

# Napa County Mosquito Abatement District

2012 NPDES Annual Report

Order # 2011-0002-DWQ    NPDES # CAG 990004

## 1. Annual Report

### a. Executive Summary

During the 2012 calendar year the Napa County Mosquito Abatement District (District) continued full compliance with the General NPDES Permit for Biological and Residual Pesticide Discharges from Vector Control Applications, this Per the requirements of the permit, the District performed visual monitoring on more than ten percent of all individual application sites identified as or suspected to be “Waters of the United States.” No observable water quality changes were found in conjunction with the mosquito control applications at these sites (see Attachment B). The District also performed physical monitoring for methoprene applied in an agricultural and wetlands setting for use in the MVCAC NPDES Coalition’s annual report.

The District made 554 applications to waters of the U.S. during the 2012 calendar year. The log of these applications can be found in Attachment C. The District performed Visual Monitoring on more than ten percent of all application sites identified as or suspected to be “Waters of the United States” until July 2012. The visual monitoring completed by the District in the first half of the year found that there is no observable change in water quality between the background, event, and post event time periods-see monitoring log sheets Attachment B. The SWRCB notified the permit holders in a letter to MVCAC dated July 13, 2012, that because the visual monitoring requirements were “interfering with the need for maximal efficient application to adequately protect human health from vector-borne diseases like West Nile Virus,” that the visual monitoring was no longer required by individual Districts.

The District continued to follow its best management practices (BMP’s) outlined in its submitted Pesticide Application Plan (PAP) and determined them to be effective and appropriate. Therefore, the BMP’s described in the District’s current PAP will continue to be utilized for the 2013 monitoring year. The District will also continue to follow the guidelines of its PAP.

### b. Summary of Monitoring Data

The District began the year by complying with the visual monitoring requirements of the permit. See Footnote 1 of Tables C-1 and C-2 in Amended Water Quality Control Order No. 2011-0002-DWQ, General Permit No. CAG990004. These requirements required a tremendous amount of time to monitor including a number of revisits to specific sites to gather the necessary information. Most critically, time spent revisiting old sites caused delay in getting to new sites. Given the short lifecycle of the mosquito, this greatly exacerbated the task of

looking for and treating mosquito breeding sites early in their lifecycle when treatment is more concentrated and effective. Recognizing the need of mosquito control districts to quickly find and treat mosquito breeding sites to prevent the spread of disease, such as West Nile Virus, the SWRCB issued a letter to MVCAC dated July 13, 2012 that indicated the visual monitoring requirement would no longer be required of individual Districts.

The January-June 2012 visual monitoring performed at each site indicated there were no observable changes in water quality between the background, event and post-event observations (see attachment B). It should be noted that the MVCAC Coalition annual report has been scheduled for submission in March of 2013. This report will include a summary of all physical and chemical monitoring to date as highlighted in the permit. Per the instructions in the letter, the Coalition will also provide information on the incidence of West Nile Virus and other similar public health threats in the Coalition's report.

For the reasons stated above, the District will no longer be collecting visual monitoring data.

c. BMP Identification

The BMP's utilized and outlined in the District's PAP were found to be effective and consistent with a sound Integrated Vector Management Program. Examples of the District's BMP's include but are not limited to: public outreach, reduction of mosquito breeding habitats through the management of water flows and vegetative cover, biological control by use of mosquito eating fish and bacterial agents, routine staff training and equipment calibration to ensure proper application of larvicides and adulticides, staff training to minimize potential impacts to sensitive species and habitats, and regular assessments of the District's biologically based treatment thresholds.

d. Violation Discussion

No violations of the NPDES Permit were observed.

e. Map of Applications

Please see Attachment A – map of Napa County depicting larvicide and adulticide application areas for calendar year 2012.

f. Log of Applications Made to Waters of the United States

Please see Attachment C which includes application data for calendar year 2012.

g. General Information on Applications

Attachment C also includes the dosage, concentrations and amounts of each pesticide applied which were based on the individual pesticide labels.

- h. Visual Monitoring Data  
Please see Attachment B
  - i. BMP, PAP, Monitoring Program Recommendations  
No recommendations are being proposed to improve the current BMP's, PAP, or monitoring plan. Any changes to the Coalition Monitoring Plan will be highlighted in the Coalition Monitoring Annual Report.
  - j. Pesticide Application Log Made to Waters of the United States  
A representation of the pesticide application log is presented in Attachment C.
2. Updated PAP Components  
N/A
  3. Self Monitoring Reports  
N/A
  4. Monitoring Reports  
The Coalition Monitoring Annual Report will summarize all physical measurements and chemical monitoring done for 2011 and 2012.
