## Delta Cross Channel Adult Salmon

 Fyke Trapping

Jeff McLain, U.S. Fish and Wildlife Service Funded by CALFED and
The Interagency Ecological Program

## Methods

- Acoustics (Horn)
- Sampled between 9/4/01 and 11/15/01
- Three fykes in DCC, two in GS, and two in Sac
- Daily passage estimates

- All adult fish were tagged with Floy ${ }^{\circledR}$ T-Bar Anchor Tags
- Predation assessment (Kohlhorst, McIntire)

## Hypothesis

Fewer adult chinook migrated through the DCC than the Sacramento River during the fall of 2001

# Sac <br> Catch $=80$ <br> Mean Passage = 57.3/day <br> DCC 

Catch $=21$ Mean Passage $=7.8 /$ day

Paired $t$ test ${ }^{*} \quad \mathrm{t}=-5.0, \mathrm{p}<0.001, \mathrm{n}=39$

* Paired $\boldsymbol{t}$ test performed with log10 transformed data

## Hypothesis

## The abundance of adult salmon in the DCC was lower when the gates were closed than when they were open during the fall of 2001

## Predator Abundance

- 353 black bass tagged

59 recovered

- 119 salmon tagged

0 recovered

- 109 striped bass tagged

0 recovered

- 100 redear sunfish tagged

0 recovered

- 22 Sacramento sucker tagged 0 recovered
- 11 white catfish tagged 0 recovered

## Predator Abundance

Local black bass population estimate based on multiple census (Schumacher and Eschmeyer's estimate) = 1,153 $95 \%$ confidence interval $=1,009$ to 1,345

## Predation by Black Bass

## Predation by Striped Bass

## Predation
