Re: 2012 NPDES Annual Report

State Water Resources Control Board,

This letter is intended to satisfy the annual reporting requirement for the Statewide General NPDES Permit for the Discharge of Aquatic Pesticides to Surface Waters of the United States for Vector Control, Water Quality Order No. 2012-0003-DWQ General Permit No. CAG 990004 (General Permit).

Attached are the required components of the Permit's Annual Permit (Executive Summary, Attachment A, Attachment B, and Attachment C).

Respectfully,

A handwritten signature in black ink, appearing to read "M. C. Ball", is written over a light gray rectangular background.

Matthew C. Ball
District Manager

1. Annual Report

a. Executive Summary

Butte County Mosquito & Vector Control District (District) complied with the applicable components of the General NPDES Permit for Biological and Residual Pesticide Discharges from Vector Control Applications (General Permit). The District is a member of the MVCAC NPDES Permit Coalition and the Coalition conducted all required chemical and physical monitoring. The results of the Coalition's monitoring will be included in the Coalition Annual Report that will be sent separately to the SWRCB and Regional Boards.

The District made 1346 larvicide applications and 1886 adulticide applications to waters of the U.S. during the 2012 calendar year. The log of these applications can be found in Attachment B. In this first year of implementation, the District planned visual monitoring work based on historical patterns of frequency and emergence during the mosquito season, and to coincide with the concentration of the greatest number of sites that peak in late summer. District plans sought to reduce loss of critical staff time for visual monitoring where long distance travel to emergence sites would be required and to minimize loss in the District's ability to prevent emergence at the greatest number of larval habitat sites. As a result of the determination by the SWRCB to suspend visual monitoring in July, to ensure that the District reached as many larval sites as possible to prevent West Nile virus, the District performed Visual Monitoring of <10% of individual application sites identified as "Waters of the US" until July 2012. The visual monitoring completed by the District in the first half of the year found that there is no observable change in water quality between the background, event, and post event time periods-see monitoring log sheets. The SWRCB notified the permit holders in a letter to MVCAC dated July 13, 2012 that because the visual monitoring requirements were "interfering with the need for maximal efficient application to adequately protect human health from vector-borne diseases like West Nile Virus," that the visual monitoring was no longer required by individual Districts. The District continued to follow the guidelines of its Pesticide Application Plan (PAP).

The District is a member of the Mosquito and Vector Control Association of California (MVCAC) Monitoring Coalition. The MVCAC Coalition completes the physical and chemical monitoring required by the Vector Control Permit. As part of the MVCAC Coalition, the District became aware of an exceedance of the Instantaneous Maximum Monitoring Trigger of 0.014 µg/L for piperonyl butoxide (PBO) in PBO/pyrethrin mixtures following an application of PBO/pyrethrin (Pyroicide 7396 - EPA Reg. No. 1021-1569 on November 14, 2012. The concentration of PBO in one "event" sample collected approximately 21 hours after the application was reported as 0.1 µg/L. The exceedance was reported to the State Water Resources Control Board (SWRCB) and the Central Valley Regional Water Quality Control Board (Region 5) within 24 hours of the District's awareness of the circumstance, and a five-day written report was submitted within the necessary time frame. An investigation of the exceedance was conducted as required by the five-day written report. No adverse effects were witnessed as a result of this potential noncompliance event.

b. Summary of Monitoring Data

The District began the year by complying with the visual monitoring requirements of the permit. See Footnote 1 of Tables C-1 and C-2 in Amended Water Quality Control Order No. 2011-0002-DWQ, General Permit No. CAG990004. These requirements required a tremendous amount of time to monitor including a number of revisits to specific sites to gather the necessary information. Most critically, time spent revisiting old sites caused delay in getting to new sites. Given the short lifecycle of the mosquito, this greatly exacerbated the task of looking for and treating mosquito breeding sites early in their lifecycle when treatment is more concentrated and effective. Recognizing the need of mosquito control districts to quickly find and treat mosquito breeding sites to prevent the spread of disease, such as West Nile virus, the SWRCB issued a letter to MVCAC dated July 13, 2012 that indicated the visual monitoring requirement would no longer be required of individual Districts.

Per the instructions in the letter, the Coalition will provide information on the incidence of West Nile Virus and other similar public health threats in the Coalition's annual report. For the reasons stated above, the District will no longer be collecting visual monitoring data.

c. BMP Identification

BMP's utilized by the District are outlined in the District's PAP. These include; emphasis on reducing mosquito breeding habitat through non-chemical means, training employees to prevent spills and applying appropriate amount of chemical in each treatment area, calibrate application equipment and use a biology based assessment for determining treatment thresholds.

d. Violation Discussion

As part of the MVCAC Coalition, the District became aware of an exceedance of the Instantaneous Maximum Monitoring Trigger of 0.014 µg/L for piperonyl butoxide (PBO) in PBO/pyrethrin mixtures following an application of PBO/pyrethrin (Pyrocyde 7396 - EPA Reg. No. 1021-1569 on November 14, 2012. The concentration of PBO in one "event" sample collected approximately 21 hours after the application was reported as 0.1 µg/L. The exceedance was reported to the State Water Resources Control Board (SWRCB) and the Central Valley Regional Water Quality Control Board (Region 5) within 24 hours of the District's awareness of the circumstance, and a five-day written report was submitted within the necessary time frame. An investigation of the exceedance was conducted as required by the five-day written report. No adverse effects were witnessed as a result of this potential noncompliance event.

e. Map of Applications

See Attachment A

f. Log of Applications made to Waters of the U.S.

Attachment B includes monthly reports of all application data on the covered application areas.

g. General Information on Applications

Attachment B includes information on dosage, concentration and quantity of each pesticide used which are derived from the individual pesticide labels.

h. Visual Monitoring Data

Visual Monitoring Data has been submitted to the State Water Board in the provided Monitoring Database Form (Attachment C).

i. BMP, PAP, Monitoring Program Recommendations

No recommendations are being proposed to improve the current BMP's, PAP, or monitoring plan. Any changes to the Coalition Monitoring Plan will be highlighted in the Coalition Monitoring Annual Report.

j. Pesticide Application Log made to Waters of the U.S.

A representation of the pesticide application log is contained in Attachment B.

2. **Updated PAP Components**

N/A

3. **Self Monitoring Reports**

N/A

4. **Monitoring Reports**

The Coalition Monitoring Annual Report will summarize all physical measurements and chemical monitoring done for 2011 and 2012.
