RE: Comments for May 6th Workshop on Order WR 2009-0027-DWR

Dear Chairman Hoppin and Members of the Board,

I am writing to express my concern regarding impacts related to Order 2009-0027- DWR and modifications in permit terms that would reduce those impacts. The reduction in flows will cause severe impacts to water quality, recreation, community water systems, over-summering juvenile salmon and Steelhead as well as the lower River economy that depends on a healthy Russian River.

The Russian River is one of the few green rivers in America and one of three in California. I own a vacation rental in Monte Rio and obviously the

Russian River is a BIG draw for vacationing: swimming, canoeing, fishing and lying on the beach. The western part of Sonoma County is a very depressed area and most businesses depend on tourism. We do not allow new buildings or fast food chains in order to support local businesses, however without the river and tourism, we'd all be out of business.

With the current down turn in the American dollar, many Americans are not traveling abroad and many foreigners are coming to the wine country. How disappointing to find the river knee deep.

Monte Rio puts on a flotilla every year around the 4th of July. It's a very big event in this small town. Last year people walked/pulled the boats past the judges.

I beg you to consider the depressed economics of this area. Families vacation here from the Bay Area and all over the world. It just seems contradictory to have these enormous, expensive, beautiful wineries, and an algae filled stream.

In order to reduce the impacts from reduced flows under Order 2009-0027-DWR we urge you on May 6 to take action to protect water quality and beneficial uses in the Russian River.

Specifically we urge you to:

- Increase frequency of chemical water quality monitoring to every two weeks with results posted promptly on a public website to proactively prevent water quality problems such as algae blooms from increased nutrient concentrations

- Include new provisions in the order to require flow changes in response to violations in water quality standards or as needed to protect juvenile ESA listed fish over the summer, the water agency released water to protect grapes from frost on April 14 to 16th so we expect increases to protect water quality as well

- Installation of additional gauges as needed to ensure instantaneous flow compliance levels are maintained, in 2004 and 2007 compliance levels were violated under previous orders

- A minimum of 25% mandatory conservation for SCWA customers and all users downstream of Dry Creek to help maintain flows and conserve water in case of multi-year drought.

- Mandatory conservation by all permitted water diversions upstream of Dry Creek including agricultural and rural residential diversions and streamside wells pumping underflow

- Additional prohibitions in the Order on diversions that are not permitted in critically dry conditions or if needed a separate order restraining those unpermitted diversions to protect water storage in Lake Mendocino and maintain higher flows

- Keep order prohibition on commercial turf irrigation in SCWA service area and expand to include all commercial turf using water from the Russian River

We believe that modifying the order to include these provisions will improve protection of water quality, juvenile endangered fish and likely result in somewhat higher flows due to reduced diversions. We greatly appreciate your consideration of our comments.

Sincerely,

Nancy McGauley
