

1. **Annual Report**

a. Executive Summary

Fresno Westside Mosquito Abatement (District) complied with the applicable components of the General NPDES Permit for Biological and Residual Pesticide Discharges from Vector Control Applications (General Permit). The District is a member of the MVCAC NPDES Permit Coalition and the Coalition conducted all required chemical and physical monitoring. The results of the Coalition's monitoring will be included in the Coalition Annual Report that will be sent separately to the SWRCB and Regional Boards.

The District made 171 applications to waters of the U.S. during the 2012 calendar year. The log of these applications can be found in Attachment 2. Beginning May 2012, the District performed Visual Monitoring of >10% of individual application sites identified as "Waters of the US". This monitoring was halted as of July 13, 2012, after notice of suspension from SWRCB citing that continued visual monitoring was "interfering with the need for maximal efficient application to adequately protect human health from vector-borne diseases like West Nile Virus." The District continued to follow the guidelines of its PAP.

b. Summary of Monitoring Data

The District began the year by complying with the visual monitoring requirements of the permit. See Footnote 1 of Tables C-1 and C-2 in Amended Water Quality Control Order No. 2011-0002-DWQ, General Permit No. CAG990004. These requirements required a tremendous amount of time to monitor including a number of revisits to specific sites to gather the necessary information. Most critically, time spent revisiting old sites caused delay in getting to new sites. Given the short lifecycle of the mosquito, this greatly exacerbated the task of looking for and treating mosquito breeding sites early in their lifecycle when treatment is more concentrated and effective. Recognizing the need of mosquito control districts to quickly find and treat mosquito breeding sites to prevent the spread of disease, such as West Nile virus, the SWRCB issued a letter to MVCAC dated July 13, 2012 that indicated the visual monitoring requirement would no longer be required of individual Districts.

Per the instructions in the letter, the Coalition will provide information on the incidence of West Nile Virus and other similar public health threats in the Coalition's annual report.

For the reasons stated above, the District will no longer be collecting visual monitoring data.

c. BMP Identification

BMP's utilized by the District are outlined in the District's PAP. These include; emphasis on reducing mosquito breeding habitat through non-chemical means,

training employees to prevent spills and applying appropriate amount of chemical in each treatment area, calibrating application equipment and using a biology based assessment for determining treatment thresholds.

d. Violation Discussion

No violations of the General Permit were observed.

e. Map of Applications

See Attachment 1

f. Log of Applications made to Waters of the U.S.

Attachment 2 includes monthly reports of all application data on the covered application areas.

g. General Information on Applications

Included in Attachment 2. Dosage, concentration and quantity of each pesticide used are derived from the individual pesticide labels.

h. Visual Monitoring Data

Visual Monitoring Data has been submitted to the State Water Board in the provided MVP Monitoring Database Form and Monitoring Log Sheets (Attachment 3).

i. BMP, PAP, Monitoring Program Recommendations

No recommendations are being proposed to improve the current BMP's, PAP, or monitoring plan. Any changes to the Coalition Monitoring Plan will be highlighted in the Coalition Monitoring Annual Report.

j. Pesticide Application Log made to Waters of the U.S.

A representation of the pesticide application log is contained in Attachment B

2. **Updated PAP Components**
