

**Cruise Report for the
Surface Waters Ambient Monitoring Program (SWAMP)
Bioaccumulation Screening Study
in
California Lakes and Reservoirs Year Two (FY 07-08)**

Sampling Dates: April 2008- November 2008

**Written by: Billy Jakl
CDFG/Marine Pollution Studies at Moss Landing Marine Laboratories
Updated: 06/01/09**

1.0 Introduction

This report describes the second year sampling activities of the popularly fished lakes and reservoirs in California for the SWAMP bioaccumulation of contaminants in fish tissue. Fish were collected from sites with guidance from SWAMP Bioaccumulation Oversight Group (BOG). The State Water Quality Control Board (SWQCB) work was authorized via FY 07-08 in support of Work Order 07SWBG01. The work for the FY 07-08 SWAMP SWQCB collection effort is a screening study that focuses on the beneficial use of fish from lakes and reservoirs in California. Year one cruise report describes the overall two year study design.

1.1 Cruise Report

1.1 Objectives

Year two's objectives were to sample the remaining one hundred lakes from the two hundred and sixteen popular lakes listed to be sampled. Below is a description of what and how water bodies were sampled in the second year period. A random draw was performed on popular fishing areas chosen from the book "California Fishing" by Tom Stienstra. Two hundred and sixteen popular fishing areas were identified and placed in a generalized random tessellation stratified (GRTS) design to produce a "Sampling Sequence" (Table 2 Quality Assurance Program Plan (QAPP) Appendices). The first one hundred sixteen popular fishing areas were sampled for fish tissue in Year One.

Lake size determined the number of fish and locations to be collected. The fish tissue would be used for specific analyses as directed by BOG and SWQCB in Work Order No. 07SWBG01 (see Section 1.3 below). Sample stations were reached by boating to a "species-specific" habitat with gill nets, hook and line and/or an electrofisher boat. Two species of fish (bottom feeder and predatory) were collected at all locations when species composition allowed for it.

1.2 Sampling personnel

Billy Jakl	MPSL/CDFG	Crew Lead
Dylan Service	MPSL/CDFG	Crew Lead
Gary Ichikawa	MPSL/CDFG	Crew Lead

Jon Goetzl	MPSL/CDFG	Research Tech
John Negrey	MPSL/CDFG	Research Tech
Steve Martenuk	MPSL/CDFG	Research Tech
Bryan Frueh	MPSL/CDFG	Research Tech
Sean Mundell	MPSL/CDFG	Research Tech

Assistance from DFG Reservoir Biologist

Jay Rowan
Amber Rossi
Monty Currier

1.3 Authorization to collect samples

All sampling personnel are MPSL staff (through San Jose State University Foundation) contracted through CDFG to conduct the sample collection activities listed herein. The funding and authorization to collect the samples described herein is contained in the State Water Resources Control Board (SWRCB) Work Order 07SWBG01, including the description of the number samples and locations necessary to be collected at each water body.

1.4 Station reconnaissance and selection

CDFG /MPSL conducted the pre-sample collection reconnaissance activities from a list of water bodies provided by BOG and SWQCB. After reconnaissance, one hundred two bodies were considered sampleable. Two lakes were added to the sample draw to offset year one lakes “sample failures”. Water bodies were removed from the list due to the lack of: water, fish, fresh water or access. BOG and SWQCB authorized all water bodies for fish collection and for specific types of tissue analyses as set forth in the Work Order 07SWBG01.

1.5 Summary of types of samples authorized to be collected

After reconnaissance, a total of one hundred two water bodies were authorized for sample collection effort, in order to assess the bioaccumulation of contaminants in fish tissue. The target species were fish that are commonly caught and consumed by anglers and are good indicators of mercury, synthetic organics or selenium bioaccumulation. Two types of species were chosen based on their ability to best indicate the above contaminants. Top predatory species (ex. largemouth bass or trout) were targeted because mercury is biomagnified in tissue. Bottom-feeders (ex. carp or catfish) were collected as a second species due to their high lipid content which bio-accumulate organics. Sample size was based on lake size in hectares, for more detailed information reference section “III C” of the QAPP appendices. Analysis authorization dictates tissue compositing and analysis (QA/QC requirements-preservatives, aliquoting, cooling, etc.).

Physical parameters were collected for each fish, which included: weight, total length, fork length, sex and presence of any abnormalities. A cross-section (~10cm) steak of tissue was collected from behind the head and was then wrapped in aluminum foil and placed in a zipper-closure bag and

stored on dry ice for the duration of the trip. At the MPSL/DFG lab, samples were stored in a freezer until they were processed for authorized analysis, per appropriate SOP's.

Scales were collected from black bass species for age growth analysis used in an age regression with mercury concentration. Black bass species were used for this analysis due to their high correlation of age to mercury concentration.

1.6 Discussion

Lack of water and fish were the major problems encountered during sampling. Unseasonably dry years made launching difficult. Some of the boat launches required creative use of portable ramps, rocks, and debris.

1.7 Results

Out of the one hundred two water bodies authorized to be sampled for fish, ninety-nine were sampled and had fish tissue collected. Three sites were not sampled due to lack of water or fish. Scales were taken from all black bass species collected.

1.8 Description of Sample Collection Stations

Multiple CDFG/MPSL teams sampled the authorized lakes and reservoirs. Descriptions and maps of sample collection for popular fishing water bodies, access issues, and species sampled are in the table below. Table 1.8.1 is linked to the description for the water bodies sampled.

1.8.1 Table of Contents for Sample Collection in Popular Water Bodies

Water Body Name (Code)	Page	Water Body Name (Code)	Page
Almaden Lake (205PAL221)	6	Cherry Lake (536PCY047)	24
Antelope Lake (518PAL175)	7	Clear Lake (513PCL173)	25
Bass Lake (540PBL098)	8	Cleone Lake (113PCL118)	27
Beardsley Lake (534PBD132)	10	Convict Lakes (603PCL163)	28
Big Lake (526PBL034)	11	Copco Lake (105PCL181)	29
Big Reservoir (514PBR153)	12	Courtright Reservoir (552PCR178)	30

2008 BOG Cave and Lily Lake (527PCL207, 527PLL159)

Latitude: 41.98047, 41.97666

Longitude: -120.20956, -120.21009

Collection Method: Hook and Line (Cave Lake), electrofisher boat (Lily Lake)

Date (s) of Collection: July 22, 2008 (Trip 40)

Samplers: Billy Jakl, Dylan Service

Fish caught:

(Cave Lake) Brook Trout										
TL (mm)	200	201	206	208	211	223	224	224	232	251
Tag #	A0955	A0954	A0958	A0957	A0951	A0952	A0949	A0953	A0950	A0956

Comments: The site was accessed through the campground. Hook and line was used to collect a sample of brook trout (10 fish). No other fish were present.

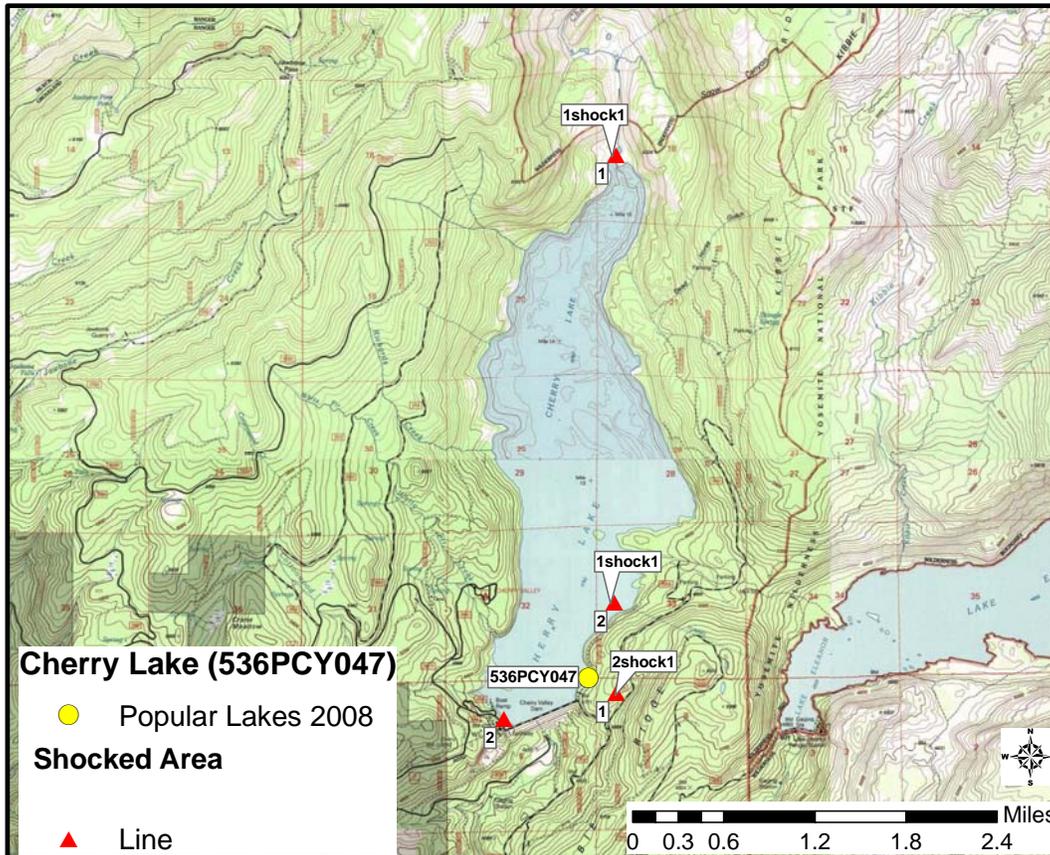

Fish caught:

(Lily Lake) Rainbow Trout										
TL (mm)	249	250	258	264	269	273	284	286	292	298
Tag #	A0970	A0972	A0977	A0973	A0969	A0974	A0976	A0978	A0971	A0975

Comments: The sampling vessel was launched from the bank near the campground. A sample of rainbow trout (10 fish) was collected using the electrofisher boat. Brook trout was also present.

Back to Table

2008 BOG Cherry Lake (536PCY047)

Latitude: 37.97920

Longitude: -119.90511

Collection Method: Electrofisher boat

Date (s) of Collection: June 30, 2008 (Trip 37)

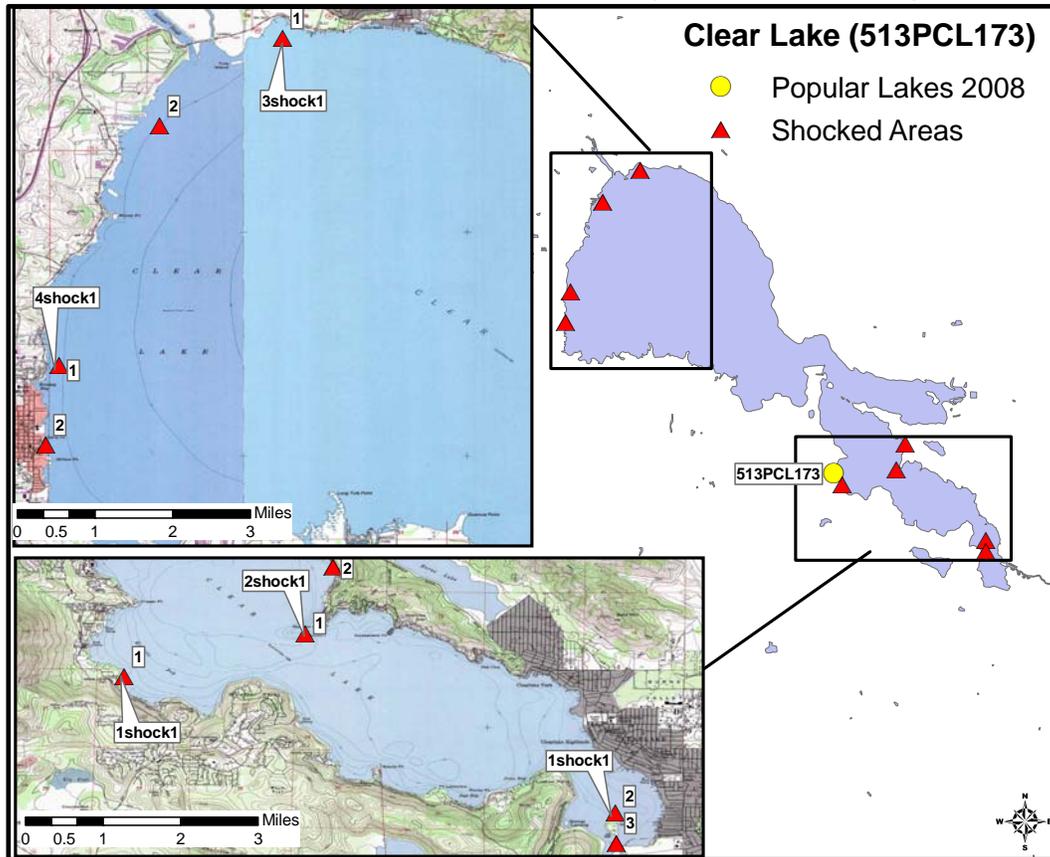

Samplers: Gary Ichikawa, Jon Goetzl

Fish caught: No fish were collected

Comments: The sampling vessel was launched from a ramp that was accessed through the main entrance. No fish were seen after shocking two locations. This site may be revisited using a different collection method.

[Back to Table](#)

2008 BOG Clear Lake (513PCL173)

Latitude: 38.97321

Longitude: -122.74103

Collection Method: Electrofisher boat

Date (s) of Collection: September 15, 2008 (Trip 44)

Samplers: Gary Ichikawa, Dylan Service

Fish caught:

2008 BOG Pleasant Valley Reservoir (603PPV083)

Latitude: 37.42243

Longitude: -118.5359

Collection Method: Electrofisher boat

Date (s) of Collection: September 19, 2008 (Trip 44)

Samplers: Sean Mundell, Billy Jakl

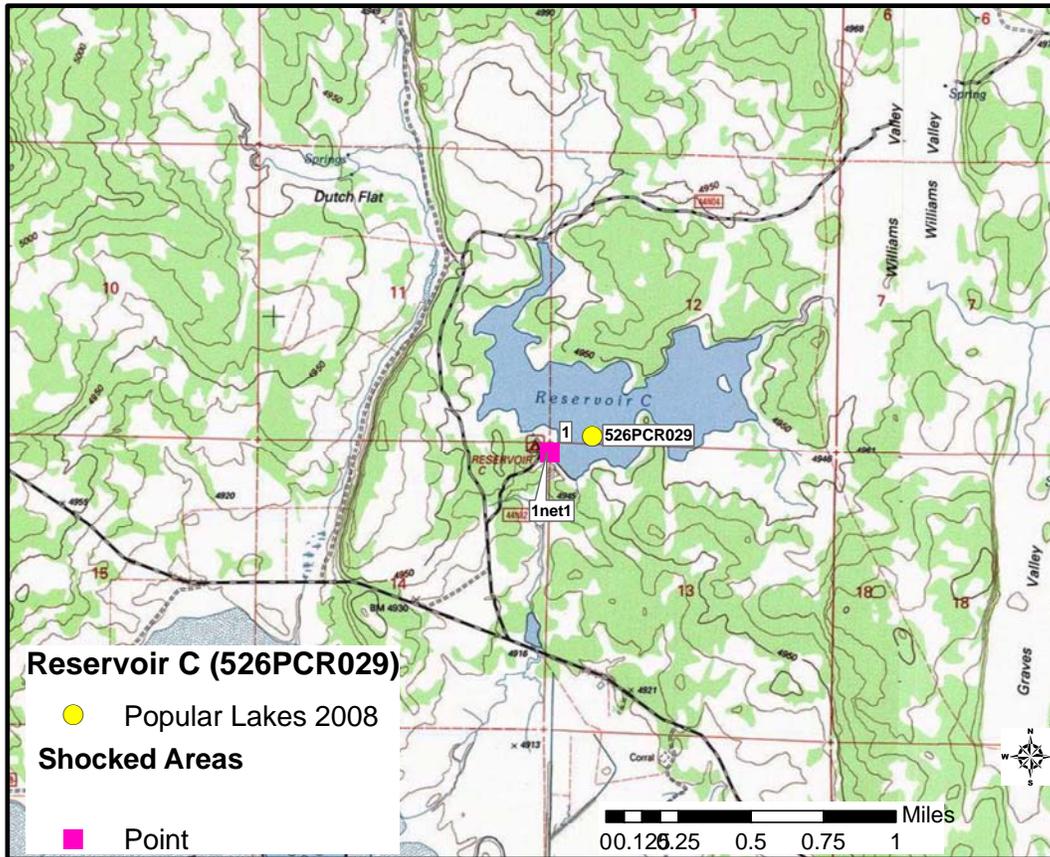

Fish caught:

Rainbow Trout										
TL (mm)	264	276	283	285	285	285	286	300	305	318
Tag #	A1662	A1664	A1669	A1663	A1665	A1666	A1668	A1671	A1670	A1667

Comments: The sampling vessel was launched from a concrete ramp after LADWP granted access. A sample of rainbow trout (10 fish) was collected using the electrofisher boat. Brown trout was the only other fish present.

[Back to Table](#)

2008 BOG Reservoir C (526PCR029)

Latitude: 41.66068

Longitude: - 120.77149

Collection Method: Dip net

Date (s) of Collection: July 22, 2008 (Trip 40)

Samplers: Billy Jakl, Dylan Service

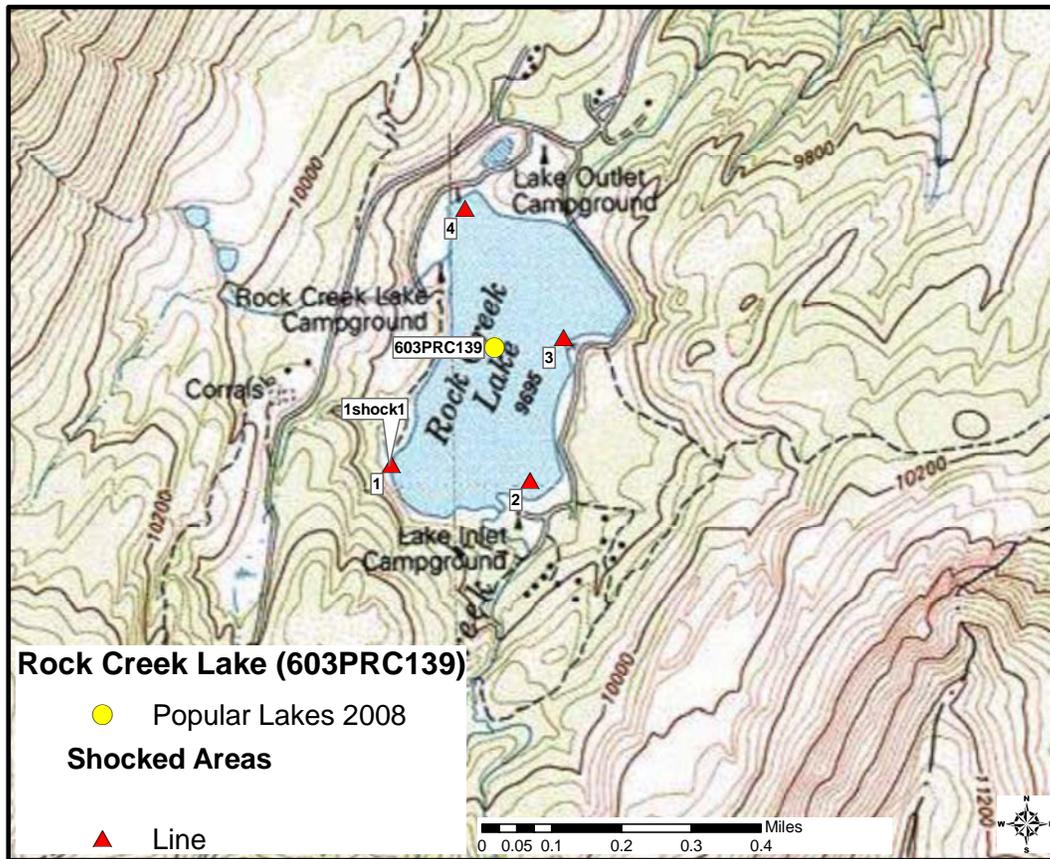

Fish caught:

Rainbow Trout										
TL (mm)	251	251	258	268	271	281	285	303	307	314
Tag #	A0960	A0967	A0966	A0962	A0968	A0965	A0963	A0959	A0961	A0964

Comments: The sampling vessel was launched from a ramp at the main entrance. A sample of rainbow trout (10 fish) was collected using a dip net. A large number of trout were clustered in one area allowing us to use a dip net to collect our sample. These fish were likely planters. No other fish were present.
