

## **Surface Water Ambient Monitoring Program (SWAMP) San Francisco Bay Regional Water Quality Control Board**

The SF Bay Area SWAMP program provides water and sediment chemistry, toxicity and pathogen data as well as time series data on the BDAT website. Time series (continuous monitoring) basic water quality data is available on BDAT through a Time Series Database maintained by regional SWAMP staff and the Department of Water Resources (DWR).

### **Please note:**

- All SWAMP chemistry and toxicity data is **Final** and has completed SWAMP QA (quality assurance) procedures.
- All time series (continuous monitoring) data should be considered **DRAFT**.
- **DRAFT** data has not been through complete SWAMP QA procedures.
- **Please do not cite or disseminate DRAFT SWAMP data.**

For calibration and QA information for time series data, please see *SWAMP Calibration and QA Metadata.pdf* (available 07/2007). For additional information or questions about SWAMP data, please contact the SF Bay Area's SWAMP Data Manager:
