

STATE OF CALIFORNIA
REGIONAL WATER QUALITY CONTROL BOARD
SAN FRANCISCO BAY REGION

STAFF SUMMARY REPORT (Marcia Liao)
MEETING DATE: May 8, 2013

ITEM: 5B

SUBJECT: **City of Burlingame and North Bayside System Unit,
Wastewater Treatment Facility and Wastewater Collection
System, Burlingame, San Mateo County –
Reissuance of NPDES Permit**

CHRONOLOGY: January 2008 – Permit reissued

DISCUSSION: This Revised Tentative Order (Appendix A) would reissue the NPDES permit for the City of Burlingame and the North Bayside System Unit. The Burlingame wastewater treatment plant serves about 37,000 people in Burlingame and Hillsborough and discharges about 3.4 million gallons of secondary-treated wastewater each day through a deepwater outfall shared with other North Bayside System Unit dischargers (Millbrae, South San Francisco, San Bruno, and the San Francisco International Airport). The outfall is located near Point San Bruno approximately 5,200 feet offshore in San Francisco Bay.

The City of Burlingame and U.S. EPA submitted comments (Appendix B) on a draft permit distributed for review. We prepared responses to the comments (Appendix C), modifying the draft in several cases. The Revised Tentative Order reflects all proposed revisions. We expect this item to remain uncontested.

**RECOMMEN-
DATION:** Adopt the Revised Tentative Order

CIWQS: Place ID 210839

APPENDICES: A. Revised Tentative Order
B. Comment Letters
C. Response to Comments
