BACKGROUND INFORMATION

Currently, the nine Regional Water Boards regulate the potential impacts to water quality from grazing operations, on a region-by-region basis. In 2013, the staffs from the State Water Board and all nine Regional Water Boards, led by the Lahontan Regional Water Board, were directed to assess whether there could be improvements in efficiency and statewide consistency of their regulatory programs, while still accounting for regional differences. Five Focused Listening Sessions were held across the state to solicit comments from stakeholder groups. These meetings yielded valuable feedback. Principal among the feedback was that regional differences in rangeland type, grazing practices and water quality factors supported a regional approach to grazing rather than a statewide approach.

The proposed resolution would direct staff to discontinue discussions regarding a statewide grazing approach. The resolution would also direct Regional Water Boards to assess their current regulatory and/or non-regulatory strategies, and to consider adapting these strategies to

include implementation of best management practices (BMPs) that are supported by current information. These strategies would consider regional differences in hydrology, topography, climate, and land use, and include watershed-wide or regional monitoring programs to assess the effectiveness of the BMPs implemented under regulatory or non-regulatory actions.
