Subject: Comment Letter –Submittal Deadline Extension for Industrial General Permit Due 8.3.2015 Noon

These permits are difficult for the public to understand without clear direction and established information. These permits do not appear in the Planning and Land Use process of local governments such as the City of Los Angeles. Any mitigation is rarely mentioned in Mitigated Negative Declarations.

Since the LA County MS4 permit has numerous TMDLs, far beyond the approved USEPA list, would these permits also include those TMDLs, if a source point, with wet-weather and dry-weather compliance issues?

Regional Boards will develop TMDL-specific permit requirements, but waterbodies may cross jurisdictions. How will those requirements be handled if they differ between Regional Boards?

We are unclear of the baseline in relationship to Resolution 68-16.
