

It would be irresponsible to further restrict Cal Am's ability to pump water from the Carmel River until a viable alternative is approved and operating.
Carmel is a leader in conservation and has consistently reduced water consumption over the last ten years or more. Water rationing would cripple the local economy, causing home prices and taxable value to plummet.
It is time for government to bring solutions to water resource needs, not issue arbitrary restrictions that would destroy the quality of life in our community.

Thank you for considering my views. Please act and make decisions responsibly.
