

Attachment F

Mitigation Tables

Attachment F: Tables 1 - 3

Table 1. Summary of Restoration for Temporary Impacts to State Waters

Jurisdictional Feature Type	Devers-Valley Line Restoration (acres)	CRS-Devers Line Restoration (acres)	
Non-Wetland Waters			
Braided Ephemeral Channel	2.66	6.78	9.44
Low-Flow Channel	4.17	0.41	4.58
Ditches/Culverts	0.01	—	0.01
Narrow Ephemeral Channel	0.37	1.10	1.47
Unforeseen Impacts	TBD	TBD	0.50
Total*	7.21	8.29	15.99

* Acreage may not total due to rounding.

Table 2. Summary of Temporary Impacts to State-Jurisdictional Waters and Proposed Mitigation

Jurisdictional Feature Type	Mitigation Ratio	Devers-Valley Line Temporary Impacts (acres)	Devers-Valley Line Restoration (acres)	CRS-Devers Line Temporary Impacts (acres)	CRS-Devers Line Restoration (acres)
Non-Wetland Waters					
Braided Ephemeral Channel	1:1	2.66	2.66	6.78	6.78
Low-Flow Channel	1:1	4.17	4.17	0.41	0.41
Ditches/Culverts	1:1	0.01	0.01	—	—
Narrow Ephemeral Channel	1:1	0.37	0.37	1.10	1.10
Non-Wetland Waters Subtotal	1:1	7.21	7.21	8.29	8.29
Wetlands					
Wetlands	1:1	—	—	—	—
Total*	1:1	7.21	7.21	8.29	8.29

* Acreage may not total due to rounding.

Table 3. Summary of Permanent Impacts to State-Jurisdictional Waters

General Habitat	Vegetation Community	Total Impacts	Mitigation Ratio	Proposed Mitigation
Non-Native Vegetation/Developed Areas	Disturbed Land	0.04	TBD	TBD
Scrub/Sonoran Desert Scrub	Scalebroom Scrub	0.08	TBD	TBD
	Creosote Bush Scrub	0.02		TBD
	Catclaw Acacia Thorn Scrub	0.01		TBD
	Cheesebush Scrub	0.05		TBD
Riparian Forest and Woodland	Blue Palo Verde-Ironwood Woodland	0.03	TBD	TBD

General Habitat	Vegetation Community	Total Impacts	Mitigation Ratio	Proposed Mitigation
	Blue Palo Verde Woodland	0.12		TBD
	Ironwood Woodland	0.02		TBD
	Desert-Willow Woodland	0.03		TBD
	California sycamore woodlands	0.01		TBD
Non-Vegetated Wash	Sandy to Cobbly Wash Bottom	0.47	TBD	TBD
Construction Footprint Modifications	N/A	0.13	TBD	TBD
Total	—	1.00*		TBD

* Acreage may not total due to rounding.

Table Note: All impacts to state waters are non-wetland, ephemeral drainages. However, to assess the functions and values of the proposed impact areas, the underlying vegetation community for each impact to state waters was analyzed. Table 6 summarizes the impacts to jurisdictional waters by vegetation community. In summary, it is estimated that 619 acres of state waters will be preserved within the 1,874-acre Devers Palo Verde Preserve in Riverside County. After all the parcels in the Preserve have been acquired and recorded, surveys will be conducted to determine the exact acreage of state waters and underlying vegetation communities within the Preserve. After the information is collected, the final amount of compensatory mitigation for state waters and mitigation ratios will be calculated and updated in the Final Conceptual Wetlands Mitigation and Monitoring Plan.
