Subject: Comments Comment Letter – Urban Water Conservation Workshop due 4.14.2016
Noon

We do not understand the emphasis on:

Climate Adjustment
Growth Adjustment
New, Local, Drought-Resilient Supply Credit

We have regional cooperation through the IRWMPs, but they do not address the sources of supply outside of the geographic boundaries of the IRWMP. They do not address all water suppliers.

We are not clear how regional cooperation will be achieved.

Infrastructure is not addressed. Broken pipes waste potable water. This should be addressed in urban conservation.

Growth adjustment needs to address density growth, as part of state legislation and Cap and Trade programs from other boards.
