CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD  
SANTA ANA BASIN REGION

**ORDER R8-2023-0008**

WASTE DISCHARGE REQUIREMENTS  
FOR  
IN-SITU REMEDIATION OF SOIL AND GROUNDWATER  
AT THE FORMER WEISER LOCK FACILITY  
HUNTINGTON BEACH, ORANGE COUNTY

**FINDINGS**

The Santa Ana Regional Water Quality Control Board (Santa Ana Water Board) hereby finds as follows:

**Introduction**

1. The Santa Ana Water Board is overseeing the cleanup and abatement of pollutants at the Former Weiser Lock Facility, located at 5555 McFadden Avenue in Huntington Beach (Site). The Former Weiser Lock Facility manufactured commercial and residential lock sets at the Site between 1979 to 1995. Investigations conducted at the Site have identified volatile organic compounds (VOCs) and 1,4-dioxane as pollutants in soils and groundwater at the Site. The Site is assigned Geotracker Global Identification No. SL208053860.
2. Cleanups at polluted sites such as the Former Weiser Lock Facility may be accomplished in whole or in part via the addition (discharge) of chemicals and other reactive materials (amendments) to soil and groundwater (in-situ), to promote remediation. A person or entity applying or proposing to discharge such amendments to soil or groundwater to promote remediation within a specified treatment zone must file a report of waste discharge (ROWD) pursuant to Water Code section 13260 and obtain waste discharge requirements (WDRs) for the discharge from the Santa Ana Water Board.
3. Masco Building Products Corporation (Discharger) has proposed to conduct in-situ chemical oxidation/in-situ soil stabilization (ISCO/ISS) to address the source area concentrations of VOCs and 1,4-dioxane observed in soil and groundwater beneath the former Degreaser Area at the Site (Attachment A, Figure 1).
4. The requirements for this Order were developed based upon the proposed scope of work, background information, and site-specific data presented in the "Report of Waste Discharge [ROWD] for 1,4-Dioxane Interim Remedial Measure Work

Plan” (dated October 20, 2022), as well as electronic submittals to Santa Ana Water Board staff from November 2022 to March 2023.

5. This Order consists of WDRs regulating the ISCO/ISS of the specified waste constituents, namely VOCs and 1,4-dioxane, in soil and groundwater at the Site. The Santa Ana Water Board has determined that issuance of these individual WDRs is more appropriate than enrollment under Order R8-2018-0092, *General Waste Discharge Requirements for In-situ Groundwater Remediation at Sites Within the Santa Ana Region* (General Order), given that the extent of the plume is beyond the Degreaser Area and Compliance Points per the definition of the General Order must be outside of the plume boundary.

### **Discharge Characteristics**

6. The covered discharge includes ISCO/ISS at the former Degreaser Area at the Site as an interim remedial measure (IRM) to prevent further migration of contaminants into groundwater (Attachment A, Figure 1).
7. Up to a total of 42 US tons of sodium persulfate (i.e. Klozur® SP), 420 US tons of Portland Cement (Type I/II CEMEX)<sup>1</sup> and 302,900 gallons of water are authorized to be applied into a treatment zone of approximately 3,500 square feet (sq. ft) to a depth of approximately 25 ft below ground surface (bgs).
8. The surface paving, aggregate, and subsurface soils to a depth of approximately 5 ft bgs within the proposed ISCO/ISS treatment area will first be excavated and directly loaded into haul trucks for potential treatment and re-use or disposal.
9. The slurry will be prepared at the batch plant by adding water and Klozur® SP in a mixing tank (up to 800 gallon capacity). It will then be pumped into another mixing tank (up to 800 gallon capacity), where Portland Cement will be added (using a hopper) to active the Klozur® SP (maximum slurry concentration of 35 grams per liter [g/L]) and provide a binder for the soils. A mud balance density test (American Society for Testing and Materials [ASTM] D4380) will be performed to verify slurry homogeneity prior to application into the treatment area. Two long-reach excavators (standard bucket and rotary tool) will be used to mix the slurry with the subsurface soils in each 10ft x 10ft x 25ft mixing cell (Cells: A, B and 1 to 41, Attachment A, Figure 1).

---

<sup>1</sup> The ISCO/ISS mix design consists of 1 percent (%) Klozur® SP (>99% weight) and 10% Portland Cement by weight based on the results of the bench scale treatability study.

10. Wet-grab samples will be collected from the mixed zone at regular intervals using ASTM D1632, cured for approximately 7 days before performing an Unconfined Compressive Strength (UCS) testing, using ASTM D2166 and hydraulic conductivity determination using ASTM D5084.
11. A network of seven groundwater wells will be monitored before and after ISCO/ISS remediation process takes place to ensure that groundwater quality standards are met outside the treatment area in both upgradient and downgradient monitoring wells. The groundwater monitoring wells are identified in Table 1 of the accompanying Monitoring and Reporting Program R8-2023-0008. Similarly, Table 2 states that baseline samples will be collected for all constituents prior to ISCO/ISS implementation and post-implementation samples will be collected for select constituents on a semimonthly, monthly and quarterly basis.
12. If mobile equipment (e.g., submersible pump, equalization/mixing tank, piping and hoses, etc.) is used at different areas of the Site, which may be impacted with different types of contaminants, appropriate decontamination measures must be applied in accordance with the project-specific Quality Assurance Protection Plan (QAPP)<sup>2</sup> to prevent cross-contamination.

### **Basin Plan and Related Regulatory Considerations**

13. Water Code section 13263 authorizes the Santa Ana Water Board to prescribe WDRs as to the nature of any proposed or existing discharge with relation to the conditions existing in the disposal area or receiving waters upon, or into, which the discharge is made or proposed. The WDRs must implement relevant water quality control plans (Basin Plans) and take into consideration the beneficial uses of water to be protected, the water quality objectives reasonably required for that purpose, other waste discharges, the need to prevent nuisance, and the provisions of Water Code section 13241.
14. The Santa Ana Water Board adopted a revised Water Quality Control Plan for the Santa Ana River Basin (Basin Plan) on March 11, 1994. The Basin Plan was subsequently approved by the State Water Resources Control Board (State Water Board) on July 21, 1994. Subsequent revisions to the Basin Plan have also been adopted by the Santa Ana Water Board and approved by the State

---

<sup>2</sup> A QAPP contains 24 elements that describe a project's goals, data needs and assessment, responsible individuals, quality assurance plan, quality control measures (i.e. measurement quality objectives (MQOs)), and reporting deadlines.

[https://www.waterboards.ca.gov/water\\_issues/programs/quality\\_assurance/qapp.html](https://www.waterboards.ca.gov/water_issues/programs/quality_assurance/qapp.html)

Water Board as recently as November 2022. The Basin Plan identifies beneficial uses and water quality objectives for waters within the Santa Ana Region, including various Groundwater Management Zones (GMZs).

15. The Site is located within the Orange GMZ. The Basin Plan states that the beneficial uses of groundwater in the Orange GMZ are:
  - a. Municipal and Domestic Supply (MUN),
  - b. Agricultural Supply (AGR),
  - c. Industrial Service Supply (IND), and
  - d. Industrial Process Supply (PROC).
16. This Order establishes WDRs pursuant to division 7, chapter 4, article 4 of the Water Code for discharges that are not subject to regulation under Clean Water Act section 402 (33 U.S.C. § 1342). These WDRs implement numeric and narrative water quality objectives for groundwater and surface waters established by the Basin Plan and other applicable state and federal laws and policies.
17. It is the policy of the State of California that every human being has the right to safe, clean, affordable, and accessible water adequate for human consumption, cooking, and sanitary purposes. Both the State Water Board and the Santa Ana Water Board recognized this right in Resolution No. 2016-0010 and Resolution R8-2019-0079, respectively. This Order supports the human right to water by including conditions to ensure proper cleanup and remediation of pollutants at the Site.
18. Consistent with Water Code section 13241, the Santa Ana Water Board, in establishing the requirements contained herein, considered factors including, but not limited to, the following:
  - a. Past, present, and probable future beneficial uses of water.
  - b. Environmental characteristics of the hydrographic unit under consideration, including the quality of water available thereto.
  - c. Water quality conditions that could reasonably be achieved through the coordinated control of all factors which affect water quality in the area.
  - d. Economic considerations.
  - e. The need for developing housing within the region.

- f. The need to develop and use recycled water.
19. Water Code section 13267 authorizes the Santa Ana Water Board to require technical and monitoring reports. Monitoring and Reporting Program (MRP) R8-2023-0008 establishes monitoring and reporting requirements necessary to evaluate compliance with the terms and conditions of this Order and to ensure protection of waters of the state. The burden, including costs, of preparing the technical and monitoring reports bears a reasonable relationship to the need for the reports and benefits to be obtained from them.
20. In accordance with California Code of Regulations, title 23, section 2200, a discharger for whom WDRs have been prescribed is required to submit an annual fee to the State Water Board. The annual fee is based on (1) the threat to water quality and (2) the complexity of the discharge, in accordance with the ratings in the annual fee schedule contained in section 2200. It is expected that the discharge covered by this Order will have a threat to water quality of Category 3 and a complexity rating of B, for a combined rating of 3-B. Category 3 is the lowest threat to water quality category, and Category B is the middle complexity rating, for dischargers that have a physical, chemical or biological treatment system, and do not meet the higher complexity rating definition for Category A. Discharges with a rating of 3-B contain pollutants that could degrade water quality or cause a minor impairment of designated beneficial uses within the treatment zone of the receiving groundwater.

#### **Antidegradation Analysis**

21. Pursuant to State Water Board Resolution No. 92-49, the Santa Ana Water Board must require actions for cleanup and abatement of discharges that cause or threaten to cause pollution or nuisance to conform to the provisions of State Water Board Resolution No. 68-16 (Resolution No. 68-16), *Statement of Policy with Respect to Maintaining High Quality Water in California*, and the Basin Plan. The Santa Ana Water Board must ensure that Dischargers are required to cleanup and abate the effects of discharges in a manner that promotes attainment of background water quality, or if background levels of water quality cannot be restored, the best water quality that is reasonable and complies with the Basin Plan, including applicable water quality objectives.
22. Resolution No. 68-16 generally prohibits the Santa Ana Water Board from authorizing discharges that will result in the degradation of high quality waters, unless it is demonstrated that any change in water quality will: (a) be consistent with maximum benefit to the people of the state, (b) not unreasonably affect beneficial uses, and (c) not result in water quality less than that prescribed in state and regional policies (e.g., the violation of one or more water quality

objectives). The Discharger must also employ best practicable treatment or control (BPTC) to minimize the degradation of high-quality waters.

23. The temporary degradation allowed by this Order within the in-situ treatment zone is consistent with Resolution No. 68-16 because: (a) the purpose of discharging amendments to the soil and groundwater is to accelerate and enhance remediation of both soil and groundwater pollution, and such remediation will benefit the people of the state; (b) the degradation is limited in scope and duration; (c) best practicable treatment and control, including adequate monitoring and hydraulic control to assure protection of water quality, are required by this Order; and (d) the proposed discharge is not anticipated to cause water quality objectives to be exceeded beyond the observation monitoring well network, and potential increases in concentrations above water quality objectives within the zone of distribution are expected to be temporary, and not result in any long-term deleterious effects on water quality.

#### **CEQA and Public Participation**

24. The Santa Ana Water Board is the lead agency pursuant to the California Environmental Quality Act (CEQA; Public Resources Code, section 21100 et seq.). The issuance of WDRs for the cleanup of the Site is exempt from CEQA in accordance with California Code of Regulations, title 14, section 15308 and section 15330.
25. In the past, the Santa Ana Water Board has conducted public outreach at various stages of cleanup at the Site, including recently in April 2022 distributing a Fact Sheet concerning the cleanup to nearby property owners surrounding the Site. There are no known tribal and/or disadvantaged communities in the vicinity of the Site.
26. The Santa Ana Water Board has notified interested agencies and persons of its intent to prescribe WDRs for the discharge associated with the ISCO/ISS IRM and has provided them with an opportunity to submit written comments.
27. The Santa Ana Water Board, in a public meeting held on May 5, 2023, heard and considered all oral comments pertaining to the WDRs.

#### **REQUIREMENTS**

**IT IS HEREBY ORDERED**, pursuant to Water Code sections 13263 and 13267, that the Discharger shall comply with the following:

**A. Discharge Prohibitions**

1. The discharge of amendments or waste in a manner other than as described in this Order is prohibited.
2. The discharge of treated or untreated solid or liquid waste to a surface waters or tributaries of surface waters is prohibited, unless authorized under a separate permit issued by the Santa Ana Water Board or State Water Board.
3. The use of any amendment other than the compounds identified in Finding 7 above is prohibited.
4. The discharge of any radiological, chemical, or biological warfare agent or high level radiological waste is prohibited.
5. Discharges to groundwater and the surrounding geological formation that are conducted in a manner that increases the mobility and/or extent of the contaminants in groundwater through fracturing of the geologic formation are prohibited. Additionally, fracturing of an aquitard that separates two distinct water-bearing zones is prohibited under any condition.
6. The discharge of amendments or waste to property that is not owned or under the control of the Discharger is prohibited. The property “under the control” of the Discharger includes the horizontal borders of the treatment zone where the Discharger holds an access agreement with the overlying property owner for purposes of investigation and remediation.

**B. Discharge Limitations and Specifications**

1. The amendment injection program shall be implemented in such a manner as to minimize or prevent the surfacing of wastes or an overflow of wastes or chemicals used in the treatment process. Any injection that results in excessive surfacing of waste shall be discontinued, and measures shall immediately be taken to eliminate further surfacing.
2. The discharge of amendments shall not cause the total dissolved solids (TDS) concentration to exceed 580 milligrams per liter (mg/L), as specified in Table 4-1 of the Basin Plan for the Orange Groundwater Management Zone (GMZ), at any location outside the treatment area, with compliance determined at the upgradient and downgradient wells specified in the Monitoring and Reporting Program. If the background TDS levels prior to injection of amendment exceed the water quality objective for TDS in the

Orange GMZ, the discharge of amendments shall not cause increases of this parameter over the background levels.

3. The discharge of amendments shall not cause nitrogen as nitrate-nitrogen ( $\text{NO}_3\text{-N}$ ) concentration to exceed 3.4 mg/L, as specified in Table 4-1 of the Basin Plan for the Orange GMZ, at any point outside the treatment area, with compliance determined at the upgradient and downgradient wells specified in the Monitoring and Reporting Program. If the background  $\text{NO}_3\text{-N}$  levels prior to injection of amendment exceed the water quality objective for  $\text{NO}_3\text{-N}$  in the Orange GMZ, the discharge of amendments shall not cause increases of this constituent over the background levels.
4. The discharge of amendments shall not cause the pH of the receiving groundwater to either exceed or be below the range of 6 to 9, at any point outside the treatment area, with compliance determined at the upgradient and downgradient wells specified in the Monitoring and Reporting Program.
5. The discharge of amendments shall not cause the remediation-target constituents, including their intermediate degradation products, to exceed background concentrations at any location outside of the treatment area, with compliance determined at the upgradient and downgradient wells specified in the Monitoring and Reporting Program.
6. The discharge of amendments shall not cause any other applicable water quality objectives specified in the Basin Plan to be exceeded in the affected groundwater at any point outside the treatment area, with compliance determined at the upgradient and downgradient wells specified in the Monitoring and Reporting Program. If the background levels for any constituents prior to injection of amendment exceed water quality objectives for the Orange GMZ, the discharge of amendments shall not cause increases of constituents over the background levels.
7. The discharge shall not cause groundwater to contain taste- or odor-producing substances at concentrations that cause a nuisance or adversely affect beneficial uses at any location outside the treatment area, with compliance determined at the upgradient and downgradient wells specified in the Monitoring and Reporting Program.
8. The discharge of amendments shall not cause the concentrations of chemical constituents of the receiving groundwater, which is designated for use as domestic and municipal supply, to exceed state or federal maximum contaminant levels (MCLs) and/or notification levels (NLs) for drinking water at any location outside treatment area, with compliance

determined at the upgradient and downgradient wells specified in the Monitoring and Reporting Program. If the background levels for any constituents prior to injection of amendment exceed the state or federal MCLs and/or NLS, the discharge of amendments shall not cause increases of constituents over the background levels.

9. The injection or reuse of treated groundwater shall be limited to the same aquifer where the impacted groundwater was withdrawn for treatment. Re-injection of treated groundwater to which materials or amendments have been added shall be limited to the same aquifer and within the treatment zone.

### C. Monitoring and Reporting Program

1. The Discharger shall submit technical and monitoring reports to the Santa Ana Water Board in accordance with the Monitoring and Reporting Program R8-2023-0008 and as amended by the Executive Officer.
2. Among other things, the Monitoring and Reporting Program requires the Discharger to evaluate changes in geochemistry that may alter the oxidation/reduction state of one or more constituents, and consequently may result in the production of undesirable compounds (such as hexavalent chromium) during the oxidation or reduction process of the in-situ remediation under these WDRs. Anticipated negative impacts to geochemistry as a result of implementation of remediation at the Site shall be addressed pursuant to the Contingency Plan identified in item K of the ROWD.

### D. Provisions

1. **Noncompliance** – The Discharger shall comply with all of the terms, requirements, and conditions of this Order and Monitoring and Reporting Program (MRP) R8-2023-0008. Noncompliance is a violation of the Porter-Cologne Water Quality Control Act (Wat. Code, §13000 et seq.) and grounds for: (1) an enforcement action; (2) termination, revocation and reissuance, or modification of this Order; or (3) denial of an Order renewal application.
2. **Proper Operation and Maintenance** – The Discharger shall, at all times, properly operate and maintain all facilities and systems of management and control (and related appurtenances) installed or used by the Discharger to achieve compliance with this Order. Proper operation and maintenance include, but are not limited to, effective performance, sufficient funding, appropriate quality assurance procedures, proper

operator staffing and training, and adequate process controls. This provision requires the operation of backup or auxiliary facilities or similar systems when necessary to achieve compliance with the conditions of this Order.

3. **Reporting of Noncompliance** – The Discharger shall report any noncompliance that may endanger the environment. Information shall be provided orally to the Santa Ana Water Board office and the Office of Emergency Services within 24 hours of when the Discharger becomes aware of the incident. If noncompliance occurs outside of business hours, the Discharger shall leave a message on the Santa Ana Water Board’s office voicemail. A written report shall also be provided within five business days of the time the Discharger becomes aware of the incident. The written report shall contain a description of the noncompliance and its cause, the period of noncompliance, the anticipated time to achieve full compliance, and the steps taken or planned, to reduce, eliminate, and prevent recurrence of the noncompliance. All other forms of noncompliance shall be reported with the Discharger’s next scheduled Monitoring Report, or earlier if requested by the Executive Officer.
4. **Duty to Mitigate** – The Discharger shall take all reasonable steps to minimize or prevent any discharge in violation of this Order that has a reasonable likelihood of adversely affecting human health or the environment.
5. **Familiarity with Order** – The Discharger shall ensure that all site-operating personnel are familiar with the content of this Order and maintain a copy of this Order at the Site.
6. **Material Changes** – Before initiating a new discharge or making a material change in the character, location, or volume of an existing discharge, the Discharger shall report all pertinent information in writing to the Santa Ana Water Board, and if required by the Santa Ana Water Board, obtain revised requirements before any modifications are implemented. A material change includes, but is not limited to, the following:
  - a. An increase in area or depth to be treated beyond that specified in the Order; or
  - b. A change in the type of amendment being used at the Site.

7. **Inspection and Entry** – The Discharger shall allow the Santa Ana Water Board or an authorized representative, upon the presentation of credentials and other documents as may be required by law, to:
  - a. Enter upon the premises regulated by this Order, or the place where records are kept under the conditions of this Order;
  - b. Have access to and copy, at reasonable times, any records kept under the conditions of this Order;
  - c. Inspect at reasonable times any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this Order; and
  - d. Sample or monitor at reasonable times, for the purpose of assuring compliance with this Order, or as otherwise authorized by the Water Code, any substances or parameters at any location.
  
8. **Records Retention** – The Discharger shall retain copies of all reports required by this Order and the associated MRP. Records shall be maintained for the duration of cleanup activities and a minimum of five years from the date of the sample, measurement, report, or application. Records may be maintained electronically. This period may be extended during the course of any unresolved litigation or when requested by the Santa Ana Water Board’s Executive Officer.
  
9. **Change in Ownership** – This Order is not transferable to any person without written approval by the Santa Ana Water Board’s Executive Officer. Prior to any change in ownership, the Discharger shall notify the Executive Officer in writing at least 30 days in advance. The notice must include a written transfer agreement between the existing owner and the new owner. At a minimum, the transfer agreement must contain a specific date for transfer of responsibility for compliance with this Order and an acknowledgment that the new owner or operator is liable for compliance with this Order from the date of transfer. The Santa Ana Water Board may require modification or revocation and reissuance of this Order to change the name of the Discharger and incorporate other requirements as may be necessary under the Water Code.
  
10. **Monitoring Wells**– The Discharger shall comply with all notice and reporting requirements of the California Department of Water Resources and with any well permitting requirements imposed by a local agency regarding the construction, alteration, destruction, maintenance, or abandonment of any monitoring wells used for compliance with this Order

and the accompanying MRP, as required under Water Code sections 13750 and 13755 and local agency requirements.

11. **Qualified Professionals** – In accordance with Business and Professions Code sections 6735, 7835, and 7835.1, engineering and geologic evaluations and judgments shall be performed by or under the direction of California registered professionals (i.e., civil engineer, engineering geologist, geologist, etc.) competent and proficient in the fields pertinent to the required activities. All technical reports required under this Order that contain work plans, describe the conduct of investigations and studies, or contain technical conclusions and recommendations concerning engineering and geology shall be prepared by or under the direction of appropriately qualified professional(s), even if not explicitly stated. Each technical report submitted by the Discharger shall contain a statement of qualifications of the responsible licensed professional(s) as well as the professional's signature and/or stamp of the seal. Additionally, all field activities are to be conducted under the direct supervision of one or more of these professionals.
12. **Certification of Submitted Documents** – All documents submitted to the Santa Ana Water Board shall be signed and certified as follows:
  - a. Documents shall be submitted with signatures from the following persons, depending on the type of Discharger:
    - i. For a corporation – by a responsible corporate officer of at least the level of vice-president.
    - ii. For a partnership or sole proprietorship – by a general partner or the proprietor, respectively.
    - iii. For a municipality, state, federal or other public agency – by either a principal executive officer or ranking elected official.
    - iv. For a military installation – by the base commander or the person with overall responsibility for environmental matters in that branch of the military.
  - b. A duly authorized representative of a person identified in subsection (a) of this provision may sign and certify documents only if:
    - i. The authorization is made in writing by the person described in subsection (a) of this provision;

- ii. The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity; and
  - iii. The written authorization is submitted to the Executive Officer.
- c. Any person signing a document under this provision shall make the following certification:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

13. **Compliance with Other Laws** – This Order does not authorize the violation of any other applicable federal, state, or local laws and regulations.
14. **Other Permits** – This Order does not alleviate the responsibility of the Discharger to obtain other applicable local, state, and federal permits necessary for compliance with this Order; nor does this Order prevent imposition of additional standards, requirements, or conditions by any other regulatory agency.
15. **No Vested Right to Discharge** – In accordance with Water Code section 13263(g), this Order does not create a vested right to continue to discharge and is subject to rescission and/or modification. The discharge of waste into the waters of the state is a privilege, not a right.
16. **Modification, Revocation, Termination** – This Order may be modified, revoked and reissued, or terminated for cause. The filing of a request by the Discharger for an Order modification, rescission, or reissuance, or the Discharger's notification of planned changes or anticipated noncompliance, does not stay any Order condition. Causes for modification include, but are not limited to, the violation of any term or condition contained in this Order, a material change in the character,

location, or volume of discharge, a change in land application plans or disposal practices, or the adoption of new regulations by the State Water Board, Santa Ana Water Board (including revisions to the Basin Plan), or federal government.

17. **Severability** – The provisions of this Order are severable. If any provision of this Order is found invalid, the remainder of this Order shall not be affected.
18. **Effective Date** – This Order becomes effective on the date of adoption by the Santa Ana Water Board.

### LIST OF ATTACHMENTS

Attachment A—Figure 1 – *Groundwater Monitoring Network and Treatment Area, March 2023.*

Monitoring and Reporting Program R8-2023-0008

### ENFORCEMENT

The Santa Ana Water Board reserves the right to take any enforcement action authorized by law. Accordingly, failure to timely comply with any provisions of this Order may subject the Discharger to enforcement action. Such actions include, but are not limited to, the assessment of administrative civil liability pursuant to Water Code sections 13323, 13268, and 13350, a Time Schedule Order (TSO) issued pursuant to Water Code sections 13300 and 13308, or referral to the California Attorney General for recovery of judicial civil liability. Failure to comply with this Order may result in the assessment of administrative civil liability of up to \$10,000 per violation, per day, depending on the violation.

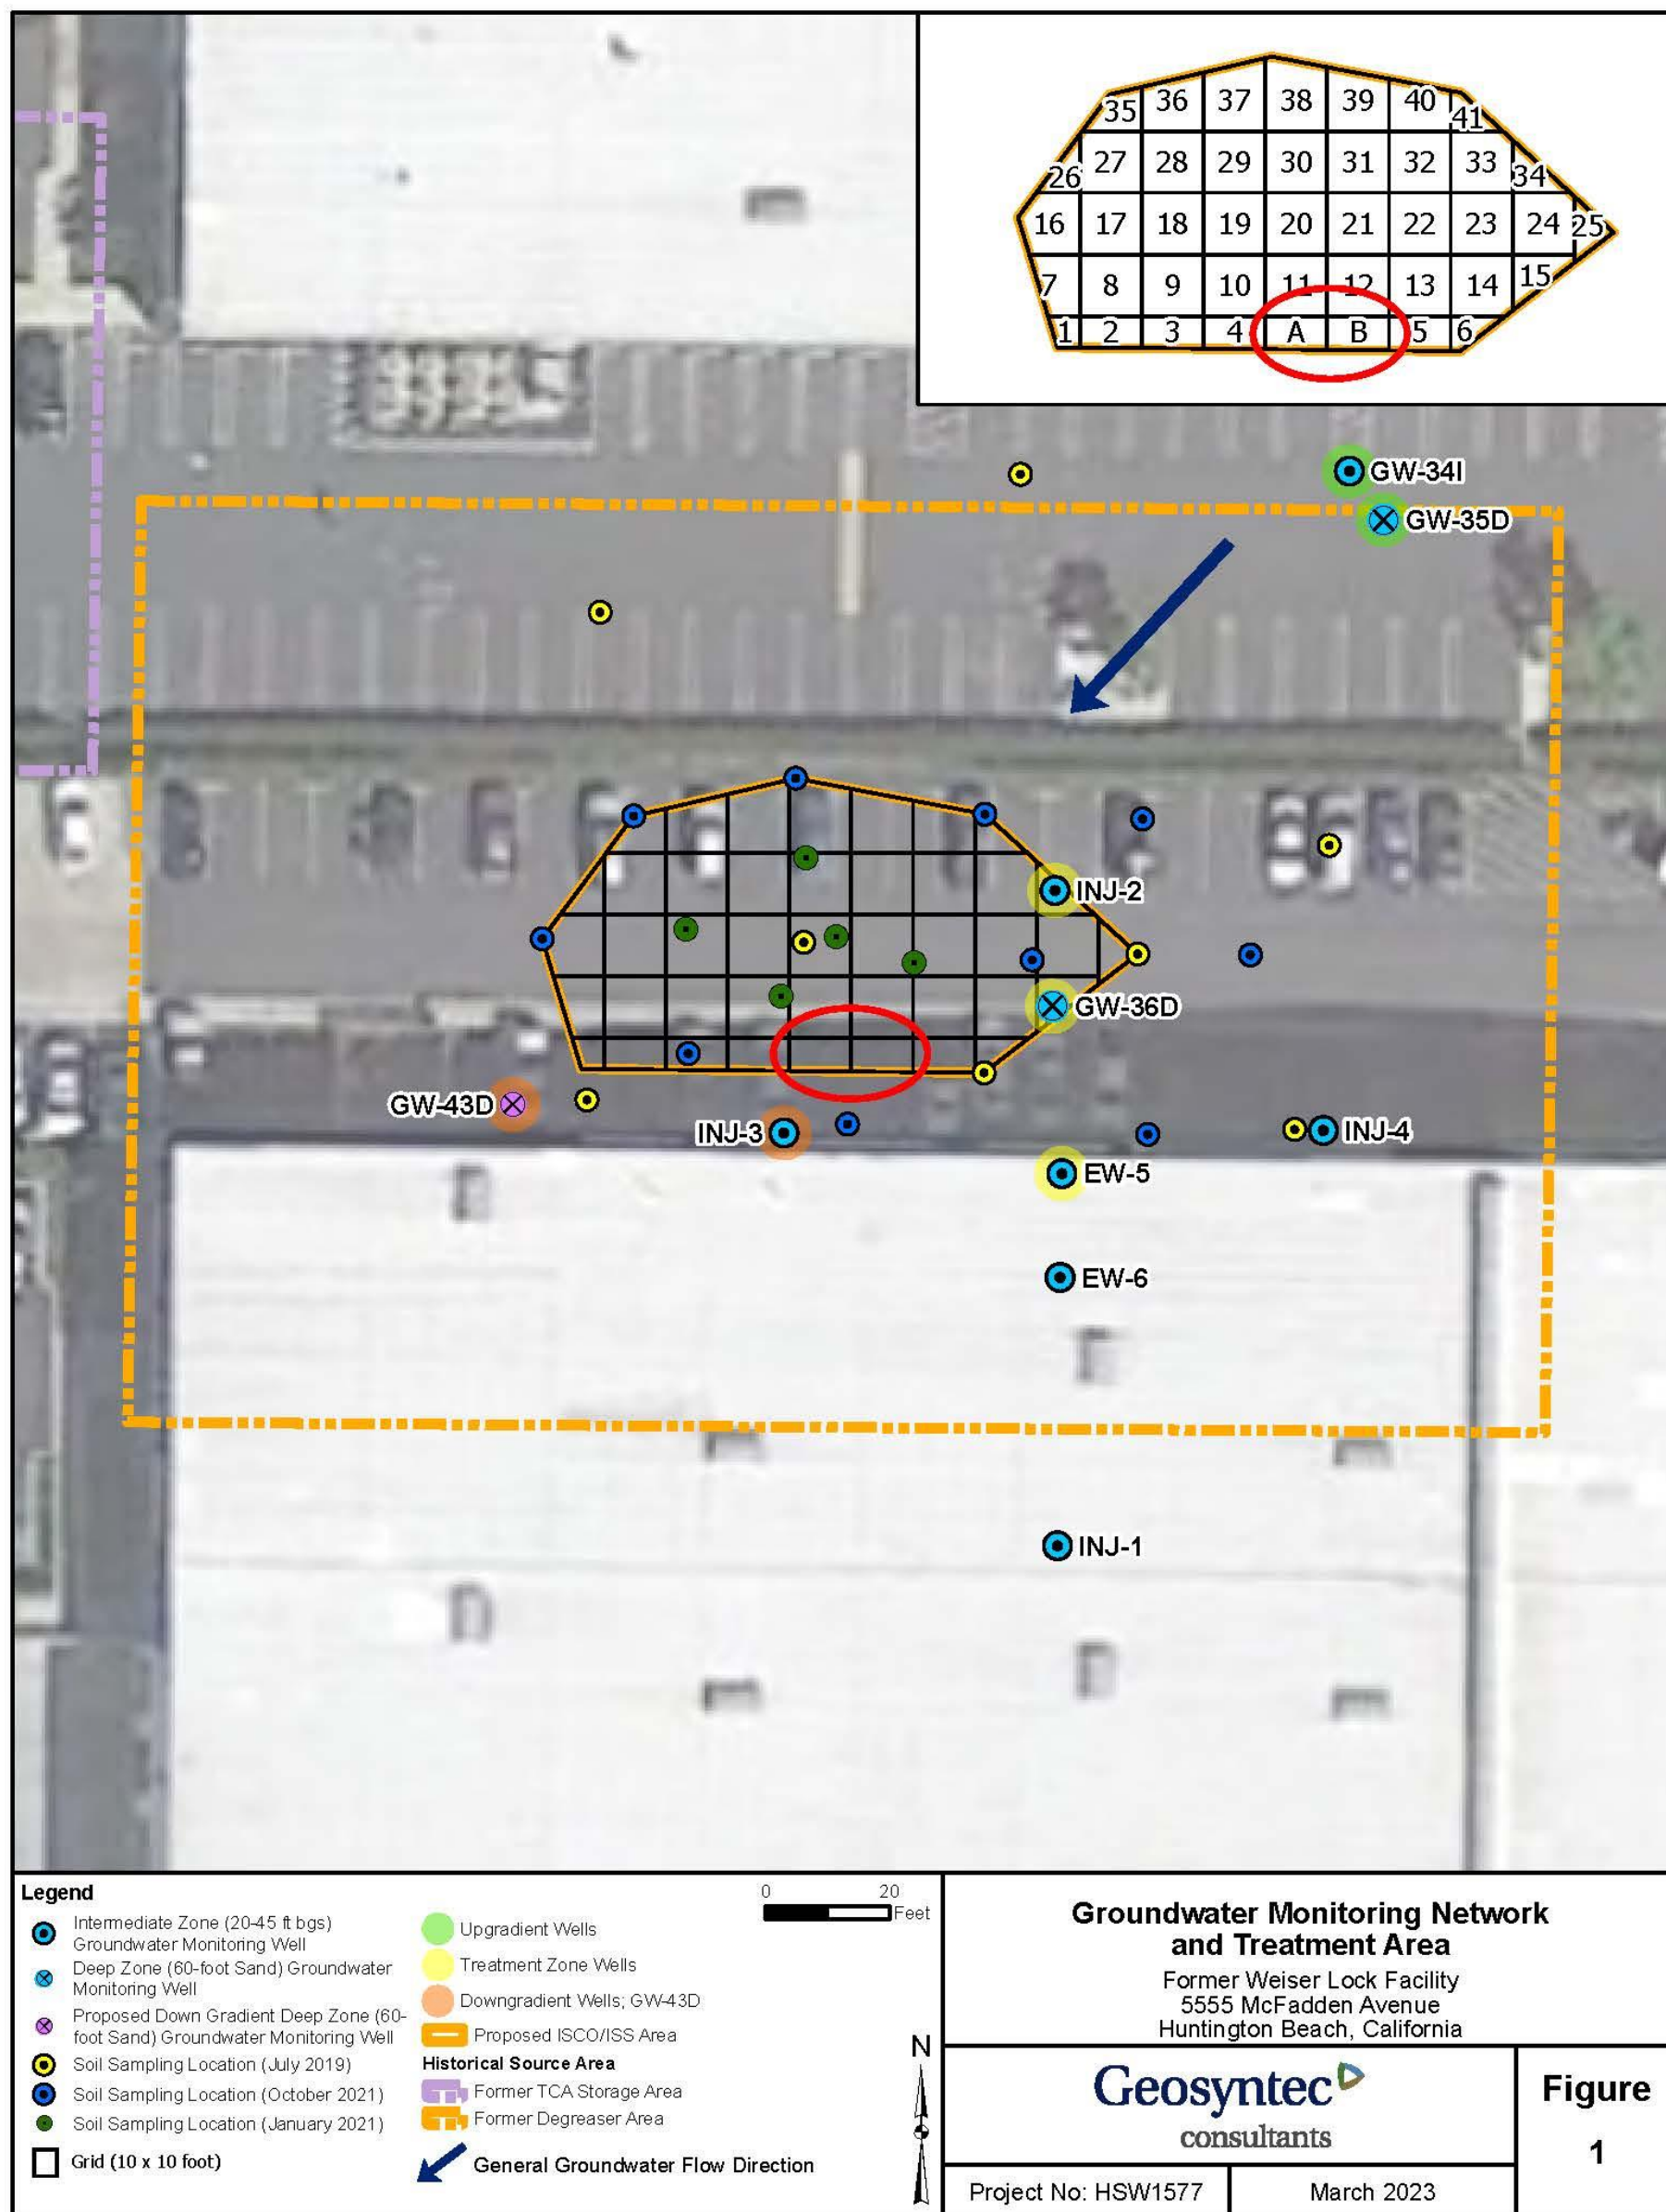

### ADMINISTRATIVE REVIEW

Any person aggrieved by this Santa Ana Water Board action may petition the State Water Board for review in accordance with Water Code section 13320 and California Code of Regulations, title 23, section 2050 et seq. To be timely, the petition must be received by the State Water Board by 5:00 pm on the 30th day after the date of this Order; if the 30th day falls on a Saturday, Sunday or state holiday, the petition must be received by the State Water Board by 5:00 pm on the next business day. The law and regulations applicable to filing petitions are available on the [State Water Board website](#)

([http://www.waterboards.ca.gov/public\\_notices/petitions/water\\_quality](http://www.waterboards.ca.gov/public_notices/petitions/water_quality)). Copies will also be provided upon request.
