

Attn: Jeanine Townsend, Clerk of the Board  
State Water Resources Control Board

It is my understanding the Water Board set out guidelines in 2010 identifying the proportion of natural water flows needed to support natural and human needs in the Delta. I also understand a disproportionate amount of water is being diverted from the San Joaquin River system for human needs at the expense of the natural needs.

I urge you to take a broad view and consider the full value of nature and give it a fair allocation of water. In my view, killing off nature in one form or another has never turned out well for mankind. I urge you to look at the real efforts being taken for more efficient use of water allocated to human needs.

In the upcoming hearings to update the Bay Delta Water Quality Control Plan please take a broad view. Humans are the only ones voting here.
