

GCID Wells and Outer Impact Boundary with Domestic Well Depth Summary Map

source of maps: DWR, 2014a, Northern Region, Glenn County Domestic Well Depth Summary with Depth to Groundwater Contours for Wells Screened at Depths Less Than 150 ft.; & GCID Supplemental Water Supply Program DEIR

- Domestic Well Count District**
- 1 to 10 domestic wells per section
 - 11 to 25 domestic wells per section
 - 26 to 50 domestic wells per section
 - 51 to 75 domestic wells per section
 - 76 to 100 domestic wells per section
 - 100 to 125 domestic wells per section
 - 126 or more domestic wells per section

- Domestic Well Depth Summary**
- 105 Minimum Well Depth
 - 120 Maximum Well Depth
 - 113 Average Well Depth

This map provides an overview of the extent of groundwater development. The wells identified within each section is based on Completion Reports submitted to DWR December, 2013. It is important to note that unknown number of wells have been drilled constructed without the submittal of a Well Report, thus are not included in the well map.

— 20 — Depth to Groundwater for Shallow Monitoring

The depth-to-water contour lines represent the ground surface to which the groundwater is screened at depths less than 150 feet of 2013.

The depth-to-water contour lines should be used as an approximation of groundwater levels and not a representation of the depth to water at a specific location.

In some areas, depth-to-water contour lines may be affected by hydrostatic pressure to rise above the actual depth to water, which may lead to a false assumption that the well is shallower than it actually is.

Please contact the California Department of Water Resources (530) 529-7300 for more detailed well data.
