities (re)inspected due to enforcement actions in current reporting year	Number of facilities (re)inspected to enforcement actions in current reporting cycle	Number of facilities brought into compliance in the current reporting year	Number of facilities brought into compliance in current reporting cycle	Total number of enforcement actions since permit adoption (by category)
NOVs						
Etc...						

Facilities by category	Number of Warning letters	Number of NOV's	Number of Referrals	Number of Other(Explain)
Landfill				
Etc...				
Comments/ Explanation/ Conclusion:				

Nurseries and nursery centers

- (a) At nurseries subject to the agricultural waiver issued by the Regional Water Board, provide a spreadsheet with the following information:
  - How many operators have enrolled under the waiver?
  - What is their identification number?
  - How many nonfilers did you notify to apply under the agricultural waiver?
- (b) Did you submit electronically semiannually to the Regional Water Board a list with the names of facilities notified to apply for the waiver?

Ensuring Compliance of Critical Sources

- (a) On how many sites did you determine that a BMP is infeasible, and require implementation of other BMPs that will achieve the equivalent reduction of pollutants in the storm water discharges?
- (b) For critical sources that discharge to ESAs or that are tributary to CWA § 303(d) impaired water bodies, does the Permittee require operators to implement additional controls to reduce pollutants in storm water runoff that are causing or contributing to exceedences of Water Quality Standards?

Investigation of Complaints Regarding Facilities – Transmitted by the RB Staff

- (a) How many investigations were conducted as a result of USEPA or Regional Water Board staff referrals of violators to the Permittee?
- (b) Was the investigation initiated within one business day of being contacted?
- (c) What were the results of each investigation?

**E. Planning and Land Development Program**

1. Low Impact Development

- (a) Did all new development and redevelopment projects integrate Low Impact Development (LID) principles into project design?
- (b) How many did?
- (c) How many did not?
- (d) If not, Why not?

Numeric Hydromodification Mitigation Criteria

1. Hydrologic (Flow/ Volume/ Duration) Control

- (a) Did the Permittees require all new developments and redevelopment projects to implement hydrologic control measures, to prevent accelerated downstream erosion and to protect stream habitat in natural drainage systems?
- (b) How many did?
- (c) How many did not?
- (d) Why not?

- (a) For each project, did each Permittee require that during the construction of a single-family hillside home, actions be taken to:
  - (1) Conserve natural areas?
  - (2) Protect slopes and channels?
  - (3) Provide storm drain system stenciling and signage?
  - (4) Divert roof runoff to vegetated areas before discharge unless the diversion would result in slope instability? and
  - (5) Direct surface flow to vegetated areas before discharge unless the diversion would result in slope instability?
- (b) Did each Permittee require that all development projects equal to 1 acre or greater be subject to conditioning and approval of post-construction BMPs as approved by the Regional Water Board in Board Resolution No. R 00-02?
- (c) Did each Permittee require that the following development projects be subject to conditioning and approval of post-construction BMPs?
  - (1) Retail gasoline outlets 5,000 square feet or more of surface area; How many sites?
  - (2) Restaurants (SIC 5812) 5,000 square feet or more of surface area; How many sites?
  - (3) Parking lots 5,000 square feet or more of surface area or with 25 or more parking spaces; How many sites?
  - (4) Automotive service facilities (SIC 5013,5014,5541,7532-7534 and 7536-7539) [5,000 square feet or more of surface area]; How many sites? and
  - (5) Redevelopment projects in subject categories that meet Redevelopment thresholds. How many sites?
- (d) Did each Permittee require that post construction BMPs be subject to conditioning and approval for development projects located in or directly adjacent to or discharging directly to an Environmentally Sensitive Area (ESA), where the development will:
  - (1) Discharge storm water and urban runoff that is likely to impact a sensitive biological species or habitat.
  - (2) Create 2,500 square feet or more of impervious surface area.

3. Numeric Water Quality Design Criteria

**Projects disturbing land areas less than 50 acres**

- (a) Ho many did the Permittee require that post-construction Treatment Control BMPs incorporate, at a minimum, a volumetric and/ or hydrologic (flow based) treatment control design standard, as identified below to mitigate (infiltrate, filter or treat) storm water runoff as specified below?
- (b) How many sites were exempted from the requirement?
- (c) Why were they exempted?

**Projects disturbing land area of 50 acres or greater**

For sites 50 acres or greater how many did the Permittee require that post-construction Treatment Control BMPs be,

- (a) Designed using an appropriate public domain hydrodynamic model (such as Storm Water Management Model (SWMM) 5 or Hydrologic Engineering Center – Hydrologic Simulation Program – Fortran (HEC-HSPF); and incorporate
- (b) Rainfall intensity based on hourly rainfall records;
- (c) An adjustment factor for within hour rainfall variability; and
- (d) Hydraulics of BMP Performance.
- (e) How many projects did this apply to?
- (f) Were there any sites that were exempted from the requirement?
- (g) How many sites were exempted?
- (h) Why were they exempted?

## 4. Applicability of Numerical Criteria

Did the Permittee require all projects equal to 1 acre or greater and the following additional projects to design and implement post-construction treatment controls to mitigate storm water pollution for the following?:

- (a) Automotive service facilities (SIC 5013, 5014, 5541, 7532-7534 and 7536-7539) [5,000 square feet or more of surface area].
- (b) Retail gasoline outlets [5,000 square feet or more of impervious surface area and with projected Average Daily Traffic (ADT) of 100 or more vehicles].  
Subsurface Treatment Control BMPs which may endanger public safety (i.e., create an explosive environment) are considered not appropriate.
- (c) Restaurants (SIC 5812) [5,000 square feet or more of surface area].
- (d) Parking lots 5,000 square feet or more of surface area or with 25 or more parking spaces.
- (e) Projects located in, adjacent to or discharging directly to an ESA that meet threshold conditions identified above in 2(d).
- (f) Redevelopment projects in subject categories that meet Redevelopment thresholds.
- (g) How many projects did this apply to?
- (h) Were there any sites that were exempted from the requirement?
- (i) How many sites were exempted?
- (j) Why were they exempted?

## 5. Site Specific Mitigation

- (a) List how many sites did each Permittee require the implementation of a site-specific plan to mitigate post-development storm water for new development and redevelopment not identified in Section XX but which may potentially have

adverse impacts on post-development storm water quality, with one or more of the following project characteristics:

- (1) Vehicle or equipment fueling areas. How many?
- (2) Vehicle or equipment maintenance areas, including washing
- (3) and repair. How many?
- (4) Commercial or industrial waste handling or storage. How many?
- (5) Outdoor handling or storage of hazardous materials. How many?
- (6) Outdoor manufacturing areas. How many?
- (7) Outdoor food handling or processing. How many?
- (8) Outdoor animal care, confinement, or slaughter. How many?
- (9) Outdoor horticulture activities. How many?

- (b) Were there any sites that were exempted from the requirement?
- (c) How many sites were exempted?
- (d) Why were they exempted?

6. Redevelopment Projects

- (a) Did the Permittees apply the post construction BMP requirements, or site specific requirements including post-construction storm water mitigation to all projects that undergo significant Redevelopment in their respective categories?
- (b) How many?
- (c) Were there any sites that were exempted from the requirement?
- (d) How many sites were exempted?
- (e) Why were they exempted?

7. Maintenance Agreement and Transfer

- (a) How many developments subject to post construction BMP requirements and site specific plan requirements actually provided verification of maintenance provisions for Structural and Treatment Control BMPs, including but not limited to legal agreements, covenants, CEQA mitigation requirements, and or conditional use permits?
- (b) How many of each verification were received?
- (c) The developer's signed statement accepting responsibility for maintenance until the responsibility is legally transferred?
- (d) A signed statement from the public entity assuming responsibility for Structural or Treatment Control BMP maintenance and that it meets all local agency design standards?
- (e) Written conditions in the sales or lease agreement, which requires the recipient to assume responsibility for maintenance and conduct a maintenance inspection at least once a year?
- (f) Written text in project conditions, covenants and restrictions (CCRs) for residential properties assigning maintenance responsibilities to the Home Owners Association for maintenance of the Structural and Treatment Control BMPs?

- (g) Written conditions in the sales or lease agreement, which requires the recipient to assume responsibility for maintenance and conduct a maintenance inspection at least once a year?
- (h) Another type of legally enforceable agreement that assigns responsibility for the maintenance of post-construction Structural or Treatment Control BMPs?
8. Development Planning Coordination and Enforcement
- (a) Did you inspect each new development and redevelopment project for post construction controls prior to approving and signing off for occupancy?
- (b) How many?
- (c) Were there any sites that were exempted from the requirement?
- (d) How many sites were exempted?
- (e) Why were they exempted?
9. Regional Storm Water Mitigation Program
- (a) Have you applied to the Regional Water Board for approval of a regional or sub-regional storm water mitigation program to substitute in part or wholly for on-site post-construction requirements?
10. Inspection and Tracking System for Post Construction Treatment BMPs
- (a) Did you implement the required Geographic Information System (GIS) or other electronic system for tracking projects conditioned for post construction treatment control BMPs?
- (b) Does include the following information? (Answer each separately)
- (1) Municipal Project ID?
- (2) State WDID No.?
- (3) Project Acreage?
- (4) BMP Type and Description?
- (5) BMP Location (GPS coordinates)?
- (6) Date of Acceptance?
- (7) Date of O&M Certification?
- (8) Maintenance Records
- (9) Inspection Date and Summary?
- (10) Corrective Action?
- (11) Replacement or Repair Dates?
- (c) Did you inspect all facilities to verify proper maintenance and operation of Treatment BMPs previously approved?
- (d) Did you accomplish the following?
- (e) BMP acceptance inspection to ensure proper installation?
- (1) Inspection once every two years of high priority post-construction BMPs to ensure treatment effectiveness, hydraulic function, and vector risk minimization?

11. Developer Technical Guidance and Information

- (a) List dates as to when the Ventura County Technical Guidance Manual for Stormwater Quality Control Measures was last updated to include the following:
- (1) Hydrologic (Peak Flow) Control criteria for volume control described herein and the interim criteria based on hydrograph matching?
  - (2) Expected BMP pollutant removal performance including consistent effluent quality and removal efficiency ranges (International BMP Database, technical reports and the scientific literature?
  - (3) Improved Correlation of BMPs with storm water POC?
  - (4) Data on Observed Local Effectiveness and performance of implemented BMPs?
  - (5) BMP Maintenance and Cost considerations?
  - (6) Criteria to facilitate integrated water resources planning and management in the selection of BMPs, including water conservation, groundwater recharge, public recreation, multipurpose parks, open space preservation, and redevelopment retrofits?

12. Project Review and Inter Department Coordination

- (a) Did you ensure that a detailed BMP review was performed including BMP sizing calculations, BMP pollutant removal appropriateness, for each plan submitted with a signed certification?
- (b) How many?
- (c) Were there any sites that were exempted from the requirement?
- (d) How many sites were exempted?
- (e) Why were they exempted?
- (f) Did you ensure that a clear structure for communication and delineated authority are established between and among municipal departments which have jurisdiction over project review, plan approval, project construction, and site maintenance?
- (g) Explain how?

13. California Environmental Quality Act (CEQA) Document Update

Did you incorporate into the CEQA process procedures for considering potential storm water quality impacts and providing for appropriate mitigation when preparing and reviewing CEQA documents? (Answer each below separately.)

- (a) Potential impact of project construction on storm water runoff?
- (b) Potential impact of project post-construction activity on Storm Water runoff?
- (c) Potential for discharge of storm water from areas from material storage, vehicle or equipment fueling, vehicle or equipment maintenance (including washing), waste handling, hazardous materials handling or storage, delivery areas or loading docks, or other outdoor work areas?
- (d) Potential for discharge of storm water to impair the beneficial uses of the receiving waters or areas that provide water quality benefit?

- (e) Potential for the discharge of storm water to cause significant harm on the biological integrity of the waterways and water bodies?
- (f) Potential for significant changes in the flow velocity or volume of Storm Water runoff that can cause environmental harm?
- (g) Potential for significant increases in erosion of the project site or surrounding areas?

15. General Plan Update

- (a) Was your General Plan amended, revised or updated to include watershed and storm water quality and quantity management considerations and policies when any of the following General Plan elements are updated or amended?  
(Answer each separately)
  - (1) Land Use?
  - (2) Housing?
  - (3) Conservation?
  - (4) Open Space?
- (b) Did you provide the Regional Water Board with the draft amendment or revision when a listed General Plan element or the General Plan was noticed for comment in accordance with Cal. Govt. Code § 65350 *et seq*?
- (c) When?

**F. Development Construction Program**

- 1. Did you implement a program to control runoff from construction activity at all construction sites within your jurisdiction to ensure that the following requirements are effectively implemented? (Answer each separately)
  - (a) For construction projects within or adjacent to an environmentally sensitive area (ESAs), did you prohibit grading between October 1 and April 15?
  - (b) For construction projects, which include grading on slopes greater than 5:1, that no grading shall occur between October 1 and April 15?
  - (c) All construction projects, which directly discharge into a sedimentation/ siltation impaired water body and is listed on the CWA §303 (d) list. No grading shall be occurring between October 1 and April 15?
  - (d) If grading operations were not completed before the rainy season began, was grading halted and erosion control measures put in place to minimize erosion until grading resumes after April 15?
- 2. Did you require construction site operators to seek separate coverage from the Regional Water Board wherever ground water dewatering may be necessary, is anticipated, or likely?
  - (a) Small Construction Sites

- (1) For each construction site did you require and inspect to ensure that at each construction site, the minimum set of BMPs were implemented to minimize erosion and sediment loss, and prevent pollution from construction waste?
3. For each construction site 1 acre and greater:
- Did you review and approve a Local Storm Water Pollution Prevention Plan (Local SWPPP), for approval prior to issuance of a grading permit for construction projects?
  - Did you inspect all construction sites for storm water quality requirements during routine inspections a minimum of once during the wet season?
  - Was the Local SWPPP reviewed for compliance with local codes, ordinances, and permits?
  - For inspected sites that have not adequately implemented their Local SWPPP, a follow-up inspection to ensure compliance shall take place within 2 weeks?
  - If compliance had not been attained, did the Permittee take additional actions to achieve compliance (as specified in municipal codes)?
  - How many?
  - For small construction sites one acre and greater (or part of a larger plan of development or sale), did you require, prior to issuing any grading permit, demolition permit, building permit, or construction permit [or any other municipal authorization to move soil and/ or construct or destruct that involves soil disturbance], for all projects requiring coverage under the state general permit, proof of a Waste Discharger Identification (WDID) Number for filing a Notice of Intent (NOI) for coverage under the CASGP and a certification that a SWPPP has been prepared by the project developer?
  - Does your agency accept a Local SWPPP as a substitute for the State SWPPP?
  - Is the Local SWPPP at least as inclusive in controls and BMPs as the State SWPPP?
  - Do you require proof of an NOI and a copy of the SWPPP at any time a transfer of ownership takes place for the entire development or portions of the common plan of development where construction activities are still on-going?
  - What system do you use to track grading permits issued by your agency?
4. Linear Construction
- Do require for any linear construction project or projects (cumulatively) that will cause one acre or more of soil disturbance but not more than 5 acres that coverage be obtained under the Small Linear Underground/ Overhead Construction Projects General Permit?
  - Do you require proof of a Waste Discharger Identification Number (WDID) for filing a Notice of Intent (NOI) for coverage under the and a certification that a SWPPP has been prepared by the project developer, prior to issuing a grading permit, demolition permit building permit, or construction permit (or other authorization to move soil and/ or construct or destruct that involves soil disturbance)?

5. CASGP Violation Referrals
  - (a) Did you make any referral of violations of the new development and redevelopment post construction requirements and municipal storm water ordinances to the Regional Water Board?
  - (b) Did you make any referral for suspected violations of the CASGP or Linear Permit coverage requirements

#### G. Public Agency Activities Program

1. Sewage System Maintenance, Overflow, and Spill Prevention
  - (a) Did you implement a response plan for overflows of the sanitary sewer system within their respective jurisdiction that clearly identifies agencies responsible and telephone numbers and email for any contact?
  - (b) How many overflows did you have?
  - (c) How many did you respond to?
  - (d) Do you own and/ or operate a sanitary sewer system?
  - (e) If so, did you also Identify, repair, and remediate sanitary sewer blockages, exfiltration, overflow, and wet weather overflows from sanitary sewers to the MS4?
  - (f) Did you implement procedures and maintenance schedules to prevent sewage spills or leaks from sewage facilities from entering the MS4?
  - (g) If you are a Permittee with septic systems in your jurisdiction, how many do you have?
  - (h) Did you implement the following for flows of septic leachate to surface waters within their respective jurisdiction, which shall consist at a minimum of the following:
    - (1) Investigation of any complaints received?
    - (2) Immediately respond to overflows for containment, upon notification?
    - (3) Notification to appropriate agencies and public health agencies when a septic system fails and flows to the MS4?
2. Public Construction Activities Management
  - (a) Did you comply with all the Development Planning Program requirements in at public construction projects?
  - (b) Did you comply with all the Development Construction Program requirements at Permittee owned or operated construction sites?
  - (c) Did you obtain coverage under the CSWGP for all construction activities for (non linear) capital improvement project(s), or contracts, that individually or cumulatively equals or surpass the 1 acre land disturbance threshold?
  - (d) Did you obtain coverage under the Statewide General Permit for Storm water Discharges Associated with Construction Activity from Small Linear Underground/ Overhead Projects (Small LUP General Permit) for Small Linear

(b) Are all of your existing facilities that are not plumbed to the sanitary sewer with vehicle and equipment washing areas:

- (1) Self-contained? How many?
- (2) Equipped with a clarifier? How many?
- (3) Equipped with an alternative pre-treatment device? How many?
- (4) To be plumbed to the sanitary sewer? How many? When?
  - (A) Are all new facilities, or during redevelopment of existing facilities (including fire stations), all vehicle and equipment wash areas to be plumbed to the sanitary sewer and be equipped with a pre-treatment device in accordance with requirements of the sewer agency? If not state why.

4. Landscape and Recreational Facilities Management

Control Program for Registered Pesticides

- (a) Did you adopt and implement policies, procedures, and/ or ordinances requiring the minimization of pesticide use and the use of integrated pest management (IPM) techniques in your operations and on municipal property?
- (b) What was your previous year's pesticide use? Answer in gallons or pounds for each type used.
- (c) Using estimated projections, what is your expected use this coming fiscal year? Answer in gallons or pounds for each type used.
- (d) Do you have commitments to reduce or phase-out, and ultimately eliminate use of pesticides that cause impairment of surface waters? State for each, by when.
- (e) Describe your Integrated Pesticide Management (IPM) program.
- (f) Attach the program elements.
- (g) Did you comply with the following requirements?:
  - (1) Use a standardized protocol for the routine and non-routine application of pesticides, herbicides (including pre-emergents), and fertilizers?
  - (2) Ensure no application of pesticides or fertilizers immediately before, during, or immediately after a rain event or when water is flowing off the area to be applied?
  - (3) Ensure that no banned or unregistered pesticides are stored or applied?
  - (4) Ensure that all staff applying pesticides are certified by the California Department of Food and Agriculture, or are under the direct supervision of a certified pesticide applicator?
  - (5) Implement procedures to encourage retention and planting of native vegetation and to reduce water, fertilizer, and pesticide needs?
  - (6) Store fertilizers and pesticides indoors or under cover on paved surfaces or use secondary containment?
    - (A) Reduce the use, storage, and handling of hazardous materials to reduce the potential for spills?
    - (B) Regularly inspect storage areas to ensure no environmental harm?

5. Storm Drain Operation and Management

Catch Basin Cleaning

- (a) How many catch basins did you designate as one of the following:
  - Priority A: Catch basins that are designated as consistently generating the highest volumes of trash and/ or debris?
  - Priority B: Catch basins that are designated as consistently generating moderate volumes of trash and/ or debris?
  - Priority C: Catch basins that are designated as generating low volumes of trash and/ or debris?
- (b) Did you clean all catch basins according to the following schedule?:
  - Priority A: A minimum of three times during the wet season and once during the dry season every year? How many?
  - Priority B: A minimum of once during the wet season and once during the dry season every year? How many?
  - Priority C: A minimum of once per year? How many?
- (c) Did you ensure that any catch basin that is at least 25% full of trash and/ or debris was cleaned out? How many?

For each type of catch basin (A, B, or C) state how much trash and debris was collected and state the units (wet tons, dry pounds, etc...)

- (1) Did you require for any special event that they arrange for temporary screens to be placed on catch basins or for catch basins in that area to be cleaned out subsequent to the event and prior to any rain event? How many events did this apply to?
- (2) How much trash and debris was collected? (wet tons, dry pounds, etc...)

Trash Controls

- (a) Did you install trash receptacles at transit stops as required?
- (b) How many?
- (c) How much trash and debris was collected? (wet tons, dry pounds, etc...)
- (d) Did you install trash excluders, or similar devices upon catch basins to prevent the discharge of trash to the storm drain system?
- (e) How many?
- (f) How much trash and debris was collected? (wet tons, dry pounds, etc...)

Catch Basin Labels

- (a) Did you inspect the legibility of the catch basin label by all inlets?
- (b) How many?
- (c) Were catch basins with illegible stencils shall be recorded and re-stenciled or re-labeled within 180 days of inspection?
- (d) How many were recorded?
- (e) How many were relabeled?

Storm Drain Maintenance

- (a) Did you inspect all Permittee-owned open channels and other drainage structures for debris and identify and prioritize problem areas of illicit discharge for regular inspection?
  - (b) Do your maintenance activities assure that appropriate storm water BMPs are being utilized to protect water quality?
  - (c) Did you remove trash and debris from open channel storm drains before the storm season?
  - (d) Did you minimize the discharge of contaminants during MS4 maintenance and clean outs?
  - (e) How?
  - (f) Did you properly dispose of material removed?
  - (g) How much trash and debris was collected? (wet tons, dry pounds, etc...)
  - (h) Have you obtained coverage under the CASGP for Long-term maintenance programs for flood control channels (such as vegetation removal) if one or more acres of soil are disturbed by grading, clearing or excavation activities for an individual project or as part of several projects part of the Permittee's long-term maintenance plan?
    - (i) How many projects?
    - (j) Which projects?
  - (k) Were all municipally owned treatment control BMPs as maintained as necessary to ensure optimal pollutant reduction?
  - (l) Was any pooled water shall be discharged to the sanitary sewer system?
  - (m) Was any of the pooled water treated to remove pollutants and discharged to the storm drain?
  - (n) Was every discharge monitored to ensure compliance?
6. Streets and Roads Maintenance
- (a) Did you conduct street sweeping of curbed streets in commercial areas to control trash and debris at least 2 times per month?
  - (b) How much trash and debris was collected? (wet tons, dry pounds, etc...)
  - (c) Did you obtain coverage under the CASGP for long-term maintenance programs for roadside maintenance (such as: vegetation removal ) if 1 or more acres of soil are disturbed including: grading, clearing or excavation activities that disturb 1 or more acres of land either for an individual project or as part of a long-term maintenance plan?
7. Parking Facilities Management
- (a) Were all Permittee-owned parking lots exposed to storm water cleaned to be kept clear of debris and excessive oil buildup and cleaned no less that 2 times per month?
  - (b) How much trash and debris was collected? (wet tons, dry pounds, etc...)

8. Public Industrial Activities Management
- Did you obtain separate coverage under the IASGP for any municipal activity subject to it for the discharge of storm water associated with industrial activity?
  - For how many facilities?
  - Which facilities?
9. Municipal Drinking Water System Discharges
- From your municipal drinking system did you maintain the system by flushing hydrants or other fixtures?
  - How many gallons total were discharged in the year?
  - If the discharges in an annual period were less than 100,000 gallons for the entire city did you implement a BMP or suite of BMPs to ensure that the chlorine level of the discharge is 0.1mg/L or less?
  - Did you sample or take a test every time to ensure dechlorination of the water to 0.1mg/L or less?
  - Did you ensure that the BMP or suite of BMPs were implemented so that no erosion is caused by the discharge of the potable water?
  - What BMPs were implemented?
10. Emergency Procedures
- Were there any emergencies that caused the Permittee to invoke this section? Explain the situation.
11. Municipal Employee (and municipal contractor) Training
- Did you train all of your employees in targeted positions regarding the requirements of the overall storm water management program?
  - Did you promote a clear understanding of the potential for activities to pollute storm water?
  - Did they learn to identify opportunities to require, implement, and maintain appropriate BMPs in their work?
  - Did they learn the appropriate ways of identification, investigation, termination, cleanup, and reporting of illicit connections and discharges?
  - Will they ensure that the requirements of this Order are met?
  - For those employees or contractors who use or have the potential to use pesticides (whether or not they normally apply pesticides as part of their work), which includes pesticides available over the counter, did you address the potential for pesticide-related surface water toxicity?
  - Proper use, handling, and disposal of pesticides?
  - Least toxic methods of pest prevention and control?
  - Encourage the use of IPM?
  - Require the quantifiable reduction of pesticide use?
  - Training - All Permittees shall train all targeted employees who are responsible for on an annual basis. In public agency?

**H. Illicit Connections/ Illegal Discharge Program**

1. IC/ ID Program
  - (a) Did you implement an IC/ ID Program?
  - (b) The IC/ ID Program must be documented and available for review.
  - (c) Did you map all permitted connections to the storm drain system?
  - (d) Did you map all illicit connections and discharges on baseline maps?
  - (e) Did you transmit this information to the Principal Permittee?
  - (f) Did you use this mapping information to identify priority areas for further investigation?
  - (g) Did you eliminate all known illicit connections and illicit discharges?
  
2. Public Reporting
  - (a) Did you establish and maintain a phone hotline to receive illicit discharge/ connection complaints?
  - (b) Did you establish and maintain an internet homepage to receive illicit discharge/connection complaints?
  - (c) For all complaints received, did you document the location of the illicit discharge/ connection?
  - (d) Have you documented the actions undertaken in response to all illicit discharge/ connection complaints?
  
3. Illicit Connections
 

Screening for Illicit Connections

  - (a) Did you conduct field screening of your storm drain system for illicit connections?
  - (b) For those portions of the storm drain system consisting of storm drain pipes 36 inches in diameter or greater, how many miles did you field screen this year?
  - (c) Out of how many miles total?
  - (d) Did you conduct field screening for high priority areas identified during the mapping of illicit connections and discharges?
  - (e) How many miles were completed this year?
  - (f) Out of how many miles total?
  - (g) How much of the storm drain system that is 50 years or older in age did you field screen?
  - (h) Out of how many miles total?
  - (i) Did you submit to the Principal Permittee a GIS layer showing the location and length of underground pipes greater than 18" in diameter and channels within their jurisdiction?
  - (j) Did you also include the status of suspected, confirmed, and terminated illicit connections?
  - (k) Did you maintain a list containing all connections under investigation for possible illicit connection and their status?

- (l) Did you attach that list to this Annual Report?

Response to Illicit Connections

- (a) Did you complete an investigation within 21 days of notice of a suspected illicit connection?
- (b) Did you determine the Source of each connection?
- (c) Did you determine the nature and volume of discharge through the connection?
- (d) Did you identify the responsible party of the connection?
- (e) How many suspected illicit connections were there this year?
- (f) Upon confirmation of the illicit nature of a storm drain connection did you terminate the connection within 180 days of completion of the investigation?
- (g) Did you document all illicit connection discoveries and your response to each?

4. Illicit Discharges

(a) Abatement and Cleanup

- (1) Did you respond and cleanup within 1 business day of discovery or of receiving a report of a suspected illicit discharge?
- (2) Did you keep records of all illicit discharge discoveries, reports of suspected illicit discharges and their response to the illicit discharges and suspected illicit discharges?
- (3) How many did you receive?
- (4) How many did you respond to?

(b) Investigation

- (1) Did you investigate illicit discharges during or immediately following containment and cleanup activities, and take enforcement action as appropriate?

Proposed Additions and/or Edits are Highlighted in yellow. Deletions are in Strikethrough.

**1 Proposed Change**

Part 1, B.3 p.2

Stated: ~~natural watercourses~~

Correction: receiving waters

**2 Proposed Change:**

Part 1, D.3 p. 9

Stated: ~~watercourses~~

Correction: receiving waters

**3 Proposed Change**

Part 1- New LID Finding, B. 19

Stated: New insert

Correction: Staff finds there is a growing acceptance by stormwater professionals to integrate LID principles into stormwater management programs and MS4 permits. However, there remains significant controversy regarding the appropriate requirements and metrics for LID. At the heart of this controversy is a dispute regarding the feasibility and effectiveness of requiring a fixed volume of stormwater to be captured and retained onsite for infiltration, reuse, and evapotranspiration, as opposed to permitting a portion of the stormwater to be released off site after it is treated, when it is infeasible to retain the required stormwater on site due to site specific conditions.

Staff has reviewed extensive technical literature regarding this issue (e.g. R. Horner, *Investigation of the Feasibility and Benefits of Low-Impact Site Design Practices ("LID") for Ventura County* (February 2007); E. Strecker, A. Poresky, D. Christsen, *Memorandum: Rainwater Harvesting and Reuse Scenarios and Cost Consideration*, (April, 2009). Staff finds that there is consensus in the technical community that site conditions and the type of development can limit the feasibility of retaining, infiltrating, and reusing stormwater at sites due to a variety of site specific conditions. Factors that affect the feasibility of a fixed volume capture standard include, but are not limited to: soils infiltration capacity, subsurface pollution, and locations in urban core centers.

Regarding the effects of capturing a fixed stormwater volume on site, Staff finds the fixed volume approach may be ignoring basic hydrological principles that relate the feasible infiltration volume to the infiltration capacity of local soils. Requirements to capture a fixed volume on site could disturb the natural water balance and lead to unintended engineering and hydrologic consequences. For example, a typical hydrological condition in Ventura County is one of successive storms during the winter which may exceed the stormwater capacity that can be retained on site. This may result in ponded water on site with attendant health and safety risks, saturation of the near surface soils, and reduction of water resources in Regional waterbodies. These effects could damage site structures, increase groundwater pollution by forcing enhanced pollution spreading, or destroy aquatic habitat. Staff finds these reasonably potential effects are not well evaluated scientifically. Finally, staff cannot find that a fixed retention volume versus a

standard that attempts to release surface flows at a predevelopment level would result in a greater reduction of stormwater pollution.

#### **4 Proposed Change**

Part 1- Discharge Prohibitions A.1(c)

Stated:

Correction: A.1.(c)(2) was moved to A.1(c), the word "emergency" was eliminated

#### **5 Proposed Change**

Part 1- Table 1

Correction: Requirements from firefighting activity flows have been eliminated.

#### **6 Proposed Change**

Part 1- A.1.

Stated: watereourses

Correction: receiving waters

#### **7 Proposed Change**

Part 1 – Discharge Prohibitions, A.1.c.(3)(I), Pg.30 -

Stated: Pooled storm water from treatment BMPs<sup>1</sup>.

Correction: Pooled non-storm water from treatment BMPs

\*Footnote 1 is not associated with this item. Footnote 2 has been reworded and combined with the previous draft permit's footnote 3, which was associated with the item. Footnote appears to be in need of a change.

#### **8 Proposed Change**

Part 1 – Discharge Prohibitions, Table 1, Pg.30 -

Stated: Discharges from potable water sources<sup>1</sup>. See Footnote 1

Correction: Delete footnote at the end of sources.

\*Footnote 1 is not associated with this item. Footnote 2 has been reworded and combined with the previous draft permit's footnote 3, which was associated with the item. Footnote appears to be in need of a change or deletion.

#### **9 Proposed Change**

Part 1 – Discharge Prohibitions, Footnote 2, Pg.30 -

Stated: All storm water BMPs shall at a minimum be maintained at a frequency as specified by the manufacturer, and designed to drain within 72 hours of the end of a rain. Storm water treatment BMPs may be drained to the MS4 under this Order if the discharge is not a source of pollutants. Sediments shall be disposed of properly, in compliance with all applicable local, state, and federal policies, acts, laws, regulations, ordinances, and statutes.

Correction: All storm water BMPs shall at a minimum be maintained at a frequency as specified by the manufacturer, and designed to drain within XX hours of the end of a rain. Storm water treatment BMPs may be drained to the MS4 under this Order if the discharge is not a source of pollutants. Sediments shall be disposed of properly, in compliance with all applicable local, state, and federal policies, acts, laws, regulations, ordinances, and statutes.

### 10 Proposed Change

Part 1 – Discharge Prohibitions, Footnote 1, Pg.31 -

Stated: The term applies to low volume, incidental and infrequent releases that are innocuous from a water quality perspective. Those releases for dewatering or hydro-testing or flushing of water supply and distribution mains and incidental and infrequent releases from well heads shall be allowed with the implementation of appropriate BMPs until such time as a new General Permit is adopted that addresses those types of releases. Discharges from hydrostatic pipe testing shall be subject to separate NPDES general permit coverage (CAG674001) and discharges from utility vaults shall be conducted under coverage of a separate NPDES permit specific to that activity.

Correction: Delete Footnote 1. There appears to be no Footnote in Table on Page 31.

### 11 Proposed Change

Part 1 – Discharge Prohibitions, Footnote 2, Pg.33 -

Stated: All storm water BMPs shall at a minimum be maintained at a frequency as specified by the manufacturer, and designed to drain within 72 hours of the end of a rain. Storm water treatment BMPs may be drained to the MS4 under this Order if the discharge is not a source of pollutants. Sediments shall be disposed of properly, in compliance with all applicable local, state, and federal policies, acts, laws, regulations, ordinances, and statutes.

Correction: All storm water BMPs shall at a minimum be maintained at a frequency as specified by the manufacturer, and designed to drain within ~~XX~~ hours of the end of a rain. Storm water treatment BMPs may be drained to the MS4 under this Order if the discharge is not a source of pollutants. Sediments shall be disposed of properly, in compliance with all applicable local, state, and federal policies, acts, laws, regulations, ordinances, and statutes.

### 12 Proposed Change

Part 2 Municipal Action Levels, Page 34,

The following language will be inserted as the new paragraph 6:

Upon Executive Officer approval, Permittees may coordinate MAL Action Plans and TMDL Implementation Plans, subject to the compliance timeline of the earliest date.

### 13 Proposed Change

Part 4.A.3, Page 36

Current Language: Each Permittee shall require that treatment control BMPs being implemented under the provisions of this Order shall be designed, at a minimum, to achieve the BMP performance criteria for storm water pollutants likely to be discharged as identified in Attachment “C”, Table 3.

Revised Language: Each Permittee shall require that treatment control BMPs being implemented under the provisions of this Order shall be designed, at a minimum, to achieve the BMP performance criteria for storm water pollutants likely to be discharged as identified in Attachment “C”, Table 3 for an 85th percentile 24-hour runoff event determined as the maximized capture storm water volume for the area using a 48 to 72-hour draw down time, from the formula recommended in Urban Runoff Quality Management, WEF Manual of Practice No. 23/ASCE Manual of Practice No. 87, (1998). Expected BMP pollutant removal performance for effluent quality was developed from the WERF-ASCE/ U.S. EPA International BMP Database.

**14 Proposed Change**

Part , 1.(a)(2),1.(a)(4), 1(a)(5), 1(a)(8)

Stated:

Correction: the word “impervious” was stricken from these sections

**15 Proposed Change**

Part 5 – Special Provisions (Baseline), E. Planning and Land Development Program,  
III. New Development/Redevelopment Performance Criteria, 1(b)., Pg.55 -

Stated: ... For redevelopment projects, or development projects that can be demonstrated that the 5% EIA goal is infeasible, the project shall comply with the surface discharge requirements of 5.E.III.4

Correction: For redevelopment projects, or development projects that can be demonstrated that the 5% EIA goal is infeasible, the project shall comply with the surface discharge requirements of 5.E.III.4~~3~~.

**16 Proposed Change**

Part 5 – Special Provisions (Baseline), E. Planning and Land Development Program,  
III. New Development/Redevelopment Performance Criteria, 1(b)., Pg.56 -

Stated: All features structured constructed to render impervious surfaces “ineffective” as described in provision (b), above, shall be properly sized to infiltrate or store for beneficial reuse at least the volume of water that meets the criteria in subpart 5.E.III.3.

Correction: All features ~~structured~~-constructed to render impervious surfaces “ineffective” as described in provision (b), above, shall be properly sized to infiltrate or store for beneficial reuse at least the volume of water that meets the criteria in subpart 5.E.III.3.

**17 Proposed Change**

5.E.III.2.(a)(1)(F)

Correction: described in subpart 5.E.III.3(a)(3)(A)

**18 Proposed Change**

Part 5E.III.2.(3)

Stated:

Correction: “described in subpart 5.E.III.3(a)(4) below...”

**19 Proposed Change**

Part 5, E.III.2.(a)(5) p.58

Correction: Alternatively, the Co-Permittees may revise the Ventura County Technical Guidance Manual for Stormwater Quality Control Measures to address projects that disturb more than 50 acres.

**20 Proposed Change**

p. 59

Stated: added language

Correction: The HCP shall be deemed in effect upon Executive Officer approval.

**21 Proposed Change**

Part 5. E.IV.4.(a) p.63

Stated: The Principal Permittee or a coalition of Permittees shall create a ~~management~~ framework to fund regional or subregional solutions to storm water pollution, where any of the following situations occur:

Correction: The Principal Permittee or a coalition of Permittees shall create a ~~Mitigation Funding Plan~~ to fund regional or subregional solutions to storm water pollution, where any of the following situations occur:

**22 Proposed Change**

Part 5.E.IV.4.(a)(5) p.63

Stated: new section

Correction: When a Permittee determines that a project is infeasible in accordance with 5.(E).III.(1)(c), the project application shall provide sufficient funds to the Permittee for a public project that will retain or mitigate a volume of stormwater equivalent to the onsite retention volume that was not retained on site.

**23 Proposed Change**

p.63

Stated: new language

Correction: The Permittees shall submit the Mitigation Funding Plan to the Executive Officer for approval 445 days after Permit adoption. The Mitigation Funding Plan shall be deemed in effect upon Executive Officer approval.

**24 Proposed Change**

p.64

Stated: new language

Correction: The Permittees shall submit revisions to the Ventura County Technical Guidance Manual to the Regional Board for Executive Officer approval.

**25 Proposed Change**

Part 5- E.V.6.(3) p.70, E.V.6.(11) p.71

Stated: watercourses

Correction: receiving waters

**26 Proposed Change**

Part 5 – Special Provisions (Baseline), G. Public Agency Activities Program, I., Pg.74 -

Stated: viii. Public Industrial Activities Management

x. Infrastructure Maintenance

Correction: Either delete items viii. and x. in the list, or include section viii. Public Industrial Activities Management and section x. Infrastructure Maintenance within the program.

**25 Proposed Change**

Part 5- 6.(b)(1)(C), 6.(b)(1)(K) p. 81

Stated: watercourses  
Correction: receiving waters

## 27 Proposed Change

Part 6- TMDL

Corrections:

Add the following language to Section III of Part 6 of the Order and renumber the section accordingly. Additions are underlined.

1. TMDL for Nutrients for Malibu Creek Watershed (Effective date: March 21, 2003)
2. TMDL for Nitrogen Compounds and Related Effects in Calleguas Creek (Effective date: July 16, 2003)
3. TMDL for Nitrogen Compounds for the Santa Clara River (Effective date: March 23, 2004).
4. TMDL for Chloride in Santa Clara River, Reach 3 (Effective date: June 18, 2003)
5. TMDL for Chloride in Upper Santa Clara River (Effective date: May 4, 2005)
6. TMDL for Toxicity, Chlorpyrifos and Diazinon in the Calleguas Creek, its Tributaries and Mugu Lagoon - (Effective date: March 24, 2006).
7. TMDL for Organochlorine Pesticides, Polychlorinated Biphenyls, and Siltation in Calleguas Creek, its Tributaries and Mugu Lagoon (Effective date: March 24, 2006).
8. TMDL for Bacteria in Malibu Creek and Lagoon (Effective date: January 24, 2006).
9. TMDL for Metals and Selenium in the Calleguas Creek, its Tributaries and Mugu Lagoon (Effective date: March 26, 2007)
10. TMDL for Trash in Revolon Slough and Beardsley Wash (Effective date: March 6, 2008).
11. TMDL for Boron, Chloride, Sulfate, and TDS in Calleguas Creek Watershed (Effective date: December 2, 2008)
12. TMDL for Trash in the Ventura River Estuary (Effective date: March 6, 2008).
13. TMDL for Bacteria in Harbor Beaches of Ventura County (Effective date: September 23, 2008).

## 28 Proposed Change

Part 6- TMDL

Correction: Add the following language to Section IV of Part 6 of the Order and renumber the section accordingly. Additions are underlined.

- “
1. Final Wet Weather Bacteria WLAs for Malibu Creek and Lagoon – (Compliance date: January 24, 2016).
  2. Final Chloride WLAs for Upper Santa Clara River – (Compliance date: May 4, 2016)
  3. Final Organochlorine Pesticides, Polychlorinated Biphenyls, and Siltation WLAs for Calleguas Creek, its Tributaries and Mugu Lagoon – (Compliance date: March 24, 2026).
  4. Final Metals and Selenium WLAs for Calleguas Creek, its Tributaries and Mugu Lagoon (Compliance date: March 26, 2022).
  5. Final Boron, Chloride, Sulfate, and TDS WLAs for Calleguas Creek watershed (Compliance date: December 2, 2023).”

**29 Proposed Change**

Part 6- TMDL

Correction: Add the following language to Section V of Part 6 of the Order and renumber the section accordingly. Additions are underlined.

“1. TMDL for Nutrients for Malibu Creek Watershed

(a) Summer Load Allocations

	Nitrogen (lbs/day)	Phosphorus (lbs/day)
- Runoff from developed areas	26	2.6
- Golf Course Fertilization	37	6.6
- Dry Weather Urban Runoff	52	4.6
- Other	56	4.1

(b) Winter concentration-based Load Allocations

	Nitrogen (Nitrate-N + Nitrite-N) (mg/L)
- Runoff from Developed Areas	8
- Golf Course Fertilization	8
- Dry Weather Urban Runoff	8
- Other	8

(a) Compliance Monitoring:

This TMDL was established and approved by U.S. EPA and did not include an implementation plan.

(b) Actions and Special Studies required for Malibu Creek MS4 permittees

(1) Extent of algal impairment. EPA recommends studies to investigate the current extent of impairment due to excessive algal growth in the creek by surveying algal biomass and species composition at multiple sites within the creek.

(2) Limiting factor analysis. EPA recommends further study to assess whether total nitrogen or total phosphorus or other parameters such as flow and light limit algal growth in the Malibu Creek watershed.

(3) Fate of nutrients in Malibu Lagoon. EPA recommends this special study to determine if the expected upstream reductions in nutrient loadings would result in desired improvements in water quality in the lagoon.

2. TMDL for Nitrogen Compounds and Related Effects in Calleguas Creek Watershed

The stormwater permitted discharges were considered minor sources of nitrogen to the Calleguas Creek. Therefore, WLAs are not assigned to storm water permitted discharges. The monitoring program of this TMDL includes data collection to quantify loadings and associated WLAs from these sources.”

### 30 Proposed Change

#### Part 6- TMDL

Correction: Add the following language to Section V of Part 6 of the Order and renumber the section accordingly. Additions are underlined.

#### "4. TMDL for Chloride in Santa Clara River, Reach 3

(a) Waste Load Allocation:

MS4 permittees discharging to Santa Clara River, Reach 3 shall implement BMPs to achieve the following MS4 WLAs:

Chloride (mg/L) 80

(b) Compliance Monitoring: This TMDL was established and approved by U.S. EPA and did not include an implementation plan.

(c) Actions and Special Studies required of Santa Clara MS4 permittees:

(1) Annual Progress Reports. Santa Clara River MS4 permittees, either independently or in conjunction with other stakeholders, shall submit an annual progress report with respect to achievement of the WLAs.

#### 5. TMDL for Chloride in Upper Santa Clara River

(a) Waste Load Allocation:

MS4 permittees discharging to Upper Santa Clara River shall implement BMPs to achieve the following WLAs

Chloride (mg/L) 100

(b) Compliance monitoring:

(1) Compliance with the WLAs is to be determined through receiving water monitoring conducted in accordance with the Santa Clara River Nitrogen TMDL Monitoring Program approved by the Executive Officer.

(2) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports and Implementation Plans. Following these actions, Regional Water Board staff will evaluate the need for further enforcement action.

(c) Actions and Special Studies required of Santa Clara MS4 permittees:

(1) Annual Progress Reports. Santa Clara River MS4 permittees, either independently or in conjunction with other stakeholders, shall submit an annual progress report with respect to achievement of the WLAs."

### 31 Proposed Change

#### Part 6- TMDL

Correction: Add the following language to Section V of Part 6 of the Order and renumber the section accordingly. Additions are underlined.

#### "12. TMDL for Boron, Chloride, Sulfate and TDS in Caleguas Creek Watersheed

(a) Waste Load Allocation

**(1) Interim Dry Weather WLAs for Permitted Stormwater Dischargers**

<u>Constituent</u>	<u>Interim Limit</u> <u>30-day average (mg/L)</u>
<u>Boron Total</u>	<u>1.3</u>
<u>Chloride Total</u>	<u>230</u>
<u>Sulfate Total</u>	<u>1289</u>
<u>TDS Total</u>	<u>1720</u>

**(2) Final Dry Weather WLAs for Permitted Stormwater Dischargers**

<u>Subwatershed</u>	<u>Critical Condition Flow Rate (mgd)</u>	<u>Chloride Allocation (lb/day)</u>	<u>TDS Allocation (lb/day)</u>	<u>Sulfate Allocation (lb/day)</u>	<u>Boron Allocation (lb/day)</u>
<u>Simi</u>	<u>1.39</u>	<u>1,738</u>	<u>9,849</u>	<u>2,897</u>	<u>12</u>
<u>Las Posas</u>	<u>0.13</u>	<u>157</u>	<u>887</u>	<u>261</u>	<u>N/A</u>
<u>Conejo</u>	<u>1.26</u>	<u>1,576</u>	<u>8,931</u>	<u>2,627</u>	<u>N/A</u>
<u>Camarillo</u>	<u>0.06</u>	<u>72</u>	<u>406</u>	<u>119</u>	<u>N/A</u>
<u>Pleasant Valley (Calleguas)</u>	<u>0.12</u>	<u>150</u>	<u>850</u>	<u>250</u>	<u>N/A</u>
<u>Pleasant Valley (Revolon)</u>	<u>0.25</u>	<u>314</u>	<u>1,778</u>	<u>523</u>	<u>2</u>

**(b) Compliance Monitoring**

(1) A monitoring plan will be submitted to the RWQCB for Executive Officer approval on June 2, 2009. Monitoring will begin one year after Executive Officer approval of the monitoring plan to allow time for the installation of automated monitoring equipment.

(2) Compliance with the WLAs is to be determined through the measurement of in-stream water quality at the base of each of the Calleguas Creek subwatersheds, in accordance with the Calleguas Creek Watershed TMDL Monitoring Program approved by the Executive Officer.

(3) If any WLA is exceeded at a compliance monitoring site, permittees shall implement BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL special studies identified in the Basin Plan Amendment. Following these actions, Regional Water Board staff will evaluate the need for further enforcement action.

**(c) Actions and Special Studies required of Calleguas Creek Watershed MS4 permittees**

Responsible jurisdictions including MS4 permittees shall submit compliance monitoring plan to the Los Angeles Regional Board for Executive Officer approval on June 2, 2009. Monitoring shall begin monitoring as outlined in the approved monitoring plan six months after approval of the work plan.

Responsible jurisdictions including MS4 permittees shall demonstrate that implementation actions have reduced the boron, sulfate, TDS, and chloride imbalance by 20%, 40%, 70% by December 2 of 2011, 2015, and 2018 respectively. Stormwater dischargers shall achieve WLAs, which shall be expressed as NPDES mass-based limits specified in accordance with federal regulations and state policy on water quality control by December 2, 2023.”

### **26 Proposed Change**

Part 6- III, p.86

Stated: New section

Correction: The Permittee shall comply with the following Wasteload Allocations, consistent with the assumptions and requirements of the Wasteload Allocations documented in the Implementation Plans, including compliance schedules, associated with the State adoption and approval of the TMDL at compliance monitoring points established in each TMDL (40CFR122.44(d)(1)(vii)(B).

### **27 Proposed Change**

V.5.(b)(2)

V.6.(b)(2)

V.7.(b)(2)

V.8.(b)(2)

V.9.(b)(2)

V.10.(b)(2)

V.11.(b)(2)

Stated: further enforcement

Correction: ~~further~~ enforcement

### **28 Proposed Change**

Stated: For public projects including those under a Capital Improvement Project Plan that disturb less than one acre of soil the Permittees shall require the development and implementation of a Storm Water Pollution Control Plan. The SWPCP shall include BMPs as identified in Tables 5, 9 and 10.

Correction: For public projects including those under a Capital Improvement Project Plan that disturb less than one acre of soil the Permittees shall require the development and implementation of a Storm Water Pollution Control Plan. The SWPCP shall include BMPs as identified in Tables ~~5~~6, 9 and 10.

### **29 Proposed Change**

Attachment F, Monitoring Program, Core Monitoring, A. Mass Emissions, 3., 5., & 7., Pg. 2

Stated: 3. The Principal Permittee shall monitor each mass emission station each year as follows:  
(a) The first storm event of the wet season that produces a 20% or greater increase in base stream flow,...

Stated: 5. Samplers shall be set to monitor storms that produce a 20% or greater increase in base stream flow.

Stated: 7. Samples shall be collected from the discharge resulting from a storm event that is 0.25 inches or greater, samples may be analyzed if a predicted storm event produces between 0.15 and 0.24 inches of rain.

Correction: \*There is a conflict with sampling 20% or greater increase in base stream flow; and also sampling discharge resulting from a storm event that is 0.25 inches or greater, samples may be analyzed if a predicted storm event produces between 0.15 and 0.24 inches of rain. It is recommended that either the sampling option stated in #3 or #7 be required.

### 30 Proposed Change

Attachment F, Monitoring Program, Core Monitoring, A. Mass Emissions, 10., Pg. 2

Stated: Grab samples shall be taken only for pathogen indicators, hardness (as mg/L CaCO<sub>3</sub>) and pH, temperature, and DO.

Correction: Grab samples shall be taken only for pathogen indicators, hardness (as mg/L CaCO<sub>3</sub>), and pH, temperature, and DO.

### 31 Proposed Change

Attachment F, Monitoring Program, Core Monitoring, B. Major Outfalls, 1(d), Pg. 4

Stated: In the first year after permit adoption, 4 major outfall stations shall be monitored. Thereafter, all major outfall stations listed in Attachment H...

Correction: In the first year after permit adoption, 4 major outfall stations shall be monitored. Thereafter, all major outfall stations listed in Attachment H...

### 32 Proposed Change

Attachment F, Monitoring Program, Core Monitoring, B. Major Outfalls, 7., Pg. 5

Stated: In Major outfall samples taken within a subwatershed shall be analyzed for the biological and chemical parameters listed in the preceding subpart B.6, and for all of the constituents in Attachment "C" (Municipal Action Levels), Tables 1 & 2, as listed below:

- (a) pH
- (b) TSS
- (c) COD
- (d) Kjeldahl Nitrogen (TKN)
- (e) Nitrate & Nitrite- Total
- (f) P- Total
- (g) Cd- Total
- (h) Cr- Total
- (i) Cu- Total
- (j) Pb- Total
- (k) Ni- Total
- (l) Zn- Total
- (m) Hg- Total

Correction: In Major outfall samples taken within a subwatershed shall be analyzed for the biological and chemical parameters listed in the preceding subpart B.6, and for all of the constituents in Attachment "C" (Municipal Action Levels), Tables 1-&2, as listed below:

~~(a) pH~~

(a) TSS

~~(c) COD~~

~~(d) Kjeldahl Nitrogen (TKN)~~

(b) Nitrate & Nitrite- Total

~~(f) P- Total~~

~~(g) Cd- Total~~

~~(h) Cr- Total~~

(c) Cu- Total

(d) Pb- Total

~~(k) Ni- Total~~

(e) Zn- Total

~~(m) Hg- Total~~

### 33 Proposed Change

Attachment F, Monitoring Program, Core Monitoring, D. Aquatic Toxicity Monitoring, 12., Pg. 11

Stated: Toxic samples shall be immediately subjected to Toxicity Identification Evaluation (TIE) procedures to identify the toxic chemical(s) if toxicity is determined by the standard t-test.

Correction: Toxic samples shall be immediately subjected to Toxicity Identification Evaluation (TIE) procedures to identify the toxic chemical(s) if toxicity is ~~determined~~ demonstrated by the standard t-test.

- It was recommended that the word "demonstrated" be used by USEPA.

- 15 Delete the word "or more of impervious surface area" from Section 5.E.II.1.(a) (2);  
Delete the word "or more of impervious surface area" from Section 5.E.II.1.(a) (4);  
Delete the word "or more of impervious surface area" from Section 5.E.II.1.(a) (5);  
Delete the word "or more of impervious surface area" from Section 5.E.II.1.(a)(8);  
Delete the word "impervious" from Section 5.E.II.1.(a) (10B);

### 34 Proposed Change

\*Tables that are bolded and underlined are hard to read. It looks as though the title- Table 9 located on top of the table has a strikethrough.

ATTACHMENT A  
 SPECIFIC TECHNICAL COMMENTS  
 FEBRUARY 24, 2009 VENTURA COUNTY MUNICIPAL SEPARATE STORM SEWER  
 SYSTEM PERMIT (NPDES NO. CAS004002)  
 FOR THE  
 VENTURA COUNTY WATERSHED PROTECTION DISTRICT, COUNTY OF VENTURA,  
 AND THE INCORPORATED CITIES

No.	Page	Citation	Comment	Changed?
1	2	Finding B.2	Suggest the term "trash" be added as common pollutant found in urban runoff, thereby providing the basis for including requirements for trash management.	yes
2	3	Findings B.5	A references for studies is needed: "local and national epidemiological studies indicate there is a causal relationship between adverse health effects and recreational water quality . . ." A 2003 SCCWRP Mission Bay Epidemiological Study found "The risk of illness was uncorrelated with levels of traditional water quality indicators and state water quality thresholds were not predictive of swimming-related illnesses".	pending
3	4	Findings B.12	References for the studies are needed: "Studies have demonstrated a direct correlation between degree of imperviousness and receiving water degradation." Also suggest editing the first line to read "... runoff from developed areas has the potential to greatly accelerate downstream erosion . . .", and the last sentence to read " pervious cover is a reliable <u>one</u> indicator . . ." There is some debate as to whether it's a reliable indicator, and the primary cause of water quality degradation from new development is the unabated discharge of stormwater. With proper BMPs these discharges can be mitigated. Please include reference and amend finding accordingly.	pending
4	4	Findings B.12	Add clarity: "Significant declines . . . with as little as 3-10 percent conversion from natural to impervious surfaces in a watershed". As currently worded, the finding implies a 3-10 percent conversion at a lot level is also significant. To avoid confusion and provide clarity, the language should be revised to indicate that significant declines may occur if there are conversions for the entire subwatershed.	yes
5	5	Findings B.13,14,	Please provide references for studies.	pending
6	5	Findings B.16	Environmentally Sensitive Areas (ESA) as described here does not match definition, missing all unimproved 303(d) reaches.	yes
7	6	Findings B.17,19	Please provide references for studies.	pending
8	8	Findings C.6	No trash and debris study is included in the Monitoring and Reporting Program, please delete this reference.	yes
9	8	Finding C.6	Recommend modifying finding to read "This Order requires a monitoring program consisting of mass emission, <u>outfall and special studies</u> , <u>toxicity</u> , to support program evaluation and TMDLs <u>storm-water (wet-weather) MS4 water quality-based effluent</u>	yes

**ATTACHMENT A**  
**PERMITTEES' COMBINED TECHNICAL COMMENTS**  
**TENTATIVE VENTURA COUNTY MUNICIPAL SEPARATE STORM SEWER**  
**SYSTEM PERMIT (NPDES NO. CAS004002)**

10	8	Finding D.1	<p>limits, TMDL non-storm water (dry-weather) MS4 water quality-based effluent limits, ... The current language is confusing and inconsistent with the intent of the finding.</p> <p>Recommend modifying the finding to read "The area covered by this Order includes all <u>urbanized areas within Ventura County boundaries...</u> This permit is for discharges from urbanized areas of the County and does not apply countywide for un-urbanized areas. (See also Letter to Mr. Jonathan A. Bishop, Executive Officer, Los Angeles Regional Water Quality Control Board from Gerhardt Hubner, Chair, Ventura Countywide Stormwater Quality Management Program (March 6, 2007) (March 2007 Letter) at pp. 13-14.)</p>	rejected
11	9	Finding D.6	<p>Recommend modifying the finding to read "The CWA and the California Water Code contain specific provisions on how <u>wastewater discharges of waste</u> from point sources are to be permitted, <u>including urban stormwater and non-storm water</u>. We believe the intent of this finding is to establish the fact that stormwater discharges are regulated under the CWA and CWC.</p>	rejected
12	10	Finding E.4	<p>When referring to the Porter-Cologne Water Quality Control Act (California Water Code), it should be clear that the State and Regional Water Board's have the authority to regulate the discharge of "wastes that could affect the quality of waters of the state." Thus, we recommend that the second sentence of the finding be revised as follows: The Porter-Cologne Water Quality Control Act (California Water Code) authorizes the State Water Resources Control Board (State Water Board), through the Regional Water Boards, to regulate and control the discharge of <u>pollutants wastes that could affect the quality of waters into all waters</u> of the State, including waters of the United States, and tributaries thereto.</p>	yes
13	13	Finding E.7	<p>The Permittees disagree with the conclusive statements made in Finding E.7. In general, we do not agree that all requirements contained in the Tentative Order are required by federal law. Many of the provisions may in fact be more stringent than required by federal law and may therefore potentially be considered an unfunded local mandate subject to subvention under Article XIII B, Section (6) of the California Constitution. Additional legal and policy comments on this finding are provided on Attachment C.</p>	See legal response to comments
14	21	Findings E.26 & E.27	<p>The Permittees disagree with the conclusive statements made in findings as some of the requirements contained in the Tentative Order may well exceed the maximum extent practicable (MEP) standard. Additional legal and policy comments on this finding are provided on Attachment X. Furthermore, this finding as drafted is confusing because it blurs the distinction between the effective elimination of non-storm water discharges and</p>	See legal response to comments

**PERMITTEES' COMBINED TECHNICAL COMMENTS**  
**TENTATIVE VENTURA COUNTY MUNICIPAL SEPARATE STORM SEWER**  
**SYSTEM PERMIT (NPDES NO. CAS004002)**

15	23	1.F. 6.	the reduction of stormwater pollutants to the maximum extent practicable. Please clarify not all impervious area is intended to be minimized but rather effective impervious area by adding the word "effective": "Smart growth techniques include the minimization of <u>effective</u> impervious area"	Yes
16	24	Finding F.9	This finding implies that under the CWA the Permittees are required to "attain water quality objectives from new development and redevelopment activities." Such a statement is incorrect. We recommend revising the finding accordingly by deleting this part of the sentence.	No, comment noted
17	25	Finding F.12	This finding needs a lead in statement to support the position that the permit has established BMP performance, which are based on the ASCE and USEPA database.	No, paragraph contains requested information
18	27	Finding F.19	This finding claims that the Fact Sheet includes an analyses of the factors required by California Water Code section 13241. We disagree. The Fact Sheet does not include any analysis that is consistent with the statutory factors identified in Water Code section 13241. Thus, we recommend either deleting the finding, or revising the Fact Sheet to appropriately include the analysis identified.	Yes, comment noted, statement removed
19	29 - 32	Footnotes	The footnotes are redundant and should only be stated once. Further, footnotes are not formatted properly.	Comment noted
20	30	Part 1.A.1.(c)	The Tentative Order does not properly explain or describe the purpose of the information contained in Table 1. If the purpose of Table 1 is to identify conditions that apply to the categories of allowed non-storm water discharges identified in Part 1.A.1.(c), it should be explained accordingly. Otherwise, as currently incorporated there is no correlation between the Discharge Prohibition language and the information contained in Table 1.	Yes (Carlos)
21	30	Table	It is unclear of the distinction between the columns labeled: "Conditions under which allowed" and "Required conditions for discharge to occur". Recommend deleting one and if necessary expanding the explanation in the remaining column. Also it is unclear what is meant by "Permittees shall comply with all conditions in the authorization", specifically what authorization?	Yes (Carlos)
22	32 & 108	Table 1	Required conditions for discharge from sidewalk rinsing refers to the glossary description of "Sidewalk Rinsing" where it says "any waste generated from the activity must be collected". Please describe under what circumstance a discharge for sidewalk rinsing be allowed.	Rejected, staff disagrees

**ATTACHMENT A**  
**PERMITTEES' COMBINED TECHNICAL COMMENTS**  
**TENTATIVE VENTURA COUNTY MUNICIPAL SEPARATE STORM SEWER**  
**SYSTEM PERMIT (NPDES NO. CAS004002)**

23	32	Part 1.A.2	<p>This provision would require the Permittees to take certain actions if the Regional Water Board's executive officer determined that any of the preceding categories of non-storm water discharges are a source of pollutant that may exceed water quality standards. However, the provision does not specify that the Permittee's obligations occur only after receiving notice of the Executive Officer's determination. To ensure that the Permittee's obligations occur only after proper notice, we recommend that the first sentence be revised as follows: "If the Regional Water Board Executive Officer determines that any of the preceding categories of non-storm water discharges are a source of pollutants that exceed water quality standards, the Permittee(s) <u>upon receiving written notice of the Executive Officer's determination, shall either....</u>"</p>	rejected
24	33	Part 1.A.3	<p>This provision should be deleted as it is redundant with requirements noted in Table 1.</p>	yes
26	34	Part 2.4	<p>There is a conflict with the timelines given for two of the requirements. More specifically, the statements "Beginning year 3 after adoption" and "first MAL Action Plan due Dec. 15, 2011" conflict because year 1=2009-2010, year 2= 2010-2011, and year 3=2011-2012. By December of 2011, only the first wet season's data (four sites) will be available. To avoid the conflict, we recommend that the first sentence be modified as follows: <u>At the end of Beginning Year 3 after Order adoption date, each Permittee shall submit a MAL Action Plan with the Annual Report (e.g. the first MAL Action Plan would be due with Dec-15, 2011 the 2011/2012 Annual Report if the Order is adopted in 2009) to the Executive Officer ...</u></p>	yes
27	37	4.B.3	<p>There are conflicting timelines for several of the provisions related to adoption and/or revision of municipal codes (i.e. one year to adopt ordinance to enforce all requirements of this order conflicts with 4.B.4, which allows two years for legal counsel statement, and 4.D.1, which allows two years for municipal codes to be consistent with requirements). To avoid the conflict, we recommend revising Part 4.B.3 to allow two years after Order adoption for each permittee to ensure that its Storm Water Quality Ordinance authorizes the Permittee to enforce all requirements of this Order.</p>	yes
28	38	4.C.1.(a).1.(B)	<p>The budget provisions imply that the Program Implementation Activities apply only to storm water related activities. As stated throughout the Tentative Order, it contains requirements with respect to storm related activities as well as non-storm water discharges. Because this may imply that the costs of implementing the program are less than actually required, we recommend revising the phrase "storm water related activities only" permit related activities as it would be more inclusive.</p>	yes
29	39	4.E.1.(e) & (g)	<p>Subsections (e) and (g) appear to be duplicative.</p>	rejected

**ATTACHMENT A**  
**PERMITTEES' COMBINED TECHNICAL COMMENTS**  
**TENTATIVE VENTURA COUNTY MUNICIPAL SEPARATE STORM SEWER**  
**SYSTEM PERMIT (NPDES NO. CAS004002)**

30	39	Part 4.E.1.(i)	The District (i.e. Principal Permittee) does not have the same pollutant generating activities, legal authority and land use decision capability as the municipalities (i.e. Permittees) therefore (i) should be deleted.	Yes
31	40	Part 5.B.2	Redundant – this section is repeated in Monitoring Program Attachment H	Delete section? yes
32	42	Part 5.C.2.(c)(1)(C)	Request 365 days to develop and distribute materials to retail stores. No time frame is currently provided.	
33	44	Part 5.D.1.	Laundries are not listed as a Critical Sources under commercial facilities but are listed in attachment "D". Please clarify if the intent is to include laundries as a Critical Source, and if so a clear definition of size and function of the included business. - - - - - <b>wait for Paul's review of SIC 7200</b>	Comment noted, doesn't belong to industrial facilities
34	45	Part 5.D.1.(a)(2)	Please provide a definition for Phase II facilities. Phase I facilities are included in the definitions, but Phase II facilities are not.	Comment noted, PII definition in USEPA regulations
35	45	Part 5.D.2.(a)	The sentence that refers to subpart 5.D.2 should be modified to refer to subpart 5.D.1.	Yes
36	46	Part 5.D.2.(a)(2)	The phrase "in cooperation with its appropriate department . . ." is unnecessary as all departments of a permittee are responsible for permit compliance and I internal cooperation and communication would be expected.	Yes
37	49	Part 5.D.2.(b)(1)(A) &(B)	Part (A) refers to an "initial inspection" and "second mandatory compliance inspection," while part (B) refers to both "first mandatory compliance inspection" and "second mandatory compliance inspection." Please clarify the difference between the initial inspection and the first mandatory compliance inspection. Further, the Permittees continue to be concerned that the inspection requirements for industrial facilities is in fact an unfunded local mandate because determination of compliance with the State's General Permit is a state function, not a local function. Additional comments on this issue are provided in Attachment C.	Rejected, they are the same
38	50	Part 5.D.2.(b)(2)(B)	The last sentence in this provision, "[t]he Permittees shall require implementation of additional BMPs where the storm water from the MS4 discharges to a CWA 303(d) listed waterbody" is redundant with provisions contained in sub-section D.3.(b).. Thus, this	Yes

**ATTACHMENT A**  
**PERMITTEES' COMBINED TECHNICAL COMMENTS**  
**TENTATIVE VENTURA COUNTY MUNICIPAL SEPARATE STORM SEWER**  
**SYSTEM PERMIT (NPDES NO. CAS004002)**

39	50		Part 5.D.3.(a)	Part 5.D.3.(a)	sentence should be deleted.		yes
40	51		Part 5.D.4(c)	Part 5.D.4(c)	This provision seems to be inconsistent with a similar provision in the Construction section (see page 73) regarding investigating complaints received from the Regional Board. The provision should read as follows: Each Permittee shall initiate, within one business day, <sup>1</sup> investigation of complaints of (other than non-storm water discharges) to the MS4 from facilities within its jurisdiction (other than non-storm water discharges).		yes
41	52		Part 5.E.(1)	Part 5.E.(1)	Smart Growth should be included as one of the purposes for this section. We recommend that a new purpose be added as follows: (a) <u>Lessen the water quality impacts of development by using smart growth practices such as compact development, directing development towards existing communities via infill or redevelopment, safeguarding of environmentally sensitive areas, mixing of land uses (e.g., homes, offices, and shops), transit accessibility, and better pedestrian and bicycle amenities.</u>		yes
42	52		Part 5.E.(1).(b)	Part 5.E.(1).(b)	"Minimize the percentage of impervious area" should be revised as follows: minimize the percentage of effective impervious area.		Yes
43	52		footnote	footnote	48 hour drain time is in conflict with table on page 32 calling for 72 hour drain time which is the time most BMPs use in design.		Yes
44	52		Part 5.D.4.(e)	Part 5.D.4.(e)	Please clarify, is the Stormwater Task Force the same as the California Association of Stormwater Quality Agencies (CASQA)?		Yes, same
45	53		Part 5.E.II.1.(a)(6)	Part 5.E.II.1.(a)(6)	Please clarify by stating "25 or more <u>exposed</u> parking spacing"		rejected
46	54		Part 5.E.II.2.(a)(3)	Part 5.E.II.2.(a)(3)	The effective date for public projects is more strict than private projects and can create a hardship in costly redesigns of a project. A project is completely designed at the point a governing body approves authorization to bid the project. Requiring compliance with this section of the permit would mean a costly re-design of the project. Language more comparable to the trigger for private projects would be preferable. We suggest: "For Permittee's projects the effective date shall be the date the governing body or their designee approves initiation of the project design."		yes
47	55		Part 5.E.III.1 (b)	Part 5.E.III.1 (b)	The reference in the last sentence should be changed from 5.E.III.4 to 5.E.III.3		Yes
48	55		Part 5.E.III.1 (c) - (e)	Part 5.E.III.1 (c) - (e)	We would recommend that these three provisions be combined to read as follows: (c) All features structured constructed to render impervious surfaces "ineffective" as		Yes?

**ATTACHMENT A**  
**PERMITTEES' COMBINED TECHNICAL COMMENTS**  
**TENTATIVE VENTURA COUNTY MUNICIPAL SEPARATE STORM SEWER**  
**SYSTEM PERMIT (NPDES NO. CAS004002)**

49	57	Part 5.E.III.2.(a)(1)(F)	described in provision (b), above, shall be properly sized to infiltrate or store for beneficial reuse at least capture the volume of water that meets the criteria in subpart 5.E.III.3 (water quality volume). The hierarchy of BMPs for capturing the water quality volume are: (1) infiltration, harvesting, or evapotranspiration BMPs; and, (2) vegetated BMPs such as bioretention. The water quality volume not captured by BMPs shall be treated consistent with Part 4.A.3 and Attachment C, Table 3.	Yes
50	58	Part 5.E.III.3.(a)	Numbering format needs correction	yes
51	62	Part 5.E.IV.3(b)(3)	To be consistent with the rest of the Effective Impervious Area language please change "less than 5 percent" to "5 percent or less"	yes
52	68	Footnotes	Footnotes 17 and 18 are redundant.	yes
53	69	F.1.4. (c)	Delete obligation of Permittees to require project proponents to collect samples in accordance with general construction permit. As indicated previously, any requirement placed upon the Permittees that requires them to implement or enforce the State's General Permit is an unfunded mandate for which subvention funds must be provided.	yes
54	69	Part 5.F.5	The reference to subpart F.5 should be subpart F.4	yes
55	66-69	Tables in Part 5.F	Tables 6 -9 are intended to build on each other. There is no need to repeat the BMPs in every table as the text requires the Discharge to implement appropriate BMPs in addition to the ones already identified in the previous tables. See provision F.2, F.3, or F.4. In general these provision state "Each Permittee shall require the implementation of an effective combination of appropriate erosion and sediment control BMPs from Table 7 in addition to the ones identified in Table 6 to prevent erosion and sediment loss..." (emphasis added).	Rejected, staff disagrees
56	70	Part 5.F.6.	Section is missing punctuation. Please include a footnote defining chance of rain (POP >50%).	yes
57	74	Part 5.G.2.(a)	Table 9 should read Table 10.	yes
58	74	Part 5.G.2.(a)	Please revised the provision as follows: "(a) Each Permittee shall implement the activity specific BMPs listed in Table 10 or related BMPs as listed in the 2003 California Stormwater Municipal BMP Handbook when such activities."	rejected
59	77	Part	No time frame given for implementing an Integrated Pest Management Program --	yes

**ATTACHMENT A**  
**PERMITTEES' COMBINED TECHNICAL COMMENTS**  
**TENTATIVE VENTURA COUNTY MUNICIPAL SEPARATE STORM SEWER**  
**SYSTEM PERMIT (NPDES NO. CAS004002)**

60	5.G.(4)(a) Part 5.G.1.4(a)(7) (C)	request 365 days Several agencies have been implementing Integrated Pest Management programs for several years and have therefore already made significant reductions in pesticides used by the agencies. By requiring these same proactive agencies to now "demonstrate reductions in pesticide use" will be very difficult because reductions have already occurred. Further, the primary goal and purpose of Integrated Pest Management programs is to address pest issues in a holistic manner using a number of different types of control methods. The implementation of such programs may or may not result in the reduction of the use of pesticides. The need for pesticides even when implementing an Integrated Pest Management program may also vary based on the type of weather year and other circumstances beyond the control of local agencies. As such, we are concerned that a requirement "to demonstrate reductions in pesticide use" may not be feasible in all circumstances. Thus, we recommend revising the language as follows: "Demonstrate implementation of IPM alternatives where feasible to reduce pesticide use."	rejected
61	Part 5.G.(d)(1)	"rainy season" should be replaced with the defined term "wet season"	yes
62	Part 5.G.(f)(1)(b)	"storm season" should be replaced with the defined term "wet season"	yes
63	Part 5.G.(g)(1)	Section should specify that it pertains to spills by permittee facilities or activities.	yes
64	Part 5.G.6.(b)	Redundant because G.1(b) requires compliance with 5.F.6 which is the exact same language.	?
65	Part 5.H.1.3(a)(2)	Please include the language that is in the fact sheet noting "this provision is not meant to exclude Permittees from using equally effective alternative methods not listed in the manual."	yes
66	Part 5.H.(1).(b)	Confusing request and time frame. Requirement is to map all known connections to storm drain system in 3 years, but 5.H.(3) give 5 years for pipes 18 – 35 inches in diameter. Could be very problematic if requirement is for all private connections.	Rejected, staff disagrees
67	Part 5.I.1	Electronic reporting program submitted 12 months after permit adoption conflicts with Dec. 15 reporting deadline given at Part 2.4. (page 34) and in Attachment H.	Rejected, staff disagrees- ERP can be comported to comply

**ATTACHMENT A**  
**PERMITTEES' COMBINED TECHNICAL COMMENTS**  
**TENTATIVE VENTURA COUNTY MUNICIPAL SEPARATE STORM SEWER**  
**SYSTEM PERMIT (NPDES NO. CAS004002)**

				with reporting deadlines given in Part 2.4 and Attachment H
68	85	Part 6.11	Although the regional board corrected the individual TMDLs throughout this section to remove the requirement for a "MS4 effluent quality workplan...", they did not change Part 6.11 to add the new language, which should read as follows: "11. Each permittee shall attain the storm water VLAs incorporated into this Order by implementing BMPs in accordance with the TMDL Technical Reports, Implementation Plans or as identified as a result of TMDL specialist studies identified in the Basin Plan Amendment." This is the language used for each identified TMDL under (b) Compliance Monitoring (2).	yes
69	86	Part 6 III.8	The "effective date" of the Harbor Beaches TMDL is December 18, 2008 – not September 23.	yes
70		Definitions	Please add a definition for "Smart Growth" as follows: Development in or near cities intended to lessen or reverse suburban sprawl, decrease the use of automobiles, and shorten daily travel. It uses compact building design to cluster together residential, shopping, and work areas and encourages walking and public transportation. Smart Growth is considered a stormwater BMP in the 2005 EPA publication <i>Using Smart Growth Techniques as Stormwater Best Management Practices</i> , EPA 231-B-05-002	yes
71	F-2	A.1.1.10	Other constituents are properly sampled as grabs (ammonia, conductivity, perchlorate, O&G, TRPH, phenols, cyanide). Suggest stating samples are to be taken according to Standard Methods, or citing EPA methods.	rejected
72	F-3	A.1.15.c	Reference to "J" should be to "K".	yes
73	F-3	A.12	If a constituent is not detected at the MDL then it will not be an "observed occurrence" and so cannot show a concentration greater than the State WQOs or CTR acute criteria. Suggest "if a constituent is not detected at the Method Detection Limit (MDL) for its respective test method it need not be further analyzed. unless the observed occurrence shows concentrations greater than the state-water quality objective, and/or the California Toxics Rule (CTR) for acute criteria."	rejected
74	F-4	B.1.d	Reference to attachment "H" should be attachment "I"	yes
75	F-5	B.7	Attachment "C" constituents (Tables 1 and 2) don't match constituents listed in B7. Suggest deleting the list of constituents included in B.7.	yes

**ATTACHMENT A**  
**PERMITTEES' COMBINED TECHNICAL COMMENTS**  
**TENTATIVE VENTURA COUNTY MUNICIPAL SEPARATE STORM SEWER**  
**SYSTEM PERMIT (NPDES NO. CAS004002)**

76	F-6	B.8	Request to the same language used as A.12 for screening of all constituents (first storm event of the wet season) with same modification to language to eliminate contradictory statement, i.e. "If a constituent is not detected at the Method Detection Limit (MDL) for its respective test method it need not be further analyzed. unless the observed occurrence shows concentrations greater than the state water quality objective, and/or the California Toxics Rule (CTR) for acute criteria." because if a constituent is not detected at the MDL then it cannot be an "observed occurrence" and so cannot show a concentration greater than the State WQOs or CTR acute criteria.	rejected
77	F-6	B.11.c	Standard Monitoring Provisions are part "K" (not "J")	yes
78	F-7	B.13	A reference should be added to attachment "A" for "Pollutants of Concern"	rejected
79	F-12	D.14	Add "significant" to first sentence, i.e. "... TIEs for all sites showing <u>significant</u> toxicity." To match language in the trigger for TIE in the same section.	yes
80	F-14	E.1.a,d/e & E.2.a	Inconsistent frequency of pyrethroid monitoring: E.2 "shall monitor 1 sampling event per station per monitoring year" should be deleted or changed to match E.1.a,d/e it is to begin "no later than the second year of this Order" at "at least 2 stations [per watershed]" and is to be "repeated in the fifth year of the permit term" and in	Yes, "shall be repeated every 3 <sup>rd</sup> year".
81	F-16	G.4.	Please delete there is no text associated with section.	yes
82	F-17	I.1.a.1.A	Suggest clarifying frequency i.e. "Level of effort per watershed per year"	yes
83	F-19	K.6.b	The intercalibration study consists of a small number of constituents (TSS, nutrients, metals, chlorinated hydrocarbons, and pyrethroid pesticides). Request change of language at end of K.6.a and K.6.b to add "where applicable" to allow use of laboratories to test for constituents not included in the intercalibration study (i.e. bacteriological, toxicity, and other chemical analyses).	rejected
84	F-7	B.12	This section requires results from Major outfall stations to be compared to Basin Plan water quality objectives. Comparisons with WQO can be done for informative purposes, however these objectives are set for receiving waters and are not appropriate to determine compliance with the NPDES permit through the quality of discharges from MS4s	No change, comment noted

## I. PURPOSE

The purpose of this Fact Sheet/Staff Report is to provide permittees (Ventura County Watershed Protection District, the County of Ventura and the incorporated cities therein and interested parties) an overview of the Ventura County NPDES Permit for storm water discharges from municipal separate storm sewer systems (MS4s), adopted on May 5, 2009. This Fact Sheet/Staff Report also provides the technical basis for the permit requirements. Sections 1 through xx describe water quality problems for storm water and urban runoff, and permit conditions to address these problems. Sections xx and xx discuss each major element of the Permittees' Storm Water Quality Management Plan (SQMP), and are meant to be used as a companion reference document to the permit. Section xx addresses changes that were made at the Xxx xx, 200x Regional Board Meeting.

## II. INTRODUCTION - THE NEED TO REGULATE STORM WATER DISCHARGES

### A. Impacts

The quality of storm water and urban runoff is fundamentally important to the environmental and economic health of the Los Angeles Region (Region), and to the quality of life in southern California. Polluted municipal storm water runoff is one of the leading causes of water quality impairment in the Region. Storm water and urban runoff (during wet and dry weather) are often contaminated with bacteria from animal droppings; Polycyclic Aromatic Hydrocarbons (PAHs), from the products of internal combustion engine operation and parking lot sealants wash off; nitrates from fertilizer application; pesticides from pest mitigating applications; herbicides from plant mitigating applications; bis (2-ethylhexyl) phthalate from the break down of plastic products; mercury from atmospheric fallout and improper disposal of mercury switches; lead

from fuels, paints, automotive parts; copper from brake pad wear and roofing materials, zinc from tire wear and galvanized sheeting and fencing; sediment from land disturbance and erosion; and dioxins as products of combustion. Water flowing over the Permittee's residential, industrial, and commercial areas carries these untreated pollutants through the storm drain systems directly into the receiving waters of the Region. Water quality impacts and public health risks from Municipal Separate Storm Sewer System (MS4) discharges that affect receiving waters nationwide and within the Region are well documented.

Water quality assessments conducted by the Regional Board have identified impairments and threatened impairments of beneficial uses of water bodies in the Ventura Watersheds. These impairments include many of the Pollutants of Concern (POC) identified by the Ventura Countywide Storm Water Monitoring Program. These impairments are identified on the State of California § 303(d) list of impaired water bodies.

Studies and research conducted by other Regional agencies, and academic institutions have also identified storm water urban runoff as significant sources of pollutants to surface waters in Southern California. A regional survey of the microbiological water quality along the shoreline of the Southern California Bight (SCB), from Point Conception south to Ensenada, Mexico, was conducted during August, 1998, by 36 agencies under the coordination of the Southern California Coastal Water Research Project (SCCWRP). It was found that freshwater outlets, comprised mainly of storm drains, had the poorest water quality with 60% and 40% of the shoreline miles exceeding monthly and daily thresholds, respectively. Freshwater outlets were also more likely to demonstrate exceedances by multiple indicators at a single site, and repeat exceedances at sites over the five-week period.<sup>1</sup>

Urban runoff has been found to cause significant receiving water impacts on aquatic life. In order to best identify and understand these impacts, it is necessary to include biological monitoring, using a variety of techniques, and sediment quality analyses, in a monitoring

<sup>1</sup> xxx

program, Water column testing alone has been shown to be very misleading. Most aquatic life impacts associated with urbanization are probably related to long-term problems caused by polluted sediments and food web disruption. An adequate analysis of receiving water biological impacts must include investigations of a number of biological organism groups in addition to studies of water and sediment quality<sup>1</sup>.

### III. INTRODUCTION

#### History of Ventura MS4 NPDES Permit

In 1987, the U.S. Congress amended the Clean Water Act to specifically require storm water discharges including those from municipalities with populations 100,000 or greater, conveyed by

---

<sup>1</sup> Burton, G.A. Jr., and R. Pitt, Stormwater Effects Handbook: A ToolBox for Watershed Managers, Scientists, and Engineers. CRC Press, Inc., Boca Raton, FL. August 2001. 1085 pgs.

a separate storm sewer system to be addressed as point sources of pollution under the NPDES. These municipalities were required to reduce the discharge of storm water pollutants to the maximum extent practicable (commonly referred to as the MEP standard). The U.S. and California Courts have since interpreted federal statutes to give the permitting authority the discretion to also require compliance with water quality standards. In addition, conditions in NPDES permits must be consistent with the assumptions of TMDL WLA's that have been adopted.

The USEPA issued the Final Storm Water Regulations in Nov 1990, which required medium and large municipalities to submit a two part application. The first part required basic system description and ownership identity information. Part 2 required storm water pollutant discharge characterization data from one wet season, and a proposed storm water quality management plan.

In 1990, populations in Oxnard, Thousand Oaks, and Unincorporated Ventura County met the Census definition of medium size municipalities.

The City of Oxnard submitted a Part 1 application in 1991. After discussions with the Ventura County Flood Control District, and the City of Thousand Oaks, the Water Board decided that the VCFD as Principal Permittee would submit a system wide Part 2 application on behalf of all the municipalities in Ventura County, because of the interconnected nature of the flood control system.

A consolidated Part 2 application was submitted in 1993, and the Water Board issued the first term system-wide municipal storm water permit for Ventura County in 1994.

The first term MS4 permit was adopted in 1994, and the focus of the permit was to require Ventura County municipalities to develop storm water pollution control programs in the areas of public involvement/ education; business/ industry outreach; development planning; development construction; public agency activities; and illicit connection/ discharge elimination, in addition to

implementing a basic monitoring program to characterize the quality of municipal storm water discharges.

The second term MS4 permit was adopted in 2000, and the focus of the permit was the implementation of a comprehensive storm water quality management program, to reduce the discharge of storm water pollutants to the MEP, and to meet water quality standards. The monitoring program was expanded to assess mass emissions of pollutants from Ventura County Rivers to coastal waters, and to better understand the quality of wet weather discharges and their adverse impacts.

No doubt the Ventura County MS4 Program, under the leadership of the Ventura County Watershed Protection District has made significant strides in implementing programs to reduce storm water pollution. Yet, more than a decade after the first permit was issued, we continue to see exceedances of water quality standards for storm water pollutants such as bacteria, and heavy metals. In addition, the Ventura County MS4 program having run its second term is a step behind that of Los Angeles County, which closed out its third term last December.

The third term MS4 permit for the first time includes Municipal Action Levels, derived using the USEPA's monitoring dataset for large and medium MS4s. The permit identifies a default set of specific storm water BMPs that industry, construction, and public agencies must implement based on activity to reduce the discharge of storm water pollutants. The permit promotes the implementation of LID strategies for new development and redevelopment, which have the objective of maintaining pre-development hydrology and utilizing natural controls to reduce storm water pollution. The permit incorporates for the first time TMDL WLAs adopted by the Board for impaired water bodies which is consistent with USEPA's TMDL Policy.

Report of Waste Discharge

The permittees filed a Report of Waste Discharge (ROWD), dated January 26, 2005. The permittees applied for renewal of their waste discharge requirements for a 5-year period, which serves as an NPDES permit to discharge wastes to surface waters.

The Regional Water Board reviewed the ROWD and determined it to be partially complete under the reapplication policy for MS4s issued by the United States Environmental Protection Agency (U.S. EPA) (61 Fed. Reg. 41697). The Regional Water Board has prepared this Order so that implementation of provisions contained in this Order by permittees will meet the requirements of the federal NPDES regulations at 40 CFR122.26.

The permittees Report of Waste Discharge contained a proposed Storm Water Management Program and a Monitoring Program to be considered by the Regional Water Board for incorporation into an MS4 NPDES Permit as permit conditions and to demonstrate compliance with federal law. The permittees are entitled, but did not elect to pursue a permit with numeric end-of-pipe limits for storm water discharges, which would have required them to satisfy specific effluent limitations rather than implement storm water management programs. Where a MS4 permittee voluntarily chooses a Best Management Practice (BMP) based storm water management program as permit effluent limitations rather than end-of-pipe numeric effluent limits, there exists no compulsion of a specific regulatory scheme that would violate the 10th Amendment to the United States Constitution. (City of Abilene V. EPA, 325 F.3d 657 (5th Cir. 2003)).

Meetings

The Regional Water Board staff has conducted meetings from October 2005 through January 2009, with permittees their representatives (Larry Walker and Associates, and Somach, Simmons & Dunn), and various stakeholders (Building Industry Association of Southern California/ Greater Los Angeles Ventura Chapter (BIAGLA/ VC), California State Dept. of Health Services, Calleguas Water District, California Stormwater Quality Association (CASQA), City of Downey, City of Los Angeles-EMD, Coalition for Practical Regulation (CPR),

Construction Industry Coalition on Water Quality (CICWQ), County of Orange, Geosyntec Consultants, Golden State, Heal The Bay; Local Government Commission, Los Angeles City; Los Angeles County Department of Public Works, Los Angeles County-SD, Los Angeles Department of Water & Power, Metropolitan Water District, Natural Resources Defense Council (NRDC), Richard Watson Association, San Bernardino Flood Control District, Santa Monica Bay Restoration Commission, Southern California Coastal Water Research Project, University of California Sea Grant, Ventura CoastKeeper, and Charles Abbott Associate. On April 5, 2007, September 20, 2007, and July 10, 2008 the Regional Water Board conducted workshops to discuss drafts of the NPDES Order and received input from the permittees and the public regarding proposed changes.

#### **IV. STATUTORY AND REGULATORY HISTORY OF THE STORMWATER PROGRAM**

The federal Clean Water Act (CWA) generally prohibits the “discharge of any pollutant,” 33 U.S.C. § 1311(a), from a “point source” into the navigable waters of the United States. 33 U.S.C. § 1362(12)(A). An entity can, however, obtain a National Pollutant Discharge Elimination System (NPDES) permit that allows conditionally for the discharge of some pollutants. 33 U.S.C. § 1342(a)(1). The CWA defines point sources as “discernible, confined and discrete conveyances, including but not limited to, any pipe, ditch, channel, tunnel, conduit, well, discrete fissure” such as a pipe, ditch, container, rolling stock, concentrated animal feeding operation, landfill leachate collections system, vessel or other floating craft from which pollutants are or may be discharged. 33 U.S.C. § 1362; 40 CFR 122.2.

In 1987, the U.S. Congress enacted the Water Quality Act recognizing both the environmental threats posed by storm water runoff and the U.S. EPA's problems in implementing regulations for storm water discharges (NRDC II, 966 F.2d at 1296). These Amendments to the CWA established new statutory requirements to control industrial and municipal storm water discharges to waters of the United States (CWA § 402(p).)

The amendments require NPDES permits for storm water discharges from Municipal Separate Storm Sewer Systems (MS4s) to waters of the United States, and the MS4 was designated a "point source". The storm water discharge permits for MS4s (i) may be issued on a system- or jurisdiction-wide basis; (ii) shall include a requirement to effectively prohibit [unauthorized] non-storm water discharges into the storm sewers; and (iii) shall require controls to reduce the discharge of pollutants from storm water to the maximum extent practicable, including management practices, control techniques and systems, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants. (See CWA §402(p) (3) (B)).

Ordinarily, an NPDES permit imposes [numerical] effluent limitations on such discharges. See 33 U.S.C. § 1342(a)(1) (incorporating effluent limitations found in 33 U.S.C. § 1311). First, a permit-holder "shall . . . achiev[e] . . . effluent limitations . . . which shall require the application of the best practicable control technology [BPT] currently available." 33 U.S.C. § 1311(b)(1)(A). Second, a permit-holder "shall . . . achiev[e] . . . any more stringent limitation, including those

necessary to meet water quality standards, treatment standards or schedules of compliance, established pursuant to any State law or regulations (under authority preserved by section 1370 of this title)." 33 U.S.C. § 1311(b)(1)(C). In the case of MS4 NPDES discharge permits, federal courts have ruled that the U.S. EPA has the discretionary authority under "33 U.S.C. § 1342(p)(2)(E) to determine that ensuring strict compliance with state water-quality standards is necessary to control pollutants, or to require less than strict compliance with state water-quality standards, such as a BMP approach" (*Defenders of Wildlife v. Browner*, 191 F.3d 1159 (9<sup>th</sup> Cir., 1999)). Under 33 U.S.C. § 1342(p)(3)(B)(iii), the U.S. EPA has the choice to include either best management practices or numeric limitations in the permits. NRDC II, 966 F.2d at 1308 ("Congress did not mandate a minimum standards approach or specify that [the] EPA develop minimal performance requirements.").

Regulatory Scheme

On November 16, 1990, pursuant to CWA § 402(p), the U.S. EPA promulgated regulations at 40 CFR 122.26 which established requirements for storm water discharges under the NPDES program. The U.S. EPA defines storm water at 40 CFR 122.26 (b)(13) as 'storm water runoff, snow melt runoff, and surface runoff and drainage' [related to storm events or snow melt] (55 Fed. Reg. 47990, 47995). Non storm water discharges to the MS4 are to be "effectively prohibited" by the MS4 operator. "Effective prohibition" meant that the MS4 Permittee was to implement programs to eliminate "illicit discharges" to the storm drain system unless authorized

E  
V  
I  
S  
E  
D  
T  
E  
N  
T  
A  
T  
I  
V  
E

under NPDES permits issued independent of the MS4 permit (55 Fed. Reg. 47995). The storm water regulations also intended to not hold MS4 Permittees responsible for certain categories of non storm water discharges, such as uncontaminated ground water infiltration, natural springs, rising groundwater, stream and diversions, from the MS4. Such discharges might need to be addressed under independent NPDES permits when specifically identified on a case-by case basis by the MS4 Permittee or the permitting authority.

The U.S. EPA intended that storm water discharges from the MS4 be primarily addressed through the implementation of BMPs on an iterative approach because of the intermittent and variable nature of storm flows and pollutant concentrations as well as insufficient data rather than numerical effluent limitations (61 FR 43761). However, the U.S. EPA's scheme for non-storm water discharges from the MS4 is to bring them under the existing framework of the NPDES program at 40 CFR 122.44(d). (55 Fed. Reg. 47995). Non-numerical limitations such as BMPs for non-storm water discharges may be authorized only where numerical limits are not feasible (40 CFR 122.44(k)). In any case, if the Permittee fails to implement adequate BMPs to prevent exceedance of the receiving water objectives, the permitting authority "may have to consider other approaches to water quality protection" (61 Fed. Reg. 43761; *Interim Permitting Approach*, Response #6, EPA 833-D-96-00, 1996).

The CWA §303(d)(1)(A) requires each State to conduct a biennial assessment of its waters, and identify those waters that are not achieving water quality standards. The resulting list is referred

to as the 303(d) list. The CWA also requires States to establish a priority ranking for waters on the 303(d) list of impaired waters and to develop and implement TMDLs for these waters. A TMDL specifies the maximum amount of a pollutant that a waterbody can receive and still meet water quality standards, and allocates the acceptable pollutant load to point and nonpoint sources. The elements of a TMDL are described in 40 CFR 130.2 and 130.7. A TMDL is defined as “the sum of the individual waste load allocations for point sources and load allocations for nonpoint sources and natural background” (40 CFR 130.2). Regulations further require that TMDLs must be set at “levels necessary to attain and maintain the applicable narrative and numeric water quality standards with seasonal variations and a margin of safety that takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality” (40 CFR 130.7 (c) (1)). The regulations at 40 CFR 130.7 also state that TMDLs shall take into account critical conditions for stream flow, loading and water quality parameters. The U.S. EPA has issued guidance for establishing WLAs for storm water discharges in TMDLs and their incorporation as numerical limitations in MS4 Storm Water Permits (U.S. EPA Office of Water Memo, *Establishing Total Maximum Daily Load Wasteload Allocations for Storm Water Sources and NPDES Permit Requirements Based on those WLAs*, Nov 22, 2002 Memo). Since provisions in NPDES permits must reflect the assumptions and requirements of available TMDLs (40 CFR 122.44 (d)(1)(vii)(B)), the NPDES permit must incorporate the WLAs as either BMPs (reasonably expected to achieve the WLAs when implemented and properly maintained), under specified circumstances (40 CFR 122.44(k)(2) & (3)), or as a Water Quality Based

E

T  
A  
T  
I  
V  
E

Limitation (WQBEL) expressed numerically. Where a non-numeric effluent limitation is selected, the permits administrative record must support the expectation that the BMPs are sufficient to achieve the WLAs. (40 CFR 124.8, 124.9, and 124.18.)

State Regulatory Authority and Permit History

The State of California is one of forty-five States with duly delegated authority under the CWA to implement the NPDES permitting program. The Porter-Cologne Act (California Water Code) authorizes the State Board, through the nine regional boards, to issue NPDES permits, and regulate and control the discharge of pollutants into waters of the State. To comply with the CWA, the Los Angeles Regional Water Board (LA Water Board) issued the first storm water permit (“predecessor permit”) for the County of Ventura on August 22, 1994, to the municipalities (Permittees) in Ventura County (Order No. 94-082; NPDES Permit No. CAxxxxx). The Ventura County MS4 Permit was reissued on July 27, 2000 (Order No. 00-108; NPDES Permit No. CAS004002).

Because of the complexity and networking of the storm drain system and drainage facilities within and tributary to the County of Ventura, the LA Water Board adopted a countywide approach in permitting storm water and urban runoff discharges. The permit requires Permittees to conduct monitoring and to implement programs in the areas of public involvement and participation, industrial/commercial inspection, development planning, development construction, public agency activities, and to reduce the discharge of pollutants in storm water to

the Maximum Extent Practicable (MEP) from the permitted areas in the County of Ventura to the waters of the U.S. In addition, Permittees are required to effectively prohibit the discharge of unauthorized non storm water into the MS4 (except where they are authorized under a NPDES permit), by implementing a program to detect and eliminate illicit discharges/connections to the MS4.

The Ventura County MS4 Permit requires Permittees to develop, and implement a timely, comprehensive, cost-effective storm water pollution control program to reduce the discharge of pollutants in storm water to the Maximum Extent Practicable (MEP) to the waters of the U.S. In addition, it states that discharges from the MS4 to waters of the U.S. including Calleguas Creek, Santa Clara River, Ventura River, Malibu Creek, and Ventura County Coastal areas are required to meet water quality standards. Upon establishment of TMDLs by the State or the U.S. EPA, the State is required to incorporate the TMDLs into the State Water Quality Management Plan (40 CFR 130.6 (c) (1), 130.7). The Water Quality Control Plan for the Los Angeles Region (Basin Plan), and applicable statewide plans, serves as the State Water Quality Management Plan governing the watersheds under the jurisdiction of the LA Water Board. LA Water Board-issued NPDES permits must contain provisions consistent with the State Water Quality Management Plan.

## V. DISCUSSION OF SPECIAL PROVISIONS

### A. General Requirements

#### **Non Storm Water Discharges** Discharges from Potable Water Sources

Federal Regulations promulgated on November 16, 1990 at 40 CFR 122.26 required Permittees to effectively prohibit all non-storm water discharges. However, the federal regulations also included a list of specific non-storm water discharges that "need not be prohibited." These discharges include among others, discharges from potable water sources.

This Regional Board, on April XX 2009, issued an NPDES permit for releases of potable water from distribution systems. Releases may occur only with the implementation of appropriate BMPs and dechlorination prior to discharge

#### **Municipal Action Levels** Introduction

The draft Tentative Ventura County MS4 Order establishes Municipal Action Levels (MALs) for selected pollutants based on a regional subset of nationwide Phase I MS4 monitoring data for pollutants in storm water. (<http://unix.eng.ua.edu/~rpitt/Research/Research.shtml>, last visited on August 14, 2007). The MALs were computed using the statistical based population approach, one of three approaches recommended by the California Water Board's Storm Water Panel in its report, 'The Feasibility of Numerical Effluent Limits Applicable to Discharges of Storm Water Associated with Municipal, Industrial and Construction Activities (June 2006). The MALs were obtained by calculating the 80<sup>th</sup> percentile value of selected pollutants. The end-of-pipe

assessment points for the determination of MAL exceedances are the major outfalls, as defined in 40 CFR122.26(b)(5) and (b)(6). Staff chose to incorporate MALs derived from a USEPA Climate Zone 6 subset of nationwide MS4 data, included in the National Stormwater Quality Database, because of the large number of events sampled for each pollutant. A Climate Zone 6 subset of the nationwide MS4 dataset was used to assure that the calculated values were relevant to Ventura County monitoring data (Ventura County is in USEPA Climate Zone 6). The California Water Board's Storm Water Panel Final Report states, "the statistically based population approach would once again rely on the average distribution of measured water quality values developed from many water quality samples taken for many events at many locations." Over 100 events were sampled for all MAL pollutant included in the Order. Approximately 350 events were sampled for most MAL pollutants. In addition, the use of the nationwide dataset provided for the sampling of a wide variety of storm events. The Climate Zone 6 subset of the nationwide data includes events sampled for storms ranging from 0.02" to 9.85" rainfall depth. The nationwide data incorporates monitoring events from various areas/climate zones in the nation, notably USEPA Climate Zone 6, which includes Ventura County. The nationwide MS4 data is derived from the sampling of runoff from multiple land uses and drainage areas of varying sizes, from 0.4 acres to over 10,000 acres. The California Water Board's Storm Water Panel Final Report states, "In built-out urbanized environments, there are greater opportunities to examine various data sets for setting Action Levels." The report acknowledges the importance of monitoring various land uses, which are included in the National Stormwater Quality Database, and setting Action Levels based on a large number of sampling events, which are included in the National Stormwater Quality Database. Staff selected common storm water pollutants as MALs with the presumption that appropriate control of the selected pollutants would lead to appropriate control of the majority of storm water pollutants and serve as a quantifiable measure of storm water management program effectiveness.

Discussion of New Requirement

- 1) Beginning Year 3 after Order adoption date, a running average of twenty percent or greater of exceedances of any discharge of storm water from the MS4 to waters of the U.S. that exceed the Municipal Action Levels (MALs) for the pollutants listed in Attachment "C"

N

E

(Municipal Action Levels) will require each permittee to affirmatively augment and implement all necessary storm water controls and measures to reduce the discharge of the associated class of pollutant(s) in accordance with the Maximum Extent Practicable (MEP) provision. Staff chose to incorporate a running average of 20% or greater exceedances of a MAL over a three year period to require Permittees to address pollutants that consistently demonstrated a potential threat to storm water quality. The purpose of this requirement is to help ensure that Permittee's do not act on sampling anomalies, but focus on identifying and eliminating sources of pollutants that consistently exceed MALs. The MAL requirement in the Ventura MS4 Order does not require that all outfalls be retrofitted with treatment Best Management Practices (BMPs). Staff's intent in incorporating the MAL requirement is to require Permittees to assess and implement effective program components such as industrial/construction inspections, public education and public agency activities to control pollutants in MS4 storm water discharges to the MEP

- 2) Permittees who have storm water discharges that continue to exceed a MAL pollutant(s) after Year 3 of the operative MAL(s) are required to demonstrate they have implemented adequate storm water control measures and BMPs to comply with the MEP criteria. To demonstrate compliance with the MEP standard, Permittees must submit to the Executive Officer (within three years of Permit Adoption), an MAL Action Plan for those subwatersheds with discharges in excess of the MALs. The plan should include an assessment of their storm water program, the sources responsible for the abnormal pollutant levels and the methodology used in identifying those sources (e.g. storm water computer modeling), the existing BMPs that address those sources, the additional practicable BMPs and/or actions the Permittee proposes to ensure compliance with the MEP standard, and a BMP implementation schedule for all structural and non-structural BMPs.
- 3) Within 90 days of the plan approval, the Permittee shall initiate the BMPs and actions proposed in the MAL Action Plan, together with any other practicable BMPs or actions that the Executive Officer determines to be necessary to comply with the MEP standard. The Permittee shall complete the proposed actions in accordance with the approved

implementation schedule. Upon completion of the actions specified in the approved MAL Action Plan, the Permittee shall re-monitor the subject subwatershed in accordance with the MRP, and submit a Post-Project MAL Assessment Report to the Executive Officer. The Executive Officer will either accept the report as evidence that the Permittee has complied with the MEP standard or, alternatively, identify additional actions which the Executive Officer determines necessary to comply with the standard.

## B. Watershed Initiative Participation

### Introduction

The Principal Permittee consents to participate in water quality meetings for watershed management and planning, including but not limited to the Southern California Stormwater Monitoring Coalition (SMC) and other Watershed planning groups, as appropriate.

### Participation

The Principal Permittee consents to participate in the following regional water quality programs, and projects for watershed management and planning:

- (a) SMC Regional Monitoring Programs
  - (1) Southern California Regional Bioassessment
    - (A) Level of effort per watershed
      - (i) Probabilistic sites per watershed
        - (I) Ventura River - Six
        - (II) Santa Clara River - Three
        - (III) Calleguas Creek - Six
      - (ii) Integrator sites per watershed
        - (I) Ventura River - One
        - (II) Santa Clara River - One

  - (II) Santa Clara River - One
  - (III) Calleguas Creek - One
- (b) Southern California Bight Projects
  - (1) Regional Monitoring Survey – 2008, and successive years.

### C. Public Information and Participation Program

#### Introduction

Implementation of a PIPP is a critical BMP and a necessary component of a storm water management program. The State Board Technical Advisory Committee "recognizes that education with an emphasis on pollution prevention is the fundamental basis for solving nonpoint source pollution problems." The USEPA Phase II Fact Sheet 2.3 (Fact Sheet 2.3) finds that "An informed and knowledgeable community is critical to the success of a storm water management program since it helps insure the following: (i) greater support for the program as the public gains a greater understanding of the reasons why it is necessary and important, and (ii) greater compliance with the program as the public becomes aware of the personal responsibilities expected of them and others in the community, including the individual actions they can take to protect or improve the quality of area waters."

The USEPA's, Public Participation/Involvement Minimum Control Measure- fact Sheet, finds that Public education and outreach involves using effective mechanisms and programs, guided by a detailed outreach strategy, to engage the public's interest in preventing stormwater pollution. A key factor to consider when developing a strategy is that the public has varying levels of background knowledge of both storm water management and their role in reducing storm water

R  
E  
V  
I  
S  
E  
D

V  
E

pollution. Furthermore, the public can provide valuable input and assistance to a municipal storm water management program and, therefore, should play an active role in the development and implementation of the program. An active and involved community is essential to the success of a storm water management program because it allows for:

- Broader public support since residents who participate in the development and decision making process are partially responsible for the program and, therefore, are more likely to take an active role in its implementation.
- Shorter implementation schedules due to fewer obstacles in the form of public and legal challenges and increased sources in the form of residents volunteers.
- A broader base of expertise and economic benefits since the community can be a valuable, and free, intellectual resource; and A conduit to other programs as residents involved in the storm water program development process make important cross-connections and relationships with other community and government programs.

This benefit is particularly valuable when trying to implement a storm water program on a watershed basis.

#### Discussion of New Requirements

- 1) The Draft Ventura MS4 Permit requires Permittees to work with existing local watershed groups or organize establish watershed Citizen Advisory Groups/ Committees. The intent of this requirement is to solicit public input for messages/activities that will persuade the public to modify their common activities to reduce/prevent pollutants from being discharged in storm water. A paper presented by David Galvin during the 4th National Conference Nonpoint Source and Stormwater Pollution Education Programs October 17-20, 2005 \*Measuring Results from Outreach and Education Programs: Can We See Improvements Downstream? states, "Experiential programs appear to be more powerful than information

V  
E

campaigns, more likely to connect people with their watershed. Activities such as citizen volunteer monitoring, hands-on restoration, storm-drain-stenciling projects, and other ways to get an experiential element incorporated into the program have a greater likelihood of success. Get peoples' feet wet and their hands dirty. Once they have invested in the watershed, even in a tiny part of it, they will have more ownership." Direct feedback from the public on storm water pollution prevention messages can be an inexpensive alternative to traditional surveys and studies as well as promoting increased public support for storm water pollution prevention campaigns. The Draft Ventura MS4 Permit requires Permittees to establish watershed Citizen Advisory Groups/ Committees, which can be a subset of existing committees/groups. The intent of this requirement is to solicit public input for messages/activities that will persuade the public to modify their common activities to reduce/prevent pollutants from being discharged in storm water. A paper presented by David Galvin during the 4th National Conference Nonpoint Source and Stormwater Pollution Education Programs October 17-20, 2005 \*Measuring Results from Outreach and Education Programs: Can We See Improvements Downstream? states, "Experiential programs appear to be more powerful than information campaigns, more likely to connect people with their watershed. Activities such as citizen volunteer monitoring, hands-on restoration, storm-drain-stenciling projects, and other ways to get an experiential element incorporated into the program have a greater likelihood of success. Get peoples' feet wet and their hands dirty. Once they have invested in the watershed, even in a tiny part of it, they will have more ownership." Direct feedback from the public on storm water pollution prevention messages can be an inexpensive alternative to traditional surveys and studies as well as promoting increased public support for storm water pollution prevention campaigns.

- 2) The Draft Ventura MS4 Permit requires an increase in media impressions and identifies the media venues. The intent of these changes is to provide an increase in public knowledge of storm water pollution prevention practices in an effective and cost efficient manner. Several studies have found that an increase in the frequency of storm water pollution prevention messages contributes to the likelihood that these messages will be remembered.

- 3) The Draft Ventura MS4 Permit requires outreach to ethnically diverse communities. The USEPA, Tailoring Outreach Programs to Minority and Disadvantaged Communities and Children Fact Sheet finds that, "many residents of ethnically and culturally diverse communities don't speak English. English messages contained in public education outreach materials may not be effectively reaching a significant portion of some communities. The intent of this provision is to encourage behavior changes that reduce pollutants in storm water to a portion of the population who might otherwise be overlooked.
- 4) The Draft Ventura MS4 Permit requires Permittees to work with other regional and/or statewide agencies and associations such as the California Storm Water Quality Association (CASQA), to develop a corporate outreach program to educate and inform corporate and local managers about storm water regulations and Best Management Practices (BMPs). The intent of this provision is to ensure that management is aware of the potential impacts their business can have on storm water quality, facilitate compliance with storm water requirements, and give management sufficient guidance to train staff throughout their business on appropriate business practices to mitigate the potential water quality impacts of their operations.
- 5) The Draft Ventura MS4 Permit requires Permittees to implement a Business Assistance Program to provide technical information to small businesses to facilitate their efforts to reduce the discharge of pollutants in storm water. The provision requires the distribution of storm water pollution prevention education materials to operators of auto repair shops, car wash facilities (including mobile car detailing), mobile carpet cleaning services, commercial pesticide applicator services and restaurants providing guidance on appropriate business practices to mitigate the potential impacts their business practices can have on storm water quality.

Purpose

The purpose of the **Industrial/Commercial Businesses Program** is to assure that the implementation of adequate controls and inspection and monitoring activities at industrial/commercial sites will assist municipalities comply with the Maximum Extent Practicable and water quality standards for discharges from their MS4s. The goal of the program is also to assure that the need not be permitted non-stormwater discharges, such as air conditioning condensate, drains for foundations, footings, and crawl spaces, etc., are not a significant source of pollution and the Permittees are actively enforcing the prohibition against non-stormwater discharges. The Permittees have the legal authority to actively control pollutants in storm water discharges, to prohibit illegal discharges/illicit connections, to control spills, and to require compliance with the local ordinances, including the implementation of source control BMPs and other necessary control measures and carry out inspections within their respective jurisdictions.

Legal Framework

In this third iteration of the MS4 stormwater discharges permit to be issued to Ventura County MS4 Permittees, there are a number of upgrades for the industrial/commercial business program in comparison with the previous 2000 permit. The upgrades are in line with the current requirements in the Los Angeles MS4 permit issued in 2001 and other MS4 permits recently issued in California, e.g. Sacramento, San Bernardino MS4 permits and nationwide, e.g. Seattle, Washington. This iterative approach for MS4 stormwater discharge permits, to contain better tailored BMPs, it is described by the USEPA in its *Interpretative Policy Memorandum on Reapplication Requirements* of MS4s issued by USEPA (61 Fed. Reg. 41697). In the Memorandum, USEPA specifies that "...[it] is seeking to improve existing MS4 storm water management programs by using information and experience municipalities have gained during the previous permit term." In its *Interpretative Memorandum Q&As* part (EPA 833-D-96-001), USEPA further clarified that based on the Section 301 of the Clean Water Act (CWA), it is required that discharger permits include effluent limitations necessary to meet State Water

Quality Standards (WQS). However, under the CWA and NPDES regulations, permitting authorities may employ a variety of conditions and limitations in storm water permits, including BMPs, performance objectives, narrative conditions, monitoring triggers, action levels (e.g., monitoring benchmarks, toxicity reduction action levels, etc.), as the necessary water quality-based effluent limitations.

The types of activities proposed in the new Ventura MS4 permit are similar with the conditions currently found in the Los Angeles MS4 permit. It is important to note that similar controls for industrial/commercial sites required by the Los Angeles MS4 permit, including inspection activities, are also required in the San Bernardino MS4 permit that was challenged in Court. In the decision for that case, the Appellate Court found that “[...] permittees are responsible for inspecting construction and industrial sites and commercial facilities within their jurisdiction for compliance with and enforcement of local municipal ordinances and permits” (*City of Rancho Cucamonga v. Regional Water Quality Control Bd.- Santa Ana Region (2006) Feb 27 Cal/4 E037079*).

On a separate action that challenged the Los Angeles MS4 permit, the Superior Court determined “that the Permit contains reasonable inspection requirements for these types of facilities... Addressing pollution after it has entered the storm sewer system is not working to meet legislative goals. More work is required at the source of pollution... Federal law requires [municipal] permittees to inspect dischargers... Nothing in the regulations precludes the inspections of facilities with state-issued permits...” (*In Re L.A. County Municipal Storm Water Permit Litigation (2004) BS080548*) In a subsequent decision, the Appellate Court upheld the Superior Court decision and the inclusion in the permit of the requirement to inspect industrial/commercial and construction sites (*County of Los Angeles et al. v. California State Water Resources Control Board et al. (2006) Nov 6 Cal/5 B184034*): “The legal authority extended to: requiring persons to comply with permittees’ ordinances; holding dischargers to storm drain systems accountable; controlling pollutants and their potential contributors; inspecting, watching, and monitoring procedures to insure compliance with the permit including prohibition of illicit discharges into storm drain systems; and requiring the use of best

E

management practices to reduce pollutant discharge into the storm drain systems to the maximum extent possible”(underlined added). In addition, the Court recognized the Regional Board’s authority to require in NPDES permits the implementation of specific better-tailored BMPs that achieve compliance with the MEP and WQS: “the regional board has the authority to impose additional restrictions... the federal Clean Water Act authorizes National Pollutant Discharge Elimination Systems permits to set forth specific practices which will restrict polluted storm water runoff... Thus, nothing in state law is violated by the specific pollution control requirements imposed on the permittees.”

Regional Board is authorized under 40 CFR 122.44(k)(2) to require BMPs in lieu of numeric effluent limitations in NPDES permits when the Regional Board finds numeric effluent limitations to be infeasible. The Regional Board may also impose BMPs which are “reasonably necessary... to carry out the purposes of the Clean Water Act” under 40 CFR 122.44(k)(3). Both of these standards for imposing BMPs were recognized in *NRDC v. Costle, 568 F.2d 1369, 1380 (D.C. Cir. 1977)*. Furthermore as mentioned before, the same authority was recognized in the

state Appellate Circuit in *County of Los Angeles et al. v. California State Water Resources Control Board et al.* (2006) Nov 6 Cal/5 B184034.

State of the pollution at sites of industrial/commercial activity

Since the NURP study<sup>1</sup> in early 1980s, sites of industrial activity demonstrated the potential of contributing higher quantities of pollutants into the stormwater runoff when compared with other land uses. Data from the NURP study were analyzed further in the *U.S. Geological Survey (USGS) Urban Storm Water Data Base for 22 Metropolitan Areas Throughout the United States* study<sup>2</sup>. The USGS report summarized additional monitoring data compiled during the mid-

1980s, covering 717 storm events at 99 sites in 22 metropolitan areas, and documented problems associated with metals and sediment concentrations in urban stormwater runoff.

The *California Stormwater BMP Handbook - Industrial and Commercial* published in January 2003 by California Stormwater Quality Association (CASQA) lists as potential pollutants from sites of industrial activities: sediments, nutrients, metals, organics and toxicants, oil and grease, bacteria, pesticides. The type of activity or facility that potentially discharge those pollutants in stormwater runoff include vehicle & equipment fueling, vehicle & equipment maintenance and repair, outdoor loading & unloading of materials, outdoor storage of raw materials, products, and byproducts, building and grounds maintenance, parking/storage area maintenance.

USEPA's *Considerations in the Design of Treatment BMPs to improve Water Quality* (EPA 600/R-03/103, September 2002) also shows that lands of industrial/commercial use contribute significant loads of pollutant in urban areas. As examples, the industrial land uses may typically contribute 0.2 lb/ac/yr of lead, 0.4 lbs/ac/yr of zinc, 0.6 lb/ac/yr of chromium, 500 lb/ac/yr of

suspended solids, while commercial land uses typically contribute 2.7 lb/ac/yr of lead, 2.1 lb/ac/yr of zinc, 0.15 lb/ac/yr of chromium, 1,000 lb/ac/yr of suspended solids. In the same document urban stormwater pollutants event mean concentrations for different U.S. regions show concentrations for copper, lead, zinc consistently above water quality standards.

The water quality monitoring data submitted by the Ventura MS4 Permittees (Annual Monitoring Report 04-05) reveal that a number of constituents, such as metals, PAHs, pesticides exceeded the receiving water quality standards during wet events. Because studies and research demonstrated that the same types of pollutants are typically released in higher quantities into stormwater runoff from sites of industrial and commercial activities, there is a strong presumption that pollutants in stormwater runoff discharges from those sites cause or contribute to the exceedances.

Studies that are more recent confirm that tendency. The *Critical Source Selection and Monitoring Report*<sup>1</sup> performed on behalf of Los Angeles MS4 Permittees, identified seven highest ranked pollution potential activities to be, in order of ranking: (i) wholesale trade (scrap, auto dismantling), (ii) *automotive repair/parking*, (iii) fabricated metal products, (iv) motor freight (including trucking), (v) chemical and allied products, (vi) automotive dealers/gas stations, (vii) primary metals products. It is significant to note that five out of seven categories of activities are subject to Phase I industrial storm water regulations. Although *automotive repair/parking* and *automotive dealers/gas stations* categories were not the focus of the Phase I storm water regulations, the study identified these commercial categories as significant potential pollutant contributors based on the principles developed in the critical source criteria study.

More recent research reviewing stormwater monitoring data reveals that the stormwater runoff from industrial sites contains significant loads of pollutants. In *Utility of Stormwater Monitoring- H. Lee, M.K. Stenstrom- Water Environ. Res., 77, 219 (2005)*, the authors reviewed three years of stormwater monitoring data from industrial sites in Los Angeles County covered by the statewide Industrial Activities Stormwater General Permit (IASGP). The authors concluded that the data clearly show that certain industrial sectors contribute higher quantities of pollutants in the stormwater runoff. In addition, concentrations of metals exceeded the stormwater benchmark values suggested by the US EPA more frequently than the basic water-quality parameters. In *Industrial Storm Water Monitoring Program Existing Statewide Permit Utility and Proposed Modifications (H. Lee, M.K. Stenstrom -US EPA cooperative agreement CP-82969201 from the California State Water Resources Control Board, contract number 02-172-140-0, 2005)* the authors examined data collected over the nine-year period from 1992 to 2001 from industrial sites in Los Angeles and Ventura County covered by the statewide IASGP. The analysis of the expanded data set confirmed the conclusions of the prior research that industrial/commercial sites contribute higher quantities of pollutants in the stormwater runoff.

Nationwide and statewide research and monitoring data has shown that nurseries are also a category of facilities that tend to release a higher quantity of pollutants in stormwater runoff. Recognizing this class of facilities and activities as a potential source of pollutants, the Regional Board adopted a *Conditional Waiver of Waste Discharge Requirements for Discharges from Irrigated Lands within the Los Angeles Region (Waiver)*, Order No. R4-2005-0080. The Waiver covers discharges from “irrigated lands where water is applied for producing crops and, ... includes, but is not limited to, land planted for row, vineyard, field and tree crops as well as nurseries, nursery stock production, and greenhouse operations... which are not subject to waste discharge requirements, including Municipal Separate Storm Sewer System (MS4) or other National Pollutant Discharge Elimination System (NPDES) permits.” However, because the non-agricultural nurseries present in the urban environment can manifest the same characteristics as their agricultural counterparts, the nurseries under specified NAICS codes are covered under the current Ventura MS4 permit.

Proposed Enhancements

The new permit requirements build on the activities and experience gained in the previous ones and moves from a more educational effort to the next iteration of better source control BMPs implementation, inspection and enforcement. A special emphasis is put on mandatory implementation of a baseline minimum set of common sense source control BMPs recommended by the California Stormwater Quality Association (CASQA) BMP Handbook similar to the approach suggested by the Permittees in their ROWD for controlling pollution in stormwater discharges from construction sites.

In their ROWD, the Ventura County Permittees did not propose an enhancement of their program to control pollutants in stormwater runoff from industrial/commercial sites into the MS4 further than the provisions contained in the 2000 permit. The Permittees also did not propose any improvements in the monitoring program to better characterize the discharge of pollutants from sites of industrial or commercial use and prioritize the activities to control them. In addition, the Permittees did not propose any improvements in the type and extent of BMPs that must be implemented at industrial/commercial sites in order to control the quantity of pollutants into the stormwater runoff discharged into their MS4s. The Permittees must require the implementation of such controls at industrial/commercial sites to the extent that municipalities can comply with the MEP and water quality standards for discharges of stormwater from their MS4s.

Based on the dual coverage and partnership approach between the permitting authority and municipalities that the USEPA called for in the storm water regulations and in order to best use limited resources at the State and local level, the permit includes the following improvements.

Recognizing that this permit represents a *third iteration* permit, and building upon the experience and tools developed under the previous permits, the Industrial/Commercial program has been elevated to an inspection, baseline mandatory source control BMPs implementation and enforcement program. Based also on the extensive educational effort performed by the Permittees since mid 1990s to familiarize industrial and commercial site operators with the

requirements of the stormwater pollution prevention techniques and municipal regulations the new permit includes a number of enhancements. Municipalities are required to control the storm water discharges associated with industrial activities and other commercial facilities identified as significant contributors of pollutants through the implementation of a mandatory baseline minimum set of source control BMPs;

performance of an inspection program to verify the adequacy of BMPs implementation in the field and compliance with the municipal ordinances; and assist the Regional Board in ensuring that industrial activities subject to regulations are covered by the general industrial stormwater permit. Regional Board will also assist the municipalities in case of instances of egregious non-compliance with the municipal ordinances and state and federal laws and regulations.

Many owner/operators of industrial/commercial sites should be familiar by now with the legal requirements outlined in the municipal ordinances and the type of BMPs necessary to minimize the contribution of pollutants into stormwater runoff from their sites. The enhancements are also based on the results of the monitoring data showing that pollutants of concern that are typically discharged from sites of industrial and commercial activities cause or contribute to the exceedances of the water quality standards. The permit includes conditions that the Permittees:

- Continue to update the inventory of industrial/commercial sites under their jurisdiction;
- Perform routine inspections;
- Require minimum set of source control BMPs implementation as a baseline;
- Enforce against violators of the municipal ordinances requirements.

The permit also provides for an enhanced coordination between Municipal and RB stormwater industrial programs.

Costs Evaluation

These permit enhancements have a limited financial impact and represent only an incremental increase in costs. A number of municipalities are already performing inspections, many of them in a very efficient way by combining various regulatory aspects, e.g. industrial waste, stormwater, etc., into one consolidated inspection program. Therefore, for those municipalities the increase in costs may be fiscally minimal to neutral. For those municipalities that performed site visits only, the increase may be incrementally elevated but by sharing in the experience of the municipalities that use a consolidated inspection program where the stormwater inspections are an addition to an already existing inspection program, those costs can be minimized. The *Pollution Source Control Practices Manual 8* (Center for Watershed Protection, July 2004) estimates that non-regulatory site inspections (site visits) range in cost between \$30 to \$80 per facility. The regular site inspections range in cost between \$75 to \$175 per facility. For on site illicit discharge investigations where the threat to water quality is higher or the damage already occurred the costs range from \$200 to \$900 per facility, but the municipalities in many cases can recuperate those costs through an enforcement action allowed under municipal ordinances. In order to alleviate some of the added costs, a number of municipalities use a permitting approach for sites of industrial/commercial activity discharging stormwater runoff into the MS4. The cities collect a fee as a consolidated charge for permitting a facility for various municipal services such as pretreatment, stormwater, potable water, solid waste, etc., programs.

The *California Stormwater BMP Handbook - Industrial and Commercial* states that source control BMPs are preferred over treatment control BMPs because they are generally effective if implemented properly and are usually, but not always, less costly than treatment control BMPs. Typical source control nonstructural (operational) and structural BMPs include using alternative less toxic chemicals and covering an activity area that is a pollutant source. The BMP Handbook continues to state: "the axiom of "80% of the problem can be solved with 20% of the effort" probably is true for most industries. Low or modest cost BMPs, many of which may already be in place, will usually provide satisfactory protection." The BMP Handbook provides a list of the categories of structural and operational source control BMPs that should be considered:

E

D  
E  
N  
T  
A  
T  
I  
V  
E

- Installing berms or simple curbing to divert runoff water from around the activity area to reduce the amount of polluted stormwater leaving the area;
- Implementing overhead coverage: this includes structures that provide horizontal coverage of materials, chemicals, and pollutant sources from contact with stormwater and authorized non-stormwater discharges;
- Using secondary containment structures: this generally includes containment structures around storage tanks and other areas for the purpose of collecting any leaks or spills;
- Moving an outdoor operation indoors;
- Designating equipment wash areas;
- Good housekeeping;
- Preventive maintenance;
- Spill prevention and response;
- Material handling and storage;
- Material and practices substitution;
- Waste handling and recycling;
- Employee training;
- Routine inspections;
- Record keeping and internal reporting;
- Quality assurance

As early as the early 1990's, USEPA recognized that: "EPA believes the pollution prevention approach is the most environmentally sound and cost-effective way to control the discharge of pollutants in stormwater runoff from industrial facilities... The first class of management practices includes those that are low in cost, applicable to a broad class of industries and substances, and widely considered essential to a good pollution control program. Some examples of practices in this class are good housekeeping, employee training, and spill response and prevention procedures. The second class includes management practices that provide a second line of defense against the release of pollutants. This class addresses containment, mitigation, and cleanup... Experience with these practices and controls has shown that they can be used in

permits to reduce pollutants in storm water discharges in a cost-effective manner.” (58 Fed. Reg. 61162) A number of municipalities in the nation, such as Pierce County, Washington, under Ordinance No. 96-47 are already requiring the implementation of mandatory source control BMPs since the late 1990’s.

Although the operational source control measures are considered inexpensive, typically involving the costs of staff performing good housekeeping activities with the use of low cost materials and tools, for some of the structural source control BMPs some costs data is available. For example, in the *Pollution Source Control Practices Manual* the costs for storage protection devices range from \$3.50 to \$5.00 per square foot of concrete slab (6”), containment pallets from \$50 to \$350 based on the size and number of barrels to be stored, for storage buildings from \$6 to \$11 per square foot, and between \$25 to \$500 for tarps and canopies depending on the size of area to cover. Also, discounted spill containment kits, storm drain plugs, drip pans, tarps, range in cost from \$60 to \$250 per facility.

For the educational aspect of their program, it is estimated that a presentation to a business group ranges in cost between \$40 to \$60 per hour, while a business recognition program, such as Sacramento’s *Clean Water Business Partner Program* range in cost between \$40 to \$75 per facility. Municipalities can also employ a Stormwater School concept that requires owners/operators found in minor violation of the stormwater ordinances to participate in a mandatory stormwater quality protection seminar. Similar techniques used for the Pretreatment Program showed that participation by high-level management from non-compliant permittees in such courses demonstrated a higher rate of compliance after the participation. This technique can be used in lieu of a fine or issuance of a Notice of Violation for minor violations of the municipal code.

In some cases, the baseline source control measures alone may not be sufficient to assure the reduction of pollutants in stormwater runoff to levels that will guarantee compliance with the applicable standards. In those instances, the municipalities have the legal authority to require the mitigation of pollution through the implementation of additional treatment controls. This is of

E

E

elevated importance for areas of the MS4s that may discharge into receiving waters of increased environmental sensitivity or in need of special protection.

Conclusion

Because the ROWD submitted by the applicants does not include any proposed significant improvements and because the monitoring data submitted by the Permittees shows exceedances of water quality standards for a number of pollutants that can be released in stormwater runoff from industrial/commercial sites the proposed enhancements are appropriate and reasonable. The municipalities have performed an extensive effort to educate the industrial/commercial site owners/operators about the source control pollution prevention techniques for over a decade. They also familiarized the facility owners/operators with the requirements of the municipal ordinances as they pertain to the protection of the quality of stormwater runoff. The types of baseline source control measures required by the permit are proven very effective and inexpensive in most cases. Many of these measures should be part of the routine operations by now, such as good housekeeping, employee training, elimination of non-stormwater discharges, removal of illicit connections, etc. Since many of these techniques are already implemented, they should not represent a significant fiscal burden for compliance for the industrial/commercial facilities.

There is ample case law that demonstrates and supports Regional Board's authority to require the enhancements proposed in this permit. The additional requirements represent only an incremental fiscal burden for the Permittees, many of whom currently perform activities close to the level expected by the proposed permit. The permit also builds on the tools and activities prescribed in the previous permits in an iterative mode, focusing on implementation of better-tailored BMPs, inspection, enforcement activities and a better coordination with the Regional Board's activity for a more efficient use of limited resources.

The administrative record contains a substantial volume of technical and legal material that supports the findings of this permit. The significant amount of documentation material currently

available demonstrates that many effective techniques and methods are available, in many cases at low or moderate costs levels. One of the remaining challenges is to assure their full and unequivocal implementation at every industrial/commercial site that contributes or has the potential to contribute significant quantities of pollutants in the stormwater runoff discharges. [Briefly, the level to be achieved is the "Pharmacy Cleanliness" level due to aggressive source control and pollution prevention BMPs implementation, inspection and enforcement.]

**E. Planning and Land Development Program**

Post construction land development control requirements on new development and redevelopment offer the most cost-effective strategy to reduce pollutant loads to surface waters. Retrofit of existing development will be expensive and may be considered on a targeted basis. Studies on the economic impacts of watershed protection indicate that storm water quality

management has a positive or at least neutral economic effect while greatly improving the quality of surface waters.<sup>1</sup>

The USEPA storm water regulations at 40 CFR 122.26 require that pollutants in storm water be reduced to MEP. The USEPA's definition is intentionally broad to provide maximum flexibility in MS4 permitting and to give municipalities the opportunity to optimize pollutant reductions on a program-to-program basis.<sup>2</sup> The definition of MEP has generally been applied to mean implementation of economically achievable management practices. Because storm water runoff rates can vary from storm to storm, the statistical probabilities of rainfall or runoff events become economically significant and are central to the control of pollutants through cost

<sup>1</sup> *The Economics of Watershed Protection*, T. Schueler (1999), Center for Watershed Protection, Endicott, MD. The article summarizes nationwide studies to support the statement that watershed planning and storm water management provides positive economic benefits.

<sup>2</sup> *Storm Water Phase II Final Rule – Pre-Federal Register Version*, p 87 (USEPA 1999). See USEPA's discussion in response to challenges that the definition is sufficiently vague to be deemed adequate notice for purposes of compliance with the regulation.

effective BMPs. Further, it is recommended that storm water BMPs be designed to manage both flows and water quality for best performance.<sup>1</sup> It is equally important that treatment control BMPs once implemented be routinely maintained.

Financing the MS4 program offers a considerable challenge for municipalities. A proven successful financing mechanism is the establishment of a storm water utility.<sup>2</sup> Utility fees, which are assessed on the property owner based on some estimate of storm water runoff generated for the site, are a predictable and dedicated source of funds. Utility fees can also provide a mechanism to provide incentives to commercial and industrial property owners to reduce impervious surface areas. Such incentives offer flexibility to property owners to choose the better economic option – paying more fees or making improvements to reduce runoff from the site.

Review of Design Standards

The American Society of Civil Engineers (ASCE) and the Water Environment Federation (WEF) have recommended a numerical BMP design standard for storm water that is derived from a mathematical equation to maximize treatment of runoff volume for water quality based on rainfall/ runoff statistics and which is economically sound.<sup>1</sup> The maximized treatment volume is cut-off at the point of diminishing returns for rainfall/ runoff frequency. On the basis of this equation the maximized runoff volume for eighty-five percent treatment of annual runoff volumes in California can range from 0.08 to 0.86 inches depending on the imperviousness of the watershed area and the mean rainfall.<sup>2</sup>

Other methods of establishing numerical BMP design standards include: (i) Percent treatment of the annual runoff; (ii) Full treatment of runoff from rainfall event equal to or less than a predetermined size; and (iii) Percent reduction in runoff based on a rainfall event of standard size.<sup>1</sup> These numerical design standards have been applied to Development Planning in Puget Sound, WA; Alexandria, VA; Montgomery County, MD; Denver, CO; Orlando, FL; Portland, OR; and Austin, TX.

Some States have established numerical standards for sizing storm water post-construction BMPs for new development and significant redevelopment. The State of Maryland has established storm water numerical criteria for water quality of 0.9 to 1 inch, and BMP design standards in a unified approach combining water quality, stream erosion potential reduction,

<sup>2</sup> *Florida Development Manual: A Guide to Sound Land and Water Management* (Florida Department of Environmental Protection 19xx). The manual describes structural and non-structural construction and post construction BMPs design criteria.

<sup>3</sup> *Storm Water Management in Washington State Volumes 1 – 5*. (Washington Department of Ecology 2001). The volumes 1,3 and 5 are most relevant to new development standards and cover Hydrologic and Flow Control Designs, Minimum Technical Requirements and Treatment BMPs. The volumes were adopted as statewide standards in late 2001.

90<sup>th</sup> percentile 24-hour rainfall event (used by the State of Maryland) and the six month 24 hour rainfall event (used by the State of Washington).

On a national level, the USEPA is planning to standardize minimum BMP design and performance criteria for post-construction BMPs, and will likely build from the experience of effective state and local programs to establish national criteria.<sup>1</sup> The USEPA, based on the NURP, supports the first half-inch of rainfall as generating first flush runoff.<sup>2</sup> First flush runoff is associated with the highest pollutant concentrations, and not pollutant load. The USEPA considers the first flush treatment method, the rainfall volume method, and the runoff capture volume method as common approaches for sizing of water quality BMPs.

On April 22, 1999, the Los Angeles Regional Board approved a List of BMPs for MS4 Permittees to select from and required implementation of the most effective BMPs in their Development Planning and Development Construction programs.<sup>1</sup> The State Board issued a precedential decision<sup>2</sup> on the matter in Order WQ 2000-11, largely sustaining the new development requirements as approved by the LA Regional Board. The State Water Board articulated its support for regional solutions and the mitigation banking.

The post construction requirements for Ventura County were first adopted as Stormwater Quality Urban Impact Mitigation Plans in Board Order No. 00-108, in 2000. It established new development and significant redevelopment conditions for residential, commercial, and industrial new development and redevelopment projects in the following categories:

The SQUIMP included numerical design criteria for structural and treatment control BMPs. The criteria included were:

- a) the 85<sup>th</sup> percentile 24-hour runoff event, determined as the maximized capture storm water volume for the area from the formula recommended by the WEF and ASCE study<sup>1</sup>; or
- b) the annual runoff volume, based on unit basin storage water quality volume, to achieve 80 percent or more volume treatment by the method recommended in the BMP Handbook;<sup>2</sup>
- c) the volume of runoff produced from each and every storm event up to and including a historical-record based reference 24-hour rainfall criterion for "treatment" that achieves

approximately the same reduction in pollutant loads achieved by the 85<sup>th</sup> percentile 24-hour runoff event; and/or

- d) the flow of runoff produced from a rain event equal to at least 0.2 inches per hour intensity; or
- e) 10% of the 50-year design flow rate,
- f) the flow of runoff produced from a rain event equal to at least two times the 85<sup>th</sup> percentile hourly rainfall intensity for Ventura County; or
- g) the flow of runoff produced from a rain event that will result in treatment of the same portion of runoff as treated using volumetric standards above.

The present Order integrates and advances the post-construction requirements in the Land Development and Planning Section as follows ----

#### **LOW IMPACT DEVELOPMENT (LID)**

The Ventura MS4 Order integrates and advances the post-construction requirements in the Land Development and Planning Section by incorporation numeric metrics for Low Impact Development (LID). This Order promotes land development and redevelopment strategies that consider water quality and water management benefits associated with smart growth techniques. Such measures may include hydromodification mitigation requirements, minimization of impervious surfaces, integrated water resources planning, and low impact development guidelines. (Reference: *Protecting Water Resources with Smart Growth*, EPA 231-R-04-002, U.S. EPA 2004; *Using Smart Growth Techniques as Storm Water Best Management Practices*, EPA 231-B-05-002, U.S. EPA 2005; *Parking Spaces/Community Places: Finding the Balance through Smart Growth Solutions*, EPA 231-K-06-001, U.S. EPA 2006; *Protecting Water Resources with Higher-Density Development*, EPA 231-R-06-001, U.S. EPA 2006.)

LID is an approach to land development (or re-development) that works with nature to manage stormwater as close to its source as possible. LID employs principles such as preserving and recreating natural landscape features, minimizing effective imperviousness to create functional and appealing site drainage that treat stormwater as a resource rather than a waste product. LID practices that have been used to adhere to these principles include bioretention facilities, rain gardens, vegetated rooftops, rain barrels, and permeable pavements.

LID integrates small-scale measures scattered throughout the development site. Constructed green spaces, native landscaping, and a variety of innovative bioretention and infiltration techniques capture and manage stormwater on-site. LID reduces peak runoff by allowing rainwater to soak into the ground, evaporate into the air, or collect in storage receptacles for irrigation and other beneficial uses. In areas with slow drainage or infiltration, LID captures the first flush before excess stormwater is diverted into traditional storm conveyance systems. The result is development that more closely maintains pre-development hydrology. Furthermore, LID has been shown to be cost effective, and in some cases, cheaper than using traditional stormwater management techniques.

**Low Impact Development Principles and Practices** [DD2] (Natural Resources Defense Council, Stormwater Strategies Community Responses to Runoff Pollution, Chapter 12 Low Impact Development)

LID is grounded in a core set of principles based on the paradigm that stormwater management should not be seen as stormwater disposal and that numerous opportunities exist within the developed landscape to control stormwater runoff close to the source. Underlying these principles is an understanding of natural systems and a commitment to work within their limits whenever possible. Doing so creates an opportunity for development to occur with low environmental impact. The principles are:

- integrate stormwater management early in site planning activities
- use natural hydrologic functions as the integrating framework

- focus on prevention rather than mitigation
- emphasize simple, nonstructural, low-tech, and low cost methods
- manage as close to the source as possible
- distribute small-scale practices throughout the landscape
- rely on natural features and processes
- create a multifunctional landscape

LID uses a systems approach that emulates natural landscape functions. A near limitless universe of runoff control strategies, combined with common sense and good housekeeping practices, are the essence of a LID strategy.

These basic strategies, also known as integrated management practices, rely on the earth's natural cycles, predominantly the water cycle, to reduce land development impacts on hydrology, water quality, and ecology. Integrated management practices combine a variety of physical, chemical, and biological processes to capture runoff and remove pollutants at the lot level.

Several strategies focus on disconnecting roofs and paved areas from traditional drainage infrastructure and conveying runoff instead to bioretention areas, swales, and vegetated open spaces. LID also strives to prevent the generation of runoff by reducing the impervious foot print of a site, thereby reducing the amount of water that needs treatment. The end hydrological results are a reduction in runoff volume, an increased time of concentration, reduced peak flow and duration, and improved water quality.

LID includes integrating land and infrastructure management. Activities such as street sweeping, toxic-free and low-impact landscaping, frequent cleaning of catch basins, sediment control, and downspout disconnection all reduce runoff contamination. LID works equally well in new development and redevelopment projects and is easily customized to complement local growth management, community revitalization, and watershed protection goals.

**Effective Impervious Area Principles** (California Stormwater Quality Association (CASQA), the Stormwater Monitoring Coalition (SMC), and the University of Southern California Sea Grant (USC Sea Grant) *Managing Runoff to Protect Natural Streams: The Latest Developments on Investigation and Management of Hydromodification in California*)

The Tentative Ventura MS4 Order implements the LID provision by requiring new and redevelopment projects to disconnect Effective Impervious Area (EIA) by incorporating LID strategies into the site design. The increase in impervious cover has been shown to negatively impact water quality and increase runoff flow which can damage downstream habitat. Recent studies indicate that California's intermittent and ephemeral streams are more susceptible to the effects of hydromodification than streams from other parts of the United States (US). Physical degradation of stream channels in the central and eastern US can initially be detected when watershed impervious cover approaches 10%, although biological effects (which may be more difficult to detect) may occur at lower levels. In contrast, initial response of streams in the semi-arid portions of California appears to occur between 3% and 5% impervious cover.

**LID Techniques** [DD3] (U.S.EPA, Low Impact Development and Other Green Design Strategies)

LID can be simple and effective. Instead of relying solely on complex and costly collection, conveyance, storage and treatment systems, LID employs a range of economical devices that control runoff at the source.

- Bioretention cells, commonly known as rain gardens, are relatively small-scale, landscaped depressions containing plants and a soil mixture that absorbs and filters runoff.
- Cisterns and rain barrels harvest and store rainwater collected from roofs. By storing and diverting runoff, these devices help reduce the flooding and erosion caused by stormwater runoff. And because they contain no salts or sediment, they can provide

"soft" chemical-free water for garden or lawn irrigation, reducing water bills and conserving municipal water supplies.

- Green roofs are roof-tops partially or completely covered with plants. Used for decades in Europe, green roofs help mitigate the urban "heat island" effect and reduce peak stormwater flows. The vegetated cover also protects and insulates the roof, extending its life and reducing energy costs.
- Permeable and porous pavements reduce stormwater runoff by allowing water to soak through the paved surface into the ground beneath. Permeable pavement encompasses a variety of mediums, from porous concrete and asphalt, to plastic grid systems and interlocking paving bricks suitable for driveways and pedestrian malls. Permeable pavement helps reduce runoff volumes at a considerably smaller cost than traditional storm drain systems.
- Grass swales are broad, open channels sown with erosion resistant and flood tolerant grasses. Used alongside roadways for years primarily as stormwater conveyances, swales can slow stormwater runoff, filter it, and allow it to soak into the ground. Swales and other biofiltration devices like grass filter-strips improve water quality and reduce in-stream erosion by slowing the velocity of stormwater runoff before it enters the stream. They also cost less to install than curbs, storm drain inlets, and piping systems.

**LID Cost Analysis** (U.S. EPA, Reducing Stormwater Costs through Low Impact Development (LID) Strategies and Practices Fact Sheet<sup>(DD4)</sup>)

Seventeen case studies were reviewed and evaluated to compare the projected or known costs of LID practices with those of conventional development approaches. It concludes that applying LID techniques can reduce project costs and improve environmental performance. In most cases, LID practices were shown to be both fiscally and environmentally beneficial communities. In a few cases, LID project costs were higher than those for conventional stormwater management projects. However, in the vast majority of cases, significant savings were realized due to reduced costs for site grading and preparation, stormwater infrastructure, site paving, and landscaping. Total capital cost savings ranged from 15 to 80 percent when

LID methods were used, with a few exceptions in which LID project costs were higher than conventional stormwater management costs.

### Reference Numeric Standards for LID

Numeric storm water standards are available from jurisdictions nationwide. Specific citations are included below [DDs].

#### Pennsylvania:

- Pennsylvania Stormwater Best Management Practices Manual: *“Capture at least the first two inches of rainfall from all impervious surfaces and retain onsite (through reuse, evaporation, transpiration, and/or infiltration) at least the first one inch of runoff” (Pennsylvania Stormwater Best Management Practices Manual).*

As noted in the Pennsylvania Stormwater Best Management Practices Manual (PSBMPPM), Pennsylvania laws and regulation do not directly manage storm water at the state level, although some state level management occurs through the Stormwater Management Act and the NPDES permitting program. However, the PSBMPPM are required in the draft 2009 Pennsylvania Model Stormwater Management Ordinance (SMO) which then required in the draft March 2009 NPDES Stormwater Discharges from MS4s General Permit.

- Control Guideline 2 or the Simplified Method
  - The first 2” of runoff from NEW impervious surfaces be captured.
  - At least the first 1” of runoff from NEW impervious surfaces be permanently removed from the runoff flow through reuse, evaporation, transpiration and/or infiltration.

- Where possible, all permanently removed runoff should infiltrated; however, it is suggested that in all cases at least 0.5" should be infiltrated.

**Anacostia, Washington, D.C.**

Final Environmental Standards June 2007: For all projects developed on

- AWC land or financed by AWC must implement enhanced stormwater management as follows *"Retain onsite the first one inch of rainfall and provide water quality treatment for rainfall up to the two-year storm volume"*

**West Virginia**

- Draft permit under consideration in West Virginia: *"Retain onsite the first one inch of rainfall from a 24-hour storm preceded by 48 hours of no measurable precipitation"*

**Georgia**

- Georgia Stormwater Management Manual: *"Treat the runoff from 85% of the storms that occur in an average year (i.e., provide treatment for the runoff that results from a rainfall depth of 1.2 inches)"*

**Central Coast, California (RWQCB)**

- Letter to small MS4s: *"Limit effective impervious area ("EIA") at development projects to no more than 5% of total project area (interim criteria); establish an EIA limitation between 3% and 10% in local stormwater management plans (permanent criteria)"*

## F. Development Construction Program

### Introduction

Soil disturbing activities during construction and demolition exacerbate sediment losses. Sediment is a primary pollutant impacting beneficial uses of watercourses. Sediments, and other construction activity pollutants must be properly controlled to reduce or eliminate adverse impacts.

#### 1. Enhanced BMPs

- (a) Each permittee shall implement a program to control storm water discharges from construction activity at all construction sites within its jurisdiction.
- (b) Each Permittee shall implement, or require implementation of, enhanced practices to address the threat to water quality posed by all construction sites on hillsides as defined in this Order and construction sites that directly discharge to a waterbody listed on the CWA § 303 (d) list for siltation or sediment, or that occur within or directly adjacent to an Environmentally Sensitive Area (ESAs). Construction sites located on hillsides, adjacent to CWA 303(d) listed waters for siltation or sediment, and directly adjacent to ESAs are termed "High risk sites."
  - (A) On hillsides with slopes 20% or steeper prior to land disturbance (If hillside development is not defined by a zoning ordinance, then the prohibition will apply to steep or long continuous slopes, or areas with silty soils, fine sands, or soils lacking vegetative cover.).
  - (B) Directly discharging to a waterbody listed on the CWA § 303 (d) list for siltation or sediment; or
  - (C) Within or adjacent to an environmentally sensitive area (ESAs)

(c) Depending on the project area, the developer shall implement the Erosion and Sediment control BMPs listed in the following Tables 6, 7, and 8.

2. Construction Sites Less than an Acre

This permit intends that each permittee shall require the implementation of an effective combination of the following BMPs at all construction sites (see Table 6- BMPs at Construction sites less than 1 acre) to prevent erosion and sediment loss, and the discharge of construction wastes. The BMPs are from the California BMP Handbook, Construction, January 2003 and the Caltrans Stormwater Quality Handbooks, Construction Site Best Management Practices (BMPs) Manual, March

2003, and addenda. Where the Erosivity Factor (R) for the construction project is 50 or greater, erosion controls (erosion avoidance) are the preferred BMPs.<sup>1</sup>

- (1) Local Storm Water Pollution Prevention Plan (Local SWPPP),
  - (A) Each permittee shall require the preparation and submittal of a Local SWPPP, for the permittee's review and written approval prior to issuance of a grading or construction permit for construction projects. If the Local SWPPP is revised, the permittee shall review and approve those revisions. The permittees' approval signature shall be contained within the first pages of the Local SWPPP (with sufficient room for approval of revisions.)
    - (i) The permittee shall not approve any Local SWPPP unless it contains appropriate site-specific construction site BMPs, specific locations, and maintenance schedules.
    - (ii) The Local SWPPP must include the rationale used for selecting or rejecting BMPs. The project architect, or engineer of record, or authorized qualified designee, must sign a statement on the Local SWPPP to the effect:
      - (I) ***"As the architect/ engineer of record, I have selected appropriate BMPs to effectively minimize the negative impacts of this project's construction activities on storm water quality. The project owner and contractor are aware that the selected BMPs must be installed, monitored, and maintained to ensure their effectiveness. The BMPs not selected for implementation are redundant or deemed not applicable to the proposed construction activity."***
- (2) Certification Statement
  - (A) Each permittee shall require that each landowner or the landowner's agent sign a statement on the Local SWPPP to the effect:
    - (i) *"I certify that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and*

*evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, to the best of my knowledge and belief, the information submitted is true, accurate, and complete. I am aware that submitting false and/ or inaccurate information, failing to update the Local SWPPP to reflect current conditions, or failing to properly and/ or adequately implement the Local SWPPP may result in revocation of grading and/ or other permits or other sanctions provided by law."*

- (B) The Local SWPPP certification shall be signed by the landowner as follows:
  - (i) Corporation - by a responsible corporate officer which means the following:
    - (I) President, secretary, treasurer, or vice president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation; or
    - (II) Manager of the construction activity if authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures;
  - (ii) Partnership or sole proprietorship - by a general partner or the proprietor; or
  - (iii) Municipality or other public agency - by an elected official, a ranking management official (e.g., County/ City Administrative Officer, City Manager, Director of Public Works, or City Engineer).

6. Roadway Paving or Repaving Operations (For Private or Public Projects)

- (a) Each permittee shall require that for any project that includes roadbed or street paving, repaving, patching, digouts, or resurfacing roadbed surfaces, that the following BMPs be implemented for each project.
  - (1) Restrict paving and repaving activity to exclude periods of rainfall or predicted rainfall unless required by emergency conditions
  - (2) Install sand bags or gravel bags and filter fabric at all susceptible storm drain inlets and at manholes to prevent spills of paving products and tack coat
  - (3) Prevent the discharge of release agents including soybean oil, other oils, or diesel to the storm water drainage system or watercourses
  - (4) Minimize non storm water runoff from water use for the roller and for evaporative cooling of the asphalt
  - (5) Clean equipment over absorbent pads, drip pans, plastic sheeting or other material to capture all spillage and dispose properly
  - (6) Collect liquid waste in a container, with a secure lid, for transport to a maintenance facility to be reused, recycled or disposed off properly
  - (7) Collect solid waste by vacuuming or sweeping and securing in an appropriate container for transport to a maintenance facility to be reused, recycled or disposed of properly
  - (8) Cover the "cold-mix" asphalt (i.e., pre-mixed aggregate and asphalt binder) with protective sheeting during a rainstorm
  - (9) Cover loads with tarp before haul-off to a storage site, and do not overload trucks
  - (10) Minimize airborne dust by using water spray during grinding
  - (11) Avoid stockpiling soil, sand, sediment, asphalt material and asphalt grindings materials or rubble in or near storm water drainage system or watercourses
  - (12) Protect stockpiles with a cover or sediment barriers during a rain

- (a) Each permittee shall use an site system to track grading permits, encroachment permits, demolition permits, building permits, or construction permits (and any other municipal authorization to move soil and/ or construct or destruct that involves land disturbance) issued by each permittee. To satisfy this requirement, the use of a database or GIS system is encouraged.

8. Inspections

- (a) Each permittee shall inspect all construction sites for the implementation of storm water quality controls a minimum of once during the wet season. Concurrently, each permittee shall ensure that:
  - (1) The Local SWPPP is reviewed for compliance with local codes, ordinances, and permits.
  - (2) A follow-up inspection takes place within two weeks for inspected sites that have not adequately implemented their Local SWPPP.
- (b) Each permittee shall take additional enforcement actions to achieve compliance as specified in municipal codes, if compliance with municipal codes, ordinances, or permits has not been attained.
- (c) Each permittee can refer sites to the Regional Water Board for further joint enforcement actions for violation of municipal storm water ordinances and the Construction Activities Storm Water General Permit (CASGP), or Small Linear Underground/ Overhead Construction Projects General Permit (small LUPs), after conducting a minimum of 2 site inspections and issuing a minimum of 2 written notices to the operator regarding the violation (copied to the Regional Water Board). In making such referrals, permittees shall include, at a minimum, the following documentation:
  - (1) Name of the site
  - (2) WDID number
  - (3) Site developer
  - (4) Site owner

- (5) Records of communication with the site operator regarding the violation(s), which shall include at least an inspection report
- (6) Written notice of the violation copied to the Regional Water
- (d) Prior to approving and/ or signing off for occupancy and issuing the Certificate of Occupancy for all construction projects subject to post-construction controls, each permittee shall inspect the constructed site design, source control and treatment control BMPs to verify that they have been constructed in compliance with all specifications, plans, permits, ordinances, and this Order. The initial/ acceptance BMP verification inspection does not constitute a maintenance and operation inspection, as required in the preceding subpart E.IV.2(c).

9. State Conformity Requirements

- (a) Each permittee shall ensure that no grading permit, encroachment permit, demolition permit, building permit, electrical permit, or construction permit (or any other municipal authorization to move soil and/ or construct or destruct

that involves land disturbance) is issued for any project requiring coverage under the CASGP or Small LUP General Permit<sup>1</sup> unless:

- (1) Proof of coverage under a State NPDES permit is demonstrated (a copy of a letter from the State Water Board showing a valid Waste Discharger Identification Number (WDID) for that site).
- (2) Demonstration or Certification that a SWPPP has been prepared by the project developer.
- (3) Proof of an updated NOI(s) and a copy of the modified SWPPP(s) at any time a transfer of ownership takes place for the entire development or portions of the common plan of development where construction activities are still on-going.

10. Interagency Coordination

(a) Referral of Violations:

A permittee may refer a violator of the municipal storm water ordinance and CWC § 13260 to the Regional Water Board provided that the permittee has made a good faith effort at progressive enforcement consistent with the preceding subpart F.8(c). At a minimum, the permittee's good faith effort shall be documented with:

- (1) A minimum of 2 follow-up inspection reports (inspections completed within 3 months).
- (2) A minimum of two warning letters or NOVs.

(b) Referral of Non-filers under the CASGP or the Small LUP General Permit:

Each permittee shall refer non-filers (i.e., those projects which cannot demonstrate that they have a WDID number) under the CASGP or Small LUP General Permit, to the Regional Water Board, no later than 15 days after making a

determination of failure to file. In making such referrals, permittees shall include, at a minimum, the following documentation:

- (1) Project location address
  - (2) Project description
  - (3) Developer or owners name with complete mailing address
  - (4) Project size
  - (5) Records of communication with the developer or owner regarding filing requirements
- (c) Investigation of Complaints Regarding Facilities – Transmitted by the Regional Water Board Staff:

- (1) Each permittee shall initiate, within one business day,<sup>1</sup> an initial investigation of complaint(s) (other than non-storm water discharges) on the construction site(s) within its jurisdiction.
  - (A) The initial investigation shall include, at a minimum, an inspection on the facility and its perimeter to confirm the complaint and to determine if the site operator is effectively complying with the municipal storm water/ urban runoff ordinances, and to oversee corrective action.
- (d) Support of Regional Water Board Enforcement Actions – As directed by the Regional Water Board Executive Officer:
  - (1) Each permittee shall support Regional Water Board enforcement actions by:
    - (A) Assisting in identification of current owners, operators, and lessees of properties and sites.

---

<sup>1</sup> Permittees may comply with the Permit by taking initial steps (such as logging, prioritizing, and tasking) to “initiate” the investigation within that one business day. However, the Regional Water Board would expect that the initial investigation, including a site visit, to occur within four business days.

- (B) Providing staff, when available, for joint inspections with Regional Water Board inspectors.
- (C) Appearing to testify as witnesses in Regional Water Board enforcement hearings.

Providing copies of inspection reports and other progressive enforcement documentation.

**G. Public Agency Activities Program**

- I. Each permittee shall implement a Public Agency Activities Program to minimize storm water pollution impacts from public agency activities. Public Agency requirements consist of:
  - i. Public Construction Activities Management.
  - ii. Vehicle Maintenance/ Material Storage Facilities/ Corporation Yards Management/ Municipal Operations.
  - iii. Vehicle and Equipment Wash Areas
  - iv. Landscape and Recreational Facilities Management
  - v. Storm Drain Operation and Management
  - vi. Streets and Roads Maintenance
  - vii. Infrastructure Maintenance - Long-term
  - viii. Public Industrial Activities Management
  - ix. Emergency Procedures
  - x. Employee Training
- 1. Public Construction Activities Management
  - (a) Each permittee shall implement and comply with the Planning and Land Development Program requirements in part 5.E. of this Order at permittee owned or operated public construction projects for project types identified in part 5.E of this Order.

- (b) Each permittee shall implement and comply with the Planning and Land Development Program requirements in part 5.E. for streets, roads, and highways construction of 10,000 square feet or more of surface area
  - (c) Each permittee shall implement and comply with the appropriate Development Construction Program requirements in part 5.F. of this Order at permittee owned or operated construction projects.
  - (d) For public projects that disturb less than one acre of soil the permittees shall require the development and implementation of a Storm Water Pollution Control Plan. The SWPCP shall include BMPs as identified in Table 5.
2. Vehicle Maintenance/ Material Storage Facilities/ Corporation Yards Management/ Long Term Maintenance Programs
- (a) Each permittee shall implement the following BMPs<sup>1</sup> at all permittee owned, leased facilities and job sites including but not limited to vehicle/ equipment

---

<sup>1</sup> These BMPs are identified in Appendix B of the *Caltrans Storm Water Quality Handbook Maintenance Staff Guide, May 2003*, and its addenda.

3. Vehicle and Equipment Wash Areas
  - (a) Each permittee shall eliminate discharges of wash waters from vehicle and equipment washing no later than (365 days after Order adoption date) by implementing any of the following measures at existing facilities with vehicle or equipment wash areas:
    - (1) Self-contain, and haul off for disposal
    - (2) Equip with a clarifier
    - (3) Equip with an alternative pre-treatment device; or
    - (4) Plumb to the sanitary sewer
  - (b) Each permittee shall ensure that any municipal facilities constructed, redeveloped, or replaced has all vehicle and equipment wash areas plumbed to the sanitary sewer or be self contained and all wastewater/ washwater hauled for legal disposal.

4. Landscape, Park, and Recreational Facilities Management

(a) Integrated Pest Management (IPM)

IPM is an ecosystem-based strategy that focuses on long-term prevention of pests or their damage through a combination of techniques such as biological control, habitat manipulation, modification of cultural practices, and use of resistant varieties. Each permittee shall implement a jurisdiction-wide IPM program and includes the following:

- (1) Pesticides are used only if, after monitoring indicates they are needed according to established guidelines.
- (2) Treatments are made with the goal of removing only the target organism.
- (3) Pest controls are selected and applied in a manner that minimizes risks to human health, beneficial, non-target organisms, and the environment.
- (4) Its use of pesticides, including Organo-phosphates and Pyrethroids do not threaten water quality.
- (5) Partner with other agencies and organizations to ensure that pesticide use within their jurisdiction does not threaten water quality.
- (6) Adopt and verifiably implement policies, procedures, and/ or ordinances requiring the minimization of pesticide use and encouraging the use of IPM techniques (including beneficial insects) in the permittees' overall operations and on municipal property.
- (7) Policies, procedures, and ordinances shall include commitments and timelines to reduce the use of pesticides that cause impairment of surface waters by implementing the following procedures:
  - (A) Quantify pesticide use by its staff and hired contractors.
  - (B) Prepare and annually update an inventory of pesticides used by all internal departments, divisions, and other operational units.
  - (C) Demonstrate reductions in pesticide use.

- (b) Each permittee shall implement the following requirements no later than (180 days after Order adoption date):

- (1) Use a standardized protocol for the routine and non-routine application of pesticides (including pre-emergents), and fertilizers.
  - (2) Comply with the provisions and the monitoring requirements for application of aquatic pesticides to surface waters (WQ Order No. 2004-0008-DWQ).
  - (3) Ensure no application of pesticides or fertilizers are applied to an area immediately prior to, during, or immediately after a rain event, or when water is flowing off the area.
  - (4) Ensure that no banned or unregistered pesticides are stored or applied.
  - (5) Ensure that all staff applying pesticides are certified in the appropriate category by the California Department of Pesticide Regulation, or are under the direct supervision of a pesticide applicator certified in the appropriate category.
  - (6) Implement procedures to encourage the retention and planting of native vegetation to reduce water, pesticide and fertilizer needs; and
  - (7) Store pesticides and fertilizers indoors or under cover on paved surfaces or use secondary containment.
    - (A) Reduce the use, storage, and handling of hazardous materials to reduce the potential for spills.
    - (B) Regularly inspect storage areas.
5. Storm Drain Operation and Management
- (a) Catch Basin Cleaning
    - (1) Each Permittee shall designate catch basin inlets within its jurisdiction as one of the following:
      - Priority A: Catch basins that are designated as consistently generating the highest volumes of trash.
      - Priority B: Catch basins that are designated as consistently generating moderate volumes of trash.
      - Priority C: Catch basins that are designated as generating low volumes of trash.

I  
S  
E  
D  
T  
E  
N  
T  
A  
T  
I  
V  
E

Within one year of Order adoption, Permittees shall submit a map or list of Catch Basins with their GPS coordinates and their designations. The map or list shall contain the rationale or data to support designations.

- (2) Each Permittee shall inspect catch basins according to the following schedule:

Priority A: A minimum of 3 times during the wet season and once during the dry season every year.

Priority B: A minimum of once during the wet season and once during the dry season every year.

Priority C: A minimum of once per year.

Catch basins shall be cleaned as necessary on the basis of inspections.

Permittees shall maintain inspection records for Regional Board review.

- (3) In addition to the preceding schedule, Permittees shall ensure that any catch basin that is determined to be at least 25% full of trash shall be cleaned out.

(b) Trash Management at Public Events

- (1) Each Permittee shall require for any event in the public right of way or wherever it is foreseeable that substantial quantities of trash and litter may be generated, the following measures:

(A) Proper management of trash and litter generated; and

(B) Arrangement for temporary screens to be placed on catch basins; or

(C) Provide clean out of catch basins, trash receptacles, and grounds in the event area within 24 hours subsequent to the event.

(c) Trash Receptacles

- (1) Each Permittee shall install trash receptacles, or equivalent trash capturing devices in areas subject to high trash generation within its jurisdiction no later than (one year after Order adoption date).

- (2) Each Permittee shall ensure that all trash receptacles are cleaned out and maintained as necessary to prevent trash overflow.

(d) Catch Basin Labels

- (1) Each Permittee shall inspect the legibility of the catch basin stencil or label nearest each catch basin and inlet before the rainy season begins.
- (2) Each Permittee shall record and re-stencil or re-label within 15 days of inspection, catch basins with illegible stencils.
- (e) Additional Trash Management Practices
  - (1) Each Permittee shall install trash excluders, or equivalent devices on or in catch basins or outfalls to prevent the discharge of trash to the storm drain system or receiving water no later than two years after Order adoption date in areas defined as Priority A (Provision 1a(2)) except in sites where the application of such BMP(s) alone will cause flooding. Lack of maintenance that causes flooding is not an acceptable exception to the requirement to install BMPs. Alternatively the Permittee may implement alternative or enhanced BMPs beyond the provisions of this permit (such as but not limited to increased street sweeping, adding trash cans near trash generation sites, prompt enforcement of trash accumulation, increased trash collection on public property, increased litter prevention messages or trash nets within the MS4) that provide substantially equivalent removal of trash. Permittees shall demonstrate that BMPs, which substituted for trash excluders provide equivalent trash removal performance as excluders. When outfall trash capture is provided, revision of the schedule for inspection and cleanout of catch basins in task (a) may be proposed by the Permittee for approval by the Executive Officer.
- (f) Storm Drain Maintenance
  - (1) Each Permittee shall implement a program for Storm Drain Maintenance no later than (180 days after Order adoption date) that includes the following:
    - (A) Visual monitoring of Permittee-owned open channels and other drainage structures for debris at least annually.
    - (B) Remove trash and debris from open channel storm drains a minimum of once per year before the storm season.

- (C) Eliminate the discharge of contaminants during MS4 maintenance and clean outs.
- (D) Quantify the amount of materials removed using techniques appropriate for quantifying solid waste and ensure the materials are properly disposed of.
- (g) Spill Response Plan
  - (1) Each permittee shall implement a response plan for spills to the MS4 within their respective jurisdiction. The response Plan shall clearly identify agencies responsible and telephone numbers and e-mail address for contact and shall contain at a minimum the following:
    - (A) Investigation of all complaints received within 24 hours of the incident report.
    - (B) Response within 2 hours to spills for containment upon notification.
    - (C) Notification to appropriate public health agencies and the Office of Emergency Services (OES).
- (h) Permittee Owned Treatment Control BMPs
  - (1) Each permittee shall implement an inspection and maintenance program for all permittee owned treatment control BMPs, including post-construction treatment control BMPs.
  - (2) Each permittee shall ensure proper operation of all treatment control BMPs and maintain them as necessary for proper operation, including all post-construction treatment control BMPs.
  - (3) Any residual water within a treatment control BMP when being maintained shall be:
    - (A) Hauled away and legally disposed of;
    - (B) Discharged to the sanitary sewer system (with permits or authorization); or
    - (C) Treated or filtered to remove bacteria, sediments, nutrients, and meet the limitations set in Table 10 (Discharge Limitations for Dewatering Treatment BMPs) prior to discharge to the MS4.

Oil and Grease	mg/L	10

6. Streets and Roads

(a) Maintenance

- (1) Each permittee shall perform street sweeping of curbed streets in commercial areas and areas subject to high trash generation to control trash and debris at least two times per month.

(b) Road Construction and Reconstruction

- (1) Each permittee shall implement the following BMPs for road reconstruction:

---

<sup>1</sup> Technology based effluent limits.

- (A) Drain Inlet protection from sediments.
- (B) Dewatering of below grade construction areas.
- (C) Secondary containment for cold mix.
- (D) Sheeting underneath cold mix (during storage) to prevent discharge of spray release, and
- (E) Sheeting to cover cold mix (during storage).
- (F) If street material is to be concrete, then provide a vehicle wash off area that is isolated from the MS4.

7. Emergency Procedures

- (a) Each permittee may conduct repairs of essential public service systems and infrastructure in emergency situations with a self-waiver of the provisions of this Order.
  - (1) Where the self-waiver has been invoked, the permittee shall submit to the Regional Water Board Executive Officer a statement of the occurrence of the emergency, an explanation of the circumstances, and the measures that were implement to reduce the threat to water quality, no later than 30 business days after the situation of emergency has passed.
  - (2) Minor repairs of essential public service systems and infrastructure in emergency situations (can be completed in less than one day) are not subject to the notification provisions. Appropriate BMPs to reduce the threat to water quality shall be implemented.

8. Municipal Employee and Municipal Contractor Training

- (a) Each permittee shall, no later than (12 months after Order adoption date and annually thereafter before June 30), train all of their employees and contractors in targeted positions (whose interactions, jobs, and activities affect storm water quality) on the requirements of the overall storm water management program to:
  - (1) Promote a clear understanding of the potential for activities to pollute storm water.

- (2) Identify opportunities to require, implement, and maintain appropriate BMPs in their line of work.
- (b) Each permittee shall, no later than (12 months after Order adoption date and annually thereafter before June 30), train all of their employees and contractors who use or have the potential to use pesticides or fertilizers (whether or not they normally apply these as part of their work). Training programs shall address:
  - (1) The potential for pesticide-related surface water toxicity.
  - (2) Proper use, application, handling, and disposal of pesticides.
  - (3) Least toxic methods of pest prevention and control, including IPM.
  - (4) Reduction of pesticide use.
- (c) Each permittee shall, no later than (12 months after Order adoption date) and annually thereafter before June 30, train all of their employees and contractors who are responsible for illicit connections and illicit/ illegal discharges. Training programs shall address:
  - (1) Identification
  - (2) Investigation
  - (3) Termination
  - (4) Cleanup
  - (5) Reporting of Incidents
  - (6) Documentation of Incidents

## H. Illicit Connections and Illicit Discharges Elimination Program

### Introduction

During dry weather, much of the discharge to storm drain systems consists of wastes and wastewater from non-storm water sources. A significant amount of such discharges may be from

R

E  
D  
  
T  
E  
N  
T  
A  
T  
I  
V  
E

illicit discharges or connections, or both. Illicit discharges may occur either through direct connections, such as deliberate or mistaken piping, or through indirect connections, such as dumping, spillage, subsurface infiltration, and wash-downs.

Monitoring data from MS4 programs across the nation have shown that dry weather discharges can contribute significant pollutant loads to receiving waters. *The Illicit Discharge Detection and Elimination A Guidance Manual for Program Development and Technical Assessments* finds, if these (dry weather discharges) are ignored by only focusing on storm water runoff (wet weather discharges), little improvements in receiving water quality may occur.

The objective of a municipality's illicit connection/illicit discharge (IC/ID) elimination program should be to detect illicit connections and illicit discharges to the storm drain system, and to promptly remove such discharges and connections. Municipalities typically employ the approaches listed below to achieve this objective:

- Permitting connections to the municipal storm drain.
- Mapping the storm drain system, locations of catch basins, outfalls, permitted connections, and the names and locations of all waters of the U.S. that receive discharges from the outfalls.
- Adopting a storm water/ urban runoff ordinance to prohibit unauthorized non-storm water discharges into the MS4, and implementing appropriate enforcement procedures and actions.
- Implementing a program to detect and eliminate non-storm water discharges to the MS4, including illegal dumping.
- Educating public employees, businesses, and the general public about the dangers associated with illegal discharges and improper disposal.
- Establishing a public reporting hotline or other mechanism to report illicit discharges and illegal dumping.
- Establishing measurable goals to evaluate successful program implementation.

Discussion of New Requirements

- 1) The Draft Ventura MS4 Permit requires Permittees to develop and submit to the Principal Permittee, a map showing the length and location of underground pipes 18 inches and greater in diameter, and channels within their jurisdiction within a specified time frame. The intent of this provision is to enhance the Permittees ability to identify, locate, and eliminate sources of pollutants identified by monitoring results and spill/complaint notifications.
- 2) The Draft Ventura MS4 Permit requires Permittees to screen storm pipes greater than 36" in diameter, that have not been screened within 3 years of adoption of the Order, high priority areas identified during the mapping of illicit connections and discharges, that have not been screened within 3 years of adoption of the Order, and portions of the storm drain system 50 years or older in age that have not been screened within 3 years of adoption of the Order. The Illicit Discharge Detection and Elimination A Guidance Manual for Program Development and Technical Assessments states, "The average age of development in a subwatershed may predict the potential for illicit discharge problems. For example, a subwatershed where the average age of development is more than 100 years was probably constructed before sewer service was widely available, and many of the pipes and connections may have changed over the years as a result of modernization and redevelopment. Presumably, the risk of potential discharges would be higher in these older subwatersheds. By contrast, a recently developed subwatershed may have a lower discharge risk due to improved construction materials, codes and inspections. Therefore, high Illicit Discharge Potential (IDP) may be indicated when subwatershed development is more than 50 years old, with medium IDP for 20 to 50 year old development, and low IDP if fewer than 20 years old". The intent of this requirement is to identify and eliminate potential significant source of pollutants contributing to poor dry weather water quality.
- 3) The Draft Ventura MS4 Permit requires Permittees to conduct field screening of their storm drain systems in accordance with procedures described in, The Illicit Discharge Detection and Elimination A Guidance Manual for Program Development and Technical Assessments.

The manual was developed as part of a cooperative agreement with the USEPA, to serve as a comprehensive up to date guidance manual for illicit connection/illicit discharge elimination programs. The manual was developed from surveys of Phase 1 MS4s serving multiple population sizes with the goal of coming up with cost effective methods for screening and eliminating illicit connections/illicit discharges. The goal of specifying the manual is to provide guidance and ensure effective methods are used for screening storm drain systems. The provision is not meant to exclude Permittees from using equally effective alternative methods not listed in the manual.

- 4) The Draft Ventura MS4 Permit requires Permittees to upon discovery or upon receiving a report of a suspected illicit connection, to complete an investigation within 21 days, to determine the source of the connection, the nature and volume of discharge through the connection, and identify the responsible party for the connection. The Order requires Permittees upon confirmation of an illicit storm drain connection, to ensure the termination of the connection within 180 days of completion of the investigation, using formal enforcement authority to eliminate the illicit connection. The intent of this requirement is to ensure the timely elimination of illicit connections upon discovery and their contributors to the degradation of storm water quality.
  
- 5) The Draft Ventura MS4 Permit requires Permittees to maintain records of all illicit/ illegal discharge discoveries, reports of suspected illicit/ illegal discharges, their response to the illicit/ illegal discharges and suspected illicit/ illegal discharges, and the formal enforcement taken to eliminate all illicit/ illegal discharges. The intent of this documentation provision is to facilitate the recognition of trends to assist in the discovery of unidentified illicit connections and identify areas where illicit connections and discharges have a greater probability of occurring.

## I. Reporting Program

The Reporting Program requires an Annual Report that is a Public Document Required under Federal Regulations

The Annual Report is composed of:

- 1) A Monitoring Report that contains the results that are to be used to refine BMPs for the reduction of pollutant loading, & for the protection & enhancement of the beneficial uses of the receiving waters within Ventura County.
- 2) A Program Report to track and oversee the progress each Permittee is making towards full compliance with the various requirements of the MS4 Permit.

## VI. MONITORING PROGRAM

### Background

Board based monitoring data collected through the Countywide Storm Water Monitoring Program provides a quantitative, statistically valid estimate of the impaired water segments within Ventura County. This water quality monitoring program has become a high priority, because of the number of water segments not supporting their beneficial uses due to constituent exceedances and therefore being placed on the State's 303(d) list of impaired waters. Monitoring has taken on a large role in determining compliance with the Total Maximum Daily Loads (TMDLs) developed within the Ventura waterbodies. Water quality issues have become more complex than in the past were monitoring focused mainly on conventional, bacteriological, and nutrient constituents. Now monitoring focuses on legacy pollutants, new and complex constituents such as synthetic organic compounds like pesticides and volatile organic compounds

(VOCs) in solvents, which have been introduced into the environment and were not water quality issues in the past.

Water quality monitoring and assessments help prioritize water segments within a watershed that have the most degraded waters and to assess which stressors such as nutrients, sedimentation, and habitat disturbances are the most important in that watershed. Monitoring is a useful and cost-effective method for getting a broad picture of whether there is a problem and how big the problem is within a watershed. From this board based monitoring follows targeted monitoring that focuses on the associations between water quality conditions and the natural and human factors that contribute to the impaired conditions. Targeted monitoring establishes relations between water quality, and the natural and human factors that affect water quality. In general, a comprehensive monitoring program (board based and targeted) can supply a wealth of data that can be used in a wide range of applications for improving water quality.

#### Storm Water Monitoring History

The Ventura County Watershed Protection District has been conducting storm water monitoring within Ventura County pursuant to the 2000 Board Order No. 00-108. Over the last 8 years, the storm water monitoring program has consisted of 2 main components: water chemistry and aquatic toxicity monitoring at Mass Emission, Receiving Water (tributaries), and Land Use stations. It also has had a bioassessment monitoring component within the Ventura River. The pertinent parts of the Storm Water Monitoring Program include the following:

Mass Emission stations were designed to identify pollutant loads to the ocean, and long term trends in pollutant concentrations, and characterize surface water quality in major receiving waters. The 3 Mass Emission stations are located in the major Ventura County watersheds: Calleguas Creek (ME-CC), Ventura River (ME-VR), and Santa Clara River (ME-SCR). Stations ME-CC and ME-VR were installed and monitored for the first time during the 2000/01 monitoring season, while ME-SCR was first installed and monitored during the 2001/02 monitoring season. High flows during January and February of 2005 resulted in the relocation of

the ME-VR due to landslide activity and associated safety concerns to approximately one mile downstream from the historical ME-VR site to the Ojai Valley Sanitation District's Treatment Plant above the POTW outfall. The relocated station on the Ventura River (ME-VR2) was first monitored using portable sampling equipment in May 2005; and by September 2005 a permanent station was established. Stations ME-CC, ME-SCR, and ME-VR/ ME-VR2 were required to sample 6 station events per year, including a minimum of 2 dry weather samples during the permit term. The stations ME-CC and ME-VR/ ME-VR2 samples are composed of flow-based composite and toxicity grab samples, and station ME-SCR samples are composed of time-based composite samples and toxicity grab samples. All 3 Mass Emission stations collected wet and dry weather water quality samples and analyzed for chronic toxicity.

Land Use stations were designed to characterize storm water runoff (discharges to receiving waters) from 3 specific land use types: agricultural, industrial, and residential. The 3 Land Use stations are located at: Wood Road (A-1, agricultural), Ortega Street (I-2, industrial), and Swan Street (R-1, residential). Monitoring at these sites was first implemented during the 1992-93 monitoring season and was designed to capture storm water runoff from a specific type of land use. Station A-1 was required to sample a maximum of 5 storm events during the permit term, stations I-2 and R-1 were required to sample 3 storm events during the permit term. The stations' samples are composed of time-based composite samples and toxicity grab samples. All 3 Land Use stations collected wet weather water quality samples and analyzed for acute toxicity.

Receiving Water (tributaries) stations were designed to characterize the quality of receiving waters rather than discharges to receiving waters. This monitoring evaluated smaller tributaries to the main river systems. The 2 Receiving Water stations are located in the Revolon Slough watershed at: La Vista (W-3), upper Revolon Slough, and Revolon Slough (W-4), lower Revolon Slough. Monitoring at these sites was first implemented during the 1997-98 season and captures storm water runoff from the Revolon Slough sub basin. Stations W-3 and W-4 were required to sample a maximum of 5 storm events during the permit term. The stations' samples are composed of time-based composite samples and toxicity grab samples. All 2 Receiving Water stations collected wet weather water quality samples and analyzed for acute toxicity.

Biological assessment (bioassessment) monitoring of the Ventura River watershed was designed to analyze the community structure of the in-stream benthic macroinvertebrate (BMI) assemblages in urban runoff-impacted stream segments at experimental sites. In bioassessment monitoring, a set of biological measurements (metrics), each representing a different aspect of the community, was calculated for each monitoring site. A total score was then calculated for the monitoring site, as the sum of the individual metric scores. Monitoring sites were then ranked according to their score, and then classified into groups (poor, fair, good and very good). The system of scoring and ranking sites is an Index of Biotic Integrity (IBI). The IBI used during 2001/02 through 2003/04 was the San Diego IBI; and the IBI used during 2004/05 through 2006/07 was the Southern California IBI (So CA IBI). There were fifteen BMI monitoring sites located in the Ventura River watershed, monitoring at these sites was implemented from the Fall of 2001 through 2005. A biological and physical/habitat assessment program within the Ventura River watershed was developed during the Spring of 2001.

#### New requirements

The new provisions of the monitoring program consist of:

- 1) Outfall monitoring (12 major outfalls)
- 2) Submittal of monitoring data electronically within 90 days from sample collection date & transmitted in standardized formats.
- 3) MS4 TMDL WLA Monitoring that incorporates the adopted storm water WLAs
- 4) Mass Emission stations' monitor storms that produce a 20% or greater increase in baseflow
- 5) Expanded toxicity testing
- 6) Special Studies
  - (a) Expanded Bio-assessment monitoring (Southern California Regional Bioassessment)
  - (b) Pyrethroid Insecticide
  - (c) Hydromodification Control
  - (d) Low Impact Development
  - (e) Beach Water Quality Monitoring

## EXECUTIVE SUMMARY

This report considers the economic impacts of not implementing, and implementing, the proposed Ventura County Stormwater Municipal Separate Storm Sewer Systems (MS4) Permit.

By not implementing the permit, stormwater pollution will degrade the water quality of rivers, coastal shorelines, beaches, lakes, reservoirs, bays, harbors, estuaries, groundwater, wildlife habitats and wetlands in Ventura and Los Angeles counties. Many of these waterbodies do not meet established water quality standards and are included on US EPA's 303(d) List of Water Quality Limited Segments. Many of these listed waterbodies are close to developed urban areas that are prone to stormwater pollution that will be the objective of this permit.

The 2006 303(d) list includes 488 miles of rivers and streams, 30 miles of coastal shorelines and beaches, 148,000 acres of bays, harbors, estuaries, lakes and reservoirs, and 12,000 acres of sensitive ocean habitat (Areas of Special Biological Significance). Also, the county overlies 527,000 acres of critical groundwater basins. All of these features and areas are subject to degradation from stormwater pollution that the Stormwater MS4 Permit is designed to reduce. The economic impact of not implementing the Permit was not quantified because the type and amount of stormwater pollution, and the extent and effectiveness of the permit conditions were not known.

The economic considerations of implementing the MS4 Stormwater Permit include the effect on public agencies, residents and commercial interests. This study focused on the economic effects on the public agencies responsible for implementing and complying with the conditions of the Permit. Estimating the economic impacts on residents and commercial interests would require that dischargers be identified and located. Residential and commercial development would also have to be projected to determine the costs of implementing and complying with the Industrial/Commercial Business Program, the Planning and Land Development Program and the Development Construction Program. These tasks were outside of the limits of this study.

Engineers from the California State University, Sacramento (CSUS), University of Southern California (USC), and the University of California at Los Angeles (UCLA) conducted a study funded by the State Water Resources Control Board to estimate the cost of implementing stormwater MS4 permits in six cities. Data from that study was used as a basis for this study. The CSUS study surveyed five municipalities and one metropolitan area that have implemented a MS4 permit. Cost data was collected and organized using a set of programs defined by US EPA that served as a basis for transferring the results to other cities.

Three cost scenarios based on the CSUS survey were selected to estimate the cost of implementing the Ventura County MS4 Stormwater Permit. They ranged from \$27.60 to \$42.00 (2008\$)<sup>1</sup> per household annually. Total annual cost ranged from \$7.1 million to \$10.9 million (2008\$). The Public Agency Program, which includes street cleaning and storm drain cleaning, is projected to comprise 62 percent of the total cost to public agencies for implementing and complying with the proposed permit.

## INTRODUCTION

The purpose of this analysis is to consider the economic effects of, not implementing, and implementing, the proposed Ventura County Stormwater permit. Considering economic effects allow evaluation of proposed actions in terms of economic values. This report presents a qualitative, and where possible, a quantitative evaluation of the positive and negative economic effects of the proposed permit.

This report is organized into two sections. The first section identifies the areas and activities that are affected by stormwater pollution if the Permit was not implemented. The second section contains a

---

<sup>1</sup>Indicates the year the dollar value was indexed.

discussion of the data sources and methodology used to estimate the cost of implementing the permit, descriptions of the Principal Permittee and Permittees, and an estimation of the cost of implementing and complying with the proposed permit.

## **ECONOMIC CONSIDERATIONS OF NOT REGULATING STORMWATER**

Not regulating Ventura County stormwater will result in greater contamination of rivers, streams, lakes, reservoirs, bays, harbors, estuaries, groundwater, coastal shorelines and wetlands. The benefit of the Stormwater Permit is to improve water quality, enhance beneficial uses and increase employment, income and satisfaction from environmental amenities. Most of the benefits of the permit can be identified and, in some cases, quantified in monetary terms. Others cannot be expressed in dollar terms and can only be described. This report compiles the information and data that exists on areas and activities that will be covered by the permit. It does not attempt to value the improvements that will result from the permit because activities subject to the permit has not been identified, and the relationship between stormwater discharges and water quality levels is not known.

The Los Angeles Regional Board's Basin Plan designates beneficial uses for surface and groundwater, and sets narrative and numerical objectives that must be attained or maintained to protect the designated use. These data serve to identify the activities that will benefit as a result of pollution reductions but they are not sufficient to estimate economic values.

### **Waterbodies Affected by Stormwater Pollution**

This section contains the identification of waterbodies that exceed established water quality objectives and reduce the value of identified beneficial uses. The quality of these waterbodies will be improved by implementing the Ventura County Stormwater Permit.

Under Section 303(d) of the 1972 Clean Water Act, states are required to develop a list of water quality limited segments. These waters on the list do not meet water quality standards, even after point sources of pollution have installed the minimum required levels of pollution control technology. The law requires that these jurisdictions establish priority rankings for water on the lists and develop action plans, called Total Maximum Daily Loads (TMDL), to improve water quality.

The TMDL is a number that represents the assimilative capacity of receiving waters to absorb a pollutant. The TMDL is the sum of the individual wasteload allocations for point sources, load allocations for nonpoint sources plus an allotment for natural background loading, and a margin of safety. TMDLs can be expressed in terms of mass per time (the traditional approach) or in other ways such as toxicity or a percentage reduction or other appropriate measure relating to a state water quality objective. A TMDL allocates the total allowable pollution among the different pollutant sources (through the permitting process or other regulatory means) to ensure that the water quality objectives are achieved.

On June 28, 2007, USEPA gave final approval to California's 2006 Section 303(d) List of Water Quality Limited Segments. Presented here are the 303(d) listed areas subject to stormwater pollution and will therefore benefit from implementing the Ventura County Stormwater permit.

### **Rivers and Streams**

Beneficial uses of rivers and streams generally include recreation and wildlife habitat and commercial and sport fisheries. In a few cases, they are used as a source of drinking water. Many regional streams are primary sources of replenishment for major groundwater basins that supply water for drinking and other uses, and as such must be protected as groundwater recharge. Improving water quality that enhances beneficial uses is a benefit to the Ventura County Stormwater Permit. Estimating the economic benefit in

monetary terms is only possible after linking discharges and water quality, and determining the extent and effectiveness of the required BMPs.

Under federal law, all surface waters must have water quality standards designated in the Basin Plans. Most of the inland surface waters in the Los Angeles Regional have beneficial uses designated for them. Those waters not listed (generally smaller tributaries) are designated with the same beneficial uses as the streams, lakes, or reservoirs to which they are tributary. This is referred to as the "tributary rule." They do not appear on any of the following maps or included in any of the area totals.

Figure 1 depicts the major watersheds, and the 303(d) listed rivers and streams in Ventura County. Stormwater runoff from developed areas affect, not only waterbodies that are located in Ventura County, but also in Los Angeles County. 303(d) listed rivers originating in southern Ventura County (Santa Monica Bay watershed) flow through the western part of Los Angeles County and into the 303(d) listed Santa Monica Bay.

Table 1 contains the 303(d) listed rivers and streams by major watershed, their lengths, identified pollutant and the sources of pollution. There are 488 miles of rivers and streams that are listed for various pollutants.

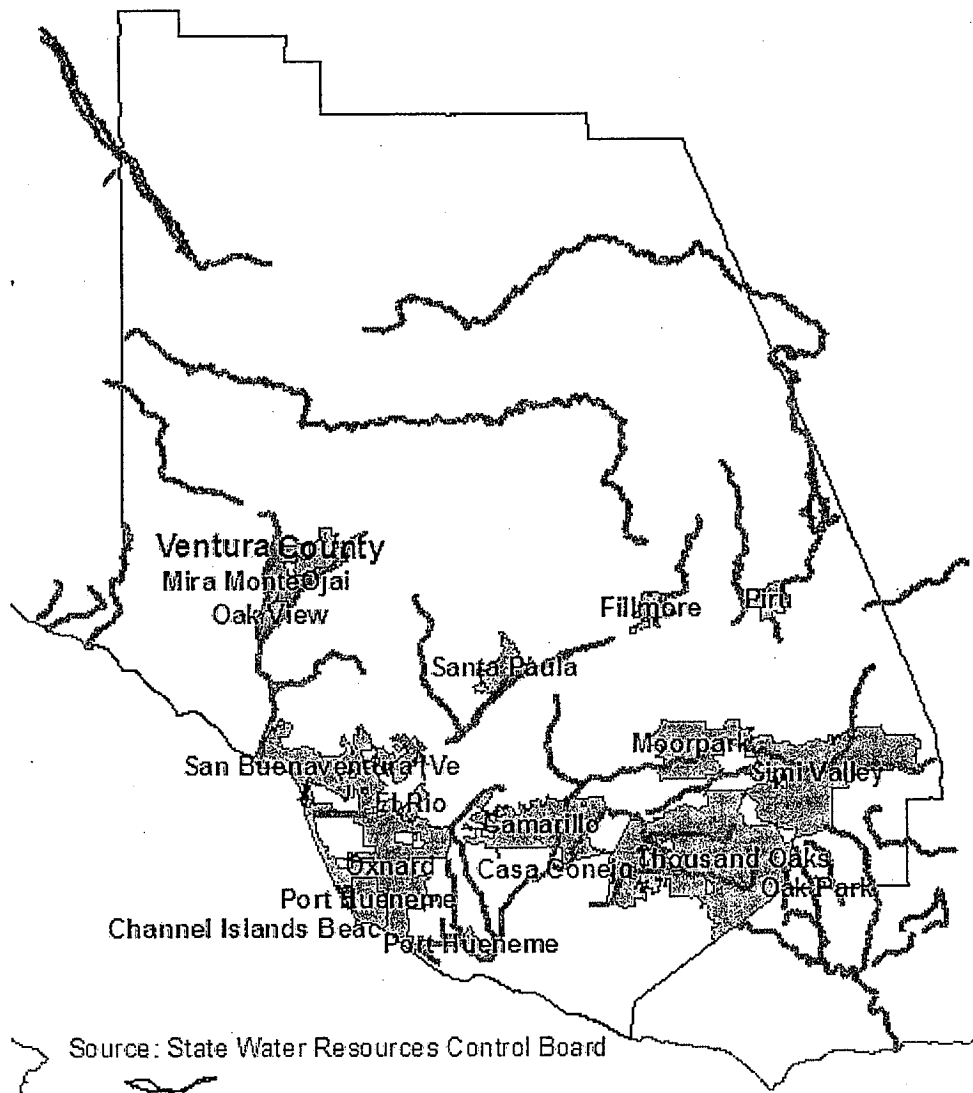

Figure 2 includes the urban areas under the Stormwater Permit and indicates their spatial relationship to the 303(d) listed rivers and streams. The Calleguas Creek river system has 119 miles that are 303(d) listed. Calleguas Creek is located in southern Ventura County in close proximity to the cities of Thousand Oaks, Moorpark, Simi Valley and Camarillo. These urban areas have a combined population of 172,000.

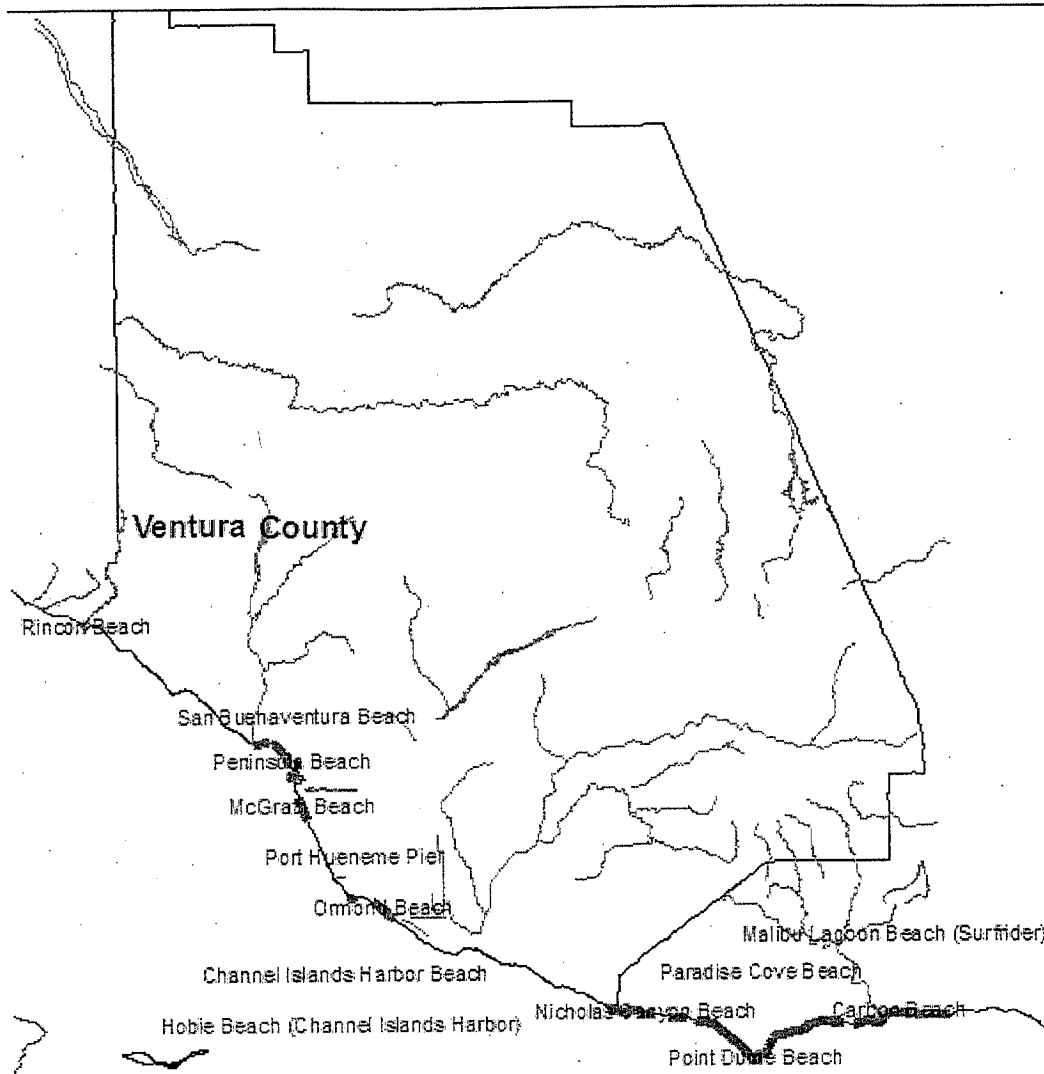

**Figure 2. Ventura County Urban Areas and 303(d) Listed Rivers and Streams, 2006.**

**Coastal Shorelines and Beaches**

Coastal waters in the Los Angeles Region include bays, estuaries, lagoons, harbors, beaches, and ocean waters. The Ventura Coast is the terminus of most of the rivers and streams listed in the previous section. Figure 3 shows those rivers and streams, and the 303(d) listed coastal shorelines and beaches. Beneficial uses for these coastal waters are habitat for marine life, recreation, boating, shellfish harvesting, and commercial and sport fishing.

A total of 29.65 miles of Ventura and Los Angeles County coastal shorelines and beaches are affected by Ventura County stormwater pollution (Table 2).

Stormwater pollution also affects beach posting and closings. The following table presents the Ventura County beach postings and closing from the year 2000 through 2007 in terms of beach-mile-days. Beach-mile-days is an index that characterizes beach posting and closures in extent (miles) and duration (days). Although beach postings and closures have diminished because of efforts to reduce beach pollution, these data indicate the potential damage that can occur. Stormwater pollution is one cause of beach postings and contributes to beach closures. The Los Angeles County beaches affected by Ventura County pollution is not included in the posting and closure totals listed in the following table because time did not permit individual beach data to be identified and totaled.

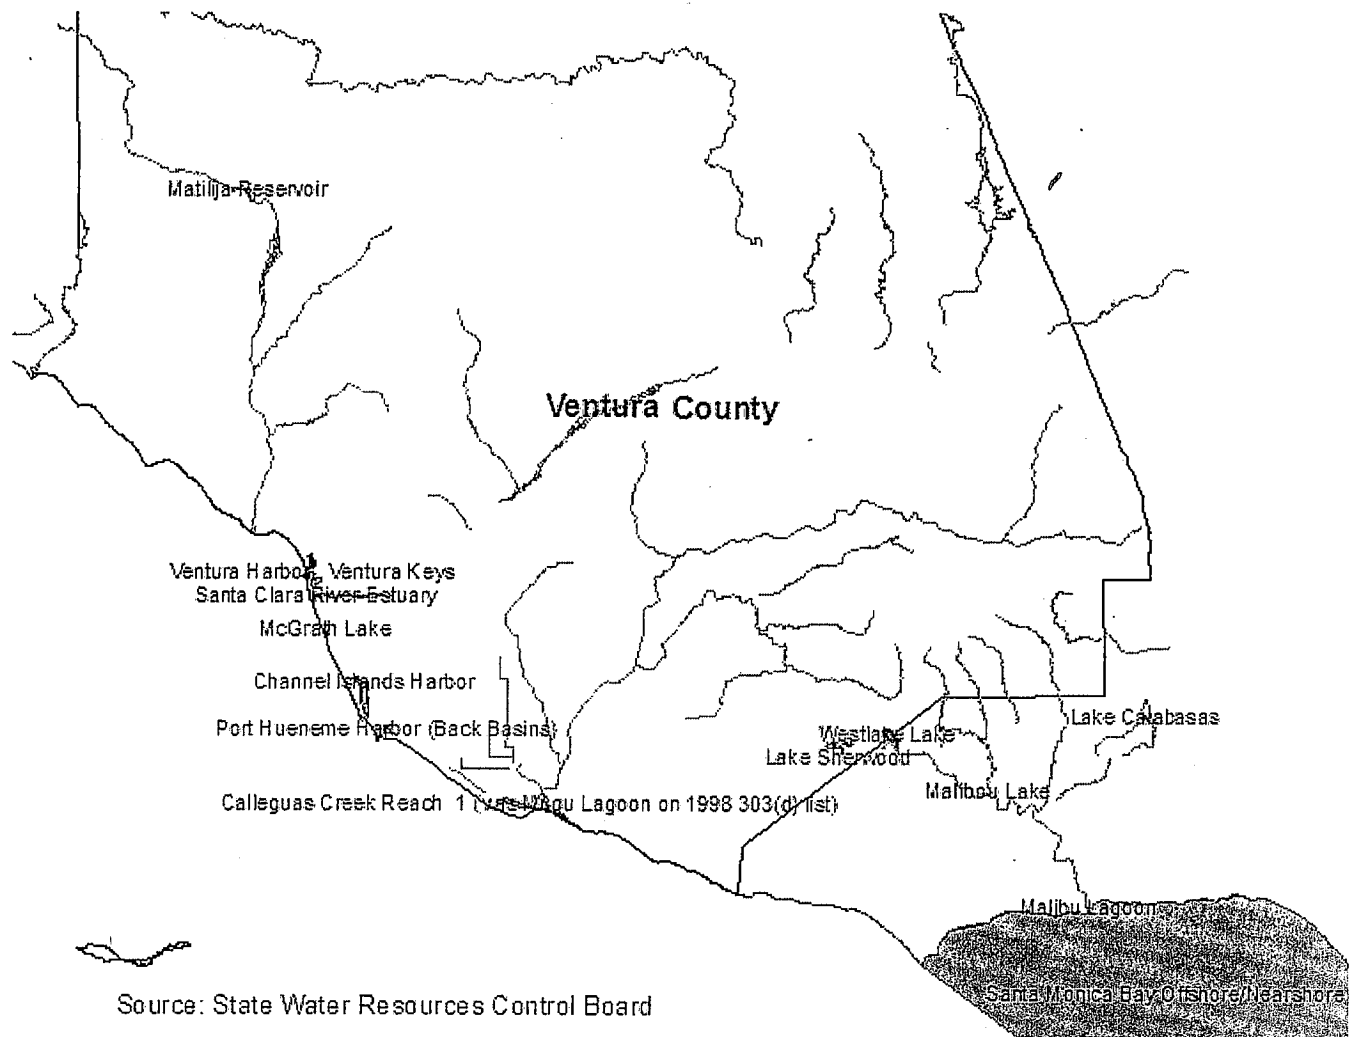

Year	Posting	Closure
2000	45.31	-
2001	98.30	37.67
2002	14.62	2.69
2003	199.43	-
2004	25.00	-
2005	21.70	-
2006	3.50	-
2007	2.10	-

#### **Lakes, Reservoirs, Bays, Harbors and Estuaries**

Beneficial uses of lakes, reservoirs, bays, harbors and estuaries affected by stormwater pollution are municipal water supply, recreation and wildlife habitat. Figure 4 shows the location of those 303(d) listed waterbodies and their proximity to the 303(d) listed rivers and streams of Ventura County.

**Figure 4. Ventura County 303(d) Listed Lakes, Reservoirs, Bays, Harbors and Estuaries, 2006.**

A total of 148,030 acres of Ventura County bay, harbors, estuaries, lakes and reservoirs are 303(d) listed (Table 3). The largest listed waterbody is the 146,642 acre Santa Monica Bay that is the terminus of the southern Ventura County rivers and streams. The Ventura and Channel Islands harbors, the Calleguas Creek reach, and the Sherwood and Westlake lakes are vulnerable to Ventura County stormwater because of their proximity to urban areas.

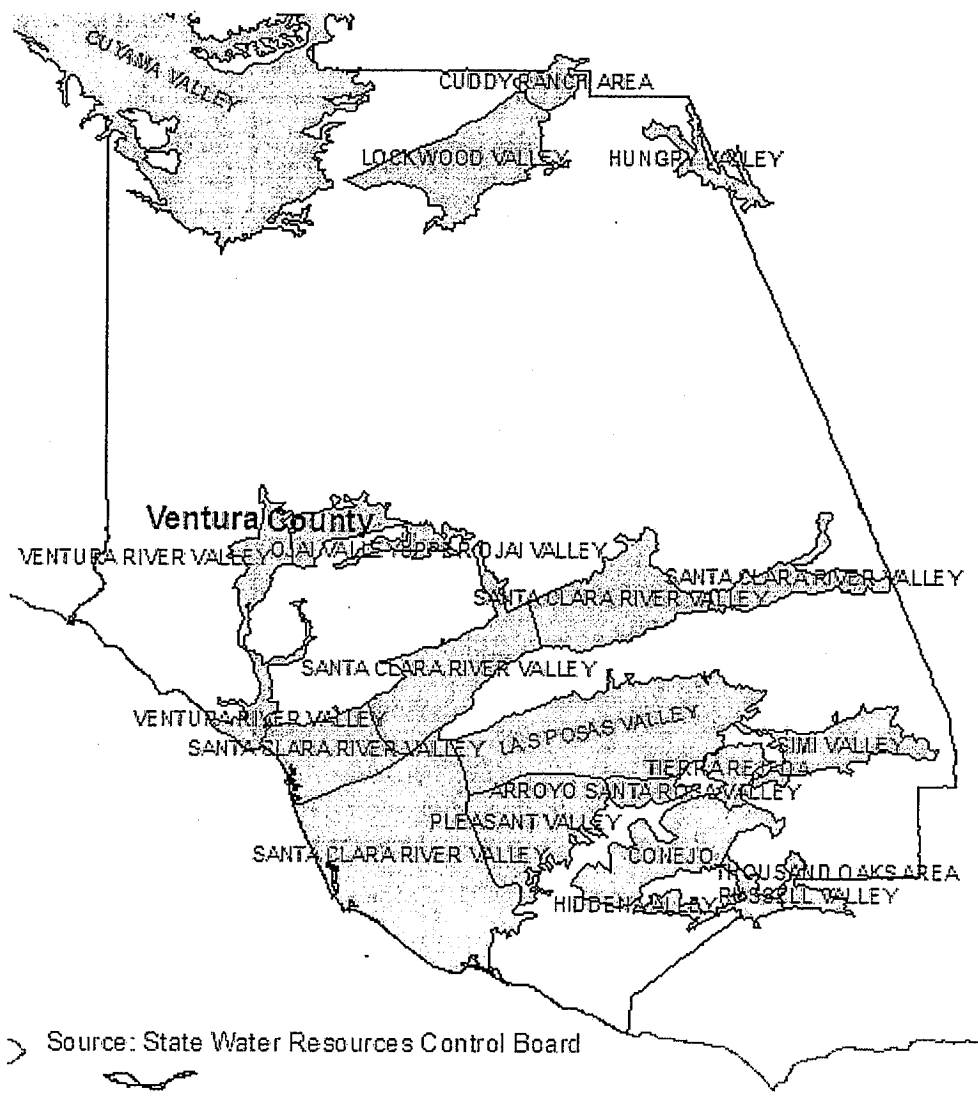

**Table 3. Acreage of Ventura County 303(d) Listed Lakes, Reservoirs, Bays, Harbors and Estuaries, 2006.**

Bays and Harbors	Acres
Port Hueneme Harbor (Back Basins)	65
Ventura Harbor: Ventura Keys	179
Channel Islands Harbor	209
Santa Monica Bay Offshore/Nearshore	146,642

### Groundwater

Beneficial uses for Ventura County groundwater basins include municipal, industrial and agricultural water supply. Occasionally, groundwater is used in aquaculture operations at the Fillmore Fish Hatchery. The 242,114 acre Cuyama Valley groundwater basin is the largest aquifer in the county but it is located in the rural area of the County (Table 4, Figure 5). The Santa Clara River Valley groundwater basins are located under a number of urban areas and total 125,702 acres. The designated groundwater basins underlie 526,993 acres of Ventura County.

**Figure 5. Ventura County Groundwater Basins**

**Table 4. Acreage of Ventura County Groundwater Basins**

Groundwater Basin	Acreage
Arroyo Santa Rosa Valley	3,747
Conejo	18,848
Cuddy Ranch Area	4,213
Cuyama Valley	242,114
Hidden Valley	2,217
Hungry Valley	5,324
Las Posas Valley	42,353
Lockwood Valley	21,841
Ojai Valley	6,851

#### **Areas of Special Biological Significance**

The Laguna Point to Latigo Point ASBS is located on the shoreline of Ventura and Los Angeles County and it is affected by Ventura County stormwater runoff (Figure 6). The ASBS is 11,842 acres.

A study completed by the Los Angeles Regional Water Quality Control Board in 1979 concluded that this ASBS is one of the least affected because of steep mountainous terrain, offshore currents and a publicly owned shoreline. However, the report mentioned the potential effect of outflows from Mugu Lagoon which contains stormwater runoff.

Source: State Water Resources Control Board

**Figure 6. Ventura County Areas of Special Biological Significance**

### **Wetlands**

Wetlands include freshwater, estuarine, and saltwater marshes, swamps, mudflats, and riparian areas. As the California Water Code (§13050[e]) defines "waters of the state" to be "any water, surface or underground, including saline waters, within the boundaries of the state," natural wetlands are entitled to the same level of protection as other waters of the state.

Wetlands also are protected under the Clean Water Act (CWA), which was enacted to restore and maintain the physical, chemical, and biological integrity of the nation's waters, including wetlands. Regulations developed under the CWA specifically include wetlands "as waters of the United States" and defines them as "those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions." Although the definition of wetlands differs widely among federal agencies, the US EPA and the U.S. Army Corps of Engineers use this definition in administrating the 404 permit program.

Recently, both state and federal wetlands policies have been developed to protect these valuable waters. Executive Order W-59-93 (signed by Governor Pete Wilson on August 23, 1993) established state policy guidelines for wetlands conservation. The primary goal of this policy is to ensure no overall net loss and

to achieve a long-term net gain in the quantity, quality, and permanence of wetland acreage in California. The federal wetlands policy, representing a significant advance in wetlands protection, was unveiled by nine federal agencies on August 24, 1993. This policy represents an agreement that is sensitive to the needs of landowners, more efficient, and provides flexibility in the permit process. The US EPA has requested that states adopt water quality standards (beneficial uses and objectives) for wetlands as part of their overall effort to protect the nation's water resources. The 1975 Basin Plan identified many waters which are known to include wetlands; these wetlands, however, were not identified as such. In the 1995 Basin Plan, a wetlands beneficial use category has been added to identify inland waters that support wetland habitat as well as a variety of other beneficial uses. The wetlands habitat definition recognizes the uniqueness of these areas and functions they serve in protecting water quality.

Beneficial uses of wetlands include many of the same uses designated for the rivers, lakes, and coastal waters to which they are adjacent, and include recreation, wildlife habitat and groundwater replenishment.

As some wetlands can not be easily identified in Southern California because of the hydrologic area, the Regional Board identifies wetlands using indicators such as hydrology, presence of hydrophytic plants (plants adapted for growth in water), and/or hydric soils (soils saturated during the growing season). The Regional Board contracted with Dr. Prem Saint, et al. (1993a and 1993b), to inventory and describe major regional wetlands. Information from this study will be incorporated in the next Basin Plan.

## **ECONOMIC CONSIDERATIONS OF REGULATING STORMWATER**

Implementing and maintaining the conditions of the proposed MS4 Stormwater Permit will economically impact the principal permittee, permittees, residents, commercial entities and real estate developers. This report presents the economic impact on the principal permittee and permittees only. The economic impacts to others although important was not estimated because of the lack of data and the limited amount of time.

This section of the report describes the methodology, data sources and estimated cost of implementing the permit.

### **Ventura Stormwater Permit Cost Categories**

The proposed Stormwater Permit designates seven special provisions. The provisions and data sources are summarized in the following sections.

#### **Public Information and Participation Program (PIPP)**

The public will be made aware of the benefits of a stormwater pollution prevention program. Target groups include residential and business. The CSUS cost survey was used to determine the cost to permittees. The CSUS study estimated that approximately five percent of the total stormwater costs should be in the Public Information and Participation Program.

#### **Industrial and Commercial Facilities Program**

Each permittee shall require pollutant reduction and control measures at industrial and commercial facilities, with the objective of reducing pollutants in stormwater. This program requires an inventory of commercial and industrial sources of stormwater pollution. Inspections will ensure that each facility has implemented the required BMPs and they will be completed twice during the five-year permit. The first inspection will be made during the first two years.

The cost to the permittees of implementing this program is assumed to be included in the CSUS cost survey. The cost of implementing the BMPs by commercial and industrial firms was not estimated. US Census indicates that there are 2,009 commercial firms located in Ventura County subject to this

program. This total includes 1,198 restaurants, 427 automotive service facilities, 180 retail gasoline outlets and 204 nurseries.

The number of industrial firms subject to this program are identified by US EPA in 40 CFR 122.2(c) but no readily accessible data source of those firms currently exists.

The CSUS study estimated that approximately three percent of the total stormwater costs were used in the Industrial and Commercial Facilities Program.

### **Planning and Land Development Program**

The objective of this program is to minimize the effects from stormwater runoff on the biological integrity of natural drainage systems and the beneficial uses of waterbodies by minimizing the percentage of impervious surfaces on land developments to support the percolation and infiltration of stormwater into the ground.

Almost all development and redevelopment projects are subject to the provisions of this program. Those projects will reduce the percentage of Effective Impervious Area (EIA) to less than 5 percent of total project area.

All new development and redevelopment projects shall also integrate Low Impact Development (LID) principles into project design. LID is a stormwater management and land development strategy that emphasizes conservation and the use of on-site natural features integrated with engineered, small-scale hydrologic controls to more closely reflect predevelopment hydrologic functions.

All new development and redevelopment projects shall implement hydrologic control measures, to prevent accelerated downstream erosion and to protect stream habitat in natural drainage systems. The purpose of the hydrologic controls is to minimize changes in post-development hydrologic stormwater runoff discharge rates, velocities, and duration. This shall be achieved by maintaining the project's pre-development stormwater runoff flow rates and durations.

The Southern California Stormwater Monitoring Coalition (SMC) is developing a regional methodology to eliminate or mitigate the adverse effects of hydromodification from urbanization, including hydromodification assessment and management tools.

Until the completion of the SMC HCS, Permittees shall implement the Interim Hydromodification Control Criteria, to control the potential adverse impacts of changes in hydrology that may result from new development and redevelopment projects. Land development project of less than 50 acres shall implement hydromodification controls such that the two-year 24-hour storm event post development hydrograph peak flow and volume will match within one percent of the two-year 24-hour storm event pre-development peak flow and volume hydrograph. Projects of 50 acres or greater shall develop and implement a Hydromodification Analysis Study (HAS) that demonstrates that post-development conditions are not expected to alter the duration of sediment transporting flows in receiving waters. The HAS must demonstrate that the selected hydromodification control BMPs will maintain an Erosion Potential value of 1 unless an alternative value can be shown to be protective of the natural drainage systems from erosion, incision, and sedimentation that can occur as a result of flow increases from impervious surfaces and damage stream habitat in natural drainage systems.

The Permittees shall develop and implement watershed specific Hydrologic Control Plans (HCP) no later than 180 days after the completion of the SMC Hydrologic Control Study (HCS).

This Program will require permittees to start a tracking system, and an inspection and enforcement program for new development and redevelopment post-construction stormwater BMPs no later than one year after the Order adoption date.

The CSUS study estimated that approximately two percent of the total stormwater costs were used in the Planning and Land Development Program.

### **Development Construction Program**

Each Permittee shall start a program to control stormwater discharges from construction activity at all construction sites within its jurisdiction. During the wet season, the program shall ensure that all no grading will be done on areas that have high soil erosive potential.

Each Permittee shall require the implementation of a minimum set of BMPs at all construction sites to prevent erosion and sediment loss, and the discharge of construction wastes. Roadway paving or repaving operations will be subject to a set of BMPs to reduce site erosion. An electronic site-tracking system will be used to track grading permits, encroachment permits, demolition permits, building permits, or construction permits (and any other municipal authorization to move soil and/ or construct or destruct that involves land disturbance) issued by each permittee.

The CSUS study estimated that approximately four percent of the total stormwater costs were used in the Development Construction Program.

### **Public Agency Activities Program**

Each Permittee shall minimize stormwater pollution impacts from storm drain operations which is primarily catch-basin cleaning, and streets and roads maintenance. Other public agency activities such as public construction, vehicle maintenance, material storage and operations, landscape and recreational facilities are also included in this program.

The CSUS study estimated that approximately 62 percent of total stormwater costs were used in the Public Agency Activities program.

### **Illicit Connections and Illicit Discharges Elimination Program**

Each Permittee shall eliminate all illicit connections and discharges to the storm drain system, and shall document, track, and report all such cases in accordance with the permit.

The CSUS study estimated that approximately two percent of total stormwater costs were used in this Program.

### **Reporting Program**

The Principal Permittee, VCWPD, in consultation with the Permittees and Los Angeles Regional Waterboard staff shall develop an electronic reporting program to assist in managing the requirements of this Order no later than six months after the Order adoption date.

The Principal Permittee shall submit by December 15th of each year beginning the year of 2008, an annual report to the Los Angeles Regional Water Board Executive Officer documenting the status of the Municipal Stormwater Program and the results of analysis of the monitoring program.

The Permit also recommends that a spatially oriented database (GIS) be developed to manage the provisions mandated in this permit.

Part 5.B of the permit designates an activity entitled Watershed Initiative Participation. For the purposes of cost comparison with the CSUS study, this was aggregated with the Reporting Program. The Reporting Program requires participation in Southern California Stormwater Monitoring Coalition activities and other watershed planning group programs.

The CSUS study estimated that approximately 22 percent of total stormwater costs were used in overall stormwater program management (14 percent) watershed management (two percent), and water quality monitoring (six percent).

### **CSUS Stormwater Cost Survey**

In 2004, the State Water Resources Control Board (SWRCB) funded a study to survey the costs to develop, implement, maintain and monitor municipal separate storm sewer system (MS4) management

and control programs.<sup>2</sup> The objectives of the CSUS study were to: 1) document stormwater program costs and; 2) assess alternative approaches to stormwater quality control. The six cities selected for the study were judged by SWRCB staff as having good stormwater management programs, adequate accounting systems, and represented a variety of geographic locations, hydrologic areas, populations and incomes. The cities selected were Corona, Encinitas, Fremont, Fresno-Clovis Metropolitan Area, Sacramento and Santa Clarita and the cost per household ranged from \$18 to \$46. These results were used to estimate the costs of complying with the Ventura MS4 Stormwater Permit.

Stormwater program expenditures by the six cities were compiled and normalized to be able to transfer the results to other cities. Factors considered for normalization of the data were size, location, tourism, and the degree of integration of programs. The compliance costs of construction, commercial, business and industrial firms were not considered in the study. An attempt to include private costs in this cost analysis was hindered by the limited timeframe to complete the study.

Table 5 contains demographic and economic data collected from the cities for 2002/2003 which in the case of city cost data, was the most recent. Population, household and income data are from the US Census for the year 2000.

Annual total cost per household ranged from \$18 to \$46. The average cost is \$35 and the median is \$36. The true mean which is derived by dividing the total sample costs by the total sample number of households, is \$29.

The CSUS study attempted to quantitatively associate costs with income, population, annual rainfall, years of incorporation, area and curb swept miles but due to the small sample size, correlation was statistically insignificant in almost all cases. However, a number of qualitative explanations were offered by the authors. The Fresno-Clovis cost estimate of \$18 may be low because of low land costs, climate, topography, soils and an integrated program approach. However, the latter factor was identified in the study as an important factor in permit costs.

An integrated program is one in which an overseeing agency establishes a common approach in implementing stormwater activities. Certainly in the case of Fresno-Clovis Metropolitan Area, an integrated program seems to be an important factor. No other city surveyed had a program in which a single agency implemented a comprehensive plan for post-construction stormwater control for all permittees as did Fresno Metropolitan Flood Control District for the Fresno-Clovis Metropolitan Area. This integration may contribute to relatively low cost per household; however, on the other extreme of the cost range was Fremont, who participates in the Alameda County Clean Water Program. (Source: CSUS, NPDES Stormwater Cost Survey, page 52)

The important factor is that permits that cover large numbers of households have the opportunity to achieve lower costs per household by applying a common approach to stormwater activities. Due to the large number of households, The Ventura County MS4 has the potential for applying an integrated approach.

---

### Ventura Stormwater Permit Costs

The cost categories used in the CSUS study are different than the categories specified in the Ventura County permit. To be able to translate costs from the CSUS study to the Ventura County permit, the categories needed to be compatible. The CSUS study had nine categories based on the US EPA six minimum measures for Phase II stormwater programs plus additional categories that were based on the permits held by the six selected cities. The activities mandated by the permit, the comparable CSUS cost category, and the percent of total surveyed stormwater costs attributed to each category are presented in the Table 6.

**Table 6. Stormwater Permit and CSUS Cost Categories, and Percent of Total Cost**

Permit		CSUS Cost Study	
Sections	Title	Cost Category	Percent of Total Cost
Part 5.C	Public Information and Participation Program (PIPP)	Public Education, Outreach, Involvement, and Participation	5.00%
Part 5.D	Industrial/ Commercial Facilities Program	Industrial and Commercial Management Programs	3.00%
Part 5.E	Planning and Land Development Program	Post Construction Stormwater Management in New Development and Redevelopment	2.00%
Part 5.F	Development Construction Program	Construction Site Stormwater Runoff Control	4.00%
Part 5.G	Public Agency Activities Program	Pollution Prevention and Good Housekeeping for Municipal Operations	61.00%
Part 5.H	Illicit Connections and Illicit Discharges Elimination Program	Illicit Discharge Detection and Elimination	2.00%
Part 5.I	Reporting Program	Watershed Management	2.00%
Part 5.B	Watershed Initiative Participation	Water Quality Monitoring	6.00%
		Overall Stormwater Program Management	14.00%

**Ventura County Watershed Protection District**

The VCWPD is responsible for coordinating and facilitating activities to comply with the requirements of the proposed Permit. The VCWPD conducts the Ventura Countywide Stormwater Quality Management Program. Their mission statement is:

Enhance, protect and preserve water quality in Ventura County water bodies using proactive and innovative ideas for preservation of biodiversity, ecological viability and human health. Work as a countywide team with public agencies, private enterprise, the environmental community and the general public to locally implement Clean Water Act requirements, balancing the actions taken with social and economic constraints. (source: <http://www.vcstormwater.org/>)

They have initiated the basic programs required by NPDES regulations and probably meet some, if not most, of the requirements of the MS4 permit. A review of their Web site indicates that VCWPD has prepared a number of educational programs and materials to urge compliance with reducing stormwater pollution.

Businesses are encouraged to carry out Best Management Practices (BMPs) to reduce pollutants to stormwater runoff. BMPs are defined as general good housekeeping practices, schedules of activities, pollution prevention techniques, educational practices, maintenance procedures, prohibitions of practices and other management practices. BMPs also include treatment practices, operating procedures, and practices to control site runoff, spillage or leaks, sludge or water disposal, or drainage from raw materials storage.

Fact sheets have been made available to provide clear guidance. The BMPs described on these fact sheets are generally inexpensive to implement and may save money and resources. The fact sheets cover various topics and are available on their Web site.

Publications are also available on the Stormwater Pollution Control Plan and on various aspects of the complying with the State General Construction Activities Stormwater Permit.

**Ventura Stormwater Permittees**

The individual permittees are responsible for implementing activities specified in the permit. Ten cities and Ventura County have been designated as Permittees. Area, population and the number of households

for those Permittees are presented in Table 7. Population and the number of households are 2006 US Census estimates.

**Table 7. Ventura County Municipal Separate Stormwater System Permittees**

PLACE NAME	Permittee	Sq Mile*	Population**	Households**

\*US Census, 2000

\*\*US Census, 2006

As stated above, the CSUS study cost estimates for the six surveyed permittees range from \$18 to \$46 (2002\$) per household per year. The number of households ranged from 23,843 to 195,311. A linear relationship was estimated between the annual cost per household and the number of households. The resulting equation was:

$$\text{Cost/Household} = 44.29 - .000109(\text{Number of Households})$$

This relationship is depicted in Figure 7. Extending this relationship to a permit with 200,000 households would result in a per household cost of \$22.46 per year (2002\$). Ventura County exceeds the number of Fresno-Clovis Metropolitan Area households by 33 percent and should be able to capture the economies of size when implementing the permit. Therefore a total annual cost of \$23 (2002\$) per household was judged to be applicable to the cost of implementing the Ventura County permit.

Two additional cost scenarios were considered to illustrate the range of the CSUS data (Table 8). The first is based on the true sample mean of the aggregate stormwater cost for all cities surveyed divided by the aggregate number of households which was \$29 per household (2002\$). The second is based on the mean of the six values for each city which is \$35 per household (2002\$). When adjusted for inflation, the annual cost estimates range from \$27.60 to \$42.00 (2008\$) per household (Table 9).

The estimated total annual cost to public agencies of implementing the Ventura County Stormwater MS4 permit range from \$7,148,400 to \$10,878,000 (2008\$).

**Figure 7. Annual Stormwater Permit Costs by Number of Households**

**Table 8. Summary of CSUS Normalized Stormwater Costs for Sample Municipalities, 2002\$.**

Municipalities	Municipality Description	Cost/Household (\$)
City of Encinitas	Coastal tourism, small city	46
City of Fremont	Bay Area, moderately integrated countywide program	45
City of Santa Clarita	Tourism and industrial	39
City of Corona	Industrial	32
City of Sacramento	Pumped stormwater, large city	29
Fresno-Clovis Metropolitan Area	65-90% infiltration, fully integrated multi-city program	18
<b>Summary Statistics</b>		
Mean of the six values for each city		35
Median of the six values for each city		36
Standard Deviation of the six values for each city		11
True Mean <sup>1</sup>		29

1. The "true" mean is the aggregate stormwater cost for all cities surveyed divided by the aggregate number of households

<b>Totals</b>	<b>\$ 27.60</b>	<b>\$ 7,148,400</b>	<b>\$ 34.80</b>	<b>\$ 9,013,200</b>	<b>\$ 42.00</b>	<b>\$ 10,878,000</b>

\*2008\$. Based 259,000 households.

The Public Agency Activities Program comprises 62 percent of the estimated total annual costs. Street cleaning and storm drain cleaning operations are the main activities of the Program (Figure 8). These activities are being conducted at the municipal or county level, however the proposed Permit specifies the frequency of the operations. The cost of this program is not expected to benefit from economies of size and per household costs will be similar for small and large permittees.
