Present Land Use/Zoning/General Plan Designation: _____

Project Description:
SWRCB is developing a statewide Policy for the consistent identification of waters that do not meet water quality standards. The goal of the Policy is to establish a standardized approach for making these determinations. The proposed Policy outlines the decision rules for evaluating data; an approach for analyzing data statistically; and requirements for data quality, data quantity, and administration of the listing process. Decision rules are provided for: chemical-specific water quality standards; bacterial water quality standards; health advisories; bioaccumulation of chemicals in aquatic life tissues; nuisance such as trash, odor, and foam; water and sediment toxicity; adverse biological response; and degradation of aquatic life populations and communities. An approach for interpreting narrative water quality objectives using numeric data is also proposed.
